We dedicate this book with warm affection to

Douglas Athon Rossman

a.k.a. "Dag"

Douglas Rossman, Photo Courtesy of the LSU Museum of Natural Science

Emeritus Curator and Professor of Herpetology

Louisiana State University Museum of Natural Science

Baton Rouge, LA (1963–1998)

Doug directed all three of us in our graduate programs
for either Masters (VW) or Doctoral (JB, KLW) degrees,
was an excellent teacher, thoughtful advisor, and supportive friend,
and made each of us better herpetologists
with his encouragement, insightful advice, and constructive criticism
exemplified daily by his dedication to scientific research.

"Mon ami, there are only two kinds of snake:
the good snake (dead) and the bad snake (trop vive!)"
… old Cajun saying from the Bayou

Contents

Introduction

Few works have attempted the challenge of cataloging all of the known species of snakes in the world, the most prominent being the British Museum catalogues of Boulenger (1893a, 1894a, 1896a) and those of F. Werner (1917b, 1921a–b, 1922a, 1923b, 1924c, 1929a) for Recent taxa and Rage (1984b) and Holman (1998a, 2000a) for fossil taxa. Until now no single work has treated all living and extinct snakes. The present work covers all living and fossil snakes described between 1758 and 2012, comprising 3783 species (3509 extant and 274 extinct species) allocated to 651 genera (539 extant and 112 extinct genera). Also included are the names of 54 genera and 302 species that are considered *incertae sedis, nomina dubia, nomina nuda, nomina rejicienda,* and *nomina inedita*, resulting in a grand total of 12,500 primary snake names. A summary of the main historical references follows.

Worldwide works. The starting point of modern binomial nomenclature, Linnaeus' 10th edition (1758), had four genera (*Anguis, Boa, Coluber*, and *Crotalus*) and 101 species of snakes. Laurenti (1768) increased the number of genera to 14 and the species to 104. Merrem (1820) recognized 330 species, placed in 22 genera. Duméril & Bibron (1844) recognized 25 genera and 64 species of scolecophidians and Duméril, Bibron & Duméril (1854) described 139 genera and 484 alethinophidian species, totaling 548 species in 164 genera (see Table I.1). The British Museum catalogues of Gray (1849) and Günther (1858) contained some 544 species and formed the foundation for Boulenger's later, more comprehensive, work. Snakes were placed in 62 genera by Günther (1888). Jan (1863b) listed 789 snake species allocated to 232 genera. Hoffmann (1890) provided descriptions of all snake genera, listing the number of species in each genus and its geographical region. Boulenger's British Museum (Natural History) catalogues (1893–1896) formed the first comprehensive summary of worldwide snakes, and continues to be a critical reference for any systematic work today. Boulenger recognized 1639 species (and 7335 total names) that he placed in 296 genera. Werner updated Boulenger's catalogues in a series of six papers (1917–1929) that resulted in 338 recognized genera and 2242 species. McDiarmid et al. (1999) covered the Scolecophidia, Anilioidea, Henophidia or Booidea, Acrochordoidea, and Viperoidea with subsequent volumes to review the Colubroidea. Table I.1 summarizes the biodiversity of snakes as seen through herpetological publications.

The checklists of Welch (1982, 1983, 1988, 1994a–b), Wilkey (2002a–b), and Brogard (2005) are of little value for any taxonomic work. Along this line, several Australian authors have a habit of universally recognizing every proposed name (Wells & Wellington) or cannibalizing molecular studies and phylogenetic analyses to attach names to every single clade (Hoser). Such works are not only superfluous but also detrimental and a hindrance to taxonomy and nomenclature and they violate clause 4 of the Code of Ethics (ICZN, 1999). They include Wells & Wellington (1984, 1985); Hoser (2000b-c, 2003f, 2004, 2009b-e, 2012b–am); and Wells (2007). The *Australasian Journal of Herpetology*, of which Hoser is the editor, reviewer, publisher, and sole author, is not considered a valid publication under the spirit of the Code and therefore all proposed names are *nomina illegitima* (see Wallach et al., 2009 and Kaiser et al., 2013).

Taxonomic groups. Hahn (1980) compiled the first modern checklist of the Scolecophidia, with synonymies and ranges, followed by McDiarmid et al. (1999). Roux-Estève (1974) treated all African Typhlopidae. Venomous snakes of the world were covered by Golay et al. (1993), David & Ineich (1999), and McDiarmid et al. (1999).

Regional works. North American snakes have been treated by Ernst & Ernst (2003) with an official list of species by Crother (2008). H. Smith & Taylor (1945) produced the only comprehensive work on Mexico, with later summaries by Smith & Smith (1993) and Flores-Villela (1993), and Liner & Casas-Andreu (2008) providing a checklist of species and subspecies. Neotropical snakes of Central and South America were catalogued by Peters & Orejas-Miranda (1970) with Central American species updated by Köhler (2008). Snakes of the West Indies were enumerated by Schwartz & Henderson (1991). Tipton (2005) listed all the genera and species of the New World (North America, Mesoamerica, Caribbean, and South America). Snakes of Europe were listed by Mertens & Wermuth (1960) and Gasc et al. (1997). African snakes have been covered by the following: South Africa (Broadley, 1990), East Africa (Spawls et al., 2002), and West Africa (Chippaux, 2006). The treatises of Bourret (1936), M.A. Smith (1943), and Das (2010) covered Southeast Asia. Mengden (1983) and Cogger (2000) treated the Australian ophiofauna.

Checklists. Recent authors who have provided lists of names of the worldwide serpent fauna include Sokolov (1988), Frank & Ramus (1995), Mattison (1999), and Delhay (2009).

Photo books. There are some books that do not contain any taxonomic or geographical data but are worthy of citation as photo-essay books. These include Seba (1734–1735), Kundert (1974, 1984), Aramata (1990), Lacarrière & Ineich (1992), Lamar (1997b), Moncuit & Daoues (2002), Mocafico (2007), and Laita (2013).

Methods

Due to the length of this catalogue, verbiage has been kept to a minimum and a staccato style has been utilized. Only the most germane topics are briefly mentioned in Remarks but citations to relevant references are provided so that additional information can be traced when desired. The text is organized alphabetically throughout, both by genus and species. Valid genera are listed with author date, and family allocation parenthetically. If the generic name appeared in a work other than the author's, that work is listed on a separate line (preceded by *in*). After each

TABLE I.1

Worldwide Snake Diversity Tabulations from 1758 to 2012

Author	Year	Genera	Species
Linnaeus	1758	4	101
Laurenti	1768	14	104
Merrem	1820	22	330
Duméril, Bibron & Duméril	1844–1854	164	548

Present work	Taxa inquirenda	54	302

genus, the type species and a generalized distribution are presented, with or without sources and taxonomic remarks. Extant and extinct species are numbered and listed in alphabetical order with the following information: original citation, synonyms and subspecies, type or types, type locality, and geographical and geological range. Relevant sources for each taxon (monotypic genus or species) are also provided, along with comments when necessary. When supplemental or revisionary information is presented in later publications we present it and list the original data under Remarks.

Species and genera. Recognition of valid species and genera usually follows the latest revisionary works. In cases where polytypic genera have not been reviewed, the latest literature is utilized. When there is controversy over generic allocation or specific status of a taxon, we provide opposing views under Remarks. For the orthography of a taxon's name, we employ the original spelling unless it was (1) a typographical or accidental error (so noted as *nomen incorrigendum*), (2) incorrectly formed according to the Rules, or (3) a name whose terminus does not agree with gender of the current genus. In the latter two cases the corrected form is used. The original names of valid species include subgeneric names in brackets (subgenera are not included among synonyms). Allocation of genera and species to families follows the classification in Table I.2, with †Ophidia being used for extinct families exhibiting a pre-Serpentes grade of evolution.

Synonyms. We have attempted to list as many nominal taxa as possible. We list under Synonyms mainly primary synonyms, emendations (whether justified or unjustified), and incorrect and corrected original spellings of genera, species, and subspecies (not different combinations, typos, or *lapsus calami*). We do not differentiate between those forms considered junior synonyms and those currently considered valid subspecies. New combinations are cited only when the termination of the specific epithet is different than the primary names, and they are indicated by a dash between name and author. Incorrect secondary spellings are listed in the text but not in the Index (since they are unavailable names). Citations for all these names are included in the Literature Cited. Latin notations following names include these terms: *incertae sedis* (uncertain taxonomic status), *lapsus calami* (slip of the pen), *nomen incorrectum* (incorrect secondary spelling), *nomen corrigendum* (corrected original name), *nomen dubium* (dubious or questionable name), *nomen emendatum* (emendation), *nomen illegitimum* (illegal or invalid name according to the Rules, usually not a binomial or trinomial), *nomen incorrigendum* (incorrect original name), *nomen ineditum* (unpublished name according to the Rules), *nomen nudum* (an unavailable or invalid name, usually lacking a diagnosis), *nomen oblitum* (forgotten name), *nomen praeoccupatum* (occupied name), *nomen protectum* (protected name, applied to a junior synonym in preference to an unused senior synonym or *nomen oblitum*), *nomen rejiciendum* (rejected name by ICZN), *nomen substitutum* (substitute or replacement name), *nomen suppressum* (suppressed name for matters of priority), and *partim* (in part, when specimens belong to more than one taxon). A name may include several of the above categories, in which case only the most relevant is cited. A *nomen emendatum* that is also a *nomen rejiciendum* will be cited as the latter.

For every valid species an abbreviated reference citation is provided along with pagination, figures, and plates referring to the new species. If a figure of a paratype is given (in the absence of a holotype figure) it is so indicated. The original combination of the name is given parenthetically when it is different from that currently employed. If the species was described in more than one publication, the other descriptions are listed in Remarks (listed as supplementary original description when its content is expanded over the initial description). Complete citations of all descriptions are in Literature Cited.

Types. We have tried to determine the location of all primary types by making liberal use of all published type lists, correspondence with various museums regarding types, and visiting certain U.S. museums to examine specimens personally (mainly ANSP, CAS, FMNH, MCZ, SDNHM, USNM). The location of many type specimens remains unknown; types were generally not designated in earlier works and many types have subsequently been lost or destroyed. If the deposition of a type is presumed but not confirmed, the museum acronym is preceded by a "?"

Whenever possible we have listed the status of the type (holotype, lectotype, neotype, or syntype), its location and registry number (including its original museum and number if now different), its total length and gender, and parenthetically the collector and date of collection. In cases where the current catalogue number or museum of deposition is different from that presented in the original description or subsequent publication, the original data are presented in parentheses following the current museum and number. If a third museum is involved, then the original and subsequent numbers are listed parenthetically. Museum acronyms follow, in most cases, Leviton et al. (1985, 1988). We have provided additional acronyms for institutions, private collections, and field series numbers. For simplicity in

TABLE I.2

Number of Living and Extinct Genera and Species by Family

	Living		Extinct

Calamariidae Bonaparte, 1838	8	88	0	0
Colubridae Oppel, 1811	108	739	16	48

presenting type numbers, we have eliminated all zeros preceding the number (i.e., 00289 = 289), all "R" designations for reptiles (including RENA at RMNH), and for BMNH numbers from the 1800s, we add the prefix "18" to complete the year. When two or more types are catalogued under one number, we refer to them informally with small lower case letters (i.e., 1460a–b) but when a museum has catalogued more than one specimen under a single number we use upper case letters (i.e., 1460A–B). If a type specimen is unknown, unlocated, missing, presumed lost, or lost, we cite just that it is lost; if destroyed it is so noted. If a type is not listed in a type list, we presume it to be lost. A number of museums have been destroyed by fire (CA, IB, MBL, MLS *fide* Almaça & Neves, 1987, Kumar, 2010, and Franco, 2012) or bombing during World War II (BSM, FMSM, ISM, KMJ, LM, LNHM, MSNM, MTD, NMB, NMSW, NMW, SMNS, USTL, ZIB, ZMH, ZMUH, and ZSM *fide* Klauber, 1952, W. Leviton, 1959b, Hellmich *in* Hoge, 1964a, Hahn, 1980, Hoogmoed & Gruber, 1983, Böhme & Bischoff, 1984, W. Ladiges *in* L.D. Wilson, 1990d, M. Podestà *in* Raxworthy & Nussbaum, 1994, Leonardi et al., 1995, Scali, 1995, Schlüter & Hallermann, 1997, Hallermann, 1998, McDiarmid et al., 1999, Fritz, 2002, Cadle, 2007, Franzen & Glaw, 2007, and Köhler & Güsten, 2007) and their types are so noted without further reference. Many types of earlier authors are unknown and it should be pointed out that the following people sent all or part of their collections to the MNHN (C. Peale, 1794–1798; Palisot de Beauvois, 1797–1798; R. Harlan, 1831–1839; C.S. Rafinesque, 1835–1839; and A. Dugès, 1853–1856). The Museum Drottningholmense, from which many Linnaean types originated, is abbreviated as Mus. Drottn.

When a lectotype or neotype has been designated, we cite the authority in question. According to Art. 74.4 of the Code, we designate as lectotypes the descriptions and/or illustrations in older works such as M. Catesby, A. Seba, and P. Russell. Early authors, such as Cope and Hallowell, when describing a new species from a syntypic series, usually only presented data on one individual and did not mention the number of individuals upon which the description was based. It is preferable, therefore, to select the specimen described as the lectotype when it can be determined that more than one specimen was available (Art. 74B).

We have converted all non-metric measurements to the nearest mm when reporting the length of types. Whenever possible we used the conversion rate for that country. However, since the "line," "inch," and "foot" have ranged from 2.0–2.9 mm, 21.3–30.0 mm, and 250–390 mm, respectively, in different countries we employed the standard metric conversion of 2.54 mm, 25.4 mm, and 305 mm, respectively, when unknown. When more than one measurement of length for a type specimen exists in the literature, we present the entire range of values. Usually subsequent measurements of the same individual reveal a shrinkage due to the preservative. If the tail is incomplete, we give the body length and refer to it as SVL or, if only the tip is missing, we list the entire specimen with a "+" after the length. We have included gender and measurements (to the nearest mm) of all available types for which those data have not been published. Since authors in the older literature normally listed measurements for the largest specimen, we cite the reported value as that of longest syntype.

For the collector of the type specimen(s), we do not differentiate between the actual collector, a purchase from native collectors, or specimens in someone's personal collection (but we use the term "coll." after a name to refer to a collection, not to be confused with "collected by"). We merely list the person or collection responsible for procuring the specimens and when a donor separate from a collector is involved, "don." is used to signify that. We refer to all local or indigenous collectors as "natives." When the specific date of collection is unknown, but more inclusive dates are known, such as the dates of a voyage or expedition or the duration of residence of the collector in a certain country/locality, we list the inclusive dates, with a specific Expedition and Voyage abbreviated as Exped. and Voy., respectively. Under each genus the type species is listed as the currently recognized name. See Williams & Wallach (1989) for more complete data on genera type species and designations.

Type locality. The type locality is given verbatim and enclosed in quotes. Whenever it is not presented in English, we translate it in brackets with an "=" sign. In order to maximize the informational content of the type locality, we have included any and all data presented in the original description, including the title. Occasionally more information is presented on the type locality

in the introduction or some other part of the work than in the designated "type locality." Following the quoted type locality, in many cases, will be found in brackets the name converted into present day terminology and/or translated into English, more detailed geographical data, the latitude and longitude, and the elevation in meters of the type locality. When a type locality is in the vicinity of a municipality, the coordinates and elevation are included in parentheses after the town. All information within brackets has been determined from other sources, either published literature or personal resources. Elevations and geographic coordinates were determined from several sources: Operational Navigation Charts (ONC) and Tactical Pilotage Charts (TPC) published by the Defense Mapping Agency, travel books and road maps for various countries, the Falling Rain Genomics website Global Gazetteer (www.fallingrain.com), the Atlas of Living Australia website (www.biocache.ala.org.au), Google Earth, and such publications as Crawford-Cabral & Mesquitela (1989) for Angola. It should be noted that these amplified type localities presented in brackets by the authors are intended as aids and not as type locality restrictions. Type locality restrictions are not enclosed in quotes and are given in English (translated, if necessary). Any and all restrictions of type localities, although bearing no official status, are listed with the restricting authority. Valid restrictions are listed under the Type locality field but invalid restrictions are in the Remarks. The geographic coordinates of all possible type localities have been determined. This is obviously impossible for many older names with generalized localities. Whenever a specific type locality was located in a gazetteer, the latitude and longitude are presented in brackets following the name of the country. When the coordinates are preceded by "ca.," it means they are derived from measurements of maps and only approximate, or else if the type locality is a general region the coordinates of the center of that region are listed. If the type locality could not be located but a locality near it was found, the latter's coordinates are given immediately after that particular location parenthetically. When the type locality is near, around, close to, or in the environs of a specific location, we refer to it as the vicinity of that location. When an island is the type locality, the range of latitude and longitude coordinates may be given, preceded by "bet." (= between). When the elevation of the type locality is known, it follows the country name and the latitude and longitude (if known). Whenever additional information on the type locality is presented elsewhere (such as corrections, more precise details, etc.), we list it as emended data, and may paraphrase or translate it in order to fit it into our format of most specific to most general geographic locality, elevation, and coordinates. Corrections (to type localities that are in error) and restrictions of type localities are so noted with the authority and source. For certain older type localities the political boundaries and names have changed and we attempt to provide the modern equivalent. For example, "Bengal" in the early 1800s consisted of the area currently known as Bangladesh and NE India (including Assam, Manipur, Meghalaya, Mizoram, Nagaland, and West Bengal provinces). With fossil species, we consider the geological age and stratigraphic horizon to be part of the type locality, and this information follows the geographical locality of the type specimen, regardless of the order of presentation in the original description. The type locality sequence for an extinct species is thusly: geographical locality; geological period or epoch (geological age, formation or local fauna).

Geological epochs (Cretaceous to Pleistocene) are listed, followed parenthetically with either the North American Land Mammal Ages (NALMA) for North America or the European Land Mammal Ages (ELMA) for the rest of the world and the Neogene Mammal (MN) and Paleogene Mammal (MP) biozones following Gradstein et al., 2004. Fossil times, in millions of years before the present (mya), are listed according to Gradstein et al., 2004, and the International Union of Geological Sciences for 2012. In reference to epochs, we utilize the adjectives "lower, middle and upper," which define formations, in contrast to "early, middle and late," which define ages.

Lists of type specimen are available for the following museums: ADM (E.H. Taylor, 1933; H. M. Smith & Necker, 1943), AMS (Goldmann et al., 1969; Cogger, 1979; Shea & Sadler, 1999), ANSP (Roze, 1958; Malnate, 1971, 1989), BNHS (P. Das et al., 1999b), BYU (W.W. Tanner, 1970), CAS (Slevin & Leviton, 1956), CAS-SU (Leviton, 1953; Leviton & Banta, 1956), CIB (Guo et al., 2000), CM (McCoy & Richmond, 1966; McCoy & Censky, 1982), CMS (Kandamby, 1997), EHT-HMS (E.H. Taylor, 1944), FMNH (Marx, 1958, 1976), FMNH-PR (Bruner, 1991), HLD (J. Köhler & Güsten, 2007), IES (Chamizo-Lara et al., 2000), IMC (Sclater, 1891), IRNSB (Lang, 1990), IZUC (Cekalovic & Artigas, 1981), KU (Duellman & Berg, 1962), KU-VP (Schultze et al., 1985), LSUMZ (Rossman & Good, 1993), MACN (Amalia-Varela, 1999), MB (Bocage, 1896), MCZ (T. The following sources contain additional information on types and type localities: Andreone & Gavetti, 2007 (M.G. Peracca types), Anonymous, 1958 (southern and East African types), Bauer et al., 1995 (W.C.H. Peters types), Crumley, 1990 (annotated account of types and type locality lists), Dowling et al., 1970 (annotated list of type specimen lists), Dowling & Gilboa, 1974 (annotated list of type specimen lists), Dunn & Stuart, 1951 (critique of type locality restrictions), V. FitzSimons, 1937 (A. Smith types), V. FitzSimons, 1958 (South African types), Flores-Villela et al., 2010 (A. Dugès reptile taxa), Hoogmoed & Gruber, 1983 (Spix & Wagler types), Krecsák, 2007a (A.F.T. Reuss vipers), Liner, 1996a (Nuevo León, México types), Liner, 2000 (H. M. Smith types), J.A. Peters, 1955 (Ecuadorian types), Rodriguez-Schettino, 2000 (Cuban types), Savage, 1974 (Costa Rican types), H.M. Smith & Necker, 1943 (A. Dugès types), H.M. Smith & Taylor, 1950 (Mexican type locality restrictions), E.H. Taylor, 1933 (Alfredo Dugès Museum), E.H. Taylor, 1944a (E.H. Taylor and H.M. Smith types), and Toriba, 1993 (M. Maki types). In addition to the type lists we have made liberal use of numerous biographies, expedition and voyage accounts, online resources (i.e., Wikipedia, Google), and invaluable works such as Adler (1989, 2007, 2012), Bauer (2004), Beolens et al. (2011), Bokermann (1957), C.W. Myers (2000), Papavero (1971), Pietsch & Anderson (1997), Savage (1974), and Vanzolini (1977–1978) for determining localities and specific collection dates (or ranges of dates in the case of voyages, expeditions, or habitations of collectors).

Distribution. We realize that a deficiency of this work is with the geographic ranges of individual species. We have tried to be as complete as possible but time constraints have prevented us from being able to search the entire literature and examine all the material in collections. Being based almost entirely upon literature records, there are undoubtedly errors of omission and commission and we would greatly appreciate being informed of corrections or additions to the listed ranges for a future edition. We have provided primarily a list of all countries from which each species is known, and secondarily a list of all known major administrative regions from which each species has been recorded. These regions include states, provinces, regions, districts, territories, counties, zones, municipalities, prefectures, governates, protectorates, divisions, parishes, and wilayas, in alphabetical order in parenthesis following country. Data has been compiled mostly from the published literature, but some has come from museum specimens examined and also unpublished information provided by colleagues or ourselves.

Consistency of the names of the administrative regions presented a problem for many countries that have changed their names recently. We previously utilized such resources as Foreign Area Studies handbooks of the American University, *Merriam-Webster's New Geographical Dictionary*, U.S. Defense Mapping Agency gazetteers, and Department of Defense maps but recently switched over to Google Earth for current names. Recent name changes employed include Myanmar (Burma), Sulawesi (Celebes), Kalimantan (Borneo), Papua and West Papua (W New Guinea), and Burkina Faso (Upper Volta). Larger geographic regions are denoted as follows: North America = Canada, USA, and Mexico; upper Central America = Guatemala/Belize to Honduras; lower Central America = Nicaragua to Panama; Mesoamerica = Mexico plus Central America; Greater Antilles = Cuba Hispaniola, Jamaica, and Puerto Rico; Lesser Antilles = Windward Islands (Virgin Is. to Dominica) and Leeward Islands (Martinique to Grenada); Amazonia = Amazonian Basin of South America; Guianas = Guyana, Suriname and French Guiana; Latin America = Mexico, Central America, and South America; Eurasia = Europe and Asia; Middle East = Syria, Iraq, Lebanon, Israel, and Jordan; Arabia = Saudi Arabian peninsula; Asia Minor = Turkey, Caucasus, and former SW Russian states; Southwest Asia = Iran to Pakistan; Indochina = Cambodia, Laos, and Vietnam; Southeast Asia = Myanmar, Thailand, and Indochina, whereas Southeastern Asia includes not only Southeast Asia but adjacent regions such as S China, India, West Malaysia, and W Indonesia; East Asia = China, Korea, and Japan; Malay Peninsula = S Myanmar, S Thailand, and West Malaysia; East Indies = Indonesia and Philippines; Borneo = Kalimantan, East Malaysia, Sabah, and Brunei; Greater Sundas = Java, Kalimantan, Sumatra, and Sulawesi; Lesser Sundas = S Indonesian islands; New Guinea = Irian Jaya and Papua New Guinea; Austro-Papua = Australia and New Guinea; Indo-Australia = S or SE Asia, East Indies, New Guinea, and Australia; Sino-Australia = E Asia, East Indies, New Guinea, and Australia; and Australasia = Australia, New Guinea, and Pacific islands. Lastly, F.A.T.A. = Federally Administered Tribal Area in Pakistan.

Questionable records or probable occurrences are discussed where appropriate with references, either under remarks or with a "?" preceding the name of the country or state. Records that are obviously erroneous (based on misidentifications or faulty data) are ignored, or so stated.

For the distribution of a genus we present a general range by geographical area, country, or continent, whereas for the range of a species we list the separate countries from which it is recorded. For marine snakes, we list the bodies of water from which it is known under distribution, but under range we give the countries from whose shores or offshore regions the species has been found.

In listing the geographical distribution, if a species occurs in at least half of the country the country is mentioned without directional adjectives. When a species is known from only a small area of a country, abbreviated prefixes refer to the generalized area (N = northern, E = eastern, S = southern, W = western, NE = northeastern, NW = northwestern, SE = southeastern, SW = southwestern, and cen. = central). Therefore, for example, West Virginia is West Virginia but W Virginia is western Virginia. Additionally, the abbreviation ext. (= extreme) is used when the species' range occupies only a marginal portion of the country in question. In order to save space, only shortened versions of political units are used; such terms as Autonomous Region (in Guangxi Autonomous Region) and Territorio Federal (in Territorio Federal Amazonas) are omitted with the listings as China (Guangxi) and Venezuela (Amazonas). The terms Southern or Western in parentheses refer to provinces such as in Zambia, not to directions within the country, which would

precede the country name, i.e., SW Zambia (Western, Southern). Countries are listed, in general, from west to east and north to south. Occasionally, in order to keep continuity from country to country, a different direction is followed.

Following the geographic distribution is the elevational range in meters. We present the minimum and maximum values known to us, mainly from literature reports and Google Earth. In many cases the given range does not reflect the altitudinal range of the species itself, merely the reported ranges that we have found. Ranges are rounded off to the nearest five meters.

NSL (near sea level) refers to values from 0–7 m and BSL (below sea level) is also indicated where appropriate. When one value is far outside the typical range we enclose it parenthetically (before the range when lower and after the range when higher) to indicate that it is either an aberrant figure or possibly was reported in error.

Islands are listed in alphabetical order after the states or provinces. The abbreviation "Is." is omitted from all major islands (i.e., Penang, Java, Sulawesi) and from all islands in Indonesia and Philippines. We do not differentiate between an archipelago, island group, or an island.

Shortened versions of some country names are employed whenever possible such as Brunei Darussalam = Brunei, Democratic People's Republic of Korea = North Korea, Democratic Republic of the Congo (Congo-Brazzaville) = Congo, Lao Democratic People's Republic = Laos, People's Republic of China = China, Republic of Korea = South Korea, Republic of Yemen = Yemen, and Socialist Republic of Vietnam = Vietnam. Sometimes not only the name of the country wherein the type locality is found has been changed but also the state or province. This is a result of changing boundaries, and we have tried to list all locations as they are presently known. The Appendix provides the major references used for each country. Entries under each category are placed in alphabetical order. When an included article covers only a particular region of a country, that region is included in parenthesis after author and date. The disputed territories of Gaza Strip, Golan Heights, and West Bank are included under Israel, and Hong Kong and Tibet (= Xizang) are included under China (but not Taiwan).

When an original description is published more than once, the subsequent description is listed under Remarks as a reprinting of the original. When the original description is brief and a more complete description is then published, we refer to the latter as a supplemental original description.

Living genera and species that are known from fossils have their fossil records listed after the distributions.

Literature cited. We have personally examined originals (or copies thereof) of all generic and species descriptions in addition to all cited references unless noted as [not seen] after the citation. Reference citations for journals follow a standard format thusly: author, date of publication, title of article, journal title, city of publication, (date on volume or title page if different from date of actual publication; in controversial cases the actual publication date is cited in brackets after the citation), (series number or abbreviated name), volume (plus series if represented by a letter), (number, part or section), total pagination, number of figures in text and number of plates. Figures and pages that are numbered are so listed (i.e., figs. 1-3) but unnumbered figures and pages are cited differently (i.e., 3 figs. or 2 pp.) Thus, if a specific number is not provided, figures, plates, and pages are unnumbered. For books the format is: author, date of publication, title, publisher, city, total pagination, number of figures, number of plates, and (list of valid species described therein). An article in a book is presented in either of two formats. If the book is edited, the book title is given first, followed parenthetically by the editors. Otherwise, the author is presented first, followed by the book title. City of publication is given for all foreign journals and obscure domestic journals. If, however, the name of the city is part of the journal title, it is not repeated. When both names of Latin American authors (or those with a double surname) are given, we hyphenate the names. If only the first name is given followed by an initial of the second name, we omit the initial in citations of authors and collectors. When an author distributed advance copies of his paper (and the actual publication date precedes the printed date), we note this in brackets after the citation as a preprint.

We list the titles of books and journal articles exactly as printed, including typographical and grammatical errors, with the sole exception that we have italicized all generic and specific Latin names. Publications in the Romance languages (French, German, Italian, Portuguese, Spanish, etc.) are cited in original form. Publications employing non-Arabic characters (Chinese, Japanese, Russian, Thai, etc.) have their citations transliterated into English with the title placed in quotation marks and the language of the article given parenthetically at the end of the citation.

When more than one edition of a publication exists, the latest edition is cited in full and all previous editions listed in brackets in abbreviated form with only edition, date, pagination, and illustration data. If the work has a different title or authors, it is listed separately. For convenience, subsequent editions are cited in English by their number (second edition, third edition, etc.) rather than by their original designations (deuxième edition, revised, augmented, updated, etc.).

Whereas the journal and book titles are listed verbatim, we have standardized certain notations: figures and plates are listed in Arabic numerals; figures denoted by letters are presented in lower case; numbers of a volume are separated by a dash; numbers, parts, or sections are included parenthetically following the number of the volume (only when both a part and a number are jointly designated do we separate them, in which case the part is listed between the volume and number). In citing figures and plates, when numbers are designated we report them as such (i.e., figs. 1-4); if unnumbered we merely list the total number (i.e., 4 figs.). For unnumbered figures, we count each individual illustration as a separate figure. When "figs." or "illust." are listed without reference to numbers, they were not counted. All line drawings, illustrations, and black and white photographs are listed as figures (plus maps or anything else listed in publication as a figure) unless several different types occur in the same publication. In that case, we list line drawings as figures, photographs as illustrations, and color photographs as colored figures. Plates include black and white or color photographs printed on a separate page as well as designated plates. Journal abbreviations and cities are listed as they were at the time of publication. Hence, certain journals have more than one title or place of publication in their history. Multiple works by an author in a single year are listed chronologically, at least within the same journal.

For all journals the series number is given only for series two and thereafter. If no series is listed then series one is implied. With only a few exceptions authors with multi-worded family names are listed alphabetically under the last name; prefixes such as "de," "do," "la," "van den," "von," etc. are placed after the initials of the personal names (N. de Rooij = Rooij, N. de.). Authors whose prefixes are capitalized and therefore part of their surnames, are listed alphabetically under the prefix, such as De Betta, De Vis, De Waal, Lidth de Jeude, and Van Denburgh. All compound surnames are separated by a hyphen (i.e., Pérez-Higareda, Saint-Girons) and Spanish authors who append only an initial of the second family name are cited using just the first surname.

In the citation of foreign journals or obscure domestic journals, the place of publication follows the abbreviated journal name; the city is omitted from domestic and well-known herpetological journals. Geographic names as nouns are written in their entirety; when used as adjectives they are abbreviated.

Three unpublished manuscripts are worth mentioning as they are cited in the present work: H. Boie's (1823–1825) "Erpétologie de Java" in RMNH, Leiden; J. Wagler's (1825) "Amphibia. Ordo II. Serpentes" in MCZ, Cambridge; and T.E. Cantor's (1834–1837) "Drawings of animals" in RSL, Oxford. Cantor's type specimens, colored sketches, and manuscripts were deposited in RSL (Cantor, 1839a: 31).

Collection Acronyms

ACVS: Arthur C.V. Schott field numbers, Mexico
ADM: (= MDUG)
AG: Academie Groningen, Groningen, the Netherlands (no longer extant) [destroyed by fire in 1906]
AHCCCP: F.N. Chernyshev Central Museum of Geological Research, Leningrad, Russia (also used is CNIGR)
AHU: School of Life Sciences, Anhui University, Hefei, Anhui, China
AIS: Académie Impérial des Sciences, St. Pétersbourg, Russia (no longer extant, now = ZISP)
AK: André Koch field numbers
AM: (= AMS)
AMG: Albany Museum, Grahamstown, Cape of Good Hope, South Africa
AMNH: Department of Ichthyology and Herpetology, American Museum of Natural History, New York, New York, USA
AMS: Australian Museum, Sydney, New South Wales, Australia (includes MMS)
AM-S: Arturo Muñoz field numbers
AMSC: (= FPM)
AMS-FN: Australian Museum field numbers
ANSP: Academy of Natural Sciences of Philadelphia, Philadelphia, Pennsylvania, USA
ASB: Asiatic Society of Bengal, Calcutta, India (no longer extant, now = ASK)
ASFS: Albert Schwartz field numbers
ASIZB: Chinese Academy of Sciences [formerly Academia Sinica], Institute of Zoology [formerly Fan Memorial Institute of Zoology], Beijing, China
ASK: The Asiatic Society, Kolkata, West Bengal, India (includes ASB & IMC)
AWP: Angelo W. Palmisano field numbers
BHSP: Paleontology Collection, Bosnia-Hercegovina Staatsmuseum, Sarajevo, Bosnia and Herzegovina
BK: Bio-Ken Snake Farm, Watamu, Kenya
BM: Bratislava Museum, Bratislava, Slovakia [partially destroyed 9 Sept. 1944 during World War II]
BML: (= MBL)
BMNH: The Natural History Museum [formerly British Museum (Natural History)], London, England, UK
BMUW: Burke Museum of Natural History and Culture, University of Washington, Seattle, Washington, USA
BNHM: (= BNHS)
BNHS: Bombay Natural History Society, Museum, Mumbai [formerly Bombay], India
BPBM: Department of Zoology, Bernice P. Bishop Museum, Honolulu, Hawaii, USA
BRT: (= USTL)
BSCM: (= BSM)
BSM: Department of Agriculture, Bureau of Science, Manila, Luzon, the Philippines (no longer extant) [destroyed January 1945 during World War II]
BSMP: National Institute for Science and Mathematics, University of the Philippines, Manila, Luzon, the Philippines
BSP: (= BSPG)
BSPG: Bayerische Staatssammlung für Paläontologie und Historische Geologie, München, Germany
BSPM: (= BSPG)
BYU: Monte L. Bean Life Science Museum, Brigham Young University, Provo, Utah, USA
CA: Chicago Academy of Sciences, Chicago, Illinois, USA (partially destroyed by fire Oct. 1871)
CAD: Charles A. Domergue private collection
CAS: California Academy of Sciences, Golden Gate Park, San Francisco, California, USA (includes CAS-SU)
CAS-SU: California Academy of Sciences, San Francisco, California, USA (former Stanford University collection, now in CAS)
CBB: Colegio Biffi, Barranquilla, Colombia
CBC: Center for Biodiversity Conservation, Royal University of Phnom Penh, Phnom Penh, Cambodia
CBF: Colección Boliviana de Fauna, Museo Nacional de Historia Natural, Instituto de Ecología, Academia Nacional de Ciencias de Bolivia, La Paz, Bolivia
CC: F.C. Centeno & T.H. Condez field numbers
CG: Chapman Grant private collection
CGM: Cairo Geological Museum, Cairo, Egypt
CHUNB: Universidade Nacional de Brasília, Brasília, Distrito Federal, Brazil
CIB: Chengdu Institute of Biology, Chinese Academy of Sciences [formerly Academia Sinica], Chengdu, Sichuan, China (includes CIS, SBRI & SIBAC)
CIB-FN: Chengdu Institute of Biology field numbers
CIS: (= CIB)
CIT: California Institute of Technology, Los Angeles, California, USA (no longer extant; now = LACM)
CLB: Carlo L. Bonaparte private collection
CM: Carnegie Museum of Natural History, Pittsburgh, Pennsylvania, USA
CMR: Charleston Museum, Raleigh, South Carolina
CMS: National Museum, Colombo, Sri Lanka (includes NMSL)
CNAR: Colección Nacional de Anfibios y Reptiles, Universidad Nacional Autónoma de México, Ciudad México, Distrito Federal, México (includes IBHUNAM, IBM & UNAM)
CNHM: (= FMNH)
CPC: Commonwealth Paleontological Collection, Canberra, Australian Capital Territory, Australia

CRE: Costa Rican Expeditions collection of Jay Savage (to be deposited in LACM)
CRES: Centre for Natural Resources Management and Environmental Studies, Hanoi National University, Hanoi, Vietnam (now = VNUH)
CRUPF: Coleção Zoológica da Répteis da Universidade Federal de Passo Fundo, Passo Fundo, Brazil
CSBR: Caucasian State Biosphere Reserve Collection, Sochi, Russia
CSJ: Museo de Historia Natural, Colégio de San José, Medellin, Antioquia, Colombia
CSJP: Colégio San José de Pamplona, Pamplona, Norte de Santander, Colombia
CSNBR: Scientific Department, Caucasian State Natural Biosphere Reserve, Sochi, Russia
CTR: "Charles T. Ramsden" historical collection (in IES)
CU: Museum of Vertebrates, Cornell University, Ithaca, New York, USA
CUP: Department of Paleontology, Charles University, Prague, Czech Republic
CVRS: Centre Voltaique de la Recherche Scientifique, Ouagadougou, Burkina Faso
CVULA: Colección de Vertebrados de la Universidad de Los Andes, Mérida, Venezuela
CWM: Charles W. Myers field numbers
CWNU: China West Normal University, Nanchong, China
CWW: Wolfgang Weyrauch field numbers
CZACC: Colecciones Zoologicas de la Academia de Ciencias de Cuba, Institute of Ecology and Systematics, La Habana, Habana, Cuba (includes IZAC)
CZGB: Colecão Zoológica Gregório Bondar, Centro de Pesquisas-Comissão Executiva do Plano da Lavoura Cacaueira, Ilhéus, Bahia, Brazil
DGM: Departamento Nacional de Produção Mineral, Setor de Paleontologia, Universidade do Estado de Rio de Janeiro, Rio de Janeiro, Brazil
DHMECN: División de Herpetología del Museo Ecuatoriano de Ciencias Naturales, Quito, Pichincha, Peru
DML: (= WML)
DP-FNSP: (= CUP)
DPL: Dwight P. Lawson field numbers
DRV: David R. Vieites field numbers
DW: Dr. Wilson private collection
DZUSP: Departamento de Zoologia, Universidade de São Paulo, São Paulo, Brazil (= MZUSP)
EBRG: Museo de la Estación Biológia de Rancho Grande, Maracay, Aragua, Venezuela
EBUAP: Laboratorio de Herpetología, Escuela de Biología, Benemérita Universidad Autónoma de Puebla, Puebla, Mexico
EC: Elliott Coues field numbers
EHT: Edward H. Taylor private collection (specimens deposited primarily at CAS, CM, FMNH, KU & UIMNH)
EHT-CC: Edward H. Taylor collection catalogue numbers
EHT-HMS: Edward H. Taylor-Hobart M. Smith private collection (specimens deposited primarily at CAS, CM, FMNH, KU & UIMNH)
EIS: Essex Institute, Salem, Massachusetts (no longer extant; now = Peabody Essex Mus.)
EK: Eugen Kramer private collection
ENS: Eric N. Smith field numbers
EPN: Departamento de Ciencias Biológicas, Escuela Politécnica Nacional, Quito, Pichincha, Ecuador
FAT: Count Francisci Annibalis Turriani private collection, Museo Illustrissimi Turriano, Italy (no longer extant)
FEW: Francis E. W. Venning specimen numbers
FGZC: Frank Glaw field numbers
FHGO: Fundación Herpetológica "Gustavo Orcés," Quito, Pichincha, Ecuador
FHSC: Vertebrate Paleontology Collection, Fort Hays State University, Fort Hays, Kansas, USA
FK: Fred Kraus field numbers
FM: Faizabad Museum, Faizabad, Uttar Pradesh, India
FML: Instituto Herpetológica, Fundación "Miguel Lillo," San Miguel de Tucumán, Tucumán, Argentina
FMNH: Division of Amphibians and Reptiles, Field Museum of Natural History, Chicago, Illinois, USA (includes CNHM)
FMNHG: Field Museum of Natural History, Paleontology Collections, Geology Department, Chicago, Illinois, USA
FMSM: Federated Malay States Museum, Kuala Lumpur, Selangor and Taiping, Perak, West Malaysia (no longer extant, now = NMM) [partially destroyed on 10 March 1945 during World War II]
FPM: Museum of Natural History and Pathological Anatomy, Fort Pitt, Chatham, England, United Kingdom (no longer extant)
FSL: (= UCBL)
FU: Fujian University, Department of Biology, Shanghai, Guangdong, China
FWP: Fred S. Parker field numbers
GECM: Geographical and Exploring Commission of the Republic of México collection of the World Exhibition in New Orleans, LA, 1879–1885 [original collection destroyed by fire 29 Aug. 1884; second collection Oct. 1884–Jan. 1885]
GIH: Geological Institute of Hungary, Budapest, Hungary
GM: Geiseltalmuseum, Martin-Luther-Universität, Halle-Wittenberg, Germany
GMU: Department of Biology, Guangxi Medical University, Nanning, Guangxi Zhuang Autonomous Region, China
GNM: Göteborgs Naturhistoriska Museum [formerly Naturhistoriska Riksmuseet], Göteborg, Sweden (includes NHMG)
GPIBO: Institut für Paläontologie, Rheinische Friedrich-Wilhelm-Universität, Bonn, North Rhine-Westphalia, Germany
GSI/GC: Geologic Survey of India, Nagpur, India
GSI/Pal/CR: Geological Survey of India, Nagpur, India
GSNJ: Geological Survey of New Jersey, Trenton, New Jersey (now = New Jersey Geological and Water Survey)
GU/RSR/VAS: Department of Geology, Vastan Lignite Mine collection of R.S. Rana, H.N.B. Garhwal University, Srinagar, Uttaranchal, India
GVAG: Genevieve V.A. Gee field numbers
HGIM: Hungarian Geological Institute Museum, Budapest, Hungary

H-GSP: Harvard-Geological Survey of Pakistan Project (to be deposited in Islamabad Natural History Museum, Islamabad, Pakistan)
HMG: Hunterian Museum of Geology, University of Glasgow, Glasgow, Scotland, UK
HMS: Hobart M. Smith private collection (specimens deposited primarily at CAS, CM, FMNH, KU & UIMNH)
HNC: Hof-Naturalien-Cabinete, Wien, Austria (no longer extant)
HNHM: Hungarian Natural History Museum [formerly Magyar Természettudományi Múzeum], Budapest, Hungary (includes MNH)
HNU: Animal Museum, Hunan Normal University, Changsha, Hunan, China
HT: Harold Trapido field numbers
HUJ: Department of Zoology, Hebrew University of Jersusalem, Jerusalem, Israel
HUJP: (= HUJ-PAL)
HUJ-PAL: Paleontological Collection, Department of Zoology, Hebrew University of Jersusalem, Jerusalem, Israel
HvM: Hermann von Meyer personal collection
IAV: Instituto de Animales Venenosas "Dr. Jorge W. Abaloz," Santiago del Estero, Argentina
IAvH: Colección Herpetológica, Instituto de Investigación de Recursos Biológicos Alexander von Humboldt, Villa de Leyva, Bogotá, Cundinamarca, Colombia
IB: Herpetological collection Alphonse Richard Hoge, Instituto Butantan, São Paulo, São Paulo, Brazil (destroyed by fire 15 May 2010)
IBHUNAM: (= CNAR)
IBI: (= MZUB)
IBM: Instituto de Biología Herpetological Collections, Universidad Nacional Autónoma de México, Ciudad México, Distrito Federal, México (= CNAR)
ICN: (= ICNMNH)
ICNMHN: Instituto de Ciencias Naturales, Museo de Historia Natural, Universidad Nacional de Colombia, Bogotá, Cundinamarca, Colombia
ID: Indraneil Das field numbers
IEBR: Institute of Ecology and Biological Resources, National Center for Nature, Science and Technology of Vietnam, Hanoi, Vietnam
IES: Instituto de Ecología y Sistemática, Cuba
IFAN: Institut Fondamental d'Afrique Noire [formerly Institut Française d'Afrique Noire], Dakar, Senegal
IGB: Instituto Gabinetlo, Padova, Padua, Italy
IITR: Vertebrate Paleontology Laboratory, Department of Earth Sciences, Indian Institute of Technology, Roorkee, Uttar Pradesh, India
ILS: (= MLS)
IMC: Indian Museum, Calcutta, West Bengal, India (no longer extant, now = ASK)
IMCS: Institut Miquel-Crusafont, Sabadell, Spain
IMRC: (= IRMC)
IMRKL: Institute of Medical Research, Kuala Lumpur, Selangor, West Malaysia
INCDS: Institutul National de Cercetare-Dezvoltare pentru Stirte Biologice, Bucharest, Romania
IND: Laboratoria de Fauna, Division de Fauna Terrestre, Instituto Nacional de Recursos Naturales Renovables y Ambiente, Bogotá, Cundinamarca, Colombia
INHMT: Instituto Nacional de Higiene, Guayaquil, Guayas, Ecuador
INIGM: Instituto Nacional de Investigaciónes Geológico-Mineras, Bogotá, Cundinamarca, Colombia
INIRENA: Instituto de Investigaciones sobre los Recursos Naturales, Universidad Michoacana de San Nicolás de Hidalgo, Morelia, Michoacán, Mexico
INM: Instituto Nacional de Microbiología "Gustav G. Malbrán," Buenos Aires, Argentina
IOAN: P. P. Shirshov Institute of Oceanology, Russian Academy of Sciences, Moscow, Russia
IOC: Instituto Oswaldo Cruz, Rio de Janeiro, Brazil
IPS: Institut de Paleontología "Miguel Crusafont," Sabadell, Cataluña, Spain
IPUB: (= PIUB)
IRD: Institut de Recherche pour le Développement, Dakar, Dakar, Senegal
IRMC: Imperiàle e Reale Museo di Fisica e Storia Naturale della Capitale, Firenze, Italy (no longer extant)
IRSNB: Institut Royal des Sciences Naturelles de Belgique, Bruxelles, Belgium
ISCM: Institut Scientifique Cherifien, Rabat, Moroccos
ISFM: (= ISM)
ISM: Institute of Science Museum, Taipei, Taiwan (no longer extant)
ISMF: Instituto di Sanità Militare di Firenze, Firenze, Italy
ITT: Instituto Technológico de Ciudad Victoria, Ciudad Victoria, Tamaulipas, Mexico
IVO: Serpentario del Instituto Venezolano de Ofidiología, Caracas, Distrito Capital, Venezuela
IVP: Instituto Vital Brazil, Niterói, Rio de Janeiro, Brazil
IVPP: Institute of Vertebrate Paleontology and Palaeoanthropology, Academia Sinica, Beijing, China
IZAC: Instituto de Zoologia, Academia de Ciencias República de Cuba, La Habana, Habana, Cuba (= CZACC)
IZPAN: Institute of Paleozoology, Polska Akademia Nauk [Polish Academy of Sciences], Warsaw, Poland
IZUC: Instituto de Zoología, Universidad de Concepción, Concepción, Chile (no longer extant, now = MZUC)
IZUCS: Collezioni Zoologiche [formerly Istituto di Zoologia], Università de Cagliari, Cagliari, Sardinia, Italy
JA: Museo Jonae Alströmer, Sweden (no longer extant, now = NHR)
JAC: Jonathan A. Campbell field numbers
JD: John Dwyer private collection
JDL: James D. "Skip" Lazell field numbers
JEC: John E. Cadle field numbers
JGF: J. G. Fischer private collection, Hamburg, Germany
JH: Julius Hurter private collection, St. Louis, Missouri, USA
JMR: Juan M. Renjifo field numbers, Colombia
JPO: John P. O'Neill field numbers
JRF: John R. Feick field numbers
JRP: Jeff R. Parmelee field numbers
JSH: Juan J. Silva-Haad field numbers
JU: Department of Geology, University of Jammu, Jammu, India

JWM: Johann W. von Müller private collection
KBIN: (= IRSNB)
KIU: (= KUM)
KIZ: Kunming Institute of Zoology, Chinese Academy of Sciences [formerly Academia Sinica], Kunming, Yunnan, China
KM: (= KMJ)
KMH: Kim M. Howell field numbers
KMJ: Kagoshima Museum, Kagoshima, Japan [partially destroyed during World War II]
KSU: Museum of Natural History, Kharkov State University, Kharkov, Russia
KU: Museum of Natural History, University of Kansas, Lawrence, Kansas, USA
KUM: Kyoto University Museum, Kyoto University [formerly Kyoto Imperial University], Kyoto, Japan
KUVP: Vertebrate Paleontology, University of Kansas Natural History Museum, Lawrence, Kansas, USA
LACM: Natural History Museum of Los Angeles County, Los Angeles, California, USA (includes CIT)
LCB: Loren C. Binford field numbers
LEG: Lawrence E. Griffin field numbers, Philippines
LIV: (= WML)
LM: Naturkundemuseum Leipzig [formerly Leipzig Museum], Leipzig, Germany [partially destroyed during World War II]
LMB: Moravské Zemské Muzeum [Moravian Museum], Brno, Czech Republic
LMK: Laurence M. Klauber private collection, San Diego, California, USA (now in SDSNH)
LMNMO: Herpetological Collection, Landesmuseum für Natur und Mensch, Oldenburg, Germany
LNHM: Lübeck Natural History Museum [formerly Lübeck Museum], Lübeck, Germany [destroyed 28 March 1942 during World War II]
LNK: (= SMNK)
LSNUI: Laboratoire des Sciences Naturelles, Université-Indochinoise, Hanoi, Vietnam (no longer extant, now in MNHN)
LSUMG: Museum of Geology, Louisiana State University, Louisiana State University, Baton Rouge, Louisiana, USA
LSUMZ: Louisiana Museum of Natural History [formerly Museum of Natural Sciences and Museum of Zoology], Louisiana State University, Baton Rouge, Louisiana, USA
MACN: Museo Argentino de Ciencias Naturales "Bernardino Rivadavia" [formerly Museo Nacional de Buenos Aires], Buenos Aires, Buenos Aires, Argentina (formerly MNBA)
MAFR: Museum Adolphi Friderici Regis [also Museum Drottningholmense], Drottningholm, Sweden (no longer extant, now in NHR)
MAGNT: (= NTM)
MAS: Malcolm A. Smith private collection, London, United Kingdom
MB: Museo Blochiano [Marcus E. Bloch private collection], Berlin, Germany (no longer extant; now = ZMB)
MBH: Michael B. Harvey field numbers
MBI: (= MZUB)
MBL: Museu Bocage, Universidade de Lisboa, Lisboa, Portugal (destroyed by fire 18 March 1978)
MBLC: Marine Biological Laboratory, University of Copenhagen, Copenhagen, Denmark
MBLUZ: Museo de Biología de la Universidad del Zulia, Maracaibo, Zulia, Venezuela
MBS: (= NMBA)
MBUCV: Museo de Biología, Universidad Central de Venezuela, Caracas, Distrito Capital, Venezuela
MCG: Museo del Colegio San José de Guanentá, San Gil, Santander, Colombia
MCN: Museu de Ciências Naturales, Fundaçao Zoobotânica do Rio Grande do Sul, Porto Alegre, Rio Grande do Sul, Brazil
MCNA: Museo de Ciências, Naturales de Alava, Vitoria, Spain
MCNC: Museo de Ciências Naturales, Los Caobos (Plaza Morelos), Caracas, Distrito Capital, Venezuela
MCNG: Museo de Ciências Naturales de la UNELLEZ [formerly Museo de Zoología], Guanare, Portuguesa, Venezuela
MCP: Museu de Ciências e Tecnologia da PUCRS [Pontíficia Universidade Católica do Rio Grande do Sul], Porto Alegre, Rio Grande do Sul, Brazil
MCV: Museo Civico di Vicenza, Vicenza, Italy
MCZ: Department of Herpetology, Museum of Comparative Zoology, Harvard University, Cambridge, Massachusetts, USA
MCZ-FS: MCZ field series
MCZ-SC: MCZ slide collection
MCZ-VP: Department of Vertebrate Paleontology, Museum of Comparative Zoology, Harvard University, Cambridge, Massachusetts, USA
MD: Museo Regional do Dundo, Chitato, Luanda-Norte, Angola
MDG: Museum de Geer, Sweden (no longer extant; now in NHR)
MDR: (= MAFR)
MDUG: Museo de Historia Natural "Alfredo Dugès," Universidad de Guanajuato, Guanajuato, México
MFAC: (= MRAC)
MFB: (= CIB)
MG: Museo Laurentii Theodori Gronovii [also Museum Gronovianum], Lugdunum Batavorum (= Leiden) (no longer extant; possibly in RMNH)
MGF: Musée de Gannat, Gannat, France
MGL: Musée Guimet d'Histoire Naturelle, Lyon, France (no longer extant, now = MMC)
MGM: Madras Government Museum, Egmore, Chennai, Tamil Nadu, India
MGPF: (= MGUF)
MGPUF: (= MGUF)
MGUF: Museo di Geologie e Paleontologie, Università di Firenze, Firenze, Italy
MH: Museo Humphrediano, Strasbourg, France (no longer extant) (= MZUS)
MHGI: (= HGIM)
MHNCI: Museu de História Natural Cupão da Imbuia, Curitiba, Paraná, Brazil

MHNG: Muséum d'Histoire Naturelle Genève, Genève, Switzerland
MHNJP: (= MUSM)
MHNL: Muséum d'Histoire Naturelle de Lyon, Lyon, France (no longer extant, now = MMC)
MHNLS: Museo de Historia Natural La Salle, Fundación La Salle de Ciências Naturales [formerly Museo de Ciências Naturales], Caracas, Distrito Capital, Venezuela.
MHNM: Museo Nacional de Historia Natural y Antropología [formerly Museo de Historia Natural de Montevideo], Montevideo, Montevideo, Uruguay
MHNMF: Museum d'Histoire Naturelle de Marseille, Marseille, France
MHNN: Muséum d'Histoire Naturelle de Neuchâtel, Neuchâtel, Switzerland (includes MZN)
MHNPB: Museum d'Histoire Naturelle Pays-Bas, Leiden, the Netherlands (no longer extant, now = RMNH)
MHNR: Muséum d'Histoire Naturelle de La Rochelle, La Rochelle, France
MHNSM: Museo de Historia Natural, Universidad Nacional Mayor de San Marcos, Lima, Lima, Perú
MHNSR: Museo de Historia Natural de San Rafael, San Rafael, Mendoza, Argentina
MHNUC: Museo de Historia Natural Universidad del Cauca, Popoyán, Colombia
MICP: Museo Instituo "Clodomiro Picado," Universidad de Costa Rica, San José, Costa Rica
MISGF: Museum of the Institute of Science of the Government of Formosa, Taipei, Taiwan (no longer extant)
MJU: Museo Jenensis Universitatis, Germany (no longer extant)
MLB: Museo Lugdunensi Batavorum, Leiden, the Netherlands (no longer extant)
MLH: Museum Lampianum, Hannover, Germany (no longer extant, now = ZPW)
MLP: Museo de La Plata, Universidad de La Plata, Buenos Aires, Buenos Aires, Argentina
MLPA: (= MLP)
MLS: Museo de Historia Natural [formerly Museo del Instituto] de La Salle, Bogotá, Cundinamarca, Colombia (destroyed by fire 9–10 April 1948)
MLU: Institut für Zoologie und Zoologisches Sammlung, Martin-Luther-Universität, Halle-Wittenberg, Germany
MM: Museum of Monaco, Monte Carlo, Monaco (no longer extant; now = ZSM)
MMBR: Musée de la Mer, Brest, Finistèrre, France
MMC: Muséum au Musée des Confluences, Lyon, France [to open in 2014] (includes MGL & MNHL)
MMK: Museo de la Misión de Kavanayen, Kavanayen, Bolívar, Venezuela
MML-PV: Museo Municipal de Lamarque Rio Negro, Neuquén, Neuquén, Argentina
MMS: Macleay Museum, University of Sydney, Sydney, Australia (no longer extant; now in AMS)
MMUS: (= MMS)
MN: (= MNRJ)
MNA: Museum of Northern Arizona, Flagstaff, Arizona, USA
MNBA: Museo Nacional de Buenos Aires, Buenos Aires, Argentina (no longer extant, now = MACN)
MNCN: Museo Nacional de Ciencias Naturales, Madrid, Madrid, Spain
MNCR: Museo Nacional de Costa Rica, San José, San José, Costa Rica
MNGL: (= MHGI)
MNH: (= HNHM)
MNHMU: (= MHNM)
MNHN: Muséum National d'Histoire Naturelle, Paris, Ile-de-France, France (includes LSNUI)
MNHNC: Museo Nacional de Historia Natural, Zoología, Santiago, Santiago, Chile
MNHNCU: Museo Nacional de Historia Natural, La Habana, Habana, Cuba
MNHNM: (= MHNM)
MNHNP: Mueo Nacional de Historia National Edificio Patria, Tacuan E/25 de Mayo/Cer. Cora, Asunción, Paraguay
MNHNU: (= MHNM)
MNHSR: Museo de Historia Natural de San Rafael, San Rafael, Argentina
MNK: Museo de Historía Natural "Noel Kempff Mercado," Santa Cruz, Santa Cruz, Bolivia
MNKNU: Museum of Nature, V.N. Karazin Kharkiv National University, Kharkiv, Ukraine
MNKR: (= MNK)
MNRJ: Museu Nacional, Universidade Federal do Rio de Janeiro, Rio de Janeiro, Guanabara, Brazil
MP: Museum Principis, Sweden (no longer extant; now in ZMUU)
MPB: (= MHNPB)
MPCA: Museo Provincial de Cipolletti "Carlos Ameghino," Cipolletti, Río Negro, Argentina
MPEG: Museu Paraense "Emilio Goeldi," Zoologia, Belém, Pará, Brazil
MPI: Museo di Pavia, Lombardy, Pavia, Italy
MPSP: Museu Paulista, São Paulo, São Paulo, Brazil (no longer extant; now = MZUSP)
MRAC: Musée Royal de l'Afrique Centrale [Koninklijk Museum voor Midden Afrika], Tervuren, Flanders, Belgium
MRF: (= IRMC)
MRSN: (= MSNTO)
MSB: Department of Biology, Museum of Southwestern Biology, University of New Mexico, Albuquerque, New Mexico, USA
MSK: Muhammed Sharif Khan private collection, Rabwah, Pakistan
MSNG: Museo Civico di Storia Naturale "Giacomo Doria," Genova, Liguria, Italy
MSNM: Museo Civico di Storia Naturale di Milano, Milano, Lombardia, Italy (includes MZUT) [partially destroyed in 1943 during World War II, including Jan's (1853–1866) collection of 1000 species, types, and catalogues]
MSNTO: Museo Civico di Storia Naturale di Torino [formerly Museo Regionale di Scienze Naturali], Torino, Piemonte, Italy (formerly MRSN)
MSP: Madras Snake Park Trust, Mamallapuram, Tamil Nadu, India
MSUVP: Vertebrate Paleontology Collection, Michigan State University, East Lansing, Michigan, USA

MT: Musée de Toulouse, Toulouse, Haute-Garonne, France
MTD: Museum für Tierkunde, Senckenberg Naturhistorische Sammlungen, Dresden, Saxony, Germany (formerly MTKD) [partially destroyed 13 Feb. 1945 during World War II]
MTKD: (= MTD)
MTR: Miguel T. Rodrigues field numbers
MUSM: Museo de Historia Natural "Javier Prado," Universidad Nacional Major de San Marcos, Lima, Lima, Perú (formerly MHNJP)
MUVP: Vertebrate Paleontology Collection, Midwestern University, Snyder, Texas, USA
MV: Museo Caesareo Vindobonensi, Wien, Austria (no longer extant)
MVP: Museum of Vertebrate Paleontology, University of California, Berkeley, California, USA
MVZ: Museum of Vertebrate Zoology, University of California at Berkeley, Berkeley, California, USA
MW: M. Ward private collection, Australia
MWNH: Museum Wiesbaden, Naturhistorische Landessammlung, Wiesbaden, Hesse, Germany (formerly NMSW and SMW) [partially destroyed Aug. 1940–March 1945 during World War II but some types survived]
MZB: Museum Zoologicum Bogoriense, Juanda 3, Kebun Raya, Bogor, Java, Indonesia
MZFC: Museo de Zoología "Alfonso L. Herrera," Facultad de Ciencias, Universidad Nacional Autónoma de México, México, Distrito Federal, Mexico
MZN: Musée Zoologique de Neuchâtel, Neuchâtel, Switzerland (= MHNN)
MZUB: Museo di Zoologia dell'Università di Bologna, Bologna, Italy (includes IBI)
MZUC: Museo de Zoología de la Universidad de Concepción, Concepción, Concepción, Chile
MZUF: Museo di Storia Naturale di Firenze, Sezione di Zoologia "La Specola," Università degli Studi di Firenze, Firenze, Toscana, Italy (includes NHCL)
MZUN: Museo di Zoologia di Napoli, Università degli Stdui di Napoli Federico II, Naples, Campania, Italy
MZUS: Musée de Zoologique de la Ville de Strasbourg, Université de Strasbourg, Strasbourg, Alsace, France [partially destroyed in 1943–Aug. 1944 during World War II]
MZUSP: Museu de Zoologia da Universidade de São Paulo, São Paulo, Brazil (includes MPSP)
MZUSP-FN: Museu de Zoologia da Universidade de São Paulo field numbers
MZUT: Museo Zoologico, Università di Torino, Torino, Italy (now in MSNM)
NCF: Department of Forest Insects, Northwestern College of Forestry, Xian, Shaanxi, China
NHCL: New Herpetological Collection of Benedetto Lanza, Museo di Storia Naturale di Firenze, Sezione di Zoologia "La Specola," Università degli Studi di Firenze, Firenze, Toscana, Italy (now in MZUF)
NHMB: (= NMBA)
NHMG: (= GNM)
NHMV: (= NMW)
NHMW: (= NMW)
NHR: Department of Vertebrate Zoology, Naturhistoriska Riksmuseet, Stockholm, Stockholm, Sweden (includes MAFR & MDR)
NHRM: (= NHR)
NK: (= MNK)
NLO: Nikolai L. Orlov field numbers
NMB: Naturhistorisches Museum Braunschweig, Brunswick, Germany (no longer extant, now = SNMBR) [destroyed 15 Oct. 1944 during World War II]
NMBA: Naturhistorisches Museum Basel, Basel, Switzerland
NMBE: Naturhistorisches Museum Bern, Bern, Switzerland
NMC: National Museums of Canada, National Museum of Natural Sciences, Ottawa, Ontario, Canada
NMK: National Museum, Nairobi, Central, Kenya
NMM: National Museum, Kuala Lumpur, Selangor, West Malaysia (includes FMSM and SM)
NM/M: Umtali Museum, Umtali, Southern Rhodesia (no longer extant, now = NMZB)
NMP: National Museum, Prague, Czech Republic
NMSL: (= CMS)
NMSR: (= NMZB)
NMSW: Naturhistorischen Museums der Stadt Wiesbaden, Wiesbaden, Hesse, Germany (= MWNH)
NMSZ: National Museum of Scotland [formerly Royal Scottish Museum], Edinburgh, Scotland, UK
NMT: National Museum, Dar es Salaam, Dar es Salaam, Tanzania
NMV: Museum Victoria [formerly National Museum of Victoria], Melbourne, Victoria, Australia
NMW: Naturhistorisches Museum, Wien, Austria
NMWGP: Naturhistorisches Museum, Geologie-Palaontologie, Wien, Austria
NMZB: Natural History Museum, Bulawayo, Zimbabwe (includes NMZB-UM)
NMZB-UM: Natural History Museum, Bulawayo, Zimbabwe (Umtali Museum collection)
NQT: Nguyen Quang Truong field numbers
NRM: (= NHR)
NRS: (= NHR)
NSM: National Science Museum, Bangkok, Thailand
NSMT: National Science Museum, Tokyo, Japan
NTI: Animal Industry Branch, Northern Territory Administration, Alice Springs, Australia
NTM: Northern Territory Museum of Arts and Sciences [formerly Museum and Art Gallery of the Northern Territory], Darwin, Northern Territory, Australia
NTM A/S: Northern Territory Museum of Arts and Sciences, Alice Springs, Australia
NUS: National University of Singapore, Singapore (no longer extant, now = ZRC)
NWNH: Staatliches Museum Wiesbaden, Wiesbaden, Hesse, Germany (= SMW)
NWU: Natural History Museum, Northwestern University, Chicago, Illinois, USA
OEHW: Otto E.H. Wucherer private collection
OF: MHNJP Ophidia collection numbers
OGM: Olduvai Gorge Museum, Olduvai Gorge, Ngorongoro Conservation Area, Tanzania

OMNH: Osaka Museum of Natural History, Osaka, Japan
ORSTOM: Office de Recherche Scientifique et Technologique Outre Mer, Paris, France
OSGP: Olivier S.G. Pauwels field numbers
OUM: Bodleian Library, Oxford University Museum, Oxford, England, UK
PCM: Philadelphia Commercial Museum, Philadelphia, Pennsylvania, USA (no longer extant)
PEM: Port Elizabeth Museum, Port Elizabeth, Cape of Good Hope, South Africa
PEPD: P.E.P. Deraniyagala private collection, Colombo, Sri Lanka
PIAN: Paleontogichesky Institut [Paleontological Institute], Akademia Nauk, Moscow, Russia
PIMUZ: Paläontologischesky Institut und Museum der Universität, Zürich, Switzerland
PIUB: Paläontologisches Institut, Rheinische Friedrich-Wilhelms-Universität Bonn, Bonn, North Rhine-Westphalia, Germany
PK: P.J.R. Kok field numbers
PM: Philadelphia Museum or C.W. Peale Museum, Philadelphia, Pennsylvania, USA (no longer extant, 1846; now = MCZ)
PMNH: (= YPM)
PNM: Philippine National Museum, Manila, Luzon, the Philippines [destroyed January 1945 during World War II]
PT: Proyecto Tupinambis, Argentina field numbers
PTB: Prince Therese von Bayern collection (no longer extant, now = Staatliches Museum für Völkerkunde, Munich, Germany)
PU: Princeton University, Natural History Museum, Princeton, New Jersey, USA
PUL: Purdue University, Lafayette, Indiana, USA (no longer extant)
QCAZ: Pontífica Universidad Católica del Ecuador, Quito, Pichincha, Ecuador
QM: Centre for Biodiversity, Queensland Museum, Brisbane, Queensland, Australia
QMB: (= QM)
QMF: Queensland Museum Fossil Collection, Brisbane, Queensland, Australia
QMP: Quetta Museum, Quetta, Baluchistan, Pakistan (no longer extant)
QSMI: Queen Saovabha Memorial Institute, Thai Red Cross Society, Bangkok, Thailand
RAN: Ronald A. Nussbaum private collection
RBS: Robert B. Stuebing field numbers
RCSM: Museum of Royal College of Surgeons, London, England, UK
RE: Robert E. Elbel field numbers
RGMC: (= MRAC)
Rh-E.F.: Musée de Gannat, Gannat, France
RLB: René L. Bourret field numbers
RM: (= RMBR)
RMAC: (= MRAC)
RMBR: Raffles Museum of Biodiversity Research, Singapore, Singapore
RMNH: Naturalis-Nationaal Natuurhistorisch Museum [formerly Rijksmuseum van Natuurlijke Historie], Leiden, the Netherlands (includes MHNPB & ZMA)
RMNH.RENA: (= RMNH)
ROM: Royal Ontario Museum, Toronto, Ontario, Canada
RSI: Razi State Vaccine and Serum Institute, Tehran, Iran
RSL: Radcliffe Science Library (formerly Bodleian Library), University of Oxford, London, United Kingdom (Cantor sketches in "Drawings of animals," vols. 1–2)
RSM: Royal Scottish Museum, Edinburgh, Scotland, UK
RSR: Rajendra S. Rana private collection (included in GU/VAS)
RT: Richard Thomas private collection, San Juan, Puerto Rico
RUSB: Department of Earth Sciences, Indian Institute of Technology, Roorkee, India
SAM: South African Museum, Cape Town, Cape of Good Hope, South Africa
SAMA: South Australian Museum, Adelaide, South Australia, Australia
SAMA-FN: South Australian Museum field numbers
SBH: S. Blair Hedges field numbers
SBRI: Sichuan Biological Research Institute, Chengdu, Sichuan, China (= CIB)
SCUM: Sichuan University Museum, Chengdu, Sichuan, China
SDSM: Museum of Geology, South Dakota School of Mines, Rapid City, South Dakota, USA
SDSNH: San Diego Society of Natural History, San Diego Natural History Museum, Balboa Park, San Diego, California, USA (includes LMK)
SERI: (= CIB)
SGDB: Geological collection of the opencast mine Bílina [Sbirky geologie, Doly Bílina], Czech Republic
SHNBA: (= MACN)
SIBAC: Southwest Institute of Biology, Academia Sinica, Chengdu, Sichuan, China (= CIB)
SIM: Smithsonian Institution Museum, Washington, D.C., USA (= USNM)
SIPT: State Institute of Pedagogy, Tiraspol, Russia
SJP: (= CSJP)
SM: Selangor Museum, Kuala Lumpur, Selangor, West Malaysia (no longer extant, now = NMM)
SMF: Mertens catalogue, Natur-Museum und Forschungs-Institut Senckenberg, Frankfurt am Main, Germany.
SMF-B: Oskar Boettger catalogue, Museum der Senckenbergischen Naturforschenden Gesellschaft, Frankfurt am Main, Germany (= SMF)
SMF-M: Robert Mertens catalogue, Museum der Senckenbergischen Naturforschenden Gesellschaft, Frankfurt am Main, Germany (= SMF)
SMF-R: Eduard Rüppell catalogue, Museum der Senckenbergischen Naturforschenden Gesellschaft, Frankfurt am Main, Germany (= SMF)
SMK: Sarawak Museum, Kuching, Sarawak, East Malaysia
SMNH: Saskatchewan Museum of Natural History, Regina, Saskatchewan, Canada
SMNHC: Shanghai Museum of Natural History, Shanghai, Jiangxi, China

SMNK: Staatliche Museum für Naturkunde Karlsruhe [formerly Landessammlungen für Naturkunde Karlsruhe], Karlsruhe, Germany
SMNS: Staatliches Museum für Naturkunde in Stuttgart [Stuttgatd State Museum of Natural History], Ludwigsburg, Germany [partially destroyed Sept. 1944 during World War II]
SMP: (= SMPSMU)
SMPSMU: Shuler Museum of Paleontology, Southern Methodist University, Dallas, Texas, USA
SMW: (= MWNH)
SMWN: Staatsmuseum-Windhoek [State Museum], Windhoek, Khomas, Namibia
SNHM: Shanghai Museum of Natural Hisltory, Huanqpu, Shanghai, China
SNM: Singapore National Museum, Singapore (no longer extant, now = ZRC)
SNMBR: Staatliches Naturhistorisches Museum Braunschweig, Brunswick, Germany (includes NMB)
SNP: Sochi National Park, Sochi, Russia
SP: Sabah Parks Zoological Museum, Gunung Kinabalu Park, Sabah, East Malaysia
SPLUE: Paläontologische Sammlung, Friedrich-Alexander Universität [formerly Sammlungen des Palaontologischen Lehrstuhls des Universität Erlangen], Erlangen-Nürnberg, Bavaria, Germany
SRAR: Society for Research of Amur Regiõn, Vladivostok, Primorsky Krai, Russia (no longer extant)
STUM: Santo Tomas University Museum, Rizal, Manila, Luzon, the Philippines
SU: Stanford University, Palo Alto, California, USA (no longer extant, now in CAS as CAS-SU)
SUP: Silliman University, Dumaguete City, Negros Oriental, the Philippines
SYS: Museum of Biology, Sun Yat-Sen University [Zhongshan University], Guangzhou, China
SZE: Sistematik Zooloji Enstitüsü, Bornova-Izmir, Turkey
SZN: Stazione Zoologica "Anton Dohrn," Naples, Campania, Italy (includes UNZM)
TCWC: Texas Cooperative Wildlife Collection, Texas A & M University, College Station, Texas, USA
THNHM: Thailand Natural History Museum, National Science Museum, Bangkok, Thailand
TIU: Science College Museum, Tokyo Imperial University, Tokyo, Japan
TM: (= TMP)
TMP: Transvaal Museum of Natural History, Northern Flagship Institution, Pretoria, Transvaal, South Africa
TMT: Georgian National Museum [formerly Tiflis Museum], Tbilisi, Georgia
TNRC: Thai National Reference Collection, Thailand Institute of Scientific and Technological Research, Bangkok, Krung Thep Mahanakhon, Thailand (= NSM)
TST: T.S. Traill private collection
TUB: Technical University of Berlin, Berlin, Berlin, Germany
UA: Université d'Antananarivo, Antananarivo, Antananarivo, Madagascar
UADZ: Department of Zoology, University of Arequipa, Arequipa, Peru
UANL: Laboratorio de Herpetologia, Universidad Autónoma de Nuevo León, Nuevo León, Mexico
UAZ: Department of Ecology and Evolutionary Biology, University of Arizona, Tucson, Arizona, USA
UBIPRO: Unidad de Biologia, Tecnología y Prototipos, Tlalnepantla, México, Mexico
UCB: (= MVZ)
UCBL: Département des Sciences de la Terre, Université Claude-Bernard, Lyon 1, Rhône-Alps, France
UCBP: (= MVP)
UCG: Universidade Católica de Goiás, Goiânia, Goiás, Brazil
UCM: Museum of Natural History, University of Colorado, Boulder, Colorado, USA
UCMP: University of California, Museum of Paleontology, Los Angeles, California, USA
UCP: Museo de Historia Natural de la Universidad del Cauca, Popoyán, Cauca, Colombia
UCR: Museo de Zoología, Universidad de Costa Rica, San José, San José, Costa Rica
UCV: Universidad Central de Venezuela, Institue of Tropical Medicine, Caracas, Distrito Federal, Venezuela
UF: Florida Museum of Natural History [formerly Florida State Museum], University of Florida, Gainesville, Florida, USA
UFAC-PV: Coleção de Paleovertebrados, Laboratório de Pesquisas Paleontológicas, Universidade Federal do Acre, Rio Blanco, Brazil
UGVP: Vertebrate Paleontology Collection, University of Georgia, Athens, Georgia, USA
UHESM: Hydroelectric Power Plant of Serra da Mesa Collection, Universidade Católica de Goiás, Goiânia, Goiás, Brazil
UIMNH: Museum of Natural History, University of Illinois, Urbana, Illinois, USA
ULABG: Colección de Anfibios y Reptiles del Laboratorio de Biogeografia, Universidad de Los Andes, Mérida, Venezuela
UM: Umtali Museum (no longer extant; now = NMZB)
UMB: Überseemuseum, Breman, Breman, Germany
UMMP: Museum of Paleontology, University of Michigan, Ann Arbor, Michigan, USA
UMMZ: Museum of Zoology, University of Michigan, Ann Arbor, Michigan, USA
UNAH: Departamento de Biología, Universidad Nacional Autónoma de Honduras, Ciudad Universitaria, Tegucigalpa, Francisco Morazán, Honduras
UNAM: Departmento de Zoologia, Universidad Nacional Autónomia de México, Ciudad México, Distrito Federal, Mexico (= CNAR)
UNAM-LT: Estación de Biologia Tropical "Los Tuxtlas," Universidad Nacional Autónomia de México, Catemaco, Veracruz, Mexico
UNAMV: (= UNAM-LT)
UNM: (= MSB)
UNNE-CHC: Coleccíon Herpetológica Corrientes, Universidad Nacional del Nordeste, Corrientes, Corrientes, Argentina
UNS: University of Natural Sciences, Ho Chi Minh City, Ho Chi Minh, Vietnam

UNSM: Nebraska State Museum, University of Nebraska, Lincoln, Nebraska, USA
UNZM: University of Naples Zoological Museum, Naples, Campania, Italy (no longer extant, now = SZN)
UOMNH: University of Oklahoma Museum of Natural History, Norman, Oklahoma, USA
UPNG: University of Papua New Guinea, Port Moresby, Central, Papua New Guinea
UPR: University of Puerto Rico, Mayagüez, Puerto Rico
UPVI: Laboratorie de Paléontologie des Vertébrés, Université Paris VI, Paris, Ile-de-France, France
UR: (= URJ)
URJ: Agriculture and Home Economics Division, University of the Ryukyus, Nishihara, Ryukyu Islands, Japan
US: (= MZUS)
USL: University of Southwestern Louisiana, Lafayette, Louisiana, USA
USNM: National Museum of Natural History [formerly United States National Museum], Smithsonian Institution, Washington, District of Columbia, USA
USNM-FN: National Museum of Natural History field numbers
USTL: Université des Sciences et Techniques du Languedoc, Montpellier II, Languedoc, France [partially destroyed in 1944 during World War II]
UTA: Collection of Vertebrates, Department of Biology, University of Texas at Arlington, Arlington, Texas, USA
UTEP: Laboratory for Environmental Biology, Department of Biological Sciences and Centennial Museum, University of Texas at El Paso, El Paso, Texas, USA
UU: Universiteitmuseum Utrecht, Universiteit Utrecht, Utrecht, the Netherlands
UUZM: Zoological Museum, University of Utah, Salt Lake City, Utah, USA
UV: Departamento de Biología, Universidad del Valle, Cali, Valle, Colombia
UVC: (= UV)
UVG: Uinversidad del Valle de Guatemala, Guatemala City, Guatemala
UZM: (= ZMUC)
UZMK: Universitetets Zoologiske Museum, København, Denmark
VAS: (= GU/RSR/VAS)
VLKE: Vernay-Lang Kalahari Exped., Namibia, Africa, Mar.–Sept. 1930
VM: Vladivostock Museum, Vladivostock, Primorsky Krai, Russia
VNMN: Vietnam National Museum of Nature, Hanoi, Hanoi, Vietnam (includes CRES, VNUH)
VNUH: (= VNMN)
VPI: Vida Preciosa International, Boerne, Texas, USA
VR: J. V. Rueda field numbers
WAM: Western Australian Museum, Perth, Western Australia, Australia
WED: William E. Duellman field numbers
WHC: William Hyde Cabinet, Philadelphia, Pennsylvania
WHM: William Hunter Museum, London, England, UK (now Hunterian Museum and Art Gallery)
WHT: Wildlife Heritage Trust of Sri Lanka, Colombo, Sri Lanka
WML: Clore Natural History Centre, World Museum Liverpool [formerly Derby Museum], Liverpool, England, UK (includes DML)
WRH: W. Ron Heyer field numbers
WS: W. Schultze private collection, Manila, Philippines
YBU: College of Life Science and Food Engineering, Yibin University, Yibin, China
YPM: Peabody Museum of Natural History, Yale University, New Haven, Connecticut, USA (formerly PMNH)
YU: Department of Zoology, Yunnan Normal University, Kunming, Yunnan, China
ZCIKU: (= MNKNU)
ZDEU: Zoology Department, Ege University, Turkey
ZDKU: Museum of Natural History, Kharkiv University, Kharkiv, Ukraine
ZFMK: Zoologisches Forschungsmuseum [formerly Forschunginstitut und Museum] "Alexander Koenig," Bonn, North Rhine-Westphalia, Germany
ZIAS: Zoological Institute, Academia Sinica [Chinese Academy of Sciences], Shanghai, China
ZIB: Zoological Institute, Bonn, North Rhine-Westphalia, German (no longer extant) [destroyed 7–9 March 1945 during World War II]
ZIK: I. I. Schmalhausen Institute of Zoology, National Academy of Sciences of Ukraine, Kiev, Ukraine
ZIKP: Department of Paleozoology, Institute of Zoology, National Academy of Sciences of Ukraine, Kiev, Ukraine
ZIL: (= ZISP)
ZIMG: (= ZMG)
ZIN: (= ZISP)
ZIN PC: (= ZISP)
ZISP: Zoological Institute, Russian Academy of Sciences, St. Petersburg [formerly Leningrad], Russia (includes AIS, ZIL, ZIN & ZIN PC)
ZIUS: Zoologiska Institutionen, Stockholms Universitet, Stockholm, Sweden
ZM: Zoologisches Museum, Kanpur, Uttar Pradesh, India
ZMA: Institut voor Taxonomische Zoölogie [formerly Zoölogisch Museum], Universiteit van Amsterdam, Amsterdam, the Netherlands (now = RMNH)
ZMB: Museum für Naturkunde [formerly Zoologischen Museum], Leibniz-Institut für Evolutions- und Biodiversitätsforschung, Universität-Humboldt zu Berlin, Berlin, Berlin, Germany (includes MB) [partially destroyed 22–23 Nov. 1944 and 3 Feb. 1945 during World War II]
ZMBP: Museum für Naturkunde [formerly Paläontologischen Museum], Leibniz-Institut für Evolutions- und Biodiversitätsforschung, Universität-Humboldt zu Berlin, Berlin, Berlin, Germany
ZMG: Zoologisches Museum, Johann-Friedrich-Blumenbach-Institut für Zoologie und Anthropologie, Göttingen, Göttingen, Germany

ZMH: Zoologisches Museum Hamburg [formerly Zoologisches Institut und Museum], Universität Hamburg, Hamburg, Hamburg, Germany [partially destroyed in July 1943 during World War II, including type collection and catalogues]
ZMK: Zoological Museum, Kristiania, Oslo, Oslo, Norway (no longer extant, now = ZMUO)
ZMMU: Zoological Museum of Mikhail V. Lomonosov, Moscow State University [formerly Imperial Moscow University], Moscow, Russia
ZMT: S. Janashia State Museum of Georgia, Zoological Section, Georgian Academy of Sciences, Tbilisi, Georgia
ZMUC: Vertebrater, Zoologisk Museum, Københavns Universitet, København, København, Denmark

Acknowledgments

The number of people who have contributed to this effort over the past 30 plus years is so enormous that someone is likely to be forgotten. We thank everyone who has assisted us with literature, information or specimens.

For the use of data from unpublished manuscripts (some now published) we thank: Kraig Adler, Dave Barker, Merel J. Cox, Patrick David, Michel Domínguez, Charles M. Fugler, Hugo von Habsburg und Lothringen, Blair Hedges, Robert W. Henderson, Barry Hughes, Malcolm J. Largen, Hy Marx, Dennis Parmley, Jean-Claude Rage, Jens. B. Rasmussen, Franklin D. Ross, Carlos Pérez-Santos, Alan Resetar, and Zbigniew Szyndlar. For assistance with data on type specimens we thank Aaron Bauer (W. Peters types), Patrick David (MNHN), Esther Dondorp (RMNH), Ned Gilmore (ANSP), Rainer Günther (ZMB), Marinus Hoogmoed (RMNH), Ivan Ineich (MNHN), Rahul Khot (BNHS), Mathias Lang (BMNH, MNHN), Franklin D. Ross (RMNH), and Andrew F. Stimson and E. N. Arnold (BMNH). For unpublished locality data on geographic regions we thank Natasha Carter (Australia), M.J. "Jack" Cox (Thailand), and Jayaditya Purkayastha (Assam, India). For assistance with nomenclatural problems and examination of MNHN types we especially thank Patrick David.

For translation of critical papers we thank: Ingela Chef-Johansson (Swedish, Norwegian, German), Roxane Coombs (French), Marina Dzidziguri (Russian), Katherine Hespe (German), Florence Kil-Bosso (French, German), Mathias Lang (German, Dutch), Herbert Levi (German), Angela Lim (Chinese), Shiu-Ping Osborn (Chinese), Jury Rudyakov (Russian), and Britta Weimann (German).

For providing rare or much needed literature, we thank: Kraig Adler, David Auth, Aaron Bauer, Donald G. Broadley, Jonathan A. Campbell, Roger Conant, Jeanette Covacevich, James R. Dixon, Richard Etheridge, M.J. Fouquette, J. Alan Holman, Marinus Hoogmoed, Barry Hughes, Kathleen Kelly, G.R. McLachlan, K.-Y. Lue, Hidetoshi Ota, Paulo Passos, Jean-Claude Rage, Alan Resetar, Janis A. Roze, Hobart M. Smith, Zbigniew Szyndlar, Paulo E. Vanzolini, John Visser, Harlan D. Walley, and Addison H. Wynn.

For the use of personal libraries, we thank: Richard Estes, Richard Etheridge, Laurence M. Klauber, Ernie Liner, Gregory K. Pregill, Douglas A. Rossman, Karl P. Schmidt, and Ernest E. Williams.

For access to and assistance in institutional libraries, we thank: Academy of Natural Sciences of Philadelphia, California Academy of Sciences, Carnegie Museum, Field Museum of Natural History, Los Angeles County Museum, Louisiana State University, National Museum of Natural History, San Diego Natural History Museum, San Diego State University, University of Florida Department of Herpetology, University of Michigan Museum of Zoology, and University of Texas at Arlington. We are especially indebted to the staff of the Ernst Mayr Library (MCZ) for assistance with literature over the past two decades (Dorothy Bahr, Ronnie Broadfoot, Roxane Coombs, Dana Fisher, Connie Rinaldo, and Mary Sears).

In particular we especially thank the staff of the rare book rooms and collections who have assisted us in our search for literature: Ewell Sale Stewart Library and Wolf Room (ANSP), Rare Book Room (FMNH), Special Collections (MCZ: Roxane Coombs, Dana Fisher), and Laurence M. Klauber Room (SDSNH: Judy Dyer).

KLW acknowledges 1990 and 1995 summer fellowships from Northwestern State University and Fleming Thomas, who enjoyed the challenges given to him in finding rare articles via interlibrary loan.

For opinions and advice on nomenclatural problems we earnestly thank: Patrick David, Jim Dixon, Carl Gans, Donald E. Hahn, Michael Harvey, Edmond V. Malnate, Paula Passos, Franklin D. Ross, Hobart M. Smith, and Larry D. Wilson.

For advice on, and in some cases reading over, specific accounts we wish to thank: Donald Broadley on *Adenorhinos, Atheris, Bitis, Montatheris*, and *Proatheris*; Laurent Chirio on *Prosymna*; Patrick David on *Opisthotropis* and *Amphiesma*; Jim Dixon on *Liophis*; Michael Harvey on *Dipsas*; Travis J. La Duc on *Adelphicos*; Thales de Lema on *Apostolepis* and *Phalotris*; Rafaqat Mansoor on *Spalerosophis*; Zoltán Tamás Nagy & Josef F. Schmidtler on *Eirenis*; Jean-Claude Rage looked at fossil genera starting with "P" and also *Simoliophis*; Dean Ripa on *Lachesis*; Douglas A. Rossman on *Adelophis, Helicops*, Regina, *Seminatrix, Storeria*, and *Thamnophis*; Gernot Vogel on *Boiga* and *Dendrelaphis*; Larry D. Wilson on *Geophis* and *Tantilla*, and all the Central American species accounts, and Wolfgang Wüster on *Naja*.

Last, heartfelt thanks from we three authors go to our academic advisor at LSU, Douglas A. Rossman, who made our graduate study a rewarding, educational, and enjoyable experience.

Valid Genera and Species

A

ACALYPTOPHIS Boulenger, 1896a (*nomen substitutum*) (Elapidae)

Synonyms: *Acalyptus* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Acolyptus* – Higgins, 1873 *(nomen incorrectum), Acalyphis* – Fayrer, 1877 *(nomen incorrectum), Acalyphus* – Hoffmann, 1890 *(nomen incorrectum), Acatyptus* – Hoffmann, 1890 *(nomen incorrectum), Pseudodistira* Kinghorn, 1926, *Agalyotophis* – Maass-Berlin, 1933 *(nomen incorrectum), Acalyitephis* – Briceño-Rossi, 1934 *(nomen incorrectum), Acalypthopis* – Rosenfeld, 1963 *(nomen incorrectum),* and *Acalptophis* – Minton & Dunson, 1985 *(nomen incorrectum).*

Type species: *Acalyptus peronii* A.-M.-C. Duméril, 1853.

Distribution: Marine waters of Sino-Australia, including Arafura Sea, Coral Sea, Gulf of Carpentaria, Gulf of Thailand, South China Sea and Timor Sea.

Sources: E.H. Taylor, 1965, McDowell, 1972a, L.A. Smith, 1974, Cogger, 1975, Cogger et al., 1983a, Ehmann, 1992, Golay et al., 1993, O'Shea, 1996, Ineich & Rasmussen, 1997, David & Ineich, 1999, Bauer & Sadlier, 2000, Ineich & Laboute, 2002, Wells, 2007, Xiang & Li, 2009, Zaher et al., 2009, I. Das, 2010, 2012, A.R. Rasmussen et al., 2011 and Hoser, 2012e.

Remarks: A synonym of *Hydrophis fide* Sanders et al., 2013.

1. *Acalyptophis peronii* (A.-M.-C. Duméril, 1853). Mém. Acad. Sci. Paris 23: 522. (*Acalyptus peronii*)

Synonyms: *Acalyptus superciliosus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Acalyptus superciliosus peroni* Duméril, Bibron & Duméril, 1854b, and *Pseudodistira horrida* Kinghorn, 1926.

Type: Holotype, MNHN 7711 (F. Péron & C.A. Lesueur, 1800–1804).

Type locality: "Nouvelle-Hollande?" [= Australia].

Distribution: Sino-Australia. Southern China (Guangdong, Hong Kong), Taiwan, Vietnam, Malaysia, E Indonesia (West Papua: Joes Is.), Papua New Guinea (Western), Australia (Northern Territory, Queensland, N Western Australia) and New Caledonia.

ACANTHOPHIS Daudin, 1803c (*nomen susbstitutum*) (Elapidae)

Synonyms: *Acanthurus* Daudin, 1803b *(nomen praeoccupatum), Acantophis* – Fischer von Waldheim, 1808 *(nomen incorrectum), Acanthophis* Leach, 1814 *(nomen praeoccupatum), Ophryas* Merrem, 1820, *Ophyrus* – Bory de Saint-Vincent, 1824 *in* 1822–1831 *(nomen incorrectum), Acantophis* Gray, 1825 *(nomen emendatum), Ophyas* – Gray, 1825 *(nomen incorrectum), Acantophis* Berthold *in* Latreille, 1827 *(nomen emendatum), Ophrias* Cuvier, 1829 *(nomen emendatum), Acantrophis* – Cuvier, 1836 *(nomen incorrectum), Orophias* Oken, 1836 *(nomen emendatum), Acanthopes* – Swainson, 1839 *(nomen incorrectum), Acauthophis* – Steindachner, 1867 *(nomen incorrectum), Acantopis* – Senna, 1886 *(nomen incorrectum), Acanthopsis* Sherborn, 1902 *(nomen emendatum), Acanthiophis* – Nikolsky, 1916 *(nomen incorrectum), Ancanthophis* – Fairley, 1929 *(nomen incorrectum),* and *Acanthopus* – Trethewie, 1956 *(nomen incorrectum).*

Type species: *Acanthophis cerastinus* Daudin, 1803c.

Distribution: Austro-Papua.

Sources: F. Werner, 1923b, Storr, 1981b, Cogger et al., 1983a, Schwaner et al., 1985, Hoser 1989, 1995, 1998b, 2002a, 2012e, Hutchinson, 1990, Ehmann, 1992, Golay et al., 1993, Greer, 1997, Keogh, 1998, David & Ineich, 1999, Cogger, 2000, Fry et al., 2001, 2002, Scanlon & Lee, 2004, Wüster et al., 2005, Sanders et al., 2008 and Zaher et al., 2009.

1. *Acanthophis antarcticus* (G. Shaw & Nodder, 1802 *in* 1789–1813). Nat. Misc. 13: pl. 535, 1 p. (*Boa antarctica*)

Synonyms: *Boa palpebrosa* G. Shaw, 1802 (*nomen oblitum*), *Acanthophis cerastinus* Daudin, 1803c, *Acanthophis brownii* Leach, 1814, *Boa ambigua* Leach, 1814, *Ophryas acantophis* Merrem, 1820, *Vipera sorda* Salvado, 1851 *(nomen nudum), Boa aculeata* Boulenger, 1896 (*nomen nudum*), *Acanthopus antarcticus* – Trethewie, 1956 *(nomen incorrectum), Acanthophis barkley* – Mollier, Chwetzoff, Frachon & Ménez, 1989 *(nomen incorrectum), Acanthophis schistos* Wells & Wellington, 1985, and *Acanthophis antarcticus cliffrosswellingtoni* Hoser, 2002a.

Type: Holotype, not designated, a 305–380 mm specimen, lost *fide* Cogger et al. (1983: 217).

Type locality: "Australasia."

Distribution: Eastern and S Australia (New South Wales, Queensland, S South Australia, N Victoria, S Western Australia, Boxer, Fraser, Groote Eylandt Hareby, Figure of Eight, Hook, Reevesby and South Twin Peak Is.), NSL–350 m.

Sources: F. McCoy, 1878f, Johnston & Ellins, 1979, Shine, 1980d, F. Parker, 1982, McDowell, 1984, G.R.

Johnston, 1987, Bush et al., 1995, O'Shea, 1996, J.C. Murphy & Schlager, 2003 and Wüster et al., 2005.

Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Boa antarctica* Shaw & Nodder is designated a *nomen protectum* and *Boa palpebrosa* Shaw a *nomen oblitum*.

2. *Acanthophis ceramensis* A.C.L.G. Günther, 1863. Proc. Zool. Soc. London 31(1): 58. (*Acanthophis cerastinus ceramensis*)

Synonyms: *Acanthophis groenveldi* Hoser, 2002a, and *Acanthophis macgregori* Hoser, 2002a.

Types: Syntypes (3), BMNH 1863.2.28.34–36, one male, females, and juveniles (Stevens) 31 Oct.–18 Dec. 1859 or 26 Feb.–4 Apr. 1860.

Type locality: "North Ceram" [= N Seram, Maluku, E Indonesia].

Distribution: Eastern Indonesia (Maluku: Seram, Tanimbar).

3. *Acanthophis hawkei* Wells & Wellington, 1985. Aust. J. Herp. (Suppl. 1): 43.

Synonym: *Acanthophis woolfi* Hoser, 1998b.

Type: Holotype, NTM 3677, an adult specimen (H. van Dyk, 20 April 1977).

Type locality: "1.5 miles south west of Brunette Downs Station Homestead, Barkly Tablelands. Northern Territory, Australia."

Distribution: Northern Australia (Northern Territory), 215 m.

Sources: Hoser, 1998b, Wickramaratna et al., 2003a and Wüster et al., 2005.

4. *Acanthophis laevis* Macleay, 1877. Proc. Linn. Soc. N.S.W. (1877–1878) 2(1): 40–41.

Synonyms: *Acanthophis crotalusei* Hoser, 1998b *(nomen incorrigendum), Acanthophis barnetti* Hoser, 1998b, *Acanthophis crotalusi* Wüster et al., 2001b *(nomen corrigendum),* and *Acanthophis yuwoni* Hoser, 2002a.

Type: Holotype, AMS 31932 (formerly MMS 693), a 398+ mm specimen (W.J. Macleay, July 1875).

Type locality: "Katow, New Guinea" [= Mawatta, S Western Prov., Papua New Guinea, ca. 9°05'S, 142°58'E, elevation 20 m].

Distribution: Papua New Guinea (Central, Eastern Highlands, East Sepik, Enga, Gulf, Madang, Morobe, National Capital District, Oro, Simbu, Southern Highlands, Western, Western Highlands, West Sepik and Karkar Is.), NSL–1800 m.

Sources: Goldman et al., 1969, O'Shea, 1996 and Wüster et al., 2005.

Remarks: Possibly a synonym of *A. praelongus fide* Wüster et al., 2005.

5. *Acanthophis praelongus* E.P. Ramsay, 1877. Proc. Linn. Soc. N.S.W. (1877–1878) 2(1): 72–73.

Type: Holotype, AMS 451, a 419 mm specimen (W. Powell).

Type locality: "Cape York, North Australia" [probably near Somerset, N Queensland].

Distribution: Austro-Papua. Extreme E Indonesia (West Papua, Kai Is.), Papua New Guinea (East Sepik, Western) and N Australia (N Northern Territory, N Queensland, ext. N Western Australia), NSL–600 m.

Sources: Storr, 1981b, O'Shea, 1996 and Wickramaratna et al., 2003a.

6. *Acanthophis pyrrhus* Boulenger, 1898d. Ann. Mag. Nat. Hist. (7) 2(7): 75.

Synonym: *Acanthophis armstrongi* Wells & Wellington, 1985.

Type: Holotype, BMNH 1946.1.18.62, a 530 mm female (E. Gerrard, 1850–1898).

Type locality: "Station Point, Southern Central Australia."

Distribution: Western Australia (S Northern Territory, ext. SW Queensland, W South Australia, Western Australia), NSL– 895 m.

Source: Schulz, 1990a.

7. *Acanthophis rugosus* Loveridge, 1948. Bull. Mus. Comp. Zool. 101(2): 392–393. (*Acanthophis antarcticus rugosus*)

Synonyms: *Acanthophis lancasteri* Wells & Wellington, 1985, *Acanthophis cummingi* Hoser, 1998b *(nomen incorrigendum), Acanthophis lancasteri bottomi* Hoser, 1998, and *Acanthophis cummingae* – Wüster et al., 2001b *(nomen corrigendum).*

Type: Holotype, MCZ 22812, a 595 mm male (P.T.L. Putnam, 1927).

Type locality: "Merauke, southwest Dutch New Guinea" [= Merauke, SE Papua, ext. E Indonesia, 8°30'S, 140°24'E, elevation NSL].

Distribution: Austro-Papua. Eastern Indonesia (SE Papua), possibly S Papua New Guinea (Western) and N Australia (N Northern Territory, NW Queensland, NE Western Australia), NSL–1500 m.

Sources: O'Shea, 1996, Hoser, 1998a, Aplin & Donnellan, 1999, Fry et al., 2001, 2002, Wickramaratna et al., 2003a–b and Wüster et al., 2005.

8. *Acanthophis wellsi* Hoser, 1998b. Monitor 9(2): 37–39, 2 photos. (*nomen corrigendum*)

Synonyms: *Acanthophis wellsei* Hoser, 1998b *(nomen incorrigendum), Acanthophis wellsi* Alpin & Donnellan, 1999 *(nomen corrigendum),* and *Acanthophis wellsei donnellani* Hoser, 2002a.

Type: Holotype, WAM 8886, a 250+ mm juvenile (K.H. Burton, before 26 Nov. 1945).

Type locality: "Wittenoom Gorge, WA, Lat: 22°15' Long: 118°23'" [= Blue Asbestos Mine, Western Australia, Australia].
Distribution: Western Australia (NW Western Australia), NSL–800 m.
Sources: Aplin & Donnellan, 1999, Fry et al., 2002, Hoser, 2002a, Wickramaratna et al., 2003a and Wüster et al., 2005.
Remarks: Taxonomic status unclear, possibly a synonym of *A. pyrrhus*.

ACHALINUS W.C.H. Peters, 1869 (Xenodermatidae)

Synonyms: *Ophielaps* Sauvage, 1877, *Cochalinus* Rhumbler, 1910, *Achalinopsis* Steindachner, 1913a, *Ophiolaps* – Maki, 1931 *(nomen incorrectum), Achalimus* – Wang & Wang, 1956 *(nomen incorrectum),* and *Achalinapsis* – Wang & Wang, 1956 *(nomen incorrectum).*
Type species: *Achalinus spinalis* W.C.H. Peters, 1869.
Distribution: Southeastern Asia.
Sources: Maki, 1931, Bourret, 1935a, Ota & Toyama, 1989a, Zhao & Adler, 1993 and Zaher et al., 2009.

1. *Achalinus ater* Bourret, 1937b. Bull. Gén. Instr. Publ. Hanoi 17(4): 72. *(nomen substitutum)*

Synonym: *Achalinus niger* Bourret, 1935a *(nomen praeoccupatum).*
Types: Syntypes (4), MNHN 1935.49 and MNHN 1938.128 [formerly RLB M.454, a 325 mm male, RLB M.455, a 349 mm female, RLB M.793, a 372 mm female, and RLB M.795, a 252 mm male] (R.L. Bourret, 1934), location of other syntypes unknown.
Type locality: "Tonkin (Tam dao alt. 900m)" [Vietnam].
Distribution: Southern China (Gansu, Guangxi, Guizhou) and N Vietnam (Vinh Phuc), 450–1100 m.
Sources: Hu et al., 1973, Zhao & Jiang, 1977, Wen, 1983, Orlov et al., 2000, Zhao, 2006 ,V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.
Remarks: Original description in Bourret (1935a: 103, fig. 2). Types not in MNHN nor listed in MNHN catalogue *fide* David (*in litt*). A synonym of *A. rufescens* Boulenger *fide* M.A. Smith (1943: 127).

2. *Achalinus formosanus* Boulenger, 1908h. Ann. Mag. Nat. Hist. (8) 2(8): 222.

Synonyms: *Achalinopsis sauteri* Steindachner, 1913a, and *Achalinus formosanus chigirai* Ota & Toyama, 1989b.
Type: Holotype, BMNH 1946.1.7.78, an 853–860 mm female (A. Moltrecht, April 1907).
Type locality: "Punkiho, Kagi district, Central Formosa" [= Punkiho, Chiayi Prefecture, cen. Taiwan].
Distribution: Taiwan (Chiayi) and S Japan (Ryukyus: Iriomotejima Is.).
Sources: Maki, 1931, Ota & Toyama, 1989b and Xiang & Li, 2009.
Remarks: Head of holotype illustrated by Ota & Toyama (1989a: fig. 2).

3. *Achalinus hainanus* C. Huang *in* S. Hu, Zhao & Huang, 1975. Acta Zool. Sinica 21(4): 380–381, 384 (English abst.), figs. 3a–c.

Type: Holotype, ASIZB 1076, a 290 mm female (20 Jan. 1964).
Type locality: "Chien Fung Ling, Hainan, altitude 800m" [China].
Distribution: Southern China (Hainan), 800 m. Known only from type locality.

4. *Achalinus jinggangensis* (Zong & Ma, 1983). Acta Herp. Sinica 2(2): 61–62, 63 (English abst.) 3 figs. (*Achalinopsis jinggangensis*)

Type: Holotype, SNHM 82X118, a 460 mm female (native 17 Oct. 1982).
Type locality: "Dajing Village, Jinggangshan, Jiangxi, alt. 940m" [China].
Distribution: Southern China (Jiangxi), 940 m. Known only from type series.

5. *Achalinus meiguensis* S.-Q. Hu & Zhao, 1966. Acta Zootaxon. Sinica 3(2): 162–164, pl. 1, figs. 4–5, pl. 2, figs. 4–6.

Type: Holotype, CIB 639101, an adult female (X.-Y. Tang, 22 May 1963).
Type locality: "Liang Ho Kou, Meigu Hsien, Szechwan, altitude 2,520 m" [= Sichuan Prov., China].
Distribution: Southwestern China (W Sichuan), 1200–2520 m.
Sources: Inger et al., 1990 and P. Guo et al., 1999b.

6. *Achalinus niger* Maki, 1931. Monogr. Snakes Japan: 60–61, figs. 27–28, pl. 19.

Type: Holotype, NSMT H2562 (formerly KIU no. a), a 599–668 mm male (M. Maki, June 1925).
Type locality: "Mt. Arisan, Central Formosa" [= Mt. Ali, ext. S Nantou Co., cen. Taiwan, ca. 23°35'N, 120°49'E, ca. 2000 m].
Distribution: Taiwan (Nantou), 2000 m.
Sources: Huang, 1995, Ota, 1997 and Xiang & Li, 2009.

7. *Achalinus rufescens* Boulenger, 1888c. Ann. Mag. Nat. Hist. (6) 2(7): 43.

Synonyms: *Achalinus meridianus* M.A. Smith, 1923a, and *Stoliczkaia kwangsiensis* Fan, 1931.
Type: Holotype, BMNH 1946.1.12.37, a 290 mm specimen (C. Ford, 1882–1888).
Type locality: "Hongkong," China.

Distribution: Southeastern China (Fujian, Guangdong, Guangxi, Hainan, Hong Kong, Jiangxi, Shaanxi) and N Vietnam (Bac Kan, Cao Bang, Hai Duong, Ha Ting, Lao Cai, Vinh Phuc), 600–1100 m.
Sources: C.H. Pope, 1935, Fang & Wang, 1983, Orlov et al., 2000, Zhao, 2006, V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.

8. *Achalinus spinalis* W.C.H. Peters, 1869. Mber. Königl. Akad. Wiss. Berlin 1869(5): 436–437, pl., figs. 1a–c.

Synonyms: *Ophielaps braconnieri* Sauvage, 1877, and *Achalinus spinalis weigoldi* Mell, 1931a.
Type: Holotype, ZMB 6449, a 360 mm specimen (S. Braconnier).
Type locality: "Japan."
Distribution: Northern Vietnam (Lao Cai, Thai Nguyen, Vinh Phuc), SE China (Fujian, Gansu, Hubei, Jiangsu, Jiangxi, Sichuan, Shaanxi, Zhejiang) and Japan (Ryukyus: Amamioshima, Edatekushima, Ehime, Horshu, Kyushu, Okinawajima and Tokunoshima Is.), 150–1230 m.
Sources: Maki, 1931, C.H. Pope, 1935, Moriguchi & Naito, 1979, Yamamoto, 1981, 1984, M. Mori, 1984, Inger et al., 1990, Ota et al., 1991, Zou & Chen, 1998, Orlov et al., 2000, Zhao, 2006, V.S. Nguyen et al., 2009, I. Das, 2010, 2012 and Yao, 2012.

9. *Achalinus werneri* Van Denburgh, 1912a. New Rept. Amph. Loo Choo Is.: 8.

Synonym: *Achalinus loochooensis* Thompson, 1912.
Type: Holotype, CAS 22064, a 337 mm specimen (J.C. Thompson a.k.a. V. Kühne, 26 April–1 May 1910).
Type locality: "Nase, Amami O shima, Loo Choo Islands, Japan" [= Ryukyu Is.].
Distribution: Extreme S Japan (Ryukyus: Amamioshima and Okinawajima Is.).
Sources: Barbour, 1917a, Maki, 1931, Koba, 1958, Takara, 1962 and M. Mori, 1986.
Remarks: Original description reprinted in Van Denburgh (1912b: 254–255).

ACRANTOPHIS Jan, 1860 *in* Jan & Sordelli, 1860–1866 (Boidae)

Synonyms: *Pelophilus* Duméril & Bibron, 1844 *(nomen praeoccupatum), Acranthophis* – Jan & Sordelli, 1860 *in* 1860–1866 *(nomen incorrectum),* and *Pelophila* Marschall, 1873 *(nomen praeoccupatum).*
Type species: *Acrantophis dumerili* Jan, 1860 *in* Jan & Sordelli, 1860–1866.
Distribution: Madagascar.
Sources: Guibe, 1949a, Stimson, 1969, Kluge, 1991, Glaw & Vences, 1994, 2007, Vences et al., 2001, Glaw, 2003 and Vences & Glaw, 2003.
Remarks: A synonym of *Sanzinia fide* Kluge, 1991. A valid genus *fide* Vences & Glaw, 2003 and Szyndlar & Rage, 2003.

1. *Acrantophis dumerili* Jan, 1860 *in* Jan & Sordelli, 1860–1866. Icon. Gén. Ophid. 1(1): 1, pl. 2, figs. a–b, d, e–g, i–ii, n, p, r, v.

Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.
Type locality: "Amérique Mérid.?" [= ? South America] (in error). Restricted to Amboasary, Madagascar *fide* Henkel & Schmidt (1995: 269).
Distribution: Southern Madagascar (Atananarivo, Fianarantsoa, Toliara), NSL–1325 m.
Source: Matz et al., 1982.
Remarks: Guibé (1949: 101) erroneously listed three MNHN syntypes. Vences & Glaw, 2003 considered Réunion (St. Denis) records erroneous.

2. *Acrantophis madagascariensis* (A.M. C. Duméril & Bibron, 1844). Erpét. Gén. 6: 524. (*Pelophilus madagascariensis*)

Synonym: *Sanzinia madagascariensis volontany* Vences & Glaw, 2003.
Types: Syntypes (3), MNHN 3133, MNHN 7275, and MNHN 8636, longest syntype 2620 mm (C.A.C.J. Bernier, 1831–1834).
Type locality: "île de Madagascar." Restricted to Mahajunga, Madagascar *fide* Henkel & Schmidt (1995: 270).
Distribution: Northern Madagascar (Antsiranana, Mahajanga, N Toamasina, N Toliara), NSL–1075 m.
Sources: Henkel & Schmidt, 1995, McKeown, 1998 and A. Mori et al., 2006.
Remarks: Syntypes are MNHN 43 and MNHN 7329 *fide* Vences & Glaw (2003: 193).

ACROCHORDUS Hornstedt, 1787 (Acrochordidae)

Synonyms: *Acrochordon* Fischer von Waldheim, 1808 *(nomen emendatum), Chersydrus* Cuvier, 1817, *Chersidrus* Oken, 1817 *(nomen emendatum), Verrucator* Merrem *in* Kuhl, 1820 (*nomen nudum*), *Acrocordus* Gray, 1825 *(nomen emendatum), Chersydreas* Gray, 1825 *(nomen emendatum), Chershydrus* Bonaparte, 1831 *(nomen emendatum), Scroggilurus* Lesson, 1832 *in* Bélanger, 1831–1834, *Verrucator* Schlegel, 1837 *(nomen nudum), Achrocordus* – Swainson, 1839 *(nomen incorrectum), Achrochordus* J.T. Reinhardt, 1843 *(nomen emendatum), Acrocordus* Agassiz, 1844 *(nomen emendatum), Chersydraeas* Gray, 1849a *(nomen emendatum), Potamophis* P. Schmidt, 1852 *(nomen praeoccupatum), Chersydraeus* A.-M.-C. Duméril, Bibron & Duméril,

1854a *(nomen emendatum), Acrochordas* – Fitzinger, 1867 *(nomen incorrectum), Chersydraeus* – Westphal-Castelnau, 1870 *(nomen incorrectum), Chrysydrus* – Boulenger, 1903f *(nomen incorrectum), Acrochodon* – Nutaphand & Tumvipart, 1982 *(nomen incorrectum), Acrocodus* – Nutaphand, 1991b *(nomen incorrectum),* and *Acrocodus* – Nutaphand, 1991b *(nomen incorrectum).*

Type species: *Acrochordus javanicus* Hornstedt, 1787.

Distribution: Indo-Australia.

Fossil records: Lower Miocene, upper Miocene and lower Pliocene of Pakistan, India and Nepal.

Sources: M.A. Smith, 1939, 1943, Bergman, 1958c, Hoffstetter & Gayrard, 1965, Hardaway & Williams, 1976, Groombridge, 1979, McDowell, 1979, 1986, S. Sharma & Nakhasi, 1980, Rieppel, 1988, Heise et al., 1995, McDiarmid et al., 1999, Gravlund, 2001, Kelly et al., 2003, Head et al., 2007 and I. Das, 2010, 2012.

1. *Acrochordus arafurae* McDowell, 1979. J. Herp. 13(1): 75–77, figs. 20b, 21b, 22b, 23b, 26b.

Type: Holotype, AMNH 59887, ca. 840 mm male (skinned out behind head) (A.L. Rand [2nd Archbold-Rand Exped.], Feb. 1936–Jan. 1937).

Type locality: "Papua New Guinea: Western Prov.: Lake Daviumbo" [= vicinity of Kaviananga, Fly River, W Western Prov., SW Papua New Guinea, 7°36'S, 141°18'E, elevation 15 m].

Distribution: Austro-Papua. Eastern Indonesia (Papua), S Papua New Guinea (Central, Western), N Australia (N Northern Territory, N Queensland), NSL–215 m.

Sources: Cogger et al., 1983a, Shine, 1985b, 1986a, S.K. Wilson & Knowles, 1988, Hoser, 1989, D. Houston & Shine, 1993, 1994, O'Shea, 1996, Cogger, 2000 and Madsen & Shine, 2001.

2. †*Acrochordus dehmi* Hoffstetter, 1964. Bull. Soc. Géol. France (7) 6(4): 467–473, fig. 2a.

Type: Holotype, BSPG 1956-II-64, one trunk vertebra (R. Dehm, T. zu Oettingen & H. Vidal).

Type locality: "gisement de Chhoinja (form. Chingi, Miocène supérieur) couches des Siwaliks, au Nord du Pakistan occidental" [= upper Miocene of Punjab, N Pakistan, 33°03'N, 72°30'E].

Distribution: Upper Miocene (3.5–11.1 mya) of Pakistan, India and Nepal.

Sources: Rage, 1984b, West et al., 1991, Rage et al., 2001, Head, 2005 and Head et al., 2007.

3. *Acrochordus granulatus* (J.G. Schneider, 1799). Hist. Amph. 1: 243–244. (*Hydrus granulatus*)

Synonyms: *Anguis granulatus acrochordus* J.G. Schneider, 1801, *Acrochordus fasciatus* G. Shaw, 1802, *Chersydrus annulatus* Gray, 1849a, and *Chersydrus granulatus luzonensis* Loveridge, 1938d.

Type: Holotype, LM, lost *fide* McDowell (1979: 79).

Type locality: Unknown. Restricted to India *fide* M.A. Smith (1943: 134).

Distribution: Indo-Australia. India (Andaman & Nicobars, Andhra Pradesh, Gujarat, Karnataka, Kerala, Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka (Northern, North-Western, Western), Singapore, Myanmar, S Thailand (Chumphon, Phang Nga, Phetchaburi, Phuket, Songkhla), Cambodia, Vietnam (Bac Ria-Vung Tau, Binh Dinh, Khanh Hoa), China (Hainan), Brunei, East Malaysia (Sabah, Sarawak), Indonesia (Papua, West Papua, Ambon, Bali, Borneo, Flores, Java, Jobi, Komodo, Misool, Schouten, Sulawesi: Central, North, Southeast, Southwest, Sumatra, Ternate, Timor, Weh), Philippines (Bantayan, Cebu, Luzon, Masbate, Palawan, Panay), Papua New Guinea (Central, East Sepik, Gulf, Madang, Milne Bay, Western, d'Entrecasteaux Is., W New Britain, New Ireland, North Solomons), and N Australia (ext. NE Western Australia, ext. N Northern Territory, NE Queensland), NSL–165 m.

Sources: Loveridge, 1938d, E.H. Taylor, 1965, McDowell, 1979, Voris & Glodek, 1980, Cogger et al., 1983a, Tweedie, 1983, S.K. Wilson & Knowles, 1988, Ehmann, 1992, Dutta & Acharjyo, 1993, Zhao & Adler, 1993, I. Das, 1994, Gaulke & Altenbach, 1994, David & Vogel, 1996, O'Shea, 1996, M.J. Cox et al., 1998, Cogger, 2000, Ferner et al., 2001, Whitaker & Captain, 2004, N. Khaire, 2006, V.S. Nguyen et al., 2009 and A. Silva et al., 2010.

4. *Acrochordus javanicus* Hornstedt, 1787. Kon. Svenska Vet. Akad. Handl. 8: 307–308, pl. 12.

Synonyms: *Acrochordus dubius* G. Shaw, 1802, *Acrochordvs iauanicus* – Merrem, 1820 *(nomen incorrectum), Verrucator merremii* Merrem *in* Kuhl, 1820 *(nomen nudum),* and *Potamophis javanica* – P. Schmidt, 1852.

Type: Holotype, not designated, ? NHR or ZIUS, a preserved skin (C.F. Hornstedt, 1702–1785).

Type locality: "Java" [SW Indonesia].

Distribution: Southeast Asia and Greater Sundas. Thailand (Krung Thep Mahanakhon, Nakhon Pathom), Singapore, Vietnam (Binh Phuoc, Can Tho, Dong Nai, Ho Chi Minh City), Brunei, East Malaysia (Sarawak) and Indonesia (Java, Kalimantan, Sumatra), NSL.

Sources: E.H. Taylor, 1965, McDowell, 1979, 1999, Tweedie, 1983, David & Vogel, 1996, M.J. Cox et al., 1998 and V.S. Nguyen et al., 2009.

Remarks: Original description reprinted in Hornstedt (1788: 284–285). Type specimen brought to Europe by Mr. Hornstedt and deposited in Museum of the King of Sweden *fide* Shaw (1802: 574); it was cooked and eaten *fide* Bergman (1958: 145).

A

ACUTOTYPHLOPS Wallach, 1995a (Typhlopidae)

Synonym: *Martinwellstyphlops* Hoser, 2012am *(nomen illegitimum).*
Type species: *Typhlops subocularis* Waite, 1897b.
Distribution: East Indies.
Sources: Wallach, 1993a, 1995a, O'Shea, 1996, Wallach & Ineich, 1996, McDiarmid et al., 1999, Wallach et al., 2007 and Vidal et al., 2010.

1. *Acutotyphlops banaorum* Wallach, Brown, Diesmos & Gee, 2007. J. Herp. 41(4): 1692–695, figs. 2–4 (paratypes).

Type: Holotype, PNM 9280 (formerly GVAG 219 & FMNH 259604), a 125 mm male (G.V.A. Gee, 28 March 2001).
Type locality: "an irrigation ditch in a muddy area of water pools near Barangay Balbalasang, Municipality of Balbalan, Kalinga Prov., Luzon Island, Philippines (17º29'N, 121º03'E), 900 m above sea level."
Distribution: Northern Phillipines (Luzon), 900–1050 m.

2. *Acutotyphlops infralabialis* (Waite, 1918b). Rec. So. Aust. Mus. 1(1): 35–36, fig. 25. (*Typhlops infralabialis)*

Synonyms: *Typhlops bergi* J.A. Peters, 1948, and *Typhlops adamsi* V.M. Tanner, 1951.
Type: Holotype, AMS 4609, a 305–315 mm specimen (J. Caulfield).
Type locality: "Malaita, Solomon Islands" [= Malaita Island, Solomon Islnads, bet. 8°18'–9°44'S, 160°34'–161°35'E].
Distribution: Eastern Papua New Guinea (North Solomons: Bougainville) and S Solomons (Guadalcanal, Malaita, New Georgia), 15–245 m.
Source: Shea & Sadlier, 1999.

3. *Acutotyphlops kunuaensis* Wallach, 1995a. Asiatic Herpetol. Res. 6: 143–147, figs. 4a–b, 5.

Type: Holotype, MCZ 76964, a 221 mm male (F.S. Parker, 19 Aug. 1963).
Type locality: "Kunua, coastal northwestern Bougainville Island, North Solomons Prov., extreme eastern Papua New Guinea, 5°46'S, 154°43'E, elevation *ca*. 30 m."
Distribution: Extreme E Papua New Guinea (North Solomons: Bougainville), 30 m.

4. *Acutotyphlops solomonis* (H.W. Parker, 1939). Bull. Mus. Roy. Hist. Nat. Belg. 15(60): 4–5, 2 figs. (*Typhlops solomonis*)

Type: Holotype, IRSNB 2029, a 407 mm specimen (J.B. Poncelet, 2 June 1938).
Type locality: "Buin, 10 miles inland on Bougainville, Solomon Islands" [= Buin, Bougainville Island, Solomon Islands, Papua New Guinea, 6°44'S, 155°41'E, elevation 50 m].
Distribution: Eastern Papua New Guinea (Milne Bay, North Solomons: Bougainville), NSL–50 m.

5. *Acutotyphlops subocularis* (Waite, 1897b). Rec. Aust. Mus. 3(3): 69–70, figs. 1–3. (*Typhlops subocularis*)

Synonym: *Typhlops keasti* Kinghorn, 1948.
Type: Holotype, AMS 2202, a 360 mm specimen (G. Brown).
Type locality: "Duke of York Island" [Bismarck Archipelago, Papua New Guinea].
Distribution: Papua New Guinea (Bismarck Arch., Duke of York, New Britain, New Ireland, Umboi) and Solomons (Bougainville, Guadalcanal, Malaita, New Georgia).
Sources: McDowell, 1974a and J.C. Murphy & Schlager, 2003.

ADELOPHIS Dugès *in* Cope, 1879 (Natricidae)

Type species: *Adelophis copei* Dugès *in* Cope, 1879.
Distribution: Southwestern Mexico.
Sources: Rossman & Wallach, 1987 and Zaher et al., 2009.
Remarks: *Adelophis foxi* is nested within *Thamnophis fide* A. de Queiroz et al., 2002, and Zaher et al*.*, 2012.

1. *Adelophis copei* Dugès *in* Cope, 1879. Proc. Amer. Philos. Soc. 18(104): 265–266.

Type: Neotype, MDUG, an unnumbered specimen, designated by H.M. Smith & Necker (1943: 182).
Type locality: "Cupátaro, Mexico" [possibly = Tupátaro, N Michoacán, SW Mexico, 19°30'N, 101°30'W, elevation 2230 m] via neotype selection.
Distribution: Southwestern Mexico (Guanajuato, Jalisco, Michoacán, Morelos), 1215–2580 m.
Source: Dugès, 1887.
Remarks: Original description reprinted in Dugès (1887: 18–20, pl. 3). Holotype lost *fide* Dugès (1887: 20).

2. *Adelophis foxi* Rossman & Blaney, 1968. Occ. Pap. Mus. Zool., Louisiana St. Univ. (35): 1–6, fig. 3 (upper).

Type: Holotype, LSUMZ 14330, a 419 mm female (D.A. Rossman & R.M. Blaney, 16 July 1966).
Type locality: "meadow in pine forest (8,600 feet) 1/4 mi. E Mil Diez (approx. 2 mi. W El Salto), Durango, México."
Distribution: Northwestern Mexico (Durango), 1580–2620 m. Known only from type locality.

ADELPHICOS Jan, 1862b (Dipsadidae)

Synonyms: *Rhegnops* Cope, 1866, *Rheynops* – Hoffmann, 1890 *(nomen incorrectum), Adelphisco* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Adelphicus* – W.W. Tanner & Avery, 1982 *(nomen incorrectum).*
Type species: *Adelphicos quadrivirgatum* Jan, 1862b.
Distribution: Eastern Mexico and upper Central America.
Sources: H.M. Smith, 1942d, J.A. Campbell & Ford, 1982, Cadle, 1984b, LaDuc, 1995, Kohler, 2001 and Zaher et al., 2009.

1. *Adelphicos daryi* J.A. Campbell & Ford, 1982. Occ. Pap. Mus. Nat. Hist. Univ. Kansas (100): 3–5, figs. 2, 4 (upper), 5d.

Type: Holotype, KU 187260, a 487 mm female (J.A. Campbell, 11 July 1980).
Type locality: “San Jorge Muxbal, 5.5 km W San José Pinula, Department of Guatemala, Guatemala, elevation 1844 m.”
Distribution: Southeastern Guatemalan (Guatemala), 1300–2135 m.

2. *Adelphicos ibarrorum* J.A. Campbell & Brodie, 1988. Herpetologica 44(4): 416–419, figs. 1–2.

Type: Holotype, UTA 18696, a 521 mm female (J.A. Campbell, 14 June 1987).
Type locality: “3.0 km SSE Chichicastenango, in valley between Paxot and Caminibal, 2100 m, Departamento de Quiché, Guatemala.”
Distribution: Southern Guatemala (Quiché), 2000–2100 m.

3. *Adelphicos latifasciatum* Lynch & Smith, 1966. Trans. Kansas Acad. Sci. 69(1): 66–68, fig. 3c. (*Adelphicos veraepacis latifasciatus*)

Type: Holotype, UIMNH 56147, a 333 mm male (T. MacDougall, 6–12 Sept. 1963).
Type locality: “Sierra Madre north of Zanatepec, Oaxaca, Mexico.”
Distribution: Southern Mexico (Sierra Madre de Chiapas of Oaxaca), 1000–2000 m.

4. *Adelphicos nigrilatum* H.M. Smith, 1942d. Proc. Rochester Acad. Sci. 8: 182–185. (*Adelphicos veraepacis nigrilatus*)

Type: Holotype, FMNH 100110, a 318 mm female (H.D. Thomas, 1937).
Type locality: “San Cristóbal, Chiapas, Mexico.” [= 16°34’N, 93°50’W, elevation 680 m].
Distribution: Southern Mexico (Meseta Central of Chiapas), 680–2900 m.

5. *Adelphicos quadrivirgatum* Jan, 1862b. Arch. Zool. Anat. Fis. 2(1): 19, pl. 7.

Synonyms: *Rhegnops visonbinus* Cope, 1866, *Rhegnops sargii* J.G. Fischer, 1885b, *Adelphicos quadrivirgatus acutirostrum* Bocourt 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, and *Adelphicos newmanorum* E.H. Taylor, 1950a.
Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.
Type locality: “Giava” [= Java, Indonesia] (in error). Restricted to Jicaltepec, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950a: 348).
Distribution: Mexico and upper Central America. Southeastern Mexico (E Chiapas, Hidalgo, Oaxaca, Puebla, N Querétaro, San Luis Potosí, Tabasco, S Tamaulipas, Veracruz), Belize (Cayo, Orange Walk), Guatemala (Alta Verapaz, Petén), Honduras (Atlántica, Comayagua, ? Colón, Copán, Cortés, Francisco Morazán, Gracias a Dios, Intibucá, Lempira, Ocotepeque, Olancho, Santa Bárbara, Yoro) and Nicaragua (Jinotega), NSL–1900 m.
Sources: L.D. Wilson & Meyer, 1985, J.C. Lee, 1996, 2000, J.A. Campbell, 1998b, Canseco-Marquez et al., 2000, Stafford & Meyer, 2000, Murillo et al., 2003, Mendoza-Quijano et al., 2003, 2005, McCranie et al., 2006, Sunyer et al., 2009 and McCranie, 2011a.
Remarks: Original description reprinted in Jan (1862c: 19, pl. 7). *Adelphicos quadrivirgatum*, *A. sargii* and *A. visoninus* valid species *fide* H.M. Smith et al., 2001, also supported by Mendoza-Quijano, 2003, 2005.

6. *Adelphicos veraepacis* L.C. Stuart, 1941b. Occ. Pap. Mus. Zool., Univ. Michigan (452): 5–6.

Type: Holotype, UMMZ 89073, a 355 mm male (L.C. Stuart, 21 April 1938).
Type locality: “Cloud forest above Finca Samac, 7 km. west of Cobán, Alta Verapaz, Guatemala. Altitude, about 1500 m.”
Distribution: Central Guatemala (Alta Verapaz, Baja Verapaz, Huehuetenango), 1200–2200 m.

AELUROGLENA Boulenger, 1898e (Colubridae)

Synonym: *Aeluroglaena* – Scortecci, 1939a *(nomen incorrectum).*
Type species: *Aeluroglena cucullata* Boulenger, 1898e.
Distribution: Northeast Africa.
Sources: Bogert, 1940, H.W. Parker, 1949, Lanza, 1983a, 1990b, Schätti, 1985a, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.
Remarks: Possibly a synonym of *Meizodon fide* Schätti (1985a: 170).

A

1. *Aeluroglena cucullata* Boulenger, 1898e. Ann. Mag. Nat. Hist. (7) 2(8): 132–133.

Type: Holotype, BMNH 1946.1.14.87, a 375 mm female (E. Lort-Phillips, 1896–1897).
Type locality: "Goolis Mountains, Somaliland" [= Qar Goilis Mountains, W Togdheer Region, NW Somalia, 9°52'N, 45°55'E].
Distribution: Eastern Ethiopia (Hararge) and NW Somalia (Togdheer, Woqooyi Galbeed), NSL–700 m.

AFRONAJA Wallach, Wüster & Broadley, 2009 (Elapidae)

Synonyms: †*Palaeonaja* Hoffstetter, 1939, †*Paleonaja* – Bogert, 1943 *(nomen incorrectum),* and *Spracklandus* Hoser, 2009c *(nomen illegitimum).*
Type species: *Naja nigricollis* J.T. Reinhardt, 1843.
Distribution: Africa.
Fossil records: Lower Miocene to middle Pleistocene of Europe and Africa. Fossils unassigned to species include: lower Miocene (Orleanian, MN 3–4: 16.0–20.0 mya) of Austria, Saudi Arabia and Spain, upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Greece, middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Turkey, upper Pliocene (Villanyian, MN 16: 2.6–3.2 mya) of France, Greece and Spain, and middle Pleistocene (Ionian: 0.13–0.78 mya) of Greece.
Sources: F. Werner, 1923b, Bogert, 1943, Klemmer, 1968, Broadley, 1968c, 1974, Minton et al., 1970, Golay, 1985, Szyndlar & Rage, 1990, Ulber, 1995, Golay et al., 1993, Keogh, 1998, David & Ineich, 1999, Slowinski & Keogh, 2000, Dobiey & Vogel, 2007, Wüster et al., 2007, Hoser, 2009c, 2012a, e, Wallach et al., 2009 and Zaher et al., 2009, 2012.

1. †*Afronaja antiqua* (Rage, 1976). Géol. Méditerr. 3(2): 61–63, figs. 5–6. (†*Naja antiqua*)

Type: Holotype, MNHN BML 903, one incomplete posterior braincase.
Type locality: "Beni Mellal, Maroc, Miocène" [= Beni Mellal, Beni Mellal Prov., cen. Morocco, 32°20'N, 6°21'W, middle Miocene].
Distribution: Middle Miocene (Astaracian, MN 7/8: 11.1–12.8 mya) of Morocco. Known only from type locality.
Source: Rage, 1984b.
Remarks: *Naja incertae sedis fide* Wallach et al. (2009: 32).

2. *Afronaja ashei* (Wüster & Broadley, 2007). Zootaxa (1532): 58–62, figs. 4–5. (*Naja ashei*)

Type: Holotype, NMK S/3993 (formerly BK 100030), a 1507 mm female (R. Taylor, 29 Sept. 2004).
Type locality: "Watamu, Kenya (3°21'S: 40°01'E)."
Distribution: Eastern Africa. Southern Ethiopia (Bale, Gemu G5ofa, Hararge, Shoa, Sidamo), SW Somalia (Gedo, Jubbada Hoose), N Kenya (Coast, North-Eastern) and NE Uganda (Amudat), 300–1750 m.
Sources: Wüster & Broadley, 2007 and Largen & Spawls, 2010.
Remarks: Probably occurs in NE Tanzania and possibly in South Sudan and NE Democratic Republic of the Congo *fide* Wüster & Broadley (2007: 63).

3. *Afronaja crawshayi* (A.C.L.G. Günther, 1894b). Proc. Zool. Soc. London (1893) 62(1): 620. (*Naja nigricollis crawshayi*)

Synonym: *Naja nigricollis crawshawii* – Manjunatha-Kini, Stefansson & Evans, 1987 *(nomen incorrectum).*
Type: Holotype, BMNH, skin of an adult (R.C. Crawshay, 1890–1893, via H.H. Johnston).
Type locality: "Lake Mweru, British Central Africa" [= Lake Meru, N Luapula Prov., ext. N Zambia].
Distribution: Central Africa. Southern Congo (Brazzaville, Plateau, Pool), S Democratic Republic of the Congo (Bandundu, Bas-Congo, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa), Tanzania, Angola (Benguela, Bié, Cuanza Norte, Huíla, Lunda Norte), W and N Zambia Luapula and N Malawi (Northern), 700–1700 m.
Sources: Witte, 1953 and Broadley & Cotterill, 2004.

4. †*Afronaja depereti* (Hoffstetter, 1939). Arch. Mus. Hist. Nat. Lyon 15(3): 66–67, pl. 2, fig. 16. (†*Palaeonaja depereti*)

Type: Holotype, UCBL 92859A, one trunk vertebra.
Type locality: "Pliocène ancien du Roussillon, Fort du Serrat-d'en-Vacquer, près Perpignan" [= Roussillon Basin, eastern Pyrénées-Orientales Department, S France, ca. 42°41'N, 2°53'E; Ruscinian (MN 15), lower Plíocene].
Distribution: Lower Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of France and Spain.
Fossil records: Upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Spain and middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of France.
Sources: Rage, 1984b and Szyndlar & Zerova, 1990.

5. †*Afronaja iberica* Szyndlar, 1985a. Estud. Geol. 41(5-6): 455–457, figs. 6–9. (†*Naja iberica*)

Type: Holotype, MNCN Alg. I-31, one basiparasphenoid.
Type locality: "Uppermost Miocene (NM 13) of Algora (Guadalajara, Spain)."
Distribution: Upper Miocene (Turolian, NM 13: 4.9–7.3 mya) of Spain. Known only from type locality.
Remarks: *Naja incertae sedis fide* Wallach et al. (2009: 32).

6. *Afronaja katiensis* (Angel, 1922). Bull. Mus. Hist. Nat. Paris 28(1): 40. (*Naja nigricollis katiensis*)

Synonym: *Naja trilepis* Roman, 1968.

Types: Syntypes (6), MNHN 1921.609–10 and MNH 1921.612–15 (Millet-Horsin, 1921).

Type locality: "la région caillouteuse de Bélédougou, à Kati (12 kilomètres au nord de Bamakko), Soudan français" [= Bélédougou region of Mandika people near Kati (12°45'N, 08°04'W, elevation 425 m), S Koulikoro Region, SW Mali].

Distribution: West Africa. Senegal (Diourbel, Kaolack, Kédougou, Tambacounda), Gambia (Western), Guinea (Siguiri), SW Mali (Kayes, Koulikoro, Sikasso), Ivory Coast (Bouna), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire), N Ghana (Northern, Upper East, Upper West), N Togo (Savanes), Niger (Zinder), N Nigeria and N Cameroon (Extreme-Nord, Nord), 150–700 m.

Sources: Villiers, 1950a–b, 1975, Cansdale, 1954, Broadley, 1968a, Roman, 1968, 1973a–b, 1976, 1980, 1989, Hughes & Barry, 1969, Papenfuss, 1969, Hughes, 1983, Schätti, 1986c, Spawls & Branch, 1995, J.-F. Trape & Mané, 2000, 2004, 2006b, Chippaux, 2006, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.

Remarks: Nima Bélédougou located at 15°04'N, 7°18W, elevation 280 m. Possibly occurs in Benin *fide* Hughes (2013: 153).

7. *Afronaja mossambica* (W.C.H. Peters, 1854). Mber. Königl. Akad. Wiss. Berlin 1854(11): 625. (*Naja mossambica*)

Synonyms: *Naja nigricollis macombique* – Zlotkin, Menashé, Miranda & Lissitzky, 1975 *(nomen incorrectum), Naja massambica massambica* – Grognet, Gatineau, Bougis, Harvey, Coudere, Fromageot & Ménez, 1986 *(nomen incorrectum), Naja mocambique mocambique* – Turell & Middlebrook, 1988 *(nomen incorrectum),* and *Naja mosambica mosambica* – Khole, 1991 *(nomen incorrectum).*

Type: Lectotype ZMB 2811, a 604–1015 mm specimen (W.C.H. Peters, June 1843–Aug. 1847), designated by Golay et al. (1993: 188).

Type locality: "Tette. Sena" [= Tete (16°10'S, 33°36'E, elevation 125 m), Tete Prov., and Vila de Sena (17°26'S, 35°02'E, elevation 50 m), N Sofala Prov., cen. Mozambique].

Distribution: East and S Africa. Southeastern Tanzania (Lindi, Morogoro, Mtwara, Ruvuma, Pemba, Zanzibar Is.), Mozambique (Gaza, Inhambane, Manica, Maputo, Niassa, Sofala, Tete, Zambézia, Mozambique Is.), S Malawi (Southern), SE Democratic Republic of the Congo (S Katanga), SW Angola (Namibe), S Zambia (Central, Eastern, Luapula, Southern, S Western), NE Namibia (Caprivi, Okavango, Oshikoto), E Botswana (Central, Gaborone, Ghanzi, Kgatleng, Kweneng, North East, North West, Southern), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland and South Africa (Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, North-West), NSL–1800 m.

Sources: Mertens, 1955, 1971, V.F.M. FitzSimons, 1962, 1974, Witte, 1962, V.J. Wilson, 1965, Broadley, 1971d, 1974, 1983, 1988, Visser, 1972, Stevens, 1974, Broadley & Cock, 1975, Visser & Chapman, 1978, Manaças, 1982, Auerbach, 1985, 1987, Patterson, 1987, Branch, 1988, Broadley & Howell, 1991, Boycott & Culverwell, 1992, Spawls & Branch, 1995, Clauss & Clauss, 2002, Spawls et al., 2002, Wüster & Broadley, 2003, 2007 and Broadley & Blaylock, 2013.

8. *Afronaja nigricincta* (Bogert, 1940). Bull. Amer. Mus. Nat. Hist. 77(1): 89–90, pl. 1, fig. 1. (*Naja nigricollis nigricinctus*)

Synonyms: *Naja nigra* A. Smith, 1838 *(nomen praeoccupatum), Naja nigricollis fasciata* Bocage, 1895 *(nomen praeoccupatum), Merremia haemachates* F. Werner *in* Schultz, 1910 *(lapsus calami),* and *Naja nigricollis woodi* Pringle, 1955.

Type: Holotype, AMNH 51823, a 1100+ mm male (A.S. Vernay, H. Lang & R. Boulton [Vernay Angola Exped.], 6 July 1925).

Type locality: "Munhino, Angola, 101 km. east of Mossamedes via railroad, 14° 55'S., 13° 0'E." [= Munhino, Namibe Prov., SW Angola, 14°57'S, 12°58'E, elevation 435–470 m].

Distribution: Southwestern Africa. Southwestern Angola (Benguela, Cuando Cubango, Cuanza Sul, Cunene, Huambo, Huíla, Luanda, Namibe), Namibia (Erongo, Hardap, Karas, Khomas, Kunene, Okavango, Omaheke, Oshikoto, Otjozondjupa) and W South Africa (Northern Cape, Western Cape), 180–1630 m.

Sources: Mertens, 1955, 1971, Boycott & Haacke, 1979, Haacke, 1979, Buys & Buys, 1983, Branch, 1998, Broadley *in* Bauer & Branch, 2001 and M. Griffin, 2003.

Remarks: Wüster et al. (2007: 445–446) recognized *N. nigricincta* as a distinct species and placed *woodi* as a subspecies.

9. *Afronaja nigricollis* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 269–272, pl. 3, figs. 5–7. (*Naja nigricollis*)

Synonyms: *Naja nigricollis fasciata* Bocage, 1866a *(nomen praeoccupatum), Naja nigricollis melanoleuca* Bocage, 1895 *(nomen praeoccupatum), Naja nigricollis occidentalis* Bocage, 1895, *Naja nigricollis atriceps* Laurent, 1955, *Naja nigrocollis* – Bonta, Vargaftig, Bhargava & Vos, 1970 *(nomen incorrectum),* and *Naja nigricolis* – Teng, Kuo, Lee & Ouyang, 1987 *(nomen incorrectum).*

Type: Lectotype, ZMUC 65204, a 1647 mm specimen (J.R. Chenon, 1826–1836), designated by F.W. Braestrup *in* Hughes & Barry (1969: 1027).

Type locality: "Guinea" [= coast of Ghana *fide* Hughes & Barry, 1969: 1027]. Restricted to vicinity of Accra, Ghana *fide* J.B. Rasmussen & Hughes (1997: 14, 16).

Distribution: Subsaharan Africa. Southwestern Mauritania (Guidimaka, Hodh El Gharbi, Trarza), Senegal (Dakar, Fatick, Kédougou, Kolda, Saint-Louis, Tambacounda, Thiès), Gambia (MacCarthy Island, Western), Guinea–Bissau (Bafatá, Bissau, Quinara, Bolama and Bubaque Is.), Guinea (Boké, Koundara, Kouroussa, Macenta, Nzérékoré, Télimélé), Sierra Leone (Eastern, Northern, Southern, Western), Ivory Coast (Abengourou, Abidjan, Agboville, Bouaflé, Daloa, Lagunes, Toumodi), SW Mali (Kayes, Koulikoro, Ségou, Sikasso), Burkina Faso (Centre, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Nord, Sahel, Sud-Ouest, Volta-Noire), Ghana (Accra, Volta, Western), Togo (Centrale, Kara, Maritime, Plateaux), N Benin (Alibori, Atakora, Atlantique, Collines, Cotonou, Zou), S Niger (S Diffa, Dosso, Niamey, S Zinder), Nigeria (Akwa Ibom, Anambra, Bayelsa, Cross River, Delta, Gongola, Kwara, Oyo, Rivers), SW Chad (Chari-Baguirmi, mayo-Kebbi Ouest), Cameroon (Adamaoua, Centre, Extreme-Nord, Est, Littoral, Nord, Nord-Ouest, Ouest, Sud, Sud-Ouest), Central African Republic (Bamingui-Bangoran, Kemo-Gribingui, Lobaye, Ombella-Mpoko, Ouham, Ouham-Pende, Sangha), E Gabon (Haut-Ogooué), N Democratic Republic of the Congo (Maniema, Nord-Kivu, Orientale), SE South Sudan (Eastern Equatoria), W Ethiopia (Gojjam), Somalia (Bay, Hiraan, Jubbada Dhexe, Jubbada Hoose, Shabeellaha Dhexe, Shabeellaha Hoose), Kenya (Central, Coast, Eastern, Nairobi, North-Eastern, Rift Valley), Uganda (Central, Eastern, Nairobi, Northern, Western), Rwanda (Butare, Byumba, Kigali), Burundi (Bujumbura, Gitega, Muramvya, Ruyigi), Tanzania (Arusha, Dodoma, Iringa, Kigoma, Kilimanjaro, Mara, Morogoro, Mtwara, Mwanza, Rukwa, Ruvuma, Singida, Tabora, Kagera), Malawi (Central, Northern, Southern), Angola (Cunene, Huíla, Namibe) and Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), NSL–2500 m.

Sources: Andersson, 1903, 1937, Aylmer, 1922, Loveridge, 1936b, 1955b, Monard, 1937, 1951, Bogert, 1940, Uthmöller, 1941b, 1950a, 1952b, 1954a, 1956b, Cansdale, 1954, Mertens, 1955, Laurent, 1956a, 1960, 1964a, 1973a, Vesey-FitzGerald, 1958, 1975, Condamin, 1959, Perret, 1961, Sweeney, 1961, Condamin & Villiers, 1962, V.F.M. Remarks: Probably occurs in SW Botswana *fide* Auerbach (1987: 199).

10. *Afronaja nubiae* (Wüster & Broadley, 2003). J. Zool. London 259(4): 348–351, figs. 1a–d, 3c. (*Naja nubiae*)

Type: Holotype, YPM 3916, a 788 mm male.

Type locality: "Kom Ombo (= Kawn Umû), Aswan Governorate, Egypt (24°28' N, 32°57' E)" [elevation 100 m].

Distribution: Northeastern Africa. Southeastern Egypt (Aswan, Assiut, S El-Bahr El-Ahmar, SE New Valley, Qena, Sohag), Eritrea (Anseba, Gash-Barka, Northern Red Sea, Southern), Sudan (El-Bahr El-Ahmar, Al Khartum, Ash-Shamaliyah, Ash Shaqiyah, Janub Darfur), NE Chad (Ennedi) and cen. Niger (Agadez), 100–2000 m.

Sources: Flower, 1930, Corkill, 1935, Marx, 1968, Spawls & Branch, 1995, J.-F. Trape & Mané, 2006b, and Largen & Spawls, 2010.

Remarks: Chad and Niger populations are isolated *fide* Largen & Spawls (2010: 603) and this species may occur in other mesic habitats in the Sahara *fide* Wüster & Broadley (2003: 354).

11. *Afronaja pallida* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 379. (*Naia nigricollis pallida*)

Synonym: *Naja mosambica pallida* – Khole, 1991 *(nomen incorrectum).*

Type: Lectotype, BMNH 1895.6.14.28, a juvenile (E. Lort-Phillips, Spring 1985), designated by Bogert (1942b: 5).

Type locality: "Inland of Berbera, British Somaliland" [= S of Berbera, Woqooyi Galbeed Region, NW Somalia, ca. 10°25'N, 45°02'E] via lectotype selection.

Distribution: Northeastern Africa. Southern Ethiopia (Bale, Gemu Gofa, Hararge, Kofa, Shoa, Sidamo), Somalia (Awdal, Bakool, Bari, Galguduud, Gedo, Jubbada Dhexe, Jubbada Hoose, Mudug, Nugaal, Sanaag, Shabeellaha Dhexe, Shabeellaha Hoose, Sool, Togdheer, Woqooyi Galbeed), E Kenya (Coast, Eastern, North-Eastern, Rift Valley, South Is.) and ext. N Tanzania (Arusha, Kilimanjaro), NSL–1500 m.

Sources: Zavattari, 1930a, Broadley, 1968c, Lanza, 1972, 1983a, Spawls, 1978, Joger, 1984, MacKay & MacKay, 1985, Broadley & Howell, 1991, Spawls & Branch, 1995, Spawls et al., 2002, Wüster & Broadley, 2003 and Largen & Spawls, 2010.

12. †*Afronaja robusta* (Meylan, 1987). Fossil Snakes Laetoli: 80–81, figs. 3.12a–c. (†*Naja robusta*)

Type: Holotype, OGM LAET 3016, five middle trunk vertebrae, presumably from one individual.
Type locality: "*c*. 8 km. w Endulen, northern Tanzania, Laetolil Beds. Locality 10, exact horizon unknown; Upper Pliocene."
Distribution: Upper Pliocene (Gelasian: 1.8–2.6 mya) of Tanzania. Known only from type locality.
Source: Rage & Bailon, 2011.
Remarks: *Naja incertae sedis fide* Wallach et al. (2009: 32).

13. †*Afronaja romani* (Hoffstetter, 1939). Arch. Mus. Hist. Nat. Lyon 15(3): 57–64, pl. 1, figs. 1–16, pl. 2, figs. 1–13. (†*Palaeonaja romani*)

Synonyms: †*Palaeonaja crassa* Hoffstetter, 1939, and †*Naja austriaca* Bachmayer & Szyndlar, 1985.
Type: Holotype, UCBL 92856, a nearly complete skeleton (R. Hoffstetter).
Type locality: "Vindobonien moyen de la Grive-Saint-Alban" [= La Grive-St. Alban, Isère Dept., SE France; Astaracian (NM 7–8), middle Miocene].
Distribution: Lower Miocene (Orleanian, MN 4-5: 13.7–16.9 mya) of France and Germany, middle Miocene (Astaracian, MN 7–8: 11.1–12.8 mya) of France, upper Miocene (Vallesian, MN 9: 9.7–11.1 mya) of Hungary and Ukraine, and upper Miocene (Turolian, MN 11: 7.8–8.7 mya) of Austria.
Sources: Szyndlar & Zerova, 1990, Szyndlar, 1991b, Szyndlar & Schleich, 1993, Szyndlar, 1995, 2005, and Ivanov, 2000.
Remarks: †*Palaeonaja crassa* Hoffstetter, 1939 and †*Naja austriaca* Bachmayer & Szyndlar, 1985 are conspecific *fide* Szyndlar & Rage, 1990.

AFRONATRIX Rossman & Eberle, 1977 (Natricidae)

Type species: *Tropidonotus anoscopus* Cope, 1861e.
Distribution: Tropical W Africa.
Sources: E.H. Taylor & Weyer, 1958, Doucet, 1963, Mertens, 1965c, Menzies, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Dunger, 1972, Rossman & Eberle, 1977, Roman, 1980, Hughes, 1983, 2013, J.A. Butler & Reid, 1986, D. Lawson, 1993, J.-F. Trapé & Mané, 1995a, 2006b, Ineich, 2003, Luiselli et al.. 2003, 2005, Chippaux, 2006, Chirio & LeBreton, 2007, Zaher et al., 2008, Ullenburch et al., 2010, W. Böhme et al., 2011, Segniagbeto et al., 2011, and Chirio, 2013.

1. *Afronatrix anoscopus* (Cope, 1861e). Proc. Acad. Nat. Sci. Philadelphia 13(7): 299. (*Tropidonotus anoscopus*)

Synonyms: *Tropidonotus ferox* A.C.L.G. Günther, 1863, *Helicops gendrii* Boulenger, 1910, and *Natrix firestonei* E.H. Taylor & Weyer, 1958.
Type: Holotype, ANSP 6639, a 356 mm specimen (Baker).
Type locality: "Cuba" (in error *fide* Loveridge, 1941a: 118). Corrected to Liberia *fide* Loveridge (1941a: 118).
Distribution: West Africa. Southeastern Senegal (Kédougou), Guinea-Bissau (Southern, Western), Guinea (Boffa, Dalaba, Macenta, Nzérékoré, Télimélé), S Mali (Sikasso), Sierra Leone, Liberia (Bong, Gbarpolu, Loffa, Montserrado, Margibi), S Ivory Coast (Abidjan, Daloa, Dix-Huit Montagnes, Guiglo, Lagunes, Tabou, Boulay Is.), SW Burkina Faso (Hauts-Bassins), S Ghana (Eastern), S Togo (Centrale, Plateaux), Benin (Alibori, Atakora, Borgou, Plateau, Zou), Nigeria (Abia, Adamawa, Akwa Ibom, Anambra, Bauchi, Bayelsa, Benue, Cross River, Delta, Kwara, Lagos, Ogun, Oyo, Plateau, Rivers, Sokoto, Taraba), W Cameroon (Adamaoua, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), and Equatorial Guinea (Bioko Is.), NSL–1200 m.

AFROTYPHLOPS Broadley & Wallach, 2009 (Typhlopidae)

Synonym: *Aspidorhynchus* Fitzinger, 1843 (*nomen praeoccupatum*).
Type species: *Acontias punctatus* Leach, 1819.
Distribution: Subsaharan Africa.
Sources: F. Werner, 1921a, Roux-Esteve, 1974, Wallach, 1993c, McDiarmid et al., 1999 and Broadley & Wallach, 2009.

1. *Afrotyphlops angeli* (Guibé, 1952). Bull. Mus. Nat. Hist. Paris (2) 24(1): 79. (*Typhlops angeli*)

Type: Holotype, MNHN 1951.1, a 365 mm specimen (M. Lamotte, 1943).
Type locality: "Nzo (Mt. Nimba), 500 m." [= Nzao, Nzérékoré Prefecture, Guinea, 07º44'N, 08º45'W, elevation 500 m].
Distribution: Southeastern Guinea (Nzérékoré), 500 m. Known only from type locality.
Sources: Angel et al., 1954 and Ineich, 2003.
Remarks: A valid species *fide* W. Böhme, 2002; previously a synonym of *Typhlops manni*.

A

2. *Afrotyphlops angolensis* (Bocage, 1866b). J. Sci. Math. Phys. Nat., Lisboa 1(1): 65–66. (*Onychocephalus angolensis*)

Synonyms: *Onychocephalus angolensis* Bocage, 1866a (*nomen nudum*), *Typhlops congicus* Boettger, 1887c, *Typhlops adolfi* Sternfeld, 1910c, *Typhlops dubius* Chabanaud, 1917a, *Typhlops lestradei* Witte, 1933c, *Typhlops ochraceus* Laurent, 1952, *Typhlops angolensis irsaci* Laurent, 1954b (*nomen nudum*), *Typhlops angolensis irsaci* Laurent, 1956a, *Typhlops angolensis polylepis* Laurent, 1954b (*nomen nudum*), *Typhlops angolensis polylepis* Laurent, 1956a, and *Typhlops angolensis symoensi* Laurent, 1960.

Type: Holotype, MBL T79.1134, a 470 mm specimen (F.A.P. Bayão, 1862–1866), destroyed by fire 18 March 1978.

Type locality: "le districto do Duque du Bragança, situado na latitude de Loanda, porém umas 75 leguas para o interior, Portuguesas Africa occidental" [= Duque de Bragança, Malanje District, Angola, 9°08'S, 16°04'E, elevation ca. 1100 m].

Distribution: Central and East Africa. Southern Cameroon (Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), S Central African Republic (Baningui-Bangoran, Lobaye, Mbomou), Gabon (Haut-Ogooué, Ogooué-Ivindo, Ogooué-Maritime, Woleu-Ntem), S Congo (Brazzaville, Kouilou, Lekoumou, Pool), Democratic Republic of Congo (Bandundu, Bas-Congo, Equateur, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), Angola (Huambo, Lunda Norte, Malanje), Uganda (Central, Western), W Kenya (Eastern, Nairobi, Western), W Rwanda, NW Burundi, NW Tanzania (Kigomo, Mwanza, Shinyanga) and NE Zambia (Northern), 500–2075 m.

Sources: Laurent, 1956a, 1960, 1964b, Pitman, 1974, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Broadley et al., 2003, Watkins-Colwell & de Leon, 2003, Branch, 2005, Herrmann et al., 2005, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Pauwels, 2008.

3. *Afrotyphlops bibronii* (A. Smith, 1846 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 51, fig. 2, pl. 54, figs. 5–8, 2 pp. (*Onychocephalus bibronii*)

Types: Syntypes (?), BMNH 1946.1.11.22 (formerly BMNH 1865.5.8.9), longest syntype 309 mm (A. Smith, 12 Aug. 1834–4 Jan. 1836), location of other syntypes unknown.

Type locality: "country to the northward of Latakoo, South Africa" [= Kuruman, N Northern Cape Prov., South Africa *fide* V.F.M. FitzSimons (1962a: 67), 27°27'S, 23°26'E, elevation 1326 m].

Distribution: Southeastern Africa. Eastern Zimbabwe (Manicaland), SE Botswana (South East), Swaziland, Lesotho and South Africa (Eastern Cape, KwaZulu-Natal, Free State, Transvaal), NSL–2000 m.

Sources: V.F.M. FitzSimons, 1974, Broadley, 1983, Branch, 1998, 2001 and Broadley & Blaylock, 2013.

4. *Afrotyphlops blanfordii* (Boulenger, 1889b). Ann. Mag. Nat. Hist. (6) 4(22): 363. (*Typhlops blanfordii*)

Type: Holotype, BMNH 1946.1.11.67 (formerly BMNH 1869.11.4.36), a 320 mm specimen (W.T. Blanford, 1867–1868).

Type locality: "Senafé, Abyssinia" [= Senafe, Southern Prov., SE Eritrea, 14°42'N, 39°25'E, elevation 2450 m].

Distribution: Eritrea (Anseba, Central, Gash-Barka, Northern Red Sea, Southern) and Ethiopia (Bale, Gemu Gofa, Gojjam, Gondar, Hararge, Kefa, Shoa, Sidamo), 1000–2450 m.

Sources: Boulenger, 1893, Laurent, 1956a, 1964b, Largen 1978, 1997, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

5. *Afrotyphlops congestus* (A.-M.-C. Duméril & Bibron, 1844). Erpét. Gén. 6: 334–336. (*Onychocephalus congestus*)

Synonyms: *Onychophis barrowii* Gray, 1845, *Typhlops crassatus* W.C.H. Peters, 1881, and *Typhlops bocagei* Bethencourt-Ferreira, 1905.

Type: Holotype, not designated, FPM, an 800 mm specimen, lost *fide* A. Grandison *in* Roux-Esteve (1974a: 79).

Type locality: Unknown.

Distribution: Central Africa. Southeastern Nigeria (Akwa Ibom, Cross River), S Cameroon (SW Adamaoua, Est, Centre, Littoral, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Central African Republic (Lobaye, Mbomou, Sangha), Gabon (Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Lolo, Ogooué Maritime, Woleu-Ntem), Congo (Brazzaville, Kouilou, Lekoumou, Sangha), Democratic Republic of Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Nord-Kivu, Oriental, Sud-Kivu), NW Angola (Cabinda), W Uganda (W Central, Western) and E Tanzania (Lindi, Tanga), NSL–1435 m.

Sources: K.P. Schmidt, 1923, Mertens, 1965c, Meirte, 1992, Rödel et al., 1995, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Branch, 2005, Herrmann et al., 2005, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Pauwels, 2008.

6. *Afrotyphlops elegans* (W.C.H. Peters, 1868a). Mber. Königl. Akad. Wiss. Berlin 1868(7): 450, pl. 2, fig. 1. (*Typhlops* [*Ophthalmidion*] *elegans*)

Types: Syntypes (3), ZMB 6066, and ZZSDa–b, 390 mm, 335 mm and 260 mm specimens (H. Dohrn, 1865), latter two lost *fide* Bauer et al. (1995: 79).

Type locality: "Prinzens-insel (Ilha de Príncipe) an der Westküste Africa's" [= Príncipe Island, Gulf of Guinea, West Africa].

Distribution: São Tomé and Príncipe (Príncipe Is.).

Source: Bocage, 1887c.

7. *Afrotyphlops fornasinii* (Bianconi, 1849a). Nouvi Ann. Sci. Nat. (2) 10: 107. (*Typhlops fornasinii*) (*nomen corrigendum*)

Synonyms: *Typhlops fornasini* Bianconi, 1849a *(nomen incorrigendum), Typhlops fornasinii* – Bianconi, 1850 *(nomen corrigendum), Onychocephalus mossambicus* W.C.H. Peters, 1854, *Onychocephalus trilobus* W.C.H. Peters, 1854, *Onychocephalus tettensis* W.C.H. Peters, 1860a, *Typhlops bianconii* Jan, 1860 *in* Jan & Sordelli, 1860–1866, and *Typhlops mossombicus* – F. Werner, 1921a *(nomen incorrectum).*

Type: Holotype, not designated, MBI, a 72 mm specimen (C. Fornasini, 1842–1847).

Type locality: "Mosambico" [= Mozambique].

Distribution: Southeastern Africa. Mozambique (Gaza, Inhambane, Maputo, Bazaruto, Benguerua, Inhaca, Magaruque and Mozambique Is.), SE Zimbabwe (Masvingo) and NE South Africa (ext. NE KwaZulu-Natal), NSL–65 m.

Sources: Laurent, 1964b, V.F.M. FitzSimons, 1974, Broadley, 1983, Branch, 1998 and Broadley & Blaylock, 2013.

Remarks: Original description repeated in Bianconi (1850: 183, pl. 6, figs. 1–1d).

8. *Afrotyphlops gierrai* (Mocquard, 1897b). Bull. Mus. Hist. Nat., Paris 3(4): 122–123. (*Typhlops gierrai*)

Synonym: *Typhlops guirrae* – K.P. Schmidt, 1923 *(nomen incorrectum).*

Type: Holotype, MNHN 1897.24, a 469 mm specimen (A. Gierra, 1895).

Type locality: "Tanga, dans l'Afrique orientale allemande" [= Tanzania].

Distribution: Tanzania (forests in Usambara and Uluguru Mountains), 600–1040 m.

Sources: T. Barbour & Loveridge, 1928, Laurent, 1964b, J. Rasmussen, 1981 and Spawls et al., 2002.

9. *Afrotyphlops kaimosae* (Loveridge, 1935). Bull. Mus. Comp. Zool. 79(1): 5–6. (*Typhlops kaimosae*)

Type: Holotype, MCZ 40060, a 208–215 mm male (A. Loveridge, 7 March 1934)

Type locality: "Kaimosi Forest, near Friends' African Mission, Kakamega district, Nyanza Prov., Kenya Colony."

Distribution: Kenya (Nyanza). Known only from type locality.

10. *Afrotyphlops liberiensis* (Hallowell, 1848). Proc. Acad. Nat. Sci. Philadelphia 4: 59–60, pl., figs. 1–2. (*Onychocephalus liberiensis*)

Synonyms: *Onychocephalus nigro-lineatus* Hallowell, 1848 *(nomen incorrigendum), Onychocephalus hallowelli* Jan, 1861b *(nomen nudum), Onychocephalus kraussi* Jan, 1861b *(nomen nudum), Typhlops hallowelli* Jan, 1863b (*nomen nudum*), *Typhlops kraussi* Jan, 1863b (*nomen nudum*), *Typhlops kraussi* Jan, 1864 *in* Jan & Sordelli, 1860–1866, *Typhlops liberiensis intermedia* Jan, 1863b (*nomen nudum*), *Typhlops hallowelli* Jan, 1864 *in* Jan & Sordelli, 1860–1866, *Typhlops liberiensis intermedia* Jan, 1864 *in* Jan & Sordelli, 1860–1866, *Typhlops punctatus nigrolineatus* – Chabanaud, 1917c *(nomen corrigendum),* and *Typhlops leprosus* E.H. Taylor & Weyer, 1958.

Type: Holotype, ANSP 3243, a 618 mm specimen (T.S. Savage, 1840–1848).

Type locality: "Liberia, Western Coast of Africa."

Distribution: West Africa. Guinea (Dalaba, Dix-Huit Montagnes, Faranah, Kouroussa, Macenta, Nzérékoré, Télimélé, Yomou), Sierra Leone (Eastern), Liberia (Bong, Loffa, Margibi, Montserrado), SW Ivory Coast (Abidjan, Guiglo, Katiola, San Pédro, Tabou) and S Ghana (Accra, Ashanti, S Eastern, S Western), 30–600 m.

Sources: E.H. Taylor & Weyer, 1958, Doucet, 1963, Ineich, 2003, W. Böhme et al., 2011 and Chirio, 2013.

11. *Afrotyphlops lineolatus* (Jan, 1864). Icon. Gén. Ophid.: 24. (*Typhlops* [*Ophthalmidion*] *lineolatus*)

Synonyms: *Typhlops lineolatus* Jan, 1863b (*nomen nudum*), *Typhlops boulengeri* Bocage, 1893c, and *Typhlops tornieri* Sternfeld, 1910c.

Type: Holotype, ZMUU 725 (A. Afzel, late 1700s–early 1800s).

Type locality: "Sierra Leona" [= Sierra Leone].

Distribution: West, cen. and E Africa. Senegal (Dakar, Fatick, Tambacounda, Thiès, Ziguinchor), Gambia (Kombo Saint Mary), Guinea (Dalaba, Dubréka, Télimélé), Sierra Leone (Northern, Southern, Sherbro Is.), Liberia, Ivory Coast (Katiola, Odienné), Ghana (Eastern, Northern), Togo (Plateaux), SW Niger (Dosso), Nigeria (Kaduna), Cameroun (Adamaoua, Est, Nord, Nord-Ouest, Sud, Sud-Ouest), SW Chad (Chari-Baguirmi), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Haute-Sangha, Mbomou, Ouham), Congo (Brazzaville, Cuvette, Cuvette-Ouest, Kouilou, Pool), Democratic Republic of Congo (Bas-Congo, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu), Angola (Benguela, Cabinda, Lunda Norte), SW Sudan (Gharb Darfur, Janub Darfur), South Sudan (Central Equatoria, Eastern Equatoria, Western Equatoria), S Ethiopia (Bale, Gemu Gofa, Sidamo), Uganda (Central, Eastern, Northern, Western, Kome Is.), SW Kenya (Central, S Eastern, Nairobi, Nyanza, S Rift Valley, Western), N Tanzania (Arusha, Kigoma, Kilimanjaro, Manyara, Mara, Morogoro, Mwanza, Piwani, Rukwa, Shinyanga, Singida, Tanga, Ukerewe Is.), NSL–2600 m.

Sources: Jan & Sordelli, 1865 *in* 1860–1866, Bocage, 1895c, Laurent, 1956a, 1964b, Pitman, 1974, Largen,

A

1978, Largen & Rasmussen, 1993, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Largen & Spawls, 2010, Segniagbeto et al., 2011 and Chirio, 2013.

Remarks: Holotype erroneously reported lost *fide* Roux-Estève (1974a: 80), Hahn (1980: 62) and McDiarmid et al. (1999: 108) but was rediscovered by L. Wallin (*in litt.,* 4 Feb. 1993).

12. *Afrotyphlops manni* (Loveridge, 1941a). Proc. U.S. Natl. Mus. 91(3128): 118. (*Typhlops manni*)

Type: Holotype, USNM 109634, a 343 mm specimen (W.M. Mann, 10 March–17 July 1940).

Type locality: "Harbel, Republic of Liberia" [= Harbel, SW Grand Bassa Co., cen. Liberia, 06°17'N, 10°21'W, elevation 100 m].

Distribution: Central Liberia (Grand Bassa), 100 m. Known only from holotype.

Source: W. Böhme et al., 2011.

13. *Afrotyphlops nanus* Broadley & Wallach, 2009. Zootaxa (2255): 32–33, fig. 5a.

Type: Holotype, BMNH 1897.11.17.16, a 125 mm male (C.S. Belton, 1896).

Type locality: "Samburu, Coast Prov., southeastern Kenya (39°17'S, 3°47'E, elevation 295 m)."

Distribution: Southeastern Kenya (Coast), 295 m. Known only from type locality.

14. *Afrotyphlops nigrocandidus* (Broadley & Wallach, 2000). Afr. J. Herp. 49(2): 166–167. (*Rhinotyphlops nigrocandidus*)

Type: Holotype, ZMUC 52223, a 440 mm male (P. Gravlund & M. Anderson, 17 Jan. 1996).

Type locality: "Kiranzi-Kitungulu Forest Reserve, Udzungwa Mountains, Iringa District, Tanzania (1500 m a.s.l., 08°09'S x 36°05'E)."

Distribution: Southeastern Tanzania (Iringa, Morogoro), 1450–1750 m.

Remarks: Probably inhabits Nguru and Ruhebo Mountains *fide* Broadley & Wallach (2000: 167).

15. *Afrotyphlops punctatus* (Leach *in* Bowdich, 1819). Miss. Cape Coast Castle-Ashantee: 493. (*Acontias punctatus*)

Synonyms: *Typhlops eschrichtii* Schlegel, 1839 *in* 1837–1844, *Onychophis punctata* Gray, 1845, and *Typhlops milleti* Chabanaud, 1920a.

Type: Holotype, BMNH 1946.1.1.47 (T.E. Bowditch, April, 1817–Oct. 1818).

Type locality: "Fantee, Cape Coast Castle to Ashantee" [= Fantee tribal area, between Mansu and Fosu along Amissa (Oki) River, Central Region, S Ghana, elevation 160–180 m].

Distribution: West, Cen. and East Africa. Senegal (Dakar, Kédougou, Tambacounda, Ziguinchor), Gambia (MacCarthy Island, Western), Guinea–Bissau (Bissau, Cacheu, Tombali, Bolama Is.), Guinea (Conakry, Kindia, Kouroussa, Macenta, Nzérékoré, Télimélé), S Mali (Mopti, Sikasso), Sierra Leone (Northern, Southern, Western), Liberia (Margibi, Nimba), Ivory Coast (Bouna, Daloa, Ferkéssédougou, Katiola), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire), S Ghana (Accra, Central, S Eastern, S Western), Togo (Plateaux), Benin (Atakora, Atlantique, Collines, Zou), SW Niger (Tahoua), Nigeria (Benue, Cross River, Delta, Gongola, Plateau), Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Littoral, Nord, Nord-Ouest, Sud, Sud-Ouest), S Chad (Chari-Baguirmi, Mayo-Kebbi), Equatorial Guinea (Bioko Is.), Central African Republic (Bamingui-Bangoran, Gribingui, Haut-Mbomou, Lobaye, Mbomou, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende, Sangha), N Democratic Republic of Congo (Equateur, Oriental), South Sudan, and Uganda (Central, Eastern, Northern, Western), NSL–1800 m.

Sources: Manaças, 1955, E.H. Taylor & Weyer, 1958, Leston & Hughes, 1968, Pitman, 1974, Roux-Estève, 1974a, Roman, 1980, Hakansson, 1981, J.A. Butler & Reid, 1986, Rödel et al., 1995, W. 16. *Afrotyphlops rondoensis* (Loveridge, 1942). Bull. Mus. Comp. Zool. 91(4): 256–257. (*Typhlops tettensis rondoensis*)

Type: Holotype, MCZ 48066, a 228 mm specimen (A. Loveridge, 5 May 1939).

Type locality: "Nchingidi, 2,700 feet, Rondo Plateau, southeastern Tanganyika Territory." [= near Lindi, Tanzania, 09°36'S, 39°25'E, elevation 825 m].

Distribution: Southeastern Tanzania (SE Lindi, Mtwara), 375–825 m.

Sources: Laurent, 1964b and Spawls et al., 2002.

17. *Afrotyphlops schmidti* (Laurent, 1956a). Ann. Mus. Roy. Congo Belge, Sci. Zool. (48): 71–72, figs. 9–10, pl. 8, fig. 4. (*Typhlops schmidti*)

Synonyms: *Typhlops schmidti wilsoni* Laurent, 1968a (*nomen praeoccupatum*) and *Rhinotyphlops schmidti laurenti* Wallach, 2003 (*nomen substitutum*).

Type: Holotype, MRAC 17996, a 326 mm specimen (IRSAC, 11–14 Dec. 1950).

Type locality: "Nyunza, 700 m., Terr. d'Albertville, Tanganika" [= Nyunza, Katanga Prov., Democratic

Republic of the Congo, 05°57'S, 28°01'E, elevation 700 m].

Distribution: Central Africa. Northeastern Angola (Moxico), SE Democratic Republic of Congo (Katanga) and Zambia (Copperbelt, Eastern, Luapula, Northern, North-Western, Western), 585–1655 m.

Sources: Witte, 1962, Laurent, 1964b, 1968a, Broadley et al., 2003 and Wallach, 2003.

18. *Afrotyphlops steinhausi* (F. Werner, 1909b). Mitt. Naturhist. Mus. Hamburg 26: 209. (*Typhlops steinhausi*)

Synonyms: *Typhlops batesii* Boulenger, 1911b and *Typhlops steinhousi* – Roux-Estève, 1965 *(nomen incorrectum).*

Type: Neotype, MNHN 1964.139, a 420–425 mm male (R. Pujol), designated by Villiers (1968: 1308).

Type locality: "Rép. Centrafricaine: Boukoko" [= Boukoko, Central African Republic, 3°54'N, 17°56'E, elevation 560 m] via neotype selection.

Distribution: Central Africa. Southeastern Nigeria (Cross River), S Cameroon (Centre, Nord-Ouest, Sud, Sud-Ouest), W Central African Republic (Haute-Sangha, Lobaye, Ombella-Mpoko, Ouham), Congo and NE Democratic Republic of Congo (Orientale), NSL–800 m.

Sources: Chirio & Ineich, 2006 and Chirio & LeBreton, 2007.

Remarks: Two ZMH syntypes lost *fide* Hallermann (1998: 216), destroyed July, 1943 during World War II. Illustration of neotype head in Villiers (1963: figs. 1–3).

19. *Afrotyphlops tanganicanus* (Laurent, 1964b). Bull. Mus. Comp. Zool. 130(6): 418–419. (*Typhlops schmidti tanganicanus*)

Type: Holotype, MCZ 57439, a 390 mm female (C.J.P. Ionides, 11 March–26 April 1958).

Type locality: "Liwale, Tanganyika" [= Liwale, Nachingwea District, Southern Prov., Tanzania, 09°,46'S, 37°56'E, elevation 470 m].

Distribution: Southeastern Tanzania (Tanga), 25–470 m.

Source: Spawls et al., 2002.

20. *Afrotyphlops usambaricus* (Laurent, 1964b). Bull. Mus. Comp. Zool. 130(6): 416–417. (*Typhlops boulengeri usambaricus*)

Type: Holotype, MCZ 38699, a 384 mm specimen (R.E. Moreau. June 1955).

Type locality: "Amani, Usambara Mtns" [= Amani, Eastern Usambara Mountains, Tanga Region, Tanzania, 05°06'S, 38°38'E, elevation 750 m].

Distribution: Northeastern Tanzania (E Usambara Mountains of N Tanga), 750 m.

Source: Spawls et al., 2002.

AGKISTRODON Palisot de Beauvois, 1799 (Viperidae)

Synonyms: *Agkishodon* – Palisot de Beauvois, 1799 *(nomen incorrectum), Scytale* Latreille *in* Sonnini & Latreille, 1801a *(nomen praeoccupatum), Cenchris* Daudin, 1803c, *Cenchrus* Link, 1807 *(nomen emendatum), Scytalus* Fischer von Waldheim, 1813 *(nomen emendatum), Tisiphone* Fitzinger, 1826a *(nomen praeoccupatum), Ancistrodon* Wagler, 1830 *(nomen emendatum), Tysiphone* A.-M.-C. Type: Holotype, not designated, (A. Garden, 1760–1761), location unknown.

Type locality: "Carolina" [USA]. Restricted to Charleston, South Carolina, USA *fide* K.P. Schmidt (1953a: 224).

Distribution: Southern and E USA (Alabama, Arkansas, Connecticut, Delaware, ext. NW Florida, Georgia, S Illinois, S Indiana, SE Iowa, E Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Mississippi, Missouri, ext. SE Nebraska, N New Jersey, SE New York, North Carolina, S Ohio, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia) and N Mexico (ext. NE Chihuahua, ext. N Coahuila), NSL–1525 m, usually below 500 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska), lower Pliocene (Hemphillian) of USA (Kansas), middle Pliocene (Blancan II, III) of USA (Kansas, Texas), upper Pliocene (Blancan V) of USA (Kansas, Nebraska), lower/middle Pleistocene (Irvingtonian I) of USA (Kansas), middle/upper Pleistocene (Irvingtonian II) of USA (West Virginia), and upper Pleistocene (Rancholabrean II) of USA (Georgia, Kansas, Pennsylvania, Texas, Virginia, West Virginia).

Sources: Gloyd & Conant, 1938, 1943, Fitch, 1960, Gloyd, 1969, Vial et al., 1977, Ernst & Barbour, 1989, Conant & Collins, 1991, Palmer & Braswell, 1995, Tennant, 1997, Fitch, 1999, Holman, 2000a, Werler & Dixon, 2000, D. Schmidt, 2006b, Guiher & Burbrink, 2008, Douglas et al., 2009 and Ernst & Ernst, 2011.

Remarks: Original description based on Catesby (1743(2): 56, pl. 56). Type not present in ZMUU *fide* Lönnberg, 1896 or NHR *fide* Andersson, 1899. Two western subspecies are distinct species *fide* Douglas et al. (2009: 1164).

3. *Agkistrodon piscivorus* (Lacépède, 1789). Hist. Nat. Serp. 2: 130–131, 424–425. (*Crotalus piscivorus*)

Synonyms: *Crotalus aquaticus* Bonnaterre, 1790, *Scytale piscivora* – Latreille *in* Sonnini & Latreille, 1801, *Coluber tisiphone* G. Shaw, 1802, *Acontias leucostoma* Troost, 1836, *Toxicophis leucostoma* Troost, 1836 *(nomen substitutm), Toxicophis pugnax* Baird & Girard, 1853, *Ancistrodon piscivorus* Cope, 1860 *(nomen emendatum), Agkistrodon piscivorus conanti* Gloyd, 1969, and *Agkistrodon piscivorus laurae* Stewart, 1974 (*nomen nudum*).

Type: Holotype, not designated, location unknown.

Type locality: "Caroline" [USA]. Restricted to vicinity of Charleston, South Carolina, USA *fide* K.P. Schmidt (1953a: 225).

Distribution: Southeastern USA (Alabama, Arkansas, Florida, Georgia, ext. S Illinois, S Indiana, ext. SE Kansas, W Kentucky, Louisiana, Mississippi, S and S Missouri, E North Carolina, E Oklahoma, cen. & E South Carolina, W Tennessee, E Texas, SE Virginia), NSL–765 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida, Georgia, Texas).

Sources: Wharton, 1960, 1966, 1969, Burkett, 1966, Mount, 1975, Ernst & Barbour, 1989, Conant & Collins, 1991, Palmer & Braswell, 1995, Tennant, 1997, Holman, 2000a, Werler & Dixon, 2000, J.C. Murphy & Schlager, 2003, Means, 2004c, Guiher & Burbrink, 2008 and Ernst & Ernst, 2011.

Remarks: Official Specific Name *fide* Opinion 1463 (ICZN, 1987). Florida subspecies possibly a valid species *fide* Douglas et al. (2009: 1164).

4. *Agkistrodon taylori* Burger & Robertson, 1951. Univ. Kansas Sci. Bull. 34(5): 213–216, pl. 25, figs. 1–2. (*Agkistrodon bilineatus taylori*)

Synonyms: *Agkistrodon bilineatus taylori* H.M. Smith & Taylor, 1950 *(nomen nudum),* and *Agkistrodon bilineatus lemosespinali* H.M. Smith & Chiszar, 2001h.

Type: Holotype, UIMNH 10002 (formerly EHT 5514), a 465 mm male (E.H. Taylor, 9 June 1938).

Type locality: "km. 833, 21 kilometers north of Villagrán, Tamaulipas, México."

Distribution: Northeastern Mexico (Hidalgo, Nuevo León, San Luis Potosí, Tamaulipas, N Veracruz), NSL–1500 m.

Sources: Tovar-Tovar & Mendoza-Quijano, 2001, Parkinson et al., 2000, Bryson & Mendoza-Quijano, 2007, Ramírez-Bautista et al., 2010 and Ernst & Ernst, 2011.

Sharma & Kumari, 1998a *(nomen incorrectum).*

Type species: *Ahaetulla mycterizans* Link, 1807.

Distribution: Southeastern Asia and East Indies.

Sources: M.A. Smith, 1926b, 1943, Leviton, 1968a and I. Das, 2010, 2012.

Remarks: Official Generic Name no. 1308 *fide* Opinion 524 (ICZN, 1958a).

1. *Ahaetulla dispar* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 303–304, pl. 23, figs. A, A′. (*Tragops dispar*)

Types: Syntypes (6), BMNH 1946.1.9.37– 42, five females, one juvenile (R.H. Beddome, 1857–1882).

Type locality: "Anamallay Mountains, British India" [= Anamalai Hills, S Western Ghats, E Kerala /W Tamil Nadu States, SW India, ca. 10°22'N, 77°08'E].

Distribution: Southwestern India (Western Ghats of Kerala, Tamil Nadu), 610–1980 m.

Sources: Whitaker & Captain, 2004 and Hutton & David, 2009.

2. *Ahaetulla fasciolata* (J.G. Fischer, 1885a). Arch. Naturg. 51(2): 66–68, pl. 5, fig. 4. (*Tragops fasciolatus*)

Type: Holotype, BMNH 1946.1.8.30, a female (F.J. Grabowsky, Jan. 1881–July 1884).

Type locality: "Südost-Borneo" [= Southeastern Borneo or Kalimantan, Indonesia].

Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Nakhon Si Thammarat, Ranong), Singapore, West Malaysia (Perak), Brunei, East Malaysia (Sabah, Sarawak) and Indonesia (Kalimantan, Natuna, Sumatra), NSL–985 m.

Sources: Smedley, 1932b, Tweedie, 1983, Stuebing, 1991, Vogel, 1992, David & Vogel, 1996, M.J. Cox et al., 1998, Pauwels & Sumontha, 2007 and Onn *et al.,* 2010.

A

3. *Ahaetulla fronticincta* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 158–159. (*Dryiophis fronticincta*)

Types: Syntypes (3), BMNH 1946.1.8.24–25, a male and female (Luna), location of other syntype unknown.
Type locality: "West Indies" (in error).
Distribution: India (West Bengal) and Myanmar (Ayeyarwady, Bago, Mon, Rakhine, Yangon).
Source: Wogan et al., 2008.
Remarks: Endemic to coastal Myanmar with Indian records needing confirmation *fide* Das (2010: 260)..

4. *Ahaetulla mycterizans* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 226. (*Coluber mycterizans*)

Synonyms: *Natrix flagelliformis* Laurenti, 1768, *Coluber mycterizans* G. Shaw, 1802, *Coluber linkii* Merrem, 1820, *Dryiophis panthoronia* H. Boie *in* Schlegel, 1826a *(nomen nudum), Dryophis xanthozonia* Schlegel, 1826b *(nomen nudum), Dryophis hammatorhynchus* Fitzinger, 1826a *(nomen substitutum), Dryophis parvoninus* Kuhl *in* F. Boie, 1827, *Dryophis xanthozonia* Kuhl *in* F. Boie, 1827, *Herpetotragus boiei* Fitzinger, 1861, *Herpetotragus pavoninus* Fitzinger, 1861, *Herpetotragus russelii* Fitzzinger, 1861, and *Tragops javanicus* Fitzinger *in* Steindachner, 1867.
Type: Holotype, NHR Lin-81 (formerly MAFR), a 730 mm male (Mus. Drottn.).
Type locality: "America" (in error).
Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Chumphon, Krabbi, Ranong, Trang), West Malaysia (Johor) and W Indonesia (Java, Sumatra), NSL–500 (1290) m.
Sources: Wall, 1905g, E.H. Taylor, 1965, Tweedie, 1983, M.J. Cox, 1991b, Malhotra & Davis, 1991, M.J. Cox et al., 1998 and Miralles & David, 2010.

5. *Ahaetulla nasuta* (Lacépède, 1789). Hist. Nat. Serp. 2: 100, 277–279, pl. 4, fig. 2. (*Coluber nasutus*)

Synonyms: *Ahaetulla mycterizans* Link, 1807 *(nomen praeoccupatum), Coluber nasutus* G. Shaw, 1802, *Dryinus oxyrhynchus* Bell, 1825, *Dryinus russellianus* Bell, 1825, *Dryophis passericki* Schinz, 1833, *Dryophis rostratus* Schinz, 1833, *Dryinus fuscus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Drijinus nasutus* Bleeker, 1856 *(nomen emendatum), Dryophis mycterizans anomalus* Annandale, 1906, *Dryophis mycterizans cinereoventer* Wall, 1908j, *Dryophis mycterizans rhodogaster* Wall, 1908j, *Dryophis mycterizans tephrogaster* Wall, 1908g, *Dryophis mycterizans isabellinus* Wall, 1910h, *Dryophis mycterizans lepidorostralis* Wall, 1910h, *Dryophis mycterizans zephrogaster* Wall, 1910h, and *Dryophis mycterizans rhodonotus* Wall, 1921g.
Type: Holotype, not designated, lost *fide* M.J. Cox et al. (2013: 92).
Type locality: "à Malabar, à Ceylan, à Pondichery, au Bengale, à Java, aux îles Philippines et aux Mariannes" [= India, Sri Lanka, Indonesia, Philippines and Mariannas]. Restricted to Sri Lanka *fide* M.A. Smith (1943: 376).
Distribution: Southern and SE Asia. India (Andhra Pradesh, Assam, Bihar, Goa, Gujarat, Karnataka, Kerala, Madhya Pradesh. Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka (Central, Eastern, North-Central, Northern, North-Western, Sabaragamuwa, Southern, Uva, Western), Bangladesh (Chittagong), Nepal (Bardiya, Dang, Dhanusa, Gorkha, Kailali, Kapilbastu, Makwanpur, Rupandehi, Sunsari, Surkhet), Myanmar (Rangoon, Yangon), Thailand (Chaiyaphum, Chiang Mai, Chon Buri, Kanchanaburi, Krung Thep Mahanakhon, Lopburi, Mae Hong Sam, Nakhon Pathom, Nakhon Ratchasima, Nakhon Sawan, Phra Nakhon, Phuket, Prachuap Kiri Khan, Sara Buri), S Laos (Champasak), Cambodia (Kampong Cham, Kampong Chhnang, Kampong Spoe) and S Vietnam (Ba Ria-Vung Tau, Dak Lak, Dong Nai, Gia Lai, Ho Chi Minh City, Khanh Hoa, Kien Giang, Kom Tum, Ninh Thuan, Tay Ninh, Vinh Long), NSL–1830 m.
Sources: Wall, 1905g, 1921g, Bourret, 1936b, Deraniyagala, 1955, E.H. Taylor & Elbel, 1958, E.H. Taylor, 1965, P. Silva, 1969, 1980a, Campden-Main, 1970a, Deuve, 1970, R. Sharma, 1971, 1976a, Saint-Girons, 1972a, Daniel, 1983, Murthy, 1986, A. Silva, 1990b, 2009, M.J. Cox, 1991b, Malhotra & Davis, 1991, M.J. A

1. *Aipysurus apraefrontalis* M.A. Smith, 1926a. Monogr. Sea Snakes: 24–25, fig. 13.

Type: Holotype, BMNH 1946.1.1.94 (formerly MAS 9032 & BMNH 1926.2.16.5), a 565 mm male (M.A. Smith, 1925).
Type locality: "Ashmore Reefs, Timor Sea" [= Ashmore Reef, Ashmore and Cartier Islands, Timor Sea, NW Australia, ca. 12°16'S, 123°00'E].
Distribution: Northwestern Australia (NW Western Australia: Ashmore and Cartier Is.).
Source: L.A. Smith, 1974.

2. *Aipysurus duboisii* Bavay, 1869. Mém. Soc. Linn. Normandie 15(5): 33–34.

Synonyms: *Aipysurus australis* Sauvage, 1877, *Pelagophis lubricus* W.C.H. Peters & Doria, 1878, and *Aepyrus duboisii* – Ruiter, 1958 *(nomen incorrectum).*
Type: Holotype, formerly MMBR, a 910 mm male (C.F. Dubois or A.J.C. Dubois), lost *fide* McCarthy *in* Golay et al. (1993: 222).
Type locality: "L'ile Lifou, Nouvelle-Calédonie" [= Lifou Is., New Caledonia, 21°00'S, 167°15'E].
Distribution: Australasia. Papua New Guinea (Central: Yule Is.), Australia (Northern Territory, Queensland, Western Australia), New Caledonia and Loyalty Is.
Sources: David & Vogel, 1996, O'Shea, 1996, Ineich & Rasmussen, 1997, Bauer & Sadlier, 2000 and Ineich & Laboute, 2002.

3. *Aipysurus eydouxii* (Bibron *in* Gray, 1849a). Cat. Snakes Brit. Mus.: 59. (*Tomogaster eydouxii*)

Synonyms: *Thalassophis anguillaeformis* P. Schmidt, 1852, *Thalassophis muraenaeformis* P. Schmidt, 1852, *Thalassiophis anguillaeformis* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Aipysurus margaritophorus* Bleeker, 1858c *(nomen nudum), Aipysurus anguilliformis* – Krefft, 1869b *(nomen incorrectum), Aepysurus anguilliformis* – Boettger, 1892b *(nomen incorrectum), Aepyurus eudouxxi* – Ruiter, 1958 *(nomen incorrectum),* and *Aipysurus eidouxii* – Elter, 1981 *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.6.86 (formerly BMNH III.10.1.a), a juvenile female.
Type locality: "Indian Ocean."
Distribution: Indo-Australia. Thailand (Chanthaburi, Pattani, Phet Buri, Samut Songkhram, Songkhla), S Vietnam (Binh Thuan, Kien Giang), West Malaysia (Johore), Singapore, East Malaysia (Sabah), Indonesia (Java, Kalimantan, Papua), Papua New Guinea (Western), N Australia (Northern Territory, Queensland, Western Australia) and New Caledonia.
Sources: E.H. Taylor, 1965, B.L. Lim & Sawai, 1975, Tweedie, 1983, O'Shea, 1996. Li et al., 2005, V.S. Nguyen et al., 2009, A.R. Rasmussen et al., 2011 and Sanders et al., 2013.
Remarks: Philippine records rejected *fide* E.H. Taylor, 1922a and Sanders et al., 2012.

4. *Aipysurus foliosquama* M.A. Smith, 1926a. Monogr. Sea Snakes: 22–24, fig. 12.

Type: Holotype, BMNH 1946.1.1.96 (formerly MAS 9052 & BMNH 1926.2.16.7), a 545 mm female (M.A. Smith, 1925).
Type locality: "Ashmore Reefs, Timor Sea" [= Ashmore Reef, Ashmore and Cartier Islands, Timor Sea, NW Australia, ca. 12°16'S, 123°00'E].
Distribution: Western Australia (NW Western Australia, Ashmore and Cartier Is., Scott Reef).
Remarks: Sanders et al. (2012: 18) erroneously listed four syntypes (BMNH 1946.1.1.86–88 and BMNH 1946.1.1.96) and one paratype (RMNH 6430).

5. *Aipysurus fuscus* (Tschudi, 1837). Arch. Naturg. 3(1): 335, pl. 8, figs. 1–7. (*Stephanohydra fusca*)

Type: Holotype, ZMB 2824, a 774 mm male (J.L.Schönlein, 1830–1837).
Type locality: "Celebes" [= Sulawesi, cen. Indonesia] (possibly in error *fide* Cogger, 1975: 80).
Distribution: Western Australia (NW Western Australia: Ashmore and Cartier Is.) and ? E Indonesia (Sulawesi).
Remarks: M.A. Smith (1926a: 17) erroneously referred to BMNH 1926.2.16.1 as holotype.

6. *Aipysurus laevis* Lacépède, 1804. Ann. Mus. Hist. Nat. Paris 4: 197, 210, pl. 56, fig. 3.

Synonyms: *Hypotropis jukesii* Gray, 1846, *Aipysurus fuliginosus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Aepysurus laevis* – F. Müller, 1878b *(nomen incorrectum), Hipysurus laevis* – Barrett, 1950 *(nomen incorrectum), Aepyurus laevis* – C.J.P. Haas, 1950 *(nomen incorrectum), Oepysurus laevis* – Parsons, 1970 *(nomen incorrectum),* and *Aipysurus laevi* – Khole, 1991 *(nomen incorrectum).*
Type: Neotype, WAM 22384, an adult female, designated by L.A. Smith (1974: 99).
Type locality: "Locker Island, off Onslow (Lat. 21°44'S, Long. 114°46'E), Western Australia" via neotype selection.
Distribution: Australasia. Eastern Indonesia (Kei and Aru Is.), S Papua New Guinea, N Australia (Northern Territory, Queensland, N Western Australia), New Caledonia and Loyalty Is.
Sources: O'Shea, 1996, Ineich & Rasmussen, 1997, Burns & Heatwole, 1998, Bauer & Sadlier, 2000, Burns & Heatwole, 2000, Ineich & Laboute, 2002 and J.C. Murphy & Schlager, 2003,.

7. *Aipysurus mosaicus* K.L. Sanders, Rasmussen, Elmberg, Mumpuni, Guinea, Blias, Lee & Fry, 2012. Zootaxa (3431): 7–12, figs. 4a, 5a–b, 6a–c.

Type: Holotype, SAMA 65222, a 549 mm male (B.F. Fry, Oct. 2000).
Type locality: "Gulf of Carpentaria near Weipa, Australia" [= vicinity of Weipa, ext. N Queensland, ext. NE Australia, 12°40'S, 141°50'E, elevation 10 m].
Distribution: Eastern Indonesia (Papua) and N Australia (Northern Territory, Queensland, Swain Reefs and Thursday Is.).
Remarks: Collector of type listed as B.F. Fry *fide* Sanders et al. (2012: 7) but is probably co-author B.G. Fry.

8. *Aipysurus pooleorum* L.A. Smith, 1974. Rec. West. Aust. Mus. 3(2): 97–98. (*Aipysurus laevis pooleorum*)

Type: Holotype, WAM 21366, an adult male (W. Poole & W. Poole, Sept. 1963).
Type locality: "Shark Bay, Western Australia" [= Shark Bay, W West Australia, W Australia, ca. 25°44'S, 113°34'E].
Distribution: Southwestern Australia (Western Australia).
Source: Storr et al., 1986.

9. *Aipysurus tenuis* Lönnberg & Andersson, 1913a. Kon. Svenska Vetensk. Akad. Handl. 52(3): 13–14.

Types: Syntypes (3), NHR 2400a–c, longest syntype 1020 mm (E. Mjöberg, July 1911).
Type locality: "Cape Jaubert, Australia" [= Cape Jaubert, Western Australia, Australia, 18°57'S, 121°33'E].
Distribution: Northwestern Australia (N Western Australia).
Source: Kharin & Cheblyukov, 2006b.

†*ALAMITOPHIS* Albino, 1986 (†Madtsoiidae)

Type species: †*Alamitophis argentinus* Albino, 1986.
Distribution: Upper Cretaceous of Argentina, and lower Eocene of Australia.
Sources: Albino, 1986, 1987b, 2011b and Scanlon, 1993, 2005.

1. †*Alamitophis argentinus* Albino, 1986. Actas IV Congr. Argent. Paleont. Bioestr. 2: 16–18, fig. 1.

Type: Holotype, MACN-RN 27, one middle trunk vertebra.
Type locality: "Ladera sudoeste del Cerro Cuadrado, noreste de la Ea. Los Alamitos, Arroyo Verde, Dpto. Valcheta, Río Negro, Argentina. Sector medio de la Formación Los Alamitos, Campaniano-Maastrichtiano temprano, cretácico tardío."
Distribution: Upper Cretaceous (Campanian-Maastrichtian: 65.5–83.6 mya) of Argentina.
Source: Albino, 2000.

2. †*Alamitophis elongatus* Albino, 1994. Pesquisas 21(1): 59–60, fig. 2.

Type: Holotype, MACN-RN 38, one middle trunk vertebra.
Type locality: "la ladera sudeste del Cerro Cuadrado, Estancia Los Alamitos, Dpto. Valcheta, sudeste de la provincia de Río Negro, Argentina. La Formación Los Alamitos (Campaniano-Maastrichtiano Inferior)."
Distribution: Upper Cretaceous (Campanian-Maastrichtian: 65.5–83.6 mya) of Argentina.

3. †*Alamitophis tingamarra* Scanlon, 2005. Mem. Queensland Mus. 51(1): 224–228, figs. 6c, 7.

Type: Holotype, QMF 19729, one middle-posterior trunk vertebra (H. Godthelp & M. Archer field crews, mid-1980s– early 1990s).
Type locality: "MP1 horizon, Main Quarry,Tingamarra, Boat Mountain, near Murgon, south-east Queensland (26°S, 152°E), Australia; Tingamarra Local Fauna, Early Eocene, 54.6+/-0.05 MYBP."
Distribution: Lower Eocene (Neustrian, MP 8: 54.6 mya) of Australia. Known only from type locality.
Sources: Albino, 1987a, 1993.

†*ALBANERYX* Hoffstetter & Rage, 1972 (Boidae)

Type species: †*Albaneryx depereti* Hoffstetter & Rage, 1972.
Distribution: Middle Miocene of France, and upper Miocene of Ukraine.
Sources: Rage, 1984b, Zerova, 1989 and Augé & Rage, 2000.

1. †*Albaneryx depereti* Hoffstetter & Rage, 1972. Ann. Paleont. (Vert.) 58(1): 105–107, fig. 9, pl. 1, fig. 6.

Type: Holotype, MNHN LGA 1, one posterior caudal vertebra.
Type locality: "La Grìve-Saint-Alban, Tortonien," Isère, France (Astaracian, middle Miocene).
Distribution: Middle Miocene (Astaracian, MN 7/8: 11.1–12.8 mya) of France.

2. †*Albaneryx volynicus* Zerova, 1989. Vestn. Zool. 1989(5): 31–35, figs. 1–12.

Type: Holotype, ZIKP 22-1089, one caudal vertebra.
Type locality: "Middle Sarmatian (late Miocene), Gritsev, Ukraine, USSR."

A

Distribution: Upper Miocene (Vallesian, MN 9: 9.7–11.1 mya) of Ukraine. Known only from type locality.

ALLUAUDINA Mocquard, 1894b (Pseudoxyrhophiidae)

Synonyms: *Allusdina* – Palacky, 1898 *(nomen incorrectum), Allandina* – Ditmars, 1933 *(nomen incorrectum),* and *Alluadina* – Phelps, 1981 *(nomen incorrectum).*
Type species: *Alluaudina bellyi* Mocquard, 1894b.
Distribution: Madagascar.
Sources: Guibé, 1958, Domergue, 1984c, Lanza, 1990a, Glaw & Vences, 1994, Kelly et al., 2009 and Zaher et al., 2009.

1. *Alluaudina bellyi* Mocquard, 1894b. C.R. Séanc. Soc. Philom. Paris 1894(17): 9–10.

Type: Holotype, MNHN 1893.214, a 312 mm male (C. Alluaud & Belly, 1892–1893).
Type locality: "la montagne d'Ambre, vallée du Saccaranii [= Sakaramy], Madagascar." Emended to Mararaomby, Madagascar *fide* MNHN catalogue.
Distribution: Northern Madagascar (Antsiranana, Mahajanga, N Toamasina, 400–650 m).
Sources: Raxworthy, 1988 and Ziegler, et al., 1997.

2. *Alluaudina mocquardi* Angel, 1939. Bull. Mus. Natl. Hist. Nat. (2) 11(6): 536–538.

Type: Holotype, MNHN 1939.53, a 500 mm male (R. Decary, 23 July 1938).
Type locality: "une grotte totalement obscure de la Mananjeba (district d'Ambilobe), Nord de Madagascar."
Distribution: Northern Madagascar (Antsiranana).
Remarks: Gender of holotype female *fide* Angel (1939: 11); Domergue (1984c: 544) showed it to have hemipenes.

ALSOPHIS Fitzinger, 1843 (Xenodontidae)

Synonyms: *Plesius* Jan, 1857, *Halsophis* Cope, 1894c *(nomen emendatum), Alsophys* – Grant, 1946b *(nomen incorrectum),* and *Asaophis* – Grant, 1946b *(nomen incorrectum).*
Type species: *Psammophis antillensis* Schlegel, 1837.
Distribution: Lesser Antilles.
Sources: J.A. Peters & Orejas-Miranda, 1970, A. Schwartz & Thomas, 1975, Cadle, 1984a, A. Schwartz & R.W. Henderson, 1988, 1991, R.W. Henderson & Sajdak, 1996, Rodríguez-Róbles & Greene, 1996, Vidal et al., 2000, Hedges et al., 2009, R.W. Henderson & Powell, 2009 and Zaher et al., 2009.
Remarks: *Alsophis (sensu lato)* split into several genera *fide* Zaher et al. (2009: 147).

1. *Alsophis antiguae* H.W. Parker, 1933a. Ann. Mag. Nat. Hist. (10) 11(61): 158. (*Alsophis leucomelas antiguae*)

Synonyms: *Herpdodryas punctifer* Martin, 1838, and *Alsophis antiguae sajdaki* R.W. Henderson, 1990.
Types: Syntypes (2): BMNH 1946.1.4.46–47 (formerly BMNH = 1850. 50.4.29.1–2), two juveniles (Gardiner).
Type locality: "Antigua, Lesser Antilles."
Distribution: Lesser Antilles (Antigua).
Sources: Lazell, 1967, R.W. Henderson, 1990, Sajdak & R.W. Henderson, 1991, Henderson et al., 1996a and Daltry et al., 2001.

2. *Alsophis antillensis* (Schlegel, 1837). Essai Phys. Serp. 1: 155, 2: 214. (*Psammophis antillensis*)

Synonym: *Dromicus leucomelas* A.-M.-C. Duméril, Bibron & Duméril, 1854a.
Type: Lectotype, RMNH 768, a 334 mm specimen (F.-X. Donzelot, 1818–1826), designated by Brongersma (1937a: 5, figs. 1c–d).
Type locality: "Guadeloupe," Lesser Antilles via lectotype selection.
Distribution: Lesser Antilles (Guadeloupe, Marie-Galante).
Sources: Brongersma, 1937a, Sajdak & R.W. Henderson, 1990 and Breuil, 2003.

3. *Alsophis manselli* H.W. Parker, 1933a. Ann. Mag. Nat. Hist. (10) 11(61): 157 (*Alsophis leucomelas manselli*)

Types: Syntypes, (13), BMNH 1946.1.4.53 (formerly BMNH 1899.6.29.18), a male (J.W. Gregory), BMNH 1946.1.4.57–62 (formerly BMNH 1931.10.18.179–184) (Gomez), BMNH 1946.1.4.95 (formerly BMNH 1832.4.1.33) (Howes) and BMNH 1946.1.6.71–75) (formerly BMNH 1886.10.16.4–8), males and females (J.S. Hollings).
Type locality: "Montserrat, Lesser Antilles."
Distribution: Lesser Antilles (Montserrat).
Sources: A. Schwartz, 1966 and Sajdak & R.W. Henderson, 1990.

4. *Alsophis rijgersmaei* Cope, 1870. Proc. Amer. Philos. Soc. (1869–1870) 11(81): 154–155.

Synonym: *Alsophis cinereus* S.W. Garman, 1887b.
Types: Syntypes (6), ANSP 5411–16, longest syntype 946 mm (H.E. van Rijgersma, 1863–1870).
Type locality: "small island of St. Martins, in the Spanish West Indies" [= Saint-Martin, Lesser Antilles].
Distribution: Lesser Antilles (Anguilla, Saint-Barthélemy, Saint-Martin).
Sources: Sajdak & R.W. Henderson, 1990, Powell, 1991, Powell et al., 1991, 1992, Howard et al., 2001 and Breuil, 2002, 2003.

5. *Alsophis rufiventris* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 668–670. (*Dromicus rufiventris*)

Types: Syntypes (2), MNHN 3559–60 (formerly RMNH), two males, longest syntype 946 mm.
Type locality: Unknown and "Brésil" [= Brazil] (in error).
Distribution: Lesser Antilles (Nevis, Saba, Statia, St. Eustatius, St. Christopher).
Sources: Sajdak & R.W. Henderson, 1990 and Maley et al., 2006.

6. *Alsophis sajdaki* R.W. Henderson, 1990. Carib. J. Sci. 25(3–4): 119–122, figs. 1a, 2 (*Alsophis antiguae sajdaki*)

Type: Holotype, KU 211059 (formerly ASPS V6789), an 857 mm female (R. Thomas, 11 Aug. 1965).
Type locality: "Great Bird Island, St. George Parish, off of the northeastern coast of Antigua, Lesser Antilles."
Distribution: Lesser Antilles (Antigua: Great Bird Is.), NSL–25 m.
Source: Sajdak & R.W. Henderson, 1990.

7. *Alsophis sanctonum* T. Barbour, 1915. Proc. Biol. Soc. Washington 28: 78.

Synonym: *Alsophis leucomelas danforthi* Cochran, 1938.
Type: Holotype, MCZ 10689 (G.K. Noble, summer 1914).
Type locality: "Terre d'en Haut, Iles des Saintes, near Guadeloupe, French West Indies."
Distribution: Lesser Antilles (Iles des Saintes: Îlet-à-Cabrit, Terre-de-Haut).
Sources: Sajdak & R.W. Henderson, 1990 and Breuil, 2003.

9. *Alsophis sibonius* Cope, 1879. Proc. Amer. Philos. Soc. 18: 275–278.

Type: Holotype, USNM 10138, a 640 mm specimen (F. Ober, 1876–1879).
Type locality: "Island of Dominica," Lesser Antilles.
Distribution: Lesser Antilles (Dominica).
Sources: Sajdak & R.W. Henderson, 1990 and Muelleman et al., 2009.

AMASTRIDIUM Cope, 1861a (Dipsadidae)

Synonyms: *Fleischmannia* Boettger, 1898, *Mimometopon* F. Werner, 1903a, *Phrydops* Boulenger, 1905b, *Mimometophon* – Dunn, 1931b *(nomen incorrectum), Phydrops* – Dunn, 1931b *(nomen incorrectum),* and *Amatridium* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Amastridium veliferum* Cope, 1861a.
Distribution: Mesoamerica and Colombia.
Sources: Dunn, 1925, 1954, Cadle, 1984b, L.D. Wilson, 1988d, Savage, 2002 and Zaher et al., 2009.

1. *Amastridium sapperi* (F. Werner, 1903a). Abh. Bayer. Akad. Wiss. 22(2): 349–350. (*Mimometopon sapperi*)

Type: Holotype, formerly ZSM, destroyed 24–25 April 1944 during World War II.
Type locality: "Guatemala."
Distribution: Mesoamerica. Mexico (Chiapas, Nuevo León, Oaxaca, Tamaulipas, Veracruz), Belize (Cayo, Stann Creek, Toledo), Guatemala (Petén, Quiché) and Honduras (Cortés), NSL–1600 m.
Sources: , L.D. Wilson & Meyer, 1969, H.M. Smith, 1971, J.C. Lee, 1996, J.A. Campbell, 1998b, 2000, Stafford & Meyer, 2000, Stafford et al., 2010, Townsend & Wilson, 2010, Wilson & Johnson, 2010 and McCranie, 2011a.
Remarks: A valid species *fide* H.M. Smith, 1971 and Savage, 2002.

2. *Amastridium veliferum* Cope, 1861a. Proc. Acad. Nat. Sci. Philadelphia (1860) 12(9): 370–371.

Synonyms: *Fleischmannia obscura* Boettger, 1898, and *Phrydops melas* Boulenger, 1905b.
Type: Holotype, ANSP 3738, ca. 379 mm male (R.W. Mitchell, 1857–1860).
Type locality: "Cocuyas de Veraguas, N. Grenada" [= Cocuyas de Veraguas, a gold mine near the Río Concepción, N Veraguas Prov., cen. Panama, ca. 8°45'N, 81°00'W, elevation 100 m].
Distribution: Lower Central America and Colombia. Nicaragua (Rio San Juan), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas), N Panama (Colón, Veraguas) and NW Colombia (Chocó), NSL–1690 m.
Sources: E.H. Taylor, 1951, Villa et al., 1988, Rueda-Almonacid & Rueda-Martínez, 2004 and Solórzano, 2004

AMBLYODIPSAS W.C.H. Peters, 1857a (Atractaspididae)

Synonyms: *Choristodon* A. Smith, 1849 *in* 1838–1849 *(nomen praeoccupatum), Calamelaps* A.C.L.G. Günther, 1866, *Amplyodipsas* – Jan & Sordelli, 1870–1881 *(nomen incorrectum), Calamelas* – Rochebrunne, 1885 *(nomen incorrectum), Rhinocalamus* A.C.L.G. Günther, 1888c, *Clothelaps* Cope, 1895c, *Calumelaps* – Boulenger, 1908k *(nomen incorrectum), Galamelaps* – Bocage, 1897 *(nomen incorrectum), Camelaps* – Calabresi, 1927 *(nomen incorrectum), Calemelaps* – Briceño-Rossi, 1934 *(nomen incorrectum), Rinocalamus* – Briceño-Rossi, 1934 *(nomen incorrectum), Choristocalamus* Witte & Laurent, 1947 *(nomen substitutum), Amblyodipas* – Underwood, 1979 *(nomen*

incorrectum), and *Calamelops* – Misonne, 1980 *(nomen incorrectum).*

Type species: *Calamaria microphthalma* Bianconi, 1852.

Distribution: Subsaharan Africa.

Sources: Witte & Laurent, 1947, Broadley, 1971c, 1983, Underwood & Kochva, 1993, Ulber, 1994, Kelly et al., 2009 and Zaher et al., 2009.

1. *Amblyodipsas concolor* (A. Smith, 1849 *in* 1838–1849). Illust. Zool. So. Africa, Rept. (App.): 18. (*Choristodon concolor*)

Synonym: *Calamelaps mironi* Mocquard, 1905a.

Type: Holotype, RSM, a 190–191 mm specimen (A. Smith, 1831).

Type locality: "Kaffirland to the eastward of the Cape Colony" [= KwaZulu-Natal, South Africa *fide* Loveridge, 1944b: 161].

Distribution: Northeastern South Africa (KwaZulu-Natal, S Limpopo, E Mpumalanga), NSL–780 m.

Sources: V.F.M. FitzSimons, 1937, 1974, Haacke, 1982, Pienaar et al., 1983, Branch, 1988 and Boycott, 1995.

Remarks: Recognized as a subgenus of *Amblyodipsas* (*Choristocalamus*). V.F.M. FitzSimons (1937: 263) discussed type specimen. This species probably occurs in S Mozambique *fide* Boycott (1995: 417).

2. *Amblyodipsas dimidiata* (A.C.L.G. Günther, 1888c). Ann. Mag. Nat. Hist. (6) 1(3): 322–323, pl. 19, fig. c. (*Rhinocalamus dimidiatus*)

Types: Syntypes (3), BMNH 1946.1.2.93–95, longest syntype 394 mm.

Type locality: "Mpwapwa, tropical Africa" [= Mpwapwa, Dodoma Region, cen. Tanzania, 06º21'S, 36º29'E, elevation 1000 m].

Distribution: Central Tanzania (Dodoma), 600–1000 m.

Source: Spawls et al., 2002.

3. *Amblyodipsas katangensis* Witte & Laurent, 1942. Rev. Zool. Bot. Afr. 36(2): 113–114.

Synonym: *Amblyodipsas katangensis ionidesi* Loveridge, 1951a.

Type: Holotype, MRAC 9321, a 300 mm specimen (R.P. Claquin, Nov.–Dec. 1922).

Type locality: "N'Gayu, confluent du Luapula et de la Luombwa (Distr. du Haut Katanga), Congo belge" [= Ngayu, Katanga Prov., Democratic Republic of the Congo].

Distribution: Southeastern Africa. Southeastern Democratic Republic of the Congo (Katanga), N Zambia (Copperbelt) and E Tanzania (Lindi, Ruvuma, Tanga), 40–650 m.

Sources: Broadley, 1971d, Spawls et al., 2002 and Broadley et al., 2003.

Remarks: Possibly occurs in N Mozambique *fide* Spawls et al. (2002: 432).

4. *Amblyodipsas microphthalma* (Bianconi, 1852). Mem. Reale Accad. Sci. Inst. Bologna 1: 167–170, pl. 8, fig. 1. (*Calamaria microphthalma*)

Synonym: *Amblyodipsas microphthalma nigra* Jacobsen, 1986.

Type: Holotype, IBI, a 311 mm specimen (C. Fornasini, 1842–1847).

Type locality: "Inhambane, Mosambico" [= Inhambane, Inhambane Prov., Mozambique, 23º52'S, 35º23'E, elevation 10 m].

Distribution: Southern Mozambique (Gaza, Inhambane, Maputo, Bazaruto and Inhaca Is.) and NE South Africa (NE KwaZulu-Natal, N Limpopo), 10–1415 m.

Sources: V.F.M. FitzSimons, 1974, Pienaar et al., 1983, Branch, 1988, Broadley, 1990b and Marais, 2004.

Remarks: Original description reprinted in Bianconi (1850–1870: 94–108, pl. 12, figs. 1, 1a–d).

5. *Amblyodipsas polylepis* (Bocage, 1873a). J. Sci. Math. Phys. Nat., Lisboa 4(15): 216–217. (*Calamelaps polylepis*)

Synonyms: *Atractaspis hildebrandtii* W.C.H. Peters, 1877d, *Calamelaps miolepis* A.C.L.G. Günther, 1888c, *Calamelaps warreni* Boulenger, 1908k, and *Calamelaps mellandi* Boulenger, 1915a.

Type: Holotype, MBL 1878, a 443 mm female (J.A. d'Anchieta, 1861–1897); destroyed by fire 18 March 1978.

Type locality: "Dondo, intérieur d'Angola" [= Dundo, northeastern Lunda Prov., ext.N Angola, 700 m, 07º22'S, 20º50'E, elevation 700 m].

Distribution: Southeastern Africa. Southern Somalia (Jubbada Dhexe), SE Kenya (Coast, Eastern, Manda Is.), SE Tanzania (Kigoma, Lindi, Manyara, Morogoro, Piwani, Ruvuma, Tanga), Southeastern Democratic Republic of the Congo (Katanga), W Angola (Benguela, Cuanza Norte, Cunene, Luanda), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western, Chilubi Is.), S Malawi (Southern, Nchisi Is.), Mozambique (Inhambane, Manica, Maputo, Nampula, Sofala, Tete), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matebeleland North, Matebeleland South, Midlands), NE Namibia (Caprivi, Okavango), Botswana (Central, Gaborone, Kweneng, North West), Swaziland and NE South Africa (Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga), NSL–1500 m.

6. *Amblyodipsas rodhaini* (Witte, 1930a). Rev. Zool. Bot. Afr. 19(1): 1–3, figs. 1–5. (*Rhinocalamus rodhaini*)

Synonym: *Calamelaps ventrimaculatus katangensis* Witte, 1951 (*nomen praeoccupatum*).
Type: Holotype, MRAC 3079, a 439 mm male (J.A.H. Rodhain, 1910–1911).
Type locality: "toute probabilité du Lomami, Congo Belge" [= Lomami, Katanga Prov., Democratic Republic of the Congo, 05º29'S, 25º17'E, elevation 695 m.
Distribution: Southeastern Democratic Republic of the Congo (Katanga), 590–1125 m.
Source: Witte, 1951.

7. *Amblyodipsas teitana* Broadley, 1971c. Occ. Pap. Natl. Mus. Rhodesia 4B(33): 661–662, fig. 12.

Type: Holotype, MCZ 40705, a 434 mm female (A. Loveridge, 27 April 1934).
Type locality: "Mount Mbololo, Teita Hills near Voi, Kenya, at an altitude of c. 1150 metres" [= Mt. Mbololo, Taita Hills, Coast Region, S Kenya, 03º17'S, 38º28'E].
Distribution: Southeastern Kenya (S Coast), 1150 m. Known only from type locality.
Source: Spawls et al., 2002.

8. *Amblyodipsas unicolor* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 236–238, pl. 1, figs. 1–3. (*Calamaria unicolor*)

Synonyms: *Atractaspis metallicus* Rochbrune, 1886, *Calamelaps feae* Boulenger, 1906, and *Calamelaps niangarae* K.P. Schmidt, 1923.
Type: Holotype, ZMUC, a 375 mm specimen, lost *fide* F.W. Braestrup *in* Hughes & Barry (1969: 1024).
Type locality: "Guineakystein" [= Ghana coast or Danish settlement near Accra, Ghana, 05º33'N, 11º47'W, elevation 30 m *fide* J. Rasmussen & Hughes, 1997: 16].
Distribution: West, cen. and E Africa. Senegal (Fatick, Kédougou, Louga, Ziguinchor), Gambia, Guinea-Bissau (Tombali), W Guinea (Télimélé), Sierra Leone, Ivory Coast (Bouaké, Bouna) Burkina Faso (Centre, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Sud-Ouest, Volte Noire), Ghana (Accra, Ashanti, Northern), S Togo (Maritime), S Benin (Atakora, Atlantique, Zou), Nigeria (Anambra, Bauchi, Bendel, Benue, Gongola, Lagos, Plateau, Oyo, Western), N Cameroon (Nord), SW Chad (Mayo-Kebbi), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Mbomou, Ombella-Mpoko, Ouham, Ouham-Pende), SE Congo, Democratic Republic of the Congo (Bandundu, Bas-Congo, Kinshasa, Orientale), SW South Sudan (Western Equatoria), S Uganda (Central, Western) and W Kenya (cen. Rift Valley), NSL–1500 m.
Sources: Witte, 1962, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Roman, 1980, Hughes, 1983, 2013, Pauwels & Meirte, 1996, J.B. Rasmussen & Hughes, 1997, J.-F. Trape & Mané, 2000, 2006b, Spawls et al., 2002, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Ullenbruch et al., 2010, Segniagbeto et al., 2011, Auliya et al., 2012 and Chirio, 2013.

9. *Amblyodipsas ventrimaculata* (Roux, 1907a). Rev. Suisse Zool. 15(1): 78–*79, figs. 1–2.* (*Rhinocalamus ventrimaculatus*)

Synonyms: *Calamelaps pellegrini* Angel, 1921a, *Calamelaps ventrimaculatus katangensis* Witte, 1951, and *Calamelaps ventrimaculatus websteri* V.F.M. FitzSimons & Brain, 1958.
Type: Holotype, MHNN 12 (formerly MZN 65), a 425 mm female.
Type locality: "pays des Barotsé, Afrique du Sud" [= Barotseland, W Zambia].
Distribution: Southern Africa. Southeastern Democratic Republic of the Congo (Katanga), W Zambia (Western), W Zimbabwe (Matabeleland North, Matebeleland South), N Namibia (Caprivi, Khomas, Omaheke) and NW Botswana (Ghanzi, Kweneng, North West), 950–1430 m.
Sources: Mertens, 1955, Broadley, 1959, 1971d, V.F.M. FitzSimons, 1974, Broadley & Cock, 1975, Auerbach, 1987, Branch, 1988, Broadley et al., 2003, M. Griffin, 2003 and Broadley & Blaylock, 2013.

†*AMEISEOPHIS* Holman, 1976c (Colubridae)

Type species: †*Ameiseophis robinsoni* Holman, 1976c.
Distribution: Middle Miocene of USA, middle Miocene of USA, and upper Miocene of USA.
Fossil records: Lower to upper Miocene of USA.
Sources: Holman, 1978, 1998b, 2000a, Rage, 1984b and Parmley & Hunter, 2010.

1. †*Ameiseophis robinsoni* Holman, 1976c. Herpetologica 32(4): 421–422, figs. 1a–b.

Type: Holotype, UCM 30222, one trunk vertebra.
Type locality: "Split Rock Formation, Main Micro Locality, Second Bench, (Brachycrus Quarry) NW 1/4, sec. 36, T 29 N, R 90 W, Fremont County, Wyoming, USA; middle Hemingfordian through lower Barstovian (middle Miocene through upper Miocene)." Emended to Late Early to Early Middle Miocene (Middle Hemingfordian to Early Barstovian)-2. Split Rock Formation, Upper Units, Fremont and Natrona Counties, Wyoming *fide* Holman (2000a: 140).
Distribution: Lower Miocene (Hemingfordian: 16.3–20.6 mya) of USA (Delaware, Wyoming), middle Miocene (Barstovian: 13.6–16.3 mya) of USA (Nebraska, South

A

Dakota, Wyoming), and upper Miocene (Barstovian: 13.6–16.3 mya) of USA (Nebraska).
Fossil records: Lower Miocene (Hemingfordian) of USA (Delaware), lower/middle Miocene (Arikareean/Hemingfordian) of USA (Wyoming), middle Miocene (Barstovian) of USA (Nebraska, South Dakota, Wyoming), and upper Miocene (Clarendonian) of USA (Nebraska).
Remarks: Revised diagnosis in Holman (2000a: 140).

AMNESTEOPHIS C.W. Myers, 2011 (Dipsadidae)

Type species: *Enicognathus melanauchen* Jan, 1863a.
Distribution: Brazil.
Sources: Jan & Sordelli, 1866 *in* 1860–1866, Boulenger, 1894a, Amaral, 1930e–f, J.A. Peters & Orejas-Miranda, 1970, Dixon, 1980 and C.W. Myers, 2011.

1. *Amnesteophis melanauchen* (Jan, 1863a). Arch. Zool. Anat. Fis. 2(2): 267. (*Enicognathus melanauchen*)

Type: Holotype, RMNH 393, a 375 mm male.
Type locality: "Bahia au Brésil" [= Bahia State, NE Brazil, or Salvador, E Bahia State, NE Brazil, 12°58'S, 38°31'W, elevation 30 m].
Distribution: Northeastern Brazil (Bahia). Known only from holotype.
Remarks: Photographs of holotype and illustrations of maxilla and hemipenis in C.W. Myers (2011: figs. 1–5).

AMPHIESMA A.-M.-C. Duméril, Bibron & Duméril, 1854a (Natricidae)

Synonyms: *Tropinotus* Kuhl & Hasselt, 1822a *(partim, nomen nudum), Tropidonotus* H. Boie, 1826 (*partim), Herpetoreas* A.C.L.G. Günther, 1860c, *Tropidonotis* – Velasco, 1890d *(nomen incorrectum), Hebius* J.C. Thompson, 1913a, *Amphieama* – Maki, 1933 *(nomen incorrectum), Amphieasma* – M.S. Khan, 1984a *(nomen incorrectum), Paranatrix* Mahendra, 1984, *Asianatrix* Hoser, 2012ag *(nomen illegitimum), Elliottnatrix* Hoser, 2012ag *(nomen illegitimum), Greernatrix* Hoser, 2012ag *(nomen illegitimum), Sundanatrix* Hoser, 2012ag *(nomen illegitimum), Wellsnatrix* Hoser, 2012ag *(nomen illegitimum),* and *Wellingtonnatrix* Hoser, 2012ag *(nomen illegitimum).*
Type species: *Coluber stolatus* Linnaeus, 1758.
Distribution: Asia and Indonesia.
Sources: Jan, 1865d, Boulenger, 1893a, Rooij, 1917, M.A. Smith, 1943, Malnate, 1960a, 1962, McDowell, 1961, Toriba, 1994b, Wallach, 1998a, Ziegler & Quyet, 2006, David et al., 2007, Zaher et al., 2009 and I. Das, 2010, 2012.
Remarks: Gender of *Amphiesma* is neuter *fide* Toriba, 1994 and David et al., 1999.

1. *Amphiesma andreae* Ziegler & Le, 2006. Zootaxa (1225): 41–47, figs. 1–8.

Type: Holotype, ZFMK 83747, a 609 mm male (T. Ziegler, H.-W. Hermann, N.T.Vu, K.Q. Le, T.H. Nguyen, X.C. Cao, M.T. Luu & H.T. Dinh, 8 Aug. 2004).
Type locality: "adjacent to Phong Nha –Ke Bang National Park, Thuong Hoa commune, Minh Hoa district, Quang Binh Prov., central Vietnam … in a limestone forest valley at an elevation of 450 m."
Distribution: Central Vietnam (Quang Binh), 450 m. Known only from type locality. Probably occurs in Laos.
Sources: Ziegler et al., 2006, David et al., 2007 and V.S. Nguyen et al., 2009.

2. *Amphiesma arquus* David & Vogel, 2010a. Russ. J. Herp. 17(2): 122–124, figs. 1–4.

Type: Holotype, NMW 37943, a 609 mm male (F. Steindachner, 1878).
Type locality: "Borneo," possibly SE Kalimantan *fide* David & Vogel (2010: 124).
Distribution: Indonesia (Borneo: ? SE Kalimantan). Known only from type specimen.
Source: David & Vogel, 2010.

3. *Amphiesma atemporale* (Bourret, 1934f). Bull. Gén. Instr. Pub. Hanoi 13(4): 75, fig. 1. (*Natrix atemporalis*)

Types: Syntypes (2), MNHN 1935.77–78 (formerly RLB M.441, a 388 mm specimen (Ecole d'Agric.) [Tonkin], a 270 mm (svl) specimen (Serv. Geol. coll.), & a 121 mm (svl) specimen.
Type locality: "Tonkin" [Vietnam]. Restricted to Tam Dao, North Vietnam *fide* Malnate & Romer (1969: 3).
Distribution: Southeastern Asia. Southeastern China (Guangdong, Guangxi, Guizhou, Hong Kong, Yunnan), Laos and ext. N Vietnam (Vinh Phuc), 800–915 m.
Sources: Malnate & Romer, 1969, Karsen et al., 1986, Zhao & Adler, 1993, Orlov et al., 2000, V.S. Nguyen et al., 2009 and I Das, 2010.

4. *Amphiesma beddomii* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 269, pl. 22, fig. E. (*Tropidonotus beddomii*) (*nomen substitutum*)

Synonyms: *Spilotes vittatus* Beddome, 1863 *(nomen praeoccupatum),* and *Rhabdophis beddomei* F. Wall, 1923d *(nomen emendatum).*
Type: Lectotype, BMNH 1946.1.15.32, a 208 mm specimen (R.H. Beddome, 1857–1882), designated by Boulenger (1893: 253).
Type locality: "Nilgherries, India" via lectotype selection.

Distribution: Southern India (Kerala, Maharashtra, Tamil Nadu), 310–2100 m.

Sources: Wall, 1919b, Inger et al., 1984, Malhotra & Davis, 1991, Whitaker & Captain, 2004 and N. Khaire, 2006.

5. *Amphiesma bitaeniatum* (Wall, 1925d). J. Bombay Nat. Hist. Soc. (1924–1925) 30(4): 806–807. (*Natrix bitaeniata*)

Type: Holotype, BMNH 1946.1.13.58 (formerly BMNH 1925.4.2.18) (P.M.R. Leonard, 1924).

Type locality: "Kutkai, North Shan States (4,500 feet), Burma" [= Kutkai, N Shan State, NE Myanmar, 23°27'N, 97°56'E, elevation 1350 m].

Distribution: Southeastern Asia. Southern China (Guangdong, Guangxi, Guizhou, W Yunnan), NE Myanmar (Kachin, Shan), N Thailand (Ching Mai), Laos and N Vietnam (Lao Cai, Son La), 1500–2375 m.

Sources: Zhao & Adler, 1993, Xie et al., 1998, V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.

6. *Amphiesma boulengeri* (Gressitt, 1937). Proc. Biol. Soc. Washington 50: 125–127. (*Natrix boulengeri*)

Type: Holotype, MVZ 23623, a 462 mm female (J.L. Gressitt, 5 Aug. 1936).

Type locality: "Tai-yong, alt. 640 meters, E. Kwangtung Prov., southeastern China (lat. 23°34'N., long. 115° 55'E.)."

Distribution: Southeastern Asia. Southeastern China (Fujian, Guangdong, Guangxi, Guizhou, Hainan, Hunan, Jiangxi, Yunnan), E Thailand (Nakhon Ratchasima, Nakhon Si. Thammarat), Cambodia (Kampong Speu, Kampot, Pursat), Laos (Xiangkhouang) and N Vietnam (Bac Kan, Cao Bang, Dak Lak, Guang Binh, Ha Giang, Ha Tay, Kon Tum, Lam Dong, Lao Cai, Nghe An, Quang Tri, Thai Nguyen, Thua Thien-Hue, Vinh Phuc), 540–1000 m.

Sources: Gressitt, 1941b, Zhao & Adler, 1993, Orlov et al., 2000, Zhao, 2006, Grismer et al., 2008, V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.

7. *Amphiesma celebicum* (W.C.H. Peters & Doria, 1878). Ann. Mus. Civ. Stor. Nat. Genova 13: 386–387. (*Styporhynchus celebicus*)

Type: Holotype, MSNG 30160, a 360 mm female (O. Beccari, 1874).

Type locality: "Kandari (Ins. Selebes)" [= Kendari, Sulawesi, E Indonesia, 03°58'S, 122°36'E, elevation 20 m].

Distribution: Eastern Indonesia (Sulawesi, Sula), 20 m.

Sources: Lang & Vogel, 2005 and Koch, 2012.

8. *Amphiesma concelarum* Malnate, 1963. Notulae Nat. (360): 2–3. (*Amphiesma pryeri concelarum*)

Type: Holotype, CAS 21905, a 786 mm male (J.C. Thompson a.k.a. V. Kühne, 23–24 May 1910).

Type locality: "Miyako-shima, Miyako group, Riukiu Islands" [= Miyakojima, Ryukyu Archipelago, S Japan, bet. 24°43'–57'N and 125°14'–28'E].

Distribution: Southern Japan (Miyako Group, Ryukyu Arch.)

Sources: M. Mori, 1986, Ota & Iwanaga, 1997 and Ota & Takahashi, 1997.

9. *Amphiesma craspedogaster* (Boulenger, 1899b). Proc. Zool. Soc. London 67(1): 163, pl. 17, fig. 1. (*Tropidonotus craspedogaster*)

Synonyms: *Tropidonotus gastrotaenia* F. Werner, 1922a, and *Natrix chrysarga chekiangensis* Mell, 1931a.

Types: Syntypes (6), BMNH 1946.1.12.63–68, longest syntype 635 mm (J.D. La Touche, spring 1896 or 1898).

Type locality: "Kuatun, a village about 270 miles from Foochow, in the mountains at the North-west of the Prov. of Fokien, at an altitude of 3000 to 4000 feet or more, China" [= Guadun, ext. N Fujian, SE China, 27°45'N, 117°50'E, elevation 915–1200 m].

Distribution: China (Anhui, Fujian, Gansu, Guangdong, Guangxi, Hubei, Hunan, Jiangsu, Jiangzi, Shaanxi, Shanxi, Sichuan, Zhejiang) and N Vietnam (Vinh Phuc), 915–1290 m.

Sources: Malnate, 1962, Zhao & Adler, 1993, Orlov et al., 2000, Zhao, 2006, V.S. Nguyen et al., 2009 and Yao, 2012.

10. *Amphiesma deschauenseei* (E.H. Taylor, 1934). Proc. Acad. Nat. Sci. Philadelphia 86: 300–301, figs. 2–4, pl. 17, fig. 5. (*Natrix deschauenseei*)

Type: Holotype, ANSP 19927, a 455 mm specimen (R.M. de Schauensee, 1 Jan.–1 March 1933).

Type locality: "Chieng Mai, North Siam" [= Chiang Mai, Chiang Mai Prov., northwestern Thailand, 18°48'N, 98°40'E, elevation 840 m].

Distribution: Northwestern Thailand (Chiang Mai, Uthai Thani), Vietnam (Cao bang, Tuyen Quang), 300–840 m.

Sources: E.H. Taylor, 1965, V.S. Nguyen et al., 2009 and I. Das, 2012.

Remarks: Vietnamese specimens referrable to another species *fide* P. David (*in litt.*) and V.S. Nguyen et al. (2009: 354). Occurs in China *fide* I. Das (2010: 331).

11. *Amphiesma flavifrons* (Boulenger, 1887b). Ann. Mag. Nat. Hist. (5) 20(116): 96. (*Tropidonotus flavifrons*)

Types: Syntypes (4), MNHN 1889.211–13 and MNHN 1889.215, longest syntype 453 mm (J. Whitehead, 1885).

Type locality: "Mount Kina Baloo, North Borneo" [= Mt. Kinabalu, N Sabah, NE East Malaysia, 6°05'N, 116°30'E, elevation 300–1800 m].

Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Kalimantan), 500–1300 m.

Sources: Malkmus et al., 2002, David & I. Das, 2003 and Auliya, 2006.

Remarks: BMNH 1891.2.25.3, a 330 mm specimen, is possible type *fide* P. Campbell *(in litt.)*.

12. *Amphiesma frenatum* (Dunn, 1923a). J. Malay. Br. Roy. Asiat. Soc. 1(1): 3. (*Natrix frenata*)

Type: Holotype, BMNH 1946.1.15.29, a 260 mm specimen (J.C. Moulton & H.W. Smith, Sept.–Nov. 1920).

Type locality: "Mt. Murud, 2,000 ft., northwestern Sarawak, Borneo."

Distribution: East Malaysia (Sarawak), 610 m. Known only from type locality.

Source: David & I. Das, 2003.

13. *Amphiesma groundwateri* (M.A. Smith, 1922a). J. Nat. Hist. Soc. Siam 4(4): 205–206, pl. 8, fig. 2. (*Natrix groundwateri*)

Type: Holotype, BMNH 1946.1.13.36, a 450 mm male (H.C. Robinson & C.B. Kloss, March 1919).

Type locality: "Tasan, 40 kilometres S.W. of Chumpon, Peninsular Siam" [= Tasan, 40 km SW Chumpon (10°30'N, 99°11'E), S Thailand].

Distribution: Southern Thailand (Chumpon, 300–600 m). Known only from type locality.

Sources: E.H. Taylor, 1965 and David & I. Das, 2003.

14. *Amphiesma inas* (Laidlaw, 1902). Proc. Zool. Soc. London (1901) 71(2): 576, pl. 35, figs. 3–4. (*Tropidonotus inas*)

Type: Holotype, not designated, a 397 mm specimen (Laidlaw & Yapp, 1899–1900).

Type locality: "Gunong Inas, Malay Peninsula" [at or near Sira Rimau, near the base of the mountain Gunong Inas in the northern part of Malaya *fide* E.H. Taylor, 1965: 831].

Distribution: Southern Thailand (Loei, Nakhon Ratchasima, Nakhon Si Thammarat, Prachuap Khiri Khan) and West Malaysia (Pahang, Perak), 950–2000 m.

Sources: E.H. Taylor, 1965, Tweedie, 1983, M.J. Cox, 1991b, M.J. Cox et al., 1998, David & I. Das, 2003, I Das, 2010 and Grismer et al., 2010.

Remarks: Figures of holotype mislabeled as fig. 2a, b *fide* Laidlaw (1902: 576). Holotype listed as BMNH 79 *fide* Cox et al. (2013: 371).

15. *Amphiesma ishigakiense* (Malnate & Munsterman, 1960). Proc. California Acad. Sci. (4) 31(2): 61–63, fig. 2. (*Natrix pryeri ishigakiensis*)

Type: Holotype, CAS 21913, a 932 mm male (J.C. Thompson a.k.a. V. Kühne, 25 May–2 June 1910).

Type locality: "Ishigaki-shima,Yaeyama group, Riukiu Islands" [= Ishigakijima, Ryukyu Arch., S Japan, bet. 24°20'–37'N and 124°04'–21'E].

Distribution: Southern Japan (Yaeyama Group, Ryukyu Arch.).

Sources: M. Mori, 1986 and Ota & Iwanaga, 1997.

16. *Amphiesma johannis* (Boulenger, 1908i). Ann. Mag. Nat. Hist. (8) 2(8): 244. (*Tropidonotus johannis*)

Synonym: *Natrix nigroreticulata* M.L.Y. Chang, 1932.

Types: Syntypes (3), BMNH 1946.1.12.79, male, and BMNH 1946.1.21.88–89, longest syntype 910 mm (J. Graham, 1903–1908).

Type locality: "Yunnan fu" [= Kunming, Yunnan, S China, 25°02'N, 102°43'E, elevation 1950 m].

Distribution: Southern China (Guizhou, Sichuan, Yunnan), 1830–1900 m.

Source: Zhao & Adler, 1993.

17. *Amphiesma kerinciense* David & Das, 2003. Raffles Bull. Zool. 51(2): 414–416, figs. 1–4.

Type: Holotype, ZRC 2.3521, a 516 mm female (D. Yeo & H.H. Tan, 12 June 1996).

Type locality: "Sungai Jalnei Dalam, at base of Gunung Tugu (or Tujuh) [= Mt. Tugo or Tujuh] (01° 42' 59.0" S-101° 21' 43.1" E), Gunung Kerinci [= Mt. Kerinci], Sumatera Barat Prov., Sumatra Island, Indonesia."

Distribution: Western Indonesia (W Sumatra), 1400 m.

18. *Amphiesma khasiense* (Boulenger, 1890a). Fauna Brit. India, Rept. Batr.: 344. (*Tropidonotus khasiensis*)

Synonym: *Natrix gilhodesi* Wall, 1925b.

Types: Syntypes (4), BMNH 1946.1.12.80–82 and BMNH 1946.1.13.45, longest syntype 563 mm (T.C. Jerdon, 1836–1852).

Type locality: "Khási Hills" [Meghalaya, India].

Distribution: Southeastern Asia. Northwestern India (Arunachal Pradesh, Assam, Meghalaya Mizoran, Nagaland, West Bengal), SW China (Guangxi, Xizang, Yunnan), Myanmar (Chin, Kachin), N Thailand (Chiang Mai, Chiang Rai, Loei), Cambodia (Kampot, Koh Kong) and Laos (Phongsali), 400–2000 m.

Sources: Zhao & Adler, 1993, Orlov et al., 2000, Chanhome et al., 2001, Ao et al., 2004, Whitaker & Captain, 2004, B.L. Stuart & Emmett, 2006, V.S. Nguyen et al., 2009, Pauwels et al., 2009b and I. Das, 2010.

Remarks: Vietnam records listed by V.S. Nguyen et al., 2009 are *A. boulengeri fide* David (*in litt.*).

19. *Amphiesma leucomystax* David, Bain, Truong, Orlov, Vogel, Thanh & Ziegler, 2007. Zootaxa (1462): 43–46, figs. 1–7.

Type: Holotype, ZFMK 71702, a 595 mm female (T. Ziegler, 12 July 1997).
Type locality: "southeastern border of the Ky Anh-Ke Go lowland forest protected area, surroundings 18°00'N-106º06'E, Cam Xuyen District, Ha Tinh Prov., Vietnam, 125 m asl."
Distribution: Southeast Asia. Northeastern Cambodia (Ratanakiri), Laos (Khammouan, Xekong) and Vietnam (Da Nang, Gia Lai, Ha Tinh, Kon Tum, Nghe An, Quang Binh, Quang Tri, Thua Thien Hue), 100–1300 m.
Sources: B.L. Stuart & Heatwole, 2008, V.S. Nguyen et al., 2009, I. Das, 2010, B.L. Stuart et al., 2010 and Cox et al., 2013.

20. *Amphiesma metusia* Inger, Zhao, Shaffer & Wu, 1990. Fieldiana: Zool. (58): 18–19, fig. 10.

Type: Holotype, CIB (CIB-FN 36982), an 885 mm female (R.F. Inger, E.-M. Zhao, H.B. Shaffer & G.-F. Wu, 29 May 1987).
Type locality: "Wa Shan (29°38''N, 102°56'E), Hongya County, Sichuan Prov., China, alt. 1200 m; in forest clearing."
Distribution: Southern China (Sichuan), 1200–1470 m. Known only from vicinity of type locality,
Source: Zhao & Adler, 1993.

21. *Amphiesma miyajimae* (Maki, 1931). Monogr. Snakes Japan: 49–51, figs. 22a–d, pl. 15. (*Natrix miyajimae*)

Type: Holotype, NSMT H2956 (formerly KIU no. b), a 392–393 mm male (Miyajima, May 1928).
Type locality: "Taihoku, Formosa" [= Taipei City, Taipei Co., N Taiwan, 25°05'N, 121°34'E, elevation 50 m].
Distribution: Northern Taiwan (Taipei), 50–1000 m.
Sources: Toriba, 1993, Zhao & Adler, 1993, Ota, 1997 and Xiang & Li, 2009.

22. *Amphiesma modestum* (A.C.L.G. Günther, 1875). Proc. Zool. Soc. London 43(1): 232. (*Tropidonotus modestus*)

Type: Lectotype, BMNH 1946.1.13.41, a 484 mm male (T.C. Jerdon, 1836–1852), designated by V.S. Nguyen et al. (2009: 356).
Type locality: "Khasi Hills, India" [= Khasi Hills, E Meghalaya State, NE India, 25°35'N, 91°38'E, elevation 1370–1675 m] via lectotype selection.
Distribution: Eastern India (Assam, Meghalaya, Nagaland), SW China (Guizhou, Guangdong, W Yunnan), Myanmar (Kachin, Kayah), N Thailand, Cambodia (Kampot), N Laos (Xiangkhouang) and S Vietnam (Cao Bang, Ha Giang, Ha Tinh, Lam Dong, Lao Cai, Vinh Phuc), 600–1525 m.
Sources: Deuve, 1970, Saint-Girons, 1972, Wen, 1983, Zhao & Adler, 1993, M.J. Cox et al., 1998, Orlov et al., 2000, V.S. Nguyen et al., 2009 and I. Das, 2010.
Remarks: Records of this species from China and Vietnam (excluding above records) represent an undescribed species *fide* David (*in litt.*).

23. *Amphiesma monticola* (Jerdon, 1854). J. Proc. Asiatic Soc. Bengal (1853) 22(6): 530. (*Tropidonotus monticolus*)

Type: Holotype, not designated, a 982+ mm specimen, lost *fide* M.A. Smith (1943: 308).
Type locality: "Wynaad, S. India" [= Wayanad Distr., N Kerala State, SW India].
Distribution: Southern India (S Karnataku, Kerala, Tamil Nadu).
Source: Whitaker & Captain, 2004.

24. *Amphiesma nicobarense* (Sclater, 1891a). J. Asiat. Soc. Bengal 60(3): 241–242, pl. 6, figs. 5a–d. (*Tropidonotus nicobarensis*)

Synonyms: *Tropidonotus nicobaricus* Sclater, 1891a *(nomen incorrigendum),* and *Tropidonotus nicobariensis* Boulengere, 1893a *(nomen emendatum).*
Type: Holotype, ZSI 8895, a juvenile (F. A. de Roepstorff, 1875–1883).
Type locality: "Camorta in the Nicobars" [= Camorta Is., Nicobars, Andaman & Nicobars, E India, bet. 8°02'–14'N & 93°27'–33'E, Bay of Bengal].
Distribution: Eastern India (Andaman & Nicobars: Camorta Is.). Known only from holotype.
Sources: Biswas & Sanyal, 1980 and I. Das, 1999.

25. *Amphiesma octolineatum* (Boulenger, 1904a). Ann. Mag. Nat. Hist. (7) 13(74): 132. (*Tropidonotus octolineatus*)

Synonyms: *Tropidonotus pleurotaenia* Boulenger, 1904a, *Tropidonotus quadrilineatus* Boulenger, 1904a, *Tropidonotus parallelus sublaevis* Despax, 1913, and *Natrix septemlineata* K.P. Schmidt, 1925b.
Type: Holotype, BMNH 1946.1.12.60, a 610 mm female (J. Graham, 1904–1904).
Type locality: "Yunnan Fu (altitude about 6000 feet)" [= Kumming, Yunnan, China, 25°02'N, 102°43'E, elevation 1950 m].
Distribution: Southern China (Guangxi, Guizhou, Sichuan, Yunnan), 1830–2100 m.
Sources: He, 1983, Zhao & Adler, 1993 and Zhao, 2006.

A

26. *Amphiesma optatum* (S.-Q. Hu & Zhao, 1966). Acta Zootaxon. Sinica 3(2): 160–161, 164, pl. 1, figs. 2–3, pl. 2, fig. 3. (*Natrix optata*)

Type: Holotype, CIB 3624, adult male (C.-C. Liu, 9 Aug. 1940).
Type locality: "Liang Feng Kang, Mt. Omei, Szechwan, altitude 700 m, China" [= Liang Feng Gang, Mt. Emei Shan (ca. 29°31'N, 103°20'E), Sichuan Prov., S China, elevation 700 m].
Distribution: Southern China (Guangxi, Guizhou, Hunan, Sichuan) and N Vietnam (Bac Kan, Cao Bang, Lang Son, Thai Nguyen, Vinh Phu), 400–1100 m.
Sources: Zhao & Adler, 1993, David et al., 1998, Xie et al., 1998, Orlov et al., 2000, 2003, V.S. Nguyen et al., 2009 and I. Das, 2010.

27. *Amphiesma parallelum* (Boulenger, 1890a). Fauna Brit. India, Rept. Batr.: 345. (*Tropidonotus parallelus*)

Synonyms: *Tropidonotus dipsas* J. Anderson, 1879, and *Natrix clerki* Wall, 1925b.
Type: Lectotype, BMNH 1946.1.13.53, a 545 mm male (J.D. Hooker, May–Dec. 1849), designated by Kramer (1977: 728).
Type locality: "Sikkim, India" via lectotype selection.
Distribution: Southeastern Asia. Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Mizoran, Nagaland, Sikkim, West Bengal), E Nepal (Ilam, Lalitpur, Sankhuwasabha), SW China (Xizang, Yunnan), Thailand (UMMZ 138282) and N Myanmar (Kachin), 900–3050 m.
Sources: Boulenger, 1913g, Kramer, 1977, Zhao & Adler, 1993, Orlov et al., 2000, Schleich & Kästle, 2002, Ao et al., 2004, Tiwari & Shah, 2004 and I. Das, 2010.
Remarks: Photographs of lectotype in Kramer (1977: figs. 5–8).

28. *Amphiesma pealii* (Sclater, 1891a). J. Asiat. Soc. Bengal 60(3): 241, pl. 6, figs. 4a–c. (*Tropidonotus pealii*)

Types: Syntypes (2), BMNH 1946.1.13.43 and ZSI 4034 (formerly IMC), two males, longest syntype 508 mm (S.E. Peal, 1872–1891).
Type locality: "Sibsagar district of Assam" [= Sibsagar Distr., N Assam State, NE India, ca. 26°59'N, 94°38'E, elevation ca. 100 m].
Distribution: Northeastern India (Assam), ca. 100 m. Known only from type locality.

29. *Amphiesma petersii* (Boulenger, 1893a). Cat. Snakes Brit. Mus. 1: 225, pl. 14, fig. 1. (*Tropidonotus petersii*) (*nomen substitutum*)

Synonym: *Tropidonotus maculatus* W.C.H. Peters, 1871b (*nomen praeoccupatum*), and *Tropidonotus sundanensis* W.C.H. Peters, 1872d (*nomen praeoccupatum*).
Type: Holotype, BMNH 1946.1.13.47, a 370 mm male (A.R. Wallace, 1 Nov. 1854–25 Jan. 1856).
Type locality: "Borneo" [= Sarawak, East Malaysia].
Distribution: Southeast Asia. West Malaysia, Singapore, East Malaysia (Sabah, Sarawak) and W Indonesia (Sumatra).
Sources: Harman, 1961, Tweedie, 1983, Stuebing, 1991, 1994, Lim & Lim, 1992, David & Vogel, 1996 and David & I. Das, 2003, 2010.

30. *Amphiesma platyceps* (Blyth, 1854a). J. Proc. Asiatic Soc. Bengal 23(3): 297–298. (*Tropidonotus platyceps*)

Synonyms: *Tropidonotus dipsas* Blyth, 1854a, *Zamenis himalayanus* Steindachner, 1867, and *Tropidonotus firthi* Wall, 1914c.
Type: Lectotype, ZSI 7482 (formerly IMC 7482), a 692+ mm specimen (W.S. Sherwill, 1843–1854), designated by Malnate (1966: 11).
Type locality: "Darjeeling, Bengal" [=Darjeeling, West Bengal, N India, 27°02'N, 88°16'E, elevation ca. 2100 m] via lectotype selection.
Distribution: Southern Asia. Northern Pakistan (W Khyber Pakhtunkhwa), N India (Kashmir, Uttar Pradesh, West Bengal), Bangladesh, Bhutan, Nepal (Baitadi, Bajhang, Dolakha, Dadeldhura, Dolpa, Doti, Jumla, Kaski, Kavre, Lalitpur, Lamjung, Makwanpur, Manang, Mustang, Nuwakot, Panchthar, Rasuwa, Sankhuwasabha, Sindhupalchok, Solukhumbu, Taplejung) and SW China (Xizang), 1250–3700 m.
Sources: Swan & Leviton, 1962, Malnate, 1966, Kramer, 1977, Nanhoe & Ouboter, 1987, Zhao & Adler, 1993, M.S. Khan, 2002, Tiwari & Shah, 2004 and Whitaker & Captain, 2004.
Remarks: Photographs of lectotype in Kramer (1977: figs. 9–12).

31. *Amphiesma popei* (K.P. Schmidt, 1925a). Amer. Mus. Novit. (157): 3. (*Natrix popei*)

Type: Holotype, AMNH 27763, adult male (C.H. Pope, Dec. 1922–July 1923).
Type locality: "Nodoa, Hainan, China" [= Nada, Zhan County, Hainan Prov., S China].
Distribution: Southern China (Guangdong, Guangxi, Guizhou, Hainan, Hunan, Yunnan) and Vietnam (Vinh Phuc), 600–800 m.
Sources: Malnate, 1962, Zhao & Adler, 1993, Xie et al., 1998 and V.S. Nguyen et al., 2009.

32. *Amphiesma pryeri* (Boulenger, 1887f). Proc. Zool. Soc. London 55(1): 149, pl. 18, fig. 3. (*Tropidonotus pryeri*)

Type: Lectotype, BMNH 1946.1.7.63, a 770 mm male (H. Pryer, 1886), designated by Ota & Iwanaga (1997: 353).

Type locality: "Loo Choo Islands" [= Ryukyu Arch., S Japan]. Restricted to Okinawa Island *fide* Malnate & Munsterman (1960: 52). Probably Anamioshima or Okinawajima *fide* Ota & Iwanaga (1997: 353).

Distribution: Extreme S Japan (Ryukyus: Agunijima, Akajima, Amamioshima, Amurojima, Fukajijima, Gishifujima, Gushikawajima, Gusukujima, Hamahigajima, Hatejima, Haterumajima, Hyanzajima, Iejima, Iheyajima, Ikeijima, Ikemajima, Irabujima, Iriomotejima, Ishigakijima, Izenajima, Kakeromajima, Kerumajima, Kikaijima, Kohamajima, Korijima, Kubajima, Kudakajima, Kumejima, Kurimajima, Kuroshima, Maejima, Minnjima, Miyagijima, Miyakojima, Nakajima, Nakanogamijima, Nohojima, Ogamijima, Ohajima, Ojima, Okierabujima, Okinawajima, Sesokojima, Shimojishima, Taketomijima, Taramajima, Tokashikijima, Tokunoshima, Tonakijima, Tsukenjima, Ukejima, Yabuchijima, Yaguchijima, Yakabijima, Yanahajima, Yonagunijima, Yorojima, Yoronjima and Zamamijima Is.).

Sources: Malnate & Munsterman, 1960, Malnate, 1962, 1963, M. Mori, 1982, Toriba, 1990a and Ota et al., 1991.

33. *Amphiesma sanguineum* (Smedley, 1932a). Bull. Raffles Mus (1931) (6): 116. (*Natrix sanguinea*)

Type: Holotype, BMNH 1946.1.8.90, a 475 mm specimen (N. Smedley, 1931).

Type locality: "Tanah Rata, Cameron Highlands, Pahang, Malay Peninsula" [= Tanah Rata, Pahang State, cen. West Malaysia, 4°28'N, 101°23'E, elevation 1500 m].

Distribution: West Malaysia (Johor, Pahang, Selangor), 125–1750 m.

Sources: Tweedie, 1983, Chan-ard et al., 1999, B.L. Lim et al., 2002, David & I. Das, 2003 and Leong & Diesmos, 2004.

34. *Amphiesma sarasinorum* (Boulenger, 1896c). Ann. Mag. Nat. Hist. (6) 17(101): 393–394. (*Tropidonotus sarasinorum*)

Type: Lectotype, NMBA 986, a 530 mm male (P. Sarasin & F. Sarasin, 1893–1896), designated by Kramer (1978: 662).

Type locality: "Loka, Mount Bonthain, 1200 m, Celebes" [= Loka, Mt. Lompobatang, South Sulawesi Prov., SW Sulawesi, cen. Indonesia, 5°19'S, 119°54'E, elevation 1200 m] via lectotype selection.

Distribution: Central Indonesia (SW Sulawesi), 1200–1500 m.

Sources: Lang & Vogel, 2005 and Koch, 2008b.

35. *Amphiesma sarawacensis* (A.C.L.G. Günther, 1872a). Proc. Zool. Soc. London 40(1): 596. (*Tropidonotus sarawacensis*)

Synonyms: *Tropidonotus maculatus* W.C.H. Peters, 1871b, and *Tropidonotus saravacensis* Boulenger, 1893a *(nomen emendatum)*.

Types: Syntypes (3), BMNH 1946.1.13.12–14, two males and a female (A.H. Everett, 1869–1872).

Type locality: "Matang in the district of Sarawak, western Borneo" [= Kampong Matang, First Division, Kidi Distr., W Sarawak, East Malaysia, 1°35'N, 110°14'E, elevation 15 m].

Distribution: Malay Peninsula and Borneo. West Malaysia (Kelantan, Pahang, Perak, Selangor), Brunei, East Malaysia (Sabah, Sarawak) and Indonesia (Kalimantan), 15–1700 m.

Sources: Tweedie, 1983, Stuebing, 1991, Stuebing & Inger, 1999, Malkmus et al., 2002, David & I. Das, 2003, I. Das, 2010, 2012 and Inger & Tan, 2010.

36. *Amphiesma sauteri* (Boulenger, 1909a). Ann. Mag. Nat. Hist. (8) 4(24): 495. (*Tropidonotus sauteri*)

Synonyms: *Natrix copei* Van Denburgh, 1909, *Amphiesma sauteri bourreti* Malnate, 1962, and *Amphiesma sauteri maximus* Malnate, 1962.

Types: Syntypes (2), BMNH 1946.1.13.38–39, a male and female (H. Sauter, 1902–1909).

Type locality: "Kosempo, Formosa" [= Taiwan].

Distribution: Eastern Asia. Southeastern China (Anhui, Fujian, Gansu, Guangdong, Guangxi, Guizhou, Hainan, Hong Kong, Hunan, Jiangxi, Sichuan, Yunnan), Taiwan, Laos and N Vietnam (Bac Kan, Ha Tay, Lang Son, Vinh Phuc), 500–1500 m.

Sources: Malnate, 1962, Kuntz, 1963, Toriba, 1986, Inger et al., 1990, Zhao & Adler, 1993, Xie et al., 1998, Orlov et al., 2000, Zhao, 2006, V.S. Nguyen et al., 2009, Xiang & Li, 2009 and Yao, 2012.

Remarks: V.S. Nguyen et al. (2009: 359) erroneously listed CAS 18004 as holotype.

37. *Amphiesma sieboldii* (A.C.L.G. Günther, 1860c). Proc. Zool Soc. London 28(1): 156–157. (*Herpetoreas sieboldii*)

Type: Holotype, BMNH 1946.1.13.16, a 917 mm male (H.R.A. von Schlagintweit, A. von Schlagintweit, & R. von Schlagintweit, 1854–1858).

Type locality: "Sikkim, Himalaya (7500 feet above the level of the sea)" [= Sikkim State, NE India, elevation 2285 m].

Distribution: Southern Asia. Northeastern Pakistan (Punjab), N India (Arunachal Pradesh, Sikkim), Nepal, Bhutan (Trashiyangtse) and N Myanmar (Shan), 1220–3660 m.

Sources: Malnate, 1966, Nanhoe & Ouboter, 1987, M.S. Khan, 2002, Agarwal et al., 2010, Wangyal, 2011 and I. Das, 2012.

A

Remarks: A synonym of *A. platyceps* Blyth *fide* Kramer, 1977.

38. *Amphiesma stolatum* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 219. (*Coluber stolatus*)

Synonyms: *Coluber bilineatus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber cinctum* Lacépède, 1789 (*nomen rejiciendum*), *Coluber malpolon* Lacépède, 1789 (*nomen rejiciendum*), *Elaps bilineatus* Schneider, 1801, *Coluber arboreus* Merrem, 1820, *Tropidonotus ruficeps* W.C.H. Peters, 1869, *Tropidonotus olivaceus* Sclater, 1891, *Tropidonotus stolatus erythrostictus* Wall, 1911, and *Natrix stolata chinensis* Mell, 1931a.

Type: Holotype, NHR Lin-16 (formerly MAFR), a 490 mm male (Mus. Drottn.), lost *fide* Cox et al. (2013: 380).

Type locality: "America" (in error). Corrected to Asia *fide* Linnaeus (1766: 380). Restricted to Dayao Shan, Guangxi, China *fide* Cox et al. (2013: 380).

Distribution: Southern and SE Asia. Pakistan (Khyber Pakhtunkhwa, Punjab, Sindh), India (Andamans & Nicobars: Andaman Is., Andhra Pradesh, Arunachal Pradesh, Assam, Maharashtra, Meghalaya, Nagaland, Orissa, Sikkim, Tripura, Uttar Pradesh, West Bengal), Sri Lanka (Kalutara), Nepal (Banke, Bara, Bardiya, Bhaktapur, Chitwan, Dang, Dadeldhura, Dhankuta, Dhanusa, Dolakha, Doti, Gorkha, Ilam, Jhapa, Kailali, Kanchanapur, Kapilbastu, Kaski, Kathmandu, Lalitpur, Lamjung, Mahottari, Makwanpur, Nuwakot, Parsa, Rasuwa, Rautahat, Rupandehi, Saptari, Sarlahi, Sindhupalchok, Sunsari, Tanahu, Taplejung), Macau, S China (Anhui, Fujian, Guangdong, Guangxi, Guizhou, Hainan, Henan, Hong Kong, Hunan, Jiangxi, Yunnan, Zhejiang, Lanyu Is.), Taiwan, Myanmar (Yangon), Thailand (Chai Nat, Chaiyaphum, Chiang Mai, Loei, Lop Buri, Nakhon Phanom, Nakhon Ratchasima, Nakhon Sawan, Prachuap Khiri Khan, Saraburi, Si Sa Ket, Suphan Buri, Tak, Udon Thani, Uthai Thani), Bangladesh (Chittagong), Cambodia (Kampot, Pursat), Laos and Vietnam (Bac Giang, Bac Kan, Bac Ninh, Binh Duong, Binh Phuoc, Cao Bang, Da Nang, Dong Nai, Gia Lai, Hai Dong, Hai Phong, Hanoi, Ha Tinh, Hoa Binh, Ho Chi Minh City, Lac Cai, Lang Son, Ninh Binh, Nghe An, Phu Tho, Quang Binh, Quang Nam, Quang Ninh, Quang Tri, Son La, Tay Ninh, Thai Nguyen, Thanh Hoa, Thua Thian-Hue, Tuyen Quang, Vinh Phuc, Yen Bai), NSL–2000 m.

Sources: Wall, 1911a, Kuntz, 1963, E.H. Taylor, 1965, P. Silva, 1969, Singh, 1972, Karsen et al., 1986, Nanhoe & Ouboter, 1987, Easton & Leung-Va, 1993, Zhao & Adler, 1993, I. Das, 1994, M.J. Cox et al., 1998, Chan-ard et al., 1999, Lazell, 1999, Orlov et al., 2000, M.S. Khan, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, B.L. Stuart & Emmett, 2006, M.F. Ahmed et al., 2009, Mahony et al., 2009, V.S. Nguyen et al., 2009, A Silva, 2009, Xiang & Li, 2009 and Masroor, 2012.

39. *Amphiesma taronense* (M.A. Smith, 1940c). Rec. Indian Mus. 42(3): 482–483. (*Natrix venningi taronensis*)

Type: Holotype, BMNH 1940.6.1.93, a male (R. Kaulback, 1937–1939).

Type locality: "Pangnamdim, Nam Tamai Valley, Upper Burma, 27°42'N, 97°54'E" [= Pangnamdim, N Kachin State, ext. N Myanmar, 27°44'N, 97°53'E, elevation 1000 m].

Distribution: Northern Myanmar (Chin, Kachin), 1000 m.

Sources: I. Das, 2010, 2012.

Remarks: A valid species *fide* I. Das (2010: 335).

40. *Amphiesma venningi* (Wall, 1910j). J. Bombay Nat. Hist. Soc. (1910–19011) 20(2): 345–346. (*Tropidonotus venningi*)

Synonym: *Natrix nigriventer* Wall, 1925b.

Types: Syntypes (3), BMNH 1946.1.21.86, a 724–750 mm male, BMNH 1946.1.13.60, a 686 mm specimen, and BMNH 1946.1.13.49, a juvenile (formerly FEW XXXV, FEW XXXVI & BNHS) (F.E.W. Venning, 26 Sept.–8 Oct. 1908 and 1910).

Type locality: "Haka Chin Hills" [= vicinity of Haka Station, Chin Hills, Chin State, NW Myanmar, elevation 1980 m].

Distribution: Northeastern India (Arunachal Pradesh, Meghalaya), Bangladesh (Rangamati), N Myanmar (Chin, Kachin) and S China (Yunnan), 1040–1980 m.

Sources: Venning, 1910, Kou, 1985, Zhao & Adler, 1993, Captain & Bhatt, 2002, Gayen, 2002, Whitaker & Captain, 2004, Zhao, 2006 and Reza, 2010b.

41. *Amphiesma vibakari* (H. Boie, 1826). Isis von Oken 18(2): 207–208. (*Tropidonotus vibakari*)

Synonyms: *Tropidonotus martensii* Hilgendorf, 1876, *Natrix vibakari ruthveni* Van Denburgh, 1923, *Natrix vibokari* – Pavloff, 1926 *(nomen incorrectum), Natrix vibakari nikolskii* Emelianov, 1929, and *Amphiesma vibakari danjoensis* Toriba, 1986.

Type: Lectotype, RMNH 1068, a 394–400 mm specimen (P.F.B. von Siebold, 1823–1826), designated herein.

Type locality: "Decima, Japan" [= Dejima Is., previously in Nagasaki harbor, now part of Nagasaki, Japan, 32°45'N, 129°52'E, elevation 10 m] (possibly in error *fide* Siebold *in* Temminck & Schlegel, 1838: iii) via lectotype selection.

Distribution: Eastern Asia. Eastern China (Heilongjiang, Jilin, Liaoning), E. Russia, Korea and Japan, NSL–1800 m.

Sources: Maki, 1931, Shannon, 1956, Malnate, 1962, Bannikov et al., 1977, Ota, 1983, M. Mori, 1984, Toriba, 1986, 1990a, Szyndlar & Hung, 1987, Zhao & Adler, 1993, Adnagulov et al., 2000 and San & Lee, 2007.

Remarks: Original description reprinted in H. Boie (1827b: 252–254), in which J.C. Blomhoff is cited as

collector, with syntype illustrated in Temminck & Schlegel (1838: pl. 5, figs. 1–8). RMNH has three paralectotypes (RMNH 47305–07) collected by Siebold in Japan.

42. *Amphiesma viperinum* (Schenkel, 1901). Verh. Naturf. Ges. Basel (1901–1902) 13(1): 155–156. (*Xenochrophis viperinus*)

Type: Holotype, NMBA 1495, a 250 mm male (A. von Mechel, 1895–1901).
Type locality: "Indragiri, Sumatra" [= Indragiri Regency, Sumatra, W Indonesia].
Distribution: Western Indonesia (Sumatra). Known only from type locality.
Sources: Malnate & Minton, 1965, David & Vogel, 1996 and David & I. Das, 2003.

43. *Amphiesma xenura* (Wall, 1907c). J. Bombay Nat. Hist. Soc. (1906–1907) 17(3): 616–617, pl., fig. 2. (*Tropidonotus xenura*)

Type: Holotype, IMC, lost *fide* M.A. Smith (1943: 292).
Type locality: Unknown.
Distribution: India (Arunachal Pradesh, Assam, Meghalaya, Mizoram, Nagaland), Bangladesh and Myanmar (Rakhine, Sagaing).
Sources: Romer, 1945, I. Das, 2004b, Whitaker & Captain, 2004, Wogan et al., 2008, Ali Reza, 2010 and I. Das, 2010.

AMPHIESMOIDES Malnate, 1961 (Natricidae)

Type species: *Tropidonotus ornaticeps* F. Werner, 1924a.
Distribution: Southeastern China and N Vietnam.
Sources: Gressitt, 1941a, Malnate, 1961, Zhao & Adler, 1993, Zhao, 2006, David et al., 2007, Q.T. Nguyen et al., 2010b, I. Das, 2010, 2012 and Shi, 2011.

1. *Amphiesmoides ornaticeps* (F. Werner, 1924a). Sitz. Bayer. Akad. Wiss. Math.-Natur. Kl. Abt. 1 133(1–3): 30–31. (*Tropidonotus ornaticeps*)

Synonym: *Natrix andrewsi* K.P. Schmidt, 1925.
Type: Holotype, NMW 23415, an 840 mm female (A. Owston, 30 May 1903).
Type locality: "Northern Hainan" [= N Hainan Is., Hainan Prov., SE China].
Distribution: Southeastern China (Fujian, E Guangxi, Hainan) and N Vietnam (Bac Giang, Hoa Binh, Nghe An), NSL–720 m.
Remarks: Guangdong, China record rejected *fide* V.S. Nguyen et al. (2010: 50) and Li, 2011.

AMPLORHINUS A. Smith, 1847 *in* 1838–1849 (Pseudoxyrhophiidae)

Synonyms: *Amblorhinus* – A.C.L.G. Günther, 1894 *(nomen incorrectum), Anoplorhinus* – Boulenger, 1912 *(nomen incorrectum),* and *Amplovihirus* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Amplorhinus multimaculatus* A. Smith, 1847 *in* 1838–1849.
Distribution: Southeastern Africa.
Sources: Boulenger, 1896a, Bogert, 1940, Broadley, 1959, 1983, V.F.M. FitzSimons, 1962a, Broadley & Cock, 1975, Branch, 1982, 1988, Cadle, 1994, Marais, 2004, Vidal et al., 2008, Kelly et al., 2009, Zaher et al., 2009 and Broadley & Blaylock, 2013.

1. *Amplorhinus multimaculatus* A. Smith, 1847 *in* 1838–1849. Illust. Zool. So. Africa, Rept.: pl. 57, 2 pp.

Synonym: *Dipsas smithi* A.-M.-C. Duméril, Bibron & Duméril, 1854b.
Types: Syntypes (5), BMNH 1946.1.2.71–75, three adult females, an adult male, and a juvenile female (A. Smith, 1828–1837), longest syntype 610 mm.
Type locality: "Southern Africa" [= Cape of Good Hope *fide* Boulenger, 1896a: 125, and Cape Colony, South Africa *fide* V.F.M. FitzSimons, 1962a: 193].
Distribution: Southeastern Africa. Eastern Zimbabwe (Manicaland), Lesotho and SE South Africa (Eastern Cape, Western Cape, KwaZulu-Natal, Limpopo, Mpumalanga), NSL–2590 m.

†*ANILIOIDES* Auffenberg, 1963 (Boidae)

Synonym: *Aniloides* – Estes & Báez, 1985 *(nomen incorrectum).*
Type species: †*Anilioides minuatus* Auffenberg, 1963.
Distribution: Upper Oligocene and lower Miocene of USA.
Sources: Auffenberg, 1963, Holman, 1981b, 2000a and Rage, 1984b.

1. †*Anilioides minuatus* Auffenberg, 1963. Tulane Stud. Zool. 10(3): 164–165, fig. 12.

Type: Holotype, UF 6151, one trunk vertebra (W. Auffenberg, 1954).
Type locality: "Boulder Bar, Thomas Farm, Gilchrist County, Florida; Lower Miocene, Arikareean, Hawthorne formation."
Distribution: Lower Miocene (Hemingfordian: 16.3–20.6 mya) of USA (Florida). Known only from type locality.

A

2. †*Anilioides nebraskensis* Holman, 1976b. Herpetologica 32(1): 91–92, figs. 3a–d.

Type: Holotype, UNSM 4519, one trunk vertebra.
Type locality: "Loc. I, Lower Gering; University of Nebraska State Museum Locality MO-119 (NW 1/4, SE 1/4, sec. 32, T 20 N, R 52 W, 10.46 km S and 2.01 km W of Bayard, Morrill County, Nebraska, lower Eocene)."
Distribution: Upper Oligocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska, Wyoming) and lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska).

ANILIOS Gray, 1845 (Typhlopidae)

Synonyms: *Libertadictus* Wells & Wellington, 1984, *Sivadictus* Wells & Wellington, 1985, and *Austrotyphlops* Wallach, 2006.
Type species: *Anilios australis* Gray, 1845.
Distribution: Austro-Papua.
Sources: Krefft, 1869, Waite, 1918, F. Werner, 1921a, Kinghorn, 1929, Cogger et al., 1983a, Wells & Wellington, 1984, S.G. Wilson & Knowles, 1988, Gow, 1989, Shine & Webb, 1990, 1993a, Ehmann, 1992, Greer, 1997, McDiarmid et al., 1999, Shea, 1999, Cogger, 2000, L.D. Wilson & Swan, 2003, Wallach, 2006, Wallach & Glaw, 2009 and Savage & Boundy, 2012.

1. *Anilios affinis* (Boulenger, 1889b). Ann. Mag. Nat. Hist. (6) 4(23): 363. (*Typhlops affinis*)

Synonyms: *Typhlops unguirostris* W.C.H. Peters, 1867d *(partim),* and *Typhlops kenti* Boulenger, 1914c.
Type: Holotype, BMNH 1946.1.10.56 (formerly BMNH 1874.4.29.243), a 170 mm specimen (R.H. Beddome coll.).
Type locality: "Queensland" [Australia].
Distribution: Eastern Australia (ext. N New South Wales, N Northern Territory, E Queensland), 60–235 m.
Sources: Boulenger, 1893, McDowell, 1974, S.G. Wilson & Knowles, 1988, Shea, 1999, Gow, 1989, Weigel, 1990, Covacevich & Couper, 1991, Swan et al., 2004, S.G. Wilson, 2005, Swanson, 2007 and Emmott & Wilson, 2009.
Remarks: *Typhlops kenti* a valid species *fide* Wells & Wellington (1985: 41). Head of type of *Typhlops kenti* illustrated by H.W. Parker (1931: 604). Waite (1894a: 11), Boulenger (1895g: 718), McDowell (1974a: 33), Cogger et al. (1983: 199) and Bauer et al. (2002: 166) discussed *affinis-unguirostris* types.

2. *Anilios ammodytes* (Montague, 1914). Proc. Zool. Soc. London 84(3): 642–643, pl. 1, figs. 8–10. (*Typhlops ammodytes*)

Type: Holotype, BMNH 1946.1.11.23 (formerly BMNH 1913.10.16.1), a 230 mm specimen (P.D. Montague & L. Burns, 29 May–29 Aug. 1912).
Type locality: "Hermite Island, Monte Bello Islands, Western Australia, approximately in lat. 20º 25'S., long. 115º 30' E, 105 miles E.N.E. of North-West Cape, and 40 miles from the mouth of the Fortescue River" [Australia].
Distribution: Western Australia (NW Western Australia: Barrow, Elphick Nob, Legendre, Lowendal and Varanus Is.), NSL–800 m.
Sources: Waite, 1918, Storr, 1981d, Wells & Wellington, 1985, Storr et al., 2002 and S.G. Wilson & Swan, 2003.
Remarks: Resurrected from the synonymy of *Ramphotyphlops (= Anilios) diversus fide* Wells & Wellington (1984: 105).

3. *Anilios aspinus* (Couper, Covacevich & Wilson, 1998). Mem. Queensland Mus. 42(2): 462–464, figs. 3–4. (*Ramphotyphlops aspina*)

Type: Holotype, QM J51541, a 235.5 mm specimen (T. Pulsford, 1990).
Type locality: "Margot Stn, 20km N Barcaldine (23º27'S, 145º16'E), CQ, Australia" [= cen. Queensland, NE Australia, elevation 280 m].
Distribution: Northeastern Australia (cen. Queensland), 280 m. Known only from type series.
Sources: S.G. Wilson & Swan, 2003, Swan, 2005 and Emmott & Wilson, 2009.

4. *Anilios australis* Gray, 1845. Cat. Lizards Brit. Mus.: 135.

Synonyms: *Onychocephalus verticalis* A. Smith, 1846 *in* 1838–1849, *Onychocephalus macrurus* W.C.H. Peters, 1860a, *Typhlops preissi* Jan, 1860 *in* Jan & Sordelli, 1860–1866, and *Typhlops preyssi* – Jan, 1861a *(nomen incorrectum).*
Type: Lectotype, BMNH 1946.1.10.61, a 196 mm specimen (W. Buchanan, 1840–1845), designated by Cogger *in* Cogger, et al. (1983: 195).
Type locality: "W. Australia" [= Western Australia, presumably Perth or adjacent regions *fide* G. Shea *in* Rabosky et al., 2004: 541].
Distribution: Southwestern Australia (SW Western Australia, Bernier, Dirk Hartog, Dorre, East Wallabi and Rottnest Is.), NSL–480 m.
Sources: Waite, 1929, Storr, 1981d, Weigel, 1990, Bush et al., 1995, 2007, Swan, 1995, Shea, 1999, Bauer et al., 2002, Storr et al., 2002, Rabosky et al., 2004 and Swan et al., 2004.
Remarks: Wells & Wellington (1985: 41) recognized *Typhlops preissi* as a distinct species and transferred it to *Sivadictus.*

5. *Anilios batillus* (Waite, 1894a). Proc. Linn. Soc. N.S.W. (2) 9(1): 9–10, pl. 1, figs. 1–3. (*Typhlops batillus*)

Synonym: *Typhlina batilla* Hahn, 1980a.
Type: Holotype, AMS 42756 (formerly MM 3 & MM 669), a 320 mm female (W.J. Macleay & G. Masters, Jan. 1874).
Type locality: "Wagga Wagga, New South Wales, Australia" [= 35°07'S, 147°22'E, elevation 145 m]
Distribution: Southeastern Australia (New South Wales), 145 m. Known only from type locality.
Sources: Goldman et al., 1969, Shea, 1999 and Swan et al., 2004.

6. *Anilios bicolor* (P. Schmidt *in* W.C.H. Peters, 1858a). Mber. Königl. Akad. Wiss. Berlin 1858(11): 509. (*Onychocephalus bicolor*)

Type: Lectotype, ZMB 4721, a 275 mm specimen (M.P.F.P. Schmidt), designated by Wells & Wellington (1985: 41).
Type locality: "Adelaide, S.A." [= Adelaide, SE South Australia, S Australia, 34°56'S, 138°36'E, elevation 45 m] via lectotype selection.
Distribution: Southern Australia (W New South Wales, South Australia, NW Victoria, S Western Australia), NSL–635 m.
Sources: Wells & Wellington, 1985, Bauer et al., 2002, Rabosky et al., 2004, Swan & Watharow, 2005 and Bush et al., 2007.
Remarks: See Bauer et al. (2002: 161) for a discussion of publication date. Resurrected from synonymy of *Anilios australis* and placed in *Sivadictus fide* Wells & Wellington (1985: 41).

7. *Anilios bituberculatus* (W.C.H. Peters, 1863a). Mber. Königl. Akad. Wiss. Berlin 1863(4): 233–234. (*Onychocephalus bituberculatus*)

Synonym: *Typhlina bituberculata* Cogger, 1975.
Type: Lectotype, ZMB 4723, a 333 mm specimen (R.H. Schomburgk, 1849–1863), designated by Wells & Wellington (1985:40).
Type locality: "Loos, 4.5km West of Gawler, South Australia" [= vicinity of Buchfelde, SE South Australia, S Australia, 34°36'S, 138°42'E, elevation 50 m] via lectotype selection.
Distribution: Southern Australia (New South Wales, S Northern Territory, SW Queensland, South Australia, NW Victoria, S Western Australia), NSL–920 m.
Sources: Storr, 1981d, Weigel, 1990, Coventry & Robertson, 1991, Bauer et al., 1995, 2002, Swan, 1995, Shea, 1999, Storr et al., 2002, Swan et al., 2004, Swan & Ratharow, 2005, S.G. Wilson, 2005, Bush et al., 2007, Swanson, 2007 and Emmott & Wilson, 2009.
Remarks: ZMB 4723 was longest and first catalogued specimen of four syntypes, both good reasons why it is most likely selected lectotype by Wells & Wellington (1985: 40).

8. *Anilios broomi* (Boulenger, 1898f). Ann. Mag. Nat. Hist. (7) 2(11): 414. (*Typhlops broomi*)

Type: Holotype, BMNH 1946.1.10.64 (formerly BMNH 1898.9.6.2), a 125 mm specimen (R. Broom, 1894–1898).
Type locality: "Muldiva, Queensland" [= Maldiva, near Cairns (16°55'S, 145°46'E), N Queensland, Australia].
Distribution: Northeastern Australia (E Queensland), 30–615 m.
Sources: Covacevich & Couper, 1991, Shea, 1995, 1999 and S.G. Wilson, 2005.

9. *Anilios centralis* (Storr, 1984b). Rec. West. Aust. Mus. 11(3): 313–314, fig. 1. (*Ramphotyphlops centralis*)

Type: Holotype, NTM A/S 344.90 (formerly NTM 317), a male specimen between 165–306 mm (Conser. Comm. Northern Territory, Oct. 1976).
Type locality: "Alice Springs, Northern Territory, in 23°42'S, 133°52'E, central Australia" [Australia, elevation 610 m].
Distribution: Central Australia (S Northern Territory, ext. N South Australia), 425–800 m.

10. *Anilios chamodracaena* (Ingram & Covacevich, 1993). Mem. Queensland Mus. 34(1): 182–184, fig. 3. (*Ramphotyphlops chamodracaena*)

Type: Holotype, QM J40233, a 114–210 mm specimen (G. Ingram & P. Webber, 18 March 1982).
Type locality: "N Camp 'Beagle', ca. 40 km N Aurukun (13°05'S, 141°59'E), Cape York Peninsula" [= N Queensland, NE Australia].
Distribution: Northeastern Australia (ext. N Queensland), NSL–120 m.
Source: Cameron & Cogger, 2000.

11. *Anilios diversus* (Waite, 1894a). Proc. Linn. N.S.W. (2) 9(1): 10–11, pl. 1, figs. 4–6. (*Typhlops diversus*)

Type: Holotype, QM J2943 (formerly D4432), a 212 mm specimen (F.W. Allpuss, 1 June 1887).
Type locality: "Mowen, Central Railway, Queensland, Australia" [= Morven, 26°25'S, 147°07'E, elevation 510 m].
Distribution: Northern Australia (Northern Territory, NW Queensland, N Western Australia, Bathurst, Bumage, Darch, Guluwuru, Mallison, Melville, Vanderlin and Watson Is.), NSL–285 m.
Sources: Storr, 1981d, Swan, 1995, Shea, 1999, Storr et al., 2002, S.G. Wilson, 2005 and Emmott & Wilson, 2009.

A

12. *Anilios endoterus* (Waite, 1918a). Rec. S. Aust. Mus. 1(1): 32–33, fig. 24. (*Typhlops endoterus*)

Synonyms: *Anilios australis* Gray, 1845 *(partim*, a paralectotype), *Typhlops leonhardii* Sternfeld, 1919, and *Typhlina endotera* McDowell, 1974a.
Type: Holotype, SAMA 88, a 235 mm specimen (F. Scarfe, 22 Jan. 1912).
Type locality: "Hermannsburg, Central Australia" [= Mission Station Hermannsburg, Finke River, S Northern Territory, Australia, 23°56'S, 132°48'E, elevation 595 m].
Distribution: Central Australia (ext. NW New South Wales, Northern Territory, ext. SW Queensland, South Australia, E Western Australia), NSL–870 m.
Sources: Storr, 1981d, Aplin & Donnellan, 1993, Shea, 1999, Swan et al., 2004 and Emmott & Wilson, 2009.

13. *Anilios erycinus* (F. Werner, 1901a). Verh. Zool.-Bot. Ges. Wien 51: 611, 1 fig. (*Typhlops erycinus*)

Synonyms: *Typhlops iridescens* de Jong, 1930b and *Typhlina erycina* McDowell, 1974a.
Type: Holotype, not designated, a 350 mm specimen, possibly ZMB 17665 or ZMB 18963 *fide* Bauer et al. (2002: 170), NMW *fide* Hahn (1980a: 41), or ZMH, destroyed *fide* Iskandar & Colijn (2001: 14).
Type locality: "Deutsch-Neu-Guinea" [= German New Guinea or N Papua New Guinea].
Distribution: New Guinea. Eastern Indonesia (N Papua) and Papua New Guinea (Madang, Morobe, West Sepik, Western), NSL–165 m.
Sources: Wallach, 1993b, O'Shea, 1996, and Kraus & Allison, 2006.

14. *Anilios ganei* (Aplin, 1998). Rec. West Aust. Mus. 19(1): 7–9, figs. 6–8. (*Ramphotyphlops ganei*)

Type: Holotype, WAS 124835, a 258–355 mm (svl) female (B. Bush, 26 Sept. 1995).
Type locality: "Cathedral Gorge, 30 km west of Newman, Western Australia, in 23°17'30"S, 119°28'E" [Australia].
Distribution: Western Australia (NW Western Australia), 200–715 m.
Source: Storr et al., 2007.
Remarks: Collector of holotype L. Gane *fide* Storr et al. (2007: 25).

15. *Anilios grypus* (Waite, 1918a). Rec. So. Aust. Mus. 1(1): 17–18, fig. 7. (*Typhlops grypus*)

Synonyms: *Typhlops gryphus* – Worrell, 1963 *(nomen incorrectum), Typhlina grypa* McDowell, 1974a, and *Typhlina grypha* – Hahn, 1980a *(nomen incorrectum).*
Type: Holotype, NMV D12351 (formerly NMV 7102), a 335 mm specimen.
Type locality: "Australia." Restricted to E Australia *fide* Storr (1981d: 249).
Distribution: Northern Australia (Northern Territory, Queensland, N Western Australia, Barrow, Faure, and West Intercourse Is.), 165–390 m.
Sources: Storr, 1981d, Sadlier, 1990, Covacevich & Couper, 1991, Shea, 1999, Storr et al., 2002, S.G. Wilson, 2005, Bush et al., 2007, and Emmott & Wilson, 2009.
Remarks: Specific locality of holotype unknown *fide* Cogger et al. (1983: 196). Type possibly from E Australia based on its high ventral count *fide* Storr (1981d: 249).

16. *Anilios guentheri* (W.C.H. Peters, 1865). Mber. Königl. Akad. Wiss. Berlin 1865(6): 259–260, pl. figs. 1, 1a–c. (*Typhlops guentheri*) (*nomen corrigendum*)

Synonyms: *Typhlops güntheri* W.C.H. Peters, 1865 *(nomen incorrigendum)* and *Typhlops guentheri* – Boulenger, 1893a *(nomen corrigendum).*
Type: Holotype, BMNH 1946.1.10.88 (formerly BMNH 1857.10.24.53), a 142 mm specimen (J.R. Elsey, Oct. 1855–June 1856).
Type locality: "Nordaustralien" [= North Australia]. Restricted to the major campsite of the North Australian Expedition on the Victoria River, Northern Territory (ca. 15º40'S, 130º20'E) *fide* Shea & Homer (1996: 58, fig. 3).
Distribution: Northern Australia (NW Northern Territory, N Western Australia), NSL–450 m.
Sources: Storr, 1981d, Shea & Horner, 1996, Shea, 1999, Cogger, 2000, and Storr et al., 2002.

17. *Anilios hamatus* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 251–254, fig. 15. (*Ramphotyphlops hamatus*)

Type: Holotype, WAM 69572, an 85–377 mm (svl) specimen (R.E. Johnstone, 6 May 1980).
Type locality: "garden at Marandoo, Western Australia, in 22°38'S, 118°06'E" [Australia, elevation ca. 730 m].
Distribution: Western Australia (W Western Australia) NSL–440 m.
Sources: Aplin & Donnellan, 1993 and Bush et al., 2007.
Remarks: Aplin & Donnellan (1993: 250, fig. 3) detected three differentiated groups within the species.

18. *Anilios howi* (Storr, 1983). Rec. West. Aust. Mus. 10(4): 315–317, figs. 1–2. (*Ramphotyphlops howi*)

Type: Holotype, WAM 77226, a 210 mm specimen (P. Griffin, 22 April 1982).
Type locality: "Walsh Point, Port Warrender/Mitchell Plateau area, Western Australia, in 14°34' S, 125°51'E" [Australia, elevation NSL].
Distribution: Western Australia (N Western Australia), 35–230 m.
Source: Storr et al., 2007.

19. *Anilios kimberleyensis* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 254–255, fig. 18. (*Ramphotyphlops kimberleyensis*)

Type: Holotype, WAM 41456, a 220–296 mm specimen (J. Van Roon 5 June 1972).
Type locality: "Bigge Island, Western Australia, in 14°32'S, 125°08'E" [Australia, elevation NSL].
Distribution: Northwestern Australia (N Northern Territory, N Western Australia, Bathurst, Bigge, Coronation, Hidden, Irvine, Koolan, Lachlan, Prudhoe, Sir Graham Moore, and South Maret Is.), NSL–455 m.
Source: Storr et al., 2007.

20. *Anilios leptosomus* (Robb, 1972). J. Roy. Soc. West. Aust. 55(2): 39–40, figs. 1a–c. (*Ramphotyphlops leptosoma*)

Type: Holotype, WAM 29623, a 250–282 mm male (R.B. Humphries, 3 Sept. 1967). Two specimens measured 250 and 282 mm, not indicated which was type.
Type locality: "'The Loop', lower Murchison River, Western Australia," [= 'The Loop' or 'Natures Window' in Murchison River Gorge, Kalbarri National Park, Western Australia, Australia, 27°29'S, 114°23'E, elevation ca. 200 m].
Distribution: Western Australia (W Western Australia), NSL–275 m.
Sources: Storr, 1981d and Bush et al., 2007.

21. *Anilios leucoproctus* (Boulenger, 1889b). Ann. Mag. Nat. Hist. (6) 4(23): 361. (*Typhlops leucoproctus*)

Synonyms: *Typhlina leucoprocta* McDowell, 1974a, and *Ramphotyphlops grovesi* Wells & Wellington, 1985 (*nomen nudum*).
Type: Lectotype, BMNH 1946.1.11.84 (formerly BMNH 1885.6.30.19), a 190–220 mm specimen (S. Macfarlane, 28 Aug.–28 Dec. 1875), designated by Wells & Wellington (1985: 40–41).
Type locality: "Fly River, Papua New Guinea," via lectotype selection.
Distribution: Southern Papua New Guinea (Western, Dauan Is.) and ext. NE Australia (ext. N Queensland, Badu, Moa and Murray Is.), 20–240 m.
Sources: Boulenger, 1893a, McDowell, 1974a, Parker, 1982, O'Shea, 1996 and S.G. Wilson, 2005.
Remarks: Type locality restricted to mouth of Fly River *fide* McDowell (1974: 32). A member of *Ramphotyphlops* *fide* McDowell (1974: 31) and Wallach (2006: 14).

22. *Anilios ligatus* (W.C.H. Peters, 1879). Mber. Königl. Akad. Wiss. Berlin 1879(8): 775, pl., figs. 3, 3a–c. (*Typhlops ligatus*)

Synonyms: *Typhlops curtus* Ogilby, 1892, and *Typhlina ligata* McDowell, 1974a.
Type: Holotype, ZMB 6231, a 245 mm specimen (Mus. Godeffroy).
Type locality: "Port Mackay (N. O. Australien)" [= Mackay, Queensland, Australia, 21°09'S, 149°12'E, elevation NSL].
Distribution: Northern and E Australia (N New South Wales, N Northern Territory, E Queensland, N Western Australia, Bathurst, Mooroongga and Raracala Is.), NSL–340 m.
Sources: Storr, 1981d, Swan, 1990, Weigel, 1990, Covacevich & Couper, 1991, Shea, 1999, Storr et al., 2002, Swan et al., 2004, S.G. Wilson, 2005, Swanson, 2007 and Emmott & Wilson, 2009.
Remarks: Wells & Wellington (1985: 41) recognized *Typhlops curtus* as a valid species and allocated it to *Sivadictus*.

23. *Anilios longissimus* (Aplin, 1998). Rec. W. Aust. Mus. 19(1): 4–7, figs. 5a–c. (*Ramphotyphlops longissimus*)

Type: Holotype, WAM 120049, a 268 mm female (L. Whitsed, 22 May 1995).
Type locality: "considerable depth below the ground in a well at Bandicoot Bay, Barrow Island, Western Australia in 20º54'S 115º22'E" [Australia].
Distribution: Northwestern Australia (W Western Australia, Barrow Is.), NSL.
Source: Storr et al., 2002.

24. *Anilios margaretae* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 259–260, fig. 23. (*Ramphotyphlops margaretae*)

Type: Holotype, WAM 15710, a 306 mm specimen (W.H. Butler, 25 Aug. 1962).
Type locality: "Lake Throssell, Western Australia, in 27° 25'S, 124°18'E" [Australia, elevation ca. 450–500 m].
Distribution: Southwestern Australia (S Western Australia), 450–500 m . Known only from type locality.

25. *Anilios micrommus* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 260–261, fig. 24. (*Ramphotyphlops micromma*)

Type: Holotype, WAM 1341, a 205 mm specimen (W.R. Richardson, Oct. 1924).
Type locality: "Leopold Downs, Western Australia, in 17° 52'S, 125°26'E" [Australia, elevation 280 m].
Distribution: Northwestern Australia (N Western Australia), 280 m. Known only from type locality.
Source: Storr et al., 2002.

26. *Anilios minimus* (Kinghorn, 1929). Rec. Aust. Mus. 17(4): 190–191, fig. 1. (*Typhlops minimus*)

Synonym: *Typhlina minima* Cogger, 1975.

A

Type: Holotype, AMS 9692, a 170 mm specimen (H.E. Warren, Dec. 1928).
Type locality: "Groote Eylandt, Gulf of Carpentaria, North Australia, Australia" [= Northern Territory, elevation < 220 m].
Distribution: Northern Australia (Northern Territory, W Queensland, ext. N Western Australia, Elcho and and Groote Eylandt Is.), 25–630 m.
Source: Shea & Horner, 1996.

27. *Anilios nema* (Shea & Horner, 1996). The Beagle 13: 54–55, figs. 1–2. (*Ramphotyphlops nema*)

Type: Holotype, NTM 21665, a 268 mm (svl) specimen (D. Low Choy, 8 Dec. 1995).
Type locality: "Fannie Bay, Darwin, NT, northern Australia" [= Australia, 12°25'S, 130°50'E, elevation NSL].
Distribution: Northern Australia (N Northern Territory), NSL–10 m.

28. *Anilios nigrescens* Gray, 1845. Cat. Spec. Lizards Collect. Brit. Mus. p. 135.

Synonyms: *Typhlops rüppelli* Jan, 1863b (*nomen nudum*), *Typhlops rüppelli* Jan 1864c, *Typhlops temminckii* Jam. 1864 *in* Jan & Sordelli, 1860–1866, *Typhlops reginae* Boulenger, 1889b, *Typhlops ruppelli* – Waite, 1918a *(nomen incorrectum),* and *Typhlops rueppelli* Hahn, 1980a *(nomen emendatum).*
Type: Lectotype, BMNH 1946.1.11.17 (G. Newport, 1840–1845), designated by Cogger et al. (1983: 198).
Type locality: "Parramatta, New South Wales, Australia" [= 33°49'S, 151°00'E, elevation NSL] via lectotype selection.
Distribution: Southeastern Australia (Australian Capital Territory, E New South Wales, SE Queensland, Victoria), NSL–1410 m.
Sources: Boulenger, 1893a, Loveridge, 1934, Rawlinson, 1966, Jenkins & Bartell, 1980, Griffiths, 1987, Hoser, 1989, Swan, 1990, 1995, Weigel, 1990, Covacevich & Couper, 1991, Coventry & Robertson, 1991, Webb & Shine, 1992, 1993b, Shea, 1999, Swan et al., 2004 and S.G. Wilson, 2005.
Remarks: A synonym of *Ramphotyphlops polygrammicus fide* Forcart (1953: 375). *Ramphotyphlops reginae* a valid species *fide* Wells & Wellington (1984: 105).

29. *Anilios nigricaudus* (Boulenger, 1895i). Proc. Zool. Soc. London 63(4): 867, pl. 49, figs. 1, 1a–b. (*Typhlops nigricauda)*

Type: Lectotype, BMNH 1946.1.11.33, a 315 mm specimen (K.T.F. Dahl, 1895), designated by Shea & Homer (1996: 58).
Type locality: "Daly River, North Australia" [= Northern Territory, Australia] via lectotype selection.
Distribution: Northwestern Australia (NW Northern Territory, ext. N Western Australia), NSL–210 m.
Sources: Storr, 1981d, Wells & Wellington 1984, Shea & Homer, 1996 and Cogger, 2000.
Remarks: Shea & Horner (1996: 58) provided data to support full species status.

30. *Anilios nigroterminatus* (H.W. Parker, 1931). Ann. Mag. Nat. Hist. (10) 8(48): 605. *(Typhlops niroterminatus)*

Synonym: *Typhlops kenti* Waite, 1918 (*nomen praeoccupatum*).
Type: Holotype, BMNH 1946.1.11.58 (formerly BMNH 1931.10.10.1), a 270 mm female (B. Grey, 1929–1931).
Type locality: "Roebuck Bay, N. W. Australia" [= Western Australia, 18°04'S, 122°17'E, elevation NSL].
Distribution: Northwestern Australia (N Western Australia), NSL–10 m.
Sources: McDowell, 1974 and Shea, 1999.
Remarks: Resurrected from synonymy of *A. grypus fide* Wallach *in* McDiarmid et al. (1999: 66).

31. *Anilios pilbarensis* (Aplin & Donnellan, 1993). Rec. West. Aust. Mus. 16(2): 244–247, figs. 2a–c. (*Ramphotyphlops pilbarensis)*

Type: Holotype, WAM 90864, a 241 mm male (J. Dell, 26 Sept. 1988).
Type locality: "Site WS2, Woodstock Station, Pilbara region in 21°36'42"S 118°57'20"E, northwestern Western Australia, Australia."
Distribution: Western Australia (NW Western Australia), NSL–685 m.

32. *Anilios pinguis* (Waite, 1897a). Trans. Roy. Soc. So. Aust. (1896–1897) 21(1): 25–26, pl. 3, figs. 1–4. (*Typhlops pinguis*)

Synonym: *Typhlops opisthopachys* F. Werner, 1917a.
Type: Holotype, SAMA 803, a 348 mm specimen (E.C. Stirling, 1890).
Type locality: "South Australia" [Australia].
Distribution: Southwestern Australia (SW Western Australia), NSL–420 m.
Sources: Waite, 1929, Storr, 1981d, Bush et al., 1995, Shea, 1999 and Bush et al., 2007.
Remarks: Distribution restricted to SW Australia *fide* Storr (1981: 262) and Shea (1999: 50).

33. *Anilios polygrammicus* (Schlegel, 1839 *in* 1837–1844). Abbild. Amph.: 40, pl. 32, figs. 35–38. (*Typhlops polygrammicus*)

Synonyms: *Typhlops bipartitus* Sauvage, 1879, *Typhlops torresianus* Boulenger, 1889b, *Typhlops florensis* Boulenger, 1897d, *Typhlops elberti* Roux, 1911, *Typhlops florensis undecimlineatus* Mertens, 1927b,

Typhlops florensis brongersmai Mertens, 1929a, *Typhlops soensis* de Jong, 1930a, and *Typhlina polygrammica polygrammica* Hahn, 1980a.

Type: Holotype, RMNH 3712, a 282 mm specimen (S. Müller & H.C. Macklot, 1825–1829).

Type locality: "Timor" [S Indonesia].

Distribution: Austro-Papua. Indonesia (S Papua, Flores, Komodo, Lombok, Moyo, Sumba, Sumbawa, Timor), S Papua New Guinea (Western, Daru and Sturt Is.) and ext. E Australia (E New South Wales, E Queensland, Dunk, Lizard and Murray Is.), NSL–1200 m.

Sources: Mertens, 1927b, 1929a, Brongersma, 1934, Forcart, 1953, Sadlier, 1990, O'Shea, 1996 and Lang, 2011.

Remarks: *Typhlops bipartitus* a valid species *fide* McDiarmid et al. (1999: 93). Java, Indonesia records doubtful *fide* Brongersma (1934:186).

34. *Anilios proximus* (Waite, 1893). Rec. Aust. Mus. 2(5): 60–62, pl. 15, figs. 3–4. (*Typhlops proximus*)

Synonym: *Typhlina proxima* McDowell, 1974a.

Type: Holotype, AMS 131704 (formerly AMS 6411), a 405 mm specimen.

Type locality: "New South Wales, Australia."

Distribution: Southeastern Australia (E New South Wales, ext. SE Queensland, cen. Victoria), NSL–1010 m.

Sources: Hoser, 1989, Swan, 1990, 1995, Weigel, 1990, Covacevich & Couper, 1991, Coventry & Robertson, 1991, Shea, 1999, Swan et al., 2004 and S.G. Wilson, 2005.

Remarks: Type locality listed as "New South Wales" *fide* Cogger et al. (1983: 198), based presumably on data for AMS 6411 as Waite listed both New South Wales and Victoria as localities for the type series of several specimens.

35. *Anilios robertsi* (Couper, Covacevich & Wilson, 1998). Mem. Queensland Mus. 42(2): 460–462, figs. 1–2. (*Ramphotyphlops robertsi*)

Type: Holotype, QM J63736, a 290 mm specimen (L. Roberts, 10 Feb. 1983).

Type locality: "Romeo Ck, via Shipton's Flat (15º50'S, 145º14'E) NEQ" [= near Cooktown, northeastern Queensland, Australia, NSL].

Distribution: Northeastern Australia (ext. NE Queensland), NSL.

Source: S.G. Wilson, 2005

36. *Anilios silvia* (Ingram & Covacevich, 1993). Mem. Queensland Mus. 34(1): 181–182, figs.1–2. (*Typhlops silvia*)

Type: Holotype, QM J27387, a 175 mm specimen (J. Covacevich & P. Filewood, 3–6 February 1976).

Type locality: "Seary's Scrub, Cooloola NP (25°58'S,153°07'E), SEQ" [= Great Sandy Region, Cape York Peninsula, southeastern Queensland, Australia, NSL].

Distribution: Extreme E Australia (ext. SE Queensland, Fraser Is.), NSL–160 m.

Source: S.G. Wilson, 2005.

37. *Anilios splendidus* (Aplin, 1998). Rec. Aust. Mus. 19(1): 1–2, figs. 2, 3a–b, 4a–c. (*Ramphotyphlops splendidus*)

Type: Holotype, WAM 119900, a 512 mm female (T. Heger & N. Heger, 3 April 1995).

Type locality: "Distribution's residence, Milyering Well, Cape Distribution National Park, Western Australia in 22°01'S 113°56'E" [Australia, elevation NSL]

Distribution: Northwestern Australia (ext. Western Australia), NSL. Known only from type locality.

Source: Storr et al., 2002.

38. *Anilios tovelli* (Loveridge, 1945a). Proc. Biol. Soc. Washington 58: 111. (*Typhlops tovelli*)

Type: Holotype, MCZ 48844, a 122 mm specimen (G.T.R. Tovell, 1944).

Type locality: "Koonowarra Sports Ground, about five miles south of Darwin, Northern Territory, Australia" [elevation ca. 30 m].

Distribution: Extreme N Australia (N Territory, Melville Is.), NSL–140 m.

Source: S.G. Wilson & Swan, 2003.

Remarks: Hahn (1980a: 47) erroneously listed holotype as MCZ 48845.

39. *Anilios troglodytes* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 263, fig. 27. (*Ramphotyphlops troglodytes*)

Type: Holotype, WAM R51043, a 402 mm specimen (B.R. Wilson & S.M. Slack-Smith, 1 Sept. 1975).

Type locality: "Tunnel Cave, Napier Distribution, Western Australia, in 17°37'S, 125°14'E." [= Kimberley region, Australia, ca. 90 m].

Distribution: Northern Australia (NE Queensland, N Western Australia), 10–425 m.

Source: Storr et al., 2002.

40. *Anilios unguirostris* (W.C.H. Peters, 1867d). Mber. Königl. Akad. Wiss. Berlin 1867(11): 708–709, pl., figs. 3, 3a–c. (*Typhlops unguirostris*)

Synonym: *Typhlops curvirostris* W.C.H. Peters, 1879.

Type: Lectotype, ZMB 5884, a 450 mm specimen (A. Dietrich, 1863–1867, via Mus. Godeffroy), designated by McDowell (1974a: 33).

A

Type locality: "Rockhampton, Queensland" [= Australia, 23°23'S, 150°30'E, elevation NSL] via lectotype selection.
Distribution: Northern Australia (N Northern Territory, N Queensland, N Western Australia, Crocodile, Groote Eylandt, Milingimbi and Yabooma Is.), NSL–700 m.
Sources: Gow, 1977 and Storr, 1981d, Sadlier, 1990, Covacevich & Couper, 1991, Shea, 1999, Bauer et al., 2002, Storr et al., 2002, S.G. Wilson, 2005 and Emmott & Wilson, 2009.
Remarks: Hahn (1980: 48) erroneously reported a ZMB holotype. The second syntype (ZMB 63444, formerly ZMB 5884) was reidentified as *Typhlops (= Anilios) affinis* (Boulenger) *fide* McDowell, (1974a: 33). Types collected by A. Dietrich in NE Queensland for J.C. Godeffroy (Mus. Godeffroy, Hamburg) *fide* Bauer et al. (2002: 166).

41. *Anilios waitii* (Boulenger, 1895g). Proc. Linn. Soc. N.S.W. (1894) (2) 9(4): 718. (*Typhlops waitii*)

Type: Holotype, BMNH 1946.1.11.7 (formerly BMNH 1869.7.27.3), an adult specimen.
Type locality: "N.W. Australia" [= northwest Australia].
Distribution: Western Australia (S Northern Territory, NW South Australia, Western Australia), 245–1040 m.
Sources: Storr, 1981d, Bush et al., 1995, 2007 and Storr et al., 2002.

42. *Anilios wiedii* (W.C.H. Peters, 1867a). Mber. Königl. Akad. Wiss. Berlin 1867(1): 24–25. (*Typhlops wiedii*)

Type: Holotype, ZMB 5845, a 245 mm specimen (A. Dietrich, 1863–1867, via Mus. Godeffroy).
Type locality: "Brisbane (N. O. Australien)" [= Queensland, Australia, 27°30'S, 153°01'E, elevation 25 m].
Distribution: Eastern Australia (E New South Wales, E Queensland), NSL–1005 m.
Sources: Waite, 1894a, Swan, 1990, Weigel, 1990, Covacevich & Couper, 1991, Shea, 1995, 1999, Swan et al., 2004 and S.G. Wilson, 2005.
Remarks: See remarks about collector under *Anilios unguirostris.*

43. *Anilios yampiensis* (Storr, 1981d). Rec. West. Aust. Mus. 9(3): 268–269, fig. 32. (*Typhlops yampiensis*)

Type: Holotype, WAM 26839, a 128 mm specimen (F.C. Van Ingen, March 1966).
Type locality: "Koolan Island, Western Australia, in 16° 08' S, 123°45' E" [= Yampi Sound, NW Kimberley, Australia, elevation NSL].
Distribution: Northwestern Australia (N Western Australia, Koolan Is.), NSL. Known only from type locality.

44. *Anilios yirrikalae* (Kinghorn, 1942). Rec. Aust. Mus. 21(2): 118, fig. 1. (*Typhlops yirrikalae*)

Type: Holotype, AMS 12381, a 182 mm specimen (W.S. Chaseling, 1936–1939).
Type locality: "Yirrikala Mission Station, near Caledon Bay, Arnhem Land, Northern Territory" [= Australia, 12°15'S, 136°53'E, elevation NSL].
Distribution: Northern Australia (N Northern Territory), NSL. Known only from type locality.

ANILIUS Oken, 1816
(Aniliidae)

Synonyms: *Scytale* Gronovius, 1763 *(nomen illegitimum), Tortrix* Oppel, 1811b (*nomen praeoccupatum*), *Helison* Goldfuss, 1820 (*nomen substitutum*), *Elysia* Hemprich, 1820 *(nomen substitutum), Ilysia* Lichtenstein, 1823 *(nomen emendatum), Torquatrix* Haworth, 1825 (*nomen substitutum*), *Ilyssa* Fitzinger, 1826a *(nomen emendatum),* ? *Rouleau* Guérin-Méneville, 1829 *in* 1829–1844, *Illyria* J.P. Type species: *Anomalepis mexicanus* Jan 1860 *in* Jan & Sordelli, 1860–1866.

Distribution: Lower Central America and NW South America.

Sources: Dunn, 1941, Robb & Smith, 1966, J.A. Peters & Orejas-Miranda, 1970, Hahn, 1980a, Kofron, 1988a, Wallach, 1993a, McDiarmid et al., 1999 and Tipton, 2005.

1. *Anomalepis aspinosus* E.H. Taylor, 1939b. Proc. New England Zool. Club 17: 92–93, pl. 5, figs. 4–7.

Type: Holotype, MCZ 14782, a 126 mm specimen (G.K. Noble [Harvard Peru. Exped.], 22 Aug.–16 Sept. 1916).

Type locality: "Perico, Peru." [= Perico, Cajamarca Department, NW Peru, 05º20'S, 78º47'W, elevation 500 m].

Distribution: Northwestern Peru (Cajamarca), 500–1000 m.

Source: Haas, 1968.

2. *Anomalepis colombia* Marx, 1953b. Fieldiana: Zool. 34(17): 197–198.

Type: Holotype, FMNH 54986, a 172 mm specimen (K. von Sneidern, Jan. 1946).

Type locality: "La Selva, Pueblo Rico, Department of Caldas, Colombia. Altitude 1,700 meters" [= Risaralda Department, 05º46'N, 75º46'W].

Distribution: Cordillera Central of W Colombia (Risaralda), 1700 m. Known only from type locality.

Source: Pérez-Santos & Moreno, 1988.

3. *Anomalepis flavapices* J.A. Peters, 1957a. Amer. Mus. Novit. (1851): 3–6.

Type: Holotype, USNM 196349 (formerly JAP 2613), a 146 mm specimen (Gray via G. Orcés).

Type locality: "near Esmeraldas, Esmeraldas Prov., Ecuador." [= 0º59'N, 79º42'W, elevation NSL].

Distribution: Coastal plain of NW Ecuador (Esmeraldas, Manabi), NSL.

Sources: J.A. Peters, 1960 and Pérez-Santos & Moreno, 1991.

4. *Anomalepis mexicanus* Jan 1860 *in* Jan & Sordelli, 1860–1866. Icon. Gén. Ophid. 1(1): pl. 5, fig. 1, pl. 6, figs. 1a–c, g, n, p, r, v, x.

Synonyms: *Anomalepis mexicana* Boulenger, 1893a, and *Anomalepis dentatus* E.H. Taylor, 1939b.

Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.

Type locality: "Messico" [= México] (probably in error *fide* Kofron, 1988: 12).

Distribution: Northeastern Honduras (Colón, Gracias a Dios), Nicaragua, NW Costa Rica (Guanacaste), W Panama (Canal Zone: Barro Colorado Is.) and NW Peru (Amazonas, Cajamarca), NSL–725 m.

Sources: Dunn, 1941, Kofron, 1988a, Villa et al., 1988, G. Köhler, 1999, 2001a–b, 2003, Savage, 2002, Solórzano, 2004, McCranie et al., 2006 and McCranie, 2011a.

Remarks: Expected to occur in Colombia and Ecuador (Dunn, 1944: 47; Kofron, 1988a: 11; Leenders, 2001: 215), elsewhere in Central America and possibly even Mexico (Savage, 2002: 554). Peruvian population possibly a separate species *fide* McCranie (2011: 41).

†*ANOMALOPHIS* Auffenberg, 1959 (†Anomalophiidae)

Synonym: †*Onomalophis* – Porter, 1972 *(nomen incorrectum).*

Type species: †*Anomalophis bolcensis* Massalongo, 1859.

Distribution: Lower/middle Eocene of Italy.

Sources: Auffenberg, 1959 and Rage, 1984b.

1. †*Anomalophis bolcensis* (Massalongo, 1859). Spec. Photo. Anim. Plant. Foss. Veronensis: 15–16, pls. 3–4. (†*Archaeophis bolcensis*)

Types: Syntypes (3), MCZ-VP 1001–03, portions of the anterior, middle and posterior parts of the vertebral

A

column and their associated ribs, 480 mm, 330 mm and 270 mm specimens (O. di Canossa, 1850, via A. Agassiz).

Type locality: "agri Veronensis;in calcareo eocenio numm. M. Bubulcae" [= La Pesciara (Monte Bolca), Veneto Prov., Italy, 45º36'N, 11º13'E; Ypresian, lower Eocene *fide* Rage, 1984a: 41].

Distribution: Lower Eocene (Ypresian: 48.6–55.8 mya) of Italy (Veneto). Known only from type locality.

Remarks: Age is middle Eocene *fide* Auffenberg (1959: 15) and upper lower Eocene *fide* Tatarinov (1988: 113).

ANOMOCHILUS Berg, 1901 (*nomen substitutum*) (Anomochilidae)

Synonyms: *Anomalochilus* Lidth de Jeude, 1890 (*nomen praeoccupatum*), *Anomachilus* – Terent'ev, 1961 *(nomen incorrectum),* and *Anomolochilus* – Mahendra, 1984 *(nomen incorrectum).*

Type species: *Anomalochilus weberi* Lidth de Jeude *in* Weber, 1890.

Distribution: Malaysia and Indonesia.

Sources: Brongersma & Helle, 1951, McDowell, 1975a, Cundall et al., 1994, McDiarmid et al., 1999, Gower et al., 2005, I. Das et al., 2008a and I. Das, 2010.

1. *Anomochilus leonardi* M.A. Smith, 1940b. Ann. Mag. Nat. Hist. (11) 6(35): 447–448, figs. a–c.

Type: Holotype, BMNH 1946.1.17.4 (formerly BMNH 1940.4.20.1), a 228–271 mm female (G.R. Leonard, 1938–1940).

Type locality: "Sungei Ngeram, near Merapoh, N. Pahang, Malay Peninsula, at about 800 feet altitude" [= West Malaysia, elevation 245 m].

Distribution: West Malaysia (N Pahang, Selangor), 230–245 m.

Sources: B.L. Lim & Sharef bin Kamarudin, 1975, Tweedie, 1983 and Stuebing & Goh, 1993.

Remarks: Type locality listed as "Ngeram R., nr. Merapoh, N Pahang, Malaya, 500 ft." in BMNH catalogue *fide* McDiarmid et al. (1999: 128).

2. *Anomochilus monticola* I. Das, Lakim, Lim & Hui, 2008. J. Herp. 42(3): 585–588, fig. 1.

Type: Holotype, SP 4594, a 520 mm female (B. Benedict, K. Yustic & L. Johhny, 3 March 2004).

Type locality: "Kiau View Trail (06.00N, 116.32E; 1,513 masl; datum: wgs84), Gunung Kinabalu Park, Ranau District, Sabah, Malaysia (northern Borneo)."

Distribution: East Malaysia (Sabah), 1450–1515 m.

Sources: Stuebing & Goh, 1993, Malkmus et al., 2002 and I. Das, 2012.

3. *Anomochilus weberi* (Lidth de Jeude *in* Weber, 1890). Zool. Ergebn. Nieder. Ost.-Ind. 1(2): 181, pl. 15, figs. 1–3. (*Anomalochilus weberi*)

Type: Holotype, RMNH 4329, a 362 mm male (M. Weber, Mar.–Nov. 1888).

Type locality: "Sumatra: Kaju tanam" [= Kayutanam, Sumatera Barat, western Indonesia, 0°33'S, 100°20'E, elevation 122 m].

Distribution: Indonesia (Kalimantan, W Sumatra), 120–145 m.

Sources: Brongersma & Helle, 1951, Cundall & Rossman, 1994 and David & Vogel, 1996.

ANOPLOHYDRUS F. Werner, 1909 (Homalopsidae)

Type species: *Anoplohydrus aemulans* F. Werner, 1909b.

Distribution: Western Indonesia.

Sources: Haas, 1950, David & Vogel, 1996, J.C. Murphy, 2007b and Zaher et al., 2009.

Remarks: Homalopsidae *incertae sedis fide* J.C. Murphy (2007b: 208).

1. *Anoplohydrus aemulans* F. Werner, 1909b. Mitt. Naturhist. Mus. Hamburg 26: 214, fig. 3.

Type: Holotype, ZMH, a 430 mm male (H. Hagedorn, 1908–1909), destroyed in July 1943 during World War II.

Type locality: "Pudang, Distrikt Babongan, Sumatra" [= Ujungpadang, Bakongan District, Aceh Prov., Sumatra, W Indonesia *fide* Hallermann, 1998: 213].

Distribution: Western Indonesia (NW Sumatra). Known only from type specimen.

ANTAIOSERPENS Wells & Wellington, 1985 (Elapidae)

Synonym: *Antairoserpens* Wilson & Swan, 2003 *(nomen incorrectum).*

Type species: *Cacophis warro* De Vis, 1884.

Distribution: Northeastern Australia.

Sources: Mack & Gunn, 1953, Storr, 1979, Wells & Wellington, 1985 and Horner, 1998.

1. *Antaioserpens warro* (De Vis, 1884). Proc. Roy. Soc. Queensland 1(3): 139. (*Cacophis warro*)

Synonyms: *Pseudelaps albiceps* Boulenger, 1898f, *Denisonia rostralis* De Vis*,* 1911, and *Rhynchelaps fuscicollis* Lönnberg & Andersson, 1913a.

Type: Holotype, QM J188 (F.A. Blackman, 1855–1874)

Type locality: "Warro Station, Port Curtis" [= Warro Station, near Port Curtis (23°53'S, 151°21'E, elevation NSL), E Queensland, E Australia].

Distribution: Northeastern Australia (E Queensland), NSL–500 m.

ANTARESIA Wells & Wellington, 1984 (Pythonidae)

Synonym: *Rawlingspython* Hoser, 2009b & 2012b *(nomen illegitimum).*
Type species: *Liasis childreni* Gray, 1842a.
Distribution: Austro-Papua.
Sources: Wells & Wellington, 1984, L.A. Smith, 1985, K.L. Williams, 1987, Kluge, 1993b, D.G. Barker & Barker, 1994, Walls, 1998b, Hoser, 1999a, 2000d, 2003f, 2009b, 2012b, McDiarmid et al., 1999, Cogger, 2000, Torr, 2000, Fyfe & Green, 2003, Rawlings et al., 2008 and Schleip & O'Shea, 2010.

1. *Antaresia childreni* (Gray, 1842a). Zool. Misc. 2(Mar.): 44. (*Liasis childreni*)

Synonym: *Nardoa gilbertii* Gray, 1842a.
Type: Holotype, BMNH 1946.1.16.78 (formerly BMNH IV.4.3a).
Type locality: Unknown. "N.W. Australia" *fide* BMNH catalogue.
Distribution: Northern Australia (N Northern Territory, N Queensland, N Western Australia, Angarbulumardja, Augustus, Barranyi North, Bathurst, Baudin, Berthier, Bickerton, Bigge, Brigadier, Byam Martin, Cape Wessel, Cassini, Centre, Champagny, Coronation, Darcy, Grant, Groote Eylandt, Guluwuru, Hayman, Heywood, Irvine, Koolan, Kingfisher, Lachlan, Long, Marchinbar, Maret, Maria, Melville, Middle Osborn, Milingimbi, Mornington, Muir, North East, North Maret, Saibai, Saint Andrew, Sir Graham Moore, South West, Storr, Sunday, Troughton, Truant, Wessel Marchinbar and Wulalam Is.), NSL–655 m.
Source: Sonnemann, 2000.

2. *Antaresia maculosa* (W.C.H. Peters, 1873c). Mber. Königl. Akad. Wiss. Berlin 1873(10): 608–609. (*Liasis maculosus*)

Synonym: *Antaresia maculosus brentonoloughlini* Hoser, 2003f.
Type: Lectotype, ZMB 5948 (A. Dietrich, 1863–1872, via Mus. Godeffroy), designated by L.A. Smith (1985: 266).
Type locality: "Port Mackay" [= Mackay, east-central Queensland, Australia, 21°09'S, 149°12'E] via lectotype selection.
Distribution: Papua New Guinea (Western) and E Australia (NE New South Wales, E Queensland, Badu, Curtis, Hammond, Hayman, Holbourne, Lindeman, Lizard, Magnetic, Marble and Moa Is.), NSL–700 m.
Sources: Swan, 1990, Covacevich & Couper, 1991, B. Barnett, 1999a and O'Shea et al., 2004.
Remarks: A synonym of *Antaresia childreni* (Gray) *fide* Cogger et al., 1983a. Papua New Guinea population possibly a separate species *fide* O'Shea et al. (2004: 226).

3. *Antaresia perthensis* (Stull, 1932b). Occ. Pap. Boston Soc. Nat. Hist. (8): 26, pl. 2, fig. a. (*Liasis childreni perthensis*)

Type: Holotype, MCZ 24426, a 293–297 mm female (W.S. Brooks, 1927).
Type locality: "Perth, West Australia" [Australia] (possibly in error *fide* L.A. Smith, 1985: 263).
Distribution: Western Australia (W Western Australia, Depuch, Malus, Rosemary and West Lewis Is.), NSL–1040 m.
Sources: F. Mitchell, 1965, Hoser, 1999b, 2009a and J.C. Murphy & Schlager, 2003.
Remarks: Type locality unknown *fide* L.A. Smith (1985: 263).

4. *Antaresia stimsoni* (L.A. Smith, 1985). Rec. West. Aust. Mus. 12(3): 267–269. (*Liasis stimsoni stimsoni*)

Synonyms: *Antaresia saxacola* Wells & Wellington, 1985 (*nomen nudum*), *Liasis stimsoni orientalis* L.A. Smith, 1985, and *Antaresia saxacola campbelli* Hoser, 2000b.
Type: Holotype, WAM 63108, an 872 mm male (L.A. Smith & R.E. Johnstone, 6 April 1979).
Type locality: "15 km SE of Nullagine, Western Australia, Australia, in 21°58'S, 120°12'E."
Distribution: Australia (NW New South Wales, Northern Territory, W Queensland, South Australia, Western Australia, Barrow, Bernier, Dirk Hartog, Dorre, Hermite and Rosemary Is.), NSL–805 m.
Sources: Bush et al., 1995 and Shea & Sadlier, 1999.

ANTILLOPHIS Maglio, 1970 (Xenodontidae)

Type species: *Dromicus parvifrons* Cope, 1862b.
Distribution: Hispaniola.
Sources: A. Schwartz, 1971, A. Schwartz & Thomas, 1975, A. Schwartz & R.W. Henderson, 1988, 1991, Sosa et al., 1995, Rodríguez-Robles & Greene, 1996, Hedges et al., 2009 and Zaher et al., 2009.
Remarks: A valid genus *fide* Grazziotin et al. (2012: 22) but a synonym of *Hypsirhynchus fide* Hedges et al. (2009: 9).

1. *Antillophis parvifrons* (Cope, 1862b). Proc. Acad. Nat. Sci. Philadelphia 14(1): 79. (*Dromicus parvifrons)*

Synonyms: *Dromicus protenus* Jan, 1863b (*nomen nudum*), *Dromicus protenus* Jan, 1867 *in* Jan & Sordelli, 1866–1870, *Leptophis frenatus* J.G. Fischer,

A

1883, *Leimadophis alleni* Dunn, 1820a, *Leimadophis parvifrons niger*, Dunn, 1920a, *Leimadophis tortuganus* Dunn, 1920a, *Leimadophis parvifrons lincolni* Cochran, 1931, *Dromicus parvifrons rosamondae* Cochran, Cochran, 1934, *Dromicus parvifrons paraniger* R. Thomas & Schwartz, 1965, and *Dromicus parvifrons stygius* R. Thomas & Schwartz, 1965.

Type: Syntypes (5), MCZ 3344a–b, MCZ 3602a–b, and FMNH 73373 (D.F. Weinland, 1859), longest syntype 673 mm.

Type locality: "Hayti, near Jeremie" [= vicinity of Jérémie (18°39'N, 74°07'W, elevation 15 m), Grand'Anse Dept., SW Haiti].

Distribution: Hispaniola. Haiti (Artibonite, Centre, Grand'Anse, Nord, Nord-Est, Nord-Ouest, Sud, Sud-Est, Grand Cayemite, Grosse Caye, Petite Gonâve, Tortue and Vache Is.) and Dominican Republic Republic (Azua, Baoruco, Barahona, Dajabón, Distrito Nacional, Duarte, Elías Piña, El Seibo, Espillat, Hato Mayor, Independencia, La Altagracia, La Estrelleta, La Romana, La Vega, María Trinidad Sánchez, Monseñor Nouel, Monte Christi, Pedernales, Peravia, Puerto Plata, Salcedo, Samaná, Sánchez Ramirez, San Cristóbal, San Juan, San Pedro de Macorís, Santiago, Santiago Rodriguez, Valverde, Beata and Saona Is.), NSL–15 m.

Sources: Cochran, 1941, R. Thomas & Schwartz, 1965, Maglio, 1970, A. Schwartz & Thomas, 1975, Sajdak & R.W. Henderson, 1982, Schwartz & R.W. Henderson, 1988, 1991, Rodriguez-Robles & Greene, 1996, Hedges et al., 2009, R.W. Henderson & Powell, 2009, Zaher et al., 2009 and Burbrick et al., 2012.

Remarks: Lectotype listed in MCZ *fide* Marx (1958a: 480) but without catalogue number. A member of *Hypsirhynchus fide* Burbrink et al. (2012: 470)

APARALLACTUS A. Smith, 1849 *in* 1838–1849 (Atractaspididae)

Synonyms: *Elapomorphus* A. Smith, 1849 *in* 1838–1849 (*nomen praeoccupatum*), *Uriechis* W.C.H. Peters, 1854, *Eucritus* Jan, 1857 *(nomen nudum), Elapops* A.C.L.G. Günther, 1859a, *Pariaspis* Cope, 1860e, *Cercocalamus* A.C.L.G. Günther, 1863a, *Metopophis* W.C.H. Peters, 1870b, *Apparalactus* – Palacky, 1898 *(nomen incorrectum), Rouleophis* Chabanaud, 1917a, *Guyomarchia* Angel, 1923b, *Aarallactus* – Briceño-Rossi, 1934 *(nomen incorrectum), Aparallaetus* Witte & Laurent, 1943 *(nomen incorrectum), Periaspis* Loveridge, 1944 *(nomen emendatum), Apparallactus* – Dekeyser & Villiers, 1954 *(nomen incorrectum), Aparrallactus* – Anthony, 1955 *(nomen incorrectum), Aparellactus* – Witte, 1955 *(nomen incorrectum), Pariapsis* – E.H. Taylor & Weyer, 1958 *(nomen incorrectum), Aparalactus* – Guibé, 1970 *(nomen incorrectum),* and *Plumridgeus* Hoser, 2012ae *(nomen illegitimum).*

Type species: *Aparallactus capensis* A. Smith, 1849 *in* 1838–1849.

Distribution: Subsaharan Africa.

Sources: F. Werner, 1924c, Loveridge, 1944b, Witte & Laurent, 1947, Cadle, 1983, Wallach, 1991, Underwood & Kochva, 1993, Cadle, 1994, Ulber, 1994, Kelly et al., 2003, 2009, Vidal et al., 2008 and Zaher et al., 2009.

Remarks: Official Generic Name no. 2147 *fide* Opinion 1201 (ICZN, 1982a).

1. *Aparallactus capensis* A. Smith, 1849 *in* 1838–1849. Illust. Zool. So. Africa, Rept. (App.): 16.

Synonyms: *Elalpomorphus capensis* A. Smith, 1849 *in* 1838–1849, *Cercocalamus collaris* A.C.L.G. Günther, 1863a, *Aparallactus bocagii* Boulenger, 1895, *Aparallactus punctatolineatus* Boulenger, 1895, and *Aparallactus lübberti* Sternfeld, 1910a.

Type: Holotype, BMNH 1946.1.8.62, a 166 mm female (A. Smith, 1831).

Type locality: "country (Kaffirland) to the eastward of the Cape Colony, South Africa" [= KwaZulu-Natal Prov., NE South Africa *fide* V.F.M. FitzSimons, 1962a: 154].

Distribution: Southern Africa. Eastern Democratic Republic of the Congo (Katanga, Orientale, Sud-Kivu), S Angola (Benguela, Bié, Cuanza Sul, Huíla, Lunda Norte, Lunda Sul, Namibe), E Burundi, ext. SE Kenya (S Coast), SE Tanzania (Kigoma, Kilimanjaro, Lindi, Manyara, Mtwara, Rukwa, Ruvuma, Tanga, Mafia and Zanzibar Is.), Mozambique (Manica, Maputo, Nampula, Niassa, Sofala, Tete), Malawi (Central, Southern), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), N Namibia (Erongo, Otjozondjupa), E Botswana (Central, Gaborone, North East, South East, Southern), Swaziland and South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga), NSL–1700 m.

Sources: V.F.M. FitzSimons, 1937, 1974, Laurent, 1954a, Mertens, 1955, 1971, Broadley, 1959, 1971d, 1983, Sweeney, 1961, Broadley & Cock, 1975, Pienaar et al., 1983, Auerbach, 1987, Branch, 1988, Branch & McCartney, 1993, Clauss & Clauss, 2002, Spawls et al., 2002, Broadley et al., 2003, M. Griffin, 2003, Marais, 2004, Branch et al., 2005 and Broadley & Blaylock, 2013.

Remarks: Official Specific Name no. 2783 *fide* Opinion 1201 (ICZN, 1982a).

2. *Aparallactus guentheri* Boulenger, 1895d. Ann. Mag. Nat. Hist. (6) 16(92): 172.

Synonym: *Aparallactus uluguruensis* T. Barbour & Loveridge, 1929a.

Type: Lectotype, BMNH 1946.1.6.88, adult male (A.A. Simons), designated by Broadley *in* Broadley & Howell (1991: 28).

Type locality: "Lake Nyassa" [= Lake Nyassa, E Malawi] via lectotype selection.

Distribution: Southeastern Africa. Southeastern Kenya (Coast), E Tanzania (Dar es Salaam, Kilimanjaro, Piwani, Ruvuma, Tanga), Malawi (Central, Southern), Mozambique (Manica, Sofala) and E Zimbabwe (Manicaland, Mashonaland Central), 510–1385 m.

Sources: Broadley, 1959, 1983, 1988, Sweeney, 1961, V.F.M. FitzSimons, 1962a, 1974, Broadley & Cock, 1975, J. Rasmussen, 1981, Broadley & Howell, 1991, Spawls et al., 2002 and Broadley & Blaylock, 2013.

Remarks: Boulenger (1896a: 259) listed Lake Nyassa syntype as a female. Broadley & Howell (1991: 28) listed lectotype designation from an uncited Broadley (1968) reference.

3. *Aparallactus jacksonii* (A.C.L.G. Günther, 1888c). Ann. Mag. Nat. Hist. (6) 1(3): 325, pl. 19, fig. e. (*Uriechis jacksonii*)

Synonym: *Aparallactus jacksonii oweni* Loveridge, 1955a.

Type: Holotype, BMNH 1946.1.6.80, a 191 mm female (F.J. Jackson, 1887).

Type locality: "Foot of Kilima-ndjaro, tropical Africa" [= base of Mt. Kilimanjaro, (03°04'S, 37°21'E), Kilimanjaro Region, NE Tanzania].

Distribution: Northeastern Africa. Southeastern South Sudan (Eastern Equatoria), S Ethiopia (Gemu Gofa, Sidamo), S Somalia (Jubbada Dhexe), SE Kenya (S Coast, Eastern, Nairobi, S Rift Valley) and N Tanzania (Arusha, Iringa, Kilamanjaro, Manyara, Tanga), 320–2200 m.

Sources: Pitman, 1974, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993, Spawls et al., 2002 and Largen & Spawls, 2010.

Remarks: *Aparallactus j. oweni* probably a valid species and also occurs in N Uganda *fide* Lanza (1990b: 434).

4. *Aparallactus lineatus* (W.C.H. Peters, 1870b). Mber. Königl. Akad. Wiss. Berlin 1870(8): 643–644, pl. 1, figs. 3, 3a–c. (*Uriechis [Metopophis] lineatus*)

Synonyms: *Uriechis anomala* Boulenger, 1893c, *Elapops heterolepis* Mocquard, 1908, and *Rouleophis chevalieri* Chabanaud, 1917a.

Types: Syntypes (2), ZMB 6913a–b, longest syntype 440 mm female.

Type locality: "Keta (Guinea)" [= Keta, S Volta Region, ext. SE Ghana, 05°55'N, 01°00'E, elevation NSL].

Distribution: West Africa. Southeastern Guinea (Macenta, Nzérékoré), Liberia (Bong, Nimba), Ivory Coast (Aboisso) and SE Ghana (Accra, Volta), NSL–700 m.

Sources: Loveridge, 1938, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Wallach, 1994, Hughes, 2003, Ineich, 2003, Chippaux, 2006 and W. Böhme et al., 2011.

Remarks: MNHN 1885.698 listed as type *fide* MNHN catalogue. Type locality erroneously listed as Keta, Ivory Coast *fide* Witte & Laurent (1947: 108). Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353).

5. *Aparallactus lunulatus* (W.C.H. Peters, 1854). Mber. Königl. Akad. Wiss. Berlin 1854(11): 623. (*Uriechis lunulatus*)

Synonyms: *Uriechis concolor* J.G. Fischer, 1884a, *Aparallactus concolor boulengeri* Scortecci, 1931, *Aparallactus liddiardae* H.W. Parker, 1933b, and *Aparallactus lunulatus scortecci* H.W. Parker, 1949.

Type: Holotype, ZMB 4810, a 415 mm female (W.C.H. Peters, June 1843–Aug. 1847).

Type locality: "Tette, Mocambique" [= Tete, Tete Prov., Mozambique, 16°10'S, 33°36'E, elevation 135 m].

Distribution: Subsaharan Africa. Northern Ivory Coast, Burkina Faso (Est, Hauts-Bassins), N Ghana, N Togo (Kara, Savanes), Nigeria (Delta, Kaduna, Plateau), N Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Nord), Central African Republic (Bamingui-Bangoran, Haute-Sangha, Lobaye, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende), N Democratic Republic of the Congo (Equateur, Orientale), S South Sudan (Central Equatoria), Eritrea (Northern Red Sea, Southern), Ethiopia (Gondar, Hararge, Shoa, Sidamo), Somalia (Jubbada Dhexe, Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer, Woqooyi Galbreed), Uganda (N Eastern, Northern, Western), Kenya (Coast, Eastern, North-Eastern, Nyanza, Rift Valley), Tanzania (Arusha, Dodoma, Kilimanjaro, Piwani, Singida, Tabora, Tanga, Lamu Is.), Zambia (Eastern, Southern), Malawi (Central, Southern), Mozambique (Manica, Maputo, Sofala, Tete), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland and NE South Africa (E Limpopo, E Mpumalanga), NSL–2400 m.

Sources: Broadley, 1959, 1971d, 1983, Sweeney, 1961, V.F.M. FitzSimons, 1962a, 1974, Pitman, 1974, Broadley & Cock, 1975, Hughes, 1983, Lanza, 1983a, 1990b, Pienaar et al., 1983, Roman, 1984, Branch, 1988, Joger, 1990, Broadley & Howell, 1991, Marais, 1992, 2004, Largen & Rasmussen, 1993, Spawls et al., 2002, Broadley et al., 2003, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Remarks: Original description reprinted in W.C.H. Peters (1855: 52). Official Specific Name no. 2786 *fide* Opinion 1201 (ICZN, 1982a). MNHN 1916.263 and MNH 1916.265 listed as types *fide* MNHN catalogue.

A

Holotype is female *fide* R. Günther *(in litt.)*. Probably occurs in ext. E Botswana *fide* Auerbach (1987: 172). Possibly occurs in Benin *fide* Hughes (2013: 153).

6. *Aparallactus modestus* (A.C.L.G. Günther, 1859a). Ann. Mag. Nat. Hist. (3) 4(21): 161–162, pl. 4, fig. c. (*Elapops modestus*)

Synonyms: *Pariaspis plumbeatra* Cope, 1860e, *Elapops plumbeater* Cope, 1861c *(nomen emendatum), Elapops petersi* Jan, 1862b, *Aparallactus boulengeri* F. Werner, 1896b, *Aparallactus peraffinis* F. Werner, 1897b, *Aparallactus ubangensis* Boulenger, 1897b, *Aparallactus flavitorques* Boulenger, 1901a, *Aparallactus congicus* F. Werner, 1902, *Aparallactus dolloi* F. Werner, 1902, *Aparallactus batesii* Boulenger, 1907a, *Aparallactus christyi* Boulenger, 1910b, *Aparallactus nigrocollaris* Chabanaud, 1917a, *Aparallactus nigrocollaris roucheti* Chabanaud, 1917a, *Guyomarchia unicolor* Angel, 1923, and *Aparallactus graueri* F. Werner, 1924a.

Type: Holotype, BMNH 1946.1.3.7, a 483 mm female (Rich).

Type locality: "West Africa."

Distribution: West and cen. Africa. Southeastern Guinea (Macenta, Nzérékoré), Sierra Leone, Liberia (Montserrado, Margibi), Ivory Coast (Abidjan, Daloa, Guiglo, Lagunes, Tabou, Toumodi), Burkina Faso, Ghana (S Volta), S Togo (Plateaux), S Benin (Cotonou, Maritime), S Nigeria (Cross River, Lagos), S Cameroon (Adamaoua, Est, Centre, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ogooué-Ivindo, Ogooué-Maritime, Wolen-Ntem), Congo (Cuvette, Kouilou, Niari, Plateau, Pool, Sangha), SW Central African Republic (Haute-Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu) and S Uganda (Central, Eastern, Western), NSL–1325 m.

Sources: Boulenger, 1896a, Aylmer, 1922, Loveridge, 1941a, E.H. Taylor & Weyer, 1958, Doucet, 1963, Knoepffler, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Roux-Estève, 1969, Pitman, 1974, Hughes, 1983, 2013, J.A. Butler & Reid, 1986, J.-F. Böhme *et al.,* 2011 and Segniagbeto et al., 2011.

Remarks: Boulenger (1896a: 263) listed a specimen from Niger. Possibly occurs in SW Kenya *fide* Spawls et al. (2002: 424).

7. *Aparallactus moeruensis* Witte & Laurent, 1943. Rev. Zool. Bot. Afr. 37(1–2): 178–179.

Type: Holotype, MRAC 240, a 389 mm female (C. Lemaire, 1899).

Type locality: "Pweto (Distr. du Haut-Katanga), Congo Belge" [= Pweto, Katanga Prov., SE Democratic Republic of the Congo, 08º28'S, 28º54'E, elevation 950 m].

Distribution: Southeastern Democratic Republic of the Congo (Katanga), 950 m.

Remarks: A valid species *fide* Resetar (*in litt.*) and Wallach (1991: 475).

8. *Aparallactus niger* Boulenger, 1897a. Ann. Mag. Nat. Hist. (6) 19(110): 154.

Type: Holotype, BMNH 1946.1.6.89, a 335 mm male (W.G. Clements, 1893–1897).

Type locality: "Sierra Leone."

Distribution: West Africa. Guinea (Beyla, Dalaba, Kérouané, Macenta, Nzérékoré, Yomou), W Sierra Leone (Western), N Liberia (Nimba), SW Ivory Coast (Dix-Huit Montagnes) and Ghana, 500–650 m.

Sources: Doucet, 1963, Hughes, 1983, Wallach, 1994, Ineich, 2003, Chippaux, 2006 and W. Böhme et al., 2011.

Remarks: MNHN 1916.236 listed as type *fide* MNHN catalogue.

9. *Aparallactus nigriceps* (W.C.H. Peters, 1854). Mber. Königl. Akad. Wiss. Berlin 1854(11): 623 (*Uriechis nigriceps*)

Synonyms: *Eucritus atrocephalus* Jan, 1857 *(nomen nudum),* and *Uriechis atriceps* Jan, 1862b *(nomen emendatum).*

Type: Lectotype, ZMB 4809, a 253–255 mm specimen, designated by Loveridge (1944: 212).

Type locality: "Tette" [= Tete, Tete Prov., Mozambique, 16º10'S, 33º36'E, elevation 135 m] via lectotype selection (in error *fide* Broadley, 1983: 156).

Distribution: Southern Mozambique (Inhambane), NSL–10 m.

Sources: Broadley, 1983, Branch, 1988 and Marais, 1992, 2004.

Remarks: Original description reprinted in W.C.H. Peters (1855: 52).

10. *Aparallactus turneri* Loveridge, 1935. Bull. Mus. Comp. Zool. 79(1): 9–10.

Type: Holotype, MCZ 30117, a 175 mm male (H.J.A. Turner, June 1932).

Type locality: "Sokoki Forest, near Malindi, Coast Prov., Kenya Colony" [= Sokoke Forest, Coast Prov., SE Kenya, ca. 03º32'S, 39º49'E].

Distribution: Southeastern Kenya (E Coast), NSL–20 m.

Sources: Spawls, 1978 and Spawls et al., 2002.

11. *Aparallactus werneri* Boulenger, 1895d. Ann. Mag. Nat.Hist. (6) 16(92): 172.

Types: Syntypes (2), BMNH 1946.1.2.97–98, a male and female, longest syntype 390 mm (F. Werner, 1895).
Type locality: "Usambara, German East Africa" [= Usambara Mountains, N Tanga Region, NE Tanzania].
Distribution: Eastern Tanzania (Kilimanjaro, Lindi, Morogoro, Piwani, Tanga), NSL–1600 m.
Sources: Boulenger, 1896a, J. Rasmussen, 1981, Broadley & Howell, 1991 and Spawls et al., 2002.

APLOPELTURA A.-M.-C. Duméril, 1853 (*nomen protectum*) (Pareatidae)

Synonyms: *Aspidocercus* Fitzinger, 1843 *(nomen oblitum), Haplopeltura* Boetger, 1892 *(nomen emendatum), Hoplopeltura* – Palacky, 1898 *(nomen incorrectum), Haplopelturus* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Aphopeltura* – Nutaphand, 1991b *(nomen incorrectum).*
Type species: *Amblycephalus boa* H. Boie, 1828.
Distribution: Malay Peninsula and East Indies.
Sources: Rooij, 1917, E.H. Taylor, 1922, 1965, David & Vogel, 1996, M.J. Cox et al., 1998, Iskandar & Colijn, 2001, I. Das, 2007b, 2010, 2012, Zaher et al., 2009 and Hoser, 2012q.
Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Aplopeltura* Duméril is designated a *nomen* protectum and *Aspidocercus* Fitzinger a *nomen oblitum.*

1. *Aplopeltura boa* (H. Boie, 1828). Isis von Oken 21(10): 1035. (*Amblycephalus boa*)

Type: Holotype, RMNH 984 (H. Boie, 15-29 July 1827).
Type locality: "Parang, Java" [= Mt. Parang, Magetan Prov., cen. Java, S Indonesia, 7°44'S, 111°20'E, elevation 355 m].
Distribution: Southeast Asia and East Indies. Myanmar, S Thailand (Chumphon, Nakhon Si Thammarat, Pattani, Phang Nga), West Malaysia (Perak), East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Bangka, Java, Kalimantan,Natuna Arch., Nias, Sumatra) and S Philippines (Balabac, Basilan, Mindanao, Palawan), NSL–1500 m.
Remarks: Holotype not in RMNH. Occurs in Myanmar *fide* I. Das (2010: 344).

APODORA Kluge, 1993 (Pythonidae)

Type species: *Liasis papuanus* W.C.H. Peters & Doria, 1878.
Distribution: New Guinea.
Sources: Brongersma, 1956b, Whitaker et al., 1982, F. Parker, 1983, Kluge, 1993b, O'Shea, 1996, McDiarmid et al., 1999, Hoser, 2000b, J.C. Murphy & Schlager, 2003, Rawlings et al., 2008 and Schleip & O'Shea, 2010.

1. *Apodora papuana* (W.C.H. Peters & Doria, 1878). Ann. Mus. Civ. Stor. Nat. Genova 13: 400–401, pl. 3, figs. 1–1b. (*Liasis papuanus*)

Synonyms: *Liasis tornieri* F.Werner, 1897c, *Liasis maximus* F. Werner, 1936, and *Liasi papuano* – F. Werner, 1936c *(nomen incorrectum).*
Type: Holotype, MSNG 29988, a 3450 specimen (L.M. Albertis, 14 May 1872).
Type locality: "Ramoi presso Soron (Costa N.O. della N. Guinea) Nova Guinea austro-occidentali." [= Ramoi, near Sorong, West Papua E Indonesia, ca. 0°53'S, 131°15'E].
Distribution: New Guinea. Eastern Indonesia (Papua, West Papua, Biak, Misool) and Papua New Guinea (Central, East Sepik, Madang, Morobe, Northern, Western, Fergusson Is.).
Comment: A subspecies of *Liasis olivaceus* Gray *fide* Stull, 1935.

APOSTOLEPIS Cope, 1862a (Xenodontidae)

Synonyms: *Elapomojus* Jan, 1862b, *Rhynchonyx* W.C.H. Peters, 1869, *Elapomoius* Senna, 1886 *(nomen incorrectum), Elapomoius* Boulenger, 1896a *(nomen emendatum), Elapohomoeus* Berg, 1898 *(nomen emendatum), Elapomajus* – Palacky, 1898 *(nomen incorrectum), Parapostolepis* Amaral, 1930d, *Parapostelepis* – Briceño-Rossi, 1934 *(nomen incorrectum), Rhynchonys* – A.S. Romer, 1956 *(nomen incorrectum),* and *Apostolepsis* – Fugler, 1983 *(nomen incorrectum).*
Type species: *Elapomorphus flavotorquatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b.
Distribution: South America.
Sources: Strauch, 1884, J.A. Peters & Orejas-Miranda, 1970, Lema, 1978d, 2001, 2002, 2005, Cadle, 1983, Harvey, 1999 and Hofstadler-Deiques & Lema, 2005.
Remarks: Six new species from the Caatinga and Mato Grosso, Mato Grosso do Sul, and São Paulo states, Brazil being described by Lema et al. (pers. comm.).

1. *Apostolepis albicollaris* Lema, 2002a. Comun. Mus. Ciênc. Tecnol. PUCRS (Zool.) 15(2): 228–233, fig. 1 (paratype).

Type: Holotype, MCP 8355, a 433 mm female.
Type locality: "Parque Zoológico do Distrito Federal, Brasilia, Goiás, Brasil."
Distribution: Central Brazil (Distrito Federal, Goiás, Minas Gerais), 1000 m.
Sources: Lema, 2003b and Lema et al., 2004, 2005.

A

2. *Apostolepis ambinigra* (W.C.H. Peters, 1869). Mber. Königl. Akad. Wiss. Berlin 1869(5): 438–439, pl., fig. 2–2c. (*Rhynchonyx ambiniger*)

Type: Holotype, ZMB 6450, a 395 mm male.
Type locality: "Paraguay."
Distribution: Southern South America. Southwestern Brazil, S Bolivia and Paraguay.
Sources: J.A. Peters & Orejas-Miranda, 1972, Lema, 2001, 2002, 2003b and Lema et al., 2005b.

3. *Apostolepis ammodites* Ferrarezzi, Erritto-Barbo & España-Albuqueque, 2005a. Pap. Avulsos Zool. 45(16): 219–221, figs. 3–4, 7b.

Synonym: *Apostolepis bialbimaculata* Lema & Renner, 2005.
Type: Holotype, IB 65267, an adult female, destroyed by fire 15 May 2010.
Type locality: "Brazil: Tocantins: Palmas (10°02'S, 47°20'W, 230 m altitude)."
Distribution: Southeastern Brazil (Bahia, Districto Federal, Goiás, Mato Grosso, Minas Gerais, São Paulo, Tocantins), 230–860 m.
Source: Lema & Renner, 2007.

4. *Apostolepis arenaria* Rodrigues, 1993a. Mem. Inst. Butantan (1992) 54(2): 54–55, figs. 1–2. *(Apostolepis arenarius)*

Type: Holotype, MZUSP 10027 (MTR 88.6819), a 564 mm female (M. Rodrigues, 5 Sept. 1988).
Type locality: "Brasil: Bahia: Alagoado (9°29'S, 41°21'N)" [= 9°29'S, 41°21'W, elevation 485 m].
Distribution: Northeastern Brazil (cen. Bahia), 485 m.

5. *Apostolepis assimilis* (J.T. Reinhardt, 1861b). Vidensk. Medd. Naturhist. Foren. Kjøbenhavn (1860) 22: 235–236, pl. 4, figs. 1–5. (*Elapomorphus assimilis*)

Synonyms: *Elapomorphus assimilis* J.T. Reinhardt, 1861a *(nomen nudum), Apostolepis tertulianobeui* Lema, 2004., and *Apostolepis parassimilis* Lema & Renner, 2012.
Type: Holotype, ZMUC, a 575 mm specimen (native, 5 May 1852).
Type locality: "Fazenda, Capão dos porcos, der ligger nogle Miil fra den lille Bye Brumado i Campos-Egnene af Provindsen, Minas geraes vest for Serra do espinhaço" [= Capão dos Porcos Farm, west of Serra do Espinhaço, Minas Gerais State, Brazil *fide* Lema, 2001: 33, ca. 17°30'S, 43°30'W, elevation 650 m].
Distribution: Central Brazil (Bahia, Goiás, Minas Gerais, Paraná, São Paulo), Bolivia, Paraguay and N Argentina (Chaco, Formosa), 650–880 m.
Sources: F. Werner, 1901b, Cei, 1994, Giraudo & Scrocchi, 1998, Freitas, 1999, Valdujo & Nogueira, 2001, Giraudo & Scrocchi, 2002, Lema, 2002, 2004a, 2005, Lema et al., 2004 and Ferrarezzi et al., 2005a.
Remarks: *Apostolepis tertulianobeui* a valid species *fide* Lema (pers. comm.).

6. *Apostolepis borellii* Peracca, 1904a. Boll. Mus. Zool. Anat. Comp. Univ. Torino 19(460): 422–423, 2 figs.

Type: Holotype, MZUT 962, a 197 mm male (A. Borrelli, 1899).
Type locality: "Urucum, Matto Grosso brasiliano" [= Maciço do Urucum, W Mato Grosso do Sul State, Brazil, 19°12'S, 57°36'W, elevation 725 m]
Distribution: Central Bolivia (Santa Cruz) and SW Brazil (W Mato Grosso do Sul) 200–725 m.
Sources: Amaral, 1925b, Parker, 1928, Ferrarezzi, 1993, Harvey, 1999 and Lema & Renner, 2006b
Remarks: A valid species *fide* Lema (pers. comm.). A synonym of *A. nigrolineata fide* Harvey (1999: 399).

7. *Apostolepis breviceps* Harvey, Gonzales & Scrocchi, 2001. Copeia 2001(2): 502–504, fig. 1.

Type: Holotype, MNK 1839, a 319 mm male (G. Sato, 16 Feb. 1999).
Type locality: "in the vicinity of Cerro Cortado (i.e., within 5 km), Cordillera Prov., Santa Cruz Department, Bolivia, 19°32'S, 62°18'W. Elevation at the type locality is approximately 400 m."
Distribution: Eastern Bolivia (SW Santa Cruz), 400 m. Known only from vicinity of type locality.
Source: Lema, 2003b.

8. *Apostolepis cearensis* J. Gomés, 1915. Ann. Paul. Med. Cirurg. 4(6): 122–123, pl. 3, figs. 4–8.

Synonyms: *Apostolepis sanctae-ritae* F. Werner, 1924 *(nomen incorrigendum), Apostolepis amarali* F. Werner, 1925, and *Apostolepis sanctaeritae* – Lema & Fernandes, 1997 *(nomen corrigendum).*
Type: Holotype, IB 882, a 490 mm male (F. Dias da Rocha, 1894–1915), destroyed by fire 15 May 2010.
Type locality: "State of Ceará, Brazil."
Distribution: Northeastern Brazil (Alagoas, Bahia, Ceará, Paraíba, Piauí, Rio Grande do Norte, Sergipe).
Sources: Freitas, 1999, Lema, 2002, 2004a, 2005, Ferrarezzi et al., 2005a and Lema & Renner, 2006b.

9. *Apostolepis cerradoensis* Lema, 2003a. Acta Biol. Leopoldensia 25(1): 124–126, figs. 1–4.

Type: Holotype, UHESM 21800, a 347 mm male (N. J. de Silva, Jr.).
Type locality: "canteiro de obras da barragem da Usina Hidrelétrica Serra da Mesa, Minaçu, Goiás, Brasil."
Distribution: Northeastern Brazil (Goiás). Known only from type locality.

10. *Apostolepis christineae* Lema, 2002c. Facena 18: 41–44, pls. 1–2.

Type: Holotype, MCP 12515, a 352 mm female (C. Strüssmann, 20 Dec. 1987).

Type locality: "Estação Ecológia da Sierra das Araras, Barra dos Bugres, Cáceres, Estado de Mato Grosso, Brasil (15º05'S-57º11'W)" [= elevation 175 m].

Distribution: Central Brazil (Mato Grosso), 175 m. Known only from type locality.

Sources: Lema, 2002d, Lema et al., 2005 and Lema & Renner, 2006.

11. *Apostolepis dimidiata* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 47–48. (*Elapomorphus dimidiatus*)

Synonyms: *Elapomorphus erythronotus* W.C.H. Peters, 1880a, *Apostolepis nigriceps* F. Werner, 1897a, *Apostolepis barrioi* Lema, 1978d, *Apostolepis ventrimaculatus* Lema, 1978d, and *Apostolepis villaricae* Lema, 1978d.

Type: Holotype, formerly MSNM, a 1473 mm female, destroyed in 1943 during World War II.

Type locality: "Brasile" [= Brazil]. Restricted to São Paulo, Brazil *fide* Lema (1986: 74).

Distribution: Southeastern Brazil (Goiás, Mato Grosso do Sul, Paraná, São Paulo), Paraguay (San Pedro) and N Argentina (NE Corrientes, S Misiones), 140 m.

Sources: Lema, 1986, 1993, Cei, 1994, Moura-Leite et al., 1996, Giraudo & Scrocchi, 1998, Lema 2002, 2003a–b, Lema et al., 2004, 2005 and Ferrarezzi et al., 2005a.

Remarks: Harvey, 1999 considered *A. ventrimaculatus* a synonym.

12. *Apostolepis dorbignyi* (Schlegel, 1837). Essai Phys. Serp. 1: 130, 2: 30–31. (*Calamaria d'orbignyi*)

Type: Holotype, MNHN 3664, a 411–433 mm male (A.C.V.M.D. d'Orbigny, 14 April 1830–27 June 1833 [Bolivia] or 2 July 1831–19 Oct. 1831 [Chiquitos] or 19 Dec. 1831–16 March 1832 [Moxos]).

Type locality: "Chilé" [= Chile] (in error). Possibly Mato Grosso, Brazil or E Bolivia (Chiquitos or Moxos) *fide* Koslowsky (1898a: 31) and probably Bolivia *fide* Lema (2001: 35).

Distribution: Southern Bolivia (Chuquisaca, Santa Cruz, Tarija).

Sources: Fugler et al., 1995, Harvey, 1999, Harvey et al., 2001, Lema, 2002, 2004a and Ferrarezzi et al., 2005a.

Remarks: Holotype listed as female *fide* Guibé & Roux-Estève (1972: 130).

13. *Apostolepis flavotorquata* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 836–837. (*Elapomorphus flavotorquatus*) (*nomen corrigendum*)

Synonyms: *Elapomorphus flavo-torquatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrigendum),* and *Apostolepis flavotorquata* – Cope, 1862a *(nomen corrigendum).*

Type: Holotype, MNHN 3665, a 500 mm specimen (F.L.N.C.L. Castelnau & E. Deville, June 1843–Aug. 1847), lost *fide* Lema (1978d: 29).

Type locality: "l'intérieur de l'Amerique meridional" [= interior of South America]. Listed as "Bresíl" [= Brazil] *fide* MNHN catalogue.

Distribution: Central Brazil (Bahia, Ceará, Distrito Federal, Goiás, Mato Grosso, Rondônia, Tocantins).

Sources: Freitas, 1999 and Lema, 2002a.

14. *Apostolepis freitasi* Lema, 2004a. Comun. Mus. Cienc. Tecnol. PUCRS (Zool.) 17(1): 4–6, figs. 1a–d.

Type: Holotype, MNRJ 6523, a 181 mm male (M. Locks, July 1991).

Type locality: "Tanque do Aragão, Central municipality of Bahia state, Brazi."

Distribution: Eastern Brazil (Bahia). Known only from type locality.

15. *Apostolepis gaboi* Rodrigues, 1993a. Mem. Inst. Butantan (1992) 54(2): 56–57, fig. 3.

Type: Holotype, MZUSP 10290, a 238 mm female (G. Skuk, 12 Oct. 1990).

Type locality: "Brasil: Bahia: Queimadas (10°23'S, 42°30'W)" [= elevation 400 m].

Distribution: Northeastern Brazil (cen. Bahia), 400 m. Known only from type locality.

16. *Apostolepis goiasensis* Prado, 1943. Mem. Inst. Butantan (1942) 16: 8, pl. 1.

Type: Holotype, IB 10260, a 408 mm female (E. Garbe, 20 Jan. 1942), destroyed by fire 15 May 2010.

Type locality: "Rio Verde, Estado de Goiás, Brasil" [= 17°47'S, 50°55'W, elevation 770 m].

Distribution: Central Brazil (Goiás, Mato Grosso do Sul, Minas Gerais), 370–770 m.

Sources: Harvey et al., 2001, Abes & Ferrarezzi, 2003, Lema, 2003b and Lema et al., 2004, 2005..

Remarks: Illustrations of holotype in Lema (2003b: figs. 1a–b).

17. *Apostolepis intermedia* Koslowsky, 1898a. Rev. Mus. La Plata 8: 30–31, pl. 1, figs. 4–7.

Type: Holotype, MLP, a 228 mm specimen (C. Bach), lost *fide* Lema (2001: 36).

Type locality: "Miranda, Matto-Grosso, Brasil" [= Miranda, Mato Grosso do Sul State, Brazil, 20°15'S, 56°22'W, elevation 130 m].

Distribution: Southern Brazil (Mato Grosso do Sul), 130–155 m.

Sources: Lema, 1993, 2002c and Albuquerque & Lema, 2012.

A

18. *Apostolepis lineata* Cope, 1887b. Proc. Amer. Philos. Soc. 24(125): 56. (*Apostolepis erythronotus lineatus*)

Types: Syntypes (2), ANSP 11211–12 (H.H. Smith, 1882–1886), with ANSP 11212 deteriorated and discarded *fide* Malnate (1971: 366).

Type locality: "near the village of Chupada, thirty miles north-east of Cuyabá, and near the headwaters of the Xingu, Prov. of Mato Grosso, Brazil" [= Chapada *fide* Malnate (1971: 366) and Chapada dos Guimarães *fide* Lema (2001: 36), 15°27'S, 55°44'W, elevation 775 m].

Distribution: Central Brazil (Mato Grosso), 775 m.

Sources: Lema, 1986, 2002c, Harvey, 1999 and Lema & Renner, 2004.

Remarks: Harvey (1999: 393) reported poor condition of surviving type. Type locality listed as Chapada, a small village of Matto Grosso, Brazil, about twenty miles ENE of Cuyabá, on the plateau. The village itself is about 2,500 feet above sea level, or 1,800 ft. above Cuyabá; but collections are from all surrounding regions as low as 1,500 ft. *fide* H.H. Smith *in* Papavero (1971: 379).

19. *Apostolepis longicaudata* Gomés *in* Amaral, 1921. Ann. Paul. Med. Cirurg. 9(7–8): 110–111, pl. A, figs. 4–7.

Type: Holotype, IB 1684, a 280 mm male (F. de Assis Iglesias, 1916–1918), destroyed by fire 15 May 2010.

Type locality: "Engenheiro Dodt, povoação do municipio de Santa Philomena, Estado de Piauhy, Brasil" [= Engenheiro Dodt, Santa Filomena, Piauí State, Brazil, 9°07'S, 45°55'W, elevation 275 m].

Distribution: Northeastern Brazil (SW Piauí, Tocantins), 250–300 m.

Source: Curcio et al., 2011.

Remarks: The description heading cited Gomés, 1919, referring to the unpublished manuscript from a talk presented in 1918 at the Second South American Hygeine, Microbiology, and Pathology Conference. Brazilian specimens (Espírito Santo and Paraíba, 35–390 m) are listed as possible members of this species *fide* Curcio et al. (2011: 331).

20. *Apostolepis multicincta* Harvey, 1999. Copeia 1999(2): 397–399, fig. 9.

Type: Holotype, MNK 729, a 384 mm male (L. Gonzales & I. Fernández, 1996).

Type locality: "vicinity of Pampagrande, Provincia Florida, Departmento Santa Cruz, Bolivia, 18°5'S, 64°6'W, at an elevation of approximately 1290m."

Distribution: Eastern Bolivia (Santa Cruz), 1240–1800 m.

Sources: Lema, 2002 and Embert & Reichle, 2003.

21. *Apostolepis nelsonjorgei* Lema & Renner, 2004. Biociências 12(2): 140–142, figs. 1–2.

Type: Holotype, UHESM 14414, a 264 mm female.

Type locality: "Minaçu, Goiás, Brazil" [= 13°34'S, 48°13'W, elevation 430 m].

Distribution: Central Brazil (Goiás, Tocantins), 165–560 m.

Sources: Curcio et al., 2011 and Recorder et al., 2011.

22. *Apostolepis niceforoi* Amaral, 1935c. Mem. Inst. Butantan 9: 221, pl., fig. 5.

Type: Holotype, IB 9197, a 365 mm female (H. Nicéforo-María, 1908–1935), destroyed by fire 15 May 2010.

Type locality: "La Pedrera, near the Venezuelan-Colombian boundary, Colombia" [= Bajo Caquetá, Amazonas, SE Colombia, 1°19'S, 63°35'W, elevation 75 m].

Distribution: Southeastern Colombia (Amazonas) and Ecuador, 75–90 m.

Source: Pérez-Santos & Moreno, 1988.

Remarks: Possibly occurs in W Brazil *fide* Lema (2001: 37).

23. *Apostolepis nigrolineata* (W.C.H. Peters, 1869). Mber. Königl. Akad. Wiss. Berlin 1869(5): 439. (*Elapomorphus nigrolineatus)*

Synonyms: *Apostolepis quinquelineata* Boulenger, 1896a, and *Apostolepis rondoni* Amaral, 1925b.

Type: Holotype, ZMB 6447, a 375 mm specimen.

Type locality: "angeblich aus Guinea, wahrscheinlich aber aus Südamerica" [= *lapsus calami* for Guyana *fide* Lema, 2001: 37].

Distribution: Northeastern Brazil (Amapá, W Amazonas, Ceará, Maranhão, W Pará, Rondônia, Roraima), NE Guyana (Demerara-Mahaica, Essequibo Islands-West Demerara), Suriname (Brokopondo), and French Guiana, NSL–165 m.

Sources: Amaral, 1978, Chippaux, 1987, Silva, 1993, Lema & Renner, 1998, Vidal et al., 1988, Harvey, 1999, Lema, 2001, Abuys, 2003, Lema & Albuquerque, 2010, Curio et al., 2011 and C.J. Cole et al., 2013.

Remarks: Possibly occurs in W Brazil (Acre) *fide* Lema (2001: 39). A synonym of *A. flavotorquata fide* Bauer et al. (1995: 71) but valid *fide* Curio et al. (2011: 329). *Apostolepis quinquelineata* and *A. rondoni* are valid species *fide* Lema (pers. comm.).

24. *Apostolepis nigroterminata* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 235–236, pl. 10, figs. 2–2c.

Type: Holotype, BMNH 1946.1.9.77 (formerly BMNH 1881.5.13.76), a 217–223 mm male (W. Davis & H.J. Veitch).

Type locality: "Cayaria, north-eastern Peru" [=Pucallpa, Ucayali Department, E Peru, 8°23'S, 74°33'W, elevation 150 m].

Distribution: Eastern Peru (Ayacucho, Ucayali) and NE Bolivia (Beni), 150–760 m.
Sources: Harvey, 1999 and Lema & Renner, 2004.
Remarks: Collector of type only W. Davis *fide* Harvey (1999: 400).

25. *Apostolepis phillipsi* Harvey, 1999. Copeia 1999(2): 402–404, fig. 11.

Type: Holotype, UTA 43940, a 432 mm female (B. Phillips; 17 Sept. 1993).
Type locality: "the grounds of Estancia El Refugio, Provincia Velasco, Santa Cruz, Bolivia, 14°45'S; 61°00'W, 0.5–10 m elevation."
Distribution: Southeastern Bolivia (Santa Cruz), <10 m. Known only from type locality.
Sources: Lema, 2002c, 2004b, Michels & Bauer, 2004 and Lema & Renner, 2006.

26. *Apostolepis pymi* Boulenger, 1903b. Ann. Mag. Nat. Hist. (7) 12(69): 353–354

Type: Holotype, BMNH 1946.1.9.82, a 385 mm male (J. Pym).
Type locality: "Brazil." Restricted to Pará State, Brazil *fide* Lema (1997: 194).
Distribution: Northern Brazil (Amazonas, Ceará, W Maranhão, Mato Grosso, E Pará, Rondônia).
Sources: Lema, 1997, Lema & Renner, 1998 and Lema & Albuquerque, 2010.

27. *Apostolepis quirogai* Giraudo & Scrocchi, 1998. Herpetologica 54(4): 470–473, fig. 1.

Type: Holotype, FML 6000, a 228 mm female (R. Martínez, 8 April 1995).
Type locality: "PosaI. Das, Misiones, Argentina" [= 27°22'S, 55°54'W, elevation 110 m].
Distribution: Southern Brazil (NE Rio Grande do Sul) and NE Argentina (Entre Ríos, Misiones), 110 m.
Sources: Lema & Cappellari, 2001, 2002, Lema 2003b and Lema et al., 2004, 2005.

28. *Apostolepis serrana* Lema & Renner, 2006b. Ciên. Movimento 8(15): 14–15, 4 figs.

Type: Holotype, BMNH 1972.430, a 337 mm male.
Type locality: "Eastern Serra do Roncador, Rio das Mortes basin, Mato Grosso, Brazil, at 1500 feet high; Cerrado domain, captured near the Indian village Pimentel Barbosa (12º51' S - 51º46' W)."
Distribution: Central Brazil (Mato Grosso), 455 m. Known only from type locality.

29. *Apostolepis striata* Lema, 2004b. Comun. Mus. Ciênc. Tecnol. PUCRS, (Zool.) 17(2): 82–86, fig. 1.

Type: Holotype, CHUNB 12794, a 261 mm male.
Type locality: "Vilhena, estado de Rondônia, Brazil (12°54'5S-60°32'0W)" [= elevation 600 m].
Distribution: Western Brazil (Rondônia), 600 m. Known only from type locality.
Source: Lema & Renner, 2002.

30. *Apostolepis tenuis* Ruthven, 1927. Occ. Pap. Mus. Zool., Univ. Michigan (188): 1–2.

Type: Holotype, UMMZ 64436, a 308 mm specimen (J. Steinbach, Aug. 1906–Nov. 1925).
Type locality: "Buena Vista, Dept. Santa Cruz, Bolivia" [= 17°28'S, 63°40'W, elevation 390 m].
Distribution: Central Bolivia (Beni, Santa Cruz), 390–415 m.
Sources: Hartweg, 1932, J.A. Peters & Orejas-Miranda, 1972, Harvey, 1999 and Lema et al., 2004.

31. *Apostolepis vittata* (Cope, 1887b). Proc. Amer. Philos. Soc. 24(125): 56. (*Rhynchonyx ambiniger vittatus*)

Type: Holotype, ANSP 11293 (H.H. Smith, 1882–1886).
Type locality: "near the village of Chupada, thirty miles north-east of Cuyabá, and near the headwaters of the Xingu, in the Prov. of Mato Grosso, Brazil" [= Chapada *fide* Malnate (1971: 366) and Chapada dos Guimarães *fide* Lema (2001: 36), 15°27'S, 55°44'W, elevation 775 m].
Distribution: Central Brazil (Mato Grosso), Bolivia and Paraguay, 775 m.
Sources: J.A. Peters & Orejas-Miranda, 1972, Harvey, 1999, Harvey et al., 2001, Lema, 2002c and Lema et al., 2005.
Remarks: Type locality listed as "Chapada, a small village of Matto Grosso, Brazil, about twenty miles ENE of Cuyabá, on the plateau. The village itself is about 2,500 feet above sea level, or 1,800 ft. above Cuyabá; but collections are from all surrounding regions as low as 1,500 ft." *fide* H.H. Smith *in* Papavero (1971: 379).

APROSDOKETOPHIS Wallach, Lanza & Nistri, 2010 (Colubridae)

Type species: *Aprosdoketophis andreonei* Wallach, Lanza & Nistri, 2010.
Distribution: Somalia.
Source: Wallach et al., 2010.

1. *Aprosdoketophis andreonei* Wallach, Lanza & Nistri, 2010. Afr. J. Herp. 59(2): 99–102, 3 figs.

Type: Holotype, MZUT 3484, a 392 mm female (Cesarini, 1922–1923)

A

Type locality: "Addur" [= Xuddor, Oddur], Bakool Region, S Somalia, 04º07'N, 43º53'E, elevation approximately 500 m.
Distribution: Southern Somalia (Bakool), 500 m. Known only from type locality.

†*ARCHAEOPHIS* Massalongo, 1859 (†Palaeophiidae)

Synonyms: *Archacophis* – Huene, 1956 *(nomen incorrectum),* and *Archeophis* – Cadle, 1982 *(nomen incorrectum).*
Type species: †*Archaeophis proavus* Massalongo, 1859.
Distribution: Lower Eocene of Turkmenistan, and middle/lower Eocene of Italy.
Sources: Rage, 1984b and Scanlon & Lee, 2001.

1. †*Archaeophis proavus* Massalongo, 1859. Spec. Photo. Anim. Plant. Foss. Veron.: 14–15, pls. 1–2.

Type: Holotype, ZMBP MB 1902.1357, a 955–980 mm skeleton with 565 vertebrae and impression of skin (O. Di Canossa, 1850).
Type locality: "agri Veronensis, in calcareo numm. M. Bubulcae" [= la Pesciara (Monte Bolca), Veneto Prov., NE Italy, 45º36'N, 11º13'E; Ypresian, lower Eocene *fide* Rage, 1984a: 36].
Distribution: Lower Eocene (Ypresian: 48.6–55.8 mya) of Italy (Veneto). Known only from type locality.
Sources: Janensch, 1904a–b, 1906b and A.H. Müller, 1968.
Remarks: Age is middle Eocene *fide* Auffenberg (1959: 15) and upper lower Eocene *fide* Tatarinov (1988: 113)..

2. †*Archaeophis turkmenicus* Tatarinov, 1963. Paleont. Zhur. 1963(2): 114, figs. 3–5.

Type: Holotype, PIAN 2030/1, four articulated trunk vertebrae (P.G. Danil'chenko, 1960–1962).
Type locality: "Southwestern Turkmen, Kishlak Uilia; Lower Eocene, Donatins strata" [= Uylya-Kushlyk, Turkmenistan, 38°38'N, 55º48'E; Donatinsk formation, lower Eocene fide Rage, 1984b: 36].
Distribution: Lower Eocene (Donatins: 48.6–55.8 mya) of SW Turkmenistan. Known only from type locality.
Source: Tatarinov, 1988.
Remarks: Rage (1984b: 36) erroneously listed holotype as PIAN 2030/31.

ARCHELAPHE Schulz, Böhme & Tillack, 2011 (Colubridae)

Synonym: *Maculophis* Burbrink & Lawson, 2007 *(nomen nudum).*
Type species: *Coronella bella* Stanley, 1917.
Distribution: Southeastern Asia.
Sources: Bourret, 1934a, C.H. Pope, 1936, Rendahl, 1937, Hu et al., 1980, Tian et al., 1986, Schulz, 1992a, Zhao & Adler, 1993, Orl 2 ov et al., 2000, Schulz et al., 2000, 2011, Helfenberger 2001, Orlov et al., 2003, 2010, Burbrink & Lawson, 2007, I. Das, 2010, 2012, Orlov et al., 2010 and Ryabov et al., 2011.

1. *Archelaphe bellus* (Stanley, 1917). J. No. China Br. Royal Asiatic Soc. (1916) 47: 84–85, 3 figs., pl. with photo. (*Coronella bella*)

Synonyms: *Coluber leonardi* Wall, 1921b, and *Elaphe leonardi chapaensis* Bourret, 1934a.
Type: Holotype, SMNHC 717-17-1-525, a 950 mm specimen.
Type locality: "Kuatun hills, in north-west Fokien near the borders of Kiangsi Prov., China" [= Guadun, in Wuyishan Mtns., ext. N Fujian Prov., SE China, 27°45'N, 117°50'E, elevation 900–1200 m].
Distribution: Southeastern Asia. China (Fujian, Guangdong, Guangxi, Hunan, Sichuan, W Yunnan), NE India (Nagaland), N Myanmar (Kachin), N Laos and Vietnam (Bac Phan, Bac Thai, NW Ha Tinh, Hoàng Liên Son, Lang Son, Lao Cai, Sa Pa, Vinh Phu), 1000–3000 m.
Remarks: Holotype in FU *fide* Orlov et al. (2010b: 313).

ARGYROGENA F. Werner, 1924a (Colubridae)

Type species: *Coluber fasciolatus* G. Shaw, 1802.
Distribution: Southern Asia.
Sources: Wall, 1914b, M.A. Smith, 1928b, L.D. Wilson, 1967, Singh, 1972, P. Silva, 1980a, Khan, 1993, 2002, Captain & Thakur, 1999, R.C. Sharma, 2003, 2007, M.A.R. Khan, 2004, N. Khaire, 2006 and Whitaker & Captain, 2004.

1. *Argyrogena fasciolata* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 528. (*Coluber fasciolatus*)

Synonyms: *Coluber hebe* Daudin, 1803c, *Coluber curvirostris* Cantor, 1839, and *Argyrogena rostrata* F. Werner, 1924a.
Type: Lectotype, a 600 mm specimen described and illustrated by P. Russell (1796: 26–27, pl. 21) (native, 1781–1791), designated herein.
Type locality: "Vizagapatam, coast of Coromandel, India" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E, elevation 25 m] via lectotype selection.
Distribution: Southeastern Pakistan (Balochistan, Sindh), India (Andhra Pradesh, Bihar, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Tamil Nadu, Uttar Pradesh, West Bengal), Nepal, Sri Lanka (Northern) and Bangladesh.

Remarks: Original description based on P. Russell (1796: 26–27, pl. 21). Single record from Sri Lanka needs confirmation *fide* E.H. Taylor (1950: 546).

2. *Argyrogena vittacaudata* (Blyth, 1854b). Proc. Asiatic Soc. Bengal 23(7): 740.

Type: Holotype, a 483 mm specimen, lost *fide* I. Das et al. (1998: 157).
Type locality: "vicinity of Darjiling" [= Darjeeling, West Bengal, India, 27º02'N, 88º16'E, elevation 2100 m].
Distribution: Northeastern India (West Bengal).
Remarks: Related to *Coluber* (= *Argyrogena*) *fasciolatus fide* Blyth.

ARIZONA Kennicott *in* Baird, 1859a (Colubridae)

Synonym: *Arizon* – Goode, 1883 *(nomen incorrectum).*
Type species: *Arizona elegans* Kennicott *in* Baird, 1859a.
Distribution: Southwestern USA and N Mexico.
Fossil records: Upper Miocene of USA (Nebraska) and Pleistocene of USA (Arizona, California, New Mexico, Texas).

1. *Arizona elegans* Kennicott *in* Baird, 1859a. U.S.-Mex. Bound. Surv., Rept. (1858) 2(2): 18–19, pl. 13.

Synonyms: *Coluber arizonae* Boulenger, 1894, *Arizona elegans occidentalis* Blanchard, 1924a, *Arizona elegans blanchardi* Klauber, 1946a, *Arizona elegans candida* Klauber, 1946a, *Arizona elegans eburnata* Klauber, 1946a, *Arizona elegans expolita* Klauber, 1946a, *Arizona elegans noctivaga* Klauber, 1946a, *Arizona elegans philipi* Klauber, 1946a, *Arizona elegans arenicola* Dixon, 1960, and *Arizona elegans australis* K.L. Williams, Chrapliwy & Smith, 1961.
Type: Lectotype, USNM 1722 (A.C.V. Schott [U.S.-Mex. Bound. Surv.], 1852–1853), designated by Blanchard (1924: 4).
Type locality: "Lower Rio Grande" [= lower Rio Grande River, SE Texas, S USA] via lectotype selection.
Distribution: Southwestern United States and N Mexico. USA (Arizona, S California, ext. E Colorado, W Kansas, ext. SW Nebraska, ext. S Nevada, New Mexico, Oklahoma, Texas, ext. SE Utah) and Mexico (Aguascalientes, Chihuahua, Coahuila, Durango, Nuevo León, San Luis Potosí, W Sinaloa, W Sonora, S Tamaulipas, Zacatecas), NSL–1830 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona, California, New Mexico, Texas).
Sources: Klauber, 1946a, Fleet & Dixon, 1971, Dixon & Fleet, 1976, Van Devender & Bradley, 1994, Degenhardt et al., 1996, Keogh, 1996, P.R. Brown, 1997, Rodríguez-Robles & Jesús-Escobar, 1999, Bartlett & Tennant, 2000, Holman, 2000a, Werler & Dixon, 2000, McCranie & Wilson, 2001b, Grismer, 2002 and Pyron & Burbrink, 2009.
Remarks: Official Specific Name no. 2047 *fide* Opinion 717 (ICZN, 1965a). Lectotype closely resembles specimens from Terrel Co., Texas *fide* Dixon & Fleet (1976: 2).

2. *Arizona pacata* Klauber, 1946a. Trans. San Diego Soc. Nat. Hist. 10(17): 379–380 (*Arizona elegans pacata*)

Type: Holotype, SDSNH 17652, a 789 mm male (F.F. Gander, 16 Nov. 1941).
Type locality: "Santo Domingo (lat. 25°30'N), Baja California, Mexico."
Distribution: Northwestern Mexico (ext. SW Baja California Norte, Baja California Sur).
Source: Grismer, 2002.

3. †*Arizona voorhiesi* Parmley & Holman, 1995. J. Vert. Paleont. 15(1): 80–81, figs. 4a–b.

Type: Holotype, MSUVP 1220, one trunk vertebra (UNSM & MSU field crews).
Type locality: "Lemoyne Quarry fossil site (USNM locality Kh-101), is a north-facing road cut on Nebraska State Highway 92 in NE1/4, NW1/4, Sec. 3, 6.4 km W of Lemoyne, Keith County, SW Nebraska; middle Hemphillian mammal age (late Miocene)."
Distribution: Upper Miocene (Hemphillian: 4.9–10.3 mya) of USA (Nebraska).

ARRHYTON A.C.L.G. Günther, 1858 (Xenodontidae)

Synonyms: *Cryptodacus* Gundlach *in* W.C.H. Peters, 1861f, *Arryton* – Cope, 1860e *(nomen incorrectum), Colorhogia* Cope, 1862, and *Arhyton* – Auffenberg, 1958 *(nomen incorrectum).*
Type species: *Arrhyton taeniatum* A.C.L.G. Günther, 1858.
Distribution: Cuba.
Sources: Grant *et. al.,* 1959, A. Schwartz, 1965, Buden, 1966, Maglio, 1970, A. Schwartz & Thomas, 1975, A. Schwartz & Garrido, 1981, A. Schwartz & R.W. Henderson, 1988, 1991, Rodríguez-Robles & Greene, 1996, Vidal et al., 2000, Hedges et al., 2009, R.W. Henderson & Powell, 2009 and Zaher et al., 2009.

1. *Arrhyton ainictum* A. Schwartz & Garrido, 1981. Ann. Carnegie Mus. 50(7): 216–217, fig. 2c, 3c.

Type: Holotype, CZACC 4.4619 (formerly IZAC 4256), a 363 mm male (L. Zayas, 30 July 1974).
Type locality: "Cueva del 18, Francisco, Camagüey Prov., Cuba."
Distribution: Cuba (Camaguey, Las Tunas).
Source: Chamizo-Lara et al., 2005.

A

2. *Arrhyton dolichura* F. Werner, 1909b. Mitt. Naturhist. Mus. Hamburg 26: 224–225.

Type: Holotype, formerly ZMH, a 410 mm female, destroyed in 1943 during World War II.
Type locality: “Alabama (?)” [USA] (in error). Restricted to La Habana, Habana Prov., Cuba *fide* Grant et al. (1959: 130).
Distribution: Cuba (Habana).
Remarks: For explanation of species spelling see A. Schwartz & Garrido (1981: 220).

3. *Arrhyton procerum* Hedges & Garrido, 1992a. Herpetologica 48(2): 174–175, fig. 3a.

Type: Holotype, MNHNCU 3285, a 371 mm male (E. Alfaro, 12 July 1990).
Type locality: “11.4 km ESE Playa Girón, Matanzas Prov., Cuba, 0 m.”
Distribution: Cuba (Matanzas), NSL. Known only from type locality.

4. *Arrhyton redimitum* (Cope, 1862b). Proc. Acad. Nat. Sci. Philadelphia 14(1): 81–82. (*Colorhogia redimita*)

Synonym: *Arrhyton vittatum landoi* A. Schwartz, 1965.
Type: Holotype, USNM 29769 (formerly USNM 5747), a 197 mm specimen (C. Wright, 1856–1862).
Type locality: “Eastern Cuba” [Greater Antilles].
Distribution: Eastern Cuba (Granma, Guantánamo, Santiago de Cuba).
Sources: A. Schwartz, 1965 and Lando & Williams, 1969.

5. *Arrhyton supernum* Hedges & Garrido, 1992a. Herpetologica 48(2): 171, fig. 1b.

Type: Holotype, MNHNCU 2704, a 426 mm female (R. Thomas, 29 July 1989).
Type locality: “the SW slope of El Yunque de Baracoa, Guantánamo Prov., Cuba, 136 m.”
Distribution: Extreme E Cuba (Guantánamo), 135 m. Known only from type locality and Monte Libano.

6. *Arrhyton taeniatum* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 244.

Synonym: *Arrhyton fulvum* Cope, 1862b.
Type: Holotype, BMNH 1946.1.21.48, a 229 mm specimen (Zool. Soc. London).
Type locality: “Cuba” [Greater Antilles].
Distribution: Cuba (Cienfuegos, Granma, Guantánamo, Habana, Holguin, Pinar del Río, Santiago de Cuba and Juventud Is.).

7. *Arrhyton tanyplectum* A. Schwartz & Garrido, 1981. Ann. Carnegie Mus. 50(7): 221–222, fig. 2e, 3e.

Type: Holotype, AMNH 77782, a 542 mm male (A. Schwartz, 9 July 1957).
Type locality: “cliffs at San Vicente, Pinar del Río Prov., Cuba.”
Distribution: Extreme W Cuba (Pinar del Río).

8. *Arrhyton vittatum* (Gundlach *in* W.C.H. Peters, 1861f). Mber. Königl. Akad. Wiss. Berlin 1861(11): 1003–1004. (*Cryptodacus vittatus*)

Synonym: *Arrhyton bivittatum* Cope, 1862b.
Types: Syntypes (2), ZMB 4096, 283 and 220 mm specimens (J. Gundlach, 1839–1842), other syntype lost *fide* Bauer et al. (1995: 81).
Type locality: “Cuba” [Greater Antilles]. Restricted to Cárdenas, Matanzas Prov., Cuba *fide* & Garrido (1981: 208).
Distribution: A. Schwartz Cuba (Camagüey, Habana, Holguin, Matanzas, Oriente, Pinar del Río, Sancti Spíritus, Via Clara and Pinos Is).

ASPIDELAPS Fitzinger, 1843 (Elapidae)

Synonyms: *Aspidoelaps* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Cyrtophis* Sundevall *in* A. Smith, 1849 *in* 1838–1849, *Aspidilaps* – Pringle, 1954 *(nomen incorrectum),* and *Crytophis* – V.F.M. FitzSimons, 1962 *(nomen incorrectum).*
Type species: *Natrix lubrica* Laurenti, 1768.
Distribution: Southern Africa.
Sources: Mertens, 1955, V.F.M. FitzSimons, 1962a, 1974, Broadley, 1968a, 1983, Buys & Buys, 1983, Branch, 1988, Marais, 1992, 2004, Golay et al., 1993, Spawls & Branch, 1995, Slowinski et al., 1997, Keogh, 1998, Broadley & Baldwin, 2006, Dobiey & Vogel, 2007, Zaher et al., 2009 and Hoser, 2012e.

1. *Aspidelaps lubricus* (Laurenti, 1768). Synop. Rept.: 80. (*Natrix lubrica*)

Synonyms: *Coluber latonia* Daudin, 1803b, *Naia somersetta* A. Smith, 1826, *Aspidelaps lubricus cowlesi* Bogert, 1940, and *Aspidelaps lubricus infuscatus* Mertens, 1954b.
Type: Lectotype, specimen described and illustrated by Seba (1735: pl. 43, fig. 3), lost *fide* Golay et al. (1993: 113).
Type locality: “Africanus, ex Promontorio Bonae Spei” [= Cape of Good Hope, Western Cape Prov., SW South Africa, 34º21’S, 18º28’E, elevation 20 m].
Distribution: Southern Africa. Southwestern Angola (Namibe), Namibia (Erongo, Hardap, Karas, Khomas, Kunene, Omaheke, Oshikoto, Otjozondjupa) and

W South Africa (Eastern Cape, S Free State, Northern Cape, Western Cape), NSL–1415 m.

2. *Aspidelaps scutatus* (A. Smith, 1849 *in* 1838–1849). Illust. Zool. So. Africa, Rept. (App.): 22. (*Cyrtophis scutatus*)

Synonyms: *Naia fula-fula* Bianconi, 1849a *(nomen incorrigendum), Naja fulafula* – W.C.H. Peters, 1882d *(nomen corrigendum), Aspidelaps scutatus bachmani* Mertens, 1954, and *Aspidelaps scutatus intermedius* Broadley, 1968.

Type: Holotype, BMNH 1946.1.17.83 (formerly BMNH 1863.2.21.90), a 190–205 mm specimen (A. Smith, 27 Aug.–10 Sept. 1835).

Type locality: "Kaffirland and the country towards Port Natal, South Africa," (in error *fide* V.F.M. FitzSimons, 1962a: 273, probably from further north, i.e. Mozambique). Restricted to the confluence of the Marico and Crocodile rivers, north-western Transvaal *fide* Broadley (1968d: 1) [= NW Limpopo Prov., NE South Africa, 24º11'S, 26º52'E, elevation NSL].

Distribution: Southern Africa. Southern Mozambique (Gaza, Inhambane, Manica, Maputo, Sofala), SW Zimbabwe (Bulawayo, Masvingo, Matebeleland North, Matebeleland South), Botswana (Central, Gaborone, Ghanzi, Kgaligadi, Kgatleng, Kweneng, North East, North West, Southern), Namibia (Caprivi, Erongo, Hardap, Khomas, Okavango, Omaheke, Oshikoto, Otjozondjupa) and NE South Africa (Gauteng, Limpopo, Mpumalanga), NSL–1670 m.

Sources: Broadley, 1968d, Broadley & Cock, 1975, Pienaar et al., 1978, Auerbach, 1987, Shine et al., 1996, Clauss & Clauss, 2002, M. Griffin, 2003 and Broadley & Blaylock, 2013.

Remarks: Boulenger (1896a: 391) listed a BMNH juvenile from Natal as one of A. Smith's types (confirmed *fide* V.F.M. FitzSimons, 1937: 263), leading Mertens (1955: 108) to restrict type locality to Natal. FitzSimons (1962a: 273) believed type locality of Natal to be in error (as the species does not occur there). Broadley restricted type locality to a site visited by A. Smith in 1835.

ASPIDITES W.C.H. Peters, 1877a (*nomen substitutum*) (Pythonidae)

Synonyms: *Aspidiotes* Krefft, 1864a–b *(nomen praeoccupatum), Aspidiotus* W.C.H Peters, 1876b *(nomen praeoccupatum),* and *Aspiditis* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type species: *Aspidiotes melanocephalus* Krefft, 1864a.

Distribution: Australia.

Sources: Stimson, 1969, L.A. Smith, 1981a, Storr et al., 1986, S.K. Wilson & Knowles, 1988, Hoser, 1989, 2000b, 2003a, 2012b, Ehmann, 1992, D.G. Barker & Barker, 1994, Wall, 1998b, McDiarmid et al., 1999, Cogger, 2000, Torr, 2000, Rawlings et al., 2008 and Schleip & O'Shea, 2010.

1. *Aspidites melanocephalus* (Krefft, 1864a). Proc. Zool. Soc. London 32(1): 20–22, 2 figs. (*Aspidiotes melanocephalus*)

Synonyms: *Aspidites melanocephalus adelynensis* Hoser, 2000b & 2012b *(nomen illegitimum), Aspidites melanocephalus davieii* Hoser, 2000b *(nomen illegitimum),* and *Aspidites melanocephalus rickjonesii* Hoser, 2009b & 2012b *(nomen illegitimum).*

Type: Holotype, BMNH 1946.1.8.2 (formerly BMNH 1866.2.13.27), a 2388 mm female (G. Krefft, 1861–1864).

Type locality: "Port Denison, N.E. Australia" (in error). Corrected to Bowen, Queensland *fide* Cogger et al. (1983: 202).

Distribution: Northern Australia (Northern Territory, Queensland, N Western Australia, Bathurst, Melville, Montgomery, Quail, Uwins and Valencia Is.), NSL–760 m.

Sources: L.A. Smith, 1981a, Storr et al., 1986, Hoser, 1989, 2000b, 2003a, 2012b, Ehmann, 1992, Wall, 1998b, J.C. Murphy & Schlager, 2003 and Rawlings et al., 2008.

Remarks: Original description reprinted in Krefft (1864b: 225–226, 2 figs.).

2. *Aspidites ramsayi* (Macleay, 1882). Proc. Linn. Soc. N.S.W. (1881–1882) 6(4): 813. (*Aspidiotes ramsayi*)

Synonyms: *Aspidites collaris* Longman, 1913, *Aspidites ramsayi panoptes* Hoser, 2000b & 2012b *(nomen illegitimum), Aspidites ramsayi richardjonesii* Hoser, 2000a *(nomen illegitimum),* and *Aspidites ramsayi neildavieii* Hoser, 2009b & 2012b *(nomen illegitimum).*

Type: Holotype, MMS, a 1905 mm specimen (J. Ramsay via E.P. Ramsay, 1880), lost *fide* Stimson (1969: 2).

Type locality: "near Fort Bourke" [New South Wales, Australia] in error and corrected to Tyndarie *fide* Shea (2012: 149).

Distribution: Central Australia (NW New South Wales, S Northern Territory, SW Queensland, N South Australia, Western Australia), NSL–650 m.

Sources: Waite, 1894b and Krauss, 1994.

ASPIDOMORPHUS Fitzinger, 1843 (Elapidae)

Synonyms: *Pseudelaps* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Pseudoelaps* Jan, 1859a *(nomen praeoccupatum), Apisdomorphus* A.-M.-C. Duméril, Birbon & Duméril, 1854b *(nomen emendatum), Psudoelaps* – Hoffmann, 1890 *(nomen incorrectum), Pseudelas* – Briceño-Rossi, 1934 *(nomen incorrectum), Aspidomophus* – Obst, Richter & Jacob, 1984 *(nomen incorrectum),* and *Aspidomorphis* – Schwaner,

A

Baverstock, Dessauer & Mengden, 1985 *(nomen incorrectum).*

Type species: *Elaps muellerii* Schlegel, 1837.

Distribution: New Guinea and adjacent islands.

Sources: Brongersma, 1934, McDowell, 1967, O'Shea, 1996, Keogh et al., 1998, Scanlon, 2003a, Scanlon & Lee, 2004, Sanders et al., 2008, Metzger et al., 2010, Zaher et al., 2009 and Hoser, 2012e.

Remarks: All three species contain multiple cryptic species *fide* Metzger et al. (2009: 7).

1. *Aspidomorphus lineaticollis* (F. Werner, 1903b). Zool. Anz. (1902) 26(693): 251 (footnote). (*Pseudelaps muelleri lineaticollis*)

Synonyms: *Aspidomorphus mülleri lineatus* Brongersma, 1934 *(nomen incorrigendum), Aspidiomorphus schlegeli* – Brass, 1959 *(nomen incorrectum), Aspidomorphus muelleri lineatus* – Klemmer, 1963 *(nomen corrigendum),* and *Aspidomorphus linegicollis* – McDowell, 1969a *(nomen incorrectum).*

Type: Holotype, NMW 27387, a 475 mm female (B. Geisler & H. Geisler, 1890–1902, via W. Schlüter).

Type locality: "Neuguinea" [= New Guinea].

Distribution: Eastern Papua New Guinea (Madang, Milne Bay, Morobe, Oro, Sudest, Fergusson, Goodenough, Misima, Normanby, Trobriand & Woodlark Is.), NSL–400 m.

2. *Aspidomorphus muellerii* (Schlegel, 1837). Essai Phys. Serp. 1: 182, 2: 452–454, pl. 16, figs. 16–17. *(Elaps muellerii) (nomen corrigendum)*

Synonyms: *Elaps mülleri* Schlegel, 1837 *(nomen incorrigendum), Elaps müllerii* Schlegel, 1837 *(nomen incorrigendum), Diemenia muelleri* – A.C.L.G. Günther, 1872b *(nomen corrigendum),* and *Aspidomorphus mülleri interruptus* Brongersma, 1934 *(nomen incorrigendum),* and *Aspidomorphus muelleri interruptus* – Klemmer, 1963 *(nomen corrigendum).*

Types: Syntypes (2), RMNH 1402–03, a male and female, 456 and 405 mm specimens (S. Müller, Aug. 1828).

Type locality: "la côte occidentale de la Nouvelle Guinée" [= Lobo, Triton Bay, West Papua Prov., Indonesia *fide* McDowell, 1967: 521].

Distribution: New Guinea. Eastern Indonesia (West Papua, Mansinam, Misool, Salawati, Seram) and Papua New Guinea (Central, Eastern, East New Britain, East Sepik, Gulf, Milne Bay, New Ireland, Northern, Southern Highlands, Western, Western Highlands, West New Britain, West Sepik, Duke of York Is.), 500–1500 m.

Remarks: Original description listed *E. mülleri* (1: 182 & pl. 16) and *E. müllerii* (2: 452).

3. *Aspidomorphus schlegelii* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 35. (*Diemenia schlegelii*)

Synonyms: *Pseudelaps muelleri insulae* T. Barbour, 1908, *Pseudelaps muelleri concolor* F. Werner, 1925, and *Aspidomorphus schlegelli* – Brongersma, 1952 *(nomen incorrectum).*

Types: Syntypes (2), BMNH 1946.1.18.43, a female, and BMNH 1946.1.18.86.

Type locality: "island of Misol" [= Misool, Papua Prov., E Indonesia].

Distribution: New Guinea. Eastern Indonesia (Papua, Batanta, Biak, Jamna, Jobi, Misool, Mysore, Salawati, Waigeu) and ext. NW Papua New Guinea (West Sepik).

ASPIDURA Wagler, 1830 (Natricidae)

Synonyms: *Haplocercus* A.C.L.G. Günther, 1858, *Heptagerrhon* Fitzinger, 1861, *Aspiduraz* – Theobald, 1876 *(nomen incorrectum),* and *Asidura* – Palacky, 1898 *(nomen incorrectum).*

Type species: *Scytale brachyorrhos* F. Boie, 1827.

Distribution: Sri Lanka.

Sources: M.A. Smith, 1943, Deraniyagala, 1955, P. Silva, 1971, 1980a, Gans & Fetcho, 1982, A. Silva, 1990 and Zaher et al., 2009.

Remarks: *Haplocercus* a synonym of *Aspidura fide* Pyron et al. (2013: 975).

1. *Aspidura brachyorrhos* (F. Boie, 1827). Isis von Oken 20(6): 517. (*Scytale brachyorrhos*)

Synonym: *Calamaria scytale* Schlegel, 1837.

Type: Holotype, IRSNB, a 207 mm specimen (P.-A.J. Drapiez, 1819–1827), lost *fide* Gans & Fetcho (1982: 285).

Type locality: "Java" [W Indonesia] (in error). Corrected to Ceylon [= Sri Lanka] *fide* H. Boie (1831: 188). Restricted to Sri Lanka *fide* Gans & Fetcho (1982: 286).

Distribution: Southern Sri Lanka (Central, Western), 350–1220 or 1400 m.

Source: E.H. Taylor, 1953b.

Remarks: Original description based on H. Boie's MS (1823–1825: pl. 22).

2. *Aspidura ceylonensis* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 15. *(Haplocercus ceylonensis)*

Synonym: *Aspidura carinata* Jan, 1862b.

Types: Syntypes (2), BMNH 1946.1.12.27, a male (R. Templeton, 1839–1851), and BMNH 1946.1.12.6, a 483 mm female (H. Cuming, 1836–1840).

Type locality: "Ceylon" [= Sri Lanka].

Distribution: Central Sri Lanka (Central, Sabaragamuwa, Uva), 1070–2140 (2300) m.
Sources: Wall, 1921g, 1923c, M.A. Smith, 1943, E.H. Taylor, 1953b, Deraniyagala, 1955, P. Silva, 1969, 1980a, A. Silva, 1983, 1990b, 2001, 2009 and Somaweera, 2006.
Remarks: Transferred from *Haplocercus* to *Aspidura fide* Pyron et al. (2013: 975).

3. *Aspidura copii* A.C.L.G. Günther, 1864a. Rept. Brit. India: 203, pl. 18, fig. e.

Type: Holotype, BMNH 1946.1.12.9, a 419 mm male.
Type locality: Not stated, but presumed to be Ceylon [= Sri Lanka] *fide* Günther (1864a: 203).
Distribution: Southern Sri Lanka (Central, Uva, Western), 30–2130 m.
Source: Willey, 1906.

4. *Aspidura deraniyagalae* Gans & Fetcho, 1982. Ann. Carnegie Mus. 51(14): 299–301, fig. 6 (left).

Type: Holotype, CM 83455, a 199 mm male (C. Gans, Aug. 1972).
Type locality: "Kanawarella Group Estate (near Namunukula), at 1520 m, Sri Lanka,"[= Uva Prov., SE Sri Lanka].
Distribution: Southeastern Sri Lanka (Uva). Known only from vicinity of type locality, 1500–1520 m.

5. *Aspidura drummondhayi* Boulenger, 1904d. Spolia Zeylan. 2(7): 95–96, pl., 4 figs.

Types: Syntypes (2), BMNH 1946.1.12.45–46, a 202 mm male and 223 mm female (H.M. Drummond-Hay, March–May 1903).
Type locality: "Hopewell estate, Balangoda...the probable elevation being from 3,500 to 4,200 feet above sea level" [= Sabaragamuwa Prov., S Sri Lanka].
Distribution: Southern Sri Lanka (Sabaragamuwa, Southern), 1040–1280 m.

6. *Aspidura guentheri* Ferguson, 1876. Proc. Zool. Soc. London 44(1): 819–820.

Types: Syntypes (12), BMNH 1946.1.12.16–26 and MCZ 28467, males, females and juveniles, longest syntype 157 mm (W. Ferguson, 1839–1877).
Type locality: "Ceylon" [= Sri Lanka].
Distribution: Southern Sri Lanka (Sabaragamuwa, Southern, Western), NSL–500 m.

7. *Aspidura trachyprocta* Cope, 1860d. Proc. Acad. Nat. Sci. Philadelphia 12(2): 75–76.

Synonym: *Heptagerrhon bivittatum* Fitzinger, 1861.
Type: Holotype, ANSP 3308, a 208 mm specimen (H. Cuming, 1836–1840).
Type locality: "Ceylon" [= Sri Lanka].
Distribution: Central Sri Lanka (Central, Uva), 750–2100 m.
Sources: A. Silva, 2009 and Ukuweia & Dawundasekara, 2012.
Remarks: Malnate (1971: 3072) erroneously listed type as ANSP 3309.

ASTHENODIPSAS W.C.H. Peters, 1864a (Pareatidae)

Synonyms: *Amplycephalus* Kuhl & Hasselt, 1822b *(nomen rejiciendum), Amblycephalus* Schlegel, 1826a *(nomen praeoccupatum), Amblycephalus* H. Boie *in* F. Boie, 1827 *(nomen praeoccupatum), Amplyaphalus* – F. Boie, 1827 *(nomen incorrectum), Amblicephalus* Gray *in* Griffith & Pidgeon, 1831 *(nomen emendation), Emblycephalus* – A.-M.-C. Duméril, & bibron, 1844 *(nomen incorrectum), Amblycerhalus* – Kulagin, 1888 *(nomen incorrectum), Astenodipsas* Lidth de Jeude, 1891 *(nomen emendatum),* and *Internatus* Yang & Rao *in* Rao & Yang, 1992.
Type species: *Asthenodipsas malaccana* W.C.H. Peters, 1864a.
Distribution: Southeastern Asia and W Indonesia.
Sources: Rao & Yang, 1992, David & Vogel, 1996, Iskandar & Colijn, 2001, Grossmann & Tillack, 2003, Zaher et al., 2009, I. Das, 2010, 2012 and Hoser, 2012q.

1. *Asthenodipsas laevis* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 520. (*Amblycephalus laevis*)

Synonyms: *Amblycephalus laevis* H. Boie *in* Schlegel, 1826a *(nomen nudum),* and *Amblycephalus laevis* Schlegel, 1826b *(nomen nudum).*
Type: Lectotype, RMNH 986B, a 374 mm female (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823), designated by Grossman & Tillack (2003: 180).
Type locality: "Java, Indonesia" via lectotype selection. Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).
Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Nakhon Si Thammarat, W Phatthalung, E Trang), Laos (Houaphan, Xiangkhouang), West Malaysia (Johore, Pahang, Selangor), East Malaysia (Sabah, Sarawak) and W Indonesia (Bangka, Java, S Kalimantan, Mentawai Arch., Natuna Besar, Siberut, Serasan, Sumatra), 350–1625 m.
Sources: A.C.L.G. Günther, 1864a, Flower, 1896, Rooij, 1917, 1922, M.A. Smith, 1930c, Haas, 1950, B.L. Lim, 1963, 1964, E.H. Taylor, 1965, Tweedie, 1983, Heang, 1987, Dring et al., 1990, M.J. Cox, 1991b, Stuebing, 1991, B.L. Lim et al., 2002, Malkmus et al., 2002 and I. Das, 2010.

Remarks: Original description based on H. Boie's MS (1823–1825). Photograph of lectotype in Grossman & Tillack (2003: fig. 4).

2. *Asthenodipsas malaccanus* W.C.H. Peters, 1864a. Mber. Königl. Akad. Wiss. Berlin 1864(4): 273–274, pl., figs. 3, 3a–3d. (*Asthenodipsas malaccana*)

Synonyms: *Pareas dorsopictus* Edeling, 1870, and *Amblycephalus malaccanus ventrilineatus* Angel, 1941.

Type: Holotype, ZMB 5041, a 215 mm female (W. Baumgarten), lost *fide* R. Günther (*in litt.*).

Type locality: "der Nähe von Malacca" [= Melaka, southwestern West Malaysia]. Corrected to Malay Peninsula *fide* Boulenger (1912c: 210) [= West Malaysia].

Distribution: Malay Peninsula and Greater Sundas. Extreme S Thailand (Yala), West Malaysia (Melaka, Pahang, Selangor), East Malaysia (Sabah, Sarawak), Brunei and W Indonesia (E Kalimantan, Mentawai Arch., Siberuat, Sumatra), 245–1000 m.

Sources: Lidth de Jeude, 1890, Boulenger, 1912c, M.A. Smith, 1930c, Haas, 1950, Batchelor, 1958, E.H. Taylor, 1965, Grandison, 1972, B.L. Lim & Sharef bin Kamarudin, 1975, Tweedie, 1983, Stuebing, 1991, Malkmus et al., 2002 and I. Das, 2007b, 2012.

Remarks: Photograph of holotype in Grossman & Tillack (2003: fig. 3).

3. *Asthenodipsas vertebralis* (Boulenger, 1900a). Ann. Mag. Nat. Hist. (7) 5(27): 307–308. (*Amblycephalus vertebralis*)

Synonym: *Amblycephalus tropidonotus* Lidth de Jeude, 1923.

Type: Holotype, BMNH 1946.1.20.14 (formerly BMNH 1900.7.18.5), a 460 mm specimen (L. Wray, Jr.).

Type locality: "Maxwell's Hill, Larut, 3000 feet elevation, Perak, Malay Peninsula" [= West Malaysia, elevation 915 m].

Distribution: West Malaysia (W Pahang, Perak, Tioman Is.) and W Indonesia (W Sumatra), 915–2010 m.

Sources: Smedley, 1932a, C.P. Haas, 1950, B.L. Lim, 1967a, Grandison, 1972, Sly, 1976, Tweedie, 1983, Stuebing, 1991, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, B.L. Lim et al., 2002, Grossmann & Tillack, 2003, Youmans et al., 2003, Grismer, 2011 and I. Das, 2012.

Remarks: Photograph of type in Grossman & Tillack (2003: fig. 2).

ASTROTIA J.G. Fischer, 1855 (Elapidae)

Synonyms: *Astiotia* – Reid, 1966 *(nomen incorrectum), Astrotea* – Cahill, Heatwole & Goldman, 1973 *(nomen incorrectum),* and *Aristrotia* – B.D. Sharma *in* B.D. Sharma & Kumari, 1998a *(nomen incorrectum).*

Type species: *Hydrus stokesii* Gray *in* Stokes, 1846a.

Distribution: Marine waters of Indo-Australia, including Arabian Sea, Arafura Sea, Bay of Bengal, Coral Sea, Flores Sea, Gulf of Thailand, Gulf of Tonkin, Indian Ocean, South China Sea, Strait of Malacca and Timor Sea.

Sources: M.A. Smith, 1926a, E.H. Taylor, 1965, Mao & Chen, 1975, Cogger et al., 1983a, Tweedie, 1983, Gasperetti, 1988, Golay et al., 1993, O'Shea, 1996, A.R. Rasmussen, 1997, Cogger, 2000, M.S. Khan, 2002, 2006, Whitaker & Captain, 2004, Wells, 2007, Kharin & Czeblukov, 2009, V.S. Nguyen et al., 2009, Zaher et al., 2009, Xiang & Li, 2009, I. Das, 2010, 2012, A.R. Rasmussen et al., 2011 and Hoser, 2012e.

Remarks: Original description reprinted in J.G. Fischer, 1856a. Kharin & Czeblokov, 2009 placed this genus with *Distiera* and *Enhydrina* in a new tribe Disteirini. A synonym of *Hydrophis fide* Sanders et al., 2013.

1. *Astrotia stokesii* (Gray *in* Stokes, 1846a). Discov. Australia (App.): 502, pl. 3. (*Hydrus stokesii*)

Synonyms: *Hydrophis schizopholis* P. Schmidt, 1846, *Hydrus annulatus* Gray, 1849, *Hydrophis güntheri* Theobald, 1868b (*nomen praeoccupatum*), *Hydrophis granosa* J. Anderson, 1871a, *Hydrophis guttata* Murray, 1887, *Astrossii stokesii* – W.P. Lowe, 1932 *(nomen incorrectum), Astrokia stokesi* – Ruiter, 1958 *(nomen incorrectum), Astoria stokesi* – Sawai, 1976 *(nomen incorrectum), Astroria stokesi* A. Silva, 1976 *(nomen incorrectum), Astrocia stokessi* – Khole, 1991 *(nomen incorrectum),* and *Hydrophis guentheri* Cogger et al., 1983a *(nomen corrigendum).*

Type: Holotype, BMNH 1946.1.17.12 (formerly BMNH III.9.1.d), an adult female (J.L. Stokes, 1837–1843).

Type locality: "Australian Seas."

Distribution Indo-Australia. Pakistan, India (West Bengal), Sri Lanka, Thailand (Chon Buri, Pattani), Vietnam (Gulf of Tonkin to Gulf of Thailand), China, Taiwan, West Malaysia, Singapore, Philippines, E Indonesia (Papua, Aru Is.), S Papua New Guinea (Western) and Australia (New South Wales, Northern Territory, Queensland, Western Australia).

ATHERIS Cope, 1862 (Viperidae)

Synonyms: *Chloroechis* Bonaparte, 1849 *(nomen rejiciendum), Poecilostolus* A.C.L.G. Günther, 1863a, *Antheris* – Giglioli, 1873 *(nomen incorrectum), Adenorhinos* Marx & Rabb, 1965, *Adenorhinus* Dowling *in* Dowling & Duellman, 1978 *(nomen emendatum), Adenorphinus* – Underwood, 1979 *(nomen incorrectum),* and *Woolfvipera* Hoser, 2012v *(nomen illegitimum).*

Type species: *Echis squamigera* Hallowell, 1855b.

Distribution: West, cen. and East Africa.

Sources: Broadley, 1968a, 1989, 1996b, 1998b, Groombridge, 1980, Ashe & Marx, 1988, Marx *et al.*, 1988, Golay et al., 1993, Herrmann & Joger, 1995, 1997, Spawls & Branch, 1995, Broadley, 1996b, 1998b, J.B. Rasmussen & Howell, 1998, Herrmann et al., 1999, Joger & Courage, 1999, McDiarmid et al., 1999, D. Lawson et al., 2001, Lenk et al., 2001b, Spawls et al., 2002, Mallow et al., 2003, Dobiey & Vogel, 2007, Wüster et al., 2008, Branch & Bayliss, 2009, Phelps, 2010, Menegon *et al*., 2011 and Hoser, 2012d, v.

Remarks: Official Generic Name *fide* Opinion 1634 (ICZN, 1991). McDiarmid et al. (1999: 353–354) discuss type species of *Atheris* and status of *Chloroechis* Bonaparte.

1. *Atheris acuminata* Broadley, 1998b. Herpetol. J. 8(3): 129–130, figs. 11–12.

Type: Holotype, NMZB 13950, a 440 mm male (Mrs. C. Allen, 3 May 1994).

Type locality: "forest near Nsere Lodge, Kyambura Game Reserve, just south of lake George, Ankole District, western Uganda (00º09'S: 30º08') at an altitude of ca. 950 m.

Distribution: Southwestern Uganda (W Western), 950 m. Known only from holotype.

Source: Spawls et al., 2002.

Remarks: A synonym of *A. hispida fide* Lawson et al., 2001. Taxonomic status problematic *fide* Dobiey & Vogel, 2007.

2. *Atheris anisolepis* Mocquard, 1887c. Bull. Soc. Philom. Paris (1886–1887) (7) 11(1): 89.

Synonym: *Atheris laeviceps* Boettger, 1887a.

Type: Lectotype, MNHN 1886.242, a 650 mm specimen, designated by Broadley (1998b: 128).

Type locality: "Alima [River]- Leketi, Congo" [= Alima River at Leketi, Cuvette Region, Congo, 1°36'S, 14°57'E, elevation 370 m] via lectotype selection.

Distribution: Central Africa. Southern Gabon (Haut-Ogooué), S Congo (Cuvette, Kouilou, Lekoumou, Plateau), W Democratic Republic of the Congo (Bandundu, Bas-Congo), NSL–800 m.

Source: J.-F. Trape & Roux-Estève, 1995.

Remarks: A synonym of *A. squamigera fide* Lawson & Ustach, 2000. *Atheris laeviceps* a valid species *fide* J.-F. Trape & Roux-Estève (1995: 50).

3. *Atheris barbouri* Loveridge, 1930. Proc. New England Zool. Club 11: 107–108.

Type: Holotype, MCZ 29055, a 369 mm male (A. Loveridge, 1 Jan. 1930).

Type locality: "Dabaga, Uzungwe Mountains, southeast of Iringa, Tanganyika Territory, altitude 6000 feet" [= Dabaga, Uzungwa Mountains, Iringa Region, cen. Tanzania, 8°06'S, 35°55'E, elevation 1980 m].

Distribution: Southern Tanzania (Udzungwa and Ukinga Mts. of Dodoma, Iringa, Morogoro), 1700–1980 m.

Source: J.B. Rasmussen & Howell, 1998.

4. *Atheris broadleyi* D. Lawson, 1999. Proc. Biol. Soc. Washington 112(4): 794–797, fig. 1–2.

Type: Holotype, UTA 37801 (formerly DPL 3608), a 660 mm female (D.P. Lawson, 1 June 1994).

Type locality: "vicinity Lipondji village, East Prov., Cameroon (2°23'05"N, 15°25'41"E)" [= elevation 540 m]

Distribution: Central Africa. Southern Cameroon (Adamaoua, Est, Centre, Littoral, Nord-Ouest, Ouest, Sud), SW Central African Republic (Sangha), Gabon (Estuaire, Ngounié, Ogooué-Maritime, Woleu-Ntem) and Congo (Cuvette), 330–985 m.

Sources: D. Lawson et al., 2001 and Chirioi & LeBreton, 2007.

5. *Atheris ceratophora* F. Werner, 1896a. Verh. Zool. Bot. Ges. Wien (1895) 45: 194, pl. 5, figs. 1a–e.

Synonym: *Atheris ceratophorus* – Boulenger, 1896a.

Type: Holotype, BMNH 1946.1.18.23 (formerly BMNH 1895.4.8.5), a 420 mm female (A. Müller. 1893–1895).

Type locality: "Usambara (Deutsch-Ostafrika)" [= Usambara Mountains, Tanga Prov., SE Tanzania].

Distribution: Southeastern Tanzania (Usambara, Udzungwe and Uluguru Mts. of Iringa, Morogoro, Tanga), 700–2000 m

Sources: J. B. Rasmussen & Howell, 1982, W. Böhme, 1987, Emmrich, 1997 and Spawls et al., 2002.

6. *Atheris chlorechis* (Pel, 1851). Ned.Tijdschr. Jagtkunde 1: 172–173. (*Vipera chlorechis*)

Synonyms: *Vipera chloroechis* Schlegel, 1855 *(nomen emendatum), Toxicoa chloroëchis* Cope, 1860 *(nomen emendatum), Atheris polylepis* W.C.H. Peters, 1864c, *Atheris chloroëchis* W.C.H. Peters, 1864c *(nomen emendatum), Atheris proximus* Rochebrune, 1885, and *Atheris chloraechis* Cansdale, 1981 *(nomen emendatum).*

Type: Lectotype, RMNH 1648 (H.S. Pel, 1851), designated by M.S. Hoogmoed *in* Hughes & Barry (1969: 1030).

Type locality: "Boutry" [= Butre, near Fort Batenstein, Western Region, Ghana, 24°49'N, 1°55'W, elevation 35 m] via lectotype selection.

Distribution: Forests of West Africa. Southeastern Guinea (Macenta, Nzérékoré), Sierra Leone (Eastern, Southern), Liberia, S Ivory Coast (Abidjan, Daloa, Guiglo, Lagunes, Tabou, Taï), S Ghana (Eastern, Western) and S Togo (Plateaux), NSL–560 m.

A

Sources: Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Hughes, 1983, Broadley, 1989, Ineich, 2003, Chippaux, 2006, W. Böhme et al., 2011 and Segniagbeto et al., 2011.

Remarks: Official Specific name *fide* Opinion 1634 (ICZN, 1991). Bogert (1940: 104) considered a subspecies of *A. squamiger* (Hallowell). See Remarks under *A. chloroechis* in McDiarmid et al. (1999: 355) regarding *A. chlorechis* Schlegel, 1855. Occurs in Guinea-Bissau *fide* McDiarmid et al. (1999: 355). Possibly occurs in Benin *fide* Hughes (2013: 151). Luiselli *in* Phelps (2010: 242) indicated that this species probably does not occur in Nigeria.

7. *Atheris desaixi* Ashe, 1968. J. East Africa Nat. Hist. Soc. Natl. Mus. 27(1): 53–55, figs. 1–2, 2 pls.

Type: Holotype, BMNH 1969.338 (formerly NMK 1626), a 645 mm female (F. De Saix, 3 July 1967).

Type locality: "near Chuka, Lat. 0°20'S. Long 37°.35'E... in rain forest at an altitude of c. 1,600 metres, Kenya."

Distribution: Central Kenya (cen. Eastern), 1600–1700 m.

Source: Spawls et al., 2002.

8. *Atheris hirsuta* Ernst & Rödel, 2002. Herpetol. J. 12: 55–57, figs. 2–3.

Type: Holotype, SMNS 11333, a 480 mm male (R. Ernst, 20 Sept. 2000).

Type locality: "about 6 km West of the "Station de Recherche en Ecologie Tropicale" (SRET 5°50'N 7°19'W), Taï National Park, Ivory Coast" [elevation 200 m].

Distribution: Southwestern Ivory Coast (Guiglo), 200 m. Known only from type locality.

9. *Atheris hispida* Laurent, 1955. Rev. Zool. Bot. Afr. 51(1–2): 138–139.

Synonym: *Atheris hispidus* – Meirte, 1992.

Type: Holotype, MRAC 15841, a female (A. Prigogine, 1950).

Type locality: "Lutunguru, Kivu" [= Democratic Republic of the Congo].

Distribution: East Africa. Northeastern Democratic Republic of the Congo (Orientale, Sud-Kivu), ext. SW Uganda (S Western), SW Kenya (Western) and NW Tanzania (Kagera), 800–2400 m.

Sources: Pitman, 1974, Broadley, 1998b and Spawls et al., 2002.

10. *Atheris katangensis* Witte, 1953. Explor. Parc Natl. Upemba, Rept. (6): 301–303, figs. 107a–c, pl. 3, fig. 4, pl. 21, fig. 2.

Type: Holotype, IRSNB 2207, a 397 mm male (G.-F. de Witte, 19 May 1947).

Type locality: "Mubale-Munte (région du confluent), sous-affluent et affluent de la rive droite de la Lufira (alt. 1.480 m)" [= Parc National de l'Upemba, Katanga Prov., Democratic Republic of the Congo].

Distribution: Southeastern Democratic Republic of the Congo (Katanga), 1250–1480 m.

11. *Atheris mabuensis* Branch & Bayliss, 2009. Zootaxa (2113), 44–49, figs. 2–5.

Type: Holotype, PEM 17901, a 303 mm male (native, 20 Oct. 2008).

Type locality: "main forest camp, Mount Mabu (16°17'12"S, 36°24'14"E, 1000m a.s.l., Zambezia Prov., northern Mozambique."

Distribution: Northern Mozambique (Zambézia), 1000–1550 m.

12. *Atheris matildae* Menegon, Davenport & Howell, 2011. Zootaxa (3120): 44–50, fig. 1 (left).

Type: Holotype, MTSN 9344, a 637 mm male (O. Kibure & O. Mwaipungu, Feb. 2009).

Type locality: "forest fragment in Southern Highlands of Tanzania, at about 1995 m."

Distribution: Southwestern Tanzania (SE Mbeya or SW Iringa), 2000 m. Known only from vicinity of type locality.

Remarks: Exact locality not disclosed for conservation reasons.

13. *Atheris nitschei* Tornier, 1902a. Zool. Jahrb. (1901) 15(2): 589–590, 2 figs.

Synonym: *Atheris woosnami* Boulenger, 1906b.

Types: Syntypes (2), ZMB 17669 (Eggel) and ZMB 20480 (H. Ziemann, 1900–1901).

Type locality: "Mpororosumpf, zwischen den Papyrusstauden, Deutsch-Ost-Afrika" [= Mpororo Swamp, Rwanda, near Uganda border *fide* Loveridge (1942: 313) and Broadley (1998: 121)].

Distribution: Eastern Africa. Eastern Democratic Republic of the Congo (ext. NE Katanga, Nord-Kivu, Sud-Kivu), SW Uganda (Kigezi, Toro), W Rwanda, W Burundi, NW Tanzania, 1600–2750 m.

Sources: Loveridge, 1942, Pitman, 1974, D. Lawson et al., 2001 and Spawls et al., 2002.

14. *Atheris rungweensis* Bogert, 1940. Bull. Amer. Mus. Nat. Hist. 77(1): 104–106, fig. 18. (*Atheris nitschei rungweensis*)

Type: Holotype, AMNH 39186, a 450 mm female (R. Boulton & L. Boulton, 1929).

Type locality: "Rungwe Mountains, Tanganyika Territory" [= Rungwe Mtn., Mbeya Region, SW Tanzania, ca. 9°07'S, 33°38'E].

Distribution: Eastern Africa. Western Tanzania (Kigoma, Mbeya, Rukwa), NE Zambia (Northern), N Malawi (Northern), 800–2000 m.

Sources: Sweeney, 1961, Broadley, 1998b, Spawls et al., 2002 and Broadley et al., 2003.

Remarks: A valid species *fide* Broadley *in* McDiarmid et al. (1999: 357) and Spawls et al. (2002: 492).

15. *Atheris squamigera* (Hallowell, 1855b). Proc. Acad. Nat. Sci. Philadelphia (1854–1855) 7(5): 193. (*Echis squamigera*)

Synonyms: *Atheris squamatus*– Cope, 1862c *(nomen incorrectum), Toxicoa squamata* – Cope, 1862c *(nomen incorrectum), Poecilostolus burtonii* A.C.L.G. Günther, 1863a, *Atheris lucani* Rochebrune, 1885, *Atheris squamiger* Boulenger, 1896a *(nomen emendatum),* and *Atheris squamigera robusta* Laurent. 1956a ,

Type: Holotype, ANSP 6949, a 546 mm specimen (M.P. Bellonni-Duchaillu).

Type locality: "Near the river Gaboon, Guinea" [= Gabon River, Gabon].

Distribution: Central Africa. Togo, S Nigeria (Akwa Ibom, Bayelsa, Cross River, Rivers), S Cameroon (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Central African Republic (Haut-Mbomou, Lobaye, Mbomou, Ombella-Mpoko, Sangha), Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Brazzaville, Cuvette-Ouest, Lekoumou, Pool, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Orientale, Sud-Kivu), N Angola (Cabinda, Lunda Norte), S Uganda (Central, Eastern, Western), SW Kenya (Western) and NW Tanzania (Kagera), NSL–1800 m.

Sources: Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Hughes, 1983, J.A. Butler & Reid, 1986, D.P. Lawson, 1993, 1999, J.-F. Trape & Roux-Estève, 1995, Broadley, 1998b, D.P. Lawson & Ustach, 2000, D.P. Lawson et al., 2000, Spawls et al., 2002, J.C. Murphy & Schlager, 2003, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Segniagbeto et al., 2011.

Remarks: Togo record needs confirmation *fide* Segniagbeto et al. (2011: 351). Possibly occurs in Benin *fide* Hughes (2013: 151).

16. *Atheris subocularis* J.G. Fischer, 1888a. Jahrb. Hamburg. Wiss. Anst. 5: 5, pl. 1, figs. 2a–e, pl. 2, fig. 11.

Type: Holotype, BMNH 1946.1.20.80 (formerly BMNH 1899.12.16.139), a 543 mm specimen (J. Voss).

Type locality: "Kamerun" [= Cameroon].

Distribution: Southwestern Cameroon (Sud-Ouest), 240–300 m.

Sources: D. Lawson et al., 2001, Chirio & LeBreton, 2007 and Dobiey & Vogel, 2007.

Remarks: Possibly occurs in SE Nigeria *fide* B. Lawson (2001: 742).

ATRACTASPIS A. Smith, 1849 *in* 1838–1849 (Atractaspididae)

Synonyms: *Brachycranion* Hallowell, 1854c, *Brachychranion* – Cope, 1860b *(nomen incorrectum), Eurystephus* Cope, 1862c, *Actractaspis* – Higgins, 1873 *(nomen incorrectum), Attractaspis* – Palacky, 1898 *(nomen incorrectum), Melanelaps* Wall, 1906b, *Melanoseps* Boulenger, 1920 *(nomen emendatum), Atrataspis* – Hedges, 1983 *(nomen incorrectum),* and *Hoseraspea* Hoser, 2012L *(nomen illegitimum).*

Type species: *Atractaspis bibronii* A. Smith, 1849 *in* 1838–1849.

Distribution: Africa, Middle East and Arabia.

Sources: F. Werner, 1913, Laurent, 1945, 1950a, McDowell, 1961, 1986, Pasqual, 1962, Bourgeois, 1968, Broadley, 1968a, 1991b, Cadle, 1983, 1988, Hughes, 1983, Wallach, 1991, Meirte, 1992, Golay et al., 1993, Underwood & Kochva, 1993, Ulber, 1994, Heise et al., 1995, Spawls & Branch, 1995, David & Ineich, 1999, Duefel & Cundall, 2003, Kelly et al., 2003, 2009, Dobiey & Vogel, 2007 and Zaher et al., 2009.

1. *Atractaspis andersonii* Boulenger, 1905e. Ann. Mag. Nat. Hist. (7) 16(92): 180.

Synonym: *Melanelaps mcphersoni* Wall, 1906b.

Types: Syntypes (6), BMNH 1946.1.18.14–18 and BMNH 1946.1.18.21, longest syntype 550 mm (G.W. Bury, 1901–1903).

Type locality: "El Kubar, Upper Hushabi, South Arabia" [= El Kubar, Ad Dali' Govern., SW Yemen, 13°45'N, 44°45'E, elevation 1350 m].

Distribution: Arabia. Western Saudi Arabia (Jazan, Makkah), Oman (Dhofar) and Yemen (Abyan, Ad Dali', Aden, Ibb), NSL–1460 m.

Sources: Gasperetti, 1988, Y. Werner & Werner, 1990 and David & Ineich, 1999.

Remarks: Five syntypes listed *fide* Boulenger (1905e: 180) and Gasperetti (1988: 427) designated all five as the "holotype" but BMNH catalogue also lists 1946.1.18.21 as a type.

2. *Atractaspis aterrima* A.C.L.G. Günther, 1863c. Ann. Mag. Nat. Hist. (3) 12(71): 363.

Type: Holotype, BMNH 1946.1.20.87 (formerly BMNH 1863.10.5.13), a 361 mm female (Grant).

Type locality: "West Africa."

A

Distribution: West, cen. and E Africa. Southern Senegal (Kédougou, Tambacounda, Ziguinchor), Gambia (Lower River), Guinea–Bissau (Bolama Is.), Guinea (Boffa, Conakry, Nzérékoré, Télimélé), Sierra Leone (Northern, Southern, Western), Liberia (Grand Cape Mount), Ivory Coast (Aboisso, Abidjan, Adiopodoumé, Bondoukou, Bouna, Daloa, Ferkéssédougou, Lagunes), SW Mali (Sikasso), W Burkina-Faso (Centre, Hauts-Bassins, Sud-Ouest), Ghana (Accra, Ashanti, Central, Volta, Upper West, Western), Togo (Kara, Plateaux), S Benin (Zou), Nigeria (Anambra, Benue, Imo, Kaduna, Lagos, Ondo, Oyo, Plateau, Rivers), Cameroon (Adamaoua, Centre, Ouest, Sud, Sud-Ouest), SW Chad (Chari-Baguirmi), Gabon, Central African Republic (Haute-Sangha, Kemo-Gribingui, Ombella-Mpoko, Ouham), N Democratic Republic of the Congo (N Equateur, N Orientale), N Uganda (W Northern), and SE Tanzania (Iringa, Morogoro), NSL–2000 m.

Sources: Doucet, 1963, Menzies, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Hughes, 1983, 2013, J.B. Rasmussen, 2005a, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Segniagbeto et al., 2011, Auliya et al., 2012 and Chirio, 2013.

3. *Atractaspis battersbyi* Witte, 1959. Rev. Zool. Bot. Afr. 60(3–4): 350–351.

Type: Holotype, MRAC 20567, a 525 mm male (N'Kele, 1957).

Type locality: "proviennent de Bolobo, (Territ. de Mushie), Congo belge" [= W Equateur Prov., NW Democratic Republic of the Congo, 2°10'S, 16°14'E, elevation 315 m].

Distribution: Western Democratic Republic of the Congo (Equateur, Kinshasa), 315 m.

Remarks: A synonym of *irregularis fide* Hughes, 1983.

4. *Atractaspis bibronii* A. Smith, 1849 *in* 1838–1849. Illust. Zool. So. Africa, Rept.: pl. 71, figs. a–d, 2 pp.

Synonyms: *Atractaspis inornatus* A. Smith, 1849 *in* 1838–1849, *Atractaspis rostrata* A.C.L.G. Günther, 1868, *Atractaspis coarti* Boulenger, 1901a, *Atractaspis katangae* Boulenger, 1901a, and *Atractaspis bitronii* – Falk, 1923 *(nomen incorrectum)*.

Types: Syntypes (2), BMNH 1946.1.18.19, a female, syntypes 591 mm and 457 mm (A. Smith, 1831–1834), location of other syntype unknown.

Type locality: "eastern districts of the Cape Colony, South Africa" [= KwaZulu Natal Prov., E South Africa *fide* Broadley, 1983: 221].

Distribution: Southeastern Africa. Southern Somalia (Shabeellaha Hoose), SE Democratic Republic of the Congo (Katanga), SE Kenya (Coast), Tanzania (Iringa, Kigoma, Lindi, Mbeya, Morogoro, Mtwara, Piwani, Rukwa, Ruvuma, Tanga, Zanzibar Is.), SE Rwanda, E Burundi, Malawi (Southern), Mozambique (= Gaza, Inhambane, Manica, Maputo, Sofala, Bazaruto Is.), NE Angola (Lunda Norte), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Botswana (Central, Gaborone, Ghanzi, Kgalagadi, Kgatleng, Kweneng, North West, South East, Southern), Namibia (Erongo, Karas, Khomas, Okavango, Omaheke, Oshikoto, Otjozondjupa), Swaziland and E South Africa (E Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, North West), NSL–1800 m.

5. *Atractaspis boulengeri* Mocquard, 1897a. Bull. Mus. Hist. Nat., Paris 3(1): 54–55.

Synonyms: *Atractaspis matschiensis* F. Werner, 1897b, *Atractaspis schultzei* Sternfeld, 1917, *Atractaspis boulengeri mixta* Laurent, 1945, *Atractaspis boulengeri schmidti* Laurent, 1945, and *Atractaspis boulengeri vanderborghti* Laurent, 1956a.

Type: Holotype, MNHN 1896.562, a 202 mm specimen (E. Haug, 1895–1897).

Type locality: "les environs de Lambaréné, sur le bas Ogooué, Gabon, [= Lambaréné, Moyen-Ogooué Prov., Gabon, 20°42'S, 10°14'E, elevation 25 m].

Distribution: Central Africa. Southwestern Cameroon (Centre, Littoral, Sud, Sud-Ouest), S Congo (Kouilou, Sangha), Gabon (Ogooué-Ivindo, Moyen-Ogooué, Ogooué-Maritime, Woleu-Ntem), SW Central African Republic (Lobaye) and N Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Katanga, Nord-Kivu, Orientale), 10–770 m.

Sources: J.-F. Trape & Roux-Estève, 1995, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

Remarks: Original description reprinted in Mocquard (1897d: 16–17). Collector of type spelled Huaug *fide* MNHN catalogue.

6. *Atractaspis congica* W.C.H. Peters, 1877d. Mber. Königl. Akad. Wiss. Berlin 1877(10): 616, figs. 2, 2a–2c.

Synonym: *Atractaspis congica orientalis* Laurent, 1945.

Type: Holotype, ZMB 8644.

Type locality: "Chinchoxo (Westafrika)" [= Chinchoxo, Cabinda Prov., NW Angola, 5°33'S, 12°11'E, elevation 20 m].

Distribution: Central Africa. Southwestern Cameroon (Littoral, Sud, Sud-Ouest), S Congo (Brazzaville, Kouilou), S Democratic Republic of the Congo (Bandundu, Bas-Congo, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa), Angola (Lunda Norte, Moxico) and N Zambia (Northern, North-Western), 10–1150 m.

Sources: Laurent, 1964a, Broadley, 1983, Branch, 1988, J.-F. Trape & Roux-Estève, 1995 and M. Griffin, 2003.

Remarks: Probably occurs in N Botswana *fide* Auerbach (1987: 180).

7. *Atractaspis corpulenta* (Hallowell, 1854c). Proc. Acad. Nat. Sci. Philadelphia (1854–55) 7(3): 99. (*Brachycranion corpulentum*)

Synonyms: *Atractaspis leucura* Mocquard, 1886, and *Atractaspis corpulenta kivuensis* Laurent, 1958.

Type: Holotype, ANSP 6902, a 508 mm specimen (H.A. Ford, 1851–1854).

Type locality: "Liberia, W. coast of Africa," (in error *fide* Hughes & Barry, 1969: 1031). Corrected to Gabon *fide* Hallowell (1857b: 70).

Distribution: West and cen. Africa. Sierra Leone, Liberia (Montserrado, Margibi), S Ivory Coast (Guiglo, Tabou), S Ghana, S Nigeria (Cross River, Rivers), SW Cameroon (Centre, Sud, Sud-Ouest), Equatorial Guinea, Gabon (Ogooué-Maritime, Woleu-Ntem), SW Central African Republic (Lobaye), Congo (Plateau, Sangha), N Democratic Republic of the Congo (Equateur, Orientale), 10–965 m.

Sources: E.H. Taylor & Weyer, 1958, Leston & Hughes, 1968, Hughes & Barry, 1969, Courtois, 1979, J.A. Butler & Reid, 1986, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Chippaux, 2006 and Chirio & Ineich, 2006.

Remarks: Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353).

8. *Atractaspis dahomeyensis* Bocage, 1887b. J. Sci. Math. Phys. Nat., Lisboa 11(44): 196–197.

Synonyms: *Atractaspis caudalis* Sternfeld, 1908a, and *Attractaspis dohomeyensis* – Khole, 1991 *(nomen incorrectum)*.

Type: Holotype, MBL T-108 (formerly MBL 2147), a 490 mm specimen (F. Newton, 1884–1887), destroyed by fire 18 March 1978.

Type locality: "pris à Zomaï, Dahomey" [=Zomai, Benin].

Distribution: West Africa. Southeastern Senegal (Tambacounda), Guinea, S Mali (Sikasso), Ivory Coast (Abidjan, Bouna, Katiola, Lagunes), W Burkina-Faso (Centre, Hauts-Bassins, Sud-Ouest, Volta-Noire), S Ghana (Accra), N Togo (Plateaux, Savanes), N Benin (Alibori, Atakora, Atlantique, Borgou, Zou), S Niger (Maradi), Nigeria, SW Cameroon (Sud-Ouest) and N Central African Republic (Haute-Kotto, Vakaga), 20–200 m.

Sources: Chabanaud, 1916a, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Stucki-Stirn, 1979, Hughes, 1983, 2013, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.

9. *Atractaspis duerdeni* Gough, 1907a. Rec. Albany Mus. 2: 178–179, 1 fig.

Type: Holotype, PEM 7938 (formerly AMG) (S. Blackbeard, 3 May 1904).

Type locality: "Serowe, in the north-eastern Kalahari" [= Serowe, Central District, Botswana, 22°23'S, 26°43'E, elevation 1135 m].

Distribution: Southern Africa. Northern Namibia (Otjozondjupa), SE Botswana (Central, Kweneng, South East, E Southern) and South Africa (Gauteng, Limpopo), 1100–1470 m.

Sources: Auerbach, 1987, Branch, 1988, Broadley, 1991b and Broadley & Blaylock, 2013.

10. *Atractaspis engaddensis* G. Haas, 1950. Copeia 1950(1): 52, fig. 1.

Synonyms: *Atractaspis engaddenis* – Efrati, 1969 *(nomen incorrectum), Attractaspis engaddensis* – Khole, 1991 *(nomen incorrectum),* and *Atractaspis engeddensis* – Kirchberg & Davidson, 1991 *(nomen incorrectum).*

Type: Holotype, HUJ, a 650 mm specimen (H. Mendelssohn, 1940s).

Type locality: "En-Geddi on the western side of the Dead Sea Palestine" [= Ein Gedi, Southern Distr., S Israel, 31°27'N, 35°23'E, elevation 305 m BSL].

Distribution: Middle East, Egypt and Arabia. Southern Israel (SE Northern, Southern, West Bank), W Jordan (Amman, Aqaba, Balqa, Karak, Madaba), NE Egypt (South Sinai) and W Saudi Arabia (Asir, Ha'il, Madinah, Makkah, Tabuk), 300 m BSL–2135 m.

Source: Gasperetti, 1988, Bouskila & Amitai, 2001, Disi et al., 2001, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

11. *Atractaspis engdahli* Lönnberg & Andersson, 1913b. Arkiv Zool. 8(20): 5–6, fig. 1.

Types: Syntypes (2), NHR 2421, a 415 mm specimen (T. Engdahl), location of other syntype unknown.

Type locality: "Kismayu, near Juba river in the northeastern corner of British East Africa" [= Kismayu, Jubbada Hoose Region, S Somalia, elevation NSL].

Distribution: Southern Somalia (Jubbada Dhexe, Jubbada Hose, Shabeellaha Hoose) and NE Kenya (N North-Eastern), NSL–1150 m.

Sources: Lanza, 1983a, 1990b and Spawls et al., 2002.

A

12. *Atractaspis fallax* W.C.H. Peters, 1867a. Mber. Königl. Akad. Wiss. Berlin 1866(12): 890–891.

Type: Holotype, ZMB 5564 (C. von der Decken, 1864–1865).

Type locality: "Kiriame, Ostafrika" [= Giriama, Coast, Kenya, 3°49'S, 39°35'E, elevation 185 m].

Distribution: Eastern Africa. South Sudan (Eastern Equatoria), SE Ethiopia (Bale, Hararge, Shoa, Sidamo, Wollo), Somalia (Bari, Bay, Gedo, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Mudug, Shabeellaha Dhexe, Shabeellaha Hoose, Sool, Togdheer), SE Kenya (Coast, S Eastern, Rift Valley, Lamu Is.) and ext. NE Tanzania, 185–1200 m.

Sources: Hughes, 1983, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

13. *Atractaspis irregularis* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 264–266, pl. 3, figs. 1–3. (*Elaps irregularis*)

Synonyms: *Atractaspis bipostocularis* Boulenger, 1905a, *Atractaspis conradsi* Sternfeld, 1908a, *Atractaspis schoutedeni* Witte, 1930b, *Atractaspis babaulti* Angel, 1934a, *Atractaspis irregularis loveridgei* Laurent, 1945, *Atractaspis irregularis parkeri* Laurent, 1945, *Atractaspis irregularis uelensis* Laurent, 1945, *Atractaspis irregularis angeli* Laurent, 1950, and *Atractaspis coalescens* Perret, 1960.

Type: Holotype, ZMUC 6885, a 349 mm specimen (J.R. Chenon, 1826–1836).

Type locality: "Guinea" [= coast of Ghana *fide* Hughes & Barry, 1969: 1027]. Restricted to vicinity of Accra, Ghana *fide* J.B. Rasmussen & Hughes (1997: 14, 16).

Distribution: West, cen. and E Africa. Guinea (Macenta, Nzérékoré, Télimélé), Sierra Leone, Liberia, Ivory Coast, S Ghana, S Togo (Plateaux), S Nigeria (Ondo, Rivers), S Cameroon (Centre, Est, Nord-Ouest, Ouest, Sud, Sud–Ouest), Gabon, Congo (Bouenza, Brazzaville, Kouilou, Plateau, Pool), Central African Republic (Bamingui-Bangoran, Haute-Sangha, Lobaye, Nana-Mambere, Ombella-Mpoko, Ouaka, Sangha), Democratic Republic of the Congo (Equateur, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu), N Angola, Uganda (Central, Eastern, Northern, Western), Rwanda, Burundi, cen. Kenya (Central, Nyanza, S Rift Valley, Western), NW Tanzania (Kigoma), S South Sudan, Eritrea (Northern Red Sea) and Ethiopia (Hararge, Kefa, Sidamo, Wollega), NSL–2000 m.

Sources: Bourgeois, 1963b, Aylmer, 1922, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Hughes, 1983, Largen & Rasmussen, 1993, 1999, J.-F. Trape & Roux-Estève, 1995, J.B. Remarks: *Atractaspis coalescens* Perret considered a synonym based on Hughes (pers. comm.) and Wallach (unpubl. data).

14. *Atractaspis leleupi* Laurent, 1950. Rev. Bot. Afr. 43(4): 351–352. (*Atractaspis congica leleupi*)

Type: Holotype, RGMC 18700, a 390 mm female (N. Leleup, Jan. 1950).

Type locality: "Station d'études des l'IRSAC sur le massif des Kundelungu (1.750 m.), Champ de termitières" [= Katanga Prov., SE Democratic Republic of the Congo]. Emended to Station d'études de la Seram, plateau des Kundelungu, Haut Katanga *fide* Laurent (1956a: 310).

Distribution: Southeastern Democratic Republic of the Congo (Katanga), 1750 m.

Sources: Witte, 1953 and Broadley & Cotterill, 2004.

15. *Atractaspis leucomelas* Boulenger, 1895a. Ann. Mus. Civ. Stor. Nat. Genova (2) 15: 16, pl. 4, fig. 2.

Type: Holotype, MSNG 28847, a 575 mm female (V. Bottego, 16-20 Oct. 1892).

Type locality: "Ogaden, Somali" [= Ogaden, Hararge Prov., E Ethiopia, 6°58'N, 44°02'E, elevation 780 m].

Distribution: Northeast Africa. Eastern Ethiopia (Hararge), Djibouti and ext. NW Somalia (Awdal), 285–780 m.

Sources: Lanza, 1983a, 1990b, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

16. *Atractaspis magrettii* Scortecci, 1928. Atti Soc. Ital. So. Nat. Mus. Civ. Stor. Nat. Milano 67(3–4): 308–309, fig. 6.

Type: Holotype, MSNM 1796, a male (P. Magretti, Jan.–Mar. 1900).

Type locality: "Mandafená, Eritrea."

Distribution: Eastern Sudan (Ash Shaqiyah) and Eritrea (Gash-BarkaNorthern Red Sea, Southern Red Sea), South Sudan (Eastern Equatoria) and W Ethiopia (Illubabor), 400–2400 m.

Sources: Largen & Rasmussen, 1993, Largen, 1997 and Largen & Spawls, 2010.

Remarks: Possibly occurs in N Somalia *fide* Largen & Rasmussen (1993: 333).

17. *Atractaspis microlepidota* A.C.L.G. Günther, 1866. Ann. Mag. Nat. Hist. (3) 18(103): 29, pl. 7, fig. c.

Type: Holotype, BMNH 1946.1.18.6 (formerly BMNH 1866.4.24.2), a 508 female (A.C.L.G. Günther, 1857–1866).

Type locality: "probably...West Africa."

Distribution: Extreme W Africa. Extreme S Mauritania (Guidimaka, Trarza), Senegal (Dakar, Fatick, Kaolack, Thiès), and Gambia, NSL–70 m.

Sources: Hughes, 1983, Broadley, 1994, J.-F. Trape & Mané, 2000, 2006b, Spawls et al., 2002, Chippaux, 2006 and J.-F. Trape et al., 2006.

18. *Atractaspis micropholis* A.C.L.G. Günther, 1872b. Ann. Mag. Nat. Hist. (4) 9(49): 36–37, pl. 3, fig. e.

Type: Holotype, BMNH 1946.1.18.7 (formerly BMNH 1865.7.28.5), a 330 mm female (S.G.J. Mivart, 1862–1865).
Type locality: "Africa." Restricted to N Nigeria *fide* J.-F. Trape et al. (2006: 8).
Distribution: West Africa. Senegal (Dakar, Fatick, Kédougou, Louga, Tambacounda, Thiès), NW Burkina Faso (Volta-Noire), S Mali (Koulikoro, Sikasso), S Niger (Maradi, Zinder) and N Nigeria (Bauchi, Borno, Sokoto), NSL–830 m.
Sources: Papenfuss, 1969, Pitman, 1974, Hughes, 1983, Largen & Rasmussen, 1993, Chippaux, 2006, J.-F. Trape & Mané, 2006b and J.-F. Trape et al., 2006.

19. *Atractaspis phillipsi* T. Barbour, 1913b. Proc. Biol. Soc. Washington 26: 148.

Type: Holotype, MCZ 8782 a 312 mm juvenile (J.C. Phillips & G.M. Allen, Feb. 1913).
Type locality: "Singa, Prov. of Sennaar, eastern Anglo-Egyptian, Sudan" [= Singa, Sennar Prov., Sudan, 13°11'N, 33°57'E, elevation 430 m].
Distribution: Southeastern Sudan (Blue Nile, Sennar), 430 m.
Source: Broadley, 1994.

20. *Atractaspis reticulata* Sjöstedt, 1896. Zool Anz. 19: 516–517.

Synonyms: *Atractaspis heterochilus* Boulenger, 1901a, and *Atractaspis reticulata brieni* Laurent, 1956.
Type: Holotype, ZMUU 1796, an 800 mm specimen (native, Feb. 1892).
Type locality: "Kamerun, Ekundu" [= Ekundu, Cameroon] (in error). [= Okundi, Cross River State, Nigeria *fide* Ineich & LeBreton (2007: 636), 6°24'N, 8°48'E, elevation 185 m].
Distribution: Central Africa. Southeastern Nigeria (Cross River), S Cameroon (Centre, Est, Littoral, Nord, Nord-Ouest, Ouest, Sud, Sud-Ouest), SW Central African Republic (Lobaye), Gabon (Ogooué-Ivindo, Ogooué-Maritime), N Congo (Sangha) and Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), NSL–1300 m.
Sources: Roux-Estève, 1965, D. Lawson, 1993, Chippaux, 2006 and Chirio & LeBreton, 2007.
Remarks: Supplemental original description in Sjöstedt (1897: 28–29, pl. 1, figs. 1a-d, pl. 3). Occurs in Ghana *fide* Hughes (1983: 342).

21. *Atractaspis scorteccii* H.W. Parker, 1949. Zool. Verh. (6): 109–111.

Type: Holotype, BMNH 1949.2.3.9, an 840 mm male.
Type locality: "Haud, 46°20' E. X 8°15' N., 2100 ft., Somaliland" [= Haud, Togdheer Region, N Somalia, elevation 675 m].
Distribution: Eastern Ethiopia (Hararge) and N Somalia (Bari, Togdheer, Woqooyi Galbeed), 600–1100 m.
Sources: Cherchi, 1958, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

22. *Atractaspis watsonii* Boulenger, 1908g. Ann. Mag. Nat. Hist. (8) 2(7): 94.

Synonym: *Atractaspis nigra* Pelligrin, 1909.
Type: Holotype, BMNH 1946.1.18.5, a 570 mm female (C.F. Watson, 1906–1908).
Type locality: "Sokoto, Upper Niger, Africa" [= Sokoto, Sokoto State, NW Nigeria, 13°03'N, 5°15'E, elevation 295 m].
Distribution: West Africa. Extreme S Mauritania (Guidimaka, Hodh El Gharbi), N Senegal (Saint-Louis), S Mali (Kayes, Koulikoro, Mopti, Ségou), Burkina Faso (Centre, Centre-Nord, Centre-Sud, Est, Sahel, Volta-Noire), S Niger (S Maradi, S Tahoua), N Nigeria (Gongola, Sokoto), SW Chad (Mayo-Kebbi), N Cameroon (Adamaoua, Extreme-Nord, Nord), N Central Africa Republic (Vakaga) and SW Sudan (Janub Darfur), 100–670 m.
Sources: Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, J.-F. Trape et al., 2006 and Chiro & LeBreton, 2007.
Remarks: Previously a synonym of *A. microlepidota*. Possibly occurs in Benin *fide* Hughes (2013: 153).

ATRACTUS Wagler, 1828b (Dipsadidae)

Synonyms: *Brachyura* Kuhl & Hasselt, 1822b (*nomen rejiciendum*), *Urobrachys* Fitzinger, 1843, *Isoscelis* A.C.L.G. Günther, 1858, *Isocelis* – Hoffmann, 1890 *(nomen incorrectum), Attractus* – Palacky, 1898 *(nomen incorrectum), Atractis* – Tornier, 1904 *(nomen incorrectum), Atractopsis* Despax, 1910, and *Atractopisis* – Dunn, 1928b *(nomen incorrectum).*
Type species: *Atractus trilineatus* Wagler, 1828b.
Distribution: Lower Central America and N South America.
Sources: Savage, 1960, Roze, 1961, J.A. Peters & Orejas-Miranda, 1970, Dixon & Soini, 1977, 1986, Hoogmoed, 1980, Cadle, 1984b, 1985, Pérez-Santos & Moreno, 1988, 1991, Martins & Oliveira, 1993, G. Remarks: Official Generic Name *fide* Opinion 2210 (ICZN, 2008b).

A

1. *Atractus acheronius* Passos, Rivas-Fuenmayor & Barrio-Amorgós, 2009b. Amphibia-Reptilia 30(2): 234–236, figs. 1–2.

Type: Holotype, MHNLS 398, a 581623 mm female (C. Alemán, 1950).
Type locality: “upper Río Negro Valley (2200–2400), Sierra de Perijá, municipality of Machiques de Perijá (09°52’N, 72°48’W), state of Zulia, Venezuela.”
Distribution: Venezuela (Zulia), 2400 m. Known only from type locality.
Sources: Alemán, 1953 and Passos et al., 2009b.
Remarks: Type erroneously listed as MHNSL 1760 *fide* Alemán (1953: 217). Type locality elevation listed as 2400 m *fide* Alemán (1953: 217).

2. *Atractus albuquerquei* Cunha & Nascimento, 1983b. Bol. Mus. Para. Emílio Goeldi (Zool.) (2) (123): 6–8, figs. 1–3, pl. 1, fig. 1.

Type: Holotype, MPEG 12946, a 418–420 mm male.
Type locality: “Vila Nova, PA-256, próximo ao rio Timboteua, rodovia Tomé-Acu-Parago minas” [= Vila Nova, on the road PA-256, in forested area south of the river Guamá, near the river Timboteua, between Tomé-Açu and Paragominas, Pará State, Brazil, 2°41’S, 47°55’W, elevation 50 m *fide* Zaher et al., 2005: 20].
Distribution: Central Brazil (Acre, Goiás, Mato Grosso, Mato Grosso do Sul, E Pará, Rondônia), 50–735 m.
Source: Zaher et al., 2005.
Remarks: Photograph of type in Zaher (2005: fig. 1).

3. *Atractus alphonsehogei* Cunha & Nascimento, 1983b. Bol. Mus. Para. Emílio Goeldi (Zool.) (2) (123): 25–27, figs. 2–3, pl. 2, fig. 1.

Type: Holotype, MPEG 14928, a 239 mm male.
Type locality: “Bela Vista, 75 km da PA-242, rodovia Braganca-Viseu” [= Pará State, Brazil].
Distribution: Colombia (Amazonas) and Brazil (Maranhas, Pará).
Sources: Cunha & Nascimento, 1984, Martins & Oliveira, 1993 and Prudente & Passos, 2008.

4. *Atractus altagratiae* Passos & Fernandes, 2008. Zootaxa (1849): 60–63, figs. 1–6.

Type: Holotype, MNRJ 7888, a 275 mm male (H. Sick, 1957).
Type locality: “upper Cururú River (07°12’S, 58°04’W, ca. 44 m), tributary of Teles Pires River, Municipality of Itaituba, State of Pará, Brazil.”
Distribution: Northeastern Brazil (Pará), 45 m.

5. *Atractus andinus* Prado, 1944. Ciencia 5(4–5): 111, fig. 1.

Type: Holotype, CSJ 516 (formerly CSJ 231), a 287 mm female (R.H. Daniel, 1943).
Type locality: “Andes, Colombia.”
Distribution: Central Colombia (Antioquia), 1535 m. Known only from type locality.
Source: Passos et al., 2009c.
Remarks: Original description reprinted in Prado (1946b: 109, fig. 1)

6. *Atractus apophis* Passos & Lynch, 2010. Herpetol. Monogr. (24): 150–152, figs. 1a–c, 2a–b.

Type: Holotype, ICNMNH 10822, a 433 mm male (A. Bello, 30 Oct. 1993).
Type locality: “Parque Arqueológico San Augustín, municipality of San Augustín (01º 53’ N, 76º 16’ W, ca. 1640 m), department of Huila, Colombia.”
Distribution: Colombia (Huila), 1500–1640 m. Known only from type locality.

7. *Atractus arangoi* Prado, 1940b. Mem. Inst. Butantan (1939) 13: 15–16, fig. 1.

Type: Holotype, ILS 136, a 395 mm female (R.P. Fray Miguel, 1938–1939), destroyed by fire 9–10 April 1948.
Type locality: “Colombia.”
Distribution: Southern Colombia (Putumayo), 255 m.
Source: Nicéforo-Maria, 1942.

8. *Atractus atratus* Passos & Lynch, 2010. Herpetol. Monogr. (24): 154–156, figs. 5, 6a–b.

Type: Holotype, IAvH 151, a 552 mm female.
Type locality: “Parque Nacional Natural Cueva de Los Guacharos (ca. 1800 m), municipality of Acevedo, department of Huila, Colombia.”
Distribution: Colombia (Huila), 1700–2000 m. Known only from vicinity of type locality.

9. *Atractus attenuatus* C.W. Myers & Schargel, 2006. Amer. Mus. Novit. (3532): 2–6, figs. 1–3.

Type: Holotype, AMNH 19998, a 420 mm male (H. Nicéforo-María, 16 May 1921).
Type locality: “Sabanalarga, on Cauca River, [6°51’N, 75°49’W, Department of Antioquia], Colombia. The type locality, Sabanalarga (Nicéforo María, 1942: 87, map), lies on the east bank of the Río Cauca at an elevation of about 1000 m (Paynter, 1997: 372), in the northern end of the Cordillera Central.”
Distribution: Colombia (Antioquia), 1000 m. Known only from type locality.
Source: Passos et al., 2009c.

10. *Atractus avernus* Passos, Chiesse, Torres-Carvajal & Savage, 2009d. Herpetologica 65(4): 397–398, fig. 8.

Type: Holotype, MLS 2725, a 177 mm female (H. Nicéforo-María).
Type locality: "Paraíso (01º 14' N, 75º 37' W, ca. 480 m), municipality of Florencia, Department of Caquetá, Colombia."
Distribution: Colombia (Caquetá), 480 m.

11. *Atractus badius* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 540. (*Brachyorrhos badius*)

Synonyms: *Brachyorrhos badius* H. Boie *in* Schlegel, 1826a *(nomen nudum), Rabdosoma badium rubinianum* Jan, 1862b, *Rabdosoma badium subbicinctum* Jan, 1862b, *Rabdosoma dubium* Jan, 1862b, and *Atractus micheli* Mocquard, 1904a.
Type: Lectotype, RMNH 120C, a 338 mm female, designated by Hoogmoed (1980: 11).
Type locality: "Java" [W Indonesia] (in error). Corrected to Guyane [= Guianas] *fide* RMNH catalogue and specimen label. Restricted to Cayenne, French Guiana *fide* Savage (1960: 80) and Paramaribo, Suriname *fide* Hoogmoed (1980: 11).
Distribution: Amazonian South America. Colombia (Antioquia, Boyacá, Caldas, Cundinamarca, La Guejira, Magdelena, Norte de Santander, Valle del Cauca), Venezuela (Carabobo, Distrito Federal), Guyana, Suriname (Marowijne, Suriname), French Guiana, Ecuador, Peru (Cusco, Loreto, Madre de Dios) and NE Brazil (Pará), NSL–3005 m.
Sources: Roze, 1966a, Lancini, 1986, Hoogmoed, 1979, 1980, Pérez-Santos & Moreno, 1988, 1991, Cei, 1994, Starace, 1998, Doan & Arriaga, 2000, Kok, 2006 and Passos et al., 2009c.
Remarks: Original description based on H. Boie's MS (1823–1825).

12. *Atractus balzani* Boulenger, 1898k. Ann. Mus. Civ. Stor. Nat. Genova (2) 19(39): 129–130.

Type: Holotype, MSNG CE 28873, a 400 mm specimen (L. Balzan, 1892).
Type locality: "Missiones Mosetenes, Bolivia" [= Campanario de Covendo, La Paz Department, Bolivia, 15°47'S, 66°59'W. elevation 515 m].
Distribution: Bolivia (La Paz), 515 m. Known only from type locality.

13. *Atractus biseriatus* Prado, 1941d. Mem. Inst. Butantan (1940) 14: 26, pl., lower fig.

Type: Holotype, ILS 187, a 237 mm male (N. Díaz-Berrío), destroyed by fire 9–10 April 1948.
Type locality: "Manizales, Colombia" [= 5°04'N, 75°31'W, elevation 2150 m] (in error). Corrected to Villamaría, Colombia *fide* Nicéforo-Maria (1942: 92) and E.R. Dunn *in* Savage (1960: 80) [= Villamaría, Caldas Department, Colombia, 5°03'N, 75°31'W, elevation 1950 m].
Distribution: Central Colombia (Caldas), 1950–2150 m. Known only from type locality.
Sources: Nicéforo-Maria, 1942, Passos & Arredondo, 2009 and Passos et al., 2009c.

14. *Atractus bocki* F. Werner, 1909b. Mitt. Naturhist. Mus. Hamburg 26: 228, fig. 5.

Synonym: *Atractus canedii* Scrocchi & Cei, 1991.
Type: Holotype, formerly ZMH, a 365 mm specimen (C.A. Bock, 1904–1909), destroyed in July 1943 during World War II.
Type locality: "Cochabamba, Bolivia" [= Cochabamba, Cochabamba Department, Bolivia, 17°23'S, 66°10'W, elevation 2575 m].
Distribution: Bolivia (Cochabamba) and NW Argentina (Jujuy, Salta, Tumbaya), 350–2575 m
Sources: Scrocchi & Cei, 1991, Cei, 1994, R. Fernandes, 1995b and Passos et al., 2005, 2007, 2009a.
Remarks: Passos et al., 2009a considered *A. canedii* a synonym.

15. *Atractus bocourti* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 306.

Type: Holotype, BMNH 1946.1.2.24, a 390 mm female (H.J. Veitch, 1890–1894).
Type locality: "Acomayo, N. Peru" [= Acomayo, Huanuco Department, Peru, 9°46'S, 76°05'W, elevation 2200 m].
Distribution: Northwestern South America. Colombia, Ecuador and N Peru (Huanuco, Loreto), 90–2200 m.
Sources: Nicéforo-Maria, 1942 and K.P. Schmidt & Walker, 1943c.

16. *Atractus boettgeri* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 645.

Type: Holotype, BMNH 1946.1.6.29, a 350 mm female (F.H. Rolle, 1864–1896).
Type locality: "Yungas, Bolivia" [= Sierra de las Yungas, Cochabamba Department, Bolivia].
Distribution: Central Bolivia (Beni, Cochabamba), 195 m.
Sources: C.J. McCoy, 1971, Zaher et al., 2005 and Salazar-Bravo et al., 2010.
Remarks: Type is illustrated in Zaher et al. (2005: 28).

17. *Atractus boulengerii* Peracca, 1896b. Boll. Mus. Zool. Anat. Comp. Univ. Torino 11(252): 1, 1 fig.

Type: Holotype, MSNTO 1832 (formerly MRSN 1727), a male.
Type locality: "America meridionale" [= South America].
Distribution: Columbia (Valle de Cauca), NSL–100 m.
Source: Passos et al., 2009e.

18. *Atractus caete* Passos, Fernandes, Bérnils & Moura-Leite, 2010. Zootaxa (2364): 7–9, figs. 1, 2a, 3a–b.

Type: Holotype, MNRJ 16936, a 408 mm female (A.R. Melgarejo, 1986).
Type locality: "municipality of Quebrângulo (09°19'S, 36º28'W, ca. 360 m), state of Alagoas, Brazil."
Distribution: Northeastern Brazil (Alagoas), 300–500 m.

19. *Atractus carrioni* H.W. Parker, 1930a. Ann. Mag. Nat. Hist. (10) 5(26): 208–209, 2 figs.

Type: Holotype, BMNH 1946.1.1.70 (formerly BMNH 1929.10.30.1), a 480 mm female (C. Carrión-Mora, 1929).
Type locality: "Loja, Ecuador (2200 metres)" [= Loja, E Loja Prov., S Ecuador, 3°59'S, 79°12'W, 2200 m].
Distribution: Southern Ecuador (Loja), 1435–2500 m. Known only from vicinity of type locality.
Source: H.W. Parker, 1932a.

20. *Atractus caxiuana* Prudente & Santos-Costa, 2006. Zootaxa (1285): 22–27, figs. 1–3.

Type: Holotype, MPEG 19964, a 249 mm male.
Type locality: "'Estação Científica Ferreira Penna', Flona de Caxiuanã, Pará State, Brazil (1°42'33"S 51°31'45"W), 0 m."
Distribution: Northeastern Brazil (Pará), NSL.
Sources: Passos & Fernandes, 2008 and Prudente & Passos, 2008.
Remarks: Holotype erroneously listed as MPEG 19657 *fide* Prudente & Passos (2010: 402).

21. *Atractus charitoae* Silva-Haad, 2004. Rev. Acad. Colomb. Cienc. 28(108): 417–418, figs. 7–9.

Type: Holotype, ICNMNH 10095 (formerly JSH 1162), a 255 mm male (native, 1989).
Type locality: "Taraira, Colombia, departamento del Vaupés. Región limítrofe entre Colombia y Brasil, en las márgenes del río del mismo nombre (00° 29' 38" N 69° 40' 11" E.)" [elevation 120 m].
Distribution: Colombia (Vaupés), 120 m. Known only from type locality.

22. *Atractus chthonius* Passos & Lynch, 2010. Herpetol. Monogr. (24): 157–159, figs. 7a–c, 8a–b.

Type: Holotype, ICN 5662, a 328 mm male.
Type locality: "Finca Meremburg, Santa Leticia (02º 14' N, 76º 10' W, ca. 2400 m), between municipalities of Popayán in the department of Cauca and La Plata in the department of Huila, Colombia."
Distribution: Colombia (Cauca, Huila), 1500–2400 m.

23. *Atractus clarki* Dunn & Bailey, 1939. Bull. Mus. Comp. Zool. 86(1): 8–9.

Type: Holotype, MCZ 28800, a 313 mm female (native, 1938).
Type locality: "Mine at Santa Cruz de Cana, Darien, Panamá" [= ca. 7°46' N, 77°41' W, 500 m *fide* C.W. Myers, 2003: 10].
Distribution: Eastern Panama (Darién) and NW Colombia (Antioquia, Chaco, Valle de Cauca), 100–1500 m.
Sources: C.W. Myers, 2003, Passos & Arredondo, 2009, and Passos et al., 2009e.

24. *Atractus collaris* Peracca, 1897e. Boll. Mus. Zool. Anat. Comp. Univ. Torino 12(284): 4–5, 1 fig.

Type: Holotype, not designated, location unknown.
Type locality: "a cononacco piccolo villaggio sul Rio Cononaco chef a parte dell'alto bacino idrografico delle Amazzoni. Cononacco si trova a nord ovest di Yquitos e fa parte del Perù, Perù orietale" [= village on Río Cononaco, NW of Iquitos (elevation 200 m), Loreto Department, E Peru].
Distribution: Southeastern Colombia (Amazonas), E Ecuador, and NE Peru (Loreto), 100–200 m.
Sources: Savage, 1955, Dixon & Soini, 1986, Prudente & Passos, 2008, and Vigle, 2008.
Remarks: Type not in MSNTO *fide* Andreone & Gavetti (2007: 87).

25. *Atractus crassicaudatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 103–104. (*Rabdosoma crassicaudatum*)

Synonym: *Atractus fuhrmanni* Peracca, 1914.
Types: Syntypes (4), MNHN 601, MNHN 7205, MNHN 1999.7938, and USNM 11138 (formerly USNM 387), longest syntype 420 mm (J.P. Goudot & Riéfer, 1822–1825 or 1837–1842).
Type locality: "la Nouvelle-Grenade...dans les environs de Bogota" [= Bogotá, Cundinamarca Department, Colombia, 4°36'N, 74°05'W, elevation 2630 m].
Distribution: Panama, Colombia (Antioquia, Boyacá, Caldas, Cundinamarca, Santander, Valle del Cauca) and Venezuela, 1000–3500 m.
Source: Auth, 1994.
Remarks: Cochran (1961: 208) listed "New Granada (Panama-Colombia), JPP" as data for the USNM syntype. Nicéforo-María (1942: 93) and Pérez-Santos & Moreno (1988: 72) listed Venezuela as part of Distribution.

26. *Atractus darienensis* C.W. Myers, 2003. Amer. Mus. Novit. (3391): 16–20, figs. 1b, 2b, 3b, 6, 9a.

Type: Holotype, KU 110274 (formerly CWM 6095), a 346 mm female (C.W. Myers, 25 Jan. 1966).
Type locality: "500 m above sea level on the north end of the Serranía de Pirre, Prov. of Darién, eastern Panama.

The type locality, a temporary forest camp, is situated roughly at 8°00'N, 77°43'W."

Distribution: Eastern Panama (Darién), 500 m. Known only from type locality.

27. *Atractus depressiocellus* C.W. Myers, 2003. Amer. Mus. Novit. (3391): 20–22, figs. 1c, 2c, 3e.

Type: Holotype, AMNH 119876, a 750 mm female (G. Barratt, Jr., 31 Oct. 1974).

Type locality: "Cerro Azul (Cerro Jefe) region, Prov. of Panamá, Panama. The type locality is in the general region of Cerro Jefe on the Piedras-Pacora Ridge, at about 9°14'N, 79°23'W."

Distribution: Eastern Panama (Panamá), 200–800 m.

Source: C.W. Myers & Schargel, 2006.

28. *Atractus duboisi* (Boulenger, 1880). Bull. Soc. Zool. France 5: 44. (*Rabdosoma duboisi*)

Type: Holotype, IRSNB 2008, a 335 mm male (E. De Ville, 1874).

Type locality: "Andes de l'Équateur" [= Andes of Ecuador].

Distribution: Montane cloud forest of Ecuador (Imbabura, Napo, Morona-Santiago), 1500–2200 m.

Sources: Passos & Arredondo, 2009 and Passos et al., 2009d.

29. *Atractus duidensis* Roze, 1961. Acta Biol. Venez. 3(7): 110–111.

Type: Holotype, AMNH 36609, a 355 mm male (Tyler Exped., 28 Jan. 1929).

Type locality: "Cumbre del Cerro Duida, Territorio Federal Amazonas, Venezuela; unos 2050 metros de altura" [= Cerro Duida Mountain, Amazonas Territory, S Venezuela, ca. 3°21'N, 65°42'W, elevation 2050 m].

Distribution: Southern Venezuela (cen. Amazonas), 2000–2150 m.

Sources: Roze, 1966a and Lancini, 1986.

30. *Atractus dunni* Savage, 1955. Proc. Biol. Soc. Washington 68: 14–15.

Synonym: *Rhabdosoma maculatum* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909 *(nomen praeoccupatum).*

Type: Holotype, MNHN 5986 (formerly PM 5986), a 305 mm female.

Type locality: "l'Équateur" [= Ecuador].

Distribution: Northeastern Ecuador (Cotopaxi, Pastaza, Pichincha).

Source: Cisneros-Heredia, 2005a.

Remarks: MNHN 5986 listed as type of *Rabdosoma maculatum* Bocourt *fide* MNHN catalogue. Records from Peru are erroroneous *fide* Cisneros-Heredia (2005a: 93).

31. *Atractus echidna* Passos, Mueses-Cisneros, Lynch & Fernandes, 2009e. Zootaxa (2293): 8–10, fig. 5.

Type: Holotype, UV-C 7718, a 248 mm male.

Type locality: "eastern San Antonio, Flor de la Briza, corregimiento Robles (01º42'N, 78º42'W, ca. 10 m), municipality of Tumaco, department of Nariño, Colombia."

Distribution: Southwestern Colombia (Nariño), 10 m. Known only from type locality.

32. *Atractus ecuadorensis* Savage, 1955. Proc. Biol. Soc. Washington 68: 15–16.

Type: Holotype, FMNH 23529 (formerly CM 23529), a 198 mm male (R.W. Chadwick, March 1936).

Type locality: "`Llangate area', Ecuador (probably refers to the Llanganate Distribution of eastern Tungurahua Prov.)."

Distribution: Central Ecuador (Tungurahua). Known only from type locality.

Source: Passos et al., 2012.

Remarks: Type locality listed as Ecuador: Oriente Prov. (now = Napo, Orellana, Pastaza, Morona-Santiago, Sucumbios and Zamora-Chinchipe) *fide* FMNH catalogue.

33. *Atractus edioi* N.J. Silva, Rodrigues-Silva, Ribeiro, Souza & Souza, 2005. Pap. Avul. Zool. 49(3): 34–36, figs. 2a–b.

Type: Holotype, MZUSP 13371, a 390 mm female (C. do Amaral-Sousa, 29 Jan. 2002).

Type locality: "Brasil: Goiás: Município de Minaçu, UHE Cana Brava (12°25'17"S, 48°09'43"W).

Distribution: Northeastern Brazil (Goiás).

34. *Atractus elaps* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 241–242. (*Rhabdosoma elaps*)

Synonyms: *Rabdosoma brevifrenum* Jan, 1862b, *Atractus elaps tetrazonus* Amaral, 1931a, and *Geophis diplozeugus* K.P. Schmidt & Walker, 1943a.

Type: Holotype, BMNH 1946.1.6.45, a 381 mm specimen (L. Fraser, 1857–1858).

Type locality: "Guayaquil" [Ecuador]. (probably in error *fide* J.A. Peters (1960a: 506) and Savage (1960: 81).

Distribution: Northern Amazonia. Eastern Colombia (Amazonas, Boyacá, Caqueta, Cauca, Cundinamarca, Meta, Narino, Putumayo, Vaupés), S Venezuela (Amazonas), E Ecuador (Morona-Santiago, Napo, Orellana, Pichincha, Sucumbios, Zamora-Chinchipe), W Brazil (Amazonas, Rondonia) and N Peru (Amazonas, Loreto, Madre de Dios), 100–1640 m.

Sources: Roze, 1966a, Hoogmoed, 1980, Lancini, 1986, Duellman & Salas, 1991, Abuys, 2003, Silva-Haad, 2004, Duellman, 2005, Kok, 2006, Vigle, 2008 and Navarrete et al., 2009.

A

Remarks: Possibly occurs in Suriname *fide* Hoogmoed (1980: 16) and Guyana *fide* Starace (1998: 125). Kok (2006: 28) noted that the *A. elaps* of Silva-Haad, 2004, are *A. poeppigi*.

35. *Atractus emigdioi* Gonzáles Sponga, 1971. Monogr. Cientif. Inst. Pedagogico (3): 3–4, figs. 2–5.

Type: Holotype, MCNC 5629, a 415 mm female (E. Gonzáles-Sponga, 20 Aug. 1971).
Type locality: "Campamento del M.O.P., a 19 km. de Boconó, en la vía Valera-Trujillo, Estado Trujillo, Venezuela...a 2.100 mts. de altura."
Distribution: Western Venezuela (Lara, Mérida, Trujillo), 2100 m.
Sources: Lancini, 1986 , Barros-Blanco, 2000, Esqueda et al., 2001, Schargel & Castoe, 2003, Esqueda & La Marca, 2005 and Navarrete et al., 2009.

36. *Atractus emmeli* (Boettger, 1888b). Ber. Senck. Naturf. Ges. 1888: 192–195, 3 figs. (*Geophis emmeli*)

Type: Lectotype, SMF 19364 (SMF-B 8311, 1a), a 303 mm male (F. Emmel, 1888), designated by Mertens (1967a: 94).
Type locality: "Mapiri, Nebenfluss des oberen Beni, Bolivien" [= Río Mapiri, tributary of Río Beni, La Paz Department, Bolivia, ca. 15°25'S, 67°49'W, 500 m] via lectotype selection.
Distribution: Northwestern Bolivia (Beni, La Paz) and SE Peru (Arequipa, Cusco, Junin, Loreto, Madre de Dios), 500–2400 m.
Source: K.P. Schmidt & Walker, 1943c.

37. *Atractus eriki* Esqueda, La Marca & Bazo, 2005a. Herpetotropicos 2(2): 88–90, figs. 1–3.

Type: Holotype, ULABG 6693, a 310 mm male (A.R. Angarita Matheus, 10 April 2004).
Type locality: "sector Media Luna, Escuque, 7.38 Km E Valera, aprox. 1000 m de elevación, 9°18'N y 70°40'W, Municipio Escuque, Estado Trujillo, Venezuela."
Distribution: Western Venezuela (Mérida, Táchira, Trujillo), 1000 m.
Source: Navarrete et al., 2009.

38. *Atractus erythromelas* Boulenger, 1903a. Ann. Mag. Nat. Hist. (7) 11(65): 483–484.

Types: Syntypes (8), BMNH 1946.1.7.12–19, longest syntype 480 mm (S. Briceño, 1886–1903).
Type locality: "Merida, Venezuela, at an altitude of 1600 metres" [= Merída, Merída State, W Venezuela, 8°36'N, 71°09'W, elevation 1600 m].
Distribution: Colombia (Antioquia, Norte de Santander) and W Venezuela (Mérida), 1000–1950 m.
Sources: Roze, 1966a, Lancini, 1986, Barros-Blanco, 2000, Esqueda & La Marca, 2005 and Navarrete et al., 2009.

39. *Atractus favae* (Filippi, 1840). Biblio. Ital. 99: 16. (*Calamaria favae*)

Synonyms: *Elaps hypospilus* Wagler, 1830, and *Rabdosoma longicaudatum* A.-M.-C. Duméril, Bibron & Duméril, 1854a.
Type: Holotype, not designated, MPI.
Type locality: Unknown.
Distribution: Northern Guyana (Essequibo Islands-West Demerara, Upper Demerara-Berbice, Upper Demerara-Upper Essequibo) and N Suriname, NSL–20 m.
Sources: Hoogmoed, 1980, Chippaux, 1987, Kok, 2006, Passos et al., 2009b and C.J. Cole et al., 2013.
Remarks: Possibly a distinct genus *fide* Hoogmoed (1980: 19). Possibly occurs in French Guiana *fide* Chippaux (1987: 88).

40. *Atractus flammigerus* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 540. (*Brachyorrhos flammigerus*)

Synonyms: *Brachyorrhos flammigerus* H. Boie *in* Schlegel, 1826a *(nomen nudum),* and *Geophis alasukai* Gasc & Rodrigues, 1979b.
Type: Lectotype, RMNH 118A, a 340 mm female (S.J. Brugmans Cabinet), designated by Hoogmoed (1980: 20).
Type locality: "Guyane" [= French Guiana] via lectotype selection. Restricted to Paramaribo, Suriname *fide* Hoogmoed (1980: 24).
Distribution: Northern South America. Guyana, Suriname (Marowijne, Nickerie, Suriname), French Guiana, Peru (Loreto, Madre de Dios) and Brazil (Amapa, Amazonas, Pará, Rondônia), NSL–500 m.
Sources: Dixon & Soini, 1977, Gasc & Rodriguez, 1979b, Cunha & Nacimento, 1983b, Hoogmoed, 1983, Chippaux, 1987, Duellman & Salas, 1991, Starace, 1998 and Duellman, 2005.
Remarks: Original description based on H. Boie's MS (1823–1825). Some Brazilian records may refer to *A. snethlaeae*.

41. *Atractus francicopaivai* Silva-Haad, 2004. Rev. Acad. Colomb. Cienc. 28(108): 426–428, figs. 24–25.

Type: Holotype, ICN 10100 (formerly JSH 1155), a 180 mm male (J. Silva-Haad, 1989).
Type locality: "Colombia, Puerto Córdoba, en el corregimiento de La Pedrera, en el departamento de Amazonas, a orillas del río Caquetá (01° 09' 38" N, 69° 40' 00" Oeste)" [= elevation 170 m].
Distribution: Southeastern Colombia (NW Amazonas), 170 m.
Source: Kok, 2006.

42. *Atractus francoi* Passos, Fernandes, Bérnils & Moura-Leite, 2010. Zootaxa (2364), 12–15, figs. 2b–c, 5.

Type: Holotype, MNRJ 17537 (formerly DZUFRJ 1742), a 473 mm male (M.C. Carlo, 17 July 2006).
Type locality: "Fazenda Recanto, Serra do Piloto (22º50'S, 44º03'W, ca. 600 m).
Distribution: Southeastern Brazil (Rio de Janeiro, São Paulo), 600–1000 m.

43. *Atractus fuliginosus* (Hallowell, 1845a). Proc. Acad. Nat. Sci. Philadelphia (1844–45) 2(9): 243–244. (*Coluber fuliginosus)*

Type: Holotype, ANSP 3333, a 413 mm specimen (S. Ashmead, 1835–1845).
Type locality: "Republic of Columbia, within two hundred miles of Caraccas" (in error). Corrected to Venezuela *fide* Roze (1958d: 2).
Distribution: Northern Venezuela (Distrito Federal, Guárico, Sucre), 1200–2000 m.
Sources: Roze, 1966a, Lancini, 1986 and Navarrete et al., 2009.

44. *Atractus gaigeae* Savage, 1955. Proc. Biol. Soc. Washington 68: 12–13.

Type: Holotype, UMMZ 82887 (formerly UM 82887), a male (C. Altenberg & B.G. Butler, summer 1935).
Type locality: "Morona-Santiago Prov., Ecuador."
Distribution: Ecuador (Morona-Santiago).
Remarks: A subspecies of *A. collaris fide* Dixon & Soini (1977: 34 & 1986: 91) but a valid species *fide* Prudente & Passos (2008: 727).

45. *Atractus gigas* C.W. Myers & Schargel, 2006. Amer. Mus. Novit. (532): 8–12, figs. 5–7.

Type: Holotype, FHGO 194, a 1040 mm female (V. Zak, Jan. 1990).
Type locality: "Bosque Protector Río Guajalito, antigua Hacienda Las Palmeras, old highway between Quito and Santo Domingo, 1900 m, Pichincha, Ecuador (00°14'S, 78°49'W)."
Distribution: Ecuador (Cotopaxi, Pichincha) and Peru (Cajamarca), 600–2300 m.
Source: Passos et al., 2010.

46. *Atractus guentheri* (Wucherer, 1861). Proc. Zool. Soc. London 29(1): 115–116, pl. 19, fig. 1. (*Geophis guentheri*) (*nomen corrigendum*)

Synonyms: *Geophis güntheri* Wucherer, 1861 *(nomen incorrigendum), Rabdosoma univittatum* Jan, 1862b, and *Atractus guentheri* – Amaral, 1930f *(nomen corrigendum).*
Type: Holotype, BMNH 1946.1.1.76 (formerly BMNH 1861.3.23.16), a 327 mm male (O.E.H. Wucherer, 1859–1860).
Type locality: "Caunavieras, which is to the south of the city of Bahia, Prov. of Bahia, Brazil" [= Canavieiras, Bahia State, Brazil, 15º41'S, 38º57'W, near sea level].
Distribution: Amazonian Colombia (Amazonas) and SE Brazil (SE Bahia, Minas Gerais, Rio de Janeiro, Rio Grande do Sul, São Paulo), NSL–300 m.
Sources: R. Fernandes & Puorto, 1994, Lema, 1994, R. Fernandes 1995a, R. Fernandes & Argólo, 1999, Passos et al., 2010 and Hamdan & Lira-da-Silva, 2012.
Remarks: Nicéforo-María (1942: 93) listed Venezuela.

47. *Atractus guerreroi* C.W. Myers & Donnelly, 2008. Bull. Amer. Mus. Nat. Hist. (308): 114–118, figs. 67–69.

Type: Holotype, EBRG 3403, a 250 mm male (R. Guerrero, 6–8 Feb. 1988).
Type locality: "summit of Auyantepui at 5º46'N, 62º32'W, 2100 m, elevation, Bolívar, Venezuela."
Distribution: Southeastern Venezuela (Bolívar), 2100 m. Known only from type locality.
Source: Navarrete et al., 2009.

48. *Atractus heliobelluomini* Silva-Haad, 2004. Rev. Acad. Colomb. Cienc. 28(108): 428–429, figs. 28–29.

Type: Holotype, ICNMNH 10103 (formerly JSH 639), a 158 mm female (J. Silva-Haad, Nov. 1975).
Type locality: "Colombia, departamento de Amazonas, La Pedrera, en el cerro Jupatí, a 300 m de altitud (01° 19' 42" Sur, 69° 30' 33" Oeste)."
Distribution: Southeastern Colombia (Amazonas), 300 m.
Sources: Kok, 2006 and Passos et al., 2009b.

49. *Atractus hoogmoedi* Prudente & Passos, 2010. Copeia 2010(3): 397–399, figs. 1b, 3.

Type: Holotype, MPEG 13268, a 187 mm juvenile male (F.P. do Nascimento, 1975).
Type locality: "Brazil, state of Pará, municipality of Capitão Poço, 04º45'S, 47º04'W, ca. 48 m elev., at locality of Santa Luzia."
Distribution: Northeastern Brazil (Pará), 50 m.

50. *Atractus hostilitractus* C.W. Myers, 2003. Amer. Mus. Novit. (3391): 22–25, figs. 1d, 2d, 3c, 9b.

Type: Holotype, AMNH 130330, a 374 mm female (T. Quintero, 29 Oct. 1967).
Type locality: "at 'Morti Hydro' [about 100–200 m elev., at 8°52'28"N, 77°54'19"W], Rio Morti, Prov. of Darién, Panama."
Distribution: Eastern Panama (Darién), 100–200 m.

A

51. *Atractus imperfectus* C.W. Myers, 2003. Amer. Mus. Novit. (3391): 25–28, figs. 3d, 9c, 10.

Type: Holotype, MCZ 50213, head and neck only (Panama Snake Census Surv., 1936).
Type locality: "Piedras-Pacora Ridge, [Prov. of Panamá], Panama." Precise locality is unknown, but a more-or-less central point on this divide is 9°16' N, 79°20' W *fide* C.W. Myers (2003: 25).
Distribution: Central Panama (Panamá).

52. *Atractus indistinctus* Prado, 1940b. Mem. Inst. Butantan (1939) 13: 16, fig. 2.

Type: Holotype, ILS 166, a 444 mm female (C. Hernández Yaruro, 1938–1939), destroyed by fire 9–10 April 1948.
Type locality: "Ocaña, departamento norte de Santander, Colombia" [= Ocaña, Norte de Santander Department, Colombia, 8°14'N, 73°21'W, elevation 1265 m].
Distribution: Northeastern Colombia (Antioquia, Cundinamarca, Norte de Santander), 1200–1265 m.

53. *Atractus insipidus* Roze, 1961. Acta Biol. Venez. 3(7): 106–107.

Type: Holotype, MBUCV 3957, a 235 mm male (Panchenco, 1952).
Type locality: "Poste M-1, cerca río Uraricapará, frontera Venezuela–brasil, unos 400 metrs. de altura."
Distribution: Southeastern Venezuela (Bolívar) and Brazil (Maranhao), 400 m.
Sources: Roze, 1966a, Lancini, 1986, Kok, 2006, Passos & Fernandes, 2008 and Navarrete et al., 2009.

54. *Atractus iridescens* Peracca, 1896b. Boll. Mus. Zool. Anat. Comp. Univ. Torino 11(252): 2–3, 1 fig.

Type: Holotype, MZUT 1830 (formerly MZUT 1726), an adult male (Viale).
Type locality: "America meridionale" [= South America].
Distribution: Northwestern Colombia (Antioquia, Chaco, Nariño), 50–150 m.
Source: Passos et al., 2009e.

55. *Atractus lancinii* Roze, 1961. Acta Biol. Venez. 3(7): 112–114.

Type: Holotype, MCN 574, a 342 mm female (R. Lancini, Aug. 1958).
Type locality: "El Junquito, Distrito Federal, Venezuela; 1.900 metros de altura."
Distribution: Northern Venezuela (Aragua, Carabobo, Distrito Federal, Miranda, Yaracuy), 800–2000 m.
Sources: Roze, 1966a, Lancini, 1986, Barros-Blanco, 2000, Esqueda et al., 2001 and Navarrete et al., 2009.

56. *Atractus lasallei* Amaral, 1931a. Bull. Antivenin Amer. 4(4): 87–88.

Type: Holotype, IB 5315 (formerly ILS 4), a 400 mm male (H. Nicéforo-María, 1908–1931), destroyed by fire 15 May 2010.
Type locality: "Sampedro (north of Medellin, Antioquia), Colombia" [= San Pedro, S of Medellín, Antioquia Department, Colombia, 6°28'N, 75°33'W, elevation 2535 m].
Distribution: Extreme NW South America. Northern Colombia (Antioquia, Cundinamarca) and W Venezuela, 1500–2750 m.
Source: Pérez-Santos & Moreno, 1988.

57. *Atractus latifrons* (A.C.L.G. Günther, 1868). Ann. Mag. Nat. Hist. (4) 1(6): 415, pl. 19, fig. b. (*Geophis latifrons*)

Synonym: *Elaps herthae* Ahl, 1927.
Type: Holotype, BMNH 1946.1.6.52, a 254 mm specimen, (J. Hauxwell,).
Type locality: "Pebas" [= Pébas, Loreto Department, Peru, 3°11'S, 71°47'W, elevation 125 m].
Distribution: Amazonia. Colombia (Amazonas, Caqueta, Putumayo, Vaupés), French Guyana (Cayenne), Suriname (Marowijne), NE Peru (Loreto), Brazil (Acre, Amapá, Amazonas, ? Ceará, Mato Grosso, Pará, Rondônia) and Bolivia (Santa Cruz), 90–500 m.
Sources: Hoogmoed, 1980, Cunha & Nascimento, 1983b, Martins & Oliveira, 1993, Starace, 1998, Silva-Haad, 2004, Embert et al., 2006 and Moravec & Aparcio, 2006.
Remarks: Hoogmoed (1979: 275) listed Amazonian Ecuador.

58. *Atractus lehmanni* Boettger, 1898. Kat. Rept. Senck. Mus. 2: 80.

Type: Lectotype, SMF 19355 (formerly SMF-B 8310a), a 296 mm female (F.C. Lehmann, 1894), designated by Mertens (1967: 91).
Type locality: "Cuenca, Prov. Azanay, Ecuador" [= Cuenca, Azuay Prov., Ecuador, 2°54'S, 78°59'W, elevation 2500 m] via lectotype selection.
Distribution: Colombia (Antioquia, Valle de Cauca) and S Ecuador (Azuay), 2500–2600 m.
Sources: Savage, 1960 and Passos & Arredondo, 2009.

59. *Atractus limitaneus* (Amaral, 1935c). Mem. Inst. Butantan 9: 219–210, figs. 1–3. (*Leptocalamus limitaneus*)

Type: Holotype, IB 9196 (formerly ILS 125), a 175 mm male (H. Nicéforo-María, 1908–1935), destroyed by fire 15 May 2010.
Type locality: "La Pedrera, near the Brazilian-Colombian boundary, Colombia" [= La Pedrera, Río Caquetá,

Amazonas Department, SE Colombia, 1°20'S, 69°35'W, elevation 90 m].

Distribution: Southeastern Colombia (E Amazonas), 90 m. Known only from type locality.

Source: Prudente & Passos, 2008.

60. *Atractus longimaculatus* Prado, 1940b. Mem. Inst. Butantan (1939) 13: 17, fig. 3.

Type: Holotype, ILS 170, a 372 mm male (H. Nicéforo-María, July 1938), destroyed by fire 9–10 April 1948.

Type locality: "Região do Quindío, Colombia" [= Nevada Quindío, Caldas Department, Colombia *fide* Savage, 1960: 81] (in error). Corrected to Pacho, a village NE of Zipaquirá, central Colombia *fide* Nicéforo-María (1942: 93) [= Pacho, Cundinamarca Department, cen. Colombia, 5°08'N, 74°10'W, elevation 1830 m].

Distribution: Central Colombia (Cundinamarca), 1830 m.

61. *Atractus loveridgei* Amaral, 1930a. Bull. Antivenin Inst. Amer. 4(2): 28.

Type: Holotype, MCZ 29059, a 360 mm female (H. Nicéforo-María, 1908–1930).

Type locality: "Jerico, central Colombia" [= Jericó, Antioquia Department, Colombia, 5°47'N, 75°47'W, elevation 1850 m].

Distribution: Northern Colombia (Antioquia, Boyacá, Cundinamarca, Santander), 1050–3005 m.

Source: Passos et al., 2009c.

62. *Atractus macondo* Passos, Lynch & Fernandes, 2008. Herpet. J. 18: 180–181, fig. 5.

Type: Holotype, IAvH 15 (formerly IND-R 15), a 383 mm male (G. Toro).

Type locality: "Parque Nacional Natural Isla de Salamanca (10°58'N, 74°30'W, approximately 3m), municipality of Sifionuavo, Department of Magdalena, Colombia."

Distribution: Northern Colombia (Magdalena), NSL.

63. *Atractus maculatus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 204–205. *(Isoscelis maculata)*

Type: Holotype, BMNH 1946.1.6.46 (formerly BMNH 1851.3.12.151), a 343 mm male.

Type locality: Unknown. Designated as Brazil *fide* BMNH catalogue.

Distribution: Colombia (Antioquia) and SE Brazil (Alagoas, Bahia, Espírito Santo, Paraná, Pernambuco, Rio de Janeiro, E São Paulo), NSL–500 m.

Sources: R. Fernandes, 1995a, Moura-Leite et al., 1996, R. Fernandes et al., 2000, Marques et al., 2001 and Passos et al., 2010.

Remarks: Nicéforo-María (1942: 93) listed Bolivia and Colombia (Jericó).

64. *Atractus major* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 307.

Type: Lectotype, BMNH 1946.9.7.27, a 145 mm male (C. Buckley, 1856–1880), designated by Savage (1960: 50).

Type locality: "Canelos, Napo-Pastaza Prov., Ecuador" [= Canelos, Pastaza Prov., NE Ecuador, 1°35'S, 77°45'W, elevation 500 m] via lectotype selection.

Distribution: Northwestern Amazonia. Eastern Ecuador (Napo), SE Colombia (Amazonas, Cundinamarca, Nariño), S Venezuela (Amazonas, Táchira), Peru (Amazonas, Loreto, Madre de Dios) and W Brazil (Amazonas, Pará), 100–2630 m.

Sources: Roze, 1966a, Lancini, 1986, Duellman & Salas, 1991, Martins & Oliveira, 1993, Schargel & Castoe, 2003, Costa Prudente & Santos Costa, 2004, Silva-Haad, 2004, Duellman, 2005, Esqueda & La Marca, 2005, C.W. Myers & Schargel, 2006, Vigle, 2008 and Navarrete et al., 2009.

65. *Atractus manizalensis* Prado, 1940b. Mem. Inst. Butantan (1939) 13: 17–18, fig. 4.

Type: Holotype, ILS 172, a 370 mm male (N. Díaz-Berrío, 1938–1939), destroyed by fire 9–10 April 1948.

Type locality: "Colombia." Restricted to the región of Manizales, Cordillera Central de las Andes, Colombia *fide* Nicéforo-María (1942: 93) and further restricted to Villamaria, Caldas Department, Colombia *fide* E.R. Dunn *in* Savage (1960: 82) [= 5°03'N, 75°31'W, elevation 1950 m].

Distribution: Colombia (Antioquia, Caldas, Cauca, Quindo), 1950–2150 m.

Sources: R. Fernandes, 1995a, Passos et al., 2009c and Rojas-Morales, 2012b.

66. *Atractus mariselae* Lancini, 1969. Publ. Ocas. Mus. Cienc. Nat. (15): 4–5, figs. 1–3.

Type: Holotype, MCNC 3971, a 325 mm male (M. Urosa-Sambrano, 5 Sept. 1966).

Type locality: "en el jardín posterior de una vieja casa de Boconó, Estado Trujillo, a unos 1.225 metros sobre el nivel del mar, Venezuela" [= Boconó, Trujillo State, W Venezuela, 9°15'N, 70°15'W, elevation 1225 m].

Distribution: Western Venezuela (Táchira, Trujillo), 1225 m.

Sources: Schargel & Castoe, 2003, Esqueda & La Marca, 2005 and Navarrete et al., 2009.

67. *Atractus matthewi* Markezich & Barrio-Amorgós, 2004. Bull. Maryland Herp. Soc. 40(3): 112–117, figs. 1a, 2.

Synonym: *Atractus nororientalis* D. Sánchez, Sousa, Esqueda & Manzanilla, 2005.

Type: Holotype, AMNH 29316, a 365 mm male (G.H.H. Tate, 1921–1929).

A

Type locality: "Venezuela: Estado Sucre, Carápas, 10º07'56"N, 63º53'00"W."
Distribution: Northeastern Venezuela (Anzoátegui, Sucre), ca. 1400–2130 m.
Sources: Sánchez et al., 2005, Kok et al., 2007 and Navarrete et al., 2009.

68. *Atractus medusa* Passos, Mueses-Cisneros, Lynch & Fernandes, 2009e. Zootaxa (2293): 15–17, figs. 10a–b, 11.

Type: Holotype, IAvH 2981 (formerly VR 1213), a 385 mm male (J.V. Rueda).
Type locality: "Playa Blanca, Gorgona Island (03º00'N, 78º12'W, ca. 0 m), municipality of Guapi, department of Cauca, Colombia."
Distribution: Western Colombia (Cauca: Gorgona Is.), NSL.

69. *Atractus melanogaster* F. Werner, 1916. Zool. Anz. 47(11): 309.

Type: Neotype, ICN 10030, a 283 mm male (J.D. Lynch & J.V. Rueda, 29 May 1981), designated by Passos & Lynch (2010: 160).
Type locality: "Quebrada Perales (2420 m), Vereda La Palma, 11.4 km west of the municipality of Cajamarca (04º 27' N, 75º 26' W), department of Tolima, Colombia" via neotype selection.
Distribution: Central Colombia (Antioquia, Tolima), 1800–2200 m.
Sources: Duellman, 1979 and Passos & Lynch, 2010.
Remarks: LMB holotype lost *fide* M. Berec *in* Passos & Lynch (2010: 160).

70. *Atractus melas* Boulenger, 1908a. Ann. Mag. Nat. Hist. (8) 1(1): 114–115.

Type: Holotype, BMNH 1946.1.6.33 (formerly BMNH 1908.5.29.54), a 235 mm female (M.G. Palmer, 1907–1908).
Type locality: "Los Mangos, S.W. Colombia, altitude 300 m" [= Los Cisneros or Juntas, Valle de Cauca Department, Colombia, 3°46'N, 76°45'W *fide* Savage, 1960: 82 and Passos et al., 2009e: 18].
Distribution: Western Colombia (Antioquia, Chaco, Valles, Valle de Cauca), 80–300 m.
Source: Passos et al., 2009e.

71. *Atractus meridensis* Esqueda & La Marca, 2005. Herpetotropicos 2(1): 10–12, figs. 9–10.

Type: Holotype, ULABG 4341, a 437 mm male (E. La Marca, 22 March 1997).
Type locality: "Venezuela, Estado Mérida, Municipio Pueblo Llano, en patio trasero vivienda, 1705 m.s.n.m., a 1 Km del Puente sobre el río Santo Domingo en la vía principle desde La Mitsús hasta San Domingo, ya 500 m del cruce de acceso a la Población de Las Piedras, 08º52'45"N, 70º39'09"W."
Distribution: Western Venezuela (Barinas, Mérida), 1200–2200 m.
Source: Navarrete et al., 2009.

72. *Atractus michelae* Esqueda & La Marca, 2005. Herpetotropicos 2(10): 14–16, figs. 12–13.

Type: Holotype, ULABG 2672, a 345 mm female (M. Ataroff, 14 June 1989).
Type locality: "Venezuela, Estado Mérida, Municipio Arzobispo Chacón, cerca de la población de Canagua, aprox. 1700 m.s.n.m., coordenadas estimadas 8º10'24"N, 71º28'52"W."
Distribution: Western Venezuela (Mérida, Táchira), 1000–1700 m.
Source: Navarrete et al., 2009.

73. *Atractus microrhynchus* (Cope, 1868b). Proc. Acad. Nat. Sci. Philadelphia 20(2): 102. (*Rhabdosoma microrhynchum*)

Type: Neotype, DHMECN 3008, a 329 mm male (F. Sornoza, March 2005), designated by Passos et al. (2005: 377).
Type locality: "Reserva Biológica Buenaventura (03°38'55"S, 79°45'50"W, ca. 600 m asl), Parroquia piñas, Cantón Piñas, El Oro Province, Ecuador" via neotype designation.
Distribution: Western Ecuador (El Oro, Guayas, Los Ríos) and NW Peru (Tumbes), 50–800 m.
Sources: Dixon & Soini, 1977 and Passos et al., 2009e, 2012b.
Remarks: Holotype erroneously listed as USNM 6693 *fide* J.A. Peters (1960a: 507) and ANSP 6693 *fide fide* Savage (1960: 52), lost *fide* N. Gilmore *in* Passos et al. (2012b: 377).

74. *Atractus mijaresi* Esqueda & La Marca, 2005. Herpetotropicos 2(1): 16–17, figs. 14–15.

Type: Holotype, ULABG 4697, a 369 mm male (N. Jáuregui, 5 May 1997).
Type locality: "Venezuela, Estado Mérida, Distributionl, Mucurubá, parte alta, 2405 m.s.n.m., 08º42'34"N, 70º59'17"W."
Distribution: Western Venezuela (Mérida), 2405 m.
Source: Navarrete et al., 2009.

75. *Atractus modestus* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 304, pl. 15, fig. 1.

Type: Holotype, BMNH 1946.1.6.30, a 379–380 mm male (L. Fraser, 1857–1859).
Type locality: "W. Ecuador."
Distribution: Western Ecuador (Azuay, Cotopaxi, Morona-Santiago, Pichincha), 2400–2560 m.

Source: Passos et al., 2007.

76. *Atractus multicinctus* (Jan, 1865 *in* Jan & Sordelli, 1860–1866). Icon. Gén. Ophid. 1(10): 7, pl. 4, figs. 5, a, d–g, n, p. v. *(Rabdosoma badium multicinctum)*

Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.
Type locality: "Lima," Lima Department, Peru," (in error *fide* Savage, 1960: 54, and Passos et al., 2009e: 24).
Distribution: Southwestern Colombia (Cauca, Chocó, Valle del Cauca) and NW Ecuador (Azuay, Cotopaxi, Los Rios, Morona-Santiago), NSL–770 m.
Source: Passos et al., 2009e.

77. *Atractus multidentatus* Passos, Rivas-Fuenmayor & Barrio-Amorgós, 2009b. Amphibia-Reptilia 30(2): 236–238, figs. 3–4.

Type: Holotype, CVULA 7080, a 172 mm female (R. Alarcón-Gallegos, 1979–1982).
Type locality: "quebrada El Paraiso, La Vega (8°32'N, 71°14'W, *ca*. 1000 m), State of Mérida, Venezuela."
Distribution: Western Venezuela (Mérida), 1000 m. Known only from type locality.

78. *Atractus nasutus* Passos, Arredondo, Fernandes & Lynch, 2009c. Copeia 2009(3): 425–428, fig. 1.

Type: Holotype, CSJ 561, a 199 mm male (H. Daniel, 1954).
Type locality: "Colombia, Antioquia department, San Pedro municipality, Vereda La Lana, 06º26'52, 75º36'26"W, ca. 2600 m."
Distribution: Colombia (Antioquia), 2600 m. Known only from vicinity of type locality.

79. *Atractus natans* Hoogmoed & Prudente, 2003. Zool. Meded. 77: 428–437, figs. 1, 3–4.

Synonym: *Atractus emersoni* Silva-Haad, 2004.
Type: Holotype, MPEG 18836, a 308 mm female (M.S. Hogmoed & T.C.S. Ávila-Pires, 1 Aug. 1994).
Type locality: "near flutuarte at confluence of Paraná Apara and Rio Mamirauá, Estação Mamiraua, Municipio de Uarini, Amazonas, Brazil, 3°02'57.2"S 64°50'59.7"W, 50 m."
Distribution: Amazonia. Southeastern Colombia (Amazonas), N Brazil (Amazonas, Para) and ext. NE Peru (Loreto), NSL–100 m.
Sources: Passos & Fernandes, 2008 and Passos et al., 2012b.

80. *Atractus nicefori* Amaral, 1930a. Bull. Antivenin Inst. Amer. 4(2): 28.

Type: Holotype, MCZ 29058, a 420+ mm male (R.H. Apolinar-Enrique & R.H. Daniel).
Type locality: "Jerico, central Colombia" [= Jericó, Antioquia Department, Colombia, 5°47'N, 75°47'W, elevation 1850 m].
Distribution: Central Colombia (Antioquia, Cauca, Cundinamarca), 1570–2600 m.
Source: Passos et al., 2009c.

81. *Atractus nigricaudus* K.P. Schmidt & Walker, 1943c. Field Mus. Nat. Hist., (Zool.) 24(28): 327–328.

Type: Holotype, MCZ 45909, a 367 mm female (W.F. Walker, 18 Dec. 1938).
Type locality: "Huachon, in the upper part of the Paucartambo Valley, east of Cerro de Pasco, Department of Junin, Peru. Altitude 10,000 feet."
Distribution: Central Peru (Junin, Pasco), 1800–3365 m.
Source: Passos & Arredondo, 2009.

82. *Atractus nigriventris* Amaral, 1933c. Mem. Inst. Butantan (1932) 7: 116.

Type: Holotype, IB (formerly ILS 82), a 365 mm female (R.P. Ernesto Catalalina), destroyed by fire 15 May 2010.
Type locality: "Chita (sudeste de San Gil), Colombia" [= Chita, SE of San Gil (6°34'N, 73°08'W, 1170 m), Santander Department, Colombia].
Distribution: Northern Colombia (Boyacá, Santander), 1500–3005 m.

83. *Atractus obesus* Marx, 1960. Fieldiana: Zool. 39(38): 411–413, fig. 71.

Type: Holotype, FMNH 69661, a 762 mm female (P. Hershkovitz, April 1951).
Type locality: "Santa Bárbara, a site at base of Cerro Frontino, upper Río Urrao, a tributary of Río Penserisco, Cordillera Occidental, Antioquia, Colombia... at an altitude of 2700 meters" [= 5°53'N, 75°34'W, elevation 2700 m].
Distribution: Northwestern Colombia (Antioquia, Cundinamarca, Valle del Cauca,), 1400–2700 m.
Sources: C.W. Myers & Schargel, 2006 and Passos et al., 2009c.

84. *Atractus obtusirostris* F. Werner, 1916. Zool. Anz. 47(11): 309–310.

Type: Lectotype, ZMH 4428 (formerly ZMH 33, 181), a 254 mm male (A.H. Fassl, Jan.–March 1910), designated by Passos & Lynch (2010: 163).
Type locality: "Cañon del Tolima, (= Combeima River; west Ibague, 04° 26' N, 75° 14'W, ca. 1100 m), department of Tolima, Colombia" via lectotype selection.
Distribution: Central Colombia (Caldas, Tolima), 1100–2200 m.
Sources: F. Werner, 1924a and Passos & Arredondo, 2009.

A

85. *Atractus occidentalis* Savage, 1955. Proc. Biol. Soc. Washington 68: 16–17.

Type: Holotype, BMNH 1916.5.23.5 (formerly BMNH 1916.5.23.5), a 265 mm male (W. Goodfellow, 1914–1915).
Type locality: "Mindo, Pichincha Prov., Ecuador" [= 2°56'S, 78°47'W, elevation 1280 m].
Distribution: Central Ecuador (Chimborazo, Pichincha), 800–1250 m.
Source: Passos et al*.*, 2012.

86. *Atractus occipitoalbus* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 16–17, pl. 8, fig. 5th (*Rabdosoma occipitoalbum*)

Type: Holotype, ZSM 1395/0, a 508 mm female (F.J.C.M. Wagner, 1857–1860), lost *fide* Franzen & Glaw (2007: 258), probably destroyed 24–25 April 1944 or 11 April 1945 during World War II.
Type locality: "occidentali della Ande nell'Ecuadore all' altezza di 4000 piedi."
Distribution: Southeastern Colombia (Putumayo), E Ecuador (Orellana, Morona-Santiago) and Peru (Cusco, Ucayali), 200–1220 m.
Sources: Henle & Ehrl, 1991, Silva-Haad, 2004, Vigle, 2008 and Passos et al., 2009d.

87. *Atractus ochrosetrus* Esqueda & La Marca, 2005. Herpetotropicos 2(1): 18–20, figs. 16–17.

Type: Holotype, ULABG 4698, a 322 mm male (E. La Marca, 12 Jan. 1999).
Type locality: "Venezuela, Estado Mérida, Municipio Tovar, en la via de Bailadores a "La Y", El Delgadito, approx. 2600 m.s.n.m. , 08º13'06"N, 71º52'26"W."
Distribution: Western Venezuela (Mérida, Táchira), 2600–2705 m.
Source: Navarrete et al*.*, 2009.

88. *Atractus oculotemporalis* Amaral, 1932a. Bull. Antivenin Inst. Amer. 5(3): 67. (*Atractus oculotemporalis*) (*nomen corrigendum*)

Synonyms: *Atractus oculo-temporalis* Amaral, 1932a *(nomen incorrigendum),* and *Atractus oculotemporalis* – J.A. Peters & Orejas-Miranda, 1970 *(nomen corrigendum).*
Type: Holotype, IB 6390 (formerly ILS 46), a 460 mm female (R.H. Apolinar-Enrique & R.H. Daniel), destroyed by fire 15 May 2010.
Type locality: "Jericó, west of Medellín, central Colombia" [= Jericó, Antioquia Department, Colombia, 5°47'N, 75°47'W, elevation 1850 m].
Distribution: Central Colombia (Antioquia), 1850–1970 m. Known only from type locality.
Source: Passos et al., 2009c.

89. *Atractus orcesi* Savage, 1955. Proc. Biol. Soc. Washington 68, 17–18.

Type: Holotype, CAS-SU 15622 (formerly SU 15622), a 307.5 mm male (J. Olalla, Oct. 1952).
Type locality: "Loreto, Napo-Pastaza Prov., Ecuador" [= Loreto, Orellana Prov., NE Ecuador, 00º 41' S, 77º 18' W, 410 m].
Distribution: Southwestern Colombia (Cauca, Huila, Putumayo) and E Ecuador (Morona-Santiago, Orellana, Pastaza, Sucúmbios), 410–3000 m.
Source: Passos et al., 2009d.

90. *Atractus paisa* Passos, Arredondo, Fernandes & Lynch, 2009c. Copeia 2009(3): 428–431, fig. 6.

Type: Holotype, ICNMNH 10698, a 392 mm female (A. Hincapié, 31 March 1996).
Type locality: "Colombia, Antioquia department, Sonsón municipality, 05º43'N, 75º19'W, San Francisco, 2600 m."
Distribution: Northwestern Colombia (Antioquia), 2220–2600 m.

91. *Atractus pamplonensis* Amaral, 1935c. Mem. Inst. Butantan 9: 220, fig. 4.

Type: Holotype, IB 9192, a 315 mm male (R.H. Isidoro-Regis), destroyed by fire 15 May 2010.
Type locality: "Pamplona, (near the Venezuelan-Colombian boundary), Colombia." [= Pamplona, Norte de Santander, Colombia, 7°23'N, 72°39'W, elevation 2400 m].
Distribution: Northeastern Colombia (Norte de Santander) and W Venezuela (Táchira), 1560–2400 m.
Sources: Schargel & García-Pérez, 2002, Esqueda & La Marca, 2005 and Navarrete et al*.*, 2009.
Remarks: Original description reprinted in Amaral (1937b: 1763, fig. 2).

92. *Atractus pantostictus* R. Fernandes & Puorto, 1994. Mem. Inst. Butantan 55(Suppl. 1): 8–12, figs. 1–3, 5.

Type: Holotype, IB 54844, a 273 mm male (M.S. Santos, 30 June 1992), destroyed by fire 15 May 2010.
Type locality: "Franco da Rocha, SP, Brazil,"[= Franco da Rocha, São Paulo State, SE Brazil, 23°19'S, 46°43'W, elevation 770 m].
Distribution: Southeastern Brazil (Distrito Federal, Goiás, Minas Gerais, São Paulo, Tocantins), 200–1200 m.
Sources: R. Fernandes, 1995b, Passos et al., 2005, 2010 and Passos & Fernandes, 2008.

93. *Atractus paraguayensis* F. Werner, 1924a. Sitz. Akad. Wiss. Wien, Math.-Natur. Kl., Abt. 1, 133(1–3): 40.

Type: Holotype, NMW 23443 (formerly NMW 130), a 365 mm female (G. Wieninger, 1900–1904).
Type locality: “Paraguay.”
Distribution: Paraguay, NE Argentina (Corrientes, Entre Ríos) and S Brazil (Paraná), 30–1000 m.
Sources: R. Fernandes, 1995b and Passos et al., 2005, 2010.

94. *Atractus paravertebralis* Henle & Ehrl, 1991. Bonn. Zool. Beitr. 42(2): 160–161, figs. 9a–b.

Type: Holotype, ZFMK 39705, a 450 mm specimen (K. Henle & A. Ehrl, 28 Jan. 1983).
Type locality: “Peru; Departamento Madre de Dios; Baja Tambopata; in Sekundärwald” [= Río Tambopata, Madre de Dios Department, SE Peru, ca. 12°53’S, 69°25’W, elevation 225 m].
Distribution: Southeastern Peru (Madre de Dios), 225 m. Known only from type locality.

95. *Atractus paucidens* (Mocquard *in* Despax, 1910). Bull. Mus. Hist. Nat., Paris 16(7): 372. (*Atractopsis paucidens*)

Type: Holotype, MNHN 1906.245 (formerly MNHN 3422A), a 320 mm female (P. Rivet, 1901–1906).
Type locality: “Santo-Domingo de los Colorados, Équateur, 560 mètres” [= Santo Domingo, Pichincha Prov., N Ecuador, 0°15’S, 79°10’W, elevation 550 m].
Distribution: Northwestern Ecuador (Pichincha), 200–600 m.
Source: Passos et al., 2009e.
Remarks: Original description reprinted in Mocquard (1911: 31–32, pl. 2, figs. 2–2c).

96. *Atractus pauciscutatus* K.P. Schmidt & Walker, 1943c. Field Mus. Nat. Hist., (Zool.) 24(28): 326–327.

Type: Holotype, FMNH 36725, a 330 mm female (F. Woytkowski, 14 May 1940).
Type locality: “Carpapata, in the upper Chanchamayo Valley, northeast of Tarma, Department of Junin, Peru. Altitude 10,500 feet.”
Distribution: Central Peru (Junin), 3200 m. Known only from type locality.

97. *Atractus peruvianus* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 12–13. (*Rabdosoma peruvianum*)

Type: Holotype, MNHN, a 280 mm specimen.
Type locality: “Peru.”
Distribution: Peru. Known only from type specimen.

98. *Atractus poeppigi* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 11–12, pl. 8, fig. 1. (*Rabdosoma pöppigi*)

Type: Holotype, NMW, a 570 mm specimen.
Type locality: “Brasile” [= Brazil].
Distribution: Eastern Colombia (Amazonas, Vaupés), N Peru (Amazonas, Loreto) and W Brazil (Amazonas), 100–250 m.
Sources: Dixon et al., 1976, Martins & Oliveira, 1993, Schargel & Castoe, 2003, Zaher et al., 2005 and Kok, 2006.

99. *Atractus potschi* R. Fernandes, 1995a. J. Herp. 29(3): 417–418, figs. 1–2.

Type: Holotype, IB 48438, a 290 mm male (A. J. Santos, 19 July 1985), destroyed by fire 15 May 2010.
Type locality: “Maceió, State of Alagoas, Brazil” [= 09º40’S, 35º43’W, sea level *fide* Passos et al., 2010: 30].
Distribution: Brazil (Alagoas, Bahia, Sergipe), NSL–1200 m.
Sources: Freitas, 1999, Pires-Lima et al., 2000, Passos et al., 2010 and Angôlo et al., 2011.

100. *Atractus punctiventris* Amaral, 1933c. Mem. Inst. Butantan (1932) 7: 117–118.

Type: Holotype, IB (formerly ILS 102), a 325 mm male (H. Nicéforo-María, 1908–1933), destroyed by fire 15 May 2010.
Type locality: “Villavicencio, Meta (leste de Bogotá), Colombia” [= Villavicencio, Meta Department, Colombia, 4°09’N, 73°38’W, elevation 535 m].
Distribution: Central Colombia (Meta), 465–535 m. Known only from type locality.
Source: Passos & Fernandes, 2008.

101. *Atractus resplendens* F. Werner, 1901a. Verh. Zool. Bot. Ges. Wien 51: 598. (*Atractus torquatus resplendens*)

Type: Holotype, ? NMW or ZMB, a 378 mm specimen (R. Haensch, 1899–1900), location of type unknown *fide* J.A. Peters (1960: 508).
Type locality: “Ecuador.”
Distribution: Eastern Ecuador (Chimborazo, Santiago-Zamora, Tungurahua), 1100–1900 m.

102. *Atractus reticulatus* (Boulenger, 1885b). Ann. Mag. Nat. Hist. (5) 16(92): 87. (*Geophis reticulatus*)

Synonym: *Atractus reticulatus scrocchii* Alvarez, Rey & Cei, 1992.
Type: Holotype, BMNH 1946.1.2.7 (formerly BMNH 1885.6.26.10), a 315 mm female (H.F.I. von Ihering, 1880–1885).
Type locality: “S. Lorenzo, on the southern border of the Lagoa dos Patos, Prov. Rio Grande do Sul, Brazil”

[= São Lourenço do Sul, Rio Grande do Sul, Brazil, 31°22'S, 51°59'W, elevation 15 m].

Distribution: Southern South America. Paraguay (Rivera), S Brazil (Goiás, Minas Gerais, Paraná, Rio Grande do Sul, Santa Catarina, São Paulo), NE Uruguay (Rivera) and Argentina (Corrientes, Formosa, Tucumán), NSL–1100 m.

Sources: Boulenger, 1894a, Alvarez et al., 1992, Cei, 1994, Lema, 1994, R. Fernandes, 1995b, Giraudo, 2001, Carreira-Vidal et al., 2004, 2005, 2012b and Passos et al., 2005, 2010.

103. *Atractus riveroi* Roze, 1961. Acta Biol. Venez. 3(7): 114–116.

Type: Holotype, AMNH 36615, a 485 mm male (Tyler Duida Exped., 20 April 1929).

Type locality: "Cerro Duida en el subpáramo sabanero de la cumbre, Territorio Federal Amazonas, Venezuela; unos 1800 metros de altura."

Distribution: Southern Venezuela (Amazonas), 1000–2000 m.

Sources: Roze, 1966a, Hoogmoed, 1979, Lancini, 1986 and Navarrete et al., 2009.

104. *Atractus ronnie* Passos, Fernandes & Borges-Nojosa, 2007. Copeia 2007(4): 789–791, figs. 1a–c, 2a–b.

Type: Holotype, MNRJ 14194, a 301 mm female (D. M. Borges-Nojosa, 10 April 1998).

Type locality: "Brazil, Ceará State, Serra de Baturité, municipality of Pacoti, Granja, 04º10'S, 38º55'W, *ca.* 800 m."

Distribution: Northeastern Brazil (Ceará), 500–900 m.

Sources: Passos & Fernandes, 2008, Loebmann et al., 2009 and Passos et al., 2010.

105. *Atractus roulei* Mocquard *in* Despax, 1910. Bull. Mus. Hist. Nat., Paris 16(7): 370–371.

Type: Holotype, MNHN 1906.243, a 450 mm specimen (P. Rivet, 1902–1906).

Type locality: "Alausi, à 2,350 mètres d'altitude, l'Equateur" [= Alausí, Chimborazo Prov., Ecuador, 2°12'S, 78°51'W, elevation 2350 m].

Distribution: Southern Ecuador (Azuay, Bolívar, Chimborazo, El Oro), 1200–2785 m.

Sources: Duellman, 1979 and N.J. Silva, et al., 2005.

Remarks: Original description reprinted in Mocquard *in* Despax (1911: 30–31, pl. 2, figs. 1–1b).

106. *Atractus sanctaemartae* Dunn, 1946a. Occ. Pap. Mus. Zool., Univ. Michigan (493): 2–5.

Synonym: *Atractus nebularis* Bernal-Carlo & Roze, 1997.

Type: Holotype, UMMZ 48298, a 600 mm female (W.W. Brown, 25 July 1899).

Type locality: "San Sebastian, Sierra Nevada de Santa Marta, Colombia, at an altitude of 6500 feet" [= San Sebastian, Sierra Nevada de Santa Marta Mountains, N Magdalena Department, N Colombia, ca. 11°'N, 74°W, elevation 1980 m].

Distribution: Northern Colombia (César, Magdalena), 1200–2500 m.

Sources: Barros-Blanco, 2000, C.W. Myers & Schargel, 2006 and Passos et al., 2008.

Remarks: See Passos et al. (2008: 179–180) for remarks on elevation.

107. *Atractus sanguineus* Prado, 1944. Ciencia 5(4–5): 111, fig. 2.

Type: Holotype, CSJ 517 (formerly CSJ 232), a 424 mm male (R.H. Daniel, 1943).

Type locality: "Yarumal, N. de Medellin, Colombia" [= Yarumal, Antioquia Departament, cen. Colombia, 6°58'N, 75°26'W, elevation 2350 m].

Distribution: Central Colombia (Antioquia), 2300–2350 m. Known only from type locality.

Sources: Passos & Arredondo, 2009 and Passos et al., 2009c.

Remarks: Original description reprinted in Prado (1946b: 110, 1 fig.).

108. *Atractus schach* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 540. (*Brachyorrhos schach*)

Synonym: *Brachyorrhos schach* H. Boie *in* Schlegel, 1826a *(nomen nudum).*

Type: Lectotype, RMNH 119A, a 192 mm male (RMNH Ancient Cabinet, 1820), designated by Hoogmoed (1980: 34).

Type locality: "Guyane" [= Guyana] via lectotype selection. Restricted to Mamadam, Saramacca River, distr. Brokopando, Suriname *fide* Hoogmoed (1980: 35).

Distribution: Northern Amazonia. Guyana (East Berbice-Correntyne), Suriname (Brokopondo, Commewijne, Nickerie, Saramacca), NW French Guiana (N Saint-Laurent-du-Maroni) and N Brazil (Amazonas, Maranhão, Pará), 20–230 m.

Sources: Hoogmoed, 1980, Cunha & Nascimento, 1983b, Hoogmoed & Avila-Pires, 1991, Martins & Oliveira, 1993, Starace, 199, Abuys, 2003 and C.J. Cole et al., 2013.

109. *Atractus serranus* Amaral, 1930b. Bull. Antivenin Inst. Amer. 4(3): 65.

Type: Holotype, IB 7238, a 700 mm specimen (M. Costilho, 1930), destroyed by fire 15 May 2010.

Type locality: "northermost section of the Serra de Paranapiacaba, State of São Paulo, Brazil" [= near the municipality of São Paulo, E São Paulo State, SE Brazil, 23°33'S, 46°38'W, elevation 800 m *fide* Passos et al., 2010: 43].

Distribution: Southeastern Brazil (E Rio de Janeiro, Santa Catarina, São Paulo), 700–1000 m.
Sources: Marques et al., 2001 and Passos et al., 2005, 2010.
Remarks: Amaral (1930b: 65) incorrectly listed the type as IB 5315 *fide* Passos et al. (2010: 40).

110. *Atractus snethlageae* Cunha & Nascimento, 1983b. Bol. Mus. Para. Emilio Goeldi (Zool.) (123): 19–21, pl. 2, figs. 2–3. (*Atractus flammigerus snethlageae*)

Type: Holotype, MPEG 10131, a 218 mm male.
Type locality: "Colônia Nova, rio Gurupi, Pará, rodovia BR-316, 10 km antes do Gurupi" [= Colônia Nova, along Rîo Grupi at BR 316, E Para State, NE Brazil, 1°49'S, 46°10'W, elevation 30 m].
Distribution: Northeastern Brazil (Amapá, E Amazonas, Bahia, Maranhão, Pará, Rondônia), ext. N Bolivia (Pando) and single record for Argentina (Chaco), NSL–500 m.
Sources: Martins & Oliveira, 1993, Frota, 2000a, Silva-Haad, 2004 and Gonzales & Embert, 2008.
Remarks: Unconfirmed reports from Colombia and Peru (Silva-Haad, 2004: 439).

111. *Atractus steyermarki* Roze, 1958c. Acta Biol. Venez. 2(25): 301–302.

Type: Holotype, FMNH 69920 (formerly CNHM 69920), a 270 mm male (C. Griffin, 9 April 1953).
Type locality: "Chimantá Tepui, Estado Bolívar, Venezuela; 1.430 metros de altura" [= ca, 5°18'N, 62°14'W].
Distribution: Southeastern Venezuela (Bolívar) and Guyana (Cuyuni-Mazaruni, Potaro-Siparuni), 1430–2440 m.
Sources: Roze, 1966a, Lancini, 1986, Gorzula & Señaris, 1998, C.W. Myers & Donnelly, 2008, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: The W Guyana record of Hoogmoed (1979: 275) needs confirmation. Holotype illustrated in C.W. Myers & Donnelly (2008: figs. 70–71).

112. *Atractus surucuru* Prudente & Passos, 2008. J. Herp. 42(4): 724–727, figs. 1–2.

Type: Holotype, MPEG 19146, a 418 mm female (S. Almeida, 19 Nov. 1991).
Type locality: "Serra do Surucucu (02º47'N, 63º40'W, approximately 1000 m), State of Roraima, Brazil."
Distribution: Northern Brazil (Roraima), 1000 m.

113. *Atractus taeniatus* L.E. Griffin, 1916. Mem. Carnegie Mus. 7(3): 173–174, pl. 28, figs. 1–3.

Type: Holotype, CM 117, a 218 mm male (J. Steinbach, Aug. 1906–Nov. 1925).
Type locality: "near Santa Cruz de la Sierra, Bolivia" [= Santa Cruz de la Sierra, Santa Cruz Department, Bolivia, 17°48'S, 63°10'W, elevation 425 m].
Distribution: Southern South America. Southern Brazil (Mato Grosso, Pará, Rio Grande do Sul, Rondônia), E Bolivia (Santa Cruz) and NE Argentina (Corrientes, Entre Ríos, Misiones), 370 m.
Sources: C.J. McCoy, 1971, Cei, 1994, Lema, 1994, R. Fernandes, 1995b, Lema, 1995, Moura-Leite et al., 1996, Rey & Lions, 1997a and Giraudo & Scrocchi, 2002.

114. *Atractus tamaensis* Esqueda & La Marca, 2005. Herpetotropicos 2(1): 20–22, fig. 19.

Type: Holotype, MHNLS 8307, a 283 mm male (A. Agudo, 7 Aug. 1980).
Type locality: "Venezuela, Estado Táchira: Municipia Junin: Betania Macizo de Tamá, apox. 2.100 m.s.n.m., coordenadas estimadas 7º24'21"N, 72º24'29"W."
Distribution: Western Venezuela (Táchira), 2100 m. Known only from type locality.
Source: Navarrete et al., 2009.

115. *Atractus tamessari* Kok, 2006. Zootaxa (1378): 20–26, figs. 1–2a–b, 3, 4a, 4c.

Type: Holotype, IRSNB 2640 (formerly PK 1365), a 397 mm male (P.J.R. Kok, P. Benjamin & G. Seegobin, 23 March 2006).
Type locality: "tributary of Elinkwa River, ESE Kaieteur National Park, ca. 500 m elevation, Potaro-Siparuni District, Guyana (5°08'09"N, 59°25'28"W)."
Distribution: Eastern Venezuela and cen. Guyana (Potaro-Siparuni), 500 m.
Sources: Rivas-Fuenmayor et al., 2012 and C.J. Cole et al., 2013.

116. *Atractus taphorni* Schargel & García-Pérez, 2002. J. Herp. 36(3): 398–400, fig. 1.

Type: Holotype, MCNG 1905, a 423 mm male (A. Lobo, 26 June 1993).
Type locality: "La Carbonera, Cordillera de Mérida, 2200 m, Mérida, Venezuela (8°37'52"N, 71°22'08"W)."
Distribution: Western Venezuela (Mérida), 1700–2200 m.
Sources: Esqueda & La Marca, 2005 and Navarrete et al., 2009.

117. *Atractus thalesdelemai* Passos, Fernandes & Zanella, 2005. Herpetologica 61(2): 210–213, figs. 1–2.

Synonym: *Atractus kangueryensis* Cacciali, Villalba & Yanosky, 2007a.
Type: Holotype, MNRJ 10052, a 303 mm male (N. Zanella, 30 Jan. 2001).

Type locality: "Fazenda da Brigada Militar, Municipality of Passo Fundo (28° 14' 30" S, 52° 21' 27" W), State of Rio Grande do Sul, Brazil."

Distribution: Southern Brazil (Rio Grande do Sul) and S Paraguay (Itapúa), 100–700 m.

Sources: Lema, 1994 and Passos et al., 2010.

118. *Atractus titanicus* Passos, Arredondo, Fernandes & Lynch, 2009c. Copeia 2009(3): 431–433, figs. 7–8.

Type: Holotype, ICNMNH 10697, a 473 mm female (native, 5 March 1996).

Type locality: "Colombia, Antioquia department, Sonsón municipality, 05º43'N, 75º19'W, Quebrada San Andrés, ca. 2400 m."

Distribution: Western Colombia (Antioquia, Caldas, Valle de Cauca), 1800–2400 m.

Source: Rojas-Morales, 2012b.

119. *Atractus torquatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 101–103. (*Rabdosoma torquatum*)

Synonyms: *Brachyorrhos torquatus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Brachyorrhos torquatus* F. Boie, 1827 (*nomen nudum*), *Calamaria badia* Schlegel, 1837, *Rabdosoma varium* Jan, 1862b, *Atractus davidhardi* Silva-Haad, 2004, *Atractus janethae* Silva-Haad, 2004 and *Atractus lucilae* Silva-Haad, 2004.

Type: Lectotype, MNHN 437, a male (A.C.V.M.D. d'Orbigny, 11 Nov. 1830–21 June 1831 or 17 Sept.–17 Nov. 1832), designated by Savage (1960: 66).

Type locality: "Santa Cruz, Santa Cruz, Bolivia" [= Santa Cruz de la Sierra, Santa Cruz Department, Bolivia, 17°48'S, 63°10'W, elevation 425 m] via lectotype selection.

Distribution: Amazonia. Colombia (Amazonas), SE Venezuela (Amazonas, Bolívar), Guyana (Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Nickerie, Para, Saramacca), French Guiana (Cayenne), N Brazil (Amazonas), NE Peru (Loreto) and E Bolivia (Santa Cruz), NSL–600 m.

Sources: Hoogmoed, 1980, Hoogmoed & Avila-Pires, 1991, Martins & Oliveira, 1993, C.L. Barrio-Amorgós et al., 1999, Schargel & Castoe, 2003, Silva-Haad, 2004, Kok, 2006, Navarrete et al., 2009, Passos & Prudente, 2012 and C.J. Cole et al., 2013.

Remarks: Lectotype designation of RMNH 114 and restriction of type locality to Paramaribo, Suriname *fide* Hoogmoed (1980: 36) are invalid. Bolivia (Santa Cruz de La Sierra) record doubtful *fide* Passos & Prudente (2012: 13).

120. *Atractus trihedrurus* Amaral, 1926a. Arch. Mus. Nac. Brazil 26: 105–106, pl. 2, figs. 1–4.

Type: Holotype, IB 3098, a 610 mm male (J. Naderer, 17 Oct. 1924), destroyed by fire 15 May 2010.

Type locality: "S. Bento, Estado de Santa Catharina," Brazil" [= 26º15'S, 49º23'W, ca. 870 m. *fide* Passos et al., 2010: 47].

Distribution: Southern Brazil (Paraná, Rio Grande do Sul, Santa Catarina, São Paulo), 500–1400 m.

Sources: Marques et al., 2001, Lema, 2005 and Passos et al., 2005, 2010.

121. *Atractus trilineatus* Wagler, 1828b. Isis von Oken 21(7): 742, pl. 10, figs. 1–4.

Synonyms: *Coluber brachyurus* Kuhl, 1820 *(nomen praeoccupatum), Brachyorrhos brachyurus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Brachyorrhos kuhli* Schlegel, 1826a *(nomen rejiciendum), Brachyorrhos kuhlii* H. Boie *in* F. Boie, 1827 (*nomen rejiciendum), Rabdosoma lineatum* Duméril, Bibron & Duméril, 1854a, *Rabdosoma punctatovittatum* Jan, 1862b, and *Rabdosoma trivirgatum* Jan, 1862b.

Type: Lectotype, RMNH 48, a 205 mm female, designated by Hoogmoed (1982: 134–135).

Type locality: "Java" [W Indonesia] (in error *fide* Hoogmoed, 1982: 131) via lectotype selection. Restricted to South America *fide* Savage (1960: 83) and British Guiana *fide* Roze (1966a: 88).

Distribution: Northern South America. Northeastern Venezuela (Anzoátegui, Bolívar, Delta Amacuro, Monagas, Sucre), Trinidad & Tobago (Huevos, Little Tobago, Tobago, Trinidad), N Guyana (Essequibo Islands-West Demerara, Upper Demerara-Berbice) and N Brazil (Amazonas, Roraima), NSL–105 m.

Remarks: Official Specific Name *fide* ICZN Opinion 2210 (2008: 239).

122. *Atractus trivittatus* Amaral, 1933c. Mem. Inst. Butantan (1932) 7: 118.

Type: Holotype, IB (formerly ILS 84), a 180 mm male (H. Nicéforo-María, 1908–1932), destroyed by fire 15 May 2010.

Type locality: "Chita, (sudeste de San Gil), Colombia" [= Chita, SE of San Gil (6°34'N, 73°08'W, 1170 m), Santander Department, Colombia].

Distribution: Central Colombia (Boyacá, Casanare, Norte de Santander), 1170–3005 m.

123. *Atractus turikensis* Barros-Blanco, 2000. Anartia 11: 3–6. figs. 1, 2a–c (paratype).

Type: Holotype, MBLUZ 301, a 439 mm male (A. Viloria & F. Herrera, 20 March 1991).
Type locality: "Campamento 1800 (fig. 3, ver punto número 1), Mesa Turik, Altitud 1800 msnm, Sierra de Perijá, Estado Zulia, Venezuela."
Distribution: Western Venezuela (Zulia), 1800 m. Known only from vicinity of type locality.
Source: Navarrete et al., 2009.

124. *Atractus typhon* Passos, Mueses-Cisneros, Lynch & Fernandes, 2009e. Zootaxa (2293): 26–29, figs. 17–18.

Type: Holotype, ICNMNH 10901, a 372 mm male (B. Cépeda & J.J. Mueses-Cisneros, 14 July 2006).
Type locality: "Reserva Natural Biotopo Selva Húmeda (01º25'M. 78º17'W, ca. 600 m), vereda Berlin, El Diviso, municipality of Barbacoas, department of Nariño, Colombia."
Distribution: Western Colombia (Nariño), 600 m. Known only from type locality.

125. *Atractus univittatus* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 15. (*Rabdosoma univittata*)

Type: Holotype, ZMH 2851 (formerly ZMH 482), a 300 mm specimen.
Type locality: "Caracas" [= Caracas, Distrito Federal State, Venezuela, 10°29'N, 66°54'W, elevation 925 m].
Distribution: Northern Venezuela (Aragua, Barinas, Cojedes, Distrito Federal, Mérida, Miranda, Portuguesa) and Trinidad & Tobago (Tobago), 100–1100 m.
Sources: Roze, 1966a, Lancini, 1986, J.C. Murphy, 1997, Boos, 2001, Markezich, 2002, Schargel & Castoe, 2003, Esqueda & La Marca, 2005, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Hallermann, 2006 and Navarrete et al., 2009.
Remarks: Possibly a synonym of *A. fuliginosus fide* Rivas-Fuenmayor et al. (2012: 39).

126. *Atractus variegatus* Prado, 1942a. Mem. Inst. Butantan (1941) 15: 379, 1 fig.

Type: Holotype, ILS 201, a 345 mm male (H. Nicéforo-María, 1908–1941), destroyed by fire 9–10 April 1948.
Type locality: "La Uvita, departamento de Boyacá, Colômbia" [= La Uvita, Boyacá Department, Colombia, 6°16'N, 72°33'W, elevation 3050 m].
Distribution: Central Colombia (Boyacá), 3050 m. Known only from vicinity of type locality.
Remarks: Duellman (1979: 455) listed elevation of 4000 m.

127. *Atractus ventrimaculatus* Boulenger, 1905b. Ann. Mag. Nat. Hist. (7) 15(89): 455.

Type: Lectotype, BMNH 1946.1.7.7 (formerly BMNH 1905.5.31.74) (Briceño), designated by Roze (1961b: 108).
Type locality: "Mérida, Venezuela" [= Fuqueros, Estado Mérida, Venezuela, 1630 m] via lectotype selection.
Distribution: Northwestern Venezuela (Mérida, Zulia), 1200–2500 m.
Sources: Roze, 1966a, Lancini, 1986, Barros-Blanco, 2000, Schargel & Castoe, 2003, Esqueda & La Marca, 2005, Rojas-Runjaic et al., 2007 and Navarrete et al., 2009.
Remarks: Syntypes BMNH 1946.1.5.12–15 [Merida, 1630 m] and BMNH 1946.1.7.7 [Fuqueros, 2500 m] *fide* P. Campbell *(in litt.)*.

128. *Atractus vertebrolineatus* Prado, 1941d. Mem. Inst. Butantan (1940) 14: 25–26, 1 fig.

Type: Holotype, ILS 184, a 296 mm male (H. Nicéforo-María, 1908–1940), destroyed by fire 9–10 April 1948.
Type locality: "Ocaña, ao norte de Bucaramanga, Colombia" [= Ocaña, Norte de Santander Department, Colombia, 8°14'N, 73°21'W, elevation 1200 m].
Distribution: Northeastern Colombia (Norte de Santander), 1200 m. Known only from type locality.

129. *Atractus vertebralis* Boulenger, 1904b. Ann. Mag. Nat. Hist. (7) 13(78): 451.

Type: Holotype, BMNH 1946.1.2.6, a 470 mm female (G.R. Ockendon, 1902–1904).
Type locality: "Santo Domingo, Carabaya, Peruvian Andes, altitude 6000 feet" [= Santo Domingo, Cordillera de Carabaya, Puno Department, SE Peru, 1830 m].
Distribution: Southeastern Peru (Cusco, Puno), 1830 m.

130. *Atractus vittatus* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 304, pl. 15, fig. 2.

Type: Holotype, BMNH 1946.1.6.47, a 405 mm female.
Type locality: "Caracas, Venezuela" [= Caracas, Distrito Federal State, Venezuela, 10°29'N, 66°54'W, elevation 925 m].
Distribution: Northern Venezuela (Aragua, Distrito Federal), 800–1800 m.
Sources: Duellman, 1979 and Navarrete et al., 2009.
Remarks: A member of *Geophis fide* Savage (1960: 31), an *Atractus fide* Roze (1961: 108–109), and *incertae sedis fide* J.A. Peters & Orejas-Miranda (1970: 327).

131. *Atractus wagleri* Prado, 1945. Ciencia 6(2): 61, fig. 1.

Type: Holotype, ILS 228, a 411 mm female (H. Daniel, 1943), destroyed by fire 9–10 April 1948.

A

Type locality: "Humbo (Boyacá), Colômbia" [= Humbo, Quíama, Boyacá Department, Colombia, 5°36'N, 74°16'W, 1035 m].
Distribution: Northern Colombia (Boyacá, Santander), 740–1200 m.
Source: Passos & Arredondo, 2009.
Remarks: Original description reprinted in Prado (1946b: 110–111, 1 fig.).

132. *Atractus werneri* Peracca, 1912. Mém. Soc. Neuchâtel Sci. Nat. (1914) 5: 102.

Synonym: *Atractus colombianus* Prado, 1940b.
Type: Holotype, MHNN 91.506 (formerly MZN 75 & MHNN 3), a 245 mm female (O. Fuhrmann, 1910).
Type locality: "Cafetal Argélia, près Viota (C. or Dép. Cundinamarca), alt. 1830 m, Colombie" [= 04° 26' N, 74° 31' W *fide* Passos & Lynch, 2010: 166].
Distribution: Central Colombia (Cundinamarca), 1200–1830 m.
Source: Passos & Lynch, 2010.
Remarks: Schätti (1986a: 98) and Andreone & Gavetti (2007: 65, 88) discussed publication date, which has previously been cited as 1913 or 1914.

133. *Atractus zebrinus* (Jan, 1862b). Arch. Zool. Anat. Phys. 2(1): 11, 15–16, pl. 8, fig. 3rd (*Rabdosoma zebrinum*)

Type: Holotype, formerly MSNM, a 150 mm specimen, destroyed in 1943 during World War II.
Type locality: Unknown.
Distribution: Southeastern Brazil (S Bahia, Espírito Santo, S Minas Gerais, Paraná, Rio de Janeiro, Santa Catarina, São Paulo), 500–1700 m.
Sources: Fernandes et al., 2000 and Passos et al., 2005, 2010.
Remarks: Bahia record needs confirmation *fide* Passos et al. (2010: 52).

134. *Atractus zidoki* Gasc & Rodrigues, 1979a. Bull. Mus. Natl. Hist. Nat. (4) 1A(2): 548–552, fig. 1.

Type: Holotype, MNHN 1977.1601, a 285 mm male (P. Grenand, 1971–1977).
Type locality: "Trois-Sauts, Haut Oyapock, Guyane française" [= village of Trois Sauts, Haut Oyapock basin, Cayenne Department, SE French Guiana, 2°14'N, 52°52'W, elevation 170 m].
Distribution: Northern South America. Eastern Colombia (Amazonas), Suriname (Brokopondo, Marowijne), Guyana (Potaro-Siparuni), French Guiana (Cayenne, Saint-Laurent-du-Maroni) and N Brazil (Amapá, Pará), 150–500 m.

2. *Atretium yunnanensis* J. Anderson, 1879. Anat. Zool. West. Yunnan (1878) 1: 822–823. (*Atretium schistosum yunnanensis*)

Synonym: *Helicops schistosus andersonii* Wall, 1909.
Types: Syntypes (3), ZSI 4191–92 (formerly IMC 4191–92), 876 and 629 mm specimens, and ZSI 4196 (formerly IM 4196), a 780 mm male (J. Anderson [First Yunnan Exped.], 13–23 May 1868 [Muangla] & 10–22 Aug. 1868 [Hotha]).
Type locality: "Muangla and Hotha at elevations of 2,000 and 4,500 feet, Western Yunnan" [= Lianghe, Yingjiang County, 24°48'N, 98°18'E, elevation 1050 m, and Husa'achangzuxiang, Longchuan County, 24°28'N, 97°54'E, elevation 1435 m, W Yunnan Prov., SW China].
Distribution: Southern China (ext. W Yunnan), 800–1435 m.
Sources: C.H. Pope, 1935, Zhao & Adler, 1993, I. Das et al., 1998 and Zhao, 2006.

ATROPOIDES Werman *in* Campbell & Brodie, 1992 (Viperidae)

Synonyms: *Atropos* Rüppell, 1845 *(nomen praeoccupatum), Atropus* J.W. Müller, 1865 *(nomen emendatum), Atropes* – L.C. Stuart, 1948 *(nomen incorrectum),* and *Adelynhoserserpenae* Hoser, 2012c *(nomen illegitimum).*

Type species: *Trimeresurus nummifer picadoi* Dunn, 1939b.

Distribution: Mesoamerica.

Sources: J.A. Campbell & Lamar,1989, 2004, Werman 1992, Kraus et al., 1996, Werman, 1997, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Castoe et al., 2003, 2005, 2009, Castoe & Parkinson, 2006, Luna-Reyes & Suárez-Velázquez, 2008, E.N. Smith & Ferrari-Castro, 2008, Jardin et al., 2010 and Hoser, 2012d.

1. *Atropoides indomitus* E.N. Smith & Ferrari-Castro, 2008. Zootaxa (1948): 59–66, figs. 1–4.

Type: Holotype, UTA 52952, 573 mm male (J.A. Ferrari-Castro, 17–22 May 2002).

Type locality: "near the edge of Quebrada de Botaderos, Montaña de Botaderos, Departamento de Colón, Honduras, 670 m (15º26'03.4" N 86º08'37.3" W)."

Distribution: Eastern Honduras (Colón, Olancho), 670–1200 m.

Source: McCranie, 2011a.

2. *Atropoides mexicanus* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpet. Gén. 7(2): 1521–1522. (*Atropos mexicanus*)

Synonyms: *Atropos mexicanus* A.-M.-C. Duméril, 1853 (*nomen nudum*), and *Bothriechis nummifera notata* J.G. Fischer, 1880,

Type: Holotype, MNHN 7612.

Type locality: "Coban, capitale de la Prov. de la Vera-Paz, (Republique de Guatemala, Amérique centrale)" [= Cobán, SW Alta Verapaz Dept., cen. Guatemala, 15°28'N, 90°22'W, elevation 1325 m].

Distribution: Mesoamerica. Southern Mexico (Chiapas, S Tabasco), S Belize (Belize, Cayo, Stann Creek, Toledo), Guatemala (Alta Verapaz, Baja Verapaz, Huehuatenango, Izabal, Petén), El Salvador (Chalatenango), NW Honduras (Atlántida, Copán, Cortés, Santa Bárbara), Nicaragua (Matagalpa, Río San Juan), Costa Rica (Alajuela, Cartago, Guanacaste, Limón, Puntarenas, San José) and W Panama (Canal Zone, Chiriquí, Coclé, Colón), NSL–1600 m.

3. *Atropoides nummifer* (Rüppell, 1845). Mus. Senck., Amph. 3: 313. (*Atropos nummifer*)

Synonyms: *Bothrops nummifer veraecrucis* Burger, 1950, *Lachesis nummifera* – Boettger, 1898, *Bothriochis mammifera* – Recinos, 1913 *(nomen incorrectum),* and *Adelynhoserserpenae* Hoser, 2012c *(nomen illegitimum).*

Type: Holotype, SMF 21196 (formerly SMF-R III.KK.1a & SMF-B 9544, 1a) (E. Rüppell, 1840).

Type locality: Unknown. Designated as Mexico *fide* Boettger (1898: 138). Restricted to Teapa, Tabasco, Mexico *fide* Burger (1950: 62).

Distribution: Eastern Mexico (Hidalgo, N Oaxaca, E Puebla, ext. SE San Luis Potosí, Veracruz), 670–1800 m.

4. *Atropoides occiduus* (Hoge, 1966a). Mem. Inst. Butantan (1965) 32: 130. (*Bothrops nummifer occiduus*) *(nomen substitutum)*

Synonyms: *Bothrops affinis* Bocourt, 1868 *(nomen praeoccupatum),* and *Bothrops nummifer occidduus* – Hoge & Romano-Hoge, 1981a *(nomen incorrectum).*

Types: Syntypes (3), MNHN 1194–96.

Type locality: "Saint-Augustin (Guatémala), versant occidentale de la Córdillère. 610 mètres d'altitude."

Distribution: Mesoamerica. Southeastern Mexico (SE Chiapas), S Guatemala and W El Salvador (Ahuachapán, Chalatenango, La Libertad, San Vicente, Sonsonate), 610–1700 m.

Sources: Castoe et al., 2003 and G. Köhler et al., 2005.

5. *Atropoides olmec* (Pérez-Higareda, Smith & Juliá-Zertuche, 1985). Bull. Maryland Herp. Soc. 21(3): 97–99, fig. 1. (*Porthidium olmec*)

Type: Holotype, UNAM-LT 1300, a 660 mm female (G. Pérez-Higareda, Sept. 1981).

Type locality: "crest of Cerro Egega, 1100 m, Los Tuxtlas uplands, municipality of Catemaco, southern Veracruz, México" [= 18°25'N, 95°07'W].

Distribution: Southeastern Mexico (Chiapas, SE Oaxaca, S Veracruz) and cen. Guatemala (Alta Verapaz), 530–1100 m.

Source: Castoe et al., 2003.

Remarks: Possibly conspecific with *Atropoides nummifer* *fide* J.A. Campbell & Lamar (1989: 325).

A

6. *Atropoides picadoi* (Dunn, 1939b). Proc. Biol. Soc. Washington 52: 165. (*Trimeresurus nummifer picadoi*)

Type: Holotype, USNM 37753, a 345 mm female (E. Fernandez).

Type locality: "La Palma, 4500 feet, north of San Jose, Costa Rica" [= La Palma, 1.4 km N San José (9°55'N, 84°05'W), San José Prov., cen. Costa Rica, elevation 1372 m].

Distribution: Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José) and W Panama (Bocas del Toro, Chiriquí), 15–2000 m.

Sources: E.H. Taylor, 1951, 1954, V. Martinez, 1983, N.J. Scott et al., 1983, Werman, 1984, Savage & Villa, 1986, Solis, 1991, Savage, 2002 and Zaher et al., 2012.

Remarks: The basal species of *Cerrophidion* clade *fide* Zaher et al., 2012, presenting a nomenclatural problem as *Trimeresurus nummifer picadoi* Dunn is type species of *Atropoides* Werman [publ. June 1992], which has priority over *Cerrophidion* Campbell & Lamar [publ. Aug. 1992] either making *Cerrophidion* a junior synonym of *Atropides* or recognizing both genera, but in either case requiring a new generic name for the five "*Atropoides*" species.

†*AUSTRALOPHIS* Gómez, Báez & Rougier, 2008
(Anilioidea *incertae sedis*)

Type species: †*Australophis anilioides* Gómez, Báez & Rougier, 2008.

Distribution: Upper Cretaceous of Argentina.

Sources: Gómez et al., 2008 and Albino, 2011b.

1. †*Australophis anilioides* Gómez, Báez & Rougier, 2008. Cretaceous Res. 29(3): 483–485, fig. 3.

Type: Holotype, MML–PV 181, one trunk vertebra.

Type locality: "Bajo Trapulcó (39º47'02"S, 66º42'17"W), 150 km south-west of Lamarque, Rio Negro Prov., northern Patagonia, Argentina. Lower member of Allen Formation (Malargile Group, southern margin of the Neuquén Basin), Late Campanian-Early Maastrichtian."

Distribution: Upper Cretaceous (Campanian-Maastrichtian: 65.5–83.6 mya) of Argentina.

AUSTRELAPS Worrell, 1963a
(Elapidae)

Synonyms: *Austrelops* – Porter, 1972 *(nomen incorrectum),* and *Australaps* – Carpenter, 1986 *(nomen incorrectum).*

Type species: *Hoplocephalus superbus* A.C.L.G. Günther, 1858.

Distribution: Southeastern Australia.

Sources; Kinghorn, 1964, S. Phillips, 1980, Shine & Allen, 1980, Lombardi, 1985, Schwaner et al., 1985, Shine, 1987b, S.K. Wilson & Knowles, 1988, Gow, 1989, Hoser, 1989, 2009a, 2012e, Rawlinson, 1991, Ehmann, 1992, Fearn & Munday, 1995, Greer, 1997, David & Ineich, 1999, Cogger, 2000, Sanders et al., 2009 and Zaher et al., 2009.

1. *Austrelaps labialis* (Jan, 1859a). Rev. Mag. Zool. (2) 11: 124, 128. (*Alecto labialis)*

Type: Neotype, SAMA 26414, a 550–554 mm female, designated by Rawlinson (1991: 127).

Type locality: "Islet 477, Pelican Lagoon, Kangaroo Island, South Australia, Australia" via neootype selection.

Distribution: Extreme S Australia (ext. SE South Australia, Kangaroo Is. and islets), NSL–625 m.

Remarks: Supplemental original description in Jan (1859e: pl. c, fig. no. 3).

2. *Austrelaps ramsayi* (Krefft, 1864c). Proc. Zool. Soc. London 32(1): 180–181, 3 figs. (*Hoplocephalus ramsayi*)

Synonyms: *Hoplocephalus bransbyi* Macleay, 1878a, *Hoplocephalus brankysi* – Goldman, Hill & Stanbury, 1969 *(nomen incorrectum), Austrelaps superbus victoria* Saint-Girons & Détrait, 1980 *(nomen nudum),* and *Austrelaps paulinus* Wells & Wellington, 1985.

Type: Neotype, AMS 31922 (formerly MM MR1362, 541), a 412 mm specimen, designated by Rawlinson (1991: 128).

Type locality: "Moss Vale, New South Wales (34° 33' S, 150° 23' E), Australia, Australia" via lectotype selection.

Distribution: Southeastern Australia (E New South Wales, E Victoria), NSL–2000 m.

Sources: G. Swan, 1990, Hoser, 1991 and Shea & Sadlier, 1985, 1999.

Remarks: Original description reprinted in Krefft (1865a: 67, 3 figs.). Holotype (AMS 6642) lost *fide* Rawlinson (1991: 128).

3. *Austrelaps superbus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 217. (*Hoplocephalus superbus*)

Synonyms: *Alecto schmidti* Jan, 1863b (*nomen nudum*), *Alecto schmidtii* Jan, 1873 *in* Jan & Sordelli, 1870–1881, *Austrelaps superbus australia* – Saint-Girons Détrait, 1980 *(nomen incorrectum),* and *Danisonia superba* – Khole, 1991 *(nomen incorrectum).*

Type: Lectotype, BMNH 1946.1.20.37, a 725 mm male (R.C. Gunn, July 1832–Jan. 1847), designated by Rawlinson (1991: 126).

Type locality: "Tasmania" [Australia].

Distribution: Southeastern Australia (E New South Wales, ext. SE South Australia, S Victoria, Tasmania, Bruny, Cape Barren, Chalky, Clarke, Flinders, Hunter, King, Maria, Outer Sister, Preservation and Three Hummock Is.), NSL–2125 m.

Sources: F. McCoy, 1878b, Littlejohn, 1962 and M.J. Smith, 1975.

AZEMIOPS Boulenger, 1888 (Viperidae)

Synonyms: *Azemops* – Palacky, 1898 *(nomen incorrectum),* and *Azemiophis* – Cope, 1900 *(lapsus calami).*

Type species: *Azemiops feae* Boulenger, 1888h.

Distribution: Eastern Asia.

Sources: C.H. Pope, 1935, Liem et al., 1971, Marx & Rabb, 1972, B. Hu et al., 1980, Zhao & Zhao, 1981, Yuan, 1983a, J.C. Murphy, 1984, Lombard et al., 1986, Tian et al., 1986, Price 1987a, Maes, 1989, Song, 1990, Cadle, 1992, Golay et al., 1993, Knight & Mindell, 1993, Zhao & Adler, 1993, Heise et al., 1995, Orlov, 1995, 1997, David & Ineich, 1999, McDiarmid et al., 1999, Underwood, 1999, Orlov et al., 2000 Kelly et al., 2003, Leviton et al., 2003, Mallow et al., 2003, J.C. Murphy & Schlager, 2003, Zhao, 2006, Wüster et al., 2008, V.S. Nguyen et al., 2009, Phelps, 2010, I. Das, 2012, Hoser, 2012d, and Yao, 2012.

1. *Azemiops feae* Boulenger, 1888h. Ann. Mus. Civ. Stor. Nat. Genova (2) 6: 603, pl. 7.

Type: Holotype, MSNG 30891, a 610 mm specimen (L. Fea, 1886).

Type locality: "Kakhien Hills, north of Tenasserim, Burma" [= Kachin Hills, Tanintharyi State, S Myanmar].

Distribution: Eastern Asia. Southern China (Anhui, Fujian, Gansu, Guangxi, Guizhou, Hunan, Jiangxi, Shaanxi, Sichuan, SE Xizang, Yunnan, Zhejiang), N Myanmar (Kachin), and N Vietnam (Bac Kan, Cao Bang, Vinh Phu), 700–2000 m.

B

BALANOPHIS M.A. Smith, l938 (Natricidae)

Type species: *Tropidonotus chrysargus ceylonensis* A.C.L.G. Günther, 1858.
Distribution: Sri Lanka.
Sources: Wall, 1921g, M.A. Smith, 1943, Deraniyagala, 1955, McDowell, 1961, P. Silva, 1969, 1980a, Mahendra, 1984, A. Silva, 1990b, 2001, 2009, Somaweera, 2006 and Zaher et al., 2009.
Remarks: Possibly a synonym of *Rhabdophis fide* Young & Kardong (1996: 273).

1. *Balanophis ceylonensis* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 71. (*Tropidonotus chrysargus ceylonensis*)

Type: Holotype, BMNH 1946.1.15.25, a juvenile male (H. Cuming, 1836–1840).
Type locality: "Ceylon" [= Sri Lanka].
Distribution: Sri Lanka (Central, Sabaragamuwa, Southern, Uva, Western), 915–1220 m.

BAMANOPHIS Schätti & Trape, 2008 (Colubridae)

Type species: *Periops dorri* Lataste, 1888.
Distribution: West Africa.
Sources: Hughes & Barry, 1969, Villiers, 1975, Roman, 1984, 2008, J.-F. Trape, 1997, Hughes, 1983, 2013, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Schätti & Trape, 2008 and Segniagbeto et al., 2011.

1. *Bamanophis dorri* (Lataste, 1888). Naturaliste (2) 10(38): 227. (*Periops dorri*)

Types: Syntypes (2), BMNH 1946.1.13.3 (formerly BMNH 1920.1.20.3742), a 735 mm female, and BMNH 1946.1.14.82 (formerly BMNH 1920.1.20.3785), a 435 mm female (E. Dorr, 3–4 June 1887).
Type locality: "dans le fort et à côté du fort de Bakel, Haut-Senegal" [= Bakel, Senegal, 14°52'N, 12°31'W, elevation 25 m, a French fortress and garrison in the border triangle of Senegal with Mali and Mauritania, below the junction of the Senegal and Falémé Rivers *fide* Schätti & Trape, 2008: 598].
Distribution: West Africa. Southern Mauritania (Assaba, Hodh El Gharbi), S Mali (Kayes, Koulikoro, Mopti, Sikasso), E Senegal (Kédougou, Tambacounda), W Guinea (Kindia, Labé, Mali), S Burkina-Faso (Est, Hauts-Bassins), NE Ghana (N Norther), N Togo (Savanes) and N Benin, 25–600 m.
Remarks: Probably occurs in N Ivory Coast, SW Niger and NW Nigeria *fide* Schätti & Trape (2008: 604).

†*BAVARIOBOA* Szyndlar & Schleich, 1993 (Boidae)

Type species: †*Bavarioboa hermi* Szyndlar & Schleich, 1993.
Distribution: Upper Oligocene to middle Miocene of Germany and Turkey, upper and middle Oligocene of France; lower Miocene of France, Bohemia, Czech Republic, Germany and ? Portugal.
Sources: Szyndlar & Schleich, 1993, 2003, Ivanov, 2002 and Szyndlar & Hosgör, 2012.

1. †*Bavarioboa bachensis* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 24–25, figs. 5a–e.

Type: Holotype, USTL ESP 601, one trunk vertebra.
Type locality: "Espeyrasse (Phosphorites du Quercy complex, France), middle Oligocene (MP 26)."
Distribution: Middle Oligocene (Arvernian, MP 26: 23.0–28.4 mya) of France.

2. †*Bavarioboa crocheti* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 28–38, figs. 9a–e.

Type: Holotype, USTL PDS 3102, one trunk vertebra.
Type locality: "Pech-Desse (Phosphorites du Quercy complex, France), late Oligocene (MP 28)."
Distribution: Upper Oligocene (Arvernian, MP 28: 23.0–28.4 mya) of France.

3. †*Bavarioboa hermi* Szyndlar & Schleich, 1993. Stuttgarter Beitr. Naturk. (192): 7–9, fig. 2.

Type: Holotype, BSPG 1976 XXII 5859, one trunk vertebra.
Type locality: "Petersbuch 2 near Eichstätt, Bayern, southern Germany. Lower Miocene (middle Orleanian; MN 4)."
Distribution: Lower Miocene (Orleanian, MN 4: 16.0–16.9 mya) of S Germany and Czech Republic.

B

4. †*Bavarioboa herrlingensis* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 41–44, figs. 15e–i.

Type: Holotype, SMNS 59441-3, one trunk vertebra.
Type locality: "Herrlingen 11 (Germany), late Oligocene (MP 28/30)."
Distribution: Upper Oligocene (Arvernian, MP 28/30: 23.0–28.4 mya) of Germany.

5. †*Bavarioboa minuta* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 38–40, figs. 14l–p.

Type: Holotype, SMNS 58196-1, one trunk vertebra.
Type locality: "Herrlingen 8 (Germany), late Oligocene (MP 28)."
Distribution: Upper Oligocene (Arvernian, MP 28: 23.0–28.4 mya) of Germany.

6. †*Bavarioboa ultima* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 54–56, figs. 24g–k.

Type: Holotype, SMNS 59091-3, one trunk vertebra.
Type locality: "Rothenstein 13 (Germany), middle Miocene (MN 5)."
Distribution: Middle Miocene (Orleanian, MN 5: 13.7–16.0 mya) of Germany.
Source: Szyndlar, 2009.

7. †*Bavarioboa vaylatsae* Szyndlar & Rage, 2003. Booidea Oligocene Miocene Europe: 26–27, figs. 6b–f.

Type: Holotype, USTL MPF 1102, one trunk vertebra.
Type locality: "Mas-de-Pauffié (Phosphorites du Quercy complex, France), middle Oligocene (MP 26)."
Distribution: Middle Oligocene (Arvernian, MP 26: 23.0–28.4 mya) of France.

BITIA Gray, 1842d (Homalopsidae)

Synonyms: *Bitia* Gray, 1840 *(nomen nudum), Hipistes* Gray, 1849a, *Hypistes* – Palacky, 1898 *(nomen incorrectum),* and *Hipistis* – F. Werner, 1929a *(nomen incorrectum).*
Type species: *Bitia hydroides* Gray, 1842d.
Distribution: Tidal rivers and coastal marine waters of SE Asia, including Andaman Sea and Straits of Malacca.
Sources: M.A. Smith, 1943, E.H. Taylor, 1965, Gyi, 1970, Jayne et al., 1995, J.C. Murphy, 2007b, Alfaro et al., 2008 and Zaher et al., 2009.

1. *Bitia hydroides* Gray, 1842d. Zool. Misc. 2(May): 64.

Synonyms: *Homalopsis hydrina* Cantor, 1847, and *Hipistes fasciatus* Gray, 1849a.
Type: Holotype, BMNH 1946.1.2.38 (formerly BMNH III.15.1.a), a dessicated male.
Type locality: Unknown.
Distribution: Southeast Asia. Southern Myanmar (Bago), S Thailand (Bangkok, Phra Nakhon Si Ayutthaya), Singapore and West Malaysia (Kedah, Johor, Pinang, Penang Is.).
Remarks: E.H. Taylor (1965: 927) questioned the Thailand record of Boulenger, 1896a.

BITIS Gray, 1842e (Viperidae)

Synonyms: *Cobra* Laurenti, 1768 *(nomen rejiciendum), Echidna* Merrem, 1820 *(nomen praeoccupatum), Clotho* Gray, 1840 *(nomen nudum), Clotho* Gray, 1842e *(nomen praeoccupatum), Echidne* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Calechidna* Tschudi, 1846, *Echidua* – Reichenow, 1874 *(nomen incorrectum), Echidra* – Kingsley, 1888 *(nomen incorrectum), Bitus* – Hewitt, 1912 *(nomen incorrectum), Hallowellius* A.F.T. Reuss, 1939a, *Hindius* A.F.T. Reuss, 1939a, *Macrocerastes* A.F.T. Reuss, 1939a, and *Keniabitis* Lenk, Herrmann, Joger & Wink, 1999.
Type species: *Echidna arietans* Merrem, 1820 *(nomen protectum).*
Distribution: Africa.
Fossil record: Pliocene and Pleistocene of Tanzania.
Sources: V.F.M. FitzSimons, 1962a, Broadley, 1967a, 1968a, 1983, Haacke, 1975, Derleyn, 1977, Ashe & Marx, 1988, Branch, 1988, Golay et al., 1993, Herrmann & Joger, 1995, Spawls & Branch, 1995, Wallach, 1998a, David & Ineich, 1999, Herrmann et al., 1999, Lenk et al., 1999, McDiarmid et al., 1999, Lenk et al., 2001b, Mallow et al., 2003, Dobiey & Vogel, 2007, Krecsák, 2007, Wüster et al., 2008, Phelps, 2010 and Hoser, 2012d.
Remarks: Pliocene material of Laetoli, Tanzania represents either †*Bitis olduvaiensis* or a new species *fide* Rage & Bailon (2011: 472–473). Lenk et al., 1999 resurrected two subgenera (*Calechidna* and *Macrocerastes*) and described one (*Keniabitis*), which was supported by Wüster et al. (2008: 454), with species as follows: *Bitis (arietans), Calechidna (albanica, armata, atropos, caudalis, cornuta, heraldica, inornata, peringueyi, rubida, schneideri, xeropaga), Keniabitis (worthingtoni),* and *Macrocerastes (gabonica, nasicornis, parviocula, rhinoceros).* Broadley's (pers. comm.) remarks on the Lenk et al., 1999 recognition of *Macrocerastes* as a subgenus was that "this name was not accompanied by a description that states in words, characters that are purported to differentiate the taxon [ICZN 4th Ed., Article 13.1.1]; on the same grounds I rejected *Hindius*."

1. *Bitis albanica* Hewitt, 1937. Vert. Fauna E Cape Prov. (2): 76–77, pl. 21, fig. 3. (*Bitis cornuta albanica*)

Type: Lectotype, PEM 8279 (formerly AMG 6860), a 193 mm male (W. Pannell), designated by Branch (1999a: 57).

Type locality: "Kleinpoort, near Committees, 25 km ENE of Grahamstown (33°14'S, 26°46'E; 3326BB), Grahamstown District, Eastern Cape Prov., South Africa" via lectotype selection.

Distribution: Southwestern South Africa (Eastern Cape), 50–500 m.

Sources: Branch, 1994, 1997, 1999.

Remarks: Photograph of the lectotype in Branch (1999a: 58). A subspecies of *B. cornuta fide* Mallow et al., 2003.

2. *Bitis arietans* (Merrem, 1820). Syst. Amph.: 152. (*Echidna arietans*)

Synonyms: *Cobra clotho* Laurenti, 1768 *(nomen rejiciendum), Cobra lachesis* Laurenti, 1768 *(nomen rejiciendum), Coluber clotho* Gmelin, 1789 *(nomen rejiciendum), Coluber hebraiecus* Lacépède, 1789 *(nomen rejiciendum), Coluber bitin* Bonnaterre, 1790 *(nomen rejiciendum), Coluber intumescens* Donndorf, 1798 *(nomen rejiciendum), Vipera severa* Latreille *in* Sonnini & Latreille, 1801a *(nomen rejiciendum), Coluber clotho* G. Shaw, 1802 *(nomen rejiciendum), Vipera inflata* Burchell, 1822, *Vipera brachyura* Cuvier, 1829, *Clotho lateristriga* Gray, 1842e, *Bitis lachesis somalica* H.W. Parker, 1949, *Bitis arientans* – Boquet, 1964 *(nomen incorrectum), Bitis arietans peghullae* G.D. Stewart, 1973 *(nomen ineditum), Bitis areitans* – Warrell et al., 1976 *(nomen incorrectum),* and *Bitis arientas* – Khole, 1991 *(nomen incorrectum).*

Type: Lectotype, specimen described and illustrated by Seba (1735: 55, pl. 54, fig. 4), designated herein.

Type locality: "Promontorio bonae spei" [= Cape of Good Hope, Western Cape Prov., SW South Africa, 34°21'S, 18°28'E, elevation 20 m] via lectotype selection.

Distribution: Africa and SW Arabia. NW Western Sahara (Saguia El Hamra), SW Morocco (Agadir, Tan Tan, Tiznit), SW Mauritania (Brakna, Guidimaka, Trarza), Senegal (Dakar, Fatick, Kaolack, Kédougou, Louga, Saint-Louis, Tambacounda, Thiès), Gambia (Western), Guinea–Bissau (Bissau, Bolama, Bubaque, Orango and Soga Is.), Guinea (Beyla, Boffa, Boké, Kissidougou, Kouroussa, Macenta, Télimélé), SE Algeria, S Mali (Kayes, Koulikoro, Mopti, Ségou, Sikasso, S Tombouctou), Sierra Leone (Eastern, Northern), Ivory Coast (Bouna, Ferkéssédougou, Toumodi), Ghana (Upper West), Burkina-Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Sud-Ouest, Volta-Noire), Togo (Kara, Maritime, Plateuax, Savanes), N Benin (Alibori, Atakora, Atlantique, Collines, Plateau, Zou), S Niger (Agadez, Maradi, Niamey, Zinder), Nigeria (Gongola, Kaduna), S Chad (Mayo-Kebbi Ouest), SE Sudan, South Sudan, Eritrea (Anseba, Gash-Barka, Northern Red Sea, Southern), Ethiopia (Arussi, Bale, Gemu Gofa, Gojjam, Gondar, Hararge, Illubabor, Kefa, Shoa, Sidamo, Tigre, Wollega, Wollo), Somalia (Awdal, Bakool, Bari, Bay, Galguduud, Gedo, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Mudug, Nugaal, Sanaag, Shabeellaha Dhexe, Shabeellaha Hoose, Sool, Togdheer, Woqooyi Galbeed, Coiama Is.), Cameroon (Adamaoua, Esrt, Centre, Extreme-Nord, Nord, Nord-Ouest), SE Gabon (Haut-Ogooué), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Haute-Sangha, Haute-Kotto, Mbomou, Nana-Mambere, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende), Congo (Bouenza, Brazzaville, Cuvette, Cuvette-Ouest, Pool), Democratic Republic of the Congo, Gabon (Bandundu, Bas-Congo, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), Uganda (Central, Eastern, Northern, Western), Kenya (Central, Coast, Eastern, North-Eastern, Nairobi, Nyanza, Rift Valley, Western), Rwanda, Burundi, Tanzania (Arusha, Dar es Salaam, Dodoma, Iringa, Kagera, Kigoma, Kilimanjaro, Lindi, Manyara, Mara, Mbeya, Morogoro, Mtwara, Mwanza, Piwani, Rukwa, Ruvuma, Shinyanga, Singida, Tabora, Tanga), E Angola (Lunda Norte, Moxico), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawi (Central, Northern, Southern), Mozambique (Gaza, Inhambane, Manica, Maputo, Niassa, Sofala, Tete, Zambézia), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Botswana (Central, Gaborone, Ghanzi, Kgalagadi, Kgatleng, Kweneng, North East, North West, South East, Southern), Namibia (Hardap, Karas, Khomas, Okavango, Omaheke, Oshikoto, Otjozondjupa), Swaziland, W Lesotho, South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, North West, Western Cape), SW Saudi Arabia (Asir, Bahah, Jazan, Makkah), W Oman (Dhofar) and Yemen (Ad Dali', Al Hudaydah, Amanat Al Asimah, Ibb, Sa'dah, Sana'a, Ta'izz), NSL–3500 m.

B

Remarks: BMNH 11.2.3a (dry specimen from The Gambia) listed as type *fide* BMNH catalogue. Hybridization discussed by Hughes (1968: 371, *B. gabonica* x *B. nasicornis*) and Broadley & Parker (1976: 81, *B. arietans* x *B. gabonica*).

3. *Bitis armata* (A. Smith, 1826). Edinburgh New Philos. J. 1: 251. (*Vipera armata*)

Synonym: *Vipera atropoides* A. Smith, 1846 *in* 1838–1849.
Type: Neotype, PEM 6796, a 372 mm male (M. Scott, 26 Feb. 1991), designated by Branch (1999a: 56).
Type locality: "Koppie Alleen Road, De Hoop Nature Reserve, Western Cape Prov., South Africa (34°29'S, 20°28'E; 3420AD; reserve grid BB32)" via neotype designation.
Distribution: Extreme SW South Africa (Western Cape), NSL–200 m.
Source: Branch, 1999a.

4. *Bitis atropos* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 216. (*Coluber atropos*)

Synonyms: *Vipera montana* A. Smith, 1826, *Echidna ocellata* Tschudi, 1845, *Bitis atropos unicolor* V.F.M. FitzSimons, 1959, *Bitis atropus* – G.W. Ferguson, 1977 *(nomen incorrectum),* and *Bitis atropoides* Gans, 1978 *(nomen incorrectum).*
Type: Holotype, NHR Lin-96 [or Lin-97] (formerly MAFR) a 500 mm specimen (Mus. Drottn.).
Type locality: "America" (in error). Probably from Cape of Good Hope [= Western Cape Prov., SW South Africa, 34°21'S, 18°28'E, elevation 20 m] *fide* V.F.M. FitzSimons (1962: 343).
Distribution: Southern Africa. Eastern Zimbabwe (Manicaland), W Mozambique, Lesotho, Swaziland and South Africa (Eastern Cape, Free State, W KwaZulu-Natal, Limpopo, Mpumalanga, Western Cape), NSL–3000 m.
Sources: V.F.M. FitzSimons, 1947, 1962a, Broadley & Cock, 1975, Botha, 1986, Spawls & Branch, 1995, W.R. Branch, 1997, M. Griffin, 2003 and Broadley & Blaylock, 2013.
Remarks: Namibia records doubtful *fide* M. Griffin (2003: 136).

5. *Bitis caudalis* (A. Smith, 1839 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 7, 2 pp. (*Vipera* [*Cerastes*] *caudalis*) (*nomen substitutum*)

Synonym: *Vipera ocellata* A. Smith, 1838 (*nomen praeoccupatum*).
Types: Syntypes (5), BMNH 1865.5.4.153a–e, 3 males and 2 females (A. Smith, 1828–1837), longest syntype 350 mm, lost *fide* Broadley & Rage *in* Golay et al. (1993: 260).
Type locality: "north of the Cape Colony, South Africa."
Distribution: Southwestern Africa. Southwestern Angola (Namibe), Namibia (Erongo, Hardap, Karas, Khomas, Kunene, Ohangwena, Okavango, Omaheke, Omusati, Oshana, Oshikoto, Otjozondjupa), Botswana (Central, Ghanzi, Kgalagadi, Kweneng, Southern), SW Zimbabwe (Matebeleland North, Matebeleland South) and W South Africa (W Eastern Cape, Gauteng, Limpopo, Northern Cape, North West, Western Cape), NSL–1665 m.
Sources: Mertens, 1955, 1971, V.F.M. FitzSimons, 1962a, Broadley & Cock, 1975, Haacke, 1975, Broadley, 1983, Buys & Buys, 1983, Auerbach, 1987, Branch, 1988, Clauss & Clauss, 2002, M. Griffin, 2003 and Broadley & Blaylock, 2013.
Remarks: V.F.M. FitzSimons (1937: 264) reported the types lost but photographs of syntypes in Auerbach (1987: fig. [p. 203]).

6. *Bitis cornuta* (Daudin, 1803c). Hist. Nat. Rept. 6: 188–190. (*Vipera cornuta*)

Synonyms: *Vipera lophophris* Cuvier, 1829, and *Vipera lophophrys* – Wagler, 1830 *(nomen incorrectum).*
Type: Holotype, not designated, a 300–450 mm specimen (W. Paterson, 31 Aug. 1779), lost *fide* McDiarmid et al. (1999: 362).
Type locality: "between Deepe Kloaf, or Water Val, and Great, or Sea Fountain, country of the Hottentots, and Caffraria" [= Cape of Good Hope, Western Cape Prov., SW South Africa]. Restricted to McDougall's Bay (2916BD), Little Namaqualand, Northern Cape Prov., South Africa *fide* Branch (1999a: 53).
Distribution: Namibia (Hardap, Karas, Kunene, Omaheke) and W South Africa (W Northern Cape, Western Cape), NSL–1000 m.
Sources: Mertens, 1955, 1971, V.F.M. FitzSimons, 1962a, Haacke, 1975 and Branch, 1988, 1989, 1997, 1999a.
Remarks: Holotype illustrated in Paterson (1789 & 1790: pl. 15). BMNH 1905.3.7.162 and TM 57965 from Port Nolloth are topotypes *fide* Branch (1999a: 53).

7. *Bitis gabonica* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1428–1430, pl. 80 bis, figs. 1–3. (*Echidna gabonica*)

Synonyms: *Bitis javonica* – Suzuki & Iwanaga, 1970 *(nomen incorrectum),* and *Bitis jabonica* – Mohamed et al., 1971 *(nomen incorrectum).*
Type: Lectotype, MNHN 4012 (C.-E. Aubry-Lecomte & Chaval, 1853–1854), designated by Hughes & Barry (1969: 1030).
Type locality: "Gabon" via lectotype selection.
Distribution: Cen, E and S Africa. Southeastern Nigeria (Akwa Ibom, Cross River, Rivers), S Cameroon (Sud Ouest (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea, Central African Republic (Bamingui-Bangoran, Basse-Kotto, Haut-Mbomou, Haute-Sangha, Lobaye, Mbomou,

Ombella-Mpoko, Ouaka, Sangha), Gabon (Estuaire, Haut-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Brazzaville, Cuvette-Ouest, Kouilou, Likouala, Niari, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Katanga, Maniema, Nord-Kivu, Orientale, Sud-Kivu), South Sudan (Eastern Equatoria), S Uganda (Central, Western), SW Kenya (Western), W Rwanda (Ruhengeri), E Tanzania (Lindi, Mtwara, Piwani, Tanga), E Angola (Lunda Norte, Moxico), N Zambia (Copperbelt, Luapula, Northern, North-Western), N Malawi (Northern), E Zimbabwe (Manicaland), cen. Mozambique (Manica, Sofala) and NE South Africa (NE KwaZulu-Natal), NSL–2300 m.

Sources: V.F.M. FitzSimons, 1962a, Sweeney, 1961, Berry, 1963, Pitman, 1974, Broadley & Cock, 1975, Broadley, 1983, Branch, 1988, Luiselli et al., 1998b, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Luiselli & Akani, 1998c, 2003, Spawls et al., 2002, J.C. Murphy & Schlager, 2003, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Broadley & Blaylock, 2013.

Remarks: *Bitis gabonica, B. nasicornis*, and *B. rhinoceros* are at the same taxonomic level *fide* Lenk et al. (1999, 2001).

8. *Bitis heraldica* (Bocage, 1889). J. Sci. Math. Phy. Nat. Lisboa (2) 1(2): 127–128, fig. 1. (*Vipera heraldica*)

Type: Holotype, MBL 2127, a 325 mm specimen (H.C. Capello & R. Ivens, March–April 1884), destroyed by fire 18 March 1978.

Type locality: "sur les bords de la rivière Calae, l'un des affluents du Cunene, entre le 13 et le 14 parallèle à l'est de Caconda, Angola" [= Caluè River, tributary of the Cunene River, E of Caconda, Huíla District, SW Angola, 13°44'S, 15°04'E, elevation 1700 m].

Distribution: Western Angola (Bengo, Bíe, Huambo, Huíla), 1650–1700 m.

Source: Mertens, 1958.

9. *Bitis inornata* (A. Smith, 1838 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 4, 2 pp. (*Echidna inornata*)

Type: Holotype, BMNH 1946.1.18.13 (formerly BMNH 1865.5.4.166), a 337 mm specimen (J. Leib).

Type locality: "Sneeubergen, or Snow-mountains, which are situated immediately behind the village of Graaff Reynet, South Africa" [= Sneeuwberg, near Graaff-Reinet, W Eastern Cape Prov., South Africa, 32°01'S, 24°13'E, elevation 1600 m].

Distribution: Southern South Africa (Eastern Cape Western Cape), 1600–1800 m.

Sources: V.F.M. FitzSimons, 1962a, Broadley, 1983, 1990 and W.R. Branch, 1988, 1989, 1997, 1999a.

10. *Bitis nasicornis* (G. Shaw & Nodder, 1792 *in* 1789–1813). Nat. Misc. 3: pl. 94, 3 pp. (*Coluber nasicornis*)

Synonyms: *Vipera hexacera* A.-M.-C. Duméril, 1853, and *Bitis nasicorais* – Khole, 1991 *(nomen incorrectum).*

Type: Holotype, BMNH, an 890 mm specimen (E. Jenkins), lost *fide* Golay et al. (1993: 262).

Type locality: "interior parts of Africa." Restricted to coast of Guinea *fide* J.T. Reinhardt (1843: 273) [= Ghana *fide* Hughes & Barry, 1969: 1030].

Distribution: Central and E Africa. Guinea-Bissau (Bubaque Is.), E Guinea (Dalaba, Kouroussa, Labé, Lélouma, Macenta, Nzérékoré), Liberia (Montserrado, Margibi), S Ivory Coast (Abidjan, Guiglo, Lagunes, Tabou, Toumodi), S Ghana (Accra), ? Benin, SE Nigeria (Anambra, Cross River, Imo, Rivers), S Cameroon (Centre, Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Gabon (Estuaire, Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), SW Central African Republic (Lobaye, Ombella-Mpoko, Sangha), S Congo (Kouilou, Lekoumou), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Orientale, Sud-Kivu, Idjwi Is.), NE Zambia (Luapula, Northern), South Sudan (Eastern Equatoria), S Uganda (Central, Western), SW Kenya (Western) and W Rwanda, NSL–2650 m.

Sources: E.H. Taylor & Weyer, 1958, Doucet, 1963, Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, J.A. Butler & Reid, 1986, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Lamar, 1997b, Luiselli & Akani, 1998b, 2003, Luiselli et al., 1998c, Spawls et al., 2002, Broadley et al., 2003, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Krecsák, 2007, Pauwels & Vande weghe, 2008, Segniagbeto et al., 2011, Auliya et al., 2012 and Hughes, 2013.

Remarks: The holotype was obtained from the master of a Guinea vessel *fide* G. Shaw & Nodder (1792 *in* 1789–1813: 3). Unconfirmed specimens from NE Tanzania (Uluguru and/or Usambara) *fide* Spawls et al. (2002: 481).

11. †*Bitis olduvaiensis* Rage, 1973b. Fossil Vert. Africa 3: 4, 5–6, figs. 1a–d, pl. 1, figs. 5–8.

Type: Holotype, NMT, one left maxilla.

Type locality: "FLK I, Main dig, Zinjanthropus level, Olduvai Gorge, Tanzania" [= Villafranchian Bed I].

Distribution: Lowermost Pleistocene (Villafranchian: 1.0–1.1 mya) of Tanzania. Known only from type locality.

Source: Rage & Bailon, 2011.

B

12. *Bitis parviocula* W. Böhme, 1977. Monit. Zool. Ital. (2, Suppl.) 9(3): 60–67, figs. 1, 2A, 3C.

Type: Holotype, ZFMK 16803, a 752 mm female (G. Nikolaus, 18 Oct. 1975).

Type locality: "Doki River Bridge (8°20'N-35°56'E), bei Yambo (= Yembo), an der Strasse von Metu nach Bedelle, Provinz Illubabor, SW-Äthiopien" [= Ethiopia].

Distribution: Southern Ethiopia (Bale, Illubabor, Kefa), 1700–2800 m.

Sources: Golay et al., 1993, Largen & Rasmussen, 1993, Spawls & Branch, 1995, David & Ineich, 1999, Dobiey & Vogel, 2007 and Largen & Spawls, 2010.

Remarks: A valid species *fide* Golay et al., 1993, McDiarmid et al., 1999 and Mallow et al., 2003.

13. *Bitis peringueyi* (Boulenger, 1888d). Ann. Mag. Nat. Hist. (6) 2(8): 141. (*Vipera peringueyi*)

Type: Holotype, SAM 1852, a 250 mm specimen (L.A. Péringuey, 1884–1889), lost *fide* Stander *in* Golay et al. (1993: 263).

Type locality: "Damaraland, 10 miles east of Walfisch Bay, South Africa." [= 10 mi. E of Walvis Bay, Erongo District, Namibia, ca. 23°01'S, 14°31'E. elevation 5 m].

Distribution: Southern Angola (Cuanza Sul) and W Namibia (W Erongo, W Hardap, W Karas, W Kunene), NSL–1750 m.

Sources: Mertens, 1955, 1971, V.F.M. FitzSimons, 1974, Robinson & Hughes, 1978, Broadley, 1983 and Buys & Buys, 1983.

14. *Bitis rhinoceros* (Schlegel, 1855). Versl. Meded. Akad. Wet. 3: 316–317. (*Vipera rhinoceros*)

Types: Syntypes (5), RMNH 1643–46 (H. Pel, 1850) and RMNH 1647 (H. Pel & Ferrier, 1843).

Type locality: "Goud-kust, fusschen hat Kaap de Drie Punten en hat fort Acre" [= Gold Coast between Cap Three Points and Accra, Ghana]. Designated as Dabocrom (RMNH 1644–47) and Cote d'Or (RMNH 1643) *fide* RMNH catalogue.

Distribution: West Africa. Guinea (Dalaba, Kouroussa, Labé, Lélouma, Macenta, Nzérékoré, Télimélé), Sierra Leone (Eastern, Northern, Southern, Western, Sherbo Is.), Liberia (Montserrado, Margibi), S Ivory Coast (Abidjan, Bouaflé, Daloa, Guiglo, Lagunes, Tabou, Toumodi), S Ghana (Accra), S Togo (Centrale, Plateaux) and Benin, NSL–1500 m.

Sources: E.H. Taylor & Weyer, 1958, Doucet, 1963, Hughes, 1968, Hughes & Barry, 1969, Hughes, 1983, Lenk et al., 1999, 2001, M. Griffin, 2003, Ineich, 2003, Villiers & Condamin, 2005, W. Böhme et al., 2011, Segniagbeto et al., 2011 and Chirio, 2013.

Remarks: A valid species *fide* Lenk et al. (1999: 36). Namibia record from Otjimbingwe in error *fide* M. Griffin (2003: 196).

15. *Bitis rubida* W.R. Branch, 1997. So. Afr. J. Zool. London 32(2): 38–42, fig.1.

Type: Holotype, PEM 12582, a 344 mm male (S.A. Botha, 3 Sept. 1986).

Type locality: "Jeep track above Farm Driehoek, Cedarberg Mountains, Western Cape Prov., 32°25'44"S, 19°12'30"E, alt. 1380 m; 3219AC."

Distribution: Southwestern South Africa (Eastern Cape, S Northern Cape, Western Cape), 300–1380 m.

Source: Branch, 1999aa.

16. *Bitis schneideri* (Boettger, 1886a). Ber. Senck. Naturf. Ges. 13: 8–10, pl. 1, figs. 1a–e. (*Vipera schneideri*)

Synonyms: *Bitis caudalis paucisquamatus* Mertens, 1954b, and *Bitis paucisquamata* – V.F.M. Fitzsimons, 1962.

Type: Holotype, SMF 21019 (formerly SMB-B 9498d), a 282 mm female (O. Schneider, 1886).

Type locality: "Angra Pequenia, Südwest-Afrikas." [= Angra Pequena, Lüderitz Bay, Karas District, Namibia, ca. 26°42'S, 15°22'E].

Distribution: Southwestern Namibia (W Karas) and SW South Africa (NW Northern Cape), NSL–65 m.

Sources: V.F.M. FitzSimons, 1962a, Haacke, 1975, Broadley, 1983, and M. Griffin, 2003.

Remarks: A synonym of *B. caudalis fide* McDiarmid et al., 1999.

17. *Bitis worthingtoni* H.W. Parker, 1932c. J. Linn. Soc. (Zool.) 38(257): 221–222.

Type: Holotype, BMNH 1946.1.20.90 (formerly BMNH 1932.5.2.8), a 275 mm male (E.B. Worthington [Cambridge Exped.], 1930–1931).

Type locality: "shore of Lake Naivasha, Kenya" [=Lake Oleidon, Lake Naivasha National Park, S Rift Valley Prov., S Kenya, 0°46'S, 36°22'E, elevation 1930 m].

Distribution: Southwestern Kenya (S Rift Valley), 1500–2000 m.

Source: Spawls et al., 2002.

18. *Bitis xeropaga* Haacke, 1975. Cimbebasia 4A(5): 116–117, pls. 1–2.

Type: Holotype, TMP 42305, a 395 mm male (A. Maritz, 3 Aug. 1972).

Type locality: "Dreikammberg on north bank of ODistribution River, Lüderitz district, South West Africa (16°52'E, 28°05'S, alt. about 300 m)" [= Karas District].

Distribution: Southern Namibia (Karas) and W South Africa (NW Northern Cape), 300–1000 m.

Sources: Broadley, 1983 and M. Griffin, 2003.

B

BLYTHIA Theobald, 1868b
(Colubroidea *incertae sedis*)

Synonyms: *Blythea* Theobald, 1876 *(nomen emendatum), Aproaspidops* Annandale, 1912, *Aproaspidelaps* – Phisalix, 1922 *(nomen incorrectum), Asproaspidops* – Phisalix, 1922 *(nomen incorrectum),* and *Blythis* – B.D. Sharma *in* B.D. Sharma & Kumari, 1998a *(nomen incorrectum).*

Type species: *Calamaria reticulata* Blyth, 1854a.

Distribution: Southern Asia.

Sources: Boulenger, 1913g, M.A. Smith, 1943, Mahendra, 1984, Zhao & Adler, 1993, Ao et al., 2004, Whitaker & Captain, 2004, Zhao, 2006, R.C. Sharma, 2007, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Blythia reticulata* (Blyth, 1854a). J. Proc. Asiatic Soc. Bengal 23(3): 287–288. (*Calamaria reticulata*)

Synonym: *Aproaspidops antecursorum* Annandale, 1912.

Types: Syntypes (2), ZSI 7028–29 (formerly IMC), longest syntype 305 mm (W. Robinson, 1841–1854).

Type locality: "Asám" [= Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram, Nagaland states, NE India].

Distribution: Southern Asia. Northeastern India (Arunachal Pradesh, Assam, Manipur, Meghalaya, Nagaland), SW China (Xizang) and NW Myanmar (Chin, Kachin), 145–2000 m.

BOA Linnaeus, 1758
(Boidae)

Synonyms: *Constrictor* Laurenti, 1768 *(nomen rejiciendum), Boarius* Rafinesque-Schmaltz, 1815 *(nomen emendatum), Draco* Oken, 1816 (*nomen rejiciendum*), *Boas* – S.W. Garman, 1884 *(nomen incorrectum), Boaus* A.L. Herrera, 1899 *(nomen emendatum),* and †*Pseudoepicrates* Auffenberg, 1963.

Type species: *Boa constrictor* Linnaeus, 1758.

Distribution: Latin America and Lesser Antilles.

Fossil records: Lower-middle Miocene of Panama, lower Miocene of USA, upper Pliocene of Argentina, and Pleistocene of Mexico. Possible record from lower Eocene *fide* Albino & Carlini (2008: 85).

Sources: Auffenberg, 1963, Kluge, 1991, 1993a–b, Tolson & R.W. Henderson, 1993, H. Bosch, 1994, Henderson et al., 1995, J.C. Lee, 1996, 2000, Starace, 1998, Wall, 1998a, Vosjoli et al., 1998, McDiarmid et al., 1999, Binder, 2002, G. Köhler et al., 2005, J.R. Berry, 2006, Bonny, 2007, Hes et al., 2007, Russo, 2007, Albino & Carlini, 2008, Navarrete et al., 2009, Ugueto & Rivas, 2010, Albino, 2011a, McCranie, 2011a and Head et al., 2012.

Remarks: Official Generic Name no. 2019 *fide* Opinion 1045 (ICZN, 1976). Vences et al., 2001, recognized *Acrantophis* and *Sanzinia* as distinct genera after Kluge, 1991, synonymized them with *Boa*. *Boa nebulosa* and *B. orophias* are valid species *fide* R.W. Henderson & Powell, 2009.

1. *Boa constrictor* Linnaeus, 1758. Syst. Nat., ed. 10, 1: 215.

Synonyms: *Boa orophias* Linnaeus, 1758, *Constrictor formosissimus* Laurenti, 1768 *(nomen rejiciendum), Constrictor auspex* Laurenti, 1768, *Constrictor diviniloquus* Laurenti, 1768, *Constrictor rex serpentum* Laurenti, 1768 (*nomen rejiciendum*), *Boa divinatrix* Lacépède, 1789 (*nomen rejiciendum*), *Coluber glyripeta* Bechstein, 1802b, *Boa imperator* Daudin, 1803b, *Boa eques* Eydoux & Souleyet, 1842, *Boa diviniloquax mexicana* Jan, 1863b, *Boa occidentalis* Phillipi, 1873, *Boa ortonii* Cope, 1878a, *Boa constrictor isthmica* S.W. Remarks: Official Specific Name no. 2561 *fide* Opinion 1045 (ICZN, 1976).

BOAEDON Duméril, Bibron & Duméril, 1854a (Lamprophiidae)

Synonyms: *Boedon* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Holuropholis* A.-M.-C. Duméril, 1853, *Alopecion* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Boedon* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen emendatum), Eugnathus* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Boodon* A.C.L.G. Günther, 1858 *(nomen emendatum), Catapherodon* Rochebrune, 1885 *(nomen substitutum), Eugnatus* – Boacge, 1887c *(nomen incorrectum), Boaeodon* – Hoffmann, 1890 *(nomen incorrectum), Theleus* Cope, 1893a, *Boaodon* Chabanaud, 1917c *(nomen emendatum), Catophaerodon* – V.F.M. FitzSimons, 1962 *(nomen incorrectum), Holurophis* – Mertens, 1965c *(nomen incorrectum), Bodedon* – Gasperetti, 1974 *(nomen incorrectum),* and *Boadedon* – McCallum, 1986 *(nomen incorrectum).*

Type species: *Lycodon fuliginosus* H. Boie *in* F. Boie, 1827.

Distribution: Africa, Yemen and Seychelles.

Sources: Loveridge, 1957a, V. FitzSimons, 1962a, 1974, Roux-Estève & Guibé, 1965b, Dunger, 1971b, Broadley, 1983, Kelly et al., 2003, 2009, 2011, Marais, 2004, Vital et al., 2008 and Zaher et al., 2009.

Remarks: A valid genus *fide* Kelly et al., 2011.

1. *Boaedon abyssinicus* (Mocquard, 1906a). Bull. Mus. Hist. Nat., Paris 12(5): 249–250. (*Lamprophis abyssinicus*)

Type: Holotype, MNHN 1905.188, a 483 mm female (M. de Rothschild, 1904–1905).

Type locality: "Akaki, en Abyssinie" [= Akaki, Shoa Prov., Ethiopia, 8°57'N, 38°45'E, elevation 2215 m].

Distribution: Southwestern Ethiopia (Gemu Gofa, Illubabor, Kefa, Shoa), 1500–2300 m.

Sources: Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

Remarks: A valid species *fide* Largen & Rasmussen (1993: 345). Photographs of holotype in Largen & Rasmussen (1993: figs. 3a–c).

2. *Boaedon arabicus* H.W. Parker, 1930c. Ann. Mag. Nat. Hist. (10) 6(35): 596–597, 1 fig.

Type: Holotype, BMNH 1903.1.28.14, a 710 mm female (G.W. Bury, 1901–1903).

Type locality: "El Kubar, Amiri Country, S.W. Arabia" [= El Kubar, Ad Dali'' Govern., SW Yemen, 13°48'N, 44°45'E, elevation 1350 m].

Distribution: Western Yemen (Ad Dali', Sana'a, Ta'izz), 500–2200 m.

Sources: Gasperetti, 1988 and Hughes, 1997.

Remarks: A valid species *fide* Hughes (1997: 72).

3. *Boaedon capensis* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(2): 364–365. (*Boaedon capense*)

Synonyms: *Boaedon quadrilineatum variegatum* Jan, 1863b *(nomen nudum), Boaedon quadrilineatum variegatum* Jan, 1870 *in* 1870–1881, and *Boodon mentalis* A.C.L.G. Günther, 1888c.

Types: Syntypes, MNHN, a 674 mm specimen (A. Smith, 1828–1837), and MNHN, a 567 mm specimen (C.F.F. Krauss, 7 May 1838–22 April 1840).

Type locality: "environs du Cap" [= vicinity of Cape of Good Hope, Western Cape Prov., SW South Africa, ca. 34°21'S, 18°28'E, elevation 20 m].

Distribution: Eastern Africa. Northwestern and SW Somalia (Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer, Woqooyi Galbeed), E Kenya (Coast), E Tanzania (Dar es Salaam, Dodoma, Kilimanjaro, Lindi, Morogoro, Mtwara, Piwani, Tabora, Tanga, Mafia, Pemba and Zanzibar Is.), Malawi (Southern), Mozambique (Gaza, Inhambane, Manica, Maputo, Niassa, Sofala, Tete, Zambezia), Zambia (Central, Eastern, Southern), Namibia (Caprivi, Erongo, Hardap, Karas, Khomas, Kunene, Omaheke, Otjozondjupa), Botswana (Central, Gaborone, Ghanzi, Kgalagadi, Kgatleng, Kweneng, North East, North West, Southern, Tuli), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland (Lubombo, Manzini, Shiselweni), W Lesotho, South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, North West, Western Cape), NSL–1350 m.

Sources: Uthmöller, 1937, 1941b, H.W. Parker, 1949, Manaças, 1955, 1959, Vesey-FitzGerald, 1958, Broadley, 1959, Sweeney, 1961, Roux-Estève & Guibé, 1965a–b, Menzies, 1966, Papenfuss, 1969, Pitman, 1974, Broadley & Cock, 1975, Thorpe & McCarthy, 1978, Lanza, 1983, 1990, Pienaar et al., 1983, Auerbach, 1987, Branch, 1988, Gasperetti, 1988, Gras, 1988, Hermann, 1989a, Largen & Rasmussen, 1993, Schätti & Gasperetti, 1994, Hughes, 1997, Clauss & Clauss, 2002, Spawls et al., 2002, Broadley et al., 2003, Branch et al., 2005, Largen & Spawls, 2010 and Broadley & Blaylock, 2013.

Remarks: *Boaedon capensis* a valid species *fide* Hughes, (1997: 73). Taxonomy of *L. fuliginosus* complex *(arabicus-capensis-fuliginosus-lineatus-maculatus)* unresolved and therefore Distributions are only approximate.

4. *Boaedon erlangeri* Sternfeld, 1908a. Sitz. Ges. Naturf. Freude Berlin: 92. (*Boodon erlangeri*)

Type: Holotype, ZMB 27419 (C. von Erlanger & O.R. Neumann, 1900–1901).

Type locality: "Somaliland" [= Somalia] (in error). Corrected to Ethiopia *fide* Largen & Rasmussen (1993: 347).

Distribution: Western Ethiopia (Bale, Gojjam, Illubabor, Kefa, Shoa, Sidamo, Wollega), 820–2800 m.

Sources: Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

Remarks: Photographs of the type in Largen & Rasmussen (1993: figs. 4a–c).

5. *Boaedon fuliginosus* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 551. (*Lycodon fuliginosus*)

Synonyms: *Lycodon fuliginosus* H. Boie in Schlegel, 1826a *(nomen nudum), Lycodon fuliginosus* Schlegel, 1826b *(nomen nudum), Lycodon unicolor* Schlegel, 1837, *Alopecion variegatum* Bocage, 1867b, *Boodon bipraeocularis* A.C.L.G. Günther, 1888c, and *Boodon lineatus lineolata* Bocage, 1895.

Type: Holotype, not designated, formerly RMNH, lost *fide* Brongersma *in* Roux-Estève & Guibé (1965b: 397).

Type locality: "Java" [Indonesia] (in error). Corrected to Africa *fide* V.F.M. FitzSimons (1962a: 119). Restricted to South Africa or possibly Ghana *fide* Brongersma *in* Roux-Estève & Guibé (1965b: 397).

Distribution: Susaharan Africa. Southwestern Morocco (Agadir, Tan Tan), N Western Sahara (Saguia El Hamra), SW Mauritania (Dakhlet Nouadhibou, Guidimaka, Hodh El Gharbi, Inchiri, Trarza), Senegal (Dakar, Fatick, Kaolack, Kédougou, Kolda, Louga, Matam, Saint-Louis, Tambacounda, Ziguinchor), Gambia (MacCarthy Island, Western), Guinea–Bissau (Biombo, Bissau, Tombali, Bubaque Is.), Guinea (Beyla, Boké, Nzérékoré, Télimélé), Sierra Leone (Southern), Liberia (Montserrado), Ivory Coast (Abidjan, Bouaflé, Toumodi), Burkina Faso (Centre, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire, Sahel), Ghana (Upper West, Volta), Togo (Centrale, Kara, Maritime, Plateaux, Savanes), N Benin (Alibori, Atakora, Borgou, Collines, Zou), Niger (Dosso, Maradi, Niamey), Nigeria (Bauchi, Gongola, Kaduna, Kwara, Lagos, Oyo, Plateau, Sokoto), SW Chad (Mayo-Kebbi), Cameroon (Adamaoua, Centre, Est, Littoral, Nord, Nord-Ouest, Ouest, Sud, Sud–Ouest), Central African Republic (Bamingui-Bangoran, Bangui, Basse-Kotto, Kemo-Gribingui, Mbomou, Ombella-Mpoko), E Gabon (Haut-Ogooué), S Congo (Bouenza, Brazzaville, Cuvette, Kouilou, Lekoumou, Niari, Plateau, Pool), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Katanga, Maniema, Nord-Kivu, Orientale, Sud-Kivu), Angola (Benguela, Bié, Cabinda, Cuanza Norte, Cuanza Sul, Cunene, Huambo, Huíla, Lunda Norte, Malanje, Moxico), South Sudan (Eastern Equatoria, Western Equatoria), Eritrea (Anseba, Central, Gash-Barka, Northern Red Sea, Southern), Ethiopia (Arussi, Bale, Gemu Gofa, Gojjam, Gondar, Hararge, Illubabor, Kefa, Shoa, Sidamo, Tigre, Wollega, Wollo), Somalia (Bari, Bay, Gedo, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Sanaag, Woqooyi Galbeed), W Kenya (Central, N Eastern, Nairobi, N North-Eastern, Nyanza, Rift Valley, Western), NW Uganda (Madi, West Nile), Rwanda (Butare, Byumba, Gisenyi, Kibungo, Kigali), Burundi (Bururi, Muyinga, Ruyigi), W Tanzania (Arusha, Iringa, Kagera, Kigoma, Kilimanjaro, Mara, Mbeya, Mwanza, Rukwa, Ruvuma, Shinyanga, Singida, Tabora, Tanga) and N Zambia (Copperbelt, Luapula, Northern, North-Western, Western), NSL–2150 m.

Remarks: Original description based on H. Boie's MS (1823–1825). Includes *Lamprophis lineatus* Duméril, Bibron & Duméril *fide* Roux-Estève & Guibé, 1965a–b, and Thorpe & McCarthey, 1978. Type locality restriction to Cape of Good Hope, South Africa *fide* Broadley (1971d: 73) invalid. Taxonomy of *L. fuliginosus* complex *(arabicus-capensis-fuliginosus-lineatus-maculatus)* unresolved and therefore Distributions are only approximate.

6. *Boaedon geometricus* (Schlegel, 1837). Essai Phys. Serp. 1: 142, 2: 111. (*Lycodon geometricus*)

Synonyms: *Coluber geometricus* F. Boie *in* Schlegel, 1826a *(nomen nudum), Coluber geometricus* Schlegel, 1826b *(nomen nudum),* and *Boodon seychellensis* A.C.L.G. Günther, 1888c.

Types: Syntypes (2), MNHN 1888 and MNHN 7292, longest syntype 1040 mm (F. Péron [N.T. Baudin Géographe Voy.], 1800–1804).

Type locality: Unknown. "Australie" [= Australia] *fide* MNHN catalogue (in error). Designated as Seychelles *fide* Nussbaum (1984: 362).

Distribution: Seychelles (Frégate, Mahé, Praslin and Silhouette Is.), NSL–430 m.

Sources: Rendahl, 1939, Honegger, 1966 and Nussbaum, 1984.

Remarks: Original description based on H. Boie's MS (1823–1825).

7. *Boaedon guttatus* (A. Smith, 1843 *in* 1838–1849). Illust. Zool. So. Afr., Rept. : pl. 23, 2 pp. (*Lycodon guttatus*)

Synonym: *Alopecion annulifer* A.-M.-C. Duméril, Bibron & Duméril, 1854a.

Type: ? Holotype, BMNH 1946.1.23.16, a 287 mm specimen (A. Smith, 1834–1836) (Army Med. College, 1908).

Type locality: "beyond Kurrichane, South Africa" [= Gauteng Prov.] (probably in error). Corrected to Cape Province *fide* Broadley (1983: 88) [= Eastern Cape and Western Cape Prov., South Africa].

Distribution: Southern Africa. Southern Namibia (Karas), ext. S Mozambique (Maputo), Swaziland (Lubombo, Manzini, Shiselweni) and South Africa (Eastern Cape, E Free State, Gauteng, KwaZulu-Natal, S Limpopo, Mpumalanga, Northern Cape, Western Cape), NSL–1200 m.

Sources: Broadley, 1983, Branch, 1988 and R. Hermann, 1991.

Remarks: BMNH 1946.1.23.16 not a syntype *fide* V.F.M. FitzSimons (1937: 262).

8. *Boaedon lineatus* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 363–364.

Synonyms: *Boaedon quadrivittatum* Hallowell, 1857b, *Boaedon quadrilineatum* A.H.A. Duméril, 1859, *Boodon lineatus angolensis* Bocage, 1895, *Boodon bedriagae* Boulenger, 1906f, and *Boodon lineatus plutonis* F. Werner, 1902.

Types: Syntypes (2), MNHN 6537 and MNHN 6562, two females, longest syntype 785 mm.

Type locality: "Côte-D'or" [= Gold Coast, presumably Ghana *fide* Hughes & Barry, 1969: 1013].

Distribution: West and cen. Africa. Senegal (Dakar, Kaolack, Kédougou, Kolda, Tambacounda, Ziguinchor), Guinea–Bissau (Bissau, Bolama, Cacheu, Gabú, Tombali, Bolama Is.), Guinea (Boffa, Boké, Dubréka, Macenta, Mamou, Nzérékoré, Télimélé), Sierra Leone (Eastern, Northern, Southern, Western), Liberia (Montserrado, Margibi), Ivory Coast (Abidjan), SW Mali (Kayes, Koulikoro, Sikasso), Burkina Faso (Centre, Centre-Ouest, Est, Hauts-Bassins, Sahel), Ghana, Togo (Centrale, Plateaux, Savanes), S Benin (Alibori, Atakora, Atlantique, Collines, Zou), S Niger (Dosso, Maradi), Nigeria (Abia, Adamawa, Benue, Kaduna, Katsina, Lagos, Nasarawa, Niger, Plateau, Sokoto, Taraba), SW Chad (Mayo-Kebbi), São Tome and Príncipe (Príncipe and São Tomé Is.), N Cameroon (Extreme-Nord, Nord, Nord-Ouest, Sud-Ouest), Central African Republic (Bamingui-Bangoran, Bangui, Haut-Kotto, Mbomou, Ouaka, Ouham, Ouham Pende, Sangha), S Gabon (Nyanga), Congo (Kouilou), N Democratic Republic of the Congo (Equateur, Orientale), SE South Sudan (Eastern Equatoria) and Uganda, 100–1700 m.

Sources: Sternfeld, 1908b, Villiers, 1950a, 1951a, Monard, 1951, Manaças, 1957, Taylor & Weyer, 1958, Capoccacia, 1961b, Perret, 1961, Roux-Estève & Guibé, 1965a–b, Dunger, 1971b, Pitman, 1974, Thorpe & McCarthy, 1978, Roman, 1980, Joger, 1990, J.B. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, Chirio, 2009, W. Böhme et al., 2011, Segniagbeto et al., 2011, Auliya et al., 2012 and Chirio, 2013.

Remarks: Type locality of MNHN 6537 is Bissao *fide* MNHN catalogue. Taxonomy of *L. fuliginosus* complex *(capensis-fuliginosus-lineatus-maculatus)* unresolved and therefore Distributions are only approximate.

9. *Boaedon maculatus* H.W. Parker, 1932b. Proc. Zool. Soc. London 102(2): 363–364, fig. 3.

Type: Holotype, BMNH 1931.7.20.393, a 250 mm female (R.H.R. Taylor, 10 March 1930).
Type locality: "Bihen (8°25' N., 48°25' E.), 1500 ft., British Somaliland."
Distribution: Northeast Africa. Eastern Ethiopia (Hararge), Djibouti and Somalia (Bakool, Bari, Galguduud, Nugaal, Togdheer), NSL–500 m.
Sources: H.W. Parker, 1949, Lanza, 1983a, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.
Remarks: Taxonomy of *L. fuliginosus* complex *(capensis-fuliginosus-lineatus-maculatus)* unresolved and therefore Distributions are only approximate.

10. *Boaedon olivaceus* (A.H.A. Duméril, 1856). Rev. Mag. Zool. (2) 8: 466. (*Holuropholis olivaceus*)

Synonyms: *Boodon poensis* A.C.L.G. Günther, 1888c, and *Boaedon olivaceus stirnensis* Stucki-Stirn, 1979.
Type: Holotype, MNHN 3408, a 650 mm specimen (C.E. Aubry-Lecomte, 1849–1854).
Type locality: "Gabon."
Distribution: West and cen. Africa. Guinea (Boké, Kindia, Macenta, Nzérékoré), Sierra Leone, S Liberia (Grand Cape Mount, Montserrado), Ivory Coast (Abidjan, Danané, Lagunes), S Ghana (Eastern), S Togo (Plateaux), S Nigeria (Cross River, Lagos, Rivers), S Cameroon (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), W Central African Republic (Bangui, Lobaye, Ombella-Mpoko), Equatorial Guinea (Bioko Is.), Gabon (Moyen-Ogooué, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Kouilou, Pool, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Oriental, Kinshasa, Kivu, Orientale), N Angola (Cabinda, Lunda Norte), S Uganda (Central, Eastern, Western) and W Rwanda, NSL–2000 m.
Sources: Bocage, 1895, Sternfeld, 1908a–b, Loveridge, 1941a, Monard, 1951, Laurent, 1954a, Perret & Mertens, 1957a, Witte, 1962, Doucet, 1963, Mertens, 1965c, Knoepffler, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Dunger, 1971b, Pitman, 1974, Hughes, 1983, Trape, 1985, J.A. Butler & Reid, 1986, Joger, 1990, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Segniagbeto et al., 2011.
Remarks: Possibly occurs in Benin *fide* Hughes (2013: 151).

11. *Boaedon virgatus* (Hallowell, 1854c). Proc. Acad. Nat. Sci. Philadelphia (1854–1855) 7(3): 98. (*Coelopeltis virgata*)

Synonyms: *Boaedon nigrum* J.G. Fischer, 1856b, *Boaedon quadrivirgatum* Hallowell, 1857b, and *Boodon ventralis* A.C.L.G. Günther, 1888c.
Types: Syntypes (3), ANSP 10260–62, a 710 mm, a 660 mm and a 521 mm specimen (H.A. Ford, 1851–1854).
Type locality: "Liberia, west coast of Africa." Corrected to Gaboon, west coast of Africa [= Gabon] *fide* Hallowell (1857b: 56).
Distribution: West Africa. Gambia (Kombo Saint Mary, Western), SE Guinea (Macenta, Nzérékoré), Sierra Leone (Southern), Liberia (Grand Cape Mount, Montserrado, Margibi, Nimba), Ivory Coast (Abidjan, Daloa, Guiglo, Lagunes, Man, Tabou), S Ghana (Eastern), S Togo (Kara, Plateaux), Benin, S Nigeria (Cross River, Lagos, Ogun, Rivers), S Cameroon (Centre, Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), São Tomé and Príncipe (São Tomé Is.), Gabon (Moyen-Ogooué, Ngounié), Congo (Brazzaville, Kouilou, Lekoumou, Niari) and W Democratic Republic of the Congo (Bandundu, Kinshasa), 10–1000 m.
Sources: Sternfeld, 1908a, 1909b, Loveridge, 1938b, 1941a, Monard, 1951, Perret & Mertens, 1957a, E.H. Taylor & Weyer, 1958, Doucet, 1963, Menzies, 1966, Villiers, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Dunger, 1971b, Hakansson, 1981, Trape, 1981, Hughes, 1983, 2013, J.A. Butler & Reid, 1986, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.
Remarks: Three syntypes of *Boaedon quadrivirgatum* Hallowell (1857b) also syntypes of *Coelopeltis virgata* Hallowell (1854c).

†*BOAVUS* Marsh, 1871 (Tropidophiidae)

Synonyms: †*Protagras* Cope, 1872, and †*Protagaras* – Williston & Gregory, 1925 *(nomen incorrectum).*
Type species: †*Boavus occidentalis* Marsh, 1871.
Distribution: Lower Eocene of USA, middle Eocene of USA, lower Oligocene of USA, and middle Miocene of USA.
Sources: Marsh, 1877, Gilmore, 1938, Holman, 1979b, 2000a and Rage, 1984b.

1. †*Boavus affinis* Brattstrom, 1955a. J. Paleont. 29(1): 148–149, fig. 1a.

Type: Holotype, LACM 5119 (formerly CIT 5119), one trunk vertebra.
Type locality: "C.I.T. locality 180, upper Eocene, Sespe formation, north side of Simi Valley, Ventura County, California. In a small exposure of red beds in a large

B

canyon on the east side of the first canyon west of Tapo Canyon or 2.9 miles N. 39.5° E. of Santa Susana Bench Mark 961."

Distribution: Middle Miocene (Barstovian: 13.6–16.3 mya) of USA (Texas) and middle Eocene (33.9–46.2 mya) of USA (California).

Remarks: Rage (1984b: 17) noted that assignment to the genus †*Boavus* is doubtful.

2. †*Boavus brevis* Marsh, 1871. Amer. J. Sci. Arts (3) 1(5): 324–325.

Type: Lectotype, YPM 468 (formerly PMNH 468), one trunk vertebra (H.B. Sargent, 3 Sept. 1870), designated by Gilmore (1938: 28).

Type locality: "Grizzley Buttes, Uinta Co., Wyoming. Bridger, Middle Eocene" via lectotype selection.

Distribution: Lower Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming). Known only from type locality.

Remarks: Lectotype illustrated in Gilmore (1938: fig. 8).

3. †*Boavus idelmani* Gilmore, 1938. Geol. Soc. Amer., Spec. Pap. (9): 29–35, figs. 9–10, pls. 1–2.

Type: Holotype, a 960 mm skeleton (M. Idelman via E.S. Weinberg coll., 1938), lost *fide* Bruner (1991: 26).

Type locality: "Fossil Basin, probably near Fossil, Uinta Co., Wyo., Green River formation, Eocene."

Distribution: Middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming). Known only from type locality.

Source: Grande, 1980.

Remarks: A cast of the holotype is present in the AMNH 3850.

4. †*Boavus occidentalis* Marsh, 1871. Amer. J. Sci. Arts (3) 1(5): 323–324.

Synonyms: †*Boavus agilis* Marsh, 1871, and †*Protagras lacustris* Cope, 1872.

Type: Lectotype, YPM 511 (formerly PMNH 511), one trunk vertebra (O.C. Marsh, Sept. 1870), designated by Gilmore (1938: 19).

Type locality: "Grizzly Buttes, Uinta County, Wyoming. Middle Eocene, Bridger (horizon B)" via lectotype selection.

Distribution: Lower Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming) and lower Oligocene (Orellan: 33.3–33.9 mya) of USA (South Dakota).

Remarks: Lectotype illustrated in Gilmore (1938: fig. 2).

BOGERTOPHIS Dowling & Price, 1988 (Colubridae)

Synonym: *Bogertophus* – Ernst & Ernst, 2003 *(nomen incorrectum).*

Type species: *Coluber subocularis* A.E. Brown, 1902b.

Distribution: Southwestern USA and N Mexico.

Fossil records: Upper Pleistocene of SW USA (New Mexico, Texas).

Sources: Dowling, 1957a, Stebbins, 1985, Dowling & Price, 1988, R. Price, 1990a, Staszko & Walls, 1994, Schulz, 1996, Rodríguez-Robles & Jesús-Escobar, 1999, Bartlett & Tennant, 2000, Utiger et al., 2002 and Pyron & Burbrink, 2009a.

1. *Bogertophis rosaliae* (Mocquard, 1899). Nouv. Arch. Mus. Hist. Nat. (4) 1: 321–323, pl. 12, figs. 1–1b. (*Coluber rosaliae*)

Type: Holotype, MNHN 1892.438, an 853 mm female (L. Diguet, 1889–1892).

Type locality: "Santa Rosalia, Basse-Californie" [= Santa Rosalía, Baja California Sur State, NW Mexico, 27°20'N, 112°16'W, elevation 15 m].

Distribution: Extreme SW USA (ext. S California) and NW Mexico (Baja California Norte, Baja California Sur), NSL–1520 m.

Sources: Price, 1990b, P.R. Brown, 1997 and Grismer, 2002.

2. *Bogertophis subocularis* (A.E. Brown, 1902b). Proc. Acad. Nat. Sci. Philadelphia (1901) 53(3): 492–494, fig., pl. 29. (*Coluber subocularis*)

Synonyms: *Elaphe sclerotica* H.M. Smith, 1941L *(nomen rejiciendum),* and *Elaphe subocularis amplinotus* Webb, 1990.

Type: Holotype, ANSP 13733, a 1590 mm male (E. Meyenberg, 18 June 1901).

Type locality: "Davis Mountains, fifty miles southwest of Pecos, near the head of Toyah Creek, Jeff Davis County, Texas" [USA]. Restricted to vicinity of Madera Canyon, Little Aguja Canyon, and Big Aguja Canyon *fide* D. Rhoads & Salmon (2012: 271).

Distribution: Southwestern USA (S New Mexico, SW Texas) and N Mexico (E Chihuahua, Coahuila, NE Durango, W Nuevo León), 450–1800 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (New Mexico, Texas).

Sources: H.M. Smith, 1953c, Worthington, 1980, Webb & Ferguson, 1986, Parmley, 1990, Webb, 1990, Cranston, 1993a, Degenhardt et al., 1996, Holman, 2000a, Werler & Dixon, 2000, Lemos-Espinal et al., 2004b and D. Rhoads, 2008.

Remarks: Official Specific Name no. 2093 *fide* Opinion 745 (ICZN, 1965c).

BOIGA Fitzinger, 1826a (Colubridae)

Synonyms: *Ibiba* Gray, 1825 *(nomen rejiciendum), Cephalophis* Fitzinger, 1843, *Dipsadomorphus* Fitzinger, 1843, *Eudipsas* Fitzinger, 1843, *Gonyodipsas* Fitzinger, 1843, *Macrocephalus* Fitzinger, 1843 *(nomen*

praeoccupatum), Cephalopholis – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Dipsamorphus* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Goniodipsas* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Opetiodon* A.-M.-C. Duméril, 1853, *Triglyphodon* A.-M.-C. Duméril, 1853, *Triglijphodon* Bleeker, 1856 *(nomen emendatum), Triglypodon* – Bleeker, 1860 *(nomen incorrectum), Tryglyphodon* A.-H.-A. Duméril, 1859 *(nomen emendatum), Cephalopis* – Westphal-Castelnau, 1870 *(nomen incorrectum), Pappophis* Macleay, 1877, *Trigliphodon* – Rochebrune, 1885 *(nomen incorrectum), Borga* – Hoffmann, 1890 *(nomen incorrectum), Opeliodon* – Hoffmann, 1890 *(nomen incorrectum), Liophallus* Cope, 1895c, *Dipsadoides* Annandale, 1905b, *Dipsadamorphus* – Kinghorn, 1929 *(nomen incorrectum), Opetidon* – Maki, 1933 *(nomen incorrectum), Tryglophodon* – Hughes & Barry, 1969 *(nomen incorrectum), Boigo* – Majupuria, 1981 *(nomen incorrectum),* and *Boigan* – Hedges, 1983 *(nomen incorrectum).*

Type species: *Coluber irregularis* Merrem *in* Bechstein, 1802a.

Distribution: Africa, Asia, East Indies and Pacific islands.

Sources: Stejneger, 1907, F. Werner, 1924c, M.A. Smith, 1943, Haas, 1950, Loveridge, 1957a, Leviton, 1970a, Greene, 1989, I. Das, 1998a, Wallach, 1998a, Gravlund, 2001, Orlov & Ryabov, 2002, Groen, 2008, I. Das, 2010, 2012, Ramadhan et al., 2010, and Hoser, 2012ab

Remarks: Official Generic Name *fide* Opinion 1374 (ICZN, 1986a).

1. *Boiga andamanensis* (Wall, 1909j). Rec. Ind. Mus. 3(1): 153–154. (*Dipsadomorphus andamanensis*)

Types: Syntypes (6), ZSI 7928–30, ZSI 8641, ZSI 15192, and ZSI 15198.

Type locality: "Andamans" [= Andaman & Nicobars, E India, Bay of Bengal].

Distribution: Eastern India (Andaman & Nicobars: Andaman and Long Is.).

Sources: Orlov & Ryabov, 2002 and Whitaker & Captain, 2004.

2. *Boiga angulata* (W.C.H. Peters, 1861c). Mber. Königl. Akad. Wiss. Berlin 1861(4): 688–689. (*Dipsas* [*Dipsadomorphus*] *angulata*)

Synonym: *Dipsas guiraonis* Steindachner, 1867a.

Type: Holotype, ZMB 4000, a 1015 mm male (F. Jagor, 1859–1860).

Type locality: "Insel Leyte, Philippinen" [= Leyte Island, Philippines]. Restricted herein to NE shore of Leyte Is. between Tacloban (11°15'N, 125°00'E) and Dulag (10°57'N, 125°02'E), the 30 km (airline) distance covered by Jagor's sojourn to Leyte.

Distribution: Philippines (Catanduanes, Leyte, Luzon, Mindanao, Negros, Panay, Polillo), NSL–2500 m.

Sources: Leviton, 1970a, Ross & Gonzales, 1992 and Ferner et al., 2001.

Remarks: Probably conspecific with *B. drapiezii* Boie *fide* Leviton (1970a: 297), but a valid species *fide* Gaulke (2011: 240).

3. *Boiga barnesii* (A.C.L.G. Günther, 1869). Proc. Zool. Soc. London 37(1): 506, pl. 40, fig. 2. (*Dipsas barnesii*)

Type: Holotype, BMNH 1946.1.1.33, a 550–584 mm male (R.H. Barnes, 1858–1869).

Type locality: "Ceylon" [= Sri Lanka].

Distribution: Southwestern Sri Lanka (Central, Sabaragamuwa, Western), 220–575 m.

Sources: Boulenger, 1896a, Wall, 1921g, Deraniyagala, 1955, P. De Silva, 1969, 1980a–b, A. Silva & Pradeep, 2005 and Somaweera, 2006.

4. *Boiga beddomei* (Wall, 1909j). Rec. Ind. Mus. 3(2): 152. (*Dipsadomorphus beddomei*)

Synonym: *Boiga ranawanei* Samarawiekrama, Samarawiekrama, Wijesena & Orlov, 2005.

Types: Syntypes (7), BMNH, longest syntype 1095 mm (R.H. Beddome, 1857–1882).

Type locality: "Ceylon; Kandy, Matheran" [=Kandy, Central Prov., Sri Lanka, 7°17'N, 80°38'E, elevation 500 m, and Matheran, Maharashtra State, India, 18°59'N, 73°16'E, elevation 750 m]. Restricted to Sri Lanka *fide* Taylor (1950b: 576).

Distribution: Southern India (Kerala, Maharashtra, Orissa, Tamil Nadu) and Sri Lanka (Central, Eastern), NSL–750 m.

Sources: Wall, 1909g, 1921g, E.H. Taylor, 1950b, Inger et al., 1984, Whitaker & Captain, 2004, Samarawickrama et al., 2005 and N. Khaire, 2006.

Remarks: A synonym of *Boiga ceylonensis* Günther *fide* M.A. Smith, 1943 and Deraniyagala, 1955.

5. *Boiga bengkuluensis* Orlov, Kudryavtzev, Ryabov & Shumakov, 2003. Russ. J. Herp. 10(1): 30–34, col. figs. 1–4.

Type: Holotype, ZMMU 10416, a 1673 mm female (S. Kudryavtsev & S. Mamet, 23 April 1998).

Type locality: "Rejiang (region around Curup and Kapahiang Towns), Rejianglebong Prefecture, Bengkulu Prov., Sumatra, Indonesia; 3°28'S, 102°32'E; 500 m elevation."

Distribution: Western Indonesia (Sumatra) and S Thailand (Pattani), 500 m.

Remarks: The S Thailand record is likely *B. drapiezii fide* Vogel (*in litt*.). Possibly occurs in West Malaysia *fide* I. Das (2010: 261).

B

6. *Boiga bourreti* Tillack, Ziegler & Quyet, 2004. Sauria 26(4): 4–8, figs. 1–10.

Type: Holotype, ZFMK 82921, an 1155 mm female (natives, 25 April 2004)

Type locality: "immergrünen Primärwald nordwestlich des Phong Nha-Ke Bang Nationalparks, Distrikt Minh Hoa, Provinz Quang Binh, Vietnam, 550 m NN."

Distribution: Central Vietnam (Kon Tum, Quang Binh), 550 m.

Sources: Ziegler et al., 2006, 2010 and V.S. Nguyen et al., 2009.

7. *Boiga ceylonensis* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 176. (*Dipsadomorphus ceylonensis*)

Synonyms: ? *Coluber boyuna* A.-M.-C. Duméril, 1853 (*nomen nudum*), and *Boiga ceylonensis dakhunensis* Deraniyagala, 1955.

Types: Syntypes (7), BMNH 1946.1.1.29, a juvenile male (R. Templeton, 1839–1851), BMNH 1946.1.4.71, an adult female (A. Paul, 1847–1849), BMNH 1946.1.4.75, a juvenile male (R. Templeton, 1839–1851) and BMNH (4), adult and juvenile males (H. Cuming, 1836–1840).

Type locality: "Ceylon" [= Sri Lanka].

Distribution: Southwestern India (Anaimalai and Meghamalai Hills of Maharashtra, Kerala, Tamil Nadu) and Sri Lanka (Central, North-Central, Uva, Western), 310–1525 m.

Sources: Wall, 1909j, 1921g, Deraniyagala, 1955, P. Silva, 1969, 1980, Inger et al., 1984, A. Silva, 1990b, 2001, 2009, N. Khaire, 2006 and Hutton & David, 2009.

8. *Boiga cyanea* (Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1079–1080. (*Triglyphodon cyaneum*)

Synonyms: *Triglyphodon cyaneum* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Dipsas nigromarginata* Blyth, 1854a, *Dipsas hexagonatus* Blyth, 1855b, and *Dipsas bubalina* A.C.L.G. Günther, 1864a.

Type: Holotype, not designated, an 1887 mm specimen (Smith), location unknown.

Type locality: Unknown.

Distribution: Southeastern Asia. Eastern India (Arunachal Pradesh, Assam, Darjeeling, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, West Bengal, Nicobar Is.), Bangladesh, Nepal (Chitawan, Kathmandu, Makwanpur), Bhutan (Mongar), S China (Yunnan), Myanmar, Thailand (Chachoengsao, Chanthaburi, Chiang Mai, Lampang, Loei, Nakhon Nayok, Nakhon Ratchasima, Phang Nga, Phetchabun, Phuket, Prachin Buri, Roi Et, Si Sa Ket, Surat Thani, Tak, Ubon Ratchathani, Udon Thani, Uttaradit), Cambodia (Kampong Speu, Kampot, Kratie, Mondolkiri, Pursat, Koh Khlap Is.), Laos, Vietnam (Ba Ria-Vung, Binh Phuoc, Dak Lak, Dong Nai, Gia Lai, Kien Giang, Kon Giang, Kon Tum, Lao Cai, Quang Binh, Quang Nam, Tay Ninh), West Malaysia (Perlis) and islands in Gulf of Thailand, 40–2100 m.

Sources: Bourret, 1936b, E.H. Taylor, 1965, Campden-Main, 1970a, C.B. Frith, 1977a, Jiang & Huang, 1984, Ambu & Ng, 1991, B. L. Lim & Ratnam, 1996, Zhao & Adler, 1993, I. Das, 1994, Das & Chandra, 1994, M.J. Cox et al., 1998, Chan-ard et al., 1999, Ao et al., 2004, Tillack et al., 2004, Whitaker & Captain, 2004, Tillack, 2006, B.L. Stuart & Emmett, 2006, B.L. Stuart et al., 2006, M.F. Ahmed et al., 2009, V.S. Nguyen et al., 2009 and S.K. Sharma et al., 2013.

9. *Boiga cynodon* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 549. (*Dipsas cynodon*)

Synonym: *Pareas waandersi* Bleeker, 1860a.

Type: Holotype, RMNH 974, a 2098 mm specimen (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823).

Type locality: "Sumatra" [= W Indonesia] (in error). Corrected to Java, Indonesia *fide* RMNH catalogue.

Distribution: Southeastern Asia and East Indies. Eastern India (Andhra Pradesh, Gujarat, Kerala, Madbya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh, West Bengal), S Thailand (Nakhon Si Thammart, Narathiwat, Phang Nga, Ranong, Surat Thani, Trang, Yala), Cambodia, Myanmar, West Malaysia (Pahang, Pinang, Perlis, Penang and Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Bali, Bangka, Belitung, Borneo, Java, Kalimantan, Mentawai Arch., Nias, Riau Arch., Sumatra) and Philippines (Basilan, Culion, Dinagat, Leyte, Luzon, Mindanao, Palawan, Panay, Polillo, Romblon, Sibutu, Tawitawi), NSL–1300 m.

Sources: Deuve, 1964, E.H. Taylor, 1965, Leviton, 1968b, Campden-Main, 1970a, Kroon, 1973, Tweedie, 1983, B.E. Smith, 1993, Stuebing, 1994a, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Ferner et al., 2001, Malkmus et al., 2002, Orlov et al., 2003, Pauwels et al., 2005, I. Das, 2007b, Mohapa et al., 2009 and Grismer, 2011.

Remarks: Original description based on H. Boie's MS (1823–1825), a specimen with 270 V & 145 SC (RMNH 974 has 269 V & 152 SC *fide* M.S. Hoogmoed *in litt.).*

10. *Boiga dendrophila* (F. Boie, 1827). Isis von Oken 20(6): 549. (*Dipsas dendrophila*)

Synonyms: *Coluber peruvianus* G. Shaw, 1802 (*nomen dubium*), *Dipsas dendrophilus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Dipsas dendrophilus* Schlegel, 1826b *(nomen nudum), Dipsas dendrophilus* Fitzinger, 1826a *(nomen nudum), Dipsas dendrophila javanica* Schlegel, 1844, *Triglyphodon gemmicinctum* A.-M.-C. Duméril, 1853 *(nomen nudum), Triglyphodon dendrophilum* – A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Triglyphodon gemmicinctum* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Triglijphodon gemmicinctum* Bleeker, 1856 *(nomen emendatum), Triglijphodon*

dendrophilum Bleeker, 1856 *(nomen emendatum), Triglyphodon melanotus* Bleeker *in* Boulenger, 1896a *(nomen ineditum), Dipsadomorphus dendrophilus annectens* Boulenger, 1896a, *Dipsadomorphus dendrophilus latifasciatus* Boulenger, 1896a, *Dipsadomorphus dendrophilus melanotus* Boulenger, 1896a, *Dipsadomorphus dendrophilus multicinctus* Boulenger, 1896a, *Dipsadomorphus dendrophilus regularis* Boulenger, 1896a, *Boiga dendrophila divergens* E.H. Taylor, 1922a, *Naja celebensis* Ahl, 1933b, *Boiga dendrophila occidentalis* Brongersma, 1934, *Boiga dendrophila atra* Kopstein, 1936, and *Boiga dendrophila levitoni* Gauke, Demegillo & Vogel, 2004.

Types: Syntypes (2), MNHN 7626 [Celebes] and RMNH 932 [Java], a female (C.G.C. Reinwardt, April 1816–June 1822).

Type locality: "îles Celebes" [= Sulawesi, Indonesia] and "Java" [= W Indonesia].

Distribution: Southeastern Asia and East Indies. Southern Thailand (Chumphon, Nakhon Si Thammarat, Narathiwat, Pattani, Patthalung, Phang Nga, Ranong, Satun, Trang, Yala), Cambodia (Kampot, Koh Kong), Vietnam (Binh Duong, Gia Lai, Ho Chi Minh City), West Malaysia (Pahang, Pinang, Seribuat Arch.: Besar, Sibu, Tioman), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Babi, Bali, Bangka, Battan, Batu, Belitung, Borneo, Java, Kalimantan, Nias, Pinang, Pulu Ubin, Riau Arch., Sulawesi, Sumatra) and Philippines (Balabac, Catanduanes, Dinagat, Leyte, Luzon, Mindanao, Palawan, Panay, Polillo, Samar), NSL–600 m.

11. *Boiga dightoni* (Boulenger, 1894b). J. Bombay Nat. Hist. Soc. (1893–1894) 8(4): 528, 1 pl. (*Dipsas dightoni*)

Type: Holotype, BMNH 1946.1.1.32, an 1100 mm female (S. Dighton, Jan. 1893).

Type locality: "Pirmaad, at an altitude of 3,300 feet" [= Pirmed, Peermade or Azhutha, Travancore Hills, Kerala, SW India, 9°34'N, 76°59'E, elevation 1000 m].

Distribution: Southwestern India (Kerala), 700–1000 m.

Sources: Inger et al., 1984, Murthy, 1985, 1990 and R.C. Sharma, 2007.

12. *Boiga drapiezii* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 549. (*Dipsas drapiezii*)

Synonyms: *Triglijphodon drapiezii* Bleeker, 1856 *(nomen emendatum),* and *Dipsas drapiezii bancana* W.C.H. Peters, 1867.

Type: Holotype, RMNH 1006 (H. Boie, Dec. 1825–Sept. 1827).

Type locality: "Java" [SW Indonesia] Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Southeastern Asia and East Indies. Southern Thailand (Krabi, Nakhon Si Thammarat, Pattani, Phang Nga, Ranong, Trang), Vietnam (Gai Lai), West Malaysia (Johor, Perak, Perlis, Selanger, Seribuat Arch.: Tinggi, Tioman), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Borneo, Java, Kalimantan, Mentawai Arch., Natuna Arch., Sumatra) and the Philippines (Ambon, Palawan, Tawitawi), 500–1000 m.

Sources: E.H. Taylor, 1965, Leviton, 1970a, Tweedie, 1983, Matsui et al., 1984, Welch, 1988, Gaulke, 1994b, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Orlov et al., 2003, Tillack et al., 2004, Chuaynkern & Makchal, 2006, V.S. Nguyen et al., 2009, Onn et al., 2010, Grismer, 2011 and I. Das, 2012.

Remarks: Original description based on H. Boie's MS (1823–1825). Possible syntype is RMNH 1008 (Padang, Sumatra, S. Müller, 1836). S. Müller was in Padang, Sumatra from June 1833–Dec. 1835.

13. *Boiga forsteni* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1077–1078. (*Triglyphodon forsteni*)

Synonyms: *Triglyphodon forstenii* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Triglyphodon tesselatum* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Triglyphodon tessellatum* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Dipsas forsteni ceylonensis* J. Anderson, 1871b, *Boiga forsteni haematus* Deraniyagala, 1955, *Boiga forsteni marpila* Deraniyagala, 1955, and *Boiga forsteni leucohaematus* Deraniyagala, 1960a.

Type: Holotype, MNHN 7624 (formerly RMNH), a 1472 mm specimen (E.A. Forsten, 1838–1843).

Type locality: Unknown.

Distribution: Southern Asia. India (Andhra Pradesh, Bihar, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, S Rajasthan, Tamil Nadu, Uttarakhand, Uttar Pradesh, West Bengal), Nepal (Banke, Bardiya, Kailali, Kanchananpur, Rupandehi, Sunsari, Surkhet) and Sri Lanka (Eastern, North-Central, Northern, North-Western, Southern, Uva, Western), 200–2200 m.

B

B

2001, 2009, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006 and Mohapatra et al., 2009.

Remarks: MNHN 7624 from Indonesia listed as type *fide* MNHN catalogue. Four color morphs occur in Orissa, India *fide* Mohapatra et al., 2009.

14. *Boiga fusca* (Gray, 1842c). Zool. Misc. 2(Apr.): 54. (*Dendrophis* [*Ahetula*] *fusca*)

Synonyms: *Dipsas boydii* Macleay, 1884b, and *Dipsas ornata* Macleay, 1888.

Type: Holotype, BMNH 1946.1.1.28 (J. Gilbert & J. Gould, 1840–1842).

Type locality: "north coast of New Holland; Port Essington, Australia,"[= ruins at tip of Cobourg Peninsula, Northern Territory, N Australia, ca. 11°09'N, 132°00'E, elevation NSL].

Distribution: Northern and E Australia (E New South Wales, N Northern Territory, E Queensland, N Western Australia, Bathurst, Bigge, Brampton, Byam Martin, Coronation, Cotton, Fletcher, Groote Eylandt, Horn, Indian, Inglis, Jungulu, Koolan, Lindeman, Lizard, Marchinbar, Melville, Middle Osborn, Milingimbi, Molema, Murray, Saint Andrew, Shaw, Tiwi, Wessel Marchinbar and Wigram Is.), NSL–995 m.

Source: Cogger & Lindner, 1974.

Remarks: A valid species *fide* Orlov & Ryabov, 2002.

15. *Boiga gocool* (Gray, 1835 *in* Gray & Hardwicke, 1830–1835). Illust. Indian Zool. 2(19–20): pl. 83, fig. 1. (*Dipsas gocool*)

Synonym: *Boiga gokool* A.C.L.G. Günther, 1864a *(nomen emendatum).*

Type: Holotype, BMNH 1946.1.2.59, an 840 mm female illustrated by Hardwicke in fig. 32 (T. Hardwicke, 1756–1823).

Type locality: "Bengal" [= Bangladesh and NE India (Assam, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, West Bengal)].

Distribution: South Asia. Northeastern India (Arunachal Pradesh, Assam, Manipur, Meghalaya, Nagaland, North Bengal, Sikkim), Bangladesh and Bhutan, NSL–1000 m.

Sources: Whitaker & Captain, 2004, M.F. Ahmed et al., 2009 and A. Das et al., 2010.

Remarks: M.A. Smith (1943: 529) designated pl. 32 in T. Hardwicke's collection a lectotype. Original specific orthography on plate 83, text and index is *gocool.* Holotype is illustrated in A. Das et al. (2010: 166, fig. 5). Occurs in Myanmar *fide* M.F. Ahmed et al. (2009: 83).

16. *Boiga guangxinensis* Wen, 1998. Sichuan J. Zool. 17(2): 51–52.

Type: Holotype, GMU 82020, adult male (native, 1982).

Type locality: "Longgang Nature Reserve, Longzhou City, Guangxi, Zhuang Autonomous Region, China (22°20'N and 107°4'E)."

Distribution: Southeastern Asia. Southern China (Guangxi), E Laos and N Vietnam (Bac Giang, Cao Bang, Dak Lak, Dong Nai, Gia Lai, Kon Tum, Lam Dong, Lang Son, Lao Cai, Quang Binh, Rinca, Sumba, Tay Ninh, Thai Nguyen, Vinh Phu), 150–1100 m.

Sources: Orlov et al., 2000, 2003, Tillack et al., 2004, Ziegler et al., 2006 and V.S. Nguyen et al., 2009.

17. *Boiga hoeseli* Ramadhan, Iskandar & Subasri, 2010. Asian Herpetol. Res. (2) 1(1): 23–24, figs. 1–2.

Type: Holotype, MZB Oph. 1242, a 1518 mm female (J.M. Vianney, 3 Sept. 1958).

Type locality: "Larantuka, Flores, Nenggara Islands, Indonesia" [= Larantuka, E Flores, Nusa Tenggara Timur Prov., SE Indonesia, 8°21'S, 122°59'E, elevation 25 m].

Distribution: Southern Indonesia (Alor, Flores, Komodo, Lombok, Rinca, Sumba, Sumbawa, Tenggara).

Source: Lang, 2011.

18. *Boiga irregularis* (Merrem *in* Bechstein, 1802a). Lacépède's Natur. Amph. 4: 239–240, pl. 37, fig. 1. (*Coluber irregularis*)

Synonyms: *Hurria pseudoboiga* Daudin, 1803, *Natrix mollii* Wagler, 1825 *(nomen ineditum), Triglyphodon flavescens* A.-M.-C. Duméril, 1853 *(nomen nudum), Triglyphodon flavescens* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Triglyphodon irregulare* – A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Triglijphodon flavescens* Bleeker, 1856 *(nomen emendatum), Triglijphodon irregulare* Bleeker, 1856 *(nomen emendatum), Dipsas pallida* Jan, 1863, *Pappophis flavigastra* Macleay, 1877, *Pappophis laticeps* Macleay, 1877, and *Dipsas aruanus* A.C.L.G. Günther, 1883.

Type: Holotype, specimen described and illustrated in Bechstein (1802: pl. 37, fig. 1), lost *fide* Iskandar & Colijn (2001: 39).

Type locality: Unknown.

Distribution: East Indies. Indonesia (Papua, Ambon, Aru Is., Batjan, Boano, Buru, Sulawesi, Goram, Halmahera, Kai Is., Manipa, Misool, Morotai, Salawati, Sangihe, Schouten, Seram), Philippines (Sulu Arch., Ternate), Papua New Guinea (Central, East Sepik, Eastern Highlands, Gulf, Milne Bay, Madang, Morobe, Western, Western Highlands, Balaun, Bobo, Boboa, Bougainville, Daru, Duke of York, Fergusson, Goodenough, Karkar, Kiriwina, Manus, New Britain, New Ireland, Normanby and Rabaul Is.) and Guam (introduced), NSL–2286 m.

Sources: Rooij, 1917, Brongersma, 1933e, V.M. Tanner, 1950, McDowell, 1984, Bosch, 1985, Fritts et al., 1987, Fritts, 1988, Savidge, 1991, Ehmann, 1992, O'Shea,

1996, Rodda et al., 1999, J.C. Murphy & Schlager, 2003 and Sajdak, 2010.

Remarks: Official Specific Name *fide* Opinion 1374 (ICZN, 1986a).

19. *Boiga jaspidea* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1093–1097. (*Triglyphodon jaspideum*)

Synonyms: *Triglyphodon jaspideum* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Dipsas fusca* Motlley & Dillwyn, 1855 *(nomen praeoccupatum), Dipsas boops* A.C.L.G. Günther, 1858, and *Dipsadoides decipiens* Annandale, 1905.

Type: Holotype, MNHN 7627 (formerly RMHN) (Dutch Java Exped., 1820–1836).

Type locality: "Java" [SW Indonesia]

Distribution: Southeastern Asia and Greater Sundas. Southern Thailand (Phang Nga, Pattani), Vietnam (Dong Nai, Lam Dong), West Malaysia (Johor, Pinang, Perlis), Singapore, East Malaysia (Sabah, Sarawak, Labuan Is.), Brunei and W Indonesia (Bangka, Borneo, Java, Kalimantan, Mentawai Arch., Nias, Sumatra), NSL–1525 m.

Sources: Westermann, 1942, Brongersma, 1947a, E.H. Taylor, 1965, Tweedie, 1983, Matsui et al., 1984, David & Vogel, 1996, M.J. Cox et al., 1998, Malkmus et al., 2002, Orlov et al., 2003, Tillack et al., 2004, V.S. Nguyen et al., 2009, Ziegler et al., 2010 and I. Das, 2012.

20. *Boiga kraepelini* Stejneger, 1902a. Proc. Biol. Soc. Washington 15: 16–17.

Synonyms: *Boiga sinensis* K.P. Schmidt, 1925, and *Boiga multitemporalis* Bourret, 1935c.

Type: Holotype, ZMH 1565 (O. Warburg, 1888–1889).

Type locality: "Kelung, Formosa" [= Keelung, Keelung Co., Taiwan, 25°07'N, 121°43'E, elevation 90 m].

Distribution: Southeastern Asia. Southeastern China (Anhui, Fujian, Gansu, Guangxi, Guizhou, Hainan, Hunan, Jiangxi, Sichuan, Zhejiang), Taiwan (Hsinchu, Keelung, Kaohsiung, Nantou), Laos (Khammouan) and Vietnam (Bac Giang, Cao Bang, Ha Tinh, Hoa Binh, Lang Son, Nghe An, Quang Tri, Thua Thien-Hue, Vinh Phue), 90–1100 m.

Sources: Stejneger, 1907, Maki, 1931, C.H. Pope, 1935, Kuntz, 1963, Zhao & Adler, 1993, G. Vogel, 1994, M. Huang et al., 1998, Orlov et al., 2000, 2003, Tillack et al., 2004, Zhao, 2006, Truong et al., 2007, V.S. Nguyen et al., 2009, Xiang & Li, 2009, Ziegler et al., 2010 and Yao, 2012.

21. *Boiga multifasciata* (Blyth, 1860). Proc. Asiatic Soc. Bengal 29(1): 114. (*Dipsas multifasciata*)

Type: Holotype, ZSI 7861 (formerly IMC 7861), a 368 mm specimen (J.C. Browne, 1857–1860).

Type locality: "neighborhood of Subathoo" [= Subhathu, near Simla, Himachal Pradesh State, India, 30°58'N, 77°00'E, elevation 1300 m].

Distribution: Himalayas. Northern India (Arunachal Pradesh, Himachal Pradesh, Sikkim, West Bengal), Nepal (Chitwan, Dolakha, Kaski, Kathmandu, Lalitpur, Sankhuwasabha) and Bhutan (Trashiyangtse), 1300–3100 m.

Sources: Tiwari & Shah, 2004 and Whitaker & Captain, 2004.

22. *Boiga multomaculata* (F. Boie, 1827). Isis von Oken 20(6): 549. (*Dipsas multomaculata*)

Synonyms: *Coluber aldrovandi* Merrem, 1820 *(nomen oblitum), Natrix sturmii* Wagler, 1825 *(nomen ineditum), Dipsas multimaculatus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Dipsas multimaculatus* Schlegel, 1826b *(nomen nudum), Dipsas multimaculatus* Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Boiga multimaculata hainanensis* Mell, 1931a, *Boiga multimaculata indica* Mell, 1931a, and *Boiga multimaculata sikiangensis* Mell, 1931a.

Types: Syntypes (2), RMNH 978–79 (H. Boie & H.C. Macklot, Dec. 1825–Sept. 1827).

Type locality: "Java" [SW Indonesia]

Distribution: Southeastern Asia and Greater Sundas. Southern China (Fujian, Guangdong, Guangxi, Guanxi, Guizhou, Hainan, Hong Kong, Hunan, Jiangsi, Yunnan, Zhejiang), Macau, E India (Arunachal Pradesh, Assam, Jammu and Kashmir, Nagaland, Sikkim, Uttaranchal, West Bengal), Bangladesh, Myanmar (Yangon), Thailand (Chaiyaphum, Chanthaburi, Chiang Mai, Chon Buri, Kanchanaburi, Khon Kaen, Loei, Lop Buri, Mae Hong San, Nakhon Ratchasima, Phetchabun, Prachin Buri, Rayong, Saraburi, Tak, Udon Thani, Uttardit), Cambodia (Kampong Speu, Kampot), Laos (Luang Prabang), Vietnam (Bac Kan, Binh Dinh, Binh Duong, Cao Bang, Dak Lak, Dak Nang, Da Nang, Dien Bien, Dong Nai, Gia Lai, Ha Tay, Ha Giang, Ha Tinh, Hoa Binh, Ho Chi Minh City, Lang Son, Lao Cai, Nghe An, Ninh Binh, Ninh Thuan, Quang Binh, Quang Tri, Son La, Tay Ninh, Thua Thien-Hue, Vinh Phuc), Malaysia, Singapore, Brunei, and Indonesia (Java, Kalimantan, Sumatra), NSL–2130 m.

Sources: C.H. Pope, 1935, E.H. Taylor, 1965, Karsen et al., 1986, Easton & Leung-Va, 1993, Zhao & Adler, 1993, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Farkas & Fritz, 1999a, Orlov et al., 2000, Tillack et al., 2004, Whitaker & Captain, 2004, McKay, 2006, B.L. Stuart & Emmett, 2006, V.S. Nguyen et al., 2009 and Ziegler et al., 2010.

Remarks: Original description based on H. Boie's MS (1823–1825) but credit given to Reinwardt. In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Dipsas multomaculata* F. Boie is designated a *nomen protectum* and *Coluber aldrovandi* Merrem a *nomen*

oblitum. Sulawesi records doubtful *fide* Land & Vogel (2005: 248).

B

23. *Boiga nigriceps* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 359. (*Dipsas nigriceps*)

Synonyms: *Dipsas hoffmanseggii* W.C.H. Peters, 1867, *Dipsadomorphus pallidus* Boulenger, 1903, and *Boiga nigriceps brevicauda* M.A. Smith, 1926b.

Type: Holotype, BMNH 1946.1.2.58, a 1651 mm male (Zool. Soc. London, 1863).

Type locality: Unknown.

Distribution: Southeast Asia and Greater Sundas. Southern China (Guangxi), S Thailand (Nakhon Si Thammarat, Narathiwat, Pattani, Phang Nga, Phatthalung, Ratchaburi, Songkhla, Surat Thoni), West Malaysia (Johor, Selanger, Seribuat Arch.: Aur, Tioman), East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Java, Kalimantan, Mentawai Arch., Nias, Siberut, Simeulue, Sumatra), NSL–1100 m.

Sources: E.H. Taylor, 1965, Tweedie, 1983, Zhao & Adler, 1993, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Malkmus et al., 2002, Orlov et al., 2003, Wood et al., 2008 and Grismer, 2011.

Remarks: Vogel *(in litt.)* states that *Boiga brevicauda* is a valid species.

24. *Boiga nuchalis* (A.C.L.G. Günther, 1875). Proc. Zool. Soc. London 43(1): 233. (*Dipsas nuchalis*)

Types: Syntypes (5), BMNH 1874.4.29.933–37, four males and a juvenile, longest syntype 1118 mm (R.H. Beddome, 1857–1875).

Type locality: "forests on the western coast of Malabar, Southern India" [= Kerala State, SW India].

Distribution: India (Maharashtra, Kerala, Orissa, Tamil Nadu) and Nepal (Makwanpur), 200–1875 m.

Sources: Wall, 1909j, M.A. Smith, 1943, Inger et al., 1984, Malhotra & Davis, 1991, Schleich & Kästle. 2002, Tiwari & Shah, 2004 and Whitaker & Captain, 2004.

Remarks: A synonym of *B. ceylonensis* Günther *fide* M.A. Smith, 1943.

25. *Boiga ochracea* (Theobald *in* A.C.L.G. Günther, 1868). Ann. Mag. Nat. Hist. (4) 1(6): 425. *(Dipsas ochraceus)*

Synonym: *Dipsadomorphus stoliczkae* Wall, 1909j.

Types: Syntypes (2), BMNH 1946.1.2.60–61, an 889 mm male and 762 mm female (D. Browne).

Type locality: "Pegu" [Myanmar] (in error). Corrected to near Rangoon and at Maulmain *fide* Theobald (1868a: 54), [= Yangon (16°48'N, 96°09'E, elevation 40 m), Yangon Div., and Mawlamyine (16°29'N, 97°38'E, elevation 30 m), Mon Div., S Myanmar].

Distribution: Southern Asia. Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Sikkim, West Bengal, Andaman Is.), Nepal (Chitwan, Gandaki, Ilam, Kaski, Kathmandu, Makwanpur, Sankuwasabha), Bhutan (Mongar), NE Bangledesh (Chittagong, Sylhet) and S Myanmar (Bago, Tanintharyi), 20–2100 m.

Sources: Kramer, 1977, M.J. Cox et al., 1998, Tiwari & Shah, 2004, Whitaker & Captain, 2004, Agarwal et al., 2010, Rahman, 2012a and S.K. Sharma et al., 2013.

Remarks: Günther attributed the name to Theobald. Collector of types W. Theobald *fide* Günther (1868: 425) and Theobald (1876: 196). Günther (1868: 425) lists longest type as 1118 mm. Boulenger (1896a: 66) listed three juveniles from Burma as syntypes. BMNH 1874.4.29.1193–94 and BMNH 1889.3.25.37–39 (from Burma), and BMNH 1872.4.17.119, BMNH 1872.4.17.386, BMNH 1894.12.31.55 and BMNH 1909.3.9.13–15 (from India) listed as syntypes fide BMNH catalogue.

26. *Boiga philippina* (W.C.H. Peters, 1867b). Mber. Königl. Akad. Wiss. Berlin 1867(1): 27. (*Dipsas philippina*)

Type: Holotype, NMW 23401, a 590–690 mm specimen (C. Semper, April 1860–Dec. 1861).

Type locality: "Ylaces im nordwesttheile von Luzon, Philippinen" [= Ilocos Prov., Luzon Is., Philippines *fide* Leviton, 1970a: 312, ca. 16°N, 121°E].

Distribution: Philippines (N Luzon).

Sources: E.H. Taylor, 1922 and Leviton, 1970a.

27. *Boiga quincunciata* (Wall, 1908b). J. Bombay Nat. Hist. Soc. (1907–1908) 18(2): 272–273, pl., figs. 6–10. (*Dipsadomorphus quincunciatus*)

Type: Holotype, ZSI 16131, a 610–914 mm specimen.

Type locality: "almost certainly Tinsukia, Assam" [= Tinsukia, Assam State, NE India, 27°29'N, 95°22'E, elevation 125 m].

Distribution: Northeastern India (Arunachal Pradesh, Assam) and N Myanmar (Kachin), 125 m.

Source: M.A. Smith, 1940b.

Remarks: Type sent to BMNH and lost *fide* M.A. Smith (1943: 353) but BMNH catalogue indicates that it was never received.

28. *Boiga saengsomi* Nutaphand, 1985. Thai Zool. Center Yrbk. 1(1): 4 unnumbered pp., 4 figs.

Synonym: *Boiga mahasomi* Nutaphand, 1985.

Type: Lecotype, NSM 52-3795 (formerly TNRC 52-3795), a 1618–2039 mm female (B. Saengmahasom, 1985), designated by Nutaphand et. al. (1991: 159).

Type locality: "Ban Kanom, Amphoe Khao Phanom, Krabi Prov. (Amphoe Khao Phanom is 50 kilometers northeast of Krabi city at an elevation of 150 meters above sea level)" via lectotype selection.

Distribution: Peninsular Thailand (Krabi, Nakhon Si Thammarat, Surat Thani, Trang), 150–180 m.

Sources: M.J. Cox, 1991b, Nutaphand et. al., 1991, M.J. Cox et al., 1998, Chan-ard et al., 1999 and I. Das, 2010.

Remarks: This species was renamed *B. mahasomi* by Nutaphand in later publications to honor the collector of the type but the action is invalid under the ICZN Code.

29. *Boiga schultzei* E.H. Taylor, 1923. Philippine J. Sci. 22D(5): 552–553, pl. 3, fig. 3.

Type: Holotype, formerly WS, a 1410 mm specimen (C.M. Weber), location unknown.

Type locality: "Palawan, Philippine Islands."

Distribution: Western Philippines (Palawan).

Remarks: Previously a subspecies of *B. drapiezii*.

30. *Boiga siamensis* Nutaphand, 1971. "Poisonous snakes of Thailand": 60–61, fig. p. 64 (upper). (*Boiga* sp. *siamensis* and *Boiga cynodon siamensis*)

Synonym: *Boiga ocellata* Kroon, 1973.

Type: Neotype, FMNH 191997, a 1625 mm male (R.F. Inger, 7 April 1969), designated by Pauwels et al. (2008: 104).

Type locality: "Sakaerat, Nakhon Ratchasima Prov., Thailand" via neotype selection.

Distribution: Southeast Asia. Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Nagaland, West Bengal), Bangladesh (Sylhet), Myanmar (Bago, Kachin), Thailand (Chaiyaphum, Chanthaburi, Chiang Mai, Chumpon, Kamphaeng, Kanchanaburi, Loei, Nakhon Nayok, Nakhon Ratchaburi, Nakhon Ratchasima, Phetchabun, Phetchaburi, Ratchaburi, Sakhon Nakhon Tak, Udon Thani), Cambodia (Kampot, Koh Kong), Laos and S Vietnam (Dong Nai, Lam Dong, Tay Ninh), 50–1780 m.

Sources: Kroon, 1973, Chan-ard et al., 1999, Stuart, 1999, Orlov & Ryabov, 2002, Orlov et al., 2003, Ao et al., 2004, Whitaker & Captain, 2004, Pauwels et al., 2005, B.L. Stuart & Emmett, 2006, V.S. Nguyen et al., 2009, I. Das, 2010 and Rahman, 2012b.

Remarks: FMNH 191997 is also the type of *B. ocellata* Kroon. Tillack et al. (2004: 12) thus incorrectly recognized *B. ocellata*.

31. *Boiga tanahjampeana* Orlov & Ryabov, 2002. Russ. J. Herp. 9(1): 34–37, figs. 1–10.

Type: Holotype, ZISP 21938, a 1605 mm male (B. Soetanto & V.I. Odinchenko, Sept. 1999).

Type locality: "Tanahjampea Island, Sulawesi Selatan Prov., Indonesia."

Distribution: Central Indonesia (Sulawesi). Known only from type locality.

Sources: Lang & Vogel, 2005 and Koch, 2012.

32. *Boiga trigonata* (Schneider *in* Bechstein, 1802a). Lacépède's Naturg. Amph. 4: 256–257, pl. 40, fig. 1. (*Coluber trigonatus*)

Synonyms: *Coluber sagittatus* G. Shaw, 1802, *Coluber catenularis* Daudin, 1803e, and *Dipsadomorphus trigonata melanocephalus* Annandale, 1904.

Type: Lectotype, specimen described and illustrated by P. Russell (1796: 20–21, pl. 15) (P. Russell, 1781–1791), designated herein.

Type locality: "Vizagapatam, coast of Coromandel, India" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E, elevation 25 m] via lectotype selection.

Distribution: Southern Asia. Iran (Hormizghan, Kerman, Razavi Khorasan, Sistan va Baluchestan), S Uzbekistan, Turkmenistan, Tajikastan, Afganistan, Pakistan (W Baluchistan, Khyber Pakhtunkhwa, Punjab, Sindh), India (Andhra Pradesh, Bihar, Gujarat, Kashmir, Maharashtra, Manipur, Meghalaya, Nagaland, Orissa, Rajasthan, Sikkim, Tamil Nadu, Uttar Pradesh, Uttaranchal, West Bengal), Bangladesh, Nepal (Bara, Bardiya, Bhojpur, Chitwan, Dadeldhura, Dang, Ilam, Jhapa, Kailali, Kapilbastu, Kaski, Kathmandu, Makwanpur, Parsa, Rupandehi, Saptari, Surkhet, Tanahu), Bhutan and Sri Lanka (Central, Northern, North-Central, North-Western, Uva), NSL–2100 m.

Sources: Wall, 1908e, Deraniyagala, 1955, P. Silva, 1969, 1980, Singh, 1972, Bannikov et al., 1977, Kramer, 1977, Nanhoe & Ouboter, 1987, A. Silva, 1990b, 2001, 2009, Latifi , 1991, Szczerbak, 1994, Hallermann et al., 2001, M.S. Khan, 2002, R.C. Sharma, 2003, 2007, Ananjeva et al., 2004, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006 and Masroor, 2012.

Remarks: Original description based on P. Russell (1796: 20–21, pl. 15). Khan (2002: 97) recognized *Boiga melanocephala* as a distinct species.

33. *Boiga wallachi* I. Das, 1998a. J. So. Asian Nat. Hist. 3(1): 60–64, figs. 1a–b, 2a–c.

Type: Holotype, ZSI 25133 (formerly ID/AN 97), a 1006 mm male (I. Das & S. Bhaskar, 22 March 1994).

Type locality: "Kopen Heat (= Dakoank), 06° 48'N; 93° 41'E, Great Nicobar Island (= Sambelong), Bay of Bengal, India."

Distribution: Eastern India (Andaman & Nicobars: Great Nicobar and Little Nicobar Is.).

Sources: Whitaker & Captain, 2004 and Vijayakumar & David, 2006.

34. *Boiga walli* M.A. Smith, 1943. Fauna Brit. India, Rept. Amph. 3: 349. (*Boiga ochracea walli*)

Type: Holotype, not designated, ? BMNH.

Type locality: "Burma" [= Myanmar].

Distribution: Eastern India (Anadaman & Nicobars) and S Myanmar (Tanintharyi), NSL–300 m.

Source: I Das, 2010.
Remarks: A valid species *fide* I. Das (pers. comm.).

B

BOIRUNA Zaher, 1996b (Xenodontidae)

Type species: *Oxyrhopus maculatus* Boulenger, 1896a.
Distribution: Southern South America
Fossil records: Lower to middle Pleistocene of Argentina.
Sources: Zaher, 1996b and Zaher et al., 2009.

1. *Boiruna maculata* (Boulenger, 1896a). Cat. Snakes Brit . Mus. 3: 110, pl. 6, figs. 2-2a. (*Oxyrhopus maculatus*)

Synonyms: *Brachyruton occipitoluteum* Duméril, Bibron & Duméril, 1854a, and *Brachyryton plumbeus maculatum* Jan, 1863.
Type: Holotype, BMNH 1946.1.9.33, a 1400 mm female.
Type locality: "Uruguay."
Distribution: Southeast South America. Brazil (Amazonas, Distrito Federal, Goiás, W Mato Grosso do Sul), E Bolivia (Santa Cruz), Paraguay (Alto Paraguay, Asunción, Boquerón, Central, Misiones, Neembucú), Uruguay (Artigas, Cerro Largo, Paysandú, Rocha, Salto, Trienta y Tres) and Argentina (Catamarca, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, Jujuy, La Pampa, La Rioja, Mendoza, Misiones, Salta, San Luis, Santa Fe, Santiago del Estero, Tucumán), 30–880 m.
Sources: Leynaud & Bucher, 1999, Nugueira, 2001, Cabrera, 2004, Carreira-Vidal et al., 2005, Kacoliris et al., 2006, Cacciali, 2008 and Scanferla et al., 2009.

2. *Boiruna sertaneja* Zaher, 1996. Boll. Mus. Reg. Sci. Nat. Torino 14(2): 297–299, fig. 4a–b.

Type: Holotype, MNRJ 2384, a 1320 mm male.
Type locality: "Barreiras, Bahia, Brazil" [= Barreiras, W Bahia State, Brazil, 12°09'S, 45°00'W, elevation 575 m].
Distribution: Northeastern Brazil (Alagoas, Bahia, Ceará, Minas Gerais, Paraíba, Pernambuco, Piauí, ? Tocantins), NSL–785 m.
Source: Recorder et al., 2011.

BOLYERIA Gray, 1842a (Bolyeriidae)

Synonyms: *Uroleptes* Fitzinger, 1843, *Platygaster* A.-M.-C. Duméril & Bibron, 1844, *Uroleptis* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Urolepis* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Bolgeria* – Chenu & Desmarest, 1857 *(nomen incorrectum), Eurolepis* Hoffmann, 1890 *(nomen incorrectum), Euroleptes* Hoffmann, 1890 *(nomen incorrectum), Urolepis* Hoffmann, 1890 *(nomen incorrectum), Bolieria* Boulenger, 1893a *(nomen emendatum),* and *Boliera* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Eryx multocarinata* H. Boie *in* F. Boie, 1827.
Distribution: Mauritius and nearby islands, Indian Ocean.
Sources: Vinson, 1949, Anthony & Guibé, 1952, Guibé, 1958, Stimson, 1969, Hecht & LaDuke, 1988, Tonge, 1990, Wall, 1998b, McDiarmid et al., 1999 and Winters, 2011.

1. *Bolyeria multocarinata* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 513. (*Eryx multocarinata*)

Synonyms: *Tortrix pseudo-eryx* Schlegel, 1837 *(nomen incorrigendum), Platygaster multicarinatus* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Bolyeria multicarinata* Gray, 1849 *(nomen emendatum), Tortrix pseudoeryx* – Giebel, 1862 *(nomen corrigendum),* and *Bolieria multicarinata* Boulenger, 1893a *(nomen emendatum).*
Type: Holotype, MNHN 7185, a 540 mm (svl) male (F. Péron & C.A. Lesueur, 1800–1804).
Type locality: "environs de Port Jackson" [Australia] (in error). Corrected to Round Island near Mauritius *fide* MNHN catalogue, Guibé (1958: 204) and Guibé & Roux-Estève (1972: 129).
Distribution: Mauritius and adjacent islands (Flat, Gunner's Quoin, Pass and Round Is.).
Remarks: Original description based on H. Boie's MS (1823–1825). Effectively extinct ca. 1980 *fide* Day (1989: 252).

BORIKENOPHIS Hedges & Vidal *in* Hedges, Couloux & Vidal, 2009 (Xenodontidae)

Type species: *Alsophis portoricensis* J.T. Reinhardt & Lütken, 1862.
Distribution: Puerto Rico and Virgin Islands.
Fossil record: Pleistocene of the West Indies (Puerto Rico).
Sources: Hedges et al., 2009, R.W. Henderson & Powell, 2009 and Zaher et al., 2009.

1. *Borikenophis portoricensis* (J.T. Reinhardt & Lütken, 1862). Vidensk. Medd. Naturhist. Foren. (1862–1863) 24(10–18): 221–123. (*Alsophis portoricensis*)

Synonyms: *Alsophis anegadae* T. Barbour, 1917b, *Dromicus variegatus* K.P. Schmidt, 1926a, *Alsophis nicholsi* Grant, 1937, *Alsophis nicholsi richardi* Grant, 1946b, *Alsophis portoricensis aphantus* A. Schwartz,

1966, and *Alsophis portoricensis prymnus* A. Schwartz, 1966.

Types: Syntypes (3), ZMUC 60460 and NMW 14836a–b, longest syntype 798 mm (A.H. Riise, 1858–1862), latter destroyed 6 Nov. 1944 during World War II.

Type locality: "Portorico" [= Puerto Rico, Greater Antilles].

Distribution: Puerto Rico bank. Puerto Rico (Aguadilla, Arecibo, Bayamón, Carolina, Humacao, Juana Díaz, Ponce, Toa Baja, Utuado, Vegsa Baja, Caya de Muertos, Cayo Santiago, Culebra, Desecheo, Platillo, and Vieques Is.), U.S. Virgin Is. (Buck, Lovango Cay, Mona, Peter, Salt, St. Thomas) and British Virgin Is. (Mosquito Is.), NSL–450 m.

Sources: A. Schwartz, 1966, Philibosian & Yntema, 1976 and Rivero, 1978, 1998.

2. *Borikenophis sancticrucis* (Cope, 1862b). Proc. Acad. Nat. Sci. Philadelphia 14(1): 76. (*Alsophis sancticrucis*)

Synonyms: *Alsophis sanctae-crucis* Boulenger, 1894a *(nomen emendatum).*

Types: Syntypes (2+), ANSP 5404, longest syntype 1270 mm (E.D. Copedon.), other syntypes lost *fide* A. Schwartz & Henderson (1991: 576).

Type locality: "St. Croix Id., W. Indies" [= St. Croix, U.S. Virgin Is., bet. 17°41–47'N and 64°34–54'W].

Distribution: U.S. Virgin Islands (Green Cay, St. Croix).

Sources: A. Schwartz, 1966 and R.W. Henderson & Powell, 1996b.

Remarks: Possibly extinct *fide* Moreno, 1991.

3. *Borikenophis variegatus* (K.P. Schmidt, 1926a). Publ. Field Mus. Nat. Hist. (Zool.) (1917–1929) 12(12): 160–162, fig. 4. (*Dromicus variegatus*)

Type: Holotype, FMNH 266 (W.W. Brown, Jr., 13 Feb. 1892).

Type locality: "Isla Mona, West Indies" [bet. 18°03–07'N and 67°51–57'W].

Distribution: Puerto Rico (Mona Is.).

Remarks: A valid species *fide* Hedges et al. (2009: 8) Possibly occurs on Desecheo Is. *fide* A. Schwartz & Henderson (1991: 574) and R.W. Henderson & Schwartz (2009: 361).

BOTHRIECHIS W.C.H. Peters, 1859b (Viperidae)

Synonyms: *Teleuraspis* Cope, 1860b, *Thamnocenchris* Salvin, 1860, *Thanatos* Posada-Arango, 1889a, *Thanatophis* Posada-Arango, 1889b *(nomen emendatum), Botriechis* – Hoffmann, 1890 *(nomen incorrectum), Telesuraspis* – Cope, 1891b *(nomen incorrectum), Brothriechis* – Brazil, 1911 *(nomen incorrectum), Brotriechis* – Brazil, 1911 *(nomen incorrectum), Thamnocentris* – Amaral, 1930f *(nomen incorrectum), Bothreichis* – L.C. Stuart, 1948 *(nomen incorrectum), Teleurasphis* – Burger, 1971 *(nomen incorrectum),* and *Teleuraspia* – Hoge & Romano-Hoge, 1981a *(nomen incorrectum).*

Type species: *Bothriechis nigroviridis* W.C.H. Peters, 1859b.

Distribution: Latin America.

Sources: J.A. Peters & Orejas-Miranda, 1970, Burger, 1971, Hoge & Romano-Hoge, 1971, Villa et al., 1988, J.A. Campbell & Lamar, 1989, 1992, 2004, Gosner, 1989, Maes, 1989, Schätti & Kramer, 1991, 1993, Crother et al., 1992, Golay et al., 1993, Kraus et al., 1996, Vidal et al., 1997, 1999, Werman, 1997, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Salomão et al., 1999, J.A. Campbell & Smith, 2000, Taggart et al., 2001, Castoe & Parkinson, 2006, Luna-Reyes & Suárez-Velázquez, 2008,, Castoe et al., 2009 and Hoser, 2012d.

Remarks: *Bothriechis* and *Bothriopsis* are probably independent lineages *fide* Werman (1997: 32) but LDH enzymes failed to distinguish *Bothriopsis* from *Bothrops.*

1. *Bothriechis aurifer* (Salvin, 1860). Proc. Zool. Soc. London 28(1): 459–460, pl. 32, fig. 1. (*Thamnocenchris aurifer*)

Synonym: *Bothriechis aurifera* – Cope, 1871b.

Type: Holotype, BMNH 1946.1.17.71 (formerly BMNH 1864.1.26.32), an 872 mm specimen (R. Owen, 1859–1860).

Type locality: "Cobán, Vera Paz, Guatemala, 4500 feet" [= Cobán, Alta Verapaz Department, Guatemala, 15°28'N, 90°22'W, elevation 1325 m].

Distribution: Extreme SE Mexico (E Chiapas) and cen Guatemala (Sierra de los Cuchumatanes, Sierra de Chuacus, and Sierra de las Minas in Alta Verapaz, Baja Verapaz, Quiché), 1200–2300 m.

Source: J.C. Murphy & Schlager, 2003.

Remarks: Some specimens have been reported from lower elevations *fide* J.A. Campbell & Lamar (2004: 296).

2. *Bothriechis bicolor* (Bocourt, 1868). Ann. Sci. Nat. (Zool.) (5) 10: 202. (*Bothrops bicolor*)

Synonyms: *Bothrops bernoullii* F. Müller, 1878a, *Bothriechis bernouilii* Cope, 1887c *(nomen emendatum), Bothrops bernouillii* Boulenger, 1896a *(nomen emendatum),* and *Bothrops ornatus* Julía-Zertuche & Manuel-Varela, 1978.

Types: Syntypes (4), MNHN 1362, MNHN 6137, and BMNH 1946.1.17.74 (formerly MNHN & BMNH 1895.4.30.38), location other syntype unknown.

Type locality: "des forêts de Saint-Augustin, département de Solola (Guatémala), sur le versant occidental de la Cordillère. 610 mètres d'altitude" [= forests of San

B

Agustin on western slope of cordillera, Sacatepequez Department, Guatemala, 14°33'N, 90°44'W, elevation 610 m.]

Distribution: Southern Mexico (SE Chiapas) and S Guatemala (Chimaltenango, San Marcos, Sololá, Suchitepéquez), 500–2000 m.

Sources: Alvarez del Toro, 1982, J.A. Campbell & Smith, 2000 and Suárez-Velázquez & Luna-Reyes, 2009.

Remarks: MNHN 6137 not listed as a syntype in MHNH catalogue.

3. *Bothriechis lateralis* W.C.H. Peters, 1862c. Mber. Königl. Akad. Wiss. Berlin 1862(12): 674.

Types: Syntypes (4), ZMB 2979–81 and ZMB 8974 (K. Hoffmann, 1853–1859) *fide* Bauer et al. (1995: 80).

Type locality: "Costa Rica vom Vulcan Barbo...aus Veragua" [= Volcán Barba, Heredia Department, Costa Rica, 10°08'N, 84°06'W, and Veragua Prov., cen. Panama].

Distribution: Costa Rica (Cordillera de Tilarán, Cordillera Central, Cordillera de Talamanca in Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José) and W Panama (Chiriquí, Coclé, Lérida, Panamá), 500–2135 m (most abundant between 1200–1800 m *fide* J.A. Campbell & Lamar, 2004: 300).

Sources: E.H. Taylor, 1951, 1954, Villa, 1984, Savage, 2002 and Solórzano, 2004.

Remarks: Records from Nicaragua unconfirmed *fide* J.A. Campbell & Lamar (2004: 300).

4. *Bothriechis marchi* (T. Barbour & Loveridge, 1929b). Bull. Antivenin Inst. Amer. 3(1): 1–3, fig. 1. (*Bothrops nigroviridis marchi*)

Type: Holotype, MCZ 27260, a 560 mm female (D. March, Nov. 1928).

Type locality: "the Gold Mines at Quimistan, Santa Barbara, Honduras Republic" [= El Oro, Municipio de Quimistán, in the Sierra del Espíritu Santo northwest of the town of Quimistán *fide* J.A. Campbell & Lamar, 2004: 301].

Distribution: Northwestern Honduras (Atlántida, Cortés, Santa Bárbara, Yoro) and Nicaragua (Nuevo Segovia), 500–1840 m.

Sources: L.D. Wilson & Meyer, 1985, L.D. Wilson & McCranie, 1992, G. Köhler, 1999b, 2003 and McCranie, 2011a.

Remarks: J.A. Campbell & Smith (2000: 1009) discuss the Santa Bárbara locality.

5. *Bothriechis nigroviridis* W.C.H. Peters, 1859b. Mber. Königl. Akad. Wiss. Berlin 1859(3): 278, pl., fig. 4. (*Bothrops nigroviridis*) (*nomen corrigendum*)

Synonym: *Bothrops nigro-viridis* F. Müller, 1877 *(nomen illegitimum).*

Types: Syntypes (3), ZMB 2986–88, longest syntypes 360 mm and 344 mm (K. Hoffmann, 1853–1859).

Type locality: "Vulcan von Barbo, Costa Rica" [= Volcán Barba, Heredia Department, Costa Rica, 10°08'N, 84°06'W].

Distribution: Costa Rica (Cordillera Central and Cordillera de Talamanca in Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José) and ext. W Panama (Chiriquí), 1150–3000 m.

Sources: E.H. Taylor, 1951, 1954, Villa, 1984, Savage, 2002 and Solórzano, 2004.

6. *Bothriechis rowleyi* (Bogert, 1968b). Amer. Mus. Novit. (2341): 3–7, figs. 1a–c, 2. (*Bothrops rowleyi*)

Synonym: *Bothrops nigroviridis macdougalli* H.M. Smith & Moll, 1969.

Type: Holotype, AMNH 100669, an 875 mm male (J.S. Rowley, 24 April 1967).

Type locality: "a ridge that extends northward from Rancho Vicente, Colonia Rodolfo Figueroa, approximately 5 miles west of Cerro Baúl...approximately 1520 meters, on the headwaters of the Río Grijalva, roughly 30 kilometers to the north and slightly to the east of San Pedro Tapánatepec, in the Distrito de Juchitán, Oaxaca, Mexico."

Distribution: Southern Mexico (NW Chiapas, ext. SE Oaxaca), 1060–1830 m.

Sources: Lynch & Smith, 1965, 1966, H.M. Smith & Moll, 1969 and Gutberlet, 1995.

7. *Bothriechis schlegelii* (Berthold, 1845). Nachr. Georg-Augusts-Univ. Königl. Ges. Wiss. Göttingen (3): 42, pl. 1, figs. 5–6. (*Trigonocephalus schlegelii*)

Synonyms: *Lachesis nitidus* A.C.L.G. Günther, 1859c, *Bothrops nigroadspersus* Steindachner, 1870b, *Teleuraspis nitida* – Cope, 1871b, *Thanatos torvus* Posada-Arango, 1889a, *Thanatophis colgadora* García, 1896, and *Teleuraspis birri* Posada-Arango, 1909.

Type: Holotype, ZFMK 32554 (formerly ZMG 121/261), a 174 mm specimen (C. Degenhardt, 1839–1845).

Type locality: "Provinz Popayan, etwa 2° N.B. und 301° L., Neu-Grenada" [= W Colombia, probably on the Pacific versant *fide* Myers & Böhme, 1996: 17].

Distribution: Latin America. Southern Mexico (N Chiapas), N Guatemala (Izabal region, Petén), S Belize (Cayo, Orange Walk), N Honduras (Atlántida, Colón, Cortés, Gracias a Dios, Olancho, Yoro), E Nicaragua (Jinotega, Matagalpa, Río San Juan), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Barro Colorado, Boca del Toro, Colón, Panamá), Colombia (Antioquia, Atlántica, Boyacá, Caldas, Cauca, Norte de Santander, Santander, Valle), W Venezuela (Táchira), N Ecuador (Chimborazo, El Oro, Esmeraldas, Guayas, Manabí, Pichincha) and Peru (Tumbes), NSL–2640 m.

Sources: Pifano et al., 1950, E.H. Taylor, 1951, 1954, Werman, 1984, L.D. Wilson & Meyer, 1985, Schätti & Kramer, 1993, Kuch & Friere, 1995a, J.C. Lee, 1996, 2000, J.A. Campbell, 1998b, Solórzano et al., 1999, G. Köhler, 2000, Koch & Freire, 2001, Savage, 2002, Navarrete et al., 2009, McCranie, 2011a, Rivas-Fuenmayor et al., 2012 and Rojas-Morales, 2012b.

Remarks: Original description reprinted in Berthold (1846: 13, pl. 1, figs. 5–6). See C.W. Myers & Böhme, 1996 for summary of Berthold papers. Type locality designation of near Popayán, Cauca Dept., Colombia, 2°27'N, 76°37'W, elevation 1800 m *fide* Dunn & Stuart (1951: 56) in error *fide* C.W. Myers & Böhme (1996: 17). Records for Amazonas, Venezuela need confirmation *fide* J.A. Campbell & Lamar (2004: 306).

8. *Bothriechis supraciliaris* (E.H. Taylor, 1954). Univ. Kansas Sci. Bull. 36(2): 791–794, fig. 39. (*Bothrops schlegelii supraciliaris*)

Type: Holotype, KU 31977, a 400 mm specimen (native, 1947, via O. Chavarría, 1952).

Type locality: "mountains near San Isidro del General, San José Prov., Costa Rica" [= mountains in vicinity of San Isidro de El General, W slope of Sierra Talamanca, San José Prov., Costa Rica, 9°22'N, 83°42'W, elevation 715 m].

Distribution: Southeastern Costa Rica (Puntarenas, San José) and Panama (Chiriquí), 800–1700 m.

Sources: Solórano et al., 1998, Crother *in* McDiarmid et al. (1999: 247) and De Jesús, 2007.

9. *Bothriechis thalassinus* J.A. Campbell & Smith, 2000. Rev. Biol. Trop. 48(4): 1002–1009, figs. 1, 2a–b.

Type: Holotype, UTA 46526, a 442 mm male (E.N. Smith, 30 Aug. 1997).

Type locality: "Finca la Firmeza, Sierra de Caral, Izabal, Guatemala, 900 m (15°22'29"N, 88°41'44"W)."

Distribution: Eastern Guatemala (Chiquimula, Izabal) and W Honduras (Copán, Ocotepeque, Santa Bárbara), 200–1750 m.

Source: McCranie, 2011a.

BOTHRIOPSIS W.C.H. Peters, 1861a (Viperidae)

Synonyms: *Brothriopsis* – Cope, 1887c *(nomen incorrectum), Bothriops* – Hoffmann, 1890 *(nomen incorrectum), Botriopsis* – Marschall, 1873 *(nomen incorrectum), Bothiriopsis* – Canton, 1895 *(nomen incorrectum),* and *Bothropsis* – Hoge & Romano-Hoge, 1981a *(nomen incorrectum).*

Type species: *Bothrops taeniatus* Wagler *in* Spix, 1824.

Distribution: South America.

Sources: J.A. Campbell & Lamar, 1989, 1992, 2004, Gosner, 1989, Maes, 1989, Werman, 1992, 1997, Golay et al., 1993, David & Ineich, 1999, McDiarmid et al., 1999, Salomão et al., 1999, Vidal et al., 1999, Gutberlet & Campbell, 2001, Castoe & Parkinson, 2006, Fenwick et al., 2009 and Hoser, 2012d.

Remarks: Not a valid genus *fide* Salomão et al., 1999 but valid *fide* McDiarmid et al., 1999 and J.A. Campbell & Lamar, 2004.

1. *Bothriopsis bilineata* (Wied-Neuwied, 1821). Reise Brasil. 2: 339. (*Cophias bilineatus*)

Synonyms: *Coluber arges* Linnaeus, 1758, *Trigonocephalus bilineatus unicolor* Jan 1859b, *(nomen nudum), Trigonocephalus arboreus* Cope, 1870, *Lachesis bilineata* – Boettger, 1898, *Bothrops bilineatus smaragdinus* Hoge, 1966a, and *Bothriopsis bilineatus smaragdina* – J.A. Campbell & Lamar, 1989.

Type: Holotype, not designated, (A.M.P, zu Wied-Neuwied, 2 Jan.–5 Feb. 1816), lost *fide* McDiarmid et al. (1999: 248).

Type locality: "Brasilien" [= Brazil]. Restricted to Villa Vicosa (= ciudad Marobá), on Rio Perhuype, Estado Bahia, Brazil *fide* Hoge & Lancini (1962: 17).

Distribution: Northern South America. Southern Colombia (Amazonas, Vaupés), SE Venezuela (Amazonas, Bolívar), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni), Suriname (Nickerie), French Guiana (Cayenne, Saint-Laurent-du-Maroni), N Brazil (Bahiá, Espírito Santo, Maranhao, Mato Grosso, Pará, Rio de Janeiro, Rondonia), E Ecuador (Morona-Santiago, Napo, Orellana, Pastaza), E Peru (Junin, Loreto, Madre de Dios, Pasco) and N Bolivia (Beni, Cochabamba, La Paz, Pando, Santa Cruz), NSL–1000 m.

Sources: Cunha, 1967, Cunha & Niciemento, 1978, 1993, Morales & McDiarmid, 1996, Starace, 1998, Lehr, 2001, Duellman, 2005, Harvey et al., 2005, Navarrete et al., 2009, Wallach, 2011 and C.J. Cole et al., 2013.

Remarks: Original description reprinted in Wied-Neuwied (1825c: 483).

2. *Bothriopsis chloromelas* (Boulenger, 1912b). Ann. Mag. Nat. Hist. (8) 10(58): 423–424. (*Lachesis chloromelas*)

Synonym: *Bothrops chrysomelas* Hoge & Romano-Hoge, 1981a *(nomen emendatum).*

Types: Syntypes (3), BMNH 1946.1.17.66 (formerly BMNH 1911.12.13.63), and BMNH 1946.1.19.51–52, longest syntype 740 mm (E. Boettger, 1905–1910).

Type locality: "Huancabamba, E. Peru, above 3000 feet" [= Huancabamba, Pasco Dept., Peru, 23°12'S, 75°33'W, elevation 1700 m].

Distribution: Peru (Huánuco, Junín, Loreto, Pasco), 1000–2000+ m.

Sources: Harvey et al., 2003, 2005.

B

3. *Bothriopsis medusa* (Sternfeld, 1920a). Senckenbergiana 2(6): 180–181, figs. 1–2. (*Lachesis medusa*)

Synonym: *Bothrops eneydae* Sandner-Montilla, 1976.
Type: Holotype, SMF 21202 (formerly SMF-M 9540, 1a), a 460 mm male (F. Müller, 1877).
Type locality: "Caracas, Venezuela" [= Caracas, Distrito Federal State, Venezuela, 10°29'N, 66°54'W, elevation 925 m].
Distribution: Cordillera de la Costa of N Venezuela (Aragua, Bolívar, Carabobo, Distrito Federal, Miranda), 475–2000 (2800) m.
Sources: Pifano & Römer, 1949a and Navarrete et al., 2009.
Remarks: The taxonomic status of *B. eneydae* is unclear and the type is lost.

4. *Bothriopsis oligolepis* (F. Werner, 1901c). Abh. Ber. Kön. Zool. Anthro. Ethno. Mus. Dresden (1900/01) 9(2): 12–13. (*Lachesis bilineatus oligolepis*)

Synonyms: *Lachesis peruvianus* Boulenger, 1903b, *Bothrops chrysomelas* – Amaral, 1926b *(nomen incorrectum),* and *Bothrops peruviana* – Amaral, 1930f.
Type: Holotype, MTD D1714, an 805 mm female (A. Baessler, 1889).
Type locality: "Bolivien" [= Bolivia].
Distribution: Southeastern Peru (Cusco, Junin, Puno) and NW Bolivia (La Paz), 1500–2500 m.
Sources: Schätti & Kramer, 1993, Harvey et al., 2005 and Fenwick et al., 2009.
Remarks: A synonym of *B. pulchra fide* Schätti & Kramer (1993: 244).

5. *Bothriopsis pulchra* (W.C.H. Peters, 1862c). Mber. Königl. Akad. Wiss. Berlin 1862(12): 672–673. (*Trigonocephalus pulcher*)

Synonyms: *Bothrops albocarinata* Shreve, 1934, *Bothrops alticola* H.W. Parker, 1934, *Bothrops albocarinatus* – J.A. Peters & Orejas-Miranda, 1970, and *Bothrops alticolus* – J.A. Peters & Orejas-Miranda, 1970.
Type: Holotype, ZMB 3868, a female (formerly Quito Mus.).
Type locality: Unknown.
Distribution: Northwestern South America. South-central Colombia (Putomayo), Ecuador (Loja, Morona-Santiago, Napo, Pastaza) and N Peru (Amazonas, Cajamarca, Loreto), 300–3000 m.
Sources: J.A. Peters, 1955, Peréz-Santos & Moreno, 1988, 1991, J.A. Campbell & Lamar, 1992 and Kuch, 1997.
Remarks: Official Specific Name *fide* Opinion 1938 (ICZN, 1999b: 220). It was previously believed that the type locality was Quito but J.A. Peters (1955: 347) repeated Peters' (1862: 672) statement that the type was from the museum in Quito. Reports from Amazonian Ecuador and Peru probably refer to another species *fide* J.A. Campbell & Lamar (1989: 221). A synonym of *B. oligolepis fide* Schätti & Kramer, 1993.

6. *Bothriopsis taeniata* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 55, pl. 21, fig. 3. (*Bothrops taeniatus*)

Synonyms: *Atropos castelnautii* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Bothrops castelnaudi* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Atropos castelnautii* – A.-M.-C. Duméril, Bibron & Duméril, 1854c *(nomen incorrectum), Teleuraspis castelnaui* – Cope, 1860b *(nomen incorrectum), Bothriopsis quadriscutatus* W.C.H. Peters, 1861, *Bothriopsis castelnavii* – Cope, 1871b *(nomen incorrectum), Bothrops lichenosa* Roze, 1958c, *Bothriopsis quadricarinatus* – Hoge, 1966a *(nomen incorrectum),* and *Bothrops lichenosus* – Roze, 1966a.
Type: Neotype, MNHN 1582, an 800 mm specimen (F.L.N.C.L. de Castelnau & E. Deville, June 1843–Aug. 1847), designated by Hoogmoed & Gruber (1983: 337).
Type locality: "State of Goiás, Brasil" via neotype selection. Restricted to "stretch of [the Amazon] river between the mouth of the [Río] Tajapuru (01°02'S, 51°02'W) and the mouth of the [Río] Negro (03°08'S, 59°55'W) and the parallel waterways ("paranás" and "furos") normally followed by travelers in small boats" *fide* Vanzolini (1981: xxvi).
Distribution: Amazonia. Southern Colombia (Amazonas, Boyacá, Cundinamarca), SE Venezuela (Bolívar), Guyana (Potaro-Siparuni), Suriname (Nickeria), French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Ecuador (Morona-Santiago, Napo, Orellana, Pastaza, Zamora-Chinchipe), N Brazil (Amazonas, Maranhao, Mato Grosso, Pará, Rondônia, Roraima), E Peru (Huánuco) and ext. N Bolivia (La Paz, Pando), NSL–2135 m.
Sources: Sandner-Montilla, 1978, Cunha & Nascimento, 1972, 1975a, 1982, 1993, Peréz-Santos & Moreno, 1988, 1991, Starace, 1998, I. Freire et al., 2003, Means, 2004a, Harvey et al., 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: Holotype lost *fide* Hoogmoed & Gruber (1983: 337).

BOTHROCHILUS Fitzinger, 1843 (Pythonidae)

Synonyms: *Nardoa* Gray, 1842a (*nomen praeoccupatum*), *Botriochilus* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Botriocheilus* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum), Botrochilus* – Hoffmann, 1890 *(nomen incorrectum), Nardoana* Berg, 1901 *(nomen substitutum), Nordoana* – Berg, 1901 *(nomen incorrectum),* and *Bothrocheilus* – Greene & Burghardt, 1978 *(nomen incorrectum).*

Type species: *Tortrix boa* Schlegel, 1837.
Distribution: Northeastern Papua New Guinea.
Sources: Jan & Sordelli, 1864 *in* 1860–1866, F. Werner, 1900c, Loveridge, 1948, McDowell, 1975a, Cogger et al., 1983a, Kluge, 1993b, O'Shea, 1996, Lamar, 1997b, McDiarmid et al., 1999, Rawlings et al., 2008 and Schleip & O'Shea, 2010.

1. *Bothrochilus boa* (Schlegel, 1837). Essai Phys. Serp. 1: 129, 2: 22–23. (*Tortrix boa*)

Synonym: *Nardoa schlegelii* Gray, 1842a.
Type: Holotype, MNHN 7172, a 345–390 mm male (R-P. Lesson & P. Garnot [Coquille Voy.], Aug. 1822–March 1825).
Type locality: "Nouvelle Irlande" [= New Ireland, Bismarck Archipelago, eastern Papua New Guinea].
Distribution: Northeastern Papua New Guinea (East New Britain, Morobe, West New Britain, Arawe, Duke of York, Dyaul, Garu, Gasmata, Green, Kavieng, Mioke, Namatanai, New Britain, New Hanover, New Ireland, Tatau and Umboi Is.).
Remarks: Sulawesi and Tokelau Is. records doubtful *fide* McDowell (1975a: 49).

BOTHROCOPHIAS Gutberlet & Campbell, 2001 (Viperidae)

Type species: *Bothrops hyoprora* Amaral, 1935.
Distribution: Northwestern South America.
Sources: J.A. Campbell & Lamar, 1989, 1992, 2004, Golay et al., 1993, David & Ineich, 1999, McDiarmid et al., 1999, Gutberlet & J.A. Campbell, 2001, Castoe & Parkinson, 2006, Fenwick et al., 2009 and Hoser, 2012d.

1. *Bothrocophias campbelli* (Freire-Lascano, 1991). Publ. Trab. Cient. Ecuador, Univ. Técn. Machala 2: [1–2], 3 figs. (*Bothrops campbelli*)

Synonym: *Porthidium almawebi* Schätti & Kramer, 1993 *(nomen substitutum).*
Type: Holotype, INHMT 1956, a 906 mm male (Serpentario Laboratorios Veterinarios, 5 Aug. 1989).
Type locality: "Recinto Huagal-Sacramento, cantón Pallatanga, Provincia de Chimborazo, Ecuador. 1500 – 2000 mts de altura."
Distribution: Western Ecuador (Chimborazo, Cotopaxí, El Oro, W Imbabura, Pichincha), 1300–2000 m.
Sources: J.A. Campbell & Lamar, 1992, Schätti & Kramer, 1993 and Cisneros-Heredia et al., 2006.
Remarks: Official Specific Name *fide* Opinion 1939 (ICZN, 1999a: 220). Photograph of holotype in J.A. Campbell & Lamar (1992: fig. 4 [bottom]).

2. *Bothrocophias colombianus* (Rendahl & Vestergren, 1940). Arkiv. Zool. 33A(1): 15. *(Bothrops microphthalmus colombianus)*

Synonym: *Porthidium colombianum* – Golay, Smith, Broadley, Dixon, McCarthy, Rage, Schätti & Toriba, 1993.
Type: Holotype, NHR 3114, a 1360 mm specimen (K. von Sneidern, 1938–1940).
Type locality: "Colombia, Cauca, La Costa, the pacific coastal slopes of the Western Cordilleras…at the same meridian as El Tambo and at an altitude of about 800 m" [= ca. 2°30'N latitude].
Distribution: Western Colombia (Antioquia, Cauca), 800–2000 m.
Sources: J.A. Campbell & Lamar, 1992, 2004 and Wüster et al., 1999.
Remarks: Transferred to this genus *fide* J.A. Campbell & Lamar, 2004.

3. *Bothrocophias hyoprora* (Amaral, 1935). Mem. Inst. Butantan 9: 222, figs. 7–8. (*Bothrops hyoprora*)

Synonyms: *Bothrops pessoai* Prado, 1939, and *Bothrops hyoprorus* – Klemmer, 1963.
Type: Holotype, IB 9199 (formerly ILS 142), a 240 mm male, destroyed by fire 15 May 2010.
Type locality: "La Pedrera, Colombia, near the Brazilian-Colombian boundary" [= La Pedrera, Amazonas State, SE Colombia, 1°18'S, 69°43'W, elevation 90 m].
Distribution: Northwestern South America. Southeasterm Colombia (Amazonas, Caqueta, Casanare, Putumayo, Vaupés), E Ecuador (Morona-Santiago, Napo, Orellana, Pastazá, Sucumbíos, Zamora-Chinchipo), NE Peru, N Brazil (Acre, Amazonas, Rondônia) and N Bolivia, NSL–1000 m.
Sources: Niceforo-María, 1938, Amaral, 1944d, 1955e, 1977, Hoge, 1949, Dixon & Soini, 1986, Pérez-Santos & Moreno, 1988, 1991, Schätti & Kramer, 1993, Duellman & Mendelson III, 1995, Cisneros-Heredia et al., 2006 and Bernarde et al., 2011.
Remarks: Possibly occurs in S Guianas and an unconfirmed report from SW Venezuela *fide* J.A. Campbell & Lamar (2004: 330).

4. *Bothrocophias microphthalmus* (Cope, 1875b). J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 182–183. (*Bothrops microphthalmus*)

Synonyms: *Lachesis pleuroxanthus* Boulenger, 1912b, and *Bothrops microphthalma* – Amaral, 1930f.
Type: Holotype, ANSP 11515, an 885 mm specimen (J. Orton, autumn 1867–winter 1868).
Type locality: "the Huallaga between Balsa Puerto and Moyabamba, Peru" [= Río Huallaga between Balsa Puerto and Moyobamba (6°02'S, 76°58'W, elevation 880 m), San Martin Dept., N Peru].
Distribution: Northwestern South America. Colombia (Boyacá, Casanare, Cundimarca, Norte de Santander),

B

Ecuador (Chinchipe, Morena-Santiago, Napo, Pastaza, Tungurahua, Zamora), Peru (Amazonas, Cusco, Junin, Loreto, Madre de Dios) and ext. NE Bolivia (Beni, Cochabamba, La Paz), 900–2350 m.

Sources: Nicéforo-Maria, 1964, Kuch & Freire, 1995b, Harvey et al., 2005 and Cisneros-Heredia et al., 2006.

Remarks: Possibly occurs in Brazil and the northern and southern populations may represent separate species *fide* J.A. Campbell & Lamar (2004: 333).

5. *Bothrocophias myersi* Gutberlet & Campbell, 2001. Amer. Mus. Novit. (3316): 7–9, fig. 3 (col.).

Type: Holotype, AMNH 109812, a 689 mm female (C.W. Myers & J.W. Daly, 16–17 Feb. 1973).

Type locality: "Quebrada Guanguí, 0.5 km above the Río Patia, Department of Cauca, Colombia, 100–200 m.

Distribution: Coastal SW Colombia (Cauca, Chocó, Valle de Cauca), 75–200 m.

BOTHROLYCUS A.C.L.G. Günther, 1874b (Lamprophiidae)

Synonym: *Botrolycus* – Hoffmann, 1890 *(nomen incorrectum).*

Type species: *Bothrolycus ater* A.C.L.G. Günther, 1874b.

Distribution: Central Africa.

Sources: Witte, 1962, J.-F. Trape & Roux-Estève, 1995, Chippaux, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Bothrolycus ater* A.C.L.G. Günther, 1874b. Proc. Zool. Soc. London 42(1): 444, pl. 57, fig. b.

Synonyms: *Pseudoboodon albopunctatus* Andersson, 1901, and *Pseudoboodon brevicaudatus* Andersson, 1901.

Type: Holotype, BMNH 1946.1.12.42, a 457 mm female (Higgins).

Type locality: "Camaroon Mountain" [= Cameroon].

Distribution: Central Africa. Southwestern Cameroon (Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea, Gabon (Ngounié, Ogooué-Lolo), SW Congo (Kouilou, Lekoumou) and E Democratic Republic of the Congo (Nord-Kivu, Orientale, Sud-Kivu), 10–1500 m.

BOTHROPHTHALMUS W.C.H. Peters, 1863c (Lamprophiidae)

Synonyms: *Bothrophtalmus* – Tornier, 1901 *(nomen incorrectum), Bothopthalmus* – Briceño-Rossi, 1934 *(nomen incorrectum), Bothropthalmus* – Cansdale, 1961 *(nomen incorrectum),* and *Botrophthalmus* – Roux-Estève, 1965 *(nomen incorrectum).*

Type species: *Bothrophthalmus lineatus* W.C.H. Peters, 1863c.

Distribution: West and cen. Africa.

Source: Chippaux, 2006.

1. *Bothrophthalmus brunneus* A.C.L.G. Günther, 1863c. Ann. Mag. Nat. Hist. (3) 12(71): 356, pl. 6, fig. e.

Type: Holotype, BMNH 1946.1.14.1, an 813 mm female.

Type locality: "Fernando Po" [= Equatorial Guinea].

Distribution: Central Africa. Southern Cameroon (Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Gabon (Ngounié, Ogooué-Lolo, Ogooué-Ivindo) and Congo (Kouilou, Plateau, Sangha), 10–820 m.

Sources: Mertens, 1965c, Stucki-Stirn, 1979, J.-F. Trape & Roux-Estève, 1995, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

Remarks: A valid species *fide* Pauwels & David, 2008a.

2. *Bothrophthalmus lineatus* (W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 287–288. (*Elaphis* [*Bothrophthalmus*] *lineatus*)

Synonyms: *Bothrophthalmus lineatus* Schlegel *in* Lichtenstein & Martens, 1856 *(nomen nudum), Bothrophthalmus melanozostus* Jan, 1863, *Bothrophthalmus lineatus infuscatus* Buchholz & Peters *in* W.C.H. Peters, 1875, and *Bothrophthalmus modestus* J.G. Fischer, 1886.

Type: Holotype, ZMB 1820, a 1045 mm specimen.

Type locality: "Guinea" [= Ghana *fide* Hughes & Barry, 1969: 1013].

Distribution: West and cen. Africa. Southeastern Guinea (Macenta, Nzérékoré), Sierra Leone, Liberia (Montserrado, Margibi, Nimba), Ivory Coast (Abidjan, Daloa, Guiglo, Lagunes, Tabou), S Ghana (Eastern), S Benin (Cotonou, Plateau), Nigeria (Delta), Cameroon (Centre), S Central African Republic (Haut-Mbomou, Lobaye, Sangha), S Congo (Brazzaville), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), NE Angola (Lunda Norte) and Uganda (Central, Western), NSL–2300 m.

Sources: Amaral, 1944c, Loveridge, 1957a, E.H. Taylor & Weyer, 1958, Witte, 1962, Doucet, 1963, Thys van den Audenaerde, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Hughes, 1983, 2013, Luiselli et al., 1998a, 1999, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007, Kelly et al., 2009, Zaher et al., 2009 and W. Böhme et al., 2011.

Remarks: Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353).

BOTHROPOIDES Fenwick, Gutberlet, Evans & Parkinson, 2009 (Viperidae)

Type species: *Bothrops neuwiedi* Wagler *in* Spix, 1824.
Distribution: Eastern and S South America.
Sources: Maes, 1989, J.A. Campbell & Lamar, 2004, Fenwick et al., 2009 and Hoser, 2012d.

1. *Bothropoides alcatraz* (Marques, Martins & Sazima, 2002). Herpetologica 58(3): 304–309, figs. 1, 2 (upper), 3 (left). (*Bothrops alcatraz*)

Type: Holotype, IB 62545, a 520 mm male (O.A.V. Marques, M. Martins, M.E. Oliveira, D.N. Pereira & A. Martensen, 15 Dec. 1999), destroyed by fire 15 May 2010.
Type locality: "Alcatrazes Island (24°06'S, 45°42'W), São Sebastião, São Paulo State, Brazil."
Distribution: Brazil (São Paulo: Alcatrazes and Mar Virado Is.), NSL–265 m.
Sources: Wüster et al., 1999, Cicchi et al., 2007 and Barro et al., 2012.

2. *Bothropoides diporus* (Cope, 1862d). Proc. Acad. Nat. Sci. Philadelphia 14(5): 347. (*Bothrops diporus*)

Synonym: *Bothrops neuwiedii meridionalis* Amaral, 1930c.
Type: Holotype, USNM 12380 (formerly ANSP 5401), a 1027 mm specimen (T.J. Page [La Plata Exped.], Sept. 1853–Feb. 1855).
Type locality: "Vermejo River region." Expanded to Vermejo River region (boundary of Paraguay and Argentina)" *fide* Cochran (1961: 161).
Distribution: Southern South America. Southeastern Brazil (Mato Grosso do Sul, Paraná, Rio Grande do Sul, Santa Catarina, São Paulo), Paraguay and Argentina (Catamarca, Chaco, Córdoba, Corrientes, Formosa, Jujuy, La Pampa, La Rioja, Mendoza, Misiones, Neuquén, Río Negro, Salta, San Luis, Santa Fe, Santiago del Estero, Tucumán), NSL–700 m.
Sources: Abalos & Baez, 1963, Yanosky et al., 1996, Martínez & Avila, 2003, V.X. Silva & Rodrigues, 2008 and Minoli et al., 2011.
Remarks: Probably occurs in ext. S Bolivia *fide* J.A. Campbell & Lamar (2004: 414).

3. *Bothropoides erythromelas* (Amaral, 1923). Proc. New England Zool. Club 8: 96–97. (*Bothrops erythromelas*)

Synonym: *Coluber punctulatus* Raddi, 1820 *(nomen oblitum).*
Type: Holotype, IB 3030, a 520–540 mm female (P. Silva, Jan. 1921), destroyed by fire 15 May 2010.
Type locality: "January, near Joazeiro, State of Bahia, Brazil." Corrected to Jaguarary (e Não January, como Sahiu na Nota Previa), proximo de Joazeiro, Estado da Bahía, Brazil *fide* Amaral (1926a: 114).
Distribution: Eastern Brazil (Alagoas, Bahia, Ceará, ext. E Maranhão, Minas Gerais, Paraíba, Pernambuco, Piauí, Rio Grande do Norte, Sergipe), NSL–2000 m.
Sources: Vanzolini et al., 1980 and Freitas, 1999.
Remarks: Supplemental original description in Amaral (1916a: 114–115, pl. 4, figs. 1–3). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Bothrops erythromelas* Amaral is designated a *nomen protectum* and *Coluber punctulatus* Raddi a *nomen oblitum.*

4. *Bothropoides insularis* (Amaral, 1922a). Anex. Mem. Inst. Butantan (1921) 1(1): 18–32, pl. 3, figs. 1–5, pl. 4. (*Lachesis insularis*)

Type: Holotype, IB 1996, a 735 mm female (A. do Amaral, Nov. 1920), destroyed by fire 15 May 2010.
Type locality: "Ilha da Queimada Grande, situada no litoral do Estado de S. Paulo, a cêrca de 40 milhas a S.O. da barra de Santos, Brasil."
Distribution: Southeastern Brazil (São Paulo: Queimada Grande Is.), NSL–200 m. Known only from type locality.
Sources: Amaral, 1922b, Hoge et al., 1960, Duarte et al., 1995, Marques et al., 2002, Wüster et al., 2005, Bovo et al., 2012 and Barro et al., 2012.

5. *Bothropoides jararaca* (Wied-Neuwied, 1824a). Isis von Oken 14(10): 1103. (*Cophias jararaca*) (*nomen corrigendum*)

Synonyms: *Vipera maculata* Laurenti, 1768 *(nomen oblitum), Cophias jajaraca* Wied-Neuwied, 1824a *(nomen incorrigendum), Bothrops leucostigma* Wagler *in* Spix, 1824, *Cophias jararaca* – Wied-Neuwied, 1824 *in* 1822–1831 & 1825c *(nomen corrigendum), Cophias jararakka* – Wied-Neuwied, 1825c *(nomen incorrectum),* and *Craspedocephalus brasiliensis* Gray *in* A.C.L.G. Günther, 1858.
Type: Holotype, not designated, a 1400 mm specimen (A.P.M. zu Wied-Neuwied, 5 Feb.–12 April 1816), location unknown.
Type locality: Unknown. Designated as Lagoa d'Arara am Mucuri, Brasil *fide* Wied-Neuwied (1825b: 481) [= Morro d'Arara, 30 km above mouth of Rio Mucuri ext. S. Bahia, SE Brazil, 17°32's, 39°35'W].
Distribution: Southeastern Brazil (S Bahia, Espírito Santo, S Goiás, SE Mato Grosso, S Minas Gerais, Paraná, Rio de Janeiro, N Rio Grande do Sul, São Paulo, Santa Catarina, Anchieta, Búzios, Cananéia, Cardoso, Comprida, Franceses, Porchat, Porcos, Santo Amaro, São Sebatião, São Vicente and Vitória Is.), SE Paraguay (Alto Paraná, Itapúa) and N Argentina (Misiones), NSL–1000 m.

B

Sources: Amaral, 1925c, Hoge et al., 1978a, Sazima, 1992, Cei, 1994, N. Gomes & Puorto, 1993, Freitas, 1999, Marques et al., 2002, Wüster et al., 2004, Duarte Roche & Van Sluys, 2006, Cicchi et al., 2007, Cacciali, 2008, Monzel, 2009 and Barro et al., 2012.

Remarks: Supplemental original description in Wied-Neuwied (1824b: pl. 3 & 1825c: 470–483). Plate 3 in original description is labelled *Cophias atrox* but corrected in text to *Cophias jararaca*. McDiarmid et al. (1999: 262–263) discussed the type and spelling of specific name. In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Cophias jararaca* Wied-Neuwied is designated a *nomen protectum* and *Vipera maculata* Laurenti a *nomen oblitum*. Hoogmoed & Gruber (1983: 336) and Frazer & Glaw (2007: 261) discussed taxonomic status of *Bothrops leucostigma* Wagler.

6. *Bothropoides lutzi* (Miranda-Ribeiro, 1915). Arch. Mus. Nac. Rio de Janeiro 17(3): 4, 1 pl., 3 figs. (*Lachesis pictus lutzi*)

Synonyms: *Bothrops iglesiasi* Amaral, 1923 & 1926a, and *Bothrops neuwiedii piauhyensis* Amaral, 1925b.

Type: Holotype, MNRJ AL 5337 (formerly IOC), a 675 mm specimen (A. Lutz, 1912).

Type locality: “Rio S. Francisco, Bahia, Brasil inteiro” [= Río São Francisco, Bahia State, Brazil].

Distribution: Northeastern Brazil (Bahia, Ceará, E Goiás, N Minas Gerais, W Pernambuco, Piauí, Tocantins), NSL–800 m.

Sources: V.X. Silva & Rodrigues, 2008 and Loebmann, 2009c.

Remarks: An unconfirmed record from Americana, São Paulo may represent a disjunct population *fide* J.A. Campbell & Lamar (2004: 415).

7. *Bothropoides mattogrossensis* (Amaral, 1925c). Contr. Harvard Inst. Trop. Biol. Med. 2: 60, pl. 14, fig. 6., pl. 16, fig. 6. (*Bothrops neuwiedii mattogrossensis*)

Synonym: *Bothrops neuwiedii boliviana* Amaral, 1927a.

Type: Holotype, IB 3011, an adult female (D.A. Correia, 25 Feb. 1922), destroyed by fire 15 May 2010.

Type locality: “Miranda, Matto-Grosso” [= Miranda, Mato Grosso do Sul State, SE Brazil, 20°15’S, 56°22’W, elevation 130 m].

Distribution: Southeastern Brazil (S Amazonas [isolated populations], Goiás, Mato Grosso, Mato Grosso do Sul, Rondônia, São Paulo, Tocantins), SE Peru (Puno), Bolivia (Beni, Cochabamba, Santa Cruz, Tarija), Paraguay (Alto Paraguay, Amambay, Boquerón, Presidente Hayes) and Argentina (Salta), NSL–500 m.

Sources: N.J. Silva, 2000, Monteiro et al., 2006, Cacciali, 2008 and V.X. Silva & Rodrigues, 2008.

8. *Bothropoides neuwiedi* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 56–57, pl. 22, fig. 1. (*Bothrops neuwiedi)*

Synonyms: *Crotalus urutú* Liais, 1872 *(nomen incorrigendum), Bothrops urutu* – Lacerda, 1884 *(nomen corrigendum), Bothrops atrox meridionalis* F. Müller, 1885, *Bothrops neuwiedii bahiensis* Amaral, 1925c, *Bothrops neuwiedii goyazensis* Amaral, 1925c, *Bothrops neuwiedii minasensis* Amaral, 1925c, *Bothrops neuwiedii paranaensis* Amaral, 1925c, and *Bothrops neuwiedii fluminensis* Amaral, 1933a.

Type: Lectotype, ZSM 2348/0, a 720–744 mm male (J.B. von Spix & K.F.P. von Martius, Sept. 1818–April 1819), designated by Hoogmoed & Gruber (1983: 338).

Type locality: “provincia Bahiae, Brésil” [= Bahia Prov., NE Brazil].

Distribution: Southeastern Brazil (Bahia, Goiás, Minas Gerais, Paraíba, Paraná, Rio de Janeiro, São Paulo, Santa Catarina) and E Bolivia (Beni, Chuquisaca, Santa Cruz, Tarija), NSL–1000+ m.

Sources: Amaral, 1925c, Fernandez & Abe, 1991, Cei, 1994, D.R. Norman, 1994, Peñaranda et al., 1994, Moro, 1996, Yuki, 1997b, Leynaud & Bucher, 1999, N.J. Silva, 2000, Pérez & Avila, 2000, Pérez et al., 2003, Harvey et al., 2005, V.X. Silva & Rodrigues, 2008, Monzel, 2009 and Rodrigues et al., 2012.

Remarks: ZSM 2348/0 is probably the holotype *fide* McDiarmid et al. (1999: 269) and Franzen & Glaw (2007: 261).

9. *Bothropoides pauloensis* (Amaral, 1925c). Contr. Harvard Inst. Trop. Biol. Med. 2: 59–60, pl. 14, fig. 6, pl. 16, fig. 6. (*Bothrops neuwiedii pauloensis*)

Type: Holotype, IB 3013, adult male (J.S. Queiroz, Sept. 1922), destroyed by fire 15 May 2010.

Type locality: “Leme, São Paulo, Brazil” [= Leme, São Paulo State, SE Brazil, 22°11’S, 47°24’W, elevation 620 m].

Distribution: Southern Brazil (Goiás, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Parana, São Paulo) and E Bolivia (Santa Cruz), NSL–800 m.

Sources: N.J. Silva, 2000, Jansen, 2006, Monteiro et al., 2006 and V.X. Silva & Rosrigues, 2008.

10. *Bothropoides pubescens* (Cope, 1870). Proc. Amer. Philos. Soc. (1869–1870) 11(81): 157–158. (*Trigonocephalus* [*Bothrops*] *pubescens*)

Synonym: *Bothrops neuwiedii riograndensis* Amaral, 1925c.

Type: Neotype, MZUSP 5874, adult male (F. Achaval & C. Prigioni, 1952), designated *fide* X.V. Silva & Rodrigues (2008: 71).

Type locality: “Pozo Hondo, Tambores: Departmento de Tacuarembó: Uruguay” via neotype selection.

Distribution: Southern Brazil (Rio Grande do Sul) and Uruguay (Artigas, Canelones, Cerro Largo, Durango,

Florida, Lavalleja, Maldonado, Rivera, Rocha, Salto, San José, Tacuarembó, Treinta y Tres), NSL–500 m.

Sources: Hoge, 1959d, N.J. Silva, 2000, Carreira-Vidal et al., 2005, M.T. Hartmann et al., 2005 and V.X. Silva & Rodrigues, 2008.

Remarks: Lectotype designation by V.X. Silva & Rodrigues (2008: 71) incorrect since holotype is lost.

BOTHROPS Wagler *in* Spix, 1824 (Viperidae)

Synonyms: *Bathrops* – Gray *in* Griffith & Pidgeon, 1831 *(nomen incorrectum), Botrops* – Senna, 1886 *(nomen incorrectum), Botrops* García, 1896 *(nomen emendatum), Bothropsus* A.L. Herrera, 1899 *(nomen emendatum), Botthrops* – Brazil, 1914 *(nomen incorrectum), Bothropos* – Tomas-Rodas, 1938 *(nomen incorrectum), Bothsrops* – Pifano & Römer, 1949b *(nomen incorrectum), Bothropus* – Tamayo, 1962 *(nomen incorrectum), Daraninus* Hoser, 2012g *(nomen illegitimum),* and *Jackyhoserea* Hoser, 2012g *(nomen illegitimum).*

Type species: *Coluber lanceolatus* Bonnaterre, 1790.

Distribution: Latin America.

Fossil records: Lower/middle Pleistocene (Ensenadan) of Argentina.

Sources: Amaral, 1944c, Hoge, 1966a, J.A. Peters & Orejas-Miranda, 1970, Burger, 1971, Hoge & Romano-Hoge, 1971, Hoge & Romano-Hoge, 1981a, Werman, 1986b, J.A. Campbell & Lamar, 1989, 1992, 2004, Maes, 1989, Schätti et al., 1990, Golay et al., 1993, Schätti & Kramer, 1993, Kraus et al., 1996, Salomão et al., 1997, Vidal et al., 1997, Werman, 1997, 1999, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Salomão et al., 1999, Vidal et al., 1999, Scanferla & Nenda, 2005, Castoe & Parkinson, 2006, Fenwick et al., 2009 and Hoser, 2012d.

Remarks: The following genera and species have been separated from *Bothrops: Atropoides (indomitus, mexicanus, nummifer, occiduus, olmec), Bothriechis (aurifer, bicolor, lateralis, marchi, nigroviridis, rowleyi schlegelii supraciliaris thalassinus), Bothriopsis (bilineata, chloromelas, medusa, oligolepis, pulchra, taeniata), Bothrocophias (campbelli, colombianus, hyoprora, microphthalmus, myersi), Bothropoides (alcatraz, diporus, erythromelas, insularis, jararaca, lutzi, mattogrossensis, neuwiedi, pauloensis, pubescens), Cerrophidion (barbouri, godmani, petlalcalensis, picadoi, tzotzilorum), Porthidium (arcosae, dunni, hespere, lansbergii, nasutum, ophryomegas, porrasi, volcanicum, yucatanicum)* and *Rhinocerophis (alternatus, ammodytoides, cotiara, fonsecai, itapetiningae, jonathani).*

1. *Bothrops andianus* Amaral, 1923. Proc. New England Zool. Club 8: 103–104. (*Bothrops andiana*)

Type: Holotype, MCZ 8832, a 605 mm male (G.F. Eaton, 1912).

Type locality: "Machu Picchu, Department of Cusco, Peru, about 9000–10,000 ft. altitude."

Distribution: Southern Peru (Cusco, Puno) and Bolivia (Cochabamba, La Paz, Santa Cruz), 1800–3300 m.

Source: Harvey et al., 2005.

2. *Bothrops asper* (S.W. Garman, 1884). Mem. Mus. Comp. Zool. (1883) 8(3): 124. (*Trigonocephalus asper*) (*nomen protectum)*

Synonyms: *Bothrops atrox dirus* Jan, 1863 (*nomen nudum*), *Trigonocephalus xanthogrammus* Cope, 1868 *(nomen oblitum), Trigonocephalus asper lanceolati* Garman, 1884, *Bothrops atrox septentrionalis* F. Müller, 1885, *Bothrops quadriscutatus* Posada-Arango, 1889b, *Bothrops xanthogramma* – Amaral, 1930f, *Bothrops neuwiedii venezuelenzi* Briceõ-Rossi, 1934, *Bothrops xantogrammus* Hoge, 1966a *(nomen emendatum),* and *Bothrops xantogramma* Hoge, 1966a *(nomen emendatum).*

Type: Holotype, MCZ 2718, head only (Maack).

Type locality: "Obispo, on the Isthmus of Darien" [= Panama].

Distribution: Latin America. Southern Mexico (Campeche, Chiapas, Hidalgo, Oaxaca, Quintana Roo, San Luis Potosí, Tabasco, S Tamaulipas, Veracruz, Yucatán), Belize (Belize, Corozal, Orange Walk, Stann Creek, Toledo), Guatemala (Petén), N Honduras (Atlántida, Colón, Cortés, Gracias a Dios, Olancho, Santa Bárbara), E Nicaragua (Atlántico Norte, Atlántico Sur, Jinotega) Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José, Caño Is.), Panama, Colombia (Cundinamarca, Gorgona Is.), Ecuador (Chimborazo, Pichincha), N Venezuela (Zulia) and Trinidad and Tobago (Trinidad), NSL–2640 m.

Sources: E.H. Taylor, 1951, 1954, Roze, 1958d, Dixon, 1984, J.D. Johnson & Dixon, 1984, L.D. Wilson & Meyer, 1985, Markezich & Taphorn, 1993, J.C. Lee, 1996, 2000, Wüster et al., 1997, J.C. Murphy, 1997, J.A. Campbell, 1998b, Sasa & Barrantes, 1998, Savage, 2002, Townsend et al., 2006, Navarrete et al., 2009, Saldarriaga-Córdoba et al., 2009, Sasa et al., 2009, Suárez-Velázquez & Luna-Reyes, 2009, Wasco, 2009, Ramírez-Bautista et al., 2010 and McCranie, 2011a.

Remarks: A synonym of *Bothrops atrox fide* Schätti & Kramer (1993: 235) and Markezich & Taphorn (1993: 253). Possibly a single variable species *fide* Wüster et al. (1997: 99). J.A. Campbell submitting request to ICZN to conserve the name *B. asper* since both *colombiensis* and *xanthgrammus* have priority.

B

3. *Bothrops atrox* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 222. (*Coluber atrox*)

Synonyms: *Coluber ambiguus* Gmelin, 1789, *Vipera weigeli* Daudin, 1803e *(nomen substitutum), Cophias holosericeus* Wied-Neuwied, 1821, *Bothrops furia* Wagler *in* Spix, 1824, *Bothrops tessellatus* Wagler *in* Spix, 1824, *Trigonocephalus colombiensis* Hallowell, 1845a, *Bothrops affinis* Gray, 1849a, *Bothrops amarali* Breciño-Rossi, 1934, *Bothrops neuvoiedii venezuelenzi* – Breciño-Rossi, 1934 *(nomen incorrectum), Bothrops lanceolatus aidae* Sandner-Montilla, 1981, *Bothrops atrox aidae* Vanzolini, 1986 *(nomen substitutum),* and *Bothrops lanceolatus nacaritae* Sandner-Montilla, 1990.

Types: Syntypes (2), NHR Lin-100 (formerly MAFR), a 452 mm specimen (Mus. Drottn.), and NHR Lin-101 (formerly MAFR), a 725 mm specimen (Mus. Drottn.).

Type locality: "Asia," (in error *fide* Hoge et al., 1978b: 48). Restricted to Suriname *fide* K.P. Schmidt & Walker (1943c: 295).

Distribution: South America. Southeastern Colombia (Boyacá, Norte de Santander), S Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia), Guyana (Barima-Waini, Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Marowijne, Nickerie, Saramacca), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Amazonian Brazil (Acre, Amapá, Amazonas, Maranhão, Pará, Rondônia, Roraima), E Ecuador (Chimboraza, Morona-Santiago, Napo, Orellana, Pastaza, Zamora-Chinchipe), E Peru (Amazonas, Loreto, Madre de Dios, Puno) and N Bolivia (Beni, Cochabamba, La Paz, Pando, Santa Cruz), NSL–1585 m.

Sources: Procter, 1918, Amaral, 1925c, Cunha & Nascimento, 1978, 1982a, 1993, Peréz-Santos & Moreno, 1988, 1991, Markezich & Taphorn, 1993, Schätti & Kramer, 1993, Morales & McDiarmid, 1996, Wüster et al., 1996, 1997, 1999, Gorzula & Señaris, 1998, Starace, 1998, Salomão et al., 1999 Mijares-Urrutia & Arends, 2000, Duellman, 2005, Harvey et al., 2005, C.W. Myers & Donnelly, 2008, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: *Bothrops colombiensis* a valid species *fide* Navarrete et al. (2009: 66).

4. *Bothrops ayerbei* Folleco-Fernández, 2010. Rev. Noved. Colomb. 10(1), 45–48, figs. 7–9.

Type: Holotype, MHNUC SE-237, a 1270 mm male (S. Ayerbe-González, 2 Feb. 2000).

Type locality: "Vereda Corralejas, Municipio de Sotará, Departamento del Cauca (Colombia) (2°16'07"N 76°39'18"W)."

Distribution: Southwestern Colombia (Cauca), 400–1800 m.

5. *Bothrops barnetti* H.W. Parker, 1938b. Ann. Mag. Nat. Hist. (11) 2(11): 447, 450.

Type: Holotype, BMNH 1946.1.18.71 (formerly BMNH 1926.3.24.40), a 573+ mm male (B. Barnett, 1923–1926).

Type locality: "the mouths of the Quebradas Honda and Perines, between Lobitos and Talara, northern Peru" [= mouths of the Quebrada Honda and Quebrada Pariñas, 4°31'S, 81°17'W, elevation NSL, between Lobitos (4° 28'S, 81° 17'W, elevation 25 m) and Talara (4°35'S, 81°16'W, elevation 10 m), Piura Department, NW Peru].

Distribution: Coastal N Peru (La Libertad, Lambayeque, Piura), NSL.

Remarks: Possibly occurs in SW Ecuador *fide* J.A. Campbell & Lamar (2004: 381). The generic placement of this taxon is uncertain.

6. *Bothrops brazili* Hoge, 1954a. Mem. Inst. Butantan (1953) 25(1): 15–16, figs. 1–6, 7b.

Type: Holotype, IB 14721, an 1158 mm female (F. Alves-Soares & H. Renkichi), destroyed by fire 15 May 2010.

Type locality: "Tomé Assú, Acará Mirim River, State of Pará, Brazil."

Distribution: Amazonia. Southern Colombia (Amazonas Guainia, Vaupés), S Venezuela (Amazonas, Apure, Bolívar), Guyana (Cuyuni-Mazaruni, Potaro-Siparuni), Suriname (Nickerie, Saramacca), French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Ecuador (Morona-Santiago, Zamora-Chinchipe), N Brazil (Acre, Amapa, Amazonas, Maranhão, N Mato Grosso, Pará, Rondônia, Roraima) E Peru (Amazonas, Loreto, Madre de Dios) and N Bolivia (Beni), NSL–460 m.

Sources: Cunha & Nascimento, 1975c, 1978, 1993, Peréz-Santos & Moreno, 1988, 1991, Schätti & Kramer, 1993, Morales & McDiarmid, 1996, Starace, 1998, Cisneros-Heredia, 2004a, Navarrete et al., 2009 and C.J. Cole et al., 2013.

7. *Bothrops caribbaeus* (S.W. Garman, 1887b). Proc. Amer. Philos. Soc. 24(126): 285. (*Trigonocephalus caribbaeus*) (*nomen protectum*)

Synonyms: *Bothrops sabinii* Gray, 1842b, *Bothrops subscutatus* Gray, 1842b, and *Bothrops caribbaea* – Schwartz & R.W. Henderson, 1988.

Type: Lectotype, MCZ 4814 (S.W. Garman, 1873–1887), designated by Lazell (1964: 250).

Type locality: "St. Lucia" via lectotype selection. Restricted to Grand'Anse, Saint Lucia *fide* Lazell (1964: 251).

Distribution: Lesser Antilles (coastal Saint Lucia), NSL–200 m.

Sources: Gosner, 1987, Powell & Wittenberg, 1998, Wüster et al., 1999, 2000, Breuil, 2003 and R.W. Henderson & Powell, 2009.

Remarks: Guyana locality data for *B. sabinii* and *B. subscutatus* in error *fide* Underwood (1993: 5).

8. *Bothrops isabelae* Sandner-Montilla, 1979. Mem. Cient. Ofidiol. (4): 3–11, 5 figs.

Type: Holotype, IVO Bi-1, a 1020 mm male (R. Quintero-Serra, 15 June 1979).

Type locality: "Siete kilómetros al SE. de Guanare, Estado Portuguesa, a poco metros de la carretera que va de Guanare a Gualnarito…a 182 mts. sobre el nivel del mar" [= 7 km SE Guanare, Portuguesa State, W Venezuela, ca. 9°01'N, 69°44'W, elevation 182 m].

Distribution: Western Venezuela (Barinas, Mérida, Portuguesa, Yaracuy, Trujillo, Zulia), 180 m.

Sources: Fenwick et al., 2009 and Navarrete et al., 2009.

Remarks: Holotype was alive at time of description. A synonym of *B. atrox fide* Markezich & Taphorn (1993: 253).

9. *Bothrops jararacussu* Lacerda, 1884. Léçons Venin Serpents Brésil: 8–10.

Synonym: *Lachesis jararacuçu* Brazil, 1914 *(nomen emendatum).*

Type: Holotype, MNRJ, a 1500 mm specimen, lost *fide* Vanzolini *in* Golay et al. (1993: 46).

Type locality: "la Prov. do Rio de Janeiro, Brésil" [= Rio de Janeiro State, SE Brazil].

Distribution: Southeastern South America. Southeastern Brazil (SE Bahia, Espírito Santo, SE Mato Grosso, S Minas Gerais, Paraná, Rio de Janeiro, NW Rio Grande do Sul, Santa Catarina, São Paulo, Anchieta, Bom Abrigo, Cannanéia, Cardoso, Comprida, Grande, Porchat, Santo Amaro, São Sebastião, São Vicente and Vitória Is.), ext. SE Bolivia (Santa Cruz), SE Paraguay (Alto Paraná, Amambay, Caaguazú, Canindeyú, Itapúa) and ext. NE Argentina (Misiones), NSL–700 m.

Sources: Amaral, 1925c, Lema & Leitão de Aravjo, 1980, Cei, 1994, Freitas, 1999, Wüster et al., 1999, Duarte-Rocha & Van Sluys, 2006, Cicchi et al., 2007 and Cacciali, 2008.

10. *Bothrops lanceolatus* (Bonnaterre, 1790). Ophiologie: 10–11, pl. 38, fig. 1. (*Coluber lanceolatus*)

Synonyms: *Vipera caerulescens* Laurenti, 1768 *(nomen oblitum), Coluber glaucus* Gmelin, 1789 *(nomen oblitum), Coluber brasiliensis* Lacépède, 1789 *(nomen rejiciendum), Coluber lanceolatus* Lacépède, 1789 *(nomen rejiciendum), Coluber tigrinis* Lacépède, 1789 *(nomen rejiciendum), Coluber hastatus* Suckow, 1797, *Vipera lanceolata* – Latreille *in* Sonnini & Latreille, 1801a, *Vipera brasiliniana* Latreille *in* Sonnini & Latreille, 1801b *(nomen substitutum), Coluber megaera* G. Shaw, 1802, *Vipera brasiliana* – Daudin, 1803c *(nomen corrigendum), Vipera tigrina* – Daudin, 1803c, *Vipera chloris* Gravenhorst, 1807, *Bothrops cinereus* Gray, 1842b, and *Vipera coerulescens* – Hoge & Romano-Hoge, 1981a *(nomen incorrectum).*

Types: Syntypes (2), specimens described and illustrated in Lacépède (1789: 121–131, pl. 5, fig. 1), lost *fide* Guibé *in* Lazell (1964: 255).

Type locality: "Martinique" [= Martinique, Lesser Antilles]. Restricted to Morne Capot, between Ajoupa–bouillon and Lorrain, Martinque *fide* Lazell (1964: 255).

Distribution: Lesser Antilles (Martinque), NSL–1300 m.

Sources: Hoge, 1953e, Lazell, 1964, Gosner, 1987, Wüster et al., 1999, Breuil, 2003 and R.W. Henderson & Powell, 2009.

Remarks: A synonym of *B. atrox/asper fide* J.D. Johnson & Dixon (1984: 329).

11. *Bothrops leucurus* Wagler *in* Spix, 1824. Serp. Brasil. Sp. Nov.: 57–58, pl. 22, fig. 2.

Synonyms: *Bothrops megaera* Wagler *in* Spix, 1824 *(nomen praeoccupatum),* and *Trimeresurus pradoi* Hoge, 1948.

Type: Lectotype, ZSM 2698/0 B, a 282 mm juvenile (J.B. von Spix, Sept. 1818–April 1819), designated by Hoogmoed & Gruber (1983: 335).

Type locality: "provinciae Bahiae, Brésil" [= Bahia State, NE Brazil]. Listed as Bahia, actually Salvador, Brazil *fide* Hoge & Romano-Hoge (1981a: 200) (in error *fide* Vanzolini, 1981: xxiv).

Distribution: Eastern Brazil (Alagoas, Bahia, Ceará, Espírito Santo, Minas Gerais, Pernambuco, Rio de Janeiro, São Paulo, Sergipe), 50–400 [900] m.

Sources: Amaral, 1955d, Wüster et al., 1997, Wüster et al., 1997, 1999, Freitas, 1999, Puorto et al., 2001, Lima Duarte et al., 2003 and Rezende de Carvalho & Barreto Nacimento, 2005.

Remarks: A synonym of *B. neuwiedi* Wagler *in* J.A. Peters & Orejas-Miranda (1970: 49). Closely related to *B. atrox fide* Wüster et al., 1997.

12. *Bothrops lojanus* H.W. Parker, 1930b. Ann. Mag. Nat. Hist. (10) 5(29): 568–569. (*Bothrops lojana*)

Type: Holotype, BMNH 1946.1.19.84 (formerly BMNH 1930.1.30.1), a 488 mm male (C. Carrión-Mora, 1930).

Type locality: "vicinity of Loja City, Ecuador, (2200 metres)" [= near Loja, Loja Prov., S Ecuador, 3°59'S, 79°12'W, elevation 2200 m].

Distribution: Southern Ecuador (E. Loja, Zamora-Chinchipe), 2100–2300 m.

Sources: Peréz-Santos & Moreno, 1991 and Schätti & Kramer, 1993.

B

13. *Bothrops marajoensis* Hoge, 1966a. Mem. Inst. Butantan (1965) 32: 123–125.

Type: Holotype, IB 18143, a 952 mm male (A.R. Hoge, 20 Aug. 1958), destroyed by fire 15 May 2010.
Type locality: "Severino, Island of Marajó, State Pará, Brasil" [= Marajó Is., mouth of Río Amazonas, E Pará State, NE Brazil, ca. 0°53'S, 49°38'W, elevation 15 m].
Distribution: Coastal northern Brazil (Amapá, ? Maranhão, Pará, Marajó Is.), NSL–15 m.
Sources: Wüster et al., 1996, 1997, 1999.
Remarks: A synonym of *B. atrox fide* Cunda & Nascimento (1993: 126).

14. *Bothrops marmoratus* V. Silva & Rodrigues, 2008. Phyllomedusa 7(1): 72–77, figs. 1d, 16a–c, 17a–b.

Type: Holotype, IB 55055, a 585 mm female (F. Rodrigues-Alves, 29 June 1993), destroyed by fire 15 May 2010.
Type locality: "Ipameri (17º43'S, 48º09'W), State of Goiás, Brazil."
Distribution: Central Brazil (Goiás, W Minas Gerais, Tocantins), 785 m.
Remarks: V. Silva & Rodrigues (2008: 72) erroneously listed holotype figures as 12 and 13.

15. *Bothrops moojeni* Hoge, 1966a. Mem. Inst. Butantan (1965) 32: 126–127, pl. 4.

Type: Holotype, IB 23397, a 1468 mm female (Fundação Zoobotânica, 17 April 1962), destroyed by fire 15 May 2010.
Type locality: "Brasília, Distrito Federal, Brasil" [= Brasília, Distrito Federal State, Brazil, 15°47'S, 47°56'W, elevation 1065 m].
Distribution: Eastern Brazil (Bahia, Distrito Federal, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Piauí, São Paulo, Tocantins), E Bolivia (Santa Cruz), E Paraguay (Alto Paraná, Amambay, Caaguazú, Canindeyú, Concepción, San Pedro) and NE Argentina (Misiones), 250–1500 m.
Sources: Vanzolini, 1961, 1991, Cei, 1994, Freitas, 1999, Wüster et al., 1996, 1997, 1999, Buongermini & Waller, 1999, Harvey et al., 2005, Cacciali, 2008 and Recorder et al., 2011.
Remarks: Possibly a synonym of *B. atrox* (Linnaeus) *fide* J.A. Campbell & Lamar, 1989, 2004, Wüster et al., 1997.

16. *Bothrops muriciensis* Ferrarezzi & Freire, 2001. Bol. Mus. Nac. Rio de Janeiro (440): 2–6, fig. 1.

Type: Holotype, MNRJ 7036, a 619 mm female (S.T. Silva, 20 April 1995).
Type locality: "Brazil: Alagoas: Murici, Fazenda Bananeira (9°14'S, 35°48'W, 640m)"
Distribution: Northeastern Brazil (Alagoas), 400–640 m. Known only from vicinity of type locality.
Source: Freitas et al., 2012.

17. *Bothrops osbornei* Freire-Lascano, 1991. Publ. Trab. Cient. Ecuador, Univ. Técn. Machala 2: [2–4], 3 figs.

Synonym: *Bothriechis mahnerti* Schätti & Kramer, 1991.
Type: Holotype, INHMT 1924, a 396 mm female (Serpentario Laboratorios Veterinarios, 17 June 1989).
Type locality: "Sacramento, Cantón Pallatanga, Provincia del Chimborazo, Ecuador."
Distribution: Eastern Ecuador (Cajamarca, Chimborazo, Cotopaxi, Pichincha) and ext. N Peru (Tumbes), 500–2000 m.
Sources: Schätti & Kramer, 1991, 1993 and Coloma et al., 2000.
Remarks: Type erroneously listed as INHMT 1925 on cover figure (but INHMT 1924 in text and on two other figures).

18. *Bothrops otavioi* Barro, Grazziotin, Sazima, Martins & Sawaya, 2012. Herpetologica 68(3), 421–425, figs. 2–3, 4a.

Type: Holotype, IB 78572 (formerly CC 58), a 456 mm male (F.C. Centeno & T.H. Condez, 11 Aug. 2010).
Type locality: "'Trilha da Vitória' (23º44'28"S, 45º01'16"W; datum = WGS 84: Figs. 1 and 4B), Vitória Island, Ilhabela Archipelago, São Paulo, southeastern Brazil."
Distribution: Southeastern Brazil (São Paulo: Vitória Is.), NSL–200 m. Known only from type locality.

19. *Bothrops pictus* (Tschudi, 1845). Arch. Naturg. 11(1): 166. (*Lachesis picta*)

Type: Lectotype, MHNN 6 (formerly MZN 114) (J.J. von Tschudi, Aug. 1838–Feb. 1841), designated by Schätti (1986a: 100).
Type locality: "Montagnes élevées du Pérou" [= high mountains of Peru] via lectotype selection.
Distribution: Coastal W Peru (Ancash, Arequipa, Ica, Libertad, Lima), 500–2300 m.
Sources: J.A. Campbell & Lamar, 1992 and Yarlequé-Chocas, 2000.
Remarks: Original description reprinted in Tschudi (1846: 61–63, pl. 10). The generic status of this species is uncertain. Werner's (1901) Bolivian record unverified *fide* J.A. Campbell & Lamar (2004: 404).

20. *Bothrops pirajai* Amaral, 1923. Proc. New England Zool. Club 8: 99–100.

Synonym: *Bothrops neglecta* Amaral, 1923 & 1926a.
Type: Holotype, IB 3008, an 1130 mm female (P. da Silva, Dec. 1921), destroyed by fire 15 May 2010.
Type locality: "Ilheos, Bahia, Brazil" [= Ilhéus, SE Bahia State, E Brazil, 14°48'S, 39°02'W, elevation 10 m].
Distribution: Extreme E Brazil (E Bahia, possibly Minas Gerais), NSL–500 m.
Source: Freitas, 1999.

Remarks: Supplemental original description in Amaral (1926a: 120, pl. 4, fig. 8).

21. *Bothrops punctatus* (García, 1896). Ofidios Venen. Cauca: 30–31, pl. 8. (*Lachesis punctata*)

Synonyms: *Thanatos montanus* Posada-Arango, 1889a, *Lachesis monticellii* Peracca, 1910, *Bothrops leptura* Amaral, 1923, and *Bothrops punctatus* – Dunn, 1944.
Type: Holotype, not designated (E. García, 1887–1895), lost *fide* Nicéforo-María (1939: 92).
Type locality: "las montañas del Dagua" [= mtns. of Dagua, Valle del Cauca Department, W Colombia, ca. 3°39'N, 76°42'W].
Distribution: Extreme E Panama (Darién), W Colombia (Antioquia, Cauca, Chocó, Nariño, Valle del Cauca) and NW Ecuador (Esmeraldas) 915–2300 m.
Sources: Freire-Lascano, 1991, Schätti & Kramer, 1991 and Daza, et al., 2005.

22. *Bothrops rhombeatus* García, 1896. Ofidios Venen. Cauca: 20–22, pl. 2. (*nomen corrigendum*)

Synonyms: *Botrops rhomboatus* García, 1896 *(nomen incorrigendum),* and *Botrops rhombeatus* García, 1896 *(nomen corrigendum).*
Type: Holotype, not designated (E. García, 1887–1895), location unknown.
Type locality: "las tierras calientes del valle que en las montañas del Cauca, en los bosques espesos, á orillas de los ríos affuentes del Cauca, en el Guachal, el Bolo, el Amaime, y en los cañaverales de las haciendas" [= Río Guachal, Río Bolo and Río Amaime, Valle del Cauca Dept., NW Colombia, bet. 3°36–41'N, 76°25–28'W, elevation 950 m].
Distribution: Western Colombia (Antioquia, Caldas, Cauca, Córdoba, Risaralda, Valle del Cauca), 950–2600 m.
Source: Folleco-Fernández, 2010.
Remarks: Specific name spelled *rhomboatus* (text) and *rhombeatus* (plate).

23. *Bothrops roedingeri* Mertens *in* Titschack, 1942. Beitr. Fauna Perus 11: 284–285.

Type: Holotype, SMF 6017, a 328 mm juvenile (native, 12 June 1936).
Type locality: "Hacienda Huayuri" [= Huayuri, Ica Prov., W Peru, 14°32'S, 75°18'W, elevation 465 m].
Distribution: Coastal W Peru (Ancash, Arequipa, Ica, La Libertad, Lima), NSL–500 m.
Source: Pesantes-Segura, 2000.
Remarks: Type locality spelled Huayri *fide* Vanzolini (1986a: 5) and located near Nazca (14°50'S, 74°56'W, 575 m) *fide* J.C. Campbell & Lamar (1989: 222). Probably a synonym of *B. pictus fide* J.C. Campbell & Lamar (1989: 223).

24. *Bothrops sanctaecrucis* Hoge, 1966a. Mem. Inst. Butantan (1965) 32: 133–134, pl. 9 (middle fig.).

Type: Holotype, IB 24575, a female with 44 mm head, destroyed by fire 15 May 2010.
Type locality: "Oromomo, Rio Secure, upper Beni, Bolivia."
Distribution: Central Bolivia (Beni, Cochabamba, Santa Cruz), NSL–450 m.
Sources: Miranda et al., 1991 and Harvey et al., 2003, 2005.

25. *Bothrops venezuelensis* Sandner-Montilla, 1952. Monogr. Cien. Inst. Terap. Exp. Lab. "Veros" 9(21): 3–4, 6 figs.

Synonyms: *Bothrops venezuelae* Sandner-Montilla, 1961 *(nomen emendatum),* and *Bothrops pifanoi* Sandner-Montilla & Römer, 1961.
Type: Holotype, UCV BV-1, a specimen ≤ 1200 mm.
Type locality: "Boca de Tigre' en la Serranía de El Avila en el Distrito Federal al Norte de Caracas (Distrito Federal es lo que aquí es Cundinamarca!), Venezuela."
Distribution: Northern Colombia (Boyacá, Norte de Santander) and Venezuela (Anzoátegui, Aragua, Carabobo, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Trujillo, Yaracuy), 590–2800 m.
Sources: J.A. Peters, 1968, Lancini, 1979, Esqueda & LaMarca, 1999, Mijares-Urrutia & Arends, 2000, Markezich, 2002, Navarrete et al., 2009 and Mendoza et al., 2012.

BOULENGERINA Dollo, 1886 (Elapidae)

Synonyms: *Limnonaja* K.P. Schmidt, 1923, *Boulangerina* – Briceño-Rossi, 1934 *(nomen incorrectum), Paranaja* Loveridge, 1944b, *Boulangeria* – Boquet, 1948 *(nomen incorrectum),* and *Parahaja* – Anon., 1979 *(nomen incorrectum).*
Type species: *Naja annulata* Buchholz & Peters *in* W.C.H. Peters, 1876a.
Distribution: Subsaharan Africa.
Sources: F. Werner, 1923b, Bogert, 1943, Klemmer, 1968, Broadley, 1968c, 1974, Minton et al., 1970, Golay, 1985, Ulber, 1995, Golay et al., 1993, Keogh, 1998, David & Ineich, 1999, Slowinski & Keogh, 2000, Dobiey & Vogel, 2007, Wüster et al., 2007, Hoser, 2009c, 2012a, e, Wallach et al., 2009 and Zaher et al., 2009, 2012.

1. *Boulengerina annulata* (Buchholz & Peters *in* W.C.H. Peters, 1876a). Mber. Königl. Akad. Wiss. Berlin 1876(2): 119–120. (*Naja annulata*)

Synonyms: *Aspidelaps bocagei* Savage, 1884b, *Boulengerina stormsi* Dollo, 1886, and *Boulengerina dybowskii* Mocquard, 1897d.

Type: Holotype, ZMB 8772, a female (R. Buchholz, 1874–1875).

Type locality: "Dorfe Mbusu (Eliva Sonange am Ogowe), Westküste Afrikas" [= Eliva Sonange, near Ogooué River, Ogooué-Maritime Prov., W Gabon, ca. 1°S, 9°E, elevation NSL].

Distribution: Central Africa. Southern Cameroon (Est, Centre, Littoral, Sud, Sud-Ouest), SW Central Africa Republic (Ombella-Mpoko, Sangha), Equatorial Guinea, Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), S Congo (Brazzaville, Kouilou, Plateau), NW Angola (Cabinda), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, NE Katanga, Kinshasa, Orientale, SE Sud-Kivu), SW Burundi (Bujumbura, Bururi), ext. W Tanzania (Kigoma, Rukwa) and NE Zambia (N Luapula, N Northern), NSL–1065 m.

Sources: Boulenger, 1895i, Witte, 1962, Broadley, 1968a, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Pauwels & Lavoué, 2004, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Wüster et al., 2007 and Pauwels & Vande weghe, 2008.

Remarks: Collector of type is Zenker *fide* R. Günther *(in litt.)*. Lake Mweru, Zambia record requires verification *fide* Broadley et al. (2003: 107).

2. *Boulengerina christyi* Boulenger, 1904c. Ann. Mag. Nat. Hist. (7) 14(79): 14–15.

Type: Holotype, BMNH 1946.1.17.94 (formerly BMNH 1904.6.10.3), a 465 mm specimen (J.E. Dutton, C. Christy & J.L. Todd, Sept. 1903–June 1904).

Type locality: "near Leopoldville, Congo" [= vicinity of Kinshasa, Kinshasa Prov., SW Democratic Republic of the Congo, 4°20'S, 15°19'E, elevation 265 m].

Distribution: Southern Congo (Brazzaville) and SW Democratic Republic of the Congo (Bandundu, Kinshasa), 265–1190 m. Known only from vicinity of type locality.

Sources: Witte, 1962, Broadley, 1968a, J.-F. Trape & Roux-Estève, 1990, J.B. Rasmussen, 1991, J.-F. Trape & Roux-Estève, 1995, Chippaux, 2006 and Wüster et al., 2007.

3. *Boulengerina melanoleuca* (Hallowell, 1857b). Proc. Acad. Nat. Sci. Philadelphia (1857–1858) 9(3): 61–62. (*Naja haje melanoleuca*)

Synonyms: *Aspidelaps bocagei* Sauvage, 1884, *Naja haje leucosticta* J.G. Fischer, 1885b, *Naja melanoleuca subfulva* Laurent, 1955, *Naja melanoleuca aurata* Stucki-Stirn, 1979, and *Naja melanolenca* – Elter, 1981 *(nomen incorrectum)*.

Types: Syntypes (4), ANSP 6875–78, longest syntypes 2070 mm and 1670 mm (H.A. Ford, 1851–1857).

Type locality: "Gaboon country, West Africa" [= Gabon].

Distribution: Subsaharan Africa. Senegal (Dakar, Fatick, Kolda, Tambacounda, Thiès), Gambia (MacCarthy Island, Western), Guinea–Bissau (Bafatá, Oio, Bolama, Bubaque and Orango Is.), Guinea (Dubréka, Kindia, Macenta, Nzérékoré, Télimélé), Sierra Leone (Eastern, Northern, Southern), Liberia (Grand Gedeh, Montserrado, Margibi, Nimba), SW Mali (Kayes, Koulikoro, Sikasso), Ivory Coast (Abidjan, Agnebi, Bouaflé, Bouna, Guiglo, Lagunes, San Pédro, Sassandra, Tabou, Toumodi), W Burkina Faso (Centre-Ouest, Hauts-Bassins, Sud-Ouest, Volta-Noire), Ghana (Accra, Eastern), S Togo (Centrale, Kara, Plateaux), N Benin (Borgou, Zou), Nigeria (Akwa Ibom, Bayelsa, Cross River, Kaduna, Kwara, Oyo, Rivers), Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Littoral, Nord, Nord-Ouest, Ouest, Sud, Sud–Ouest), Equatorial Guinea (Bioko Is.), São Tomé and Príncipe (São Tomé Is.), Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Maritime, Woleu-Ntem), Central African Republic (Bamingui-Bangoran, Haute-Sangha, Haut-Mbomou, Kemo-Gribingui, Lobaye, Ombella-Mpoko, Ouham, Sangha), Congo (Brazzaville, Cuvette, Kouilou, Lekoumou, Platea, Sanghau), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu, Idjwi Is.), South Sudan (Bahr Al Ghazal, Eastern Equatoria), W Ethiopia (Gemu Gofa, Illubabor, Kefa, Shoa), S Somalia (Jubbada Hoose), Kenya (Central, Coast, Eastern, Nyanza, Rift Valley, Western), Uganda (Central, Eastern, W Northern, Western, Busi, Massambwa, Sanga and Sese Is.), Rwanda (Cyangugu, Kibungo), Burundi (Bujumbura, Bururi, Ngozi, Ruyigi), Tanzania (Arusha, Kigoma, Kilimanjaro, Lindi, Mtwara, Mwanza, Shinyanga, Tanga, Kagera, Mafia and Zanzibar Is.), Mozambique (Gaza, Inhambane, Manica, Maputo, Sofala, Tete, Zambézia, Bazaruto, Inhaca and Portuguese Is.), Malawi (Central, Northern, Southern), Zambia (Copperbelt, Central, Eastern, Luapula, Northern, North-Western), Angola (Benguela, Cuanza Norte, Lunda Norte, Malanje), E Zimbabwe (Manicaland) and ext. NE South Africa (E KwaZulu-Natal), NSL–2700 m.

BRACHYOPHIDIUM Wall, 1921a (Uropeltidae)

Synonyms: *Brahyophlbium* – Murthy, 1986 *(nomen incorrectum), Brachyiophidium* – Murthy, 1990d *(nomen incorrectum),* and *Brahyophlium* – B.D. Sharma *in* B.D. Sharma & Kumari, 1998a *(nomen incorrectum).*

Type species: *Brachyophidium rhodogaster* Wall, 1921a.

Distribution: Southern India.

Sources: Wall, 1922b, 1924f, Procter, 1924, M.A. Smith, 1943, Angel, 1947, Laurent, 1948, Constable, 1949, Gans, 1966, Murthy, 1975, 1981c, 1982b, Rajendran, 1985, McDiarmid et al., 1999, Whitaker & Captain, 2004 and Gower et al., 2005.

1. *Brachyophidium rhodogaster* Wall, 1921a. J. Bombay Nat. Hist. Soc. (1921–1922) 28(1): 41–42, pl., figs. a–d.

Type: Holotype, BMNH 1946.1.15.60 (formerly BMNH 1921.3.4.13), a 178 mm female (St. Joseph's College).

Type locality: Unknown. Designated as Sacred Heart College, Shembaganur, India, ca. 6500 feet [= Sacred Heart College, Shembaganur, 5 km. N Kodaikanal, Palani Hills, S Tamil Nadu State, S India, 10°15'N, 77°29'E, elevation 1980 m] *fide* Wall (1922b: 556).

Distribution: Southern India (Western and Eastern Ghats of Tamil Nadu), 1280–2100 m.

BRACHYOPHIS Mocquard, 1888 (Atractaspididae)

Synonyms: *Brachiophis* Palacky, 1898 *(nomen emendatum),* and *Branchyophis* – Gasperetti, 1974 *(nomen incorrectum).*

Type species: *Brachyophis revoili* Mocquard, 1888.

Distribution: Somalia.

Sources: Witte & Laurent, 1947, Lanza, 1966, 1983a, 1990b, Gasperetti, 1988, Wallach, 1991, Underwood & Kochva, 1993, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Brachyophis cornii* Scortecci, 1932c. Atti Soc. Ital. Sci. Nat. Mus. Civ. Stor. Nat. Milano 71: 268–269. (*Brachyophis revoili cornii*)

Type: Lectotype, MZUF 2491, a 177 mm female (G. Stefanini & N. Puccioni, 1924), designated by Lanza (1966: 40).

Type locality: "fra Durgale e Magghiole, Somalia settentrionale" [= between Durghale (5°35'N, 48°15'E, elevation 90 m) and Magghiole, E Galguduud Region, cen. Somalia] via lectotype selection.

Distribution: Central Somalia (Galguduud, Mudug), 20–90 m.

Source: Scortecci, 1931.

Remarks: A valid species *fide* Wallach (unpubl. data). Photographs of lectotype in Lanza (1966: pl. 15, fig. 3, pl. 17, figs. 6 [left], 7 [left]).

2. *Brachyophis krameri* Lanza, 1966. Monit. Zool. Ital. 74(1–3): 41–42, fig. 1b, pl. 15, fig. 2, pl. 19, figs. 10–11, pl. 20, fig. 13. (*Brachyophis revoili krameri*)

Type: Holotype, MZUF 3934, a 180 mm female (native, 16 Aug. 1964).

Type locality: "Geriban (Somalia settentrionale, circa 48° 50' E X 7° 15' N)" [= Geriban, Mudug Region, cen. Somalia, ca. 48°50'E, 7°15'N, elevation 200 m].

Distribution: Northern Somalia (NE Mudug), 200 m.

Remarks: Lanza (1966: 41) lists pls. I, V–VII for the new species.

B

3. *Brachyophis revoili* Mocquard, 1888. Mém. Soc. Philom. Paris 1888: 125–128, pl. 11, figs. 3–3d.

Types: Syntypes (3), MNHN 1884.691A, MNHN 1884.692, and BMNH 1946.1.3.86 (formerly MNHN 1884.693), a female, longest syntype 252 mm (G. Révoil, 1884).
Type locality: "Çomalis" [= Somalia].
Distribution: Southern Somalia (Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Mudug) and W Yemen, NSL–90 m.
Source: Scortecci, 1932a.
BRACHYORRHOS Kuhl

BRACHYORRHOS Kuhl *in* Schlegel, 1826a (Homalopsidae)

Synonyms: *Brachyorrhus* Agassiz, 1847 *(nomen emendatum), Brachyorros* – Doria, 1874 *(nomen incorrectum), Oxyorrhos* J.G. Fischer, 1879, *Atractocephalus* Sauvage, 1879, *Brachyorhos* – Palacky, 1898 *(nomen incorrectum), Brachyorhhus* – Ditmars, 1933 *(nomen incorrectum),* and *Brachyrhos* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Coluber albus* Linnaeus, 1758.
Distribution: Indonesia.
Sources: Rooij, 1917, C. Haas, 1950, J.C. Murphy, 2007, 2012b and Zaher et al., 2009.
Remarks: J.C. Murphy (2007: 269) listed genus as Homalopsidae *incertae sedis.* Undetermined *Brachyorrhos* occur on Banda, Batjan, Haruku, Nusa Laut and Saparua *fide* J.C. Murphy et al. (2012: 511).

1. *Brachyorrhos albus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 218. (*Coluber albus*)

Synonyms: *Elaps jockischii* Wagler, 1825 (*nomen ineditum*), and ? *Calamaria brachyorrhos* S. Müller, 1857 *(nomen nudum).*
Type: Holotype, NHR Lin-19 (formerly MAFR), a 460 mm specimen (Mus. Drottn.).
Type locality: "Indiis" [= India] (in error). Corrected to Ambon, Indonesia *fide* J.C. Murphy et al. (2012b: 507).
Distribution: Southern Indonesia (Ambon, Aru Is., Banda, Bisa, Haruku, Nusa Laut, Saparua, Seram) and Papua New Guinea (Raja Ampat Is.), NSL–845 m.
Remarks: Iskander & Colijn (2001: 41) list the type as ZIUS from Ambon, Indonesia. *Mainophis robusta* Macleay a synonym *fide* J.C. Murphy (2007: 211). Timor records doubtful *fide* J.C. Murphy et al. (2012b: 505).

2. *Brachyorrhos gastrotaenius* (Bleeker, 1860e). Nat. Tijds. Nederl. Indië (5) 22(2): 42–43. *(Rabdion gastrotaenia)*

Synonym: *Oxyorrhos fusiformis* J.G. Fischer, 1879.
Type: Holotype, BMNH 1863.12.4.25, a 194 mm female (C.G.C.F. Greiner, 1856).
Type locality: "Amboina, Molukschen Archipel" [= Ambon, Maluku, E Indonesia].
Distribution: Eastern Indonesia (Maluku: Ambo, Burun), 775–1450 m.
Remarks: Type locality erroneously designated as Buru, SMNS 1327 listed as lost syntypes, RMNH 3977 as cotype, and BMNH 6312425 as holotype, and publication erroneously listed as Sumatra paper *fide* J.C. Murphy et al. (2012b: 508). Photograph of head of BMNH "holotype" in J.C. Murphy et al. (2012b: fig. 4b).

3. *Brachyorrhos raffrayi* (Sauvage, 1879b). Bull. Soc. Philom. Paris (1878–1879) (7) 3: 62–63 *(Atractocephalus raffrayi)*

Synonym: *Brachyorrhos albus conjunctus* J.G. Fischer, 1880.
Type: Lectotype, MNHN 5174, a 530–580 mm female (M.J.A. Raffray, 1876–1879), designated by J.C. Murphy et al. (2012b: 509).
Type locality: "Ternate, Indonesia" [= Ternate Is.,] via lectotype selection.
Distribution: Eastern Indonesia (Maluku: Batjan [MNHN 5782], Ternate).

4. *Brachyorrhos wallacei* J.C. Murphy, Mumpuni, Lang, Gower & Sanders, 2012b. Raffles Bull. Zool. 60(2): 510, fig. 4d.

Type: Holotype, MZB 3463, a 722 mm female.
Type locality: "Jailolo, Halmahera," Indonesia.
Distribution: Eastern Indonesia (Halmahera).

BRACHYUROPHIS A.C.L.G. Günther, 1863a (Elapidae)

Synonyms: *Rhinelaps* A.C.L.G. Günther, 1872b, *Hornea* Lucus & Frost, 1896, and *Simonelaps* – Mattison, 1986 *(nomen incorrectum).*
Type species: *Brachyurophis semifasciata* A.C.L.G. Günther, 1863a.
Distribution: Australia.
Sources: Thomson, 1934, Kinghorn, 1964, Storr, 1968, 1985, 1986, Cogger et al., 1983a, Shine, 1984a, 1985a, Golay, 1985, Longmore, 1986, Scanlon & Shine, 1988, S.K. Wilson & Knowles, 1988, Gow, 1989, Hoser, 1989, 2012e, Hutchinson, 1990, Cogger, 1992, Clarke & How, 1995, Horner, 1998, Keogh et al., 1998, How & Shine, 1999, Scanlon & Lee, 2004, Sanders et al., 2008 and Zaher et al., 2009.
Remarks: A valid genus *fide* Metzger et al. (2010: 409).

1. *Brachyurophis approximans* (Glauert, 1954). West. Aust. Nat. 4(4): 85, 1 fig. (*Rhynchoelaps approximans*)

Type: Holotype, WAM 10768 (D.W.H. Shilling, June 1953).
Type locality: "Muccan Station, north-western Australia (Lat. 23°30'S., Long. 120°E.)" [= Muccan Station, NW Western Australia, W Australia, 20°40'S, 120°04'E, elevation 95 m].
Distribution: Western Australia (W Western Australia, Barrow and Varanus Is.), 10–1040 m.
Sources: Storr, 1979 and Storr et al., 2002.
Remarks: Type locality coordinates in Glauert (1954: 85) in error *fide* Storr (1968: 89), who cited them as 20°38'.

2. *Brachyurophis australis* (Krefft, 1864c). Proc. Zool. Soc. London 32(1): 180, 4 figs. (*Simotes australis*)

Types: Syntypes (2), formerly BMNH, longest syntype 290–292 mm female (J.C. Cox & J. Francis via G. Krefft), lost *fide* Cogger et al. (1983: 235).
Type locality: "neighbourhood of Port Curtis" and "Clarence River" [= vicinity of Port Curtis, E Queensland, 23°55'S, 151°21'E, elevation NSL, and Clarence River, ext. NE New South Wales, E Australia]. Port Curtis locality emended to Burdekin River in Queensland [= 20°39'S, 146°59'E, elevation 175 m] *fide* Krefft (1869: 52).
Distribution: Southeastern Australia (New South Wales, ext. SE Queensland, SE South Australia, NW Victoria), 20–1045 m.
Sources: A.C.L.G. Günther, 1865, Krefft, 1869, Mackay, 1949, Covacevich & Couper, 1991, Coventry & Robertson, 1991, G. Swan, 1999 and Swan et al., 2004.
Remarks: Original description reprinted in Krefft (1865a: 66). A.C.L.G. Günther (1865: 97) reported that Krefft sent Clarence River specimen BMNH and Boulenger (1896a: 363) listed it but did not call it a type. Krefft (1864c & 1865) reported first specimen from Port Curtis and second from Clarence River, but Krefft (1869: 52) listed Clarence River specimen as first discovered and second specimen from Burdekin River.

3. *Brachyurophis fasciolatus* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 34, pl. 5, fig. b. (*Rhinelaps fasciolatus*)

Synonyms: *Vermicella fasciata* Stirling & Zietz, 1893, and *Hornea pulchella* Lucus & Frost, 1896.
Type: Holotype, BMNH 1946.1.19.12, a 335–343 mm female (F.H. DuBoulay, 1862–1872).
Type locality: "Perth, West Australia" [= Perth, SW Western Australia, SW Australia, 31°56'S, 115°50'E, elevation NSL].
Distribution: Southern Australia (NW New South Wales, Northern Territory, ext. SW Queensland, South Australia, Western Australia, Dirk Hartog Is.), NSL–700 m
Sources: Covacevich & Couper, 1991, Bush et al., 1995 and Storr et al., 2002.

4. *Brachyurophis incinctus* (Storr, 1968). J. Roy. Soc. West. Aust. (1967) 50(3): 89–90. (*Vermicella semifasciata incincta*)

Type: Holotype, WAM 26844 (formerly NTM 2301), a 261–292 mm male (K.R. Slater, 16 Oct. 1964).
Type locality: "near Alice Springs, Northern Territory, in 23° 46' S, 133° 53' E, Australia."
Distribution: Central Australia (S Northern Territory, ext. NW Queensland), 50–895 m.
Sources: Covacevich & Couper, 1991 and Horner, 1998.

5. *Brachyurophis morrisi* (Horner, 1998). The Beagle 14: 64–68, fig. 1. (*Simoselaps morrisi*)

Type: Holotype, NTM 22951, a 301 mm male (K. Aland & A. Yumbulul, 10 Oct. 1992).
Type locality: "southern end of Elcho Island, 12°03'S 135°34'E, Northern Territory, Australia."
Distribution: Extreme N Australia (N Northern Territory, Woodah Is.), 10–60 m.
Source: S.K. Wilson & Knowles, 1988.

6. *Brachyurophis roperi* (Kinghorn, 1931). Rec. Aust. Mus. 18(5): 267, fig. 1 (*Rhynchoelaps roperi*)

Synonyms: *Rhynchoelaps campbelli* Kinghorn, 1929, *Rhychoelaps smithii* Kinghorn, 1931, *Rhynchelaps woodjonesii* Thomson, 1934, *Brachyurophis woodjonesii* Worrell, 1963 *(nomen illegitimum),* and *Brachyurophis murrayi* Wells & Wellington, 1985.
Type: Holotype, AMS 9930, a 295 mm specimen (K. Langford-Smith, May 1929).
Type locality: "Roper River, North Australia" [Australia].
Distribution: Northern Australia (Northern Territory, N Western Australia, Bathurst and Melville Is.), NSL–785 m.
Remarks: A valid species *fide* Hutchinson (1990: 404). *Rhynchoelaps campbelli* Kinghorn a valid species *fide* Hutchinson (1990: 404) and Shea & Sadlier (1999: 52). Both taxa prevously synonyms of *S. semifasciatus* (A.C.L.G. Günther).

7. *Brachyurophis semifasciatus* A.C.L.G. Günther, 1863a. Ann. Mag. Nat. Hist. (3) 11(61): 21–22, pl. 3, fig. b. (*Brachyurophis semifasciata*)

Synonyms: *Pseudoelaps rhinostoma* Jan, 1863b, and *Pseudoelaps rhodostomus* Jan, 1873 *in* Jan & Sordelli, 1870–1881.
Type: Lectotype, BMNH 1946.1.19.11, a 300–330 mm male (F.H. DuBoulay, 1862–1863), designated by Wells & Wellington (1985: 44).
Type locality: "Western Australia?" via lectotype selection.

Distribution: Western Australia (Northern Territory, South Australia, S Western Australia, Melville Is.), NSL–805 m.

Sources: Kinghorn, 1929, Hoser, 1989, Bush et al., 1995, Storr et al., 2002, J.C. Murphy & Schlager, 2003 and Edwards, 2009.

Remarks: Type locality originally listed as Baranquilla (New Granada) [= Baranquilla, Colombia] (in error), corrected to West Australia ? *fide* Boulenger (1896a: 364).

†*BRANSATERYX* Hoffstetter & Rage, 1972 (Boidae)

Type species: †*Bransateryx vireti* Hoffstetter & Rage, 1972.

Distribution: Lower Oligocene to lower Miocene of France, Czech Republic, Germany and Kazakhstan.

Sources: Rage, 1984b, Szyndlar, 1994, Szyndlar & Schleich, 1993, Szyndlar & Rage, 1993, Kordikova, 1998 and J. Müller, 1998.

1. †*Bransateryx vireti* Hoffstetter & Rage, 1972. Ann. Paléont. (Vert.) 58(1): 97–102, fig. 7, pl. 2, figs. 1–6.

Synonym: †*Bransateryx septentrionalis* Szyndlar, 1987.

Type: Holotype, MNHN Cod 1, one caudal vertebra.

Type locality: "Coderet (Allier). Oligocène supérieur (Chattien?), France."

Distribution: Upper Oligocene (Arvernian: 23.0–28.4 mya) of France, middle Oligocene (11.1–13.7 mya) of Germany, and lower Miocene (Agenian: 20.0–23.0 mya) of France, Czech Republic and Germany.

BRYGOPHIS Domergue & Bour, 1988 (Pseudoxyrhophiidae) (*nomen substitutum*)

Synonym: *Perinetia* Domergue, 1988 *(nomen praeoccupatum).*

Type species: *Perinetia coulangesi* Domergue, 1988.

Distribution: Madagascar.

Sources: Domergue, 1988, Domergue & Bour, 1988, Glaw & Vences, 1994, Andreone & Raxworthy, 1998, Kelly et al., 2009 and Zaher et al., 2009.

1. *Brygophis coulangesi* (Domergue, 1988). Bull. Mus. Natl. Hist. Nat. (4) 10(1): 135–138, figs. 1a–f. (*Perinetia coulangesi*)

Type: Holotype, MNHN 1977.817 (formerly CAD 801/S), a 1203 mm female (J. Thiel, 8 Nov. 1968).

Type locality: "Forêt de Fiherenana, en zone occidentale de la forêt de l'Est, à une cinquantaine de km, au nord de Périnet, altitude 1000 m environ, Madagascar" [= Fiherenana forest, 50 km N Andasibe (18°56'S, 48°25'E, 915 m), Toamasina Prov., E Madagascar, ca. 18°35'S, 48°15'E, elevation 1000 m].

Distribution: East-central Madagascar (Majunga, Toamasina), 1000–1200 m.

BUHOMA Ziegler, Vences, Glaw & Böhme, 1997 (Elapoidea *incertae sedis*)

Synonym: *Swileserpens* Hoser, 2012t *(nomen illegitimum).*

Type species: *Geodipsas vauerocegae* Tornier, 1902b.

Distribution: Central and East Africa.

Sources: Ziegler et al., 1997, Gravlund, 2001, Spawls et al., 2002, Vidal et al., 2008, Kelly et al., 2009 and Hoser, 2012t.

1. *Buhoma depressiceps* (F. Werner, 1897b). Verh. Zool. Bot. Ges. Wien 47: 402–403. (*Tropidonotus depressiceps*)

Synonyms: *Geodipsas mapanjensis* Andersson, 1901, and *Geodipsas depressiceps marlieri* Laurent, 1956a.

Types: Syntypes (2), ZMB, 331 and 277 mm specimens (P.R. Preuss [Zintgraff Exped.], 1889–1902).

Type locality: "Barombi-Station, Kamerun" [= Barombi Mbo, Sud-Ouest Prov., SW Cameroon, 4°40'N, 9°24'E, elevation 315 m].

Distribution: Central Africa. Southwestern Cameroon (Centre, Littoral, Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Gabon (Ngounié, Ogooué-Ivindo, Woleu-Ntem), Congo (Kouilou, Lekoumou, Sangha), E Democratic Republic of the Congo (Katanga, Nord-Kivu, Orientale, Sud-Kivu), SW Uganda (Western) and NW Burundi (Bubanza), 315–2200 m.

Sources: Laurent, 1956a, Capoccacia, 1961b, Witte, 1962, Mertens, 1965c, Knoepffler, 1966, Pitman, 1974, Derleyn, 1978a, J.-F. Trape, 1985, J.-F. Trape & Roux-Estève, 1995, Chippaux 2006, Pauwels & Vande weghe, 2006 and Chirio & LeBreton, 2007.

Remarks: *Geodipsas depressiceps marlieri* possibly a valid species *fide* Ziegler et al. (1997: 108).

2. *Buhoma procterae* (Loveridge, 1922). Proc. Zool. Soc. London 92(2): 313–314. (*Geodipsas procterae*)

Type: Holotype, BMNH 1946.1.2.48, a 386 mm male (A. Loveridge, 1 March 1921).

Type locality: "On path in thick bush-country, Uluguru Mts., 3 miles from Morogoro, Tanganyika Territroy, at an altitude of about 3000 ft." [= 3 mi. E Morogoro (6°49'S, 37°40'E), Morogoro Region, E Tanzania, ca. 6°50'S, 37°40'E, elevation 915 m].

Distribution: Southeastern Tanzania (Udzungwa and Uluguru Mts. of Iringa, N Morogoro), 915–2140 m.

Source: J.B. Rasmussen et al., 1995.

3. *Buhoma vauerocegae* (Tornier, 1902b). Zool. Anz. 25(683–684): 703–704. (*Geodipsas vauerocegae*)

Types: Syntypes, ZMB 17557, female (J. Küttner, H. Böhler, & F. Sammler), lost *fide* R. Günther *(in litt.)*
Type locality: "Usambara (Deutsch-Ost-Afrika)" [= Usambara Mountains, Tanga Region, NE Tanzania].
Distribution: Northeastern Tanzania (Usambara and Uluguru Mts. of Tanga, N Morogoro), 1000–1300 m.
Sources: J.B. Rasmussen, 1981 and J.B. Rasmussen et al., 1995.

BUNGARUS Daudin, 1803a (Elapidae)

Synonyms: *Bongarus* Fischer, 1808 *(nomen emendatum), Pseudo-boa* Oppel, 1811b *(nomen praeoccupatum), Aspidoclonion* Wagler, 1828, *Bungaras* – Bonaparte, 1832 *in* 1832–1841 *(nomen incorrectum), Aspidoclonium* Agassiz, 1844 *(nomen emendatum), Megaerophis* Gray, 1849b, *Aspidoclanion* – Mason, 1852 *(nomen incorrectum), Aspidoclonian* – Mason, 1852 *(nomen incorrectum), Bngarus* – Bleeker, 1859b *(nomen incorrectum), Aspidoclanion* – F. Mason, 1860 *(nomen incorrectum), Xenurelaps* A.C.L.G. Günther, 1864a, *Bangurus* – Stoliczka, 1870d *(nomen incorrectum), Henurelaps* – Higgins, 1873 *(nomen incorrectum), Magaerophis* Marschall, 1873 *(nomen emendatum), Pseudoboa* – Boulenger, 1896a *(nomen corrigendum), Aspidoclomion* – Maki, 1933 *(nomen incorrectum), Maegerophis* – Bourret, 1938 *(nomen incorrectum), Bungrus* – Hanvivatvong, Phanuphak, Lowcharoenkul, Benyajati & Sakulramrung, 1987 *(nomen incorrectum),* and *Bungarum* – Ota, 1991 *(nomen incorrectum).*
Type species: *Pseudoboa fasciatus* J.G. Schneider, 1801.
Distribution: Southeastern Asia and East Indies.
Fossil record: Miocene of Pakistan.
Sources: Wall, 1908f, F. Werner, 1923b, Kopstein, 1932a, M.A. Smith, 1943, Klemmer, 1963, Joger, 1984, Toriba, 1987, Golay et al., 1993, Slowinski, 1994, Keogh, 1998, David & Ineich, 1999, Slowinski & Keogh, 2000, Head, 2005, Zaher et al., 2009, I. Das, 2010, 2012 and Hoser, 2012e.
Remarks: Official Generic Name no. 2149 *fide* Opinion 1201 (ICZN, 1982a).

1. *Bungarus andamanensis* Biswas & Sanyal, 1978. J. Bombay Nat. Hist. Soc. 75(1): 179–182, figs. 1–4.

Type: Holotype, ZSI 20895/1, a 715 mm specimen (A. Bayley de Castro, 18 June 1926).
Type locality: "Port Blair, S. Andaman" [= Port Blair, South Andaman Is., Andaman & Nicobars, E India, Bay of Bengal, 11°37'N, 92°44'E, elevation 15 m].
Distribution: Eastern India (Andaman & Nicobars: Long and South Andaman Is.), NSL–15 m.
Source: Whitaker & Captain, 2004.

2. *Bungarus bungaroides* (Cantor, 1839a). Proc. Zool. Soc. London 7(1): 33. (*Elaps bungaroides*)

Synonym: *Alecto bungaroïdes* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrigendum).*
Type: Holotype, BMNH 1946.1.17.91, a juvenile (T.E Cantor, 1834–1839, via British East India Comp.).
Type locality: "Chirra Punji, Indicorum" [= Cherrapunji, East Khasi Hills, S Meghalaya State, NE India, 25°18'N, 91°42'E, elevation 1485 m].
Distribution: Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Nagaland, Sikkim, West Bengal), ext. E Nepal (Ilam), Bhutan, S China (Yunnan), ext. N Myanmar (Kachin) and N Vietnam (Yen Bai), 250–2040 m.
Sources: Shah, 1999, Kizirian et al., 2002, Leviton et al., 2003, Orlov et al., 2003, Tiwari & Shah, 2004, Kuch et al., 2005, Wangyal, 2011 and S.K. Sharma et al., 2013.

3. *Bungarus caeruleus* (J.G. Schneider, 1801). Hist. Amph. 2: 284–285. (*Pseudoboa caerulea*)

Synonyms: *Boa lineata* G. Shaw, 1802, *Boa latotecta* Hermann *in* F. Boie, 1827, *Bungarus arcuatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Bungarus coeruleus* Jan, 1863b *(nomen emendatum), Bungarus coeruleus* – Keegan, 1956 *(nomen incorrectum), Bungarus ceruleus* – Homma, 1974 *(nomen incorrectum),* and *Bungarua caeruleus* – Banerjee & Siddiqui, 1978 *(nomen incorrectum).*
Type: Lectotype, a 737 mm specimen described and illustrated by P. Russell (1796: 1–2, pl. 1), designated by Klemmer (1963: 279).
Type locality: "Vizagapatam (Indien)" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E, elevation 25 m] via lectotype selection.
Distribution: Southern Asia. Pakistan (S Balochistan, F.A.T.A., Jammu & Kashmir, Khyber Pakhtunkhwa, Punjab, Sindh), India (Andhra Pradesh, Bihar, Haryana, Himachal Pradesh, Karnataka, Madhya Pradesh, Maharashtra, Orissa, Punjab, Tamil Nadu, Uttar Anchal, Utter Pradesh, West Bengal), Nepal (Banke, Bara, Bardiya, Chitwan, Dang, Dhanusa, Jhapa, Kailali, Kanchanpur, Kapilbastu, Makwanpur, Morang, Nawalparasi, Palpa, Rupandehi, Saptari, Sunsari, Surkhet, Udyapur), E Bangladesh and Sri Lanka (Eastern, North-Central, Northern, North-Western, Sabaragamuwa, Uva, Western), 100–1500 m.
Sources: Wall, 1913d, Bhatnagar, 1960, Kramer, 1977, Khan, 1985a, 2002, Khan & Tasnim, 1986a, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Castoe et al., 2007a, Ganesh & Chandramouli, 2011, Masroor, 2012 and S.K. Sharma et al., 2013.
Remarks: Original descrioption based on P. Russell (1796: 1–2, pl. 1). The paralectotype (ZMB 2787) from Museum Blochianum ("India orientali") has been discovered *fide* Bauer (1998: 138). MNHN catalogue lists MNHN 3952 and MNHN 7686–88 as syntypes.

B

4. *Bungarus candidus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 223. (*Coluber candidus*)

Synonyms: *Pseudoboa krait* J.G. Schneider, 1801, *Bungarus semifasciatus* F. Boie, 1827, *Bungarus arcuatus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Bungarus semifasciatus* A.M.C. Duméril, 1853 (*nomen nudum*), *Bungarus javanicus* Kopstein, 1932a, and *Bungaris candidus* – Bruno, 1985 *(nomen incorrectum).*

Type: Holotype, NHR Lin-89 (formerly MAFR), a 925 mm specimen (Mus. Drottn.).

Type locality: "Indiis" [= India] (in error).

Distribution: Southeast Asia and Indonesia. Vietnam (Binh Phuoc, Dak Lak, Dak Nong, Dong Nai, Gia Lai, Ha Tinh, Hoa Binh, Kon Tum, Lam Dong, Ninh Thuan, Phu Yen, Quang Binh, Quang Nam, Quang Tri, Tay Ninh, Thua Thien-Hue), S Cambodia (Kampot, Mondulkiri), Thailand (Chaiyaphum, Chiang Mai, Chon Buri, Kanchanaburi, Khon Kaen, Lampang, Loei, Lop Buri, Nakhon Ratchasima, Pattani, Phang Nga, Phetchabun, Surin, Trang and Koh Kut Is.), West Malaysia (Kedah, Kuala Lumpur, Perak, Perlis), Singapore, and Indonesia (Bawean, Bali, Java, Karimunjawa, Sumatra), NSL–1525 m.

Sources: Wall, 1908f, M.A. Smith, 1914a, Bergman, 1962a, E.H. Taylor, 1965, Tweedie, 1983, Lim & Lim, 1992, Jintakune & Chanhome, 1995, David & Vogel, 1996, M.J. Cox et al., 1998, Kuch et al., 2005, Lang & Vogel, 2005, B.L. Stuart et al., 2006, Kuch & Mebs, 2007, V.S. Nguyen et al., 2009 and I. Das, 2010.

Remarks: Sulawesi record doubtful but possibly occurs on Kalimantan *fide* Lang & Vogel (2005: 259). *Bungarus javanicus* a valid species *fide* Toriba *in* Golay et al. (1993: 120).

5. *Bungarus ceylonicus* A.C.L.G. Günther, 1964a. Rept. Brit. India: 344.

Synonym: *Bungarus ceylonicus karavala* Deraniyagala, 1955.

Type: Lectotype, BMNH 1946.1.19.20, a 664 mm specimen (H. Cuming, 1836–1840), designated by Deraniyagala (1955: 68).

Type locality: "Ceylon" [= Sri Lanka]

Distribution: Southern Sri Lanka (Central, Sabaragamuwa, Southern, Uva, Western), NSL–750 m.

Sources: Deraniyagala, 1955, P. Silva, 1980a and A. Silva, 1990a–b.

6. *Bungarus fasciatus* (J.G. Schneider, 1801). Hist. Amph. 2: 283–284. (*Pseudoboa fasciata*)

Synonyms: *Coluber fasciatus* G. Shaw, 1802, *Coluber platurinus* G. Shaw, 1802, *Bungarus annularis* Daudin, 1803b, *Bungarus semicinctus* Duvernoy, 1832, *Aspidoclonion schneideri* Fitzinger, 1861, *Bungarus fasciatus bifasciatus* Mell, 1930, *Bungarus fasciatus insularis* Mell, 1930, *Bungurus fasciatus* – McDowell, 1969a *(nomen incorrectum), Bungaris fasciatus* – H. Fox, 1977 *(nomen incorrectum),* and *Bungrus fasciatus* – Hanvivatvong, Phanuphak, Lowcharoenkul, Benyajati & Sakulramrung, 1987 *(nomen incorrectum).*

Types: Syntypes (2), ZMB 2771–72, longest syntype 1651 mm (P. Russell & natives, 1781–1791).

Type locality: Unknown. "Indien" [= India] *fide* ZMB catalogue. Restricted to "Mansoor Cottah, Bengal, India" [= Ganjam, Orissa State, SE India, 19°23'N, 85°03'E, elevation NSL] *fide* P. Russell (1801: 53).

Distribution: Southeast Asia and Indonesia. Eastern India (N Andhra Pradesh, Arunachal Pradesh, Assam, Bihar, Madhya Pradesh, Maharashtra, Meghalaya, Mizoram, Orissa, Uttar Pradesh, West Bengal), Bangladesh, Nepal (Bardiya, Chitwan, Jhapa, Kailali, Kanchanpur, Kapilbastu, Morang, Parsa, Sunsari), Bhutan, S China (Fujian, Guangdong, Guangxi, Hainan, Hong Kong, Yunnan), Macau, Myanmar (Ayeyarwady, Kachin, Magway, Mandalay, Rakhine, Yangon), Thailand (Ang Thong, Ayutthaya, Chanthaburi, Chiang Mai, Chumphon, Loei, Lop Buri, Mae Hong, Nakhon Pathom, Nakhon Ratchasima, Nakhon Si Thammarat, Nonthaburi, Pattani, Phetchabun, Ranong, Samut Prakan, Saraburi, Sing Buri, Surin, Tak, Uthai Thani), Laos (Attapu, Borikhan, Champasak, Houaphan, Khammouan, Louangphrabang, Phongsali, Salavan, Savannakhet, Vientiane, Xaignabouri, Xekong, Xiangkhouang), Vietnam (Bac Giang, Bac Kan, Bac Ninh, Binh Phuoc, Ca Mau, Cao Bang, Da Nang, Dong Nai, Hai Duong, Hanoi, Ha Tay, Ha Tinh, Hoa Binh, Ho Chi Minh City, Kien Giang, Lang Son, Lao Cai, Nighe An, Ninh Binh, Quang Binh, Quang Nam, Quang Ninh, Quang Tri, Son La, Tay Ninh, Thai Nguyen, Thanh Hoa, Thua Thien-Hue, Tien Giang, Vinh Phuc, Yen Bai), Cambodia, West Malaysia (Pinang), Singapore, East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Java, Kalimantan, Sumatra), NSL–2500 m.

Sources: Wall, 1911c, C.H. Pope, 1935, Leviton, 1955, Bergman, 1962a, E.H. Taylor, 1965, Deuve, 1970, Tweedie, 1983, Karsen et al., 1986, Kuch, 1991, Jintakune & Chanhome, 1995, Zug & Mitchell, 1995, David & Vogel, 1996, Bauer, 1998, M.J. Cox et al., 1998, Xie et al., 1998, Stuebing & Liger, 1999, Zug et al, 1998, Orlov et al., 2000, Malkmus et al., 2002, Schleich & Kästle, 2002, Leviton et al., 2003, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Castoe et al., 2007a, M.F. Ahmed et al., 2009, V.S. Nguyen et al., 2009, I. Das, 2012 and S.K. Sharma et al., 2013.

Remarks: Description based on P. Russell (1796: 5, pl. 3). Official Specific Name no. 2785 *fide* Opinion 1201 (ICZN, 1982a). Type locality listed as Indien [= India] *fide* ZMB catalogue.

7. *Bungarus flaviceps* J.T. Reinhardt, 1843. Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 267–269, pl. 3, fig. 4.

Synonyms: *Megaerophis formosus* Gray, 1849b, *Bungarus flaviceps baluensis* Loveridge, 1938a, and *Maticora intermedia* Westermann, 1942.

Type: Holotype, ZMUC 65301, a 1256 mm specimen (B.W. Westermann, 1801–1817).

Type locality: "Java" [= W Indonesia].

Distribution: Southeast Asia and Greater Sundas. Southern Myanmar (Tanintharyi), S Vietnam (Ba Ria-Vung Tsu, Binh Thuan, Dong Nai, Lam Dong), Cambodia, Thailand (Nakhon Si Thammarat, Phang Nga, Ratchaburi), West Malaysia (Perak, Perlis, Pinang), East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Banka, Belitung, Java, Kalimantan, Nias, Sumatra), 550–1550 m.

Sources: Brongersma, 1933e, 1947a, 1948b, E.H. Taylor, 1965, Tweedie, 1983, Jintakune & Chanhome, 1995, David & Vogel, 1996, J.B. Rasmussen & Hughes, 1997, M.J. Cox et al., 1998, Kuch & Götzke, 2000, Malkmus et al., 2002, Leviton et al., 2003, Orlov et al., 2003, McGuire & Kuch, 2005 and V.S. Nguyen et al., 2009.

8. *Bungarus lividus* Cantor, 1839a. Proc. Zool. Soc. London 7(1): 32.

Type: Lectotype, specimen illustrated in colored sketch of T.E. Cantor (1834–1837: no 1) in RSL, designated by M.A. Smith (1943: 418).

Type locality: "Assam" [= Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram or Nagaland State, NE India] via lectotype selection.

Distribution: Northeastern India (Assam, Sikkim, West Bengal), Nepal (Chitwan, Udayapur) and Bangladesh, 340 m.

Sources: Wall, 1911j, Schleich & Kästle, 2002, Tiwari & Shah, 2004 and S.K. Sharma et al., 2013.

9. *Bungarus magnimaculatus* Wall & Evans, 1901. J. Bombay Nat. Hist. Soc. (1900–1901) 13(4): 611–612. (*Bungarus caeruleus magnimaculata*)

Type: Lectotype, BMNH 1908.6.23.90 (formerly IMC), a 1219–1308 mm specimen (J.C. Thompson a.k.a. V. Kühne, Jan.–June 1900), designated by M.A. Smith (1943: 417).

Type locality: "Meiktila, Upper Burma" [= Meiktila, Mandalay State, cen. Myanmar, 20°52'N, 95°51'E, elevation 245 m] via lectotype selection.

Distribution: Central Myanmar (Mandalay, Sagaing, S Shan, Yangon), 10–245 m.

Source: Leviton et al., 2003.

10. *Bungarus multicinctus* Blyth, 1860. Proc. Asiatic Soc. Bengal 29(1): 98.

Synonyms: *Bungarus wanghaotingi* C.H. Pope, 1928b, *Bungarus multicinctum* – Mell *in* Ahl, 1930, *Bungaris multicinctus* – Bertke, Watt & Tu, 1966 *(nomen incorrectum),* and *Bungarus multicinctis* – Bernheimer, Weinstein & Linder, 1986 *(nomen incorrectum).*

Type: Holotype, IMC, a 1220 mm skin without head (R. Swinhoe, 1855–1860 [Amoy] or 7 June–1 July 1858 [Formosa]), lost *fide* M.A. Smith (1943: 416).

Type locality: Unknown. Designated as Amoy [= Xiamen Shi, Fujian Prov., S China] *fide* C.H. Pope (1935: 335), M.A. Smith (1943: 416), Klemmer (1963: 281) and Golay et al. (1993: 120), Formosa [= Taiwan] *fide* Stejneger (1907: 397) and Maki (1931: 153) and both China and Formosa *fide* C.H. Pope (1935: 335).

Distribution: Southeastern Asia. Southeastern China (Anhui, Fujian, Guangdong, Guangxi, Guizhou, Hainan, Hong Kong, Hubei, Hunan, Sichuan, Yunnan, Zhejiang), Macau, Taiwan, Myanmar (Bago, Mandalay, Yangon), N Laos, N Vietnam (Bsc Giang, Bac Kan, Cao Bang, Hai Duong, Hai Phong, Hanoi, Ha Tinh, Hoa Binh, Lang Son, Nghe An, Son La, Thanh Hoa, Thua Thien-Hue, Vinh Phuc), NSL–1500 m.

Sources: Stejneger, 1907, Maki, 1931, Mao, 1961, Kuntz, 1963, Karsen et al., 1986, Easton & Leung-Va, 1993, Xie et al., 1998, Orlov et al., 2000, Kuch et al., 2005b, Kuch & Mebs, 2007, V.S. Nguyen et al., 2009 and Xiang & Li, 2009.

Remarks: The only two snakes reported in Blyth (1860: 98) are represented by dried skins and the other *(Python molurus)* is stated to be from Formosa, suggesting a type locality of Taiwan. Robert Swihoe first lived in Amoy (1855–1860), became British Vice-Consul in Formosa (1861–1873 but earlier collected in Formosa in 1856 and 1858) and then became Consulate in Amoy (1863–1873), Ningpo and Chefoo. Zhao & Adler (1993: 265), David & Ineich (1999: 69), Zhao (2006: 292), Zhang (2009: 127) and Shi (2011:256) are equivocal concerning the type locality.

11. *Bungarus niger* Wall, 1908f. J. Bombay Nat. Hist. Soc. (1907–1908) 18(4): 712–713, 715–716.

Type: Lectotype, BMNH 1946.1.18.63 (formerly BMNH 1860.3.19.1257), a juvenile female (F. Wall, 17 May 1907), designated by Toriba *in* Golay et al. (1993: 121).

Type locality: "Tindharia, eastern Himalayas, India" [= Tindharia, N West Bengal State, NE India, 26°51'N, 88°20'E, elevation 875 m] via lectotype selection.

Distribution: Southern Asia. Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Nagaland, North Bengal, Sikkim, Uttarakand), Nepal (Kaski), Bhutan and N Bangladesh, 100–1800 m.

Sources: Wall, 1911j, Tillack & Grossman, 2001, Schleich & Kästle, 2002, Grosselet et al., 2004, Tiwari & Shah, 2004, Whitaker & Captain, 2004, Theophilus et al.,

B

2008, M.F. Ahmed et al., 2009 and S.K. Sharma et al., 2013.

Remarks: Supplemental original descriptions in wall (1909d: 355 & 1910c: 838–840, pl. figs. 4–7). Type locality restriction to Tindharia, eastern Himalayas [300–1370 m] *fide* M.A. Smith (1943: 417) irrelevant.

12. *Bungarus sindanus* Boulenger, 1897f. J. Bombay Nat. Hist. Soc. (1897–1898) 11(1): 73–74, pl., 4 figs.

Synonym: *Bungarus sindanus razai* Khan, 1985a.

Types: Syntypes (3), BMNH 1946.1.18.54–55, [Sukkur] (L.J. Mountford) and BMNH 1946.1.19.16 [Umarkot] (H.E. Watson), longest syntype 1300 mm.

Type locality: "Umarkot" and "Sukkur, Sindh" [= Umarkot, S Sindh Prov., 25°24'N, 69°43'E, elevation 10 m and Sukkur, 27°41'N, 68°51'E, elevation 60 m, N Sindh Prov., SE Pakistan]. Restricted to Sindh Basin *fide* Boulenger (1897f: 73).

Distribution: Pakistan (N Balochistan, Jammu & Kashmir, Khyber Pakhtunkhwa, Punjab, Sindh) and W India (Gujarat, Madhya Pradesh, Maharashtra, Rajasthan), 10–1180 m.

Sources: Wall, 1913d, Schleich & Kästle, 2002 and Whitaker & Captain, 2004.

Remarks: Resurrected as a valid species *fide* Khan, 1984b, 1985a.

13. *Bungarus slowinskii* Kuch, Kizirian, Truong, Lawson, Donnelly & Krebs, 2005. Copeia 2005(4): 823–828, figs. 3–5.

Type: Holotype, IEBR 1172 (formerly LACM FS 843), a 1350 mm male (Q.T. Nguyen & D. Kizirian, 1 Oct. 2001).

Type locality: "Vietnam, Yen Bai Prov., Van Yen District, from a stream near Na Hau Commune, 21°46'N, 104°32'E, 540 m."

Distribution: Central Laos (Khammouane) and N Vietnam (Lao Cai, Quang Nam, Quang Tri, Thua Thien-Hue, Yen Bai), 140–1300 m. Possibly occurs up Red River Valley in Yunnan, China *fide* Kuch et al. (2005: 828).

Sources: Kien & Truong, 2009, V.S. Nguyen et al., 2009 and Kharin et al., 2011.

14. *Bungarus walli* Wall, 1907a. J. Bombay Nat. Hist. Soc. (1906–1907) 17(3): 608–609, 1 pl., 6 figs.

Type: Lectotype, from BMNH 1946.1.18.51–53 series, a 1511 mm male (F. Wall and natives, 6–29 Aug. 1906), designated by Wall (1924b: 24).

Type locality: "Fyzabad, Oudh" [= Faizabad, Uttar Pradesh, N India, 26°47'N, 82°09'E, elevation 100 m].

Distribution: Northern India (Bihar, Orissa, Uttar Pradesh, West Bengal), SE Nepal and Bangladesh (Chittagong), NSL–155 m.

Sources: Wall, 1924b, 1928, Klemmer, 1963, Whitaker & Captain, 2004, N. Khaire, 2006 and S.K. Sharma et al., 2013.

Remarks: The first new species discovered by F. Wall after 11.5 years of laborious field work, which is why he claimed "sufficient excuse for commemorating the event and attaching my own name to it."

15. *Bungarus wanghaotingi* C.H. Pope, 1928b. Amer. Mus. Novit. (325): 3–4.

Type: Holotype, AMNH 35320, a 484 mm female (W. Granger, Nov. 1926).

Type locality: "Yuan Kiang, southwestern Yunnan Province, China" [= Yuanjiang, SW Yunnan Prov., SW China, 23°36'N, 102°00'E, elevation 400 m].

Distribution: Myanmar (Kachin, Rakhine, Sagaing, Yangon) and SW China (Yunnan), 400–900 m.

Source: A valid species *fide* Leviton et al., 2003.

Remarks: Supplemental original description in C.H. Pope (1929: 469).

C

CAAETEBOIA Zaher, Grazziotin, Cadle, Murphy, Moura-Leitve & Bonatto, 2009 (Xenodontidae)

Type species: *Liophis amarali* Wettstein, 1930.
Distribution: Eastern Brazil.
Sources: Dixon, 1980, Marques et al., 2001, Zaher et al., 2009,Vidal et al., 2010 and Passos et al., 2012a.

1. *Caaeteboia amarali* (Wettstein, 1930). Zool. Anz. 88(1–4): 93–94, fig. 1. (*Liophis amarali*)

Type: Holotype, NMW 23107, a 527 mm specimen (P. Branchhardt don., May 1929).
Type locality: "Bello Horizonte, Staat Minas Geraës, Brasilien" [= Belo Horizonte, cen. Minas Gerais State, E Brazil, 19°55'S, 43°56'W, elevation 865 m].
Distribution: Southeastern Brazil (Bahia, Espírito Santo, Minas Gerais, Parana, Rio de Janeiro, Santa Catarina, São Paulo), 865 m.

CACOPHIS A.C.L.G. Günther, 1863c (Elapidae)

Synonyms: *Petrodymon* Krefft, 1865b, and *Cachophis* – Higgins, 1873 *(nomen incorrectum).*
Type species: *Cacophis krefftii* A.C.L.G. Günther, 1863c.
Distribution: Eastern Australia.
Sources: Krefft, 1869, Shine, 1980b, Cogger et al., 1983a, Mengden, 1983, Shine, 1985a, S.K. Wilson & Knowles, 1988, Hoser, 1989, 2012e, Hutchinson, 1990, Ehmann, 1992, Golay et al., 1993, Greer, 1997, David & Ineich, 1999, Cogger, 2000, Scanlon, 2003a, Scanlon & Lee, 2004 and Sanders et al., 2008.

1. *Cacophis churchilli* Wells & Wellington, 1985. Aust. J. Herp. (Suppl. 1): 45.

Type: Holotype, AMS R74464 (G. Churchill, 1968).
Type locality: "Black Mountain Road, near Kuranda, Queensland, (16 49'S x 14S 38'E), Australia."
Distribution: Northeastern Australia (Queensland, Lindeman Is.), NSL–855 m.
Sources: S.K. Wilson & Knowles, 1988, Covacevich & McDonald, 1993, Shea & Sadlier, 1999 and Scanlon, 2002.

2. *Cacophis harriettae* Krefft, 1869a. Proc. Zool. Soc. London 31(1): 319, fig. 3.

Synonyms: *Cacophis harrietti flavicollis* McDowell, 1967 *(nomen nudum),* and *Cacophis harrietti harrietti* – McDowell, 1967 *(nomen incorrectum).*
Type: Lectotype, AMS 142007 (formerly AMS 6676), a 305 mm specimen (F.A. Blackman, 1855–1869), designated by Cogger (1979: 204).
Type locality: "Warro, Port Curtis, Queensland, Australia" [= 23°25'S, 150°31'E, elevation NSL] via lectotype selection.
Distribution: Eastern Australia (ext. NE New South Wales, E Queensland), NSL–825 m.
Source: Shea & Sadlier, 1999.
Remarks: Supplemental original description in Krefft (1869b: 74, pl. 11, figs. 5–5a.).

3. *Cacophis krefftii* A.C.L.G. Günther, 1863c. Ann. Mag. Nat. Hist. (3) 12(71): 361.

Synonym: *Cacophis fordei* Krefft, 1869b.
Type: Lectotype, BMNH 1946.1.17.60, a 305 mm specimen (J.F. Wilcox, June 1847–Sept. 1850), designated by Cogger et al. (1983: 219).
Type locality: "probably from Port Macquarie" [New South Wales, Australia] (in error). "North of the Clarence River, N.S.W" via lectotype selection. Restricted to north of the Clarence at Ipswich, Queensland *fide* Krefft (1869: 74) [= Ipswich, Queensland, Australia, 27°37'N, 152°46'E, elevation 35 m].
Distribution: Eastern Australia (E New South Wales, ext. SE Queensland), NSL–1005 m.
Remarks: The types were donated by G. Krefft *fide* Günther (1863c: 361).

4. *Cacophis squamulosus* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1235–1236. (*Pseudelaps squamulosus*)

Synonyms: *Pseudelaps squamulosus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Diemansia cucullata* A.C.L.G. Günther, 1862b, *Pseudoelaps atropolios* Jan, 1863b (*nomen nudum*), and *Pseudoelaps atropolios* Jan, 1873 *in* Jan & Sordelli, 1870–1881.
Type: Holotype, MNHN 7667 (J. Verreaux, 1844).
Type locality: "Tasmanie" [= Tasmania, Australia]. (in error *fide* Cogger et al., 1983a: 219).
Distribution: Southeastern Australia (E New South Wales, ext. SE Queensland), NSL–1245 m.

C

†*CADURCERYX* Hoffstetter & Rage, 1972 (Boidae)

Type species: †*Cadurceryx filholi* Hoffstetter & Rage, 1972.
Distribution: Middle to upper Eocene of France.
Source: Rage, 1984b.
Remarks: Upper Eocene material believed to represent a second species *fide* Rage (1978: 209).

1. †*Cadurceryx filholi* Hoffstetter & Rage, 1972. Ann. Paléont. (Vert.) 58(1): 91–93, figs. 6a–c, pl. 1, fig. 1.

Type: Holotype, MNHN Qu 301, one anterior cloacal vertebra with both synapophyses and additional processes.
Type locality: "phosphorites du Quercy, anciennes collections, localité non précisée: âge: presque certainement Eocène supérieur, France." Probably Headonian, upper Eocene *fide* Rage (1984b: 24).
Distribution: Middle Eocene (Lutetian: 37.2–48.6 mya) and upper Eocene (Priabonian: 33.9–37.2 mya) of France.

†*CADURCOBOA* Rage, 1978 (Boidae)

Type species: †*Cadurcoboa insolita* Rage, 1978.
Distribution: Middle Eocene of France, upper Eocene of France and United Kingdom.
Sources: Rage, 1978, 1984b, Holman & Harrison, 1998a and Rage & Augé, 2010.
Remarks: An unidentified species known from upper Eocene of United Kingdom *fide* Milner et al. (1982).

1. †*Cadurcoboa insolita* Rage, 1978. Palaeovertebrata 8(2–4): 210–213, figs. 6, 7a–b.

Type: Holotype, UPVI SNB 1000, one trunk vertebra.
Type locality: "Sainte-Néboule, Lot (Phosphorites du Quercy), Eocène supérieur" [France]. Emended to Headonian *fide* Rage (1984b: 31).
Distribution: Middle Eocene (37.2–48.6 mya) and upper Eocene (Priabonian: 33.9–37.2 mya) of France and United Kingdom (England).

CALABARIA Gray, 1858b (Calabariidae)

Synonyms: *Rhoptrura* W.C.H. Peters, 1858, and *Roptrura* Sauvage, 1884 *(nomen emendatum)*.
Type species: *Eryx reinhardtii* Schlegel, 1848.
Distribution: Western and cen. Africa.
Sources: Gray, 1858e, Tornier, 1901, E.H. Taylor & Weyer, 1958, Doucet, 1963, Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Stimson, 1969, Underwood, 1976, Hughes, 1983, J.A. Butler & Reid, 1986, Kluge, 1993a, 1999a, Heise et al., 1995, J.-F. Trape & Roux-Estève, 1995, Lamar, 1997b, Luiselli & Akani, 1998a, McDiarmid et al., 1999, Luiselli et al., 2002, J.C. Murphy & Schlager, 2003, R. Lawson et al., 2004, Chippaux, 2006, Noonan & Chippindale, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Segniagbeto et al., 2011.
Remarks: A synonym of *Charina fide* Kluge, 1993.

1. *Calabaria reinhardtii* (Schlegel, 1848). Bijdr. Dierk. 1: 2–3, pl. (*Eryx reinhardtii*)

Synonyms: *Calabaria fusca* Gray, 1858b, and *Roptrura petiti* Sauvage, 1884.
Type: Holotype, ZMB 1471, a 457 mm specimen (J.T. Reinhardt, 1845–1847).
Type locality: "Côte d'or" [= Ghana]. Restricted to Aqua Pim (= Akwapim) [= Akwapim, Eastern Prov., S Ghana, 5°58'N, 1°05'W, elevation 120 m] *fide* Hughes & Barry (1969: 1010).
Distribution: West and cen. Africa. Southeastern Guinea (Macenta, Nzérékoré), Liberia (Bong, Gbarpolu, Loffa, Margibi, Montserrado), Ivory Coast (Abidjan), S Ghana (Eastern), Togo (Plateaux), Benin, S Nigeria (Cross River, Delta), S Cameroon (Central, Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime), Equatorial Guinea (Bioko Is.), SW Central African Republic (Lobaye, Ombella-Mpoko, Sangha), S Congo (Kouilou, Lekoumou, Niari, Pool) and Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Kivu, Orientale), NSL–1050 m.
Remarks: Possibly occurs in Benin *fide* Hughes (2013: 151).

†*CALAMAGRAS* Cope, 1873 (Boidae)

Synonyms: †*Aphelophis* Cope, 1873, †*Calamagros* – Hoffmann, 1890 *(nomen incorrectum)*, and †*Aphelopsis* Stromer, 1910 *(nomen emendatum)*.
Type species: †*Calamagras murivorus* Cope, 1873.
Distribution: Lower Eocene of USA, France and Kyrgyzstan, middle Eocene of USA, upper Eocene of Canada, lower Oligocene of USA and Mongolia, upper Oligocene of USA, and lower Miocene of USA.
Sources: Gilmore, 1938, Holman, 1979b, 2000a, and Rage, 1984b.

1. †*Calamagras angulatus* Cope, 1873. Synop. New Vert. Tertiary Colorado: 16.

Type: Holotype, AMNH 1654, one trunk vertebra (E.D. Cope, summer 1873).

Type locality: "Cedar Creek, Colorado (Whitneyan or Orellan, middle or late Oligocene)" [= early Oligocene *fide* Holman, 2000a: 288].
Distribution: Lower Oligocene (Orellan: 33.3–33.9 mya) of USA (Colorado, South Dakota), upper Oligocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska, Wyoming), and lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska).
Source: Holman, 1976b.
Remarks: Original description reprinted in Cope (1874a: 518).

2. †*Calamagras floridanus* Auffenberg, 1963. Tulane Stud. Zool. 10(3): 162–163, fig. 11.

Type: Holotype, UF 6150, one trunk vertebra (W. Auffenberg, 1954).
Type locality: "Boulder Bar, Thomas Farm, Gilchrist County, Florida, lower Miocene, Arikareean, Hawthorne formation."
Distribution: Lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Florida). Known only from type locality.
Remarks: Listed as middle Miocene *fide* (Holman, 1979b: 211).

3. †*Calamagras gallicus* Rage, 1977b. Herpetologica 33(4): 459–460, figs. 1a–b.

Type: Holotype, MNHN GR 7896, one caudal vertebra.
Type locality: "Grauves (Département de la Marne, France). Lower Eocene = Ypresian (correlated with the Wasatchian of North America)."
Distribution: Lower Eocene (Ypresian: 48.6–55.8 mya) of France. Known only from type locality.

4. †*Calamagras murivorus* Cope, 1873. Synop. New Vert. Tertiary Colorado: 15.

Synonyms: †*Aphelophis talpivorus* Cope, 1873, and †*Calamagras truxalis* Cope, 1873.
Type: Holotype, AMNH 1603, six trunk vertebrae (E.D. Cope, summer 1873).
Type locality: "Cedar Creek, northeastern Colorado" [USA]. Emended to Oligocene, Oreodon Beds *fide* Gilmore (1938: 42) and White River Formation, lower Oligocene (Orellan) of Cedar Creek locality, Logan County, Colorado *fide* Holman (2000a: 63).
Distribution: Lower Oligocene (Orellan: 33.3–33.9 mya) of the USA (Colorado, Nebraska, South Dakota).
Remarks: Original description reprinted in Cope (1874a: 517).

5. †*Calamagras platyspondyla* Holman, 1976b. Herpetologica 32(1): 89, figs. 1a–b.

Type: Holotype, USNM 4512, one trunk vertebra.
Type locality: "Loc. I, Lower Gering formation: University of Nebraska State Museum Locality MO-119 (NW 1/4, SE 1/4, sec. 32, T 20 N, R 52 W, 10.46 km S and 2.01 km W of Bayard, Morrill County, Nebraska), Lower Miocene." Emended to lower Gering formation, late Oligocene (early Arikareean)-6, Durnal locality, Morrill County, Nebraska *fide* Holman (2000a: 64)
Distribution: Lower Oligocene (Arikareean: 20.6–30.8 mya) of USA (Florida), and upper Oligocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska, Wyoming).
Sources: Holman, 1977d and Holman & Harrison, 2001.

C

6. †*Calamagras primus* M.K. Hecht *in* McGrew, 1959. Bull. Amer. Mus. Nat. Hist. 117(3): 142–143, pl. 54, figs. 1–5.

Type: Holotype, AMNH 3828, one middle trunk vertebra (P.O. McGrew & field crews, 1950–1952).
Type locality: "Locality 5, on the south side of Elk Mountain and Tabernacle Butte area at the northern end of the Green River Basin, about 15 miles from the southwest flank of the Wind River Mountains and 25 miles north of the village of Farson, in southeast corner of Sublette County, Wyoming (T 27-29N, R 103-106 W), [USA]; late Bridgerian, middle Eocene."
Distribution: Middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming) and possibly lower Eocene (50.3–55.4 mya) of USA (New Mexico).
Source: Sullivan & Lucus, 1988.

7. †*Calamagras turkestanicus* Danilov & Averianov, 1999. Geodiversitas 21(1): 86–91, figs. 1a–d, 2a–d, 3a–d.

Type: Holotype, ZISP PH 1/2, one anterior/middle trunk vertebra (A.O. Averianov, 1988–1993 and I.G. Danilov & A.O. Averianov, 1995).
Type locality: "Andarak 2, Fergana Valley, Kyrgystan; Alay beds, lower Eocene (late Ypresian)."
Distribution: Lower Eocene (Ypresian: 48.6–55.8 mya) of Kyrgyzstan.

8. †*Calamagras weigeli* Holman, 1972. Canad. J. Earth Sci. 9(12): 1626, figs. 7a–b.

Type: Holotype, SMNH 1437, one posterior trunk vertebra (Saskatchewan Mus. Nat. Hist., 1960–1963).
Type locality: "early Oligocene, Cypress Hills Formation, north branch of Calf Creek in L.S. 4, Sec. 8, Twp. 8, Distribution 22, W 3rd mer., elevation 3600 ft (1100 m), 10 mi (16 km) northwest of Eastend, Saskatchewan." Emended to late Eocene (Chadronian) *fide* Holman (2000a: 67).
Distribution: Upper Eocene (Chadronian: 33.9–38.0 mya) of Canada (Saskatchewan), and lower-middle Miocene (Barstovian, Hemingfordian and Arikareean: 13.6–30.8 mya) of USA (South Dakota, Texas, Wyoming).
Sources: Holman, 1976a, 1976c, 1977b.

C

CALAMARIA H. Boie *in* F. Boie, 1827 (Calamariidae)

Synonyms: *Changulia* Gray, 1835 *in* Gray & Hardwicke, 1830–1835, *Typhlocalamus* A.C.L.G. Günther, 1872a, *Caramaria* – Oshima, 1910 *(nomen incorrectum), Galamaria* – Okada, 1932 *(nomen incorrectum), Keiometopon* E.H. Taylor, 1962, *Calameria* – Witte, 1966 *(nomen incorrectum), Calamalia* – F.-T. Peng & Chang, 1968 *(nomen incorrectum), Crottyreedus* Hoser, 2012aj *(nomen illegitimum), Freudreedus* Hoser, 2012ai *(nomen illegitimum),* and *Oxyreedus* Hoser, 2012ai *(nomen illegitimum).*
Type species: *Calamaria linnaei* H. Boie *in* F. Boie, 1827.
Distribution: Southeastern Asia and East Indies.
Sources: Inger & Marx, 1965, Grismer et al., 2004, Koch et al., 2009, Orlov, 2009, Zaher et al., 2009 and I. Das, 2010, 2012.
Remarks: Official Generic Name *fide* Opinions 18 (ICZN, 1926) & Opinion 2196 (ICZN, 2008).

1. *Calamaria abramovi* Orlov, 2009. Russ. J. Herp. 16(2): 147–151, figs. 1–6.

Type: Holotype, ZISP 25569, a 482 mm female (N.L. Orlov, 15 Sept. 1998).
Type locality: "from above Mang Xang Village, Ngoe Linh Mountain, Dac Glei District, Kon Tum Prov., Vietnam (15º05' N 107º57' E, elevation 1700m)."
Distribution: Southern Vietnam (Kon Tum), 1700 m. Known only from type locality.
Source: Orlov et al., 2010.

2. *Calamaria abstrusa* Inger & Marx, 1965. Fieldiana: Zool. 49: 179–180, fig. 49.

Type: Holotype, NMW 17026, a 170 mm male (J. Schild, 1890–1904).
Type locality: "Padang, Sumatra" [= Padang, Sumatera Barat Prov., W Sumatra, W Indonesia, 0°57'S, 100°21'E, elevation NSL].
Distribution: Western Indonesia (Nias, W Sumatra), NSL.
Source: David & Vogel, 1996.

3. *Calamaria acutirostris* Boulenger, 1896c. Ann. Mag. Nat. Hist. (6) 17(101): 394.

Type: Lectotype, NMBA 1686, a 250 mm male (P. & F. Sarasin, 1893–1896), designated by Inger & Marx (1965: 73).
Type locality: "Celebes: Mount Bonthain, Loka" [= Loka, Mt. Lompobatang, South Sulawesi Prov., Sulawesi, Indonesia, 5°19'S, 119°54'E, elevation 1200 m] via lectotype selection.
Distribution: Central Indonesia (SW Sulawesi), 1065–1200 m.
Sources: Bosch, 1985, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007.
Remarks: Lectotype erroneously listed as NMBA 1681 *fide* Inger & Marx (1965: 74).

4. *Calamaria albiventer* (Gray, 1835 *in* Gray & Hardwicke, 1830–1835). Illust. Indian Zool. 2(19–20): pl. 86, figs. 6–9. (*Changulia albiventer*)

Synonyms: *Calamaria indragirica* Schenkel, 1901, and *Calamaria ornata* F. Werner, 1909b.
Types: Syntypes (3), BMNH 1946.1.2.10 (formerly BMNH 1860.3.19.1269a–b) and BMNH 1946.1.2.18 (formerly BMNH 1898.9.22.39), three females (T. Hardwicke, 1756–1823).
Type locality: "Pinang" [= Penang Is., Pinang State, NW Malay Peninsula, 5°22'N, 100°14'E].
Distribution: Malay Peninsula and Sumatra. West Malaysia (Perak, Pinang), Singapore and W Indonesia (E Sumatra), NSL–1370 m.
Sources: Tweedie, 1983, David & Vogel, 1996 and Grismer et al., 2010.
Remarks: M.A. Smith (1943: 530) designated pl. 124 in T. Hardwicke's collection a lectotype. Inger & Marx (1965: 96) listed 3 syntypes with BMNH 1860.3.19.1269 having 2 specimens.

5. *Calamaria alidae* Boulenger, 1920a. Ann. Mag. Nat. Hist. (9) 5(27): 282–283.

Type: Holotype, BMNH 1946.1.3.64 (formerly BMNH 1920.1.16.22), a 220 mm specimen (C.J. Brooks, 1912–1917).
Type locality: "Lebong Tandai in Benkoelen, Sumatra" [= Lebong Tandai, Bengkulu Prov., W Sumatra, W Indonesia, 3°01'S, 101°54'E, elevation 150 m *fide* David & Vogel, 1996: 240].
Distribution: Western Indonesia (W Sumatra), 150 m.
Source: David & Vogel, 1996.

6. *Calamaria apraeocularis* M.A. Smith, 1927. Proc. Zool. Soc. London 97(1): 224–225.

Type: Holotype, BMNH 1946.1.3.48 (formerly MAS 8542 & BMNH 1926.8.20.157), a 285 mm female (M.A. Smith, 15 Jan.–15 Feb. 1924).
Type locality: "Djikoro, on the south-western slopes of Mt. Bonthain, about five kilometers distant from Malakadji, at an altitude of about 1200 metres, South Celebes" [= Cikoro, Mt. Lompobatang, South Sulawesi Prov., Sulawesi, Indonesia, ca. 5°25'S, 119°52'E, elevation 1200 m]
Distribution: Central Indonesia (SW Sulawesi), 1200 m. Known only from type locality.
Sources: Bosch, 1985, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007.

7. *Calamaria banggaiensis* Koch, Arida, McGuire, Iskandar & Böhme, 2009. Zootaxa (2196): 21–26, figs. 2, 4, 6, 8.

Type: Holotype, MZB 3230 (formerly AK 182), a 201 mm female (A. Koch & E. Erida, 28 Aug. 2005).
Type locality: "approximately 5 m elevation, southeast of Desa (= village) Banggai (1°37'23"S, 123°32'16E"), Pulau Banggai, Kepulauan Banggai, east of Central Sulawesi (Propinsi Sulawesi Tengah), Indonesia."
Distribution: Central Indonesia (cen. Sulawesi: Banggai and Peleng), NSL.
Source: Koch, 2012.

8. *Calamaria battersbyi* Inger & Marx, 1965. Fieldiana: Zool. 49: 208–209.

Type: Holotype, BMNH 1896.2.17.13, a 92 mm male (F.H. Rolle, 1864–1896).
Type locality: "Tandjong, southeastern Borneo" [= SE Kalimantan].
Distribution: Central Indonesia (SE Kalimantan).

9. *Calamaria bicolor* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 78–81.

Synonyms: *Calamaria macrurus* Bleeker, 1860b, *Calamaria hosei* Günther, 1896b, *Calamaria semiannulata* Boettger, 1898, and *Calamaria picteti* Peracca, 1899.
Type: Holotype, RMNH 68, a 281 mm male (S. Müller, spring 1831–May 1832).
Type locality: "Ile de Bornéo" [= Kalimantan, cen. Indonesia].
Distribution: East Malaysia (Sabah, Sarawak) and Indonesia (cen. Java, Kalimantan), 1200 m.
Sources: T. Vogt, 1925, Malkmus et al., 2002 and I. Das, 2012.

10. *Calamaria bitorques* W.C.H. Peters, 1872b. Mber. Königl. Akad. Wiss. Berlin 1872(7): 585–586.

Type: Holotype, ZMB 7444.
Type locality: "Philippinen" [= Philippines]. Listed as Luzon in ZMB catalogue *fide* Inger & Marx (1965: 106).
Distribution: Northern Philippines (Luzón, Panay), 850 m.
Sources: E.H. Taylor, 1922a and Gaulke & Vogel, 2005.

11. *Calamaria boesemani* Inger & Marx, 1965. Fieldiana: Zool. 49: 171–172.

Type: Holotype, GNM 3230 (formerly NHMG), a 116 mm female (W. Kaudern, Dec. 1919).
Type locality: "Pinapuan (?Pinapolan) near Luwuk and Biak, near the tip of the eastern peninsula, Celebes" [= Pinapuan, near Luwuk (0°51'S, 123°03'E, 45 m), E Sulawesi, Indonesia].
Distribution: Central Indonesia (E Sulawesi), 45 m. Known only from holotype.
Sources: Bosch, 1985, Lang & Vogel, 2005 and Koch, 2012.

12. *Calamaria borneensis* Bleeker, 1860b. Nat. Tijds. Nederl. Indië (5) 22(1): 296.

Synonyms: *Calamaria borneensis* Bleeker, 1857a *(nomen nudum), Rabdosoma borneensis* Bleeker, 1857a *(nomen nudum),* and *Rhabdosoma borneensis* Bleeker, 1857a *(nomen nudum).*
Type: Holotype, BMNH 1946.1.3.66, a 220 mm specimen (P. de Bleeker, 1857–1860).
Type locality: "Borneo (Sintang)" [= Pasar Sintang, Kalimantan Barat State, W Kalimantan, Indonesia, 0°05'N, 111°29'E, elevation 25 m].
Distribution: Borneo. East Malaysia (Sarawak) and Indonesia (W Kalimantan), NSL–350 m.
Sources: Lang & Vogel, 2005 and Rooijen & Rooijen, 2007.

13. *Calamaria brongersmai* Inger & Marx, 1965. Fieldiana: Zool. 49: 118–119.

Type: Holotype, GNM 3229 (formerly NHMG), a 225 mm male (W. Kaudern, Dec. 1919).
Type locality: "Penapuan (?Pinapolan) near Luwuk and Biak, near the tip of the eastern peninsula, Celebes" [= Pinapuan, near Luwuk (0°51'S, 123°03'E, 45 m), E Sulawesi, Indonesia].
Distribution: Central Indonesia (cen. and E Sulawesi), 45 m.
Sources: S.D. Howard & Gillespie, 2007 and Koch, 2012.

14. *Calamaria buchi* Marx & Inger, 1955. Fieldiana: Zool. 37: 195–196, fig. 26.

Type: Holotype, FMNH 71697, a 389 mm female (Buch, 1953).
Type locality: "Dalat, Viet Nam, Indo-China. Altitude 1,500 feet" [= Da Lat, Lam Dong Prov., Vietnam, 11°56'N, 108°28'E, elevation 1500 m].
Distribution: Southeast Vietnam (Ha Tinh, Lam Dong), 450–1500 m.
Sources: Ziegler & Le, 2005, Ziegler et al., 2008, V.S. Nguyen et al., 2009 and Orlov et al., 2010.

15. *Calamaria butonensis* S.D. Howard & Gillespie, 2007. J. Herp. 41(2): 237–240, figs. 1–2.

Type: Holotype, MZB 3125, a 176 mm male (G.R. Gillespie, S. Howartd, D. Lockie, M. Scroggie & Boeadi, 21 June 2002).
Type locality: "Kakenauwe Reserve at 5°11'0"S, 122°53'40"E, and 150 m elevation, Sulawesi, Indonesia."
Distribution: Central Indonesia (Sulawesi), 150–430 m.
Sources: G.R. Gillespie et al., 2005 and Koch, 2012.

C

16. *Calamaria ceramensis* Rooij, 1913. Bijdr. Dierk. 19: 26–27.

Synonym: *Calamaria jeudei* Kopstein, 1926.
Types: Syntypes (2), ZMA 10083 (2), 210 and 245 mm specimens (L F. de Beauford, Feb. 1910).
Type locality: "Honitetu, West-Ceram, Archipelago indico, [= Honitétu, W Seram, Maluku, E Indonesia]."
Distribution: Eastern Indonesia (Maluku: Ambon, Saparua, Seram).
Sources: Bosch, 1985, S.D. Howard & Gillespie, 2007 and Koch et al., 2009.
Remarks: Syntype photographs in Koch et al. (2009: figs. 3, 5, 7, 9)

17. *Calamaria concolor* Orlov, Nguyen, Nguyen, Ananjeva & Ho, 2010. Russ. J. Herp. 17(3): 237–239, figs. 1–6.

Type: Holotype, ZISP 30185 (formerly IEBR A.2010.02), a 578 mm male (T.D. Tran, April 2009).
Type locality: "Bach Ma Peak, Bach Ma National Park, on the Eco-tourist trail, Thua Thien-Hue Prov., Vietnam (16º11'16.7" N, 107º50'36.1" E; altitude 1400 m.a.s.l.)."
Distribution: Central Vietnam (Thua Thien-Hue), 1400 m. Known only from type locality.

18. *Calamaria crassa* Lidth de Jeude, 1922. Zool. Meded. 6(4): 248–249.

Type: Holotype, RMNH 4692, a 460 mm male (E. Jacobson, June 1917).
Type locality: "Gunung Talamau (1300 M.) (Ophir districts), Padang Highlands, central-Sumatra" [= Mount Talakmau, Sumatera Barat Prov., W Sumatra, W Indonesia, 0°04'N, 99°59'E, elevation 1300 m *fide* David & Vogel, 1996: 243].
Distribution: Western Indonesia (W Sumatra), 1300 m.
Source: David & Vogel, 1996.

19. *Calamaria curta* Boulenger, 1896d. Ann. Mag. Nat. Hist. (6) 18(103): 62–63.

Type: Holotype, BMNH 1946.1.3.52 (formerly BMNH 1896.4.29.35), a 315 mm female (A.H. Everett, 1896).
Type locality: "S. Celebes, 2000 feet," [= S Sulawesi, E Indonesia, elevation 610 m].
Distribution: Central Indonesia (ext. SW Sulawesi), 610–1800 m.
Sources: Bosch, 1985, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007.

20. *Calamaria doederleini* Gough, 1902. Zool. Anz. 25(681): 645–646. (*Calamaria doederleini*) (*nomen corrigendum*)

Synonym: *Calamaria döderleini* Gough, 1902 (*nomen incorrigendum*).
Type: Holotype, MZUS (unnumbered), a 285–288 mm male (C. Koschinsky, 1899), lost *fide* David & Vogel (1996: 49).
Type locality: "East Sumatra, Langkat" [= Langkat Prefecture, Aceh Prov., N Sumatra, W Indonesia, 3°40'N, 98°10'E, elevation 100 m *fide* David & Vogel, 1996: 240].
Distribution: Western Indonesia (N Sumatra), 100 m. Known only from type locality.
Source: David & Vogel, 1996.
Remarks: Possibly a synonym of *C. pavimentata semidoliata* F. Werner *fide* Inger & Marx (1965: 239).

21. *Calamaria eiselti* Inger & Marx, 1965. Fieldiana: Zool. 49: 175–177, fig. 47.

Type: Holotype, NMW 16703.1, a 343 mm male (F. Steindachner, don. 1896).
Type locality: "Padang, Sumatra" [= Padang, Sumatera Barat Prov., Sumatra, W Indonesia, 0°57'S, 100°21'E, elevation NSL].
Distribution: Western Indonesia (W Sumatra), NSL. Known only from type locality.
Source: David & Vogel, 1996.

22. *Calamaria everetti* Boulenger, 1893d. Proc. Zool. Soc. London 61(1): 525.

Type: Holotype, BMNH 1946.1.2 (formerly BMNH 1893.3.6.52), a 100 mm specimen (A.H. Everett, 1872–1876 or 1885–1890).
Type locality: "Sarawak" [= Borneo]. Emended to Senah branch of Sarawak River, First Division *fide* Inger & Marx (1965: 134).
Distribution: Borneo. East Malaysia (Sabah, Sarawak) and Indonesia (N Kalimantan), 1500 m.
Remarks: Does not occur in the Philippines (Palawan) *fide* Gaulke & Vogel (2005: 19).

23. *Calamaria forcarti* Inger & Marx, 1965. Fieldiana: Zool. 49: 184–185.

Type: Holotype, NWM 16710, a 177 mm male (F. Steindachner, 1900).
Type locality: "Deli, Sumatra" [= Medan region (3°35'N, 98°41'E, ca. 25 m), N Sumatra, W Indonesia *fide* David & Vogel, 1996: 49].
Distribution: Western Indonesia (N Sumatra, Nias), 25 m.
Source: David & Vogel, 1996.

24. *Calamaria gervaisii* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 76–78.

Synonyms: *Calamaria mindorensis* Boulenger, 1895f, *Calamaria gervaisii iridescens* E.H. Taylor, 1917, *Calamaria tropica* E.H. Taylor, 1922a, *Calamaria hollandi* E.H. Taylor, 1923, and *Calamaria polillensis* E.H. Taylor, 1923.

Types: Syntypes (2), MNHN 7202a–b (formerly MNHN 2314.7202), longest syntype 194 mm (F. Eydoux & F.L.A. Souleyet, 1829–1832), location of other syntype unknown.
Type locality: "Java" [W Indonesia] (in error *fide* Inger & Marx, 1965: 106). Restricted to Luzon, Philippines *fide* Marx & Inger (1955: 182) but rescinded *fide* Inger & Marx (1965: 107).
Distribution: Philippines (Basilan, Catanduanes. Cebu, Corregidor, Luzon, Mindanao, Mindoro, Negros, Panay, Polillo, Romblon, Tablas), NSL–1525 m.
Sources: E.H. Taylor, 1922, Leviton, 1959b and Ross & Gonzales, 1992.

25. *Calamaria gialaiensis* Ziegler, Nguyen & Nguyen, 2009. Curr. Herp. 27(2): 72–75, figs. 1–2.

Type: Holotype, IEBR A.714, a 457 mm male (V.S. Nguyen, April 1999).
Type locality: "Kon Ka Kinh, K Bang District, Gia Lai Province, Vietnam, 1,300 m asl" [= 14°18'N, 108°24'E].
Distribution: Southern Vietnam (Gia Lai), 1300 m. Known only from type locality.
Source: Orlov et al., 2010.

26. *Calamaria gimlettii* Boulenger, 1905b. Ann. Mag. Nat. Hist. (7) 15(89): 456.

Synonyms: *Calamaria doerianense* Brongersma, 1928, and *Calamaria fraseri* E.H. Taylor, 1962.
Type: Holotype, BMNH 1946.1.3.71 (formerly BMNH 1905.2.7.7), a 265 mm specimen (J.D. Gimlette, 1890–1905).
Type locality: "Kelantan, Malay Peninsula" [= Kelantan State, West Malaysia].
Distribution: West Malaysia (Johor, Kelantan, Pahang, Selangor, Negri Sembilan), Singapore (Pawai Is.), Aur Is. and Riau Arch. (Durian, Galang Is.), NSL–1500 m.
Source: I Das, 2010.
Remarks: A valid species *fide* I. Das (2010: 266).

27. *Calamaria grabowskyi* J.G. Fischer, 1885a. Arch. Naturg. 51(1): 50–52, pl. 4, figs. 1a–e.

Synonyms: *Calamaria baluensis* Boulenger, 1893d, and *Calamaria moultoni* Dunn, 1923a.
Types: Syntypes (2), BMNH 1946.1.5.25–26 (formerly BMNH 1886.5.13.14–15), a 457 mm and 428 mm female (F. Grabowsky, 1880–1884).
Type locality: "Distrikt Dusson Timor...bei Telang, ...bei Tameanglaijang, Südost-Borneo" [= Telang and Tamiang Layang, Dusson Timor Distr., SW Kalimantan, cen. Indonesia, ca. 2°06'S, 114°00'E, elevation 25 m].
Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Kalimantan), 25–1430 m.
Sources: Stuebing, 1994a, Stuebing & Inger, 1999, Malkmus et al., 2002 and I. Das, 2007b.

28. *Calamaria gracillima* A.C.L.G. Günther, 1872a. Proc. Zool. Soc. London 40(1): 594–595, pl. 39, fig. a.

Type: Holotype, BMNH 1946.1.3.62 (formerly BMNH 1872.2.19.77), a 279 mm female (A.H. Everett, 1869–1872).
Type locality: "Matang in the district of Sarawak, Borneo" [= Kampong Matang, First Division, Kidi Distr., W Sarawak, East Malaysia, 1°35'N, 110°14'E, elevation 15 m].
Distribution: East Malaysia (Sarawak), 15–500 m.

29. *Calamaria griswoldi* Loveridge, 1938a. Proc. Biol. Soc. Washington 51: 43–44. (*Calamaria lumbricoidea griswoldi*)

Type: Holotype, MCZ 43580, a 505 mm female (J.A. Griswold, Jr., 14 July 1937).
Type locality: "Luidan River, near Bundutuan, Mount Kinabalu, British North Borneo, at an altitude circa 3,340 feet" [= Luidan River near Bundu Tuhan, Sabah, East Malaysia, 6°00'N, 116°32'E, elevation 1500 m].
Distribution: East Malaysia (Sabah, Sarawak) and Brunei, 1020–1800 m.
Sources: Malkmus, 1987, 1989, Stuebing & Inger, 1999, Malkmus et al., 2002 and I. Das, 2007b.

30. *Calamaria hilleniusi* Inger & Marx, 1965. Fieldiana: Zool. 49: 96–98, fig. 25.

Type: Holotype, ZMA 10078, a 317 mm male (H.A. Lorentz, 24 May 1909).
Type locality: "Samarinda, Indonesian Borneo" [= Samarinda, E Kalimantan, cen. Indonesia, 0°29'S, 117°09'E, elevation NSL].
Distribution: Borneo. East Malaysia (Sabah, Sarawak) and Indonesia (E Kalimantan), NSL.

31. *Calamaria ingeri* Grismer, Kaiser & Yaakob, 2004. Hamadryad 28(1–2): 1–2, figs. 3–4.

Type: Holotype, FMNH 262246, a 177 mm female (G. Grossmann & F. Tillack, 23 July 2002).
Type locality: "98 m above sea level in lowland dipterocarp forest on the west side of Pulau Tioman along the Tekek-Juara trail, 1.9 km east of Kampung Tekek, Pahang, West Malaysia."
Distribution: West Malaysia (Pahang: Tioman Is.), 100 m.
Sources: Grismer & Khang Aun, 2008 and Grismer, 2011.

32. *Calamaria javanica* Boulenger, 1891a. Ann. Mag. Nat. Hist. (6) 7(39): 279–280.

Type: Holotype, BMNH 1946.1.3.41 (formerly BMNH 1873.5.3.21), a 185 mm male (J.C. Ploem).
Type locality: "Java" [SW Indonesia]
Distribution: Western Indonesia (Belitung, Java).

C

33. *Calamaria joloensis* E.H. Taylor, 1922b. Philippine J. Sci. 21D(2): 203–204, pl. 7, figs. 2–3.

Type: Holotype, CAS 60901 (formerly EHT 1855), a 150 mm specimen (E.H. Taylor, 30 Oct. 1920).
Type locality: "central Jolo, Philippine Islands" [= Jolo Island, Sulu Archipelago, SW Philippines].
Distribution: Southwestern Philippines (Sulu Arch.: Jolo). Known only from type locality.
Source: Leviton, 1959b.

34. *Calamaria lateralis* Mocquard, 1890a. Naturaliste (2) 12(80): 154.

Type: Holotype, MNHN 1889.194, a 245 mm male (J. Whitehead, 1885).
Type locality: "Kina Balu, Bornéo" [= Mt. Kinabalu, Sabah, East Malaysia]. Emended to North Borneo, Mt. Kina Balu, between 1,000 and 4,000 or even 6,000 feet *fide* Mocquard (1890b: 118), [= Mt. Kinabalu, N Sabah, NE East Malaysia, 6°05'N, 116°30'E, elevation 300–1800 m].
Distribution: East Malaysia (N Sabah) and W Indonesia (cen. Java).
Source: Malkmus et al., 2002.
Remarks: Supplemental original description in Mocquard (1890b: 136–137, pl. 8, figs. 4a–c). Type listed as MNHN C231789.194 *fide* Inger & Marx (1965: 146).

35. *Calamaria lautensis* Rooij, 1917. Rept. Indo-Aust. Arch. 2: 163–164, fig. 66.

Type: Lectotype, RMNH 4716A, designated by Inger & Marx (1965: 70).
Type locality: "Pulo si Laut, Cocos Islands" via lectotype selection [= Pulau Kokos, 40 km NW of Simeulue, W Indonesia, 2°45'N, 95°50'E].
Distribution: Extreme W Indonesia (Kokos Is.).
Remarks: Lectotype designation of ZMA 10111 (Pulu si Laut, E.R. Jacobson, 21 Aug. 1913) *fide* Daan & Hillenius (1966: 137) appears to be invalid by Inger & Marx's earlier selection. However, Haas (1950: 569) declared the type to be in ZMA.

36. *Calamaria leucogaster* Bleeker, 1860b. Nat. Tijds. Nederl. Indië (5) 21(1): 293.

Synonyms: *Calamaria arcticeps* A.C.L.G. Günther, 1866, *Calamaria beccarii* W.C.H. Peters, 1872d, *Calamaria brookii* Boulenger, 1895, and *Calamaria smithi* Dunn, 1923a.
Types: Syntypes (2), BMNH 1946.1.3.76 (formerly BMNH 1863.12.11.141), a 140 mm specimen, and RMNH 3994, a 225 mm specimen (P. de Bleeker, 1842–1860).
Type locality: "Sumatra (Ampat-lawang)" [= Pendopo or Tanjungraya region, Sumatera Selatan Prov., SE Sumatra, W Indonesia, 2°19'S, 105°12'E, elevation 400 m *fide* David & Vogel, 1996: 237, 245].
Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and Indonesia (? Java, cen. Kalimantan, Sumatra), 100–1000 m.
Sources: David & Vogel, 1996 and Malkmus et al., 2002.
Remarks: MNHN catalogue lists MNHN 1889.194 as a type.

37. *Calamaria linnaei* H. Boie *in* F. Boie, 1827. Isis von Oken 20(6): 539–540.

Synonyms: *Coluber symmetricus* Lacépède, 1789 (*nomen rejiciendum*), *Calamaria maculosa* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria multipunctata* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria reticulata* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria tesselata* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria maculosa* Schlegel, 1826b *(nomen nudum), Calamaria multipunctata* Schlegel, 1826b *(nomen nudum), Calamaria reticulata* Schlegel, 1826b *(nomen nudum), Calamaria tesselata* Schlegel, 1826b *(nomen nudum), Calamaria maculosa* Reinwardt *in* F. Boie, 1827, *Calamaria multipunctata* Reinwardt *in* F. Boie, 1827, *Calamaria reticulata* Reinwardt *in* F. Boie, 1827, *Calamaria versicolor* Ranzani, 1837, *Calamaria hybida* Fitzinger, 1861, *Calamaria linnaei bilineata* Jan, 1862b (*nomen nudum*), *Calamaria linnaei contaminata* Jan, 1862b *(nomen nudum), Calamaria versicolor rhomboidea* Jan, 1862b *(nomen nudum), Calamaria linnaei transversalis* Jan, 1862b *(nomen nudum), Calamaria linnaei tessellata* Jan, 1862b *(nomen nudum), Calamaria rhomboidea interjecta* Jan, 1863b *(nomen nudum), Calamaria linnaei bilineata* Jan & Sordelli, 1865 *in* 1860–66 *Calamaria linaei contaminate* Jan & Sordelli, 1865 *in* 1860–66, *Calamaria versicolor rhomboidea* Jan & Sordelli, 1865 *in* 1860–1866, *Calamaria linnaei transversalis* Jan & Sordelli, 1865 *in* 1860–1866, *Calamaria brevis* Boulenger, 1894a, *Calamaria sondaica* T. Barbour, 1908, *Calamaria linnaei multilineata* F. Werner, 1909c, *Calamaria borneensis ventrimaculata* Holtzinger-Tenerer, 1916, and *Calamaria margaritophora gastropicta* Holtzinger-Tenerer, 1920.
Type: Holotype, RMNH 27, a 243 mm male (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823).
Type locality: "Java" [SW Indonesia] Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).
Distribution: Western Indonesia (Bangka, Java), 600–1500 m.
Sources: Duméril, Bibron & Duméril, 1854c, C. Haas, 1941 and Bergman, 1965.s
Remarks: Original description based on H. Boie's MS (1823–1825). Official Specific Name *fide* Opinion 2196 (ICZN, 2008a).

38. *Calamaria longirostris* S.D. Howard & Gillespie, 2007. J. Herp. 41(2): 240–241, figs. 4–5.

Type: Holotype, MZB 3127, an adult female (G.R. Gillespie, S. Howard, D. Lockie, M. Scroggie & Boeadi, June–Sept. 2000–2002).
Type locality: "the Lambusango Reserve at 5°12'59"S, 122°52'10"E, at 400m elevation, Sulawesi, Indonesia."
Distribution: Central Indonesia (Sulawesi), 400 m.
Sources: G.R. Gillespie et al., 2005 and Koch, 2012.

39. *Calamaria lovii* Boulenger, 1887a. Ann. Mag. Nat. Hist. (5) 19(111): 169, 3 figs.

Synonyms: *Calamaria lowi* Mocquard, 1890 *(nomen emendatum), Calamaria ventralis* Cochran, 1923, *Calamaria javanica lineata* Brongersma, 1928, *Calamaria lowi wermuthi* Inger & Marx, 1965, *Calamaria lowi ingermarxi* Darevsky & Orlov, 1992 *(nomen incorrigendum),* and *Calamaria lowi ingermarxorum* Darevsky & Orlov, 1992 *(nomen corrigendum).*
Type: Holotype, BMNH 1946.1.3.63 (formerly BMNH 1887.2.7.18), a 265 mm male (H.B. Low, 1869–1887).
Type locality: "Rejang River, Sarawak, Borneo" [= East Malaysia].
Distribution: Southeast Asia and Indonesia. Southern Thailand, S Vietnam (Gia Lai), West Malaysia, East Malaysia (Sarawak), Brunei and Indonesia (Java, E Kalimantan), NSL–750 m.
Sources: Leong, 2004, Ziegler & Le, 2005, I. Das, 2007b, 2012, Ziegler et al., 2008, V.S.Nguyen et al., 2009, Orlov et al., 2010 and Grismer, 2011.
Remarks: Original spelling as *C. lovii* is evidently (but not explicitly) named after the collector H.B. Low. The use of "v" instead of "w" is due to it's latinization (i.e. "w = v" in Latin).

40. *Calamaria lumbricoidea* H. Boie *in* F. Boie, 1827. Isis von Oken 20(6): 540.

Synonyms: *Calamaria lumbricoidea* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria lumbricoidea* Schlegel, 1826b *(nomen nudum), Calamaria temmincki* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Calamaria vermiformis* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Calamaria grayi* A.C.L.G. Günther, 1858, *Calamaria alkeni* Bleeker, 1860b, *Calamaria dimidiata* Bleeker, 1860b, *Calamaria melanorhynchos* Bleeker, 1860b, *Calamaria flaviceps* A.C.L.G. Günther, 1865, *Calamaria philippinica* Steindachner, 1867d, *Calamaria stahlknechtii* Stoliczka, 1873, *Calamaria variabilis* Lidth de Jeude *in* Weber, 1890, *Calamaria vermiformis sumatranus* Lidth de Jeude *in* Weber, 1890, *Calamaria bungaroides* F. Werner, 1901d, *Calamaria göringi* T. Vogt, 1925, and *Calamaria bruegeli* Mertens, 1924.
Type: Lectotype, RMNH 10543 (formerly RMNH 42) (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823), designated by Inger & Marx (1965: 77).
Type locality: "Java" [SW Indonesia] Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).
Distribution: Malay Peninsula and East Indies. Southern Thailand (Nakhon Si Thammarat, Narathiwat, Pattani), West Malaysia (Johor, Pahang, Perak, Perlis, Selangor, Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Great Natuna, W Java, ext. E Kalimantan, Mentawai Arch., Natuna Besar, Nias, Sumatra) and Philippines (Basilan, Bohol, Dinagat, Leyte, Mindanao, Negros, Samar), 200–1675 m.
Sources: T. Vogt, 1925, C. Haas, 1941, Leviton, 1959b, Inger & Marx, 1962, Ross & Lazell, 1991, Stuebing, 1994a, David & Vogel, 1996, M.J. Cox et al., 1998, Malkmus et al., 2002, Orlov et al., 2010, Grismer, 2011 and I. Das, 2012.
Remarks: Original description based on H. Boie's MS (1823–1825).

41. *Calamaria lumholtzii* Andersson, 1923. Nyt Mag. Naturk. 61(7): 123–124.

Synonym: *Calamaria raveni* Cochran, 1923.
Types: Syntypes (2), ZMUO 2010 (formerly ZMK), 209 and 101 mm females (C. Lumholtz, Sept. 1915).
Type locality: "Tumbang Maruwei, Central-Borneo" [= Kalimantan, Indonesia].
Distribution: Central Indonesia (cen. Kalimantan).

42. *Calamaria margaritophora* Bleeker, 1860b. Nat. Tijds. Nederl. Indië (5) 21(1): 285, 94–295.

Synonyms: *Calamaria maculolineata* W.C.H. Peters, 1863d, *Calamaria hoevenii* Edeling, 1870, and *Calamaria margaritifera* Boulenger, 1894a *(nomen emendatum).*
Types: Syntypes (2), BMNH 1946.1.2.9 (formerly BMNH 1863.12.11.146), a 284 mm female, and RMNH 3975A, a 297 mm specimen (H.J. Alken, Nov. 1857).
Type locality: "Java, Sumatra (Ampat-lawang)." Restricted to Ampat Lawang, Sumatra *fide* Inger & Marx (1965: 167) [= Pendopo or Tanjungraya region, Sumatera Selatan Prov., SE Sumatra, W Indonesia, 2°19'S, 105°12'E, elevation 400 m *fide* David & Vogel, 1996: 237, 245].
Distribution: Western Indonesia (SE Sumatra), 945 m.
Source: David & Vogel, 1996.
Remarks: MNHN catalogue lists MNHN 1912.55 as a type. Records from Java incorrect *fide* Inger & Marx (1965: 170). Javan type locality possibly in error as

Bleeker (1860b: 285) only lists *C. margaritophorus* from Sumatra (but in description adds Java as habitat).

43. *Calamaria mecheli* Schenkel, 1901. Verh. Naturf. Ges. Basel (1901–1902) 13(1): 165–166, figs. 4–4b.

C

Type: Lectotype, NMBA 1699, a 210 mm female (A. von Mechel, 1895–1901), designated by Kramer (1978: 659).
Type locality: "Indragiri, Sumatra" [= Indragiri River region, Riau Prov., E Sumatra, W Indonesia, ca. 0°22'S, 103°26'E *fide* David & Vogel, 1996: 239] via lectotype selection.
Distribution: Western Indonesia (W Sumatra).
Source: David & Vogel, 1996.

44. *Calamaria melanota* Jan, 1865 *in* Jan & Sordelli, 1860–1866. Icon. Gén. Ophid. 1(10): 6, pl. 1, figs. 5, a–b, d, g, p, r, v. (*Calamaria linnaei melanota*)

Synonyms: *Calamaria linnaei gastrogramma* Jan, 1862b (*nomen nudum*), *Calamaria linnaei melanota* Jan, 1862b (*nomen nudum*), *Calamaria benjaminsii* Edeling, 1864a, and *Calamaria electa* T. Barbour, 1927.
Type: Holotype, RMNH 37, a 168–260 mm specimen (C.A.L. Schwaner, 1845).
Type locality: "Borneo" [= Kalimantan, Indonesia].
Distribution: Borneo. Southwestern East Malaysia (Sarawak) and Indonesia (S Kalimantan).

45. *Calamaria modesta* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 74–76.

Synonyms: *Calamaria monochrous* Bleeker, 1860b, *Calamaria elegans* Rooij, 1917, *Calamaria Simeulueensis* Rooij, 1817, *Calamaria bogorensis* Lidth de Jeude *in* Weber, 1890, and ? *Calamaria mjoebergi* Lönnberg & Rendahl, 1925.
Type: Holotype, MNHN 3299, a 157 mm female.
Type locality: "ile de Java" [W Indonesia].
Distribution: Greater Sundas. East Malaysia (Sabah) and W Indonesia (W Java, Simeulue, cen. Sumatra), 900–1430 m.
Sources: David & Vogel, 1996 and Malkmus et al., 2002.

46. *Calamaria muelleri* Boulenger, 1896c. Ann. Mag. Nat. Hist. (6) 17(101): 394–395.

Type: Lectotype, NMBA 1690, a 190 mm female (P. Sarasin & F. Sarasin, 1893–1896), designated by Inger & Marx (1965: 99).
Type locality: "Loka, Bonthain Peak, about 3500 feet, Celebes" [= Loka, Mt. Lompobatang, South Sulawesi Prov., Sulawesi, Indonesia, 5°19'S, 119°54'E, elevation 1200 m]
Distribution: Central Indonesia (cen. and ext. SW Sulawesi), 1200–1600 m.
Sources: Bosch, 1985, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007.
Remarks: Boulenger's (1896c: 395) type length of 1900 mm is an obvious typo.

47. *Calamaria nuchalis* Boulenger, 1896d. Ann. Mag. Nat. Hist. (6) 18(103): 62.

Type: Holotype, BMNH 1946.1.3.73 (formerly BMNH 1896.4.29.34), a 180 mm male (A.H. Everett, 1896).
Type locality: "S. Celebes" [= Sulawesi, Indonesia].
Distribution: Central Indonesia (cen. and SW Sulawesi).
Sources: Bosch, 1985, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007.

48. *Calamaria palavanensis* Inger & Marx, 1965. Fieldiana: Zool. 49: 134–136, fig. 35.

Type: Holotype, CAS 62151, a 289–315 mm male (E.H. Taylor, 1912–1920).
Type locality: "Palawan Island" [Sulu Arch., SW Philippines].
Distribution: Southwestern Philippines (S Palawan).
Source: Leviton, 1959b.

49. *Calamaria pavimentata* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 71–73.

Synonyms: *Calamaria quadrimaculata* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Calamaria siamensis* A.C.L.G. Günther, 1864a, *Calamaria berezowskii* A.C.L.G. Günther, 1896a, *Calamaria pavimentata semidoliata* F. Werner, 1896b, *Calamaria pfefferi* Stejneger, 1901d, *Calamaria pavimentata uniformis* M.A. Smith, 1921a, *Calamaria pavimentata formosana* Maki, 1931, *Calamaria pavimentata banaensis* Bourret, 1934c, *Calamaria pavimentata annamensis* Bourret, 1937a, and *Calamaria pavimentata miyarai* Takara, 1962.
Type: Holotype, MNHN 3298, a 207 mm male.
Type locality: "Java" [W Indonesia] (in error *fide* Inger & Marx, 1965: 212).
Distribution: Southeastern Asia. Southern Myanmar (Bago, Chin, Kachin), Thailand (Lampang, Nakhon Ratchasima, Surat Thani), SE China (Guangdong, Guangxi, Hainan, W Sichuan, Zhejiang, Lanyu Is.), Taiwan, S Japan (Ryukyus: Miyakojima, Okinawajima and Yonagunijima Is.), Laos (Champasak, Xiangkhouang), Vietnam (Cao Bang, Da Nang, Gao Bang, Hai Duong, Ha Tinh, Hoa Binh, Lam Dong, Lao Cai, Nghe An, Quang Binh, Quang Nam, Quang Ninh, Quang Tri, Son Lai, Vinh Phuc, Yen Bai, Cu Lao Ba Mun Is.), Cambodia, and West Malaysia (Pahang, Perak, Pinang, Selangor, Jarak, Pinang and Tioman Is.), 245–2000 m.
Sources: C.H. Pope, 1935, M.A. Smith, 1943, Takara, 1962, E.H. Taylor, 1965, M. Mori, 1984, Ota, 1982, Tweedie, 1983, Gu et al., 1987, Zhao & Adler, 1993, Darevsky, 1999, Lazell, 1999, Orlov et al., 2000, Ziegler & Le, 2005, Zhao, 2006, Wogan et al., 2008, Ziegler et

al., 2008, V.S. Nguyen et al., 2009, Xiang & Li, 2009, Orlov et al., 2010 and Grismer, 2011.

Remarks: MNHN catalogue lists MNHN 1948.92 from Vietnam as holotype. Possibly occurs in Hong Kong, China *fide* Karsen et al. (1998: 162).

50. *Calamaria prakkei* Lidth de Jeude, 1893. Notes Leyden Mus. 15: 252–254.

Type: Lectotype, RMNH 4360, a 172–245 mm male (J.C. Prakke, 1887–1893), designated by Inger & Marx (1965: 121).

Type locality: "North Borneo: Sandakan District: Sandakan Bay" [= Sandakan Bay vicinity E Sabah, East Malaysia, 5°51'N, 118°03'E] via lectotype selection.

Distribution: Singapore and N East Malaysia (N Sabah), 15 m.

51. *Calamaria rebentischi* Bleeker, 1860b. Nat. Tijds. Nederl. Indië (5) 21(1): 293.

Type: Holotype, BMNH 1946.1.4.68 (formerly BMNH 1863.12.4.27), a 270–280 mm male (P. de Bleeker, 1842–1860).

Type locality: "Borneo (Sinkawang)" [= Singkawang, W Kalimantan, Indonesia, 0°55'N, 108°59'E, elevation NSL].

Distribution: Central Indonesia (ext. W Kalimantan). Known only from type locality.

Source: S.D. Howard & Gillespie, 2007.

52. *Calamaria sangi* Q.T. Nguyen, Koch & Ziegler, 2010a. Hamadryad (2009) 34(1): 2–3, figs. 1–6.

Type: Holotype, IEBR 360, a 373 mm female (P.R. Nguyen & A. Kuznetsov, 12 Jan. 2001).

Type locality: "Mang Canh Commune (14º41.950" N, 108º14'642" E), Kon Plong District, Kon Tum Prov., Vietnam, 1.200 m asl."

Distribution: Southern Vietnam (Kon Tum), 1200 m.

Source: Orlov et al., 2010.

53. *Calamaria schlegeli* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 81–83.

Synonyms: *Calamaria leucocephala* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Calamaria agamensis* Bleeker, 1859e *(nomen nudum), Calamaria agamensis* Bleeker, 1860b, *Calamaria dumerili* Bleeker, 1860b, *Calamaria roelandti* Bleeker, 1860b, *Calamaria sinkawangensis* Bleeker, 1860b, *Calamaria cuvieri* Jan, 1862b, *Calamaria nigroalba* A.C.L.G. Günther, 1864a, *Calamaria martapoerensis* Edeling, 1864a *(nomen incorrigendum), Calamaria iris* Boettger, 1873, *Calamaria martapurensis* Edeling, 1865 *(nomen corrigendum),* and *Keiometopon booliati* E.H. Taylor, 1962.

Type: Holotype, RMNH 10424 (formerly RMNH 68), a 250 mm specimen (S. Müller, 1836–1837).

Type locality: "ile de Bornéo" [= Kalimantan, Indonesia].

Distribution: Peninsular Thailand (Pattani), West Malaysia (Pahang, Perak, Pinang, Selangor, Penang Is.), Singapore, N East Malaysia (Sabah, Sarawak) and Indonesia (Bali, Bangka, Belitung, Java, W and E Kalimantan, Sumatra), NSL–1600 m.

Sources: K.F.L. Lim & Lee, 1989, Stuebing, 1994a, David & Vogel, 1996, S.D. Howard & Gillespie, 2007 and Orlov et al., 2010.

54. *Calamaria schmidti* Marx & Inger, 1955. Fieldiana: Zool. 37: 197–198, fig. 27.

Type: Holotype, USNM 130240, a 253 mm female (D.H. Johnson, 1 Aug. 1951).

Type locality: "Bundu Tuhan, Mount Kina Balu, North Borneo, at 4,500 ft" [= Bundu Tuhan, Mt. Kinabalu, Sabah, East Malaysia, 6°00'N, 116°32'E, elevation 1370 m].

Distribution: East Malaysia (Sabah), 1370–1570 m.

Sources: Malkmus, 1989, 1994 and I. Das, 2012.

55. *Calamaria septentrionalis* Boulenger, 1890c. Proc. Zool. Soc. London 58(1): 34.

Types: Syntypes (7), BMNH 1947.3.6.60–61 (formerly BMNH 1891.1.28.1–2) [Hong Kong], 1946.1.3.72 [Hong Kong], 1946.1.7.28–31 [Kiu Kiang], longest syntypes 347 mm and 285 mm females (A.E. Pratt [Kiu Kiang], 1887–1890, and H.M.S. Challenger Voy. [stn. 206], 16 Nov. 1874–6 Jan. 1875 [Hong Kong]).

Type locality: "Kiu Kiang and Hong Kong" [= Wu-suih, about three days' journey or 9 mi. S of the American Central China Mission in Kiu-kiang *fide* Pratt (1892: 3–5) = Wusüeh, SE Hubei Prov., cen. China, 29°50'N, 115°41'E *fide* Pope (1935: 502) and Hong Kong, Hong Kong Prov., SE China *fide* Günther, 1888: 169].

Distribution: Eastern China (Anhui, Fujien, Guangdong, N Hainan, Hong Kong, Hubei, SW Hunan, Jiangsu, Jiangxi, Sichuan, Zhejiang, Chu Shan Is.) and N Vietnam (Cao Bang, Ha Giang, Ha Tay, Ha Tinh, Hoa Binh, Lang Son, Lao Cai, Nghe An, Ninh Binh, Quang Binh, Quang Ninh, Thai Nguyen, Thanh Hoa, Vinh Phuc), 50–1500 m.

Sources: C.H. Pope, 1935, Lazell & Liao, 1986, Zhao & Adler, 1993, Zou & Chen, 1998, Orlov et al., 2000, Ziegler & Le, 2005, Zhao, 2006, Ziegler et al., 2008, V.S. Nguyen et al., 2009 and Orlov et al., 2010.

Remarks: A.C.L.G. Günther (1888: 169) listed four types from Kiu Kiang and one juvenile from Hong Kong. Boulenger (1894a: 349) listed seven types, six from Kiu Kiang (3 males, 3 females) and one juvenile from Hong Kong. Inger & Marx (1965: 218) and V.S. Nguyen et al. (2009: 291) listed two syntypes (BMNH 1947.3.6.60–61) from Kiu Kiang.

C

56. *Calamaria suluensis* E.H. Taylor, 1922a. Snakes Phil. Is.: 189–190.

Synonym: *Calamaria pendleburyi* M.A. Smith, 1931b.
Type: Neotype, FMNH 76294, a 287 mm female (R.F. Inger, 22 May 1956), designated by Inger & Marx (1965: 123).
Type locality: "Deramakot, North Borneo" via lectotype selection [= Sandakan Bay vicinity (5°51'N, 118°03'E), E Sabah, East Malaysia].
Distribution: East Indies. East Malaysia (Sabah, Sarawak), Indonesia (E Kalimantan) and SW Philippines (Cagayan Sulu), 915–1430 m.
Sources: Leviton, 1959b and Malkmus et al., 2002.
Remarks: BSM holotype destroyed January 1945 during World War II; neotype locality is 180 km from Taylor's type locality of Cagayan Sula, Philippines *fide* Inger & Marx (1965: 123).

57. *Calamaria sumatrana* Edeling, 1870. Nat. Tijds. Ned. Indië (7) 31(1): 379–380.

Type: Neotype, ZMA 10237, a 227 mm female (L.P. de Bussy, 1908–1909), designated by Inger & Marx (1965: 181).
Type locality: "Deli, Medan, Sumatra" [= Delitua, Medan, Sumatera Utara Prov., N Sumatra, W Indonesia, 3°30'N, 98°41'E, elevation 20 m *fide* David & Vogel, 1996: 239, 245] via neotype selection.
Distribution: Western Indonesia (cen. and N Sumatra).
Source: David & Vogel, 1996.
Remarks: Syntypes lost *fide* Inger & Marx (1965: 181).

58. *Calamaria thanhi* Ziegler & Le, 2005. Zootaxa (1042): 29–36, figs. 1–6.

Type: Holotype, ZFMK 82920, a 455 mm female (native, 16 June 2003).
Type locality: "adjacent to Phong Nha-Ke Bang National Park, Dan Hoa Commune, Minh Hoa District, Quang Binh Prov., Vietnam."
Distribution: Central Vietnam (Quang Binh).
Sources: Ziegler & Le, 2006, 2007, Ziegler et al., 2008, V.S. Nguyen et al., 2009 and Orlov et al., 2010.

59. *Calamaria ulmeri* Sackett, 1940a. Not. Nat. (41): 2.

Type: Holotype, ANSP 21535, a 307+ mm female (F.A. Ulmer, 11 April 1939).
Type locality: "about 40 kilometers northwest of Blangkedjeren, Atjeh Prov., Sumatra (elevation 6800 ft.)" [= 40 km NW Blangkedjeren, Aceh Prov., Sumatra, W Indonesia, 3°59'N, 97°20'E, elevation 2070 m *fide* David & Vogel, 1996: 238].
Distribution: Western Indonesia (NW Sumatra), 2070–2080 m. Known only from type locality.
Source: David & Vogel, 1996.

60. *Calamaria virgulata* H. Boie *in* F. Boie, 1827. Isis von Oken 20(6): 540.

Synonyms: *Calamaria virgulata* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria virgulata* Schlegel, 1826b *(nomen nudum), Calamaria brachyura* Boulenger, 1895f, *Calamaria anceps* F. Werner, 1896b, *Calamaria gracilis* Boulenger, 1896d, *Calamaria collaris* Boulenger, 1897g, *Calamaria mearnsi* Stejneger, 1907b, *Calamaria albopunctata* T. Barbour, 1908, *Calamaria quinquetaeniata* Despax, 1912, *Calamaria egregia* T. Barbour, 1927, and *Calamaria zamboangensis* Leviton, 1952.
Type: Holotype, RMNH 39 (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823).
Type locality: "Java" [SW Indonesia]. Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).
Distribution: East Indies. East Malaysia (Sabah), Indonesia (ext. W Java, N Kalimantan, Nias, Nunukan, Riau Arch., Sulawesi, cen. Sumatra) and S Philippines (Mindanao, Palawan, Sulu Arch.) 30–1800 m.
Sources: Leviton, 1952, 1959b, David & Vogel, 1996, Malkmus et al., 2002, Grismer et al., 2004, Lang & Vogel, 2005 and S.D. Howard & Gillespie, 2007 .
Remarks: Original description based on H. Boie's MS (1823–1825). Photographs of holotype in Inger and Marx (1965: fig. 52).

61. *Calamaria yunnanensis* Chernov, 1962. Zool. Inst. Akad. Sci. SSR Trudy 30: 383, 1 fig.

Type: Holotype, ASIZB, a 245 mm male (A.K. Zagulayev, 31 May 1956).
Type locality: "TSindhun (Ching tung district), Yunnan Prov., China, 1100–1200 m."
Distribution: Southwestern China (Yunnan) and N Laos (Phongsali), 1100–1200 m.
Sources: Zhao & Adler, 1993, Ziegler & Le, 2005, B.L. Stuart & Heatwole, 2008, Ziegler et al., 2008 and Orlov et al., 2010.
Remarks: Possibily a synonym of *C. pavimentata* or *C. septentrionalis fide* Inger & Marx (1965: 239).

CALAMODONTOPHIS Amaral, 1963 (Xenodontidae)

Synonyms: *Calamodon* Amaral, 1935a *(nomen praeoccupatum)* and *Calamadontophis* – Obst, Richter & Jacob, 1984 *(nomen incorrectum).*
Type species: *Calamodon paucidens* Amaral, 1935a.
Distribution: Southern Brazil.
Sources: Amaral, 1937a, 1977, Bailey, 1966, Pagini & Lema, 1987 and Zaher et al., 2009.

1. *Calamodontophis paucidens* (Amaral, 1935a). Mem. Inst. Butantan 9: 204, fig. 1. (*Calamodon paucidens*)

Type: Holotype, IB 8847, a 360 mm male (O.M. Freitas, 19 Nov. 1934), destroyed by fire 15 May 2010.
Type locality: "S. Simão, Rio Grande do Sul, Brasil."
Distribution: Southern Brazil (Rio Grande do Sul) and Uruguay (Rocha, Treinta y Tres), 40 m.
Sources: Franco et al., 2001, 2006, Carreira-Vidal & Lombardo, 2008 and Carreira-Vidal et al., 2012b.
Remarks: Gender of type female *fide* Amaral (1935a: 204).

2. *Calamodontophis ronaldoi* F.L. Franco, Carvalho Cintra & Lema, 2006. So. Amer. J. Herp. 1(3): 219–221, figs. 1–3.

Synonym: *Calamodontophis dorsolineatus* Lema, 2002 (*nomen nudum*).
Type: Holotype, IB 55914 (formerly MHNCI 1726), a 344 mm female (don. April 1987), destroyed by fire 15 May 2010.
Type locality: "municipality of General Carneiro (26°25'S; 51°18'W–983 m a.s.l.), state of Paraná, Brazil.
Distribution: Southern Brazil (Paraná), 825–985 m.

CALAMOPHIS A.B. Meyer, 1874 (Homalopsidae)

Type species: *Calamophis jobiensis* A.B. Meyer, 1874.
Distribution: New Guinea.
Sources: J.C. Murphy, 2012 and J.C. Murphy et al., 2012b.
Remarks: A valid genus *fide* J.C. Murphy et al. (2012b: 511). Publication date listed as 1875 *fide* McDowell (1975: 77).

1. *Calamophis jobiensis* A.B. Meyer, 1874. Mber. Königl. Akad. Wiss. Berlin 1874(2):135.

Type: Holotype, MTKD 1026 (A.B. Meyer, 1873), destroyed 13–14 Feb. 1945 during World War II.
Type locality: "Jobi, Neu-Guinea" [= Yapen Is., Indonesia]. Restricted to Ansus, SW Yapen Is., West Papua Prov., E Indonesia [= 1º46'S, 135°47'E, elevation NSL] *fide* J.C. Murphy (2012: 517).
Distribution: Eastern Indonesia (West Papua: Yapen Is.), NSL. Known only from type locality.
Source: J.C. Murphy et al., 2012b.

2. *Calamophis katesandersae* J.C. Murphy, 2012. Raffles Bull. Zool. 60(2): 518–520, fig. 3a.

Type: Holotype, MSNG 56343.1, a 223 mm female (A.A. Bruijn, Dec. 1875).
Type locality: "Andai, West Papua, Indonesia (~0°54'58"S, 134°00'25"E)."
Distribution: Eastern Indonesia (West Papua), 35 m. Known only from type locality.

3. *Calamophis ruuddelangi* J.C. Murphy, 2012. Raffles Bull. Zool. 60(2): 520, fig. 3b.

Type: Holotype, MNHN 5175, a 261 mm male (M.J.A. Raffray, 1877).
Type locality: "Ambuaki in the Tamrau Mountains (~0º46'S, 132°57'E) West Papua."
Distribution: Eastern Indonesia (West Papua), 550–770 m.

4. *Calamophis sharonbrooksae* J.C. Murphy, 2012. Raffles Bull. Zool. 60(2): 521.

Type: Holotype, MSNG 30193.1, a 315 mm male (A.A. Bruijn, 1875).
Type locality: "Mount Arfak, West Papua, Indonesia (~1º05'00"S, 133º55'00"E)."
Distribution: Eastern Indonesia (West Papua), 1300–1700 m. Known only from type locality.

CALAMORHABDIUM Boettger, 1898 (Calamariidae)

Type species: *Calamorhabdium kuekenthali* Boettger, 1898.
Distribution: Indonesia.
Sources: Rooij, 1917, Sackett, 1940a, C. Haas, 1950 and Zaher et al., 2009.
Remarks: David & Vogel (1996: 57) noted that ANSP 21951 *(C. "kuenkenthali")* from Sumatra is probably an undescribed species.

1. *Calamorhabdium acuticeps* Ahl, 1933b. Mitt. Zool. Mus. Berlin 19: 579–580.

Type: Holotype, ZMB 34315, a 114 mm female (G. Heinrich, 21 Nov. 1930).
Type locality: "Nord-Celebes (Ile-Ile, 1700 m)" [= Mt. Ileile, N Sulawesi, Indonesia, 1°0.3'N, 121°50'E, elevation 1700 m].
Distribution: Central Indonesia (N Sulawesi), 1700 m. Known only from holotype.
Sources: Lang & Vogel, 2005 and Koch, 2012.
Remarks: Holotype photographs are in Lang & Vogel (2005: figs. 53–54).

2. *Calamorhabdium kuekenthali* Boettger, 1898. Kat. Rept. Senck. Mus. 2: 82.

Type: Lectotype, SMF 19384 (formerly SMF-B 8330 a), a 205 mm female (W.G. Kükenthals, 1893–1894), designated by Mertens (1967a: 91).

Type locality: "Insel Batjan, Molukken" via lectotype selection, [= Bacan Island, Maluku, E Indonesia, ca. 0°34'N, 127°31'E].
Distribution: Indonesia (Bacan, N Sumatra), 500 m.
Remarks: Sackett's (1940a: 3) specimen (ANSP 21951) agrees in all characters except coloration, but anterior third of body is digested down to the skeleton so head scutellation is unknown.

C

CALLIOPHIS Gray, 1835 *in* Gray & Hardwicke, 1830–1835 (Elapidae)

Synonyms: *Maticora* Gray, 1835 *in* Gray & Hardwicke, 1830–1835, *Gongylocormus* Fitzinger, 1843, *Pseudelaps* Fitzinger, 1843, *Calophis* Agassiz, 1847 *(nomen emendatum), Matirora* – Agassiz, 1844 *in* 1844–1845 *(nomen incorrectum), Doliophis* Girard, 1858a, *Helminthoelaps* Jan, 1858, *Callophis* A.C.L.G. Günther, 1859 *(nomen emendatum), Congylocormus* – Westphal-Castelnau, 1870 *(nomen incorrectum), Adeniophis* W.C.H. Peters, 1871b, *Adenophis* – Sclater, 1891 *(nomen incorrectum), Callophus* – E. Bartlett, 1896a *(nomen incorrectum), Dollophis* – Brazil, 1911 *(nomen incorrectum), Aspis* T. Barbour, 1914 *(nomen praeoccupatum), Calliopis* – Takahashi, 1930 *(nomen incorrectum), Calliophils* – Maki, 1933 *(nomen incorrectum),* and *Daliophis* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Calliophis gracilis* Gray, 1835 *in* Gray & Hardwicke, 1830–1835.
Distribution: Southeastern Asia and East Indies.
Sources: M.A. Smith, 1943, Klemmer, 1963, Leviton, 1964b, McDowell, 1986, Welch, 1988, Golay et al., 1993, Keogh, 1988, David & Ineich, 1999, Ota et al., 1999, Slowinski & Keogh, 2000, Slowinski et al., 2001, Castoe et al., 2007a, E.N. Smith et al., 2008, 2012, Zaher et al., 2009, I. Das, 2010, 2012 and Hoser, 2012e.
Remarks: *Maticora* a synonym of *Calliophis fide* Slowinski et al. (2001: 238).

1. *Calliophis beddomei* M.A. Smith, 1943. Fauna Brit. India, Rept. Amph. 3: 423. (*Callophis beddomei*)

Type: Holotype, BMNH 1946.1.17.99, a 565 mm female (R.H. Beddome, 1857–1882).
Type locality: "Shevaroy Hills, British India" [= Shevaroy Hills, Tamil Nadu, S India, ca. 11°50'N, 78°13'E].
Distribution: Southern India (Karnataka, Tamil Nadu), 1380 m.

2. *Calliophis bibroni* (Jan, 1858b). Rev. Mag. Zool. (2) 10: 518, 526–527. (*Elaps bibroni*)

Synonym: *Elaps cerasinus* Beddome, 1864.
Type: Holotype, MNHN 5070, a 489 mm specimen.
Type locality: "Indes orientales" [= Southern Asia and East Indies]. Restricted to Western Ghats *fide* Deepak et al. (2010:1).
Distribution: Western Ghats of SW India (S Karnataka, N Kerala, NW Tamil Nadu), NSL–1220 m.
Source: Deepak et al., 2010.
Remarks: Supplemental original description in Jan (1859e: pl. b, fig. no. 6).

3. *Calliophis bivirgatus* (F. Boie, 1827). Isis von Oken 20(6): 556. (*Elaps bivirgatus*)

Synonyms: *Elaps bivirgatus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Elaps bivirgatus* Schlegel, 1826b *(nomen nudum), Elaps flaviceps* Cantor, 1839, *Elaps bivirgatus javanica* Schlegel, 1844, *Elaps tetrataenia* Bleeker, 1859c, *Elaps bivirgatus quadrivirgata* Jan, 1863b (*nomen nudum*), and *Maticora bivirgata* – Kopstein, 1932b.
Type: Holotype, RMNH 1435, a 595 mm male (H. Kuhl, Dec. 1820–Sept. 1821).
Type locality: "Java" [SW Indonesia] Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).
Distribution: Malay Peninsula and Greater Sundas. Peninsular Thailand (Narathiwat, Pattani, Songkha, Trang, Yala), West Malaysia (Johor, Kedah, Kelantan, Melaka, Pahang, Perak, Perlis, Pinang, Selangor, Penang Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei and W Indonesia (Bangka, Bantan, Bintan, Java, Kalimantan, Mentawi, Nias, Riau Arch., Sumatra), NSL–1375 m.
Sources: Schlegel & Müller, 1844a, Brongersma, 1948b, Wegner, 1954, E.H. Taylor, 1965, Toriba, 1989c, M.J. Cox et al., 1998, Malkmus et al., 2002 and Auliya, 2006.
Remarks: Original description based on H. Boie's MS (1823–1825) but F. Boie credited authorship to H. Kuhl. Unconfirmed reports from Laos, Cambodia, Myanmar and Vietnam.

4. *Calliophis castoe* E.N. Smith, Ogale, Deepak & Giri, 2012. Zootaxa (3437): 53–62, figs. 3c, 4, 6–7.

Type: Holotype, BNHS 3461, a 536 mm male (H. Ogale, 12 Sept. 2009).
Type locality: "Amboli, Sindhudurg district, Maharashtra, India, [ca. 15.958790° N 73.994686° E)."
Distribution: Southwestern India (Goa, NW Karanataka, S Maharashtra), 10–715 m

5. *Calliophis gracilis* Gray, 1835 *in* Gray & Hardwicke, 1830–1835. Illust. Indian Zool. 2(19–20): pl. 86, figs. 1–3.

Synonym: *Elaps nigromaculatus* Cantor, 1839.
Type: Holotype, BMNH 1946.1.16.17 (T. Hardwicke, 1756–1823).
Type locality: "Penang" [= Penang Is., Pinang State, NW Malay Peninsula, 5°22'N, 100°14'E] via lectotype selection.
Distribution: Malay Peninsula and Sumatra. Peninsular Thailand (Pattani), West Malaysia (Johor, Pinang, Selangor, Penang Is.), Singapore and W Indonesia (Sumatra), NSL–900 m.
Sources: E.H. Taylor, 1965, Tweedie, 1983 and David & Vogel, 1996.
Remarks: M.A. Smith (1943: 530) designated pl. 120 in T. Hardwicke's collection a lectotype.

6. *Calliophis haematoetron* E.N. Smith, K. Manamendra-Arachchi & R. Somaweera, 2008. Zootaxa (1847): 21–26, figs. 1, 2 (upper), 3 (upper).

Type: Holotype, WHT 1621, a 371 mm female (M.M. Bahir & S. Nanayakkara, 7 June 1997).
Type locality: "Wasgomuwa National Park, [Central Prov.], Sri Lanka, ca. 90 m (ca. 7.648056º N 80.93583º E)."
Distribution: Sri Lanka (Central), 90 m.
Remarks: Sister group to all other elapids and therefore a separate genus *fide* Pyron et al. (2013: 976).

7. *Calliophis intestinalis* (Laurenti, 1768). Synop. Rept.: 106. (*Aspis intestinalis*)

Synonyms: *Elaps furcatus* Schneider, 1801, *Coluber intestinalis* G. Shaw, 1802, *Vipera furcata* – Daudin, 1803c, *Elaps gracilis* Wagler, 1825 (*nomen ineditum*), *Maticora lineata* Gray, 1835 *in* Gray & Hardwicke, 1830–1835, *Elaps tri-lineatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrigendum)*, *Elaps melanototaenia* Bleeker, 1857a (*nomen nudum*), *Elaps thepassi* Bleeker, 1859c, *Callophis intestinalis bifurcatus* W.C.H. Peters, 1862b *(nomen nudum)*, *Elaps furcatus trilineatus* – Jan, 1863b *(nomen corrigendum)*, *Callophis furcatus nigrotaeniatus* W.C.H. Peters, 1863d, *Callophis intestinalis javanica* A.C.L.G. Günther, 1864a, *Callophis intestinalis malayana* A.C.L.G. Günther, 1864a, *Callophis intestinalis philippina* A.C.L.G. Günther, 1864a, *Callophis bilineatus* W.C.H. Peters, 1881e, *Adeniophis malayanus* – A.B. Meyer, 1886, *Adeniophis philippinus* – A.B. Meyer, 1886, *Elaps sumatranus* Lithe de Jeude *in* Weber, 1890, *Callophis intestinalis suluensis* Steindachner, 1891, *Doliophis intestinalis annectens* Boulenger, 1896a, *Doliophis intestinalis everetti* Boulenger, 1896a, *Doliophis intestinalis vertebralis* F. Werner, 1900d, *Calamaria klossi* M.A. Smith, 1926b, *Maticora intestinalis bilineata* – Loveridge, 1944a, *Maticora intestinalis immaculata* Loveridge, 1944a, *Maticora intestinalis nigrotaeniata* – Haas, 1950, *Maticora intestinalis nigrotaenita* – Wegner, 1954 *(nomen incorrectum)*, and *Elaps melanotaenia* Ulber, 1995 *(nomen nudum)*.
Type: Lectotype, specimen described and illustrated by Seba (1735: 4, pl. 2, fig. 7), designated herein.
Type locality: "Africa," (in error) via lectotype selection. Corrected to Java, Indonesia *fide* Leviton (1964a: 529).
Distribution: Southeast Asia and East Indies. Peninsular Thailand (Nakhon Si Thammarat, Krabi, Pattani, Phang Nga, Phatthalung, Yala), Vietnam (Gai Lai, Lang Son), East Malaysia (Sabah, Sarawak), West Malaysia (Johor, Kelantan, Kuala, Lumpur, Melaka, Negeri, Pahang, Perak, Pinang, Selangor, Bakong, Pinang, Tockus, Terengganua and Tioman Is.), Singapore, Indonesia (Bali, Bangka, Belitung, Java, Kalimantan, Nias, Riau Arch., S Sulawesi, Sumatra), Brunei and Philippines (Balabac, Busuanga, Culion, Dinagat, Jolo, Luzon, Mindanao, Palawan, Samar, S Tagalog), NSL–1525 m.
Sources: E.H. Taylor, 1922a, Wegner, 1954, Ross & Lazell, 1991, B.E. Smith, 1993, Chan-ard et al., 1999, Malkmus et al., 2002, Pauwels et al., 2002, V.S. Nguyen et al., 2009 and McKay & Lilley, 2012.
Remarks: M.A. Smith (1943: 530) designated pl. 122 in T. Hardwicke's collection a lectotype of *Maticora lineata* Gray. Type lost *fide* Toriba *in* Golay et al. (1993: 151). Sulawesi records doubtful *fide* Lang & Vogel (2005: 262).

8. *Calliophis maculiceps* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 232. (*Elaps maculiceps*)

Synonyms: *Elaps atrofrontalis* Sauvage, 1877, *Callophis maculiceps univirgatus* M.A. Smith, 1915d *(nomen praeoccupatum)*, *Callophis hughi* Cochran, 1927, *Calliophis maculiceps punctulatus* Bourret, 1934b, *Calliophis maculiceps michaelis* Deuve, 1961a, *Calliophis maculiceps smithi* Klemmer, 1963 *(nomen substitutum)*, *Calliophis maculiceps malcolmi* E.H. Taylor, 1965 *(nomen substitutum)*, and *Calliophis maculiceps malcolmi* Nutaphand & Tumvipart, 1982 *(nomen substitutum)*.
Type: Lectotype, BMNH 1858.4.20.6, an adult female (Zool. Soc. London), designated by Leviton et al. (2003: 424).
Type locality: "East Indies" via lectotype selection.
Distribution: Southeast Asia. Southern Myanmar (Mon, Tanintharyi, Yangon), Thailand (Chai Nat, Chanthaburi, Chiang Mai, Chon Buri, Chumphon, Kanchanaburi, Krung Thep Mahanakhon, Lop Buri, Nakhon Ratchasima, Nakhon Sawan, Nakhon Si Thammarat, Nong Khai, Lamphu, Pattani, Phetchabun, Phang Nga, Phuket, Prachuap Khiri Khan, Roi Et, Saraburi, Surat Thani, Trang, Uthai Thani, Tao Is.), Laos (Khammouane, Savannakhet, Sedone, Vientiane), Cambodia (Kampong Chhnang), S Vietnam (Ba

C

Ria-Vung Tau, Binh Duong, Dak Lak, Dong Nai, Gia Lai, Ho Chi Minh City, Kien Giang, Tay Ninh), and West Malaysia (Kedah, Perak, Perlis), NSL–1330 m.

Sources: Cochran, 1927, E.H. Taylor, 1965, Campden-Main, 1969a, Deuve, 1970, Tweedie, 1983, M.J. Cox et al., 1998, Leviton et al., 2003, V.S. Nguyen et al., 2009 and I. Das, 2012.

Remarks: Previously in the genus *Maticora*.

9. *Calliophis melanurus* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 552–553. (*Coluber melanurus*)

Synonyms: *Vipera trimaculata* Daudin 1803c, and *Calliophis melanurus sinhaleyus* Deraniyagala, 1951.

Type: Holotype, BMNH 1946.1.17.86, a 250–280 mm specimen (P. Russell, June 1788).

Type locality: "near Nerva, Bengal, India" [= Nerva, Uttar Pradesh, NE India].

Distribution: India (Andhra Pradesh, Gujarat, Karnataka, Kerala, Maharashtra, Tamil Nadu, Uttar Pradesh, West Bengal) and Sri Lanka (Central, Eastern, North-Central, North-Western, Sabaragamuwa, Southern, Uva), 500 m.

Sources: E.H. Taylor, 1950, Deraniyagala, 1955, P. Silva, 1980, A. Silva, 1990a–b, Whitaker & Captain, 2004, N. Khaire, 2006 and E.N. Smith et al., 2008.

Remarks: Description based on P. Russell (1796: 12–13, pl. 8).

10. *Calliophis nigrescens* A.C.L.G. Günther, 1862b. Ann. Mag. Nat. Hist. (3) 9(50): 131–132. (*Callophis nigrescens*)

Synonyms: *Elaps malabaricus* Jerdon, 1854, *Callophis concinnus* Beddome, 1863a, *Callophis pentalineatus* Beddome, 1871, *Callophis pectolineatus* – F. Müller, 1887 *(nomen incorrectum),* and *Callophis nigrescens khandallensis* Wall, 1913g.

Types: Syntypes (2), BMNH 1946.1.17.78 (formerly FPM), a 762 mm female, location of other syntype unknown.

Type locality: "British India" [= India].

Distribution: Southwestern India (Gujarat, Karnataka, Kerala, Maharashtra, Tamil Nadu), 900–2100 m.

Sources: Whitaker & Captain, 2004 and N. Khaire, 2006.

Remarks: Bangladesh record doubtful *fide* Whitaker & Captain (2004: 366).

CALLOSELASMA Cope, 1860b (*nomen substitutum*) (Viperidae)

Synonyms: *Tisiphone* Fitzinger, 1843 *(nomen praeoccupatum), Leiolepis* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Liolepis* Agassiz, 1847 *(nomen emendatum), Calloselaema* – Hoffmann, 1890 *(nomen incorrectum), Caloselasma* – Canton, 1895 *(nomen incorrectum),* and *Leiolephis* – W.L. Burger, 1971 *(nomen incorrectum).*

Type species: *Trigonocephalus rhodostoma* Kuhl, 1824.

Distribution: Southeast Asia and Indonesia.

Sources: Bergman, 1961b, E.H. Taylor, 1965, Chernov, 1957, Gloyd, 1979, Hoge & Romano-Hoge, 1981a, 1983, Chiasson et al., 1989, Maes, 1989, Gloyd & Conant, 1990, Kardong, 1990, Golay et al., 1993, Jintakune & Chanhome, 1995, Daltry et al., 1996, 1997, Chan-ard et al., 1999, Parkinson et al., 1997, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Malhotra & Thorpe, 2000, Ziegler et al., 2001, Gumprecht et al., 2004, B.L. Stuart & Emmett, 2006, Bain et al., 2007, V.S. Nguyen et al., 2009, Geissler et al., 2011, I. Das, 2012 and Hoser, 2012d.

Remarks: Generic status questionable *fide* J.A. Campbell & Whitmore, 1989. A synonym of *Hypnale fide* Kraus et al., 1996. A valid genus *fide* McDiarmid et al., 1999.

1. *Calloselasma rhodostoma* (Kuhl, 1824). Bull. Sci. Nat. Géol., Paris 2: 80. (*Trigonocephalus rhodostoma*)

Synonyms: *Trigonocephalus orophrias* Oppel *in* Kuhl, 1824 (*nomen nudum*), *Trigonocephalus rhodostoma* H. Boie *in* Schlegel, 1826a *(nomen nudum), Trigonocephalus rhodostoma* Schlegel, 1826b *(nomen nudum), Trigonocephalus praetextatus* Gravenhorst, 1832, *Calloselasma rhodostomus* – Cope, 1860b, *Ancistrodon annamensis* Angel, 1933a, and *Ankystrodon rhodostoma* – Duong, 1962 *(nomen incorrectum).*

Type: Holotype, RMNH 1510 (C.G.C. Reinwardt, 1816–1821).

Type locality: "Java" [SW Indonesia]

Distribution: Thailand (Bueng Kan, Chaiyaphum, Chanthaburi, Chiang Mai, Chon Buri, Chumphon, Kalasin, Kamphang Phet, Kanchanaburi, Krabi, Lampang, Lop Buri, Mae Hong Son, Nakhon Phanom, Nakhon Ratchasima, Nakhon Si Thammarat, Nan, Narathiwat, Nong Khai, Pattani, Phang Nga, Phathalung, Phetchabun, Phetchaburi, Phitsanulok, Phrae, Phuket, Prachinburi, Prachuap Khiri Khan, Rayong, Sakon Nakhon, Songkhla, Surat Thani, Tak, Trang, Trat, Udon Thani, Yala), Cambodia (Kam Pot, Koh Khang, Kampong, Koh Kong, Mondolkiri), Laos (Khammouan, Savannakhet, Vientiane, Xekong, Xiangkhouang), S Vietnam (An Giang, Ba Ria-Vung Tau, Binh Duong, Binh Phuoc, Binh Thuan, Dong Nai, Gai Lai, Ninh Thuan, Tay Ninh), West Malaysia (Kedah, Perlis) and Indonesia (Java, Kangean, Karimundjawa), NSL–1900 m.

Remarks: Original description based on H. Boie's MS (1823–1825). Possibly occurs in Myanmar *fide* Dowling & Jenner (1988: 10) but Sumatra unlikely *fide* McDiarmid et al. (1999: 273). Authorship discussed by McDiarmid et al. (1999: 273).

CANDOIA Gray, 1842a (Boidae)

Synonyms: *Cenchris* Gray *in* Griffith & Pidgeon, 1831 *(nomen substitutum), Cenchrus* Swainson, 1839 (*nomen praeoccupatum*), *Tropidoboa* Hombron & Jacquinot *in* Jacquinot & Guichenot, 1842, *Erebophis* A.C.L.G. Günther, 1877, and *Erobophis* – K.L. Williams & Wallach, 1989 *(nomen incorrectum).*

Type species: *Boa carinata* Schneider, 1801.

Distribution: Australasia.

Sources: Stimson, 1969, McDowell, 1979, M. McCoy, 1980, 2006, Kluge, 1991, Harlow & Shine, 1992, Walls, 1998a, McDiarmid et al., 1999, Austin, 2000 and H.M. Smith et al., 2001c.

1. *Candoia aspera* (A.C.L.G. Günther, 1877). Proc. Zool. Soc. London 45(1): 132, pl. 21. (*Erebophis asper*)

Synonym: *Enygrus asper schmidti* Stull, 1932b.

Type: Holotype, BMNH 1946.1.10.33 (formerly BMNH 1877.2.24.23), a 737 mm specimen (G. Brown, 1875–1877).

Type locality: "Duke-of-York Island" [= New Ireland Prov., Bismarck Archipelago, NE Papua New Guinea].

Distribution: New Guinea. Eastern Indonesia (Papua, Batanta, Biak, Japen, Misool, Salawati, Seleo, Waigeu, Valise) and Papua New Guinea (Central, East Sepik, Enga, Eastern Highlands, Gulf, Madang, Milne Bay, Morobe, Northern, Western, West Sepik and Baluan, Duke of York, Karkar, Manus, New Britain, New Hanover, New Ireland, Los Negros, Lou, Manus, Rambutyo and Umboi Is.), NSL–1000 m.

Sources: Stull, 1932b, O'Shea, 1996 and J.C. Murphy & Schlager, 2003.

Remarks: A single Bougainville record unconfirmed *fide* McDowell (1979: 59).

2. *Candoia bibroni* (A.-M.-C. Duméril & Bibron, 1844). Erpét. Gén. 6: 483–484. (*Enygrus bibroni*)

Synonyms: *Tropidoboa de bibron* Hombron & Jacquinot, 1842 (*nomen illegitimum*), and *Boa australis* Montrousier, 1860.

Types: Syntypes (5), MNHN 61–61A, MNHN 1313, and MNHN 3276–77, longest syntype is 2489 mm (J.B. Hombron & H. Jacquinot, 1837–1840).

Type locality: "l'ile Viti." [= Viti Levu Is., Fiji].

Distribution: Pacific Islands. Solomons (Bellona, Bio, Makira, Olu Malau, Reef Islands, Rennell, San Cristobal, Santa Ana, Santa Cruz, Tapua, Three Sisters, Ugi, Utupua, Vanikoro), Vanuatu (Vanua Lava), New Hebrides (Aoba, Espiritu Santo, Maewo, Malekula, Mau), Loyalty Is. (Lifou, Maré, Ouvéa, Tiga), Fiji Is. (Fulanga, Kandavu, Kia, Koro, Lakemba, Levu, Navandra, Navutuiloma, Ongea, Ovalau, Rotuma, Vanua Belavu, Viwa, Vomo, Yangganga), Wallis and Futuna (Futuna), Western Samoa (Savaii, Upolú) and American Samoa (Ta'u).

Sources: Amerson et al., 1982, Gill, 1995, Crombie & Pregill, 1999, McDiarmid et al., 1999 and Bauer & Sadlier, 2000.

3. *Candoia carinata* (Schneider, 1801). Hist. Amph. 2: 261–263. (*Boa carinata*)

Synonyms: *Boa variegata* Thunberg, 1807, *Enygrus ocellatus* Wagler, 1830 *(nomen nudum), Boa ocellata* Wagler, 1830 *(nomen nudum), Cenchris ocellata* Gray *in* Griffith & Pidgeon, 1831 *(nomen nudum), Enygrus carinnatus* – F. Werner, 1898b *(nomen incorrectum), Enygris carinatus* – W.C. Brown & Fehlmann, 1958 *(nomen incorrectum),* and *Candoia carinata tepedeleni* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c.

Type: Lectotype, ZFMK 35503 (formerly ZMG 18a), designated by McDowell (1979: 28).

Type locality: Unknown via lectotype selection. Designated as Amboina [= Ambon Island, S Maluku, SE Indonesia, ca. 3°39'S, 128°10'E] *fide* W. Böhme et al. (1998: 6).

Distribution: Indonesia (Papua, Ambon, Angaur, Ansus, Banda, Batanta, Djamna, Goram, Haruku, Java, Jobi, Karekelong, Laut, Liki, Misool, Salawati, Sangihe, Saparua, Seram, Sulawesi, Tanimbar, Ternate, Timor) and Papua New Guinea (East Sepik, Gulf, Madang, Morobe, Southern Highlands, Western, Aware, Babase, Baluan, Duke of York, Kairiru, Karkar, Lou, Manus, Mioko, New Britain, New Hanover, New Ireland, Manam, Mussau, Rambutyo, Sturt, Tabar and Tench Is.), NSL–1525 m.

Sources: V.M. Tanner, 1950, O'Shea, 1996, Crombie & Pregill, 1999 and Lang & Vogel, 2005.

Remarks: Type rediscovered by W. Böhme et al. (1998: 6). A paralectoatype (ZMB 1496 from "Java, [Indonesia]") exists *fide* Bauer et al. (2002: 167).

4. *Candoia paulsoni* (Stull, 1956). Copeia 1956(3): 185–186. (*Enygrus carinatus paulsoni*)

Synonyms: *Candoia paulsoni mcdowelli* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c, *Candoia paulsoni rosadoi* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c, *Candoia paulsoni sadlieri* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c, *Candoia paulsoni tasmai* H.M. Smith & Tepedelen *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c, and *Candoia paulsoni vindumi* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c.

Type: Holotype, MCZ 14521, a 567 mm male.

Type locality: "Ugi Island, Solomon Islands" [Papua New Guinea].

C

Distribution: Austro-Papua. Eastern Indonesia (Ambon, Banda, Batanta, Batjan, Goram, Halmahera, Haruku, Misool, Morotai, Salawati, Sangihe, Saparua, NE Sulawesi, Tanimbar, Talaud, Ternate), Papua New Guinea (Central, Madang, Milne Bay, Morobe, National Capitol, Northern, Western, West Sepik, Ambittle, Babase, Bougainville, Buka, Dobu, Fergusson, Goodenough, Kiriwina, Kitava, Misima, Nissan, Normanby, Paneati, Rossel, Samarai, Shortland, Slade, Sudest, Tagula, Tabar, Trobriand, Umboi and Woodlark Is.) and Solomons (Bagga, Bellona, Bio, Choiseul, Fatura, Florida, Ganongga, Gatukai, Guadalcanal, Malaita, Mbanika, Mono, Nggatokae, Ranongga, Rennel, San Cristobal, Santa Ana, Santa Cruz, Santa Isabel, Shortland, Simba, Treasury, Tulagi, Vangunu, Vella Lavella), NSL–1830 m.

Sources: O'Shea, 1996, Kraus & Allison, 2004 and Lang & Vogel, 2005.

5. *Candoia superciliosa* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 360–361. (*Enygrus superciliosus*)

Synonym: *Candoia superciliosa crombiei* H.M. Smith & Chiszar *in* H.M. Smith, Chiszar, Tepedelen & Breukelen, 2001c.

Types: Syntypes (2), BMNH 1946.1.16.47 (formerly BMNH 1863.10.2.7) and BMNH 1946.1.16.50 (formerly BMNH 1863.10.2.8), longest syntype 470 mm (G.L. King).

Type locality: "Pelew Islands" [= Palau, ca. 7°31'N, 134°35'E].

Distribution: Palau Islands (Angaur, Babeldaub, Beliliou, Koror, Ngcheangel, Ngeaur, Ngemelachel, Ngerechur, Ngercheu, Ngerduais, Ngerekebesang, Ngerukeuid, Ngeruktabel, Ngetmeduch, Oreor, Pkulaklim).

CANTORIA Girard, 1858a (Homalopsidae)

Synonyms: *Hydrodipsas* W.C.H. Peters, 1859a, *Cantoris* – Oshima, 1944 *(nomen incorrectum)* and *Djokoiskandarus* J.C. Murphy, 2011.

Type species: *Cantoria violacea* Girard, 1858a.

Distribution: Tidal rivers and coastal marine waters of SE Asia and Esat Indies.

Sources: Gyi, 1970, Voris et al., 2002, J.C. Murphy, 2007, 2011, Alfaro et al., 2008 and Zaher et al., 2009.

1. *Cantoria annulata* Jong, 1926a. Zool. Anz. 67(11–12): 304.

Type: Holotype, ZMA 11065, a 625 mm female (W.C. van Heurn, 1920–1921).

Type locality: "Prins Frederik Hendrik Insel Neu-Guinea." [= Yos Sudarso Is., SE Papua Prov., E Indonesia, bet. 7º22'–8°56'S, 137°39'–139º05'E].

Distribution: New Guinea. Eastern Indonesia (Papua) and SW Papua New Guinea (Western, Bobo, Daru Is.), NSL.

Sources: F. Parker, 1982 and O'Shea, 1996.

Remarks: Transferred to *Djokoiskandarus fide* J.C. Murphy (2011: 233).

2. *Cantoria violacea* Girard, 1858a. Proc. Acad. Nat. Sci. Philadelphia (1857) 9(6): 182.

Synonyms: *Hydrodipsas elapiformis* W.C.H. Peters, 1859a, *Cantoria elongata* A.C.L.G. Günther, 1864a *(nomen novum),* and *Cantoria dayana* Stoliczka, 1870a–d.

Type: Holotype, USNM 5523 (C. Wilkes [U.S. Explor. Exped.], 19 Jan.–25 Feb. 1842).

Type locality: "Singapore."

Distribution: Southeastern Asia. India (Andaman & Nicobars: North Andaman, Middle Andaman Is.), Myanmar (Ayeyarwady, Mon), peninsular Thailand (Phuket, Phuket Is.), West Malaysia, Singapore, East Malaysia (Sarawak) and Indonesia (Sumatra, Timor-Leste), NSL.

Sources: Girard, 1858b, C.B. Frith & Boswall, 1978, Tweedie, 1983, Mahendra, 1984, M.J. Cox, 1991b, David & Vogel, 1996, Manthey & Grossmann, 1997, Ghodke & Andrews, 2002 and Whitaker & Captain, 2004.

Remarks: Supplemental original description in Girard (1858b: 156–158, 1858c: pl. 11, figs. 7–10). Sumatra and Timor records doubtful *fide* J.C. Murphy (2007b: 60).

CARAIBA Zaher, Grazziotin, Cadle, Murphy, Moura-Leite & Bonatto, 2009 (Xenodontidae)

Synonym: *Haitiophis* Hedges & Vidal *in* Hedges, Couloux & Vidal, 2009.

Type species: *Liophis andreae* J.T. Reinhardt & Lütken, 1862.

Distribution: Cuba and Hispaniola.

Sources: A. Schwartz & Thomas, 1960, R. Thomas & Garrido, 1967, Hedges et al., 2009, R.W. Henderson & Powell, 2009, Zaher et al., 2009 and Burbrink et al., 2012.

1. *Caraiba andreae* (J.T. Reinhardt & Lütken, 1862). Vidensk. Medd. Naturhist. Foren. Kjøbenhavn (1862–1863) 24(10–18): 214–216. (*Liophis andreae*)

Synonyms: *Dromicus cubensis* S.W. Garman, 1887b, *Leimadophis nebulatus* T. Barbour, 1916a, *Leimadophis andreae orientalis* T. Barbour & Ramsden, 1919, *Dromicus andreae peninsulae* Schwartz & Thomas, 1960, *Dromicus andreae melopyrrha* R. Thomas & Garrido, 1967, and *Antillophis andreae morenoi* Garrido, 1973.

Types: Syntypes (2), ZMUC 60766–67, longest syntype 314 mm (C. Hygom & F. Andréa).
Type locality: "Havanna, Cuba" [= Havana, Habana Proc., Cuba, 23°07'N, 82°23'W, elevation 35 m].
Distribution: Cuba (Camagüey, Cienfuegos, Ciego de Aviula, Granma, Guantánamo, Habana, Holguín, Las Tunas, Matanzas, Pinar del Río, Sancti Spíritus, Santiago de Cuba, Villa Clara, Cantiles, Guajaba, Juventud and Santa María Is.), NSL–100 m.

2. *Caraiba anomala* (W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 282–283. (*Zamenis anomalus*)

Type: Holotype, ZMB 2269, an 825 mm specimen.
Type locality: Unknown.
Distribution: Haiti (Nord-Ouest, Ouest, Sud-Ouest, Tortue Is.) and W Dominican Republic (Baoruco, Monte Cristi, Beata Is.).

CARPHOPHIS Gervais *in* d'Orbigny, 1843 (Carphophiidae)

Synonyms: *Carphophiops* Gervais *in* d'Orbigny, 1843, *Carpophis* A.-M.-C. Duméril, 1853, *Celuta* Baird & Girard, 1853, *Carphophis* Duméril, Bibron & Duméril, 1854a *(nomen praeoccupatum)*, *Coluta* – Lichtenstein & Martens, 1856 *(nomen incorrectum), Carphoptis* – Cope, 1862f *(nomen incorrectum), Celata* – Westphal-Castelnau, 1870 *(nomen incorrectum), Carphoris* – Hurter, 1893 *(nomen incorrectum), Carphopiops* – McAtee, 1907 *(nomen incorrectum), Carphosis* – Dunn, 1928 *(nomen incorrectum), Caryophis* – Haltom, 1931 *(nomen incorrectum),* and *Carphopis* – A.F. Scott & Snyder, 1968 *(nomen incorrectum).*
Type species: *Coluber amoenus* Say, 1825.
Distribution: Southeastern USA.
Fossil records: Pleistocene of USA.
Sources: Clark, 1970, Rossman, 1973, Cadle, 1984c, Holman, 2000a, Ernst et al., 2003a and Zaher et al., 2009.

1. *Carphophis amoenus* (Say, 1825). J. Acad. Nat. Sci. Philadelphia 4(2): 237–238. (*Coluber amoenus*) (*nomen corrigendum*)

Synonyms: *Coluber amaenus* Say, 1825 *(nomen incorrigendum), Coluber cineritius* Gravenhorst, 1807 *(nomen oblitum), Carphophiops vermiformis* Gervais *in* D'Orbigny, 1843, and *Celuta helenae* Kennicott, 1859a.
Types: Syntypes (5), ANSP (4), 276 mm, 264 mm, 262 mm, 216 mm and 118 mm specimens, and a 244 mm specimen (W.L. Stewart coll.), all lost *fide* Ernst et al. (2003: 774.3).
Type locality: "Pennsylvania" [USA]. Restricted to vicinity of Philadelphia *fide* K.P. Schmidt (1953a: 184).
Distribution: Southeastern USA (Alabama, Connecticut, Delaware, N Georgia, S Illinois, S Indiana, Kentucky, ext. SE Louisiana, Maryland, S Massachusetts, Mississippi, New Jersey, SE NewYork, North Carolina, S Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Virginia, West Virginia), NSL–1310 m.
Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), middle Pleistocene (Irvingtonian) of USA (West Virginia), middle/upper Pleistocene (Irvingtonian II) of USA (Maryland), and upper Pleistocene (Rancholbrean II) of USA (Alabama, Florida, Georgia, Pennsylvania, Tennessee, Virginia, West Virginia).
Sources: Ernst & Barbour, 1989, Conant & Collins, 1991, Palmer & Braswell, 1995 and Ernst et al., 2003b.
Remarks: Var. A of Say (1825: 238) might be considered the holotype. In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Coluber amoenus* Say is designated a *nomen protectum* and *Coluber cineritius* Gravenhorst a *nomen oblitum*.

2. *Carphophis vermis* (Kennicott, 1859). Proc. Acad. Nat. Sci. Philadelphia 11(3): 99–100. (*Celuta vermis*)

Type: Holotype, USNM 2180 (P.R. Hoy, 1854).
Type locality: "Missouri" [USA]. USNM catalogue entry for type reads Cooper County *fide* Ernst et al. (2003c: 775.1).
Distribution: Central USA (Arkansas, ext. SW Illinois, ext. SE Iowa, E Kansas, ext. N Louisiana, Missouri, ext. SE Nebraska, E Oklahoma, ext. NE Texas, ext. SW Wisconsin), 60–610 m.
Fossil records: Middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas), and upper Pleistocene (Rancholabrean II) of USA (Missouri, Texas).
Sources: Clark, 1968, Fitch, 1999, Werler & Dixon, 2000 and Ernst et al., 2003c.

CASAREA Gray, 1842a (Bolyeriidae)

Synonyms: *Centrophis* Hemprich *in* Fitzinger, 1843, *Caseara* A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Leptoboa* A.-M.-C. Duméril & Bibron, 1844, *Cascara* – A.-M.-C. Duméril, 1853 *(nomen incorrectum), Leptolon* – Giglioli, 1873 *(nomen incorrectum), Caesarea* – F. Werner, 1890 *(nomen incorrectum),* and *Casaria* – H.W. Parker & Grandison, 1977 *(nomen incorrectum).*
Type species: *Boa dussumieri* Schlegel, 1837.
Distribution: Mauritius, Indian Ocean.
Fossil record: Subrecent of Mauritius.
Sources: Anthony & Guibé, 1952, Guibé, 1958, Stimson, 1969, Vinson, 1975, McAlpine, 1981, Cundall & Irish, 1986, 1989, M.K. Hecht & LaDuke, 1988, McDiarmid et al., 1999, Maiscano & Rieppel, 2007 and Winters, 2011.

C

1. *Casarea dussumieri* (Schlegel, 1837). Essai Phys. Serp. 1: 176, 2: 396–397. (*Boa dussumieri*) (*nomen corrigendum*)

Synonyms: *Boa dussumiri* Schlegel, 1837 *(nomen incorrigendum)* and *Boa dussumieri* Gray, 1842a *(nomen corrigendum).*
Type: Holotype, MNHN 9, a 420 mm female (J.-J. Dussumier, 1816–1837).
Type locality: "l'île ronde, près de Maurice" [= Round Island, near Mauritius, Indian Ocean, bet. 19°51–52'S and 57°47–48'E].
Distribution: Mascarenes (Flat, Gunner's Quoin, Passe, Round, Mauritius Is.).
Remarks: Incorrect original spelling corrected in Schlegel (1839 *in* 1837–1844: 55, pl. 17, figs. 1–5). Recently extinct on Mauritius *fide* Arnold (1980a: 41) but captive colony on Jersey Island.

CATHETORHINUS Duméril & Bibron, 1844 (Typhlopidae)

Type species: *Cathetorhinus melanocephalus* Duméril & Bibron, 1844.
Distribution: Old World.
Sources: Duméril & Bibron, 1844, Wallach & Pauwels, 2008, Cheke, 2010 and Winters, 2011.

1. *Cathetorhinus melanocephalus* Duméril & Bibron, 1844. Erpét. Gén. 6: 270–271.

Type: Holotype, MNHN 138, a 183 mm male (F. Péron & C.A. Lesueur [N.T. Baudin Géographe Voy.], Oct. 1800–1804).
Type locality: Unknown. Landfalls during the Péron and Lesueur voyage include Mauritius, Australia and Timor *fide* Wallach & Pauwels (2008: 121).
Distribution: Old World.
Remarks: Possibly an extant specimen of fossil *Typhlops cariei* from Mauritius *fide* Cheke (2010: 102).

CAUSUS Wagler, 1830 (Viperidae)

Synonyms: *Distichurus* Hallowell, 1842, *Heterophis* W.C.H. Peters, 1862a, *Dinodipsas* W.C.H. Peters, 1882b, *Cansus* – Mocquard, 1896b *(nomen incorrectum), Caussus* – Lindemann, 1898 *(nomen incorrectum),* and *Causas* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Sepedon rhombeata* Lichtenstein, 1823.
Distribution: Subsaharan Africa.
Sources: Witte, 1962, Broadley, 1968a, Golay et al., 1993, David & Ineich, 1999, McDiarmid et al., 1999, Underwood, 1999, Lenk et al., 2001b, Mallow et al., 2003, Dobiey & Vogel, 2007, Phelps, 2010 and Hoser, 2012d.

1. *Causus bilineatus* Boulenger, 1905d. Ann. Mag. Nat. Hist. (7) 16(92): 114. (*Causus rhombeatus bilineatus*)

Synonym: *Causus lineatus* Laurent, 1955.
Types: Syntypes (5), BMNH 1905.5.29.36–40, males and females (W.J. Ansorge, June–July 1903, Nov. 1903–Feb. 1904, & end of 1904).
Type locality: "Pungo Andongo, Canhoca, between Benguella and Bihé, Angola" [= between Benguela (12°35'S, 13°25'E) and Bié (12°23'S, 16°57'E), W Angola].
Distribution: Central Africa. Southeastern Democratic Republic of the Congo (Katanga), NE Rwanda (Byumba), Angola (Benguela, Bié, Cuanza Norte, Huambo, Malanje, Moxico, Namibe) and NW Zambia (Luapula, North-Western, Western), 725–1800 m.
Sources: Laurent, 1964a, Manaças, 1982, Spawls & Branch, 1995, Spawls et al., 2002, Broadley et al., 2003 and J.B. Rassmussen, 2005a.
Remarks: Localities listed as Duque de Bragança, Malanje Prov. (09°06'S, 15°57'E), Quissange River, Benguela Prov. (12°26'S, 14°03'E), Caconda, Huíla Prov. (13°44'S, 15°04'E) and Huíla, Huíla Prov. (15°03'S, 13°33'E) *fide* Bocage (1895: 146).

2. *Causus defilippii* (Jan, 1863a). Arch. Zool. Anat. Fis. 2(2): 225–226. (*Heterodon defilippii*) (*nomen corrigendum*)

Synonyms: *Heterodon de filippii* Jan, 1863a *(nomen incorrigendum), Causus rostratus* A.C.L.G. Günther, 1863c, *Causus defilippii* Mocquard, 1892a *(nomen corrigendum), Causus rostratus* Mocquard, 1892b *(nomen praeoccupatum),* and *Causus dephillippii* – Rose, 1955 *(nomen incorrectum).*
Type: Holotype, MSNM (formerly MHNG & MZUT 2836), lost *fide* Broadley *in* Golay et al. (1993: 264).
Type locality: "Buenos Ayres" [= Buenos Aires, Argentina] (in error). Corrected to Africa *fide* Broadley (1971d: 102). Restricted to Transvaal [= Limpopo, Mpumalanga and Gauteng Prov., NE South Africa] *fide* Elter (1982: 20, 55).
Distribution: East and S Africa. Eastern Democratic Republic of the Coingo (Sud-Kivu), SE Kenya (Coast), Tanzania (Iringa, Linda, Mbeya, Morogoro, Mtwara, Pwani, Ruvuma, Tanga, Zanzibar), Zambia (Central, Eastern, Northern, Southern), Malawi (Central, Southern), Mozambique (Gaza, Manica, Maputo, Nampula, Niassa, Sofala, Tete, Zambézia), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland and NE South Africa (KwaZulu-Natal, Limpopo, Mpumalanga), NSL–1800 m.

Sources: A.C.L.G. Günther, 1864b, Mocquard, 1891b, Sweeney, 1961, Broadley, 1971, 1983, FitzSimons, 1974, Broadley & Cock, 1975, Pienaar et al., 1983, Branch, 1988, Spawls & Branch, 1995, Spawls et al., 2002, Branch et al., 2005 and Broadley & Blaylock, 2013.

Remarks: Probably occurs in Namibia *fide* M. Griffin (2003: 130) and E Botswana *fide* Auerbach (1987: 205).

3. *Causus lichtensteinii* (Jan, 1859c). Rev. Mag. Zool. (1858) (2) 11: 511. (*Aspidelaps lichtensteinii*)

Synonym: *Dinodipsas angulifera* W.C.H. Peters, 1882b.

Type: Holotype, formerly NMBA, destroyed in 1943 during World War II.

Type locality: "Côte-d'Or." [= Gold Coast, presumably Ghana].

Distribution: Western and cen. Africa. Southeastern Guinea (Macenta, Nzérékoré), Sierra Leone, Liberia, S Ivory Coast (Guiglo, Tabou), S Ghana (Eastern), S Nigeria, S Cameroon (Adamaoua, Est, Centre, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea, Gabon (Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Brazzaville, Kouilou, Pool, Sangha), SW Central Africa Republic (Bamingui-Bangoran, Haut-Mbomou, Haute-Sangha, Lobaye, Mbomou, Ombella-Mpoko, Ouaka, Sangha), SE Sudan, Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Katanga, Kasai Occidental, Kasai Oriental, Orientale, Sud-Kivu), W Zambia (North-Western), Angola (Benguela, Lunda Norte), S Uganda (Central, Western) and SW Kenya (Western), NSL–2100 m.

Sources: Roux-Estéve, 1965, Leston & Hughes, 1968, Hughes & Barry, 1969, Leston, 1970, Pitman, 1974, Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Akani et al., 2001, Spawls et al., 2002, Broadley et al., 2003, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

Remarks: Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353). Possibly occurs in Benin *fide* Hughes (2013: 151). See Akani et al. (2001: 192) for discussion of its occurrence in Nigeria.

4. *Causus maculatus* (Hallowell, 1842). J. Acad. Nat. Sci. Philadelphia 8(2): 337–338, pl. 19. (*Distichurus maculatus*)

Type: Holotype, ANSP 6897, a 293 mm specimen (S.M.E. Goheen, 1836–1838).

Type locality: "Liberia, Western Africa."

Distribution: Western and cen. Africa. Southwestern Mauritania (Trarza), W Senegal (Dakar, Fatick, Kaolack, Kédougou, Kolda, Saint-Louis, Tambacounda, Ziguinchor), Gambia (MacCarthy Island), Guinea-Bissau (Bafatá, Cacheu, Tombali), Guinea (Boké, Dalaba, Kouroussa, Macenta, Nzérékoré, Télimélé), Sierra Leone (Eastern, Northern, Southern, Western, Sherbo Is.), Liberia (Bong, Grand Bassa, Grand Cape Mount, Grand Gedeh, Loffa, Montserrado, Margibi, Nimba), S Mali (Kayes, Koulikoro, Mopti, Ségou, Sikasso, S Tombouctou), Ivory Coast (Abidjan, Adzopé, Bouaké, Bouna, Daloa, Dix-Huit Montagnes, Ferkéssédougou, Guiglo, San Pédro, Tabou, Toumodi), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Nord, Sahel, Sud-Ouest, Volta-Noire), Ghana (Accra, Ashanti, Brong-Ahafo, Central, Eastern, Northern, Upper East, Upper West, Volta, Western), Togo (Centrale, Kara, Maritime, Plateaux, Savanes), Benin (Alibori, Atakora, Atlantique, Borgou, Zou), S Niger (Dosso, Niamey, S Diffa), Nigeria (Abuja, Akwa Ibom, Anambra, Bayelsa, Bendel, Cross River, Delta, Gongola, Kaduna, Kano, Kwara, Lagos, Oyo, Plateau, Rivers, Sokoto), S Chad (Chari-Baguirmi, Guéra, Mayo-Kebbi, Moyen-Chari), Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Littoral, Nord, Nord-Ouest, Ouest, Sud, Sud-Ouest), Central African Republic (Bamingui-Bangoran, Haute-Sangha, Haut-Mbomou, Kemo-Gribingui, Lobaye, Mbomou, Nana-Mambere, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende, Sangha, Vakaga), Equatorial Guinea (Bioko Is.), E Gabon (Haut-Ogooué, Ogooué-Ivindo), Congo (Bouenza, Brazzaville, Cuvette, Kouilou, Lekoumou, Likouala, Niari, Pool), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), NE Angola (Cuanza Sul, Lunda Norte, Lunda Sul), E South Sudan, S Ethiopia (Illubabor, Shoa, Wollega), and W Uganda (Western), NSL–1950 m.

Sources: Mertens, 1965c, Hughes, 1978, 2013, Roman, 1980, Hakansson, 1981, J.A. Butler & Reid, 1986, Lawson, 1993, Spawls & Branch, 1995, J.-F. Trape & Roux-Estève, 1995, J.-F. Rasmussen, 2005a, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, Largen & Spawls, 2010, Ullenbruch et al., 2010, W. Böhme et al., 2011, Segniagbeto et al., 2011 and Chirio, 2013.

5. *Causus resimus* (W.C.H. Peters, 1862a). Mber. Königl. Akad. Wiss. Berlin 1862(1): 277–278, figs. 4–4b. (*Heterophis resimus*)

Synonyms: *Causus jacksonii* A.C.L.G. Günther, 1888c, *Causus nasalis* Stejneger, 1894b, and *Causus resimus angolensis* Bocage, 1895.

Type: Holotype, ZMB 4370, a 295 mm specimen (A. von Barnim & R. Hartman, 1859–1860).

Type locality: "Sennâr, vom Gebel-Ghule" [= Jebol Ghule, Sennar Prov., SE Sudan].

Distribution: Central and E Africa. Ghana (Brong-Ahafo), Nigeria (Abia, Abuja, Borno), S Chad (Chari-Baguirmi, Mayo-Kebbi, Salamat), N Cameroon (Extreme-Nord, Nord), N Central African Republic

C

(Vakaga), NE Democratic Republic of the Congo (Nord-Kivu, Orientale), SE Sudan (Sennar), E Sudan, South Sudan, S Ethiopia (Bale, Gemu Gofa, Kefa), Somalia (Bay, Gedo, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose), Uganda (Central, Eastern, Western), S Kenya (Coast, Nyanza, Rift Valley, Western), Rwanda, N Burundi, Tanzania (Kagera, Mara, Mwanza), and Angola (Benguella, Cuanza Norte, Cuanza Sul, Lunda Norte, Namibe), NSL–1800 m.

Sources: Pitman, 1974, Lanza, 1983a, 1990b, Hughes, 1987, Spawls & Branch, 1995, Akani et al., 2001, Spawls et al., 2002, J.B. Rasmussen, 2005a, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Largen & Spawls, 2010.

Remarks: Distribution consists of numerous disjunct populations.

6. *Causus rhombeatus* (Lichtenstein, 1823). Verzeich. Doubl. Zool. Mus. Univ. Berlin: 106. (*Sepedon rhombeata*)

Synonyms: *Naja v-nigrum* F. Boie, 1827, *Naja rhombeata* – Schlegel, 1837, and *Causus rhombeatus taeniata* Sternfeld, 1912.

Types: Syntypes (2–3), ZMB 2768–69 and ? ZMB 2770, longest syntype 457 mm (G.L.E. Krebs, 1821–1829).

Type locality: "Prom. B. sp." [= Promontorium Bonae Spei or Cape of Good Hope, South Africa]. Restricted to districts of Uitenhage, Kirkwood and Port Elizabeth, Eastern Cape Prov., South Africa *fide* Bauer (2000: 57).

Distribution: Eastern Africa. Northeastern Nigeria (Gongola), Central African Republic (Ouham-Pende), South Sudan, Ethiopia (Bale, Gemu Gofa, Gojjam, Gondar, Hararge, Illubabor, Kefa, Shoa, Sidamo, Tigre), Uganda (Central, Eastern, Northern, Western), SW Kenya (Central, S Coast, Eastern, Nairobi, S Rift Valley, Western), cen. Rwanda, W Burundi, SW Tanzania (S Iringa, Kigoma, Mbeya, Rukwa, Ruvuma), SE Democratic Republic of the Congo (Katanga), NE Angola (Lunda Norte, Moxico), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawi (Central, Northern, Southern), Mozambique (Inhambane, Manica, Maputo, Niassa, Sofala, Tete), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, N Masvingo, Matabeleland North, Matabeleland South, Midlands), NE Namibia (Caprivi, E Kavango), N Botswana (North West, North East), Swaziland, Lesotho and E South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, E Western Cape), NSL–2200 m.

Sources: Barros e Cunha, 1935, Sülter, 1962, Witte, 1962, Laurent, 1964a, Hughes & Barry, 1969, Hughes, 1977, FitzSimons, 1974, Pitman, 1974, Broadley & Cock, 1975, Hughes, 1978, Broadley, 1983, Auerbach, 1987, Branch, 1988, Massary & Ineich, 1994, Bauer, 2000, Akani et al., 2001, Spawls et al., 2002, Broadley et al., 2003, M. Griffin, 2003, J.C. Murphy & Schlager, 2003, J.B. Rasmussen, 2005a, Chippaux, 2006, Largen & Spawls, 2010 and Broadley & Blaylock, 2013.

CEMOPHORA Cope, 1860e (Colubridae)

Synonyms: *Stasiotes* Jan, 1862b, *Cemaphora* – Palacky, 1898 *(nomen incorrectum),* and *Cernophora* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type species: *Coluber coccineus* Blumenbach, 1788.

Distribution: Eastern and S USA.

Fossil records: Pleistocene of SE USA.

Sources: K.L. Williams et al., 1966, K.L. Williams & Wilson, 1967, Christman, 1980, Dowling et al., 1983, K.L. Williams, 1985, Ernst & Barbour, 1989, Conant & Collins, 1991, 1998, Trauth, 1993, Holman, 1995a, 2000a, Palmer & Braswell, 1995, Keogh, 1996, Tennant, 1997, Rodríguez-Robles & Jesús-Escobar, 1999, Werler & Dixon, 2000 and Pyron & Burbrink, 2009a.

1. *Cemophora coccinea* (Blumenbach, 1788). Voigt's Mag. Physik Naturg. 5(1): 10–12, pl. 1. (*Coluber coccineus*)

Synonyms: *Coluber doliatus* Linnaeus, 1766 *(nomen rejiciendum), Coluber dumfrisiensis* Sowerby, 1804, *Coluber coccinaenus* Kirtland, 1838 *(nomen emendatum), Cemophora copei* Jan, 1863a, and *Cemophora coccinea lineri* K.L. Williams, Brown & Wilson, 1966.

Type: Holotype, ZMG (A. Garden, 1750–1761), lost *fide* K.L. Williams & Wilson (1967: 112).

Type locality: "Florida und Neu-Spanien" [USA and Mesoamerica]. Restricted to Florida, USA *fide* K.L. Williams & Wilson (1967: 112).

Distribution: Southeastern USA (Alabama, Arkansas, Florida, Georgia, ext. S Illinois, ext. S Indiana, W Kentucky, Louisiana, Maryland, Mississippi, S Missouri, E New Jersey, North Carolina, E Oklahoma, South Carolina, Tennessee, ext. E Texas, Virginia), NSL–600 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida, Virginia).

Remarks: Official Specific Name no. 2187 *fide* Opinion 804 (ICZN, 1967). Collins (1991: 43) suggested that *C. lineri* be recognized as a valid species.

CERASTES Laurenti, 1768 (*nomen protectum*) (Viperidae)

Synonyms: *Aspis* Laurenti, 1768 *(nomen rejiciendum), Cerastes* Rafinesque-Schmaltz, 1815 *(nomen nudum), Haemorrohous* Fitzinger, 1823, *Gonyechis* Fitzinger,

1843, *Gongechis* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Cerates* – K.P. Schmidt, 1941 *(nomen incorrectum),* and *Conyechis* – A.S. Romer, 1956 *(nomen incorrectum).*

Type species: *Coluber cerastes* Linnaeus, 1758.

Distribution: North Africa and SW Asia.

Sources: Villiers, 1950a, Schnurrenberger, 1959, Broadley, 1968a, Papenfuss, 1969, Joger, 1984, Y.L. Werner et al., 1991, Y.L. Werner & Sivan, 1991, 1992, Golay et al., 1993, Herrmann & Joger, 1995, Spawls & Branch, 1995, David & Ineich, 1999, Herrmann et al., 1999, Joger & Courage, 1999, McDiarmid et al., 1999, Lenk et al., 2001b, Mallow et al., 2003, Dobiey & Vogel, 2007, Stümpel & Joger, 2009, Phelps, 2010 and Hoser, 2012d.

Remarks: Official Generic Name no. 1539 *fide* Opinion 661 (ICZN, 1963b).

1. *Cerastes boehmei* Wagner & Wilms, 2010. Bonn Zool. Bull. 17(2): 300–302, figs. 2.1, 3–5.

Type: Holotype, ZFMK 58054, a 219 mm female (T. Holtmann, 1991).

Type locality: "Tunisia, SW Remada, east of Djebei National Park, close to the road midway between Beni Kandeche (Bani Kheddacvhe) and Ksar el Hallouf" [= SW Remada (32°19'N, 10°23'E, 300 m), Tatouine Govern., cen. Tunisia].

Distribution: Central Tunisia (Tatouine), 300 m.

2. *Cerastes cerastes* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 217. (*Coluber cerastes*)

Synonyms: *Coluber cornutus* Linnaeus *in* Hasselquist, 1762, *Coluber baetaen* Forskal *in* Niebuhr, 1775, *Vipera aegyptiaca* Daudin, 1803c, *Crastes preuini* Fitzinger, 1823, *Cerastes hasselquistii* Gray, 1842e, *Echidna atricauda* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(partim), Vipera avicennae* Jan, 1859a *(part), Cerastes cornutus mutila* Doumergue, 1901, *Cerastes cerates* – Weissenberg et al., 1991 *(nomen incorrectum),* and *Cerastes cerastes hoofieni* Y.L. Werner & Sivan *in* Y.L. Werner, Sivan, Kushnir & Motro, 1999.

Type: Holotype, NHR Lin-98 (formerly MAFR), an anterior body section (F. Hasselquist, 7 July 1750, via. Mus. Drottn.).

Type locality: "Oriente" [= Egypt]. Rashid, Nile delta [= Rasheed, Kafr El-Shaikh Govern., NE Egypt] *fide* Hasselquist (1762: 70–72, 315–322). Restricted to Egypt *fide* Flower (1933: 830) and to southern Judaea *fide* K.P. Schmidt (1939b: 88).

Distribution: North Africa and Arabia. Western Sahara (Rio de Oro, Saguia El Hamra), W Mauritania (Adrar, Assaba, Brakna, Dakhlet Nouadhibou, Gorgol, Inchiri, Tiris Zemmour, Trarza), S Morocco (Boulemane, Figuig, Kaar Es Souk, Ouarzazate, Tan Tan), Algeria (Adrar, El Bayadh, Illizi, Naama, Saida, Tamanrasset), NE Mali (Gao), Niger (Agadez, Diffa, Tahoua, Zinder), Tunisia (Nabeul, Sousse, Zaghouan), Libya (Ajdabiya, Al Butnan, Al Jabal Al Gharbi, Al Jurfah, Al Kurfah, Awbari, Banghazi, Ghat, Nalut, Murzuq, Surt), N Chad (Kanem, Tibetsi), N Sudan (Al Bahr Al Ahmar, Ash Shamaliyah), Egypt (Alexandria, Assiut, Aswan, Beheira, Beni Suef, Cairo, El-Bahr El-Ahmar, Faiyum, Giza, Ismailia, Matrouh, Minya, New Valley, North Sinai, Qena, South Sinai, Sohag, Suez), SW Israel (W Southern), SW Saudi Arabia (Qizan) and Yemen, NSL–1500 m.

Sources: Doumergue, 1901, Kramer & Schnurrenberger, 1963, A. Davidson, 1964, Johann, 1973, Gasperetti, 1988, Y.L. Werner et al., 1991, 1999, Leviton et al., 1992, Sterer, 1992, Y.L. Werner & Sivan, 1992, Schätti & Gasperetti, 1994, Y.L. Werner, 1994, Bons & Geniez, 1996, Schleich et al., 1996, Bogaerts, 1998, Bouskila & Amitai, 2001, J.C. Murphy & Schlager, 2003, Geniez et al., 2004, Chippauz, 2006, J.-F. Trape & Mané, 2006b and Bar & Haimovitch, 2011.

Remarks: Official Specific Name no. 1910 *fide* Opinion 661 (ICZN, 1963c). Photograph of head of "holotype" in Y.L. Werner & Sivan (1992: fig. 1), who listed holotype as lost and NHR Lin-98 as a paratype. Type locality restriction of S Judea *fide* K.P. Schmidt (1939: 88) invalid.

3. *Cerastes gasperettii* Leviton & Anderson, 1967. Proc. California Acad. Sci. (4) 35(9): 183–184, fig. 12 (*Cerastes cerastes gasperettii*)

Synonyms: *Cerastes cerastes karlhartli* Sochurek, 1974 (*nomen nudum*) and *Cerastes gasperettii mendelssohni* Werner & Sivan *in* Y.L. Werner, Sivan, Kushnir & Motro, 1999.

Type: Holotype, CAS 97826, a 580 mm male (J. Gasperetti, 23 Aug. 1964).

Type locality: "Beda Azan [23°41' N., 53°28' E.], Abu Dhabi [Abu Zaby]," United Arab Emirates.

Distribution: Arabia and Middle East. Syria, ext. SE Israel (E Southern), Jordan (Aqaba, Karak, Maan, Tafilah, Zarqa), S Iraq, Saudi Arabia (Asir, Eastern, Jawf, Jazan, Madinah, Makkah, Northern, Qasim, Riyadh, Tabuk), Kuwait, Qatar, United Arab Emirates (Abu Dhabi, Sharjah), Oman (Aden, Al Wusta, Ash Sharqiyah, Dhofar), Yemen (Abyan, Al Jawf, Al Hudaydah, Hadhramaut, Mahwit, Ma'rib, Shabwah) and SW Iran (Khuzestan), NSL–1600 m.

Sources: Y.L. Werner, 1987, 1994, Gasperetti, 1988, Leviton et al., 1992, Schätti & Gasperetti, 1994, Y.L. Werner et al., 1999, Disi et al., 2001, Baker et al., 2004, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

4. *Cerastes vipera* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 216. (*Coluber vipera*)

Synonyms: *Aspis cleopatrae* Laurenti, 1768, *Coluber aegypticus* Lacépède, 1789 (*nomen rejiciendum*), *Vipera aegyptia* Latreille *in* Sonnini & Latreille,

C

1801a, *Vipera aegyptiaca* Daudin, 1803d (*nomen substitutum*), *Aspis cleopatra* Gray, 1842e *(nomen emendatum), Cerastes richiei* Gray, 1842e, *Cerastes ritchii* Gray, 1849 *(nomen emendatum), Echidna atricauda* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(partim), Vipera avicennae* Jan, 1859a *(part), Vipera avizennae* – Strauch, 1869 *(nomen incorrectum),* and *Cerastes vipera inornatus* F. Werner, 1929b.

Type: Holotype, NHR Lin-99 (formerly MAFR), a 380 mm male (F. Hasselquist, 7 July 1750, via Mus. Drottn.).

Type locality: "Aegypto" [= Egypt]. Rashid, Nile delta [= Rasheed, Kafr El-Shaikh Govern., NE Egypt] *fide* Hasselquist (1762: 70–72, 315–322).

Distribution: North Africa and Middle East. Western Sahara (Rio de Oro, Saguia El Hamra), Mauritania (Adrar, Brakna, Dahklet Nouadhibou, Inchiri, Tagant, Tiris Zemmour, Trarza), S Morocco (Kaar Es Souk, Ouarzazate, Tan Tan), Algeria (Adrar, Bechar, Illizi, Naama, Tamanrasset), Tunisia (Gafsa, Sousse), N Mali (Gao, Tombouctou), N Niger (Agadez, Zinder), Libya (Ajdabiya, Al Jabar Al Gharbi, Awbari, Banghazi, Surt, Tarabulus), Chad, N Egypt (El-Bahr El-Ahmar, Faiyum, Giza, Ismailia, Matrouh, Minya, N New Valley, North Sinai, South Sinai, Suez), SW Saudi Arabia (Jazan), SW Israel (W Southern) and Jordan, NSL–1500 m.

Sources: Mayet, 1903, Kramer & Schnurrenberger, 1963, Bons & Geniez, 1996, Jooris & Fourmy, 1996, Schleich et al., 1996, Bogaerts, 1998, Bouskila & Amitai, 2001, Geniez et al., 2004, Chippaux, 2006, J.-F. Trape & Mané, 2006b and Bar & Haimovitch, 2011.

Remarks: Record from Lebanon rejected *fide* Joger (1984: 42).

CERATOPHALLUS Cope, 1893a (Natricidae)

Type species: *Coluber vittatus* Linnaeus, 1758.

Distribution: Singapore and Indonesia.

Sources: Bergman, 1950a, 1950b, K.F.L. Lim & Lee, 1989, David & Vogel, 1996 and Manthey & Grossmann, 1997.

Remarks: A valid genus *fide* Dubey et al., 2012, P. Gou et al., 2012, and Zaher et al., 2012.

1. *Ceratophallus vittatus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 219. (*Coluber vittatus*)

Type: Holotype, NHR (formerly MAFR), lost *fide* Andersson (1899: 5).

Type locality: "America," (in error).

Distribution: Singapore and Indonesia (Bangka, Java, Sumatra, Weh), NSL–100 m.

Remarks: Introduced into Singapore *fide* K.K.P. Lim & Chou (1990: 54). Sulawesi records doubtful *fide* Lang & Vogel (2005: 258).

†*CERBEROPHIS* Longrich, Bhullar & Gauthier, 2012b (Alethinophidia incertae sedis)

Type species: †*Cerberophis robustus* Longrich, Bhullar & Gauthier, 2012b.

Distribution: Upper Cretaceous of USA.

Source: Longrich et al., 2012a.

1. †*Cerberophis robustus* Longrich, Bhullar & Gauthier, 2012b. Proc. Natl. Acad. Sci. 109(52): 21397–21398, fig. 1-I.

Synonym: Boidae indeterminate Bryant, 1989.

Type: Holotype, UCMP 130696 (formerly V80096), one trunk vertebra.

Type species: "Hell Creek Formation, Garfield/McCone Counties, Montana; Late Cretaceous, ≤1.8 Ma before K-T boundary."

Distribution: Upper Cretaceous (Maastrichtian, 65.5–67.3 mya) of USA (Montana).

Remarks: Illustration of holotype in Bryant (1989: figs. 11a–b).

CERBERUS Cuvier, 1829 (Homalopsidae)

Synonyms: *Hurria* Daudin, 1803b, *Huria* Fischer von Waldheim, 1813 *(nomen incorrectum), Hurianus* Rafinesque-Schmaltz, 1815 *(nomen emendatum), Hurriah* Rafinesque-Schmaltz, 1815 *(nomen incorrectum), Hurrias* Oken, 1817 *(nomen emendatum), Strephon* Goldfuss, 1820 (*nomen substitutum), Hurrix* – Ritgen, 1828 *(nomen incorrectum), Cerbus* – Locard, 1875 *(nomen incorrectum), Hyrria* – Hoffmann, 1890 *(nomen incorrectum), Cerburus* – Maki, 1931 *(nomen incorrectum),* and *Hurrianus* – Maki, 1931 *(nomen incorrectum).*

Type species: *Hydrus rynchops* Schneider, 1799.

Distribution: Tidal rivers and coastal marine waters of Indo-Australia.

Sources: E.H. Taylor, 1922a, F. Werner, 1923b, Gyi, 1970, Voris et al., 2002, J.C. Murphy, 2007b, Alfaro et al., 2008, Zaher et al., 2009, J.C. Murphy et al., 2012 and J.C. Murphy, 2012a.

1. *Cerberus australis* (Gray, 1842d). Zool. Misc. 2(May): 65. (*Homalopsis australis*)

Synonyms: *Homolopsis australis* Gray, 1842c *(nomen nudum), Cerberus rynchops novaeguineae* Loveridge, 1948, and *Cerberus montgomeryi* Wells & Wellington, 1985.

Type: Holotype, BMNH 1946.1.2.40 (J. Gilbert, 1840–1842).

Type locality: "North Coast of New Holland; Port Essington" [= ruins at tip of Cobourg Peninsula, Northern Territory, N Australia, ca. 11°09'N, 132°00'E, elevation NSL].
Distribution: Eastern Indonesia (S Papua, Sumba Is.) and N Australia (N Northern Territory, ext. N Queensland, ext. N Western Australia, Channel, Melville, Mirree and Sir Graham Moore Is.), NSL–250 m.
Sources: O'Shea, 1996 and Karns et al., 2000.
Remarks: J.C. Murphy et al. (2012a: 9) listed type locality as ~12°28'S, 130°54'E.

2. *Cerberus dunsoni* J.C. Murphy, Voris & Karns, 2012a. Zootaxa (3484): 11–12, fig. 5 (paratype).

Type: Holotype, AMNH 116021, an 813+ mm female.
Type locality: "Micronesia, Palau Islands: Arakabesang (formerly Ngerekebesang) Island (~7°29'N, 134°27'E)."
Distribution: Palau (Arakabesang, Babeldaob and Oreor Is.), NSL–80 m.
Source: Crombie & Pregill, 1999.

3. *Cerberus microlepis* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 18–19, pl. 2, fig. 2–2a.

Types: Syntypes (2), BMNH 1946.1.7.24–25, two females, longest syntype 660 mm (H. Cuming, 1836–1840).
Type locality: "Philippines." Restricted to vicinity of Lake Buhi, Luzon Island *fide* J.C. Murphy (2007b: 69, 2012: 13).
Distribution: Philippines (Luzon), 60 m.

4. *Cerberus rynchops* (Schneider, 1799). Hist. Amph. 1: 246–247. (*Hydrus rynchops*)

Synonyms: ? *Boa moluroides* Schneider, 1801, *Hydrus cinereus* G. Shaw, 1802, *Coluber cerberus* Daudin, 1803d, *Hurria bilineata* Daudin, 1803d, *Python rhynchops* Merrem, 1820 *(nomen emendatum), Coluber decipiens Oppel* in H. Boie, 1826 *(nomen nudum), Homalopsis rufotaeniatus* Wagler, 1833, *Cerberus grantii* Cantor, 1836b, *Cerberus cinereus* Cantor, 1839, *Cerberus russelii* Fitzinger, 1843, *Homalopsis rhynchops* Cantor, 1847, *Cerberus unicolor* Gray, 1849a, and *Homalopis rhinchops* – F. Mason, 1852 *(nomen incorrectum).*
Type: Lectotype, a 1029 mm specimen described and illustrated by P. Russell (1796: 23, pl. 17) (Snodgrass, July 1788), designated herein.
Type locality: "Ganjam, India" [= Ganjam, Orissa State, SE India, 19°23'N, 85°03'E, elevation NSL] via lectotype selection. Restricted to Ganjam, India (~19°22'N, 85°03'E) *fide* J.C. Murphy et al. (2012a: 14).
Distribution: Southern Asia. India (Andhra Pradesh, Gujarat, Karnataka, Maharashtra, Orissa, Tamil Nadu, West Bengal, Krusadai Is., Andaman & Nicobars: Andaman, Long and Nicobar Is.), Sri Lanka (Eastern, North-Central, Southern, Western), Bangladesh, Myanmar (Ayeyarwady, Mon, Rakhine, Tanintharyi, Yangon) and peninsular Thailand (Phang Nga, Ranong), NSL–10 m.
Sources: Wall, 1918e, M.A. Smith, 1943.H. Taylor, 1965, P. Silva, 1969, Whitaker, 1969, Singh, 1972, Mahendra, 1984, M.J. Cox et al., 1998, A. Silva, 1990b, 2001, 2009, J.C. Murphy & Schlager, 2003, Whitaker & Captain, 2004, N. Khaire, 2006, I. Das, 2010, 2012 and Koch, 2012.
Remarks: Original description based upon Russell (1796: 23, pl. 17). May occur in Pakistan *fide* J.C. Murphy (2007b: 73) based on Murray, 1886.

5. *Cerberus schneiderii* (Schlegel, 1837). Essai Phys. Serp. 1: 171, 2: 341, pl. 13, figs. 6–7. (*Homalopsis schneiderii*)

Synonyms: *Elaps boaeformis* Schneider, 1801 (*nomen dubium*), *Hurria schneideriana* Daudin, 1803d (*nomen dubium*), *Python elapiformis* Merrem, 1820 (*nomen dubium*), *Python molurus* Merrem, 1820 (*nomen dubium*), *Homalopsis molurus* H. Boie, 1826, *Coluber obtutsatus* Reinwardt *in* H. Boie, 1826 *(nomen nudum), Homalopsis obtusatus* Fitzinger, 1826a, *rhinchops* Cantor, 1847 *(nomen emendatum),* and *Cerberus acutus* Gray, 1849.
Type: Lectotype, RMNH 1173, an 867 mm female described and illustrated by Schlegel (1837: 341–343, pl. 13, figs. 6–7) (J.T. Reinhardt, 1845–1847), designated by J.C. Murphy et al. (2012a: 17).
Type locality: "Timor" [S Indonesia] via lectotype selection.
Distribution: Southeast Asia and East Indies. Thailand (Nakhon Ratchasima, Pak Phanang, Phuket, Trang), Cambodia, S Vietnam (Ba Ria-Vung Tau, Ca Mau, Ho Chi Minh City, Khanh Hoa, Kien Giang), West Malaysia (Kerala, Pinang, Selangor, Seribuat Arch.: Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Ambon, Babi, Bali, Bangka, Batjan, Buru, Enggano, Erde, Flores, Fredrick Hendrik, Goram, Halmahera, Java, Kalamantan, Komodo, Lembata, Lombien, Lombok, Mentawai, Nako, Natuna, Nias, Riau Arch., Rinca, Roti Timor, Sanghe, Saparua, Seram, Simeulue, Sula, Sulawesi, Sumatra, Sumbawa, Sumba, Talaud, Ternate, Weh, West Timor, Wetar), Timor-Leste and Philippines (Bantayan, Bohol, Catanduanes, Cebu, Cuyo, Dinagat, Jagoliaou, Jolo, Luzon, Mindanao, Negros, Palawan, Panay, Polillo Romblon), NSL–80 m.
Sources: M.A. Smith, 1943, C. Haas, 1950, R. Bergman, 1955b, E.H. Taylor, 1965, Saint-Girons, 1972a, Tweedie, 1983, Ross & Lazell, 1991, Ehmann, 1992, Ross & Gonzales, 1992, David & Vogel, 1996, O'Shea, 1996, McKay, 2006, V.S. Nguyen et al., 2009 and Kaiser et al., 2011.
Remarks: Photographs of lectotype in J.C. Murphy et al. (2012a: figs. 9a, c).

CERCOPHIS Fitzinger, 1843 (Xenodontidae)

Type species: *Dendrophis auratus* Schlegel, 1837.
Distribution: Eastern South America..
Sources: Hoogmoed, 1983, 1997 and Zaher et al., 2009.

1. *Cercophis auratus* (Schlegel, 1837). Essai Phys. Serp. 1: 157, 2: 227–228. (*Dendrophis aurata*)

Type: Holotype, RMNH 813, a 570 mm male (H.H. Dieperink, 1831).
Type locality: "Paramaribo, Suriname" [= Paramaribo, Paramaribo District, Suriname, 5°49'N, 55°10'E, elevation NSL].
Distribution: Suriname (Paramaribo) and SE Brazil (Rio de Janeiro), NSL.

CERROPHIDION J.A. Campbell & Lamar, 1992 (Viperidae)

Type species: *Bothriechis godmani* A.C.L.G. Günther, 1863c.
Distribution: Southern Mexico and Central America.
Sources: J.A. Campbell & Lamar, 1989, 1992, 2004, Minton, 1992, Golay et al., 1993, Kraus et al., 1996, David & Ineich, 1999, López-Luna et al., 1999, McDiarmid et al., 1999, Parkinson, 1999, Castoe et al., 2005, 2009, Castoe & Parkinson, 2006, Jadin, 2010b and Jadin et al., 2011, 2012.

1. *Cerrophidion godmani* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 364–365, pl. 6, fig. g. (*Bothriechis godmani*) (*nomen corrigendum*)

Synonyms: *Bothriechis godmanni* A.C.L.G. Günther, 1863c *(nomen incorrigendum), Bothrops brammianus* Bocourt, 1868, *Bothriechis scutigera* J.G. Fischer, 1880, and *Bothriechis trianguligera* J.G. Fischer, 1883.
Type: Lectotype, BMNH 1946.1.18.80 (formerly BMNH 1864.1.26.40), a 446 mm female (F.D. Godman & O. Salvin, 1859–1865), designated by L.C. Stuart (1963: 129).
Type locality: "Duenas and other parts of the tableland of Guatemala" [= San Miguel Dueñas, SW Sacatepéquez Department, S Guatemala, ca. 1450 m, 14°31'N, 90°48'W], via lectotype selection.
Distribution: Southern Mexico (SE Oaxaca, Chiapas) and S Guatemala (Chimaltenango, Guatemala, Huehuetenango, Sacatepéquez, Suchitepéquez, Totonicapán), 1220–3490 m.
Sources: J.A. Campbell & Solórzano, 1992, Sasa, 1997 and G. Köhler, 1999b.

2. *Cerrophidion petlalcalensis* López-Luna, Vogt & Torre-Loranca, 1999. Herpetologica 55(3): 382–387, fig. 1, 3–7, 9.

Type: Holotype, UNAM-LTH 3454, a 395 mm male (M. Angel de la Torre-Loranca; 29 June 1997).
Type locality: "Cerro de Petlalcala, Municipio San Andres Tenejapan, Veracruz, México, 18°47' N and 97°06' W at 2100 m. The locality is 10 km south of the town of Orizaba, Veracruz."
Distribution: Eastern Mexico (W Veracruz), 2100–2300 m. Known only from vicinity of type locality.
Remarks: May occur in SE Puebla and N Oaxaca *fide* López-Luna et al. (1999: 388).

3. *Cerrophidion sasai* Jadin, Townsend, Castoe & Campbell, 2012. Zool. Scripta 41(5): 5–7, figs. 2a–c.

Type: Holotype, UTA 51399, a 713 mm male (M. Sasa, 8 Nov. 2001).
Type locality: "San Ramos de Tres Ríos, Departamento de San José, Costa Rica."
Distribution: Lower Central America. Costa Rica (Alajuela, San José) and ext. W Panama (Chiriquí), 1340–1465 m.
Sources: J.A. Campbell & Solórzano, 1992, Savage, 2002 and Solórzano, 2004.

4. *Cerrophidion tzotzilorum* (J.A. Campbell, 1985). J. Herp. 19(1): 48–50, figs. 1–3. (*Bothrops tzotzilorum*)

Type: Holotype, UTA 9641, a 386 mm male (J.A. Campbell, 8 June 1979).
Type locality: "10.9 km ESE San Cristóbal de Las Casas, Chiapas, Mexico, elevation 2320 m."
Distribution: Extreme SE Mexico (Meseta Central of cen. Chiapas), 2050–2500 m.
Sources: Lazcano-Villarreal-Barrero & Gongora-Arones, 1988, Auth et al., 2000b, G. Köhler, 2001 and Jadin, 2010a.

5. *Cerrophidion wilsoni* Jadin, Townsend, Castoe & Campbell, 2012. Zool. Scripta 41(5): 7–10, figs. 4–5.

Type: Holotype, UTA 52953, a 648 mm female (E.N. Smith, 1 Feb. 2005).
Type locality: "Cerro Azul, Parque Nacional Montaña de Botaderos, Departamaento de Olancho, Honduras, 15.3783aºN/86.14200ºW, elevation 1420 m."
Distribution: Upper Central America. El Salvador (Chalatenango, Santa Ana) and Honduras (Cortés, Fraqncisco Morazán, Lempira, Ocotepeque, Olancho, Yoro), 1220–2200 m.
Sources: L.D. Wilson & Myer, 1985, J.A. Campbell & Solórzano, 1992, J.A. Campbell & Lamar, 2004, Wilson & McCranie, 2004 and McCranie, 2011a.

CHAMAELYCUS Boulenger, 1919a
(Lamprophiidae)

Synonym: *Oophilositum* H.W. Parker, 1933b.
Type species: *Chamaelycus christyi* Boulenger, 1919a.
Distribution: West and cen. Africa.
Sources: Witte, 1962, Chifundera, 1990, J.-F. Trape & Roux-Estève, 1995, Kelly et al., 2009 and Zaher et al., 2009.

1. *Chamaelycus christyi* Boulenger, 1919a. Rev. Zool. Afr. 7(1): 22.

Type: Holotype, MRAC, a 370 mm male (C. Christy, 1912–1914).
Type locality: "Madié (district de l'Ituri), Congo Belge" [= Medje, Orientale Prov., NE Democratic Republic of the Congo, 2°49'N, 27°35'E, elevation 735 m].
Distribution: Southern Congo and NE Democratic Republic of the Congo (Nord-Kivu, Orientale), 700–1650 m.
Sources: J.-F. Trape & Roux-Estève, 1990 and Chippaux, 2006.

2. *Chamaelycus fasciatus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 196–197. (*Alopecion fasciatum*)

Type: Holotype, BMNH 1946.1.14.29, a 203 mm female (Rich).
Type locality: "West Africa."
Distribution: West and cen. Africa. Southwestern Senegal (Ziguinchor/Kolda), Guinea (Nzérékoré), Sierra Leone, Liberia, Ivory Coast (Dix-Huit Montagnes), S Ghana, S Togo (Plateaux), S Benin, S Nigeria, Cameroon (Est, Centre, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Littoral, Bioko Is.), Gabon (Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Maritime), SE Central African Republic (Sangha), Congo (Kouilou, Lekoumou, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Nord-Kivu, Orientale) and ext. W Uganda (W Western), 500–1200 m.
Sources: Doucet, 1963, Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Hughes, 1983, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2007 and Segniagbeto et al., 2011.
Remarks: Possibly occurs in Benin *fide* Hughes (2013: 151). *Chamaelycus werneri* a valid species *fide* J.-F. Trape & Roux-Estève (1995: 47).

3. *Chamaelycus parkeri* (Angel, 1934b). Bull. Soc. Zool. France 59(5): 417–419. (*Oophilositum parkeri*)

Type: Holotype, MNHN 1934-11, a male (G. Babault, 1912–1920).
Type locality: "Kabulire (dans les forêts situées à l'Ouest du lac Kivu, alt. 1.040 m.)" [= Kabulire, Sud-Kivu Prov., E Democratic Republic of the Congo].
Distribution: Central Africa. Northern Congo (Sangha), N Democratic Republic of the Congo (Equateur, Sud-Kivu, Orientale) and Angola, 400–1040 m.
Sources: J.-F. Trape & Roux-Estéve, 1990, Chippaux, 2006 and Chirio & LeBreton, 2007.
Remarks: Holotype is male *fide* Laurent (1956a: 126). Probably occurs in SE Cameroon *fide* Chirio & LeBreton (2007: 392).

4. *Chamaelycus werneri* (Mocquard, 1902b). Bull. Mus. Hist. Nat., Paris 8(6): 412. (*Lycophidium werneri*)

Type: Holotype, MNHN 1901.551, a 350 mm female (E. Haug, 1895–1901).
Type locality: "à environ 50 kilomètres au Sud-Ouest de Lambaréné, Gabon" [= ca. 50 km SW Lambaréné (0°42'S, 10°14'E, elevation 25 m), SW Moyen-Ogooué Prov., W Gabon].
Distribution: West Africa. Central Cameroon (Adamaoua), Gabon (Moyen-Ogooué) and S Congo (Brazzaville), 1035 m.
Sources: Bogert, 1940, Hughes, 1983 and LeBreton, 1999.

CHAPINOPHIS J.A. Campbell & Smith, 1998 (Dipsadidae)

Type species: *Chapinophis xanthocheilus* J.A. Campbell & Smith, 1998.
Distribution: Guatemala.
Sources: J.A. Campbell & Smith, 1998, G. Köhler, 2001, Zaher et al., 2009 and Mulcahy et al., 2011.

1. *Chapinophis xanthocheilus* J.A. Campbell & Smith, 1998. Herpetologica 54(2): 210–216, figs. 1, 4.

Type: Holotype, UTA 35919, a 518 mm male (R.F. Savage, 8 April 1993).

C

Type locality: "approximately 5 km ENE Finca Miranda on trail to Aldea Vega Larga, 2300 m, Baja Verapaz, Guatemala...slopes of the Rio Vega Larga watershed at about 15°05'48"N, 90°00'20"W."
Distribution: Central Guatemala (Baja Verapaz), 1830–2300 m.

C

CHARINA Gray, 1949a (Boidae)

Synonyms: *Wenona* Baird & Girard, 1852c, *Pseudoeryx* Jan, 1862a (*nomen praeoccupatum), Wenonia* – Jan, 1862a *(nomen incorrectum), Chamia* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Charinae* – Engelmann & Obst, 1981 *(nomen incorrectum).*
Type species: *Tortrix bottae* Blainville, 1835.
Distribution: Western North America.
Fossil records: Lower, middle and upper Miocene of W USA and S-cen. Canada, upper Pliocene of USA, and upper Pleistocene of USA.
Sources: Stimson, 1969, Kluge, 1988a, 1993a, Walls, 1998a, McDiarmid et al., 1999, Holman, 2000a and Lawson et al., 2004.
Remarks: Genus synonymized with *Calabaria fide* Kluge (1993a: 299) but revalidated *fide* Lawson et al. (2004: 292).

1. *Charina bottae* (Blainville, 1835). Nouv. Ann. Mus. Hist. Nat. (3) 4(3): 289–290, pl. 26, figs. 1–1b. (*Tortrix bottae*)

Synonyms: *Wenona isabella* Baird & Girard, 1852c, *Wenona plumbea* Baird & Girard, 1852c, *Charina brachyops* Cope, 1888, and *Charina bottae utahensis* Van Denburgh, 1920c.
Type: Holotype, MNHN 730, a 600 mm specimen (P.E. Botta, 1827–1829).
Type locality: "Californie" [= California, USA]. Restricted to coast Distribution opposite Monterey, California *fide* K.P. Schmidt (1953a: 157).
Distribution: Extreme SW Canada (S British Columbia) and NW USA (N California, Idaho, W Montana, N Nevada, Oregon, Utah, Washington, W Wyoming), 535–2590 m.
Fossil records: Upper Pliocene (Blancan) of USA (Washington), and upper Pleistocene (Rancholabrean II) of USA (California).
Sources: V.M. Tanner & Tanner, 1939, Nussbaum & Hoyer, 1974, Stewart, 1977, 1988, Nussbaum et al., 1983, Stebbins, 1985, H.A. Brown et al., 1995, Bell & Meade, 1996, P.R. Brown, 1997, Bartlett & Tennant, 2000, Rodríguez-Robles et al., 2001 and Parmley & Walker, 2003.
Remarks: Occurs in NW Colorado *fide* Rodríguez-Robles et al. (2001: fig. 1).

2. †*Charina prebottae* Brattstrom, 1958. Bull. So. California Acad. Sci. 57(1): 6–7.0.

Types: Syntypes (2), MVP 45242, two middle trunk vertebrae (R.H. Telford & R.L. Schultz).
Type locality: "Upper Miocene, Barstow formation, Barstow Syncline, San Bernardino County, California" [= Middle Miocene *fide* Holman, 2000a: 69].
Distribution: Lower Miocene (Arikareean-Hemingfordian: 16.3–20.6 mya) of USA (Colorado, Nebraska, South Dakota, Wyoming), middle Miocene (Barstovian: 10.3–16.3 mya) of USA (California, Nebraska, South Dakota, Wyoming), upper Miocene (Hemphillian: 4.9–10.3 mya) of USA (Nebraska, Texas) and W Canada (Saskatchewan), Pliocene (1.8–4.9 mya) of USA (Washington), and Pleistocene (0.01–1.8 mya) of USA (California).
Sources: Holman, 1976a, 1979b, 2003, Parmley, 1988 and Parmley & Holman, 1995.

3. *Charina umbratica* Klauber, 1943d. Trans. San Diego Soc. Nat. Hist. 10(7): 83–84. (*Charina bottae umbratica*)

Type: Holotype, SDSNH 12101, a 264 mm male (C. Searl, 1 July 1929).
Type locality: "Fern Valley, near Idyllwild, San Jacinto Mountains at elevation 5800 ft., Riverside County, California," USA.
Distribution: Southwestern USA (S California), 1560–1765 m.
Sources: Stebbins, 1986 and Rodríguez-Robles et al., 2001.
Remarks: A valid species *fide* Rodríguez-Robles et al. (2001: 234).

†*CHEILOPHIS* Gilmore, 1938 (Boidae)

Type species: †*Cheilophis huerfanoensis* Gilmore, 1938.
Distribution: Lower to middle Eocene of USA.
Sources: H, Miller, 1955, Holman, 1979a, 2000a, Rage, 1984a–b, Sullivan & Lucas, 1988 and Longrich et al., 2012b.

1. †*Cheilophis huerfanoensis* Gilmore, 1938. Geol. Soc. Amer., Spec. Pap. (9): 79–80, figs. 34a–d.

Type: Lectotype, AMNH 5195, one middle trunk vertebra (AMNH Exped., 1918), designated by Rage (1984a: 219).
Type locality: "two miles north of Gardner, Custer County, Colorado, USA. Upper Huerfano, early Bridgerian, early middle Eocene" via lectotype selection.
Distribution: Lower Eocene (Wasatchian: 50.3–55.4 mya) of USA (New Mexico) and middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Colorado).

CHERSODROMUS J.T. Reinhardt, 1861b
(Dipsadidae)

Synonyms: *Opisthiodon* W.C.H. Peters, 1861b and *Schmidtophis* E.H. Taylor, 1949.
Type species: *Chersodromus liebmanni* J.T. Reinhardt, 1861b.
Distribution: Southern Mexico.
Sources: H.M. Smith & Taylor, 1945, Dixon & Ketchersid, 1969, Cadle, 1984b, G. Köhler et al., 2001 and Zaher et al., 2009.

1. *Chersodromus liebmanni* J.T. Reinhardt, 1861b. Vidensk. Medd. Naturhist. Foren. Kjøbenhavn (1860) 22: 243–245, pl. 4, figs. 10–11.

Synonyms: *Chersodromus liebmanni* J.T. Reinhardt, 1861a *(nomen nudum), Chersodromus nigricans* Kröyer *in* J.T. Reinhardt, 1861a, *Opisthiodon torquatus* W.C.H. Peters, 1861b, and *Dirosema collare* F. Werner, 1900a.
Type: Holotype, ZMUC 60561, a 250 mm male (R.W. Liebmann, 1841–1843).
Type locality: "Mexico." Restricted to Cuautlapan, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950: 347) and to Mirador, Veracruz, Mexico *fide* H.M. Smith & Braestrup (1963: 240).
Distribution: Southeastern Mexico (Oaxaca, Veracruz), 1800–1840 m.
Sources: H.M. Smith & Braestrup, 1963, Canseco-Maquez & Flores-Villela, 1995, Casas-Andreu et al., 1996 and Mancilla-Moreno, 1998.

2. *Chersodromus rubriventris* (E.H. Taylor, 1949). Univ. Kansas Sci. Bull. 33(2): 193–194. (*Schmidtophis rubriventris*)

Type: Holotype, LSUMZ 577, a 308 mm specimen (C.R. Shaw, 1946–1947).
Type locality: "near Xilitla (Xilitla Region) San Luis Potosí, México" [= vicinity of Xilitla (21°23'N, 98°59'W, elevation 660 m), San Luis Potosí State, NE Mexico].
Distribution: Central Mexico (E Querétaro, San Luis Potosí), 660 m.

CHILOMENISCUS Cope, 1860f
(Colubridae)

Type species: *Chilomeniscus stramineus* Cope, 1860f.
Distribution: Extreme SW USA and NW Mexico.
Sources: H.M. Smith & Taylor, 1945, Banta & Leviton, 1963, R.W. Murphy & Ottley, 1984, Stebbins, 1985, McPeak, 2000 and Grismer et al., 2002a.

1. *Chilomeniscus savagei* Cliff, 1954. Trans. San Diego Soc. Nat. Hist. 12(5): 71–72, fig. 2.

Type: Holotype, CAS-SU 14034, a 234 mm female (J.M. Savage, 3 April 1952).
Type locality: "southwest coast of Cerralvo Island, Gulf of California, Mexico."
Distribution: Northwestern Mexico (Baja California del Sur: Ceralvo Is.).

2. *Chilomeniscus stramineus* Cope, 1860f. Proc. Acad. Nat. Sci. Philadelphia 12(8): 339.

Synonyms: *Chilomeniscus cinctus* Cope, 1861e, *Chilomeniscus ephippicus* Cope, 1867a, *Chilomeniscus stramineus fasciatus* Cope, 1892a, *Chilomeniscus punctatissimus* Van Denburgh & Slevin, 1921a, and *Chilomeniscus stramineus esterensis* Hoard, 1939.
Types: Syntypes (5), USNM 4674a–b, USNM 6495a–b, and ANSP 3405, longest syntype 229 mm (J. Xantus, Dec. 1859).
Type locality: "Cape St. Lucas, Lower California" [= Cabo San Lucas, Baja California Sur State, NW Mexico, 22°53'N, 109°55'W, elevation 25 m].
Distribution: Southwestern USA (SW Arizona) and NW Mexico (Baja California, W Sonora and Cedros, Monserrate, San José and San Marcos Is.), NSL–915 m.
Sources: Fowlie, 1965, Powers & Banta, 1974b, Wong, 1997 and Bartlett & Tennant, 2000.

CHILORHINOPHIS F. Werner, 1907a
(Atractaspididae)

Synonyms: *Chilorinophis* – Loveridge, 1924c *(nomen incorrectum), Parkerophis* T. Barbour & Amaral, 1927, and *Chilorpinophis* – Isemonger, 1983 *(nomen incorrectum).*
Type species: *Chilorhinophis butleri* F. Werner, 1907a.
Distribution: Eastern Africa.
Sources: Battersby, 1950, Witte & Laurent, 1947, Loveridge, 1958, Wallach, 1991, Meirte, 1992, Underwood & Kochva, 1993, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Chilorhinophis butleri* F. Werner, 1907a. Kaiserliche Akad. Wiss. Wien 26: 480.

Synonyms: *Parkerophis carpenteri* H.W. Parker, 1927a and *Chilorhinophis carpenteri liwalensis* Loveridge, 1951a.
Type: Holotype, NMW 14729, a 315 mm specimen (F. Werner, 30 March 1905).
Type locality: "Mongalla" [= Mangalla, Central Equatoria Prov., S South Sudan, 5°12'N, 31°46'E, elevation 470 m].
Distribution: Eastern Africa. Southeastern South Sudan (Central Equatoria), SE Tanzania (Lindi, Mtwara) and NE Mozambique (Cabo Delgado), 40–520 m.

Sources: Meirte, 1992 and Spawls et al., 2002.
Remarks: Supplemental original description in F. Werner (1907c: 1881, pl. 3, figs. 8a–d). *Chilorhinophis carpenteri* a synonym *fide* A. Resetar *in* Wallach (1991: 416).

C

2. *Chilorhinophis gerardi* (Boulenger, 1913c). Rev. Zool. Afr. 3(1): 103, 2 figs. (*Apostolepis gerardi*)

Synonym: *Chilorhinophis gerardi tanganyikae* Loveridge, 1951a.
Type: Holotype, MRAC 1205, a 315 mm male (P. Gérard, 1906–1913).
Type locality: "Kikondja, Katanga, Congo Belge" [= Kikondja, cen. Katanga Prov., SE Democratic Republic of the Congo, 8°12'S, 26°25'E, elevation 585 m].
Distribution: Southeastern Africa. Southeastern Democratic Republic of the Congo (Katanga), W Tanzania (Kigoma, Rukwa), Zambia (Central, Copperbelt, Lusaka, Northern, North-Western, Southern) and N Zimbabwe (N Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Matabeleland North, Midlands), 585–1300 m.
Sources: FitzSimons, 1974, Broadley, 1983, Branch, 1988, Spawls et al., 2002, Broadley et al., 2003 and Broadley & Blaylock, 2013.

CHIONACTIS Cope, 1860e (*nomen substitutum*) (Colubridae)

Synonym: *Lamprosoma* Hallowell, 1857a *(nomen praeoccupatum).*
Type species: *Rhinostoma occipitale* Hallowell, 1854a.
Distribution: Southwestern USA and NW Mexico.
Fossil records: Pleistocene of SW USA.
Sources: Stickel, 1943, Klauber, 1951, Fowlie, 1965, Stebbins, 1985, Bartlett & Tennant, 2000, Holman, 2000a and Mahrdt et al., 2001

1. *Chionactis occipitalis* (Hallowell, 1854a). Proc. Acad. Nat. Sci. Philadelphia 7(3): 95. (*Rhinostoma occipitale*)

Synonyms: *Lamprosoma annulatum* Baird, 1859a, *Sonora occipitalis klauberi* Stickel, 1941, *Chionactis occipitalis talpina* Klauber, 1951, and *Chionactis saxatilis* Funk, 1967.
Type: Holotype, USNM 8030, a 229 mm specimen (R.S. Williamson [Pacific Railroad Surv.], 1853–1854).
Type locality: "Mohave Desert, California" [USA]. Listed as "Fort Mojave" *fide* USNM catalogue. Restricted to the western Mojave Desert in the vicinity of the Mojave River *fide* Klauber (1951: 154).
Distribution: Southwestern USA (SW Arizona, SE California, S Nevada) and ext. NW Mexico (NE Baja California Norte, ext. NW Sonora), NSL–1500 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona, California).
Sources: Elvin, 1963, Cross, 1979, P.R. Brown, 1997, Mahrdt et al., 2001b, Grismer, 2002 and D.A. Wood et al., 2008.
Remarks: Holotype based on specimen depicted in Hallowell (1859: pl. 4, figs. 2a–c) *fide* Klauber (1951: 153).

2. *Chionactis palarostris* (Klauber, 1937b). Trans. San Diego Soc. Nat. Hist. 8(27): 363–365. (*Sonora palarostris*)

Synonyms: *Chionactis palarostris organica* Klauber, 1951 and *Chionactis palarostris seri* Blake, 1970 *(nomen ineditum).*
Type: Holotype, SDSNH 26771 (formerly LMK 26771), a 312 mm male (G. Lindsay, April 1937).
Type locality: "5 miles south of Magdalena, Sonora, Mexico." Corrected to six miles south of Hermosillo, Sonora, Mexico *fide* Blake *in* Mahrdt et al. (2001c: 732.1).
Distribution: Southwestern USA (SW Arizona) and NW Mexico (NW Sonora), NSL–760 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona).
Sources: Mahrdt et al., 2001c and H.M. Smith et al., 2005.

CHIRONIUS Fitzinger, 1826a (Colubridae)

Synonyms: *Erpetodrius* H. Boie *in* F. Boie, 1826, *Erpetodryas* H. Boie *in* Schlegel, 1826a *(nomen emendatum), Erpetodrias* – H. Boie *in* F. Boie, 1827 *(nomen incorrectum), Macrops* Wagler, 1830, *Herpetodrys* Wagler, 1830 *(nomen emendatum),* ? *Coronella* Bonaparte, 1831a *(nomen praeoccupatum), Herpetodryas* Schlegel, 1837 *(nomen emendatum), Hylophis* Fitzinger, 1843, *Phyllosira* Cope, 1862d, *Herpetodryos* – J.W. Müller, 1865 *(nomen incorrectum), Herpetodrias* – Steindachner, 1876 *(nomen incorrectum), Herpedodryas* – F. Müller, 1878b *(nomen incorrectum), Leptastes* Philippi, 1899 *(nomen nudum), Leptastes* Philippi *in* Quijada, 1916, *Herpelodryas* – Guibé, 1958 *(nomen incorrectum),* and *Shironius* – Hoge & Maranhão-Niña, 1964 *(nomen incorrectum).*
Type species: *Coluber carinatus* Linnaeus, 1758.
Distribution: Central America and South America.
Sources: Bailey, 1955, Donoso-Barros, 1969a, J.A. Peters & Orejas-Miranda, 1970, Wiest, 1978, Cunha & Nascimento, 1983c, Dixon & Soini, 1986, Pérez-Santos & Moreno, 1988, Dixon et al., 1995 and Hollis, 2006.
Remarks: Hollis (2006: 444–445) elevated seven subspecies to species: *Chironius carinatus flavopictus* to *C. flavopictus*; *C. carinatus spixii* to *C. spixii*; *C. fuscus leucometapus* to *C. leucometapus*; *C. multiventris cochranae* to *C. cochranae*; *C. m. foveatus* to *C. foveatus*; *C. m. septentrionalis* to *C. septentrionalis*; *C. quadricarinatus maculoventris* to *C. maculoventris.*

1. *Chironius bicarinatus* (Wied-Neuwied, 1820a). Reise Brasil. 1: 181, col. pl. (*Coluber bicarinatus*)

Synonym: *Natrix bicarinata* – Wagler *in* Spix, 1824.
Type: Holotype, ? ZSM 1752/0, an 1125+ mm female (A.M.P. zu Wied-Neuwied, 26 Nov.–19 Dec. 1815.
Type locality: "an dem Sandufer einer Lagoa...unweit Villa do Espirito-Santo, wohin man noch einen Weg von 5 Legoas hat" [= lake near Rio Jacu, within five leagues of Villa do Espírito Santo, Estado Espírito Santo, Brazil, *fide* Wiest, 1978: 79].
Distribution: Southeastern Brazil (E Bahia, Espírito Santo, Goiás, ext. E Minas Gerais, Paraná, Rio de Janeiro, Rio Grande do Sul, Santa Catarina, São Paulo, Sergipe, Búzios, Cananéia, Cardoso, Comprida, Grande, Mar Virado, Porchat, Santo Amaro, São Sebatião and São Vicente Is.), NE Uruguay (Artigas, Cerro Largo, Rio Negro, Salto) and NE Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Missiones, Salta), NSL–1850 m.
Sources: P. Müller, 1969b, Cei, 1994, Carreira-Vidal et al., 2005, Duarte Roche & Van Sluys, 2006, Carreira-Vidal & Lombardo, 2007a, Cicchi et al., 2007 and Morato et al., 2011.

2. *Chironius carinatus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 223. (*Coluber carinatus*)

Synonyms: *Coluber subfuscus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber chironius* Donndorff, 1798, *Coluber moschatus* Donndorff, 1798, *Coluber null* Donndorff, 1798, ? *Coluber flaviceps* Gravenhorst, 1807, *Coluber pickeringii* Hallowell, 1845a, *Herpetodryas carinatus carinatissima* Jan, 1863b (*nomen nudum*), *Herpetodryas carinatus decalepis* Jan, 1863b (*nomen nudum*), *Herpetodryas carinatus glabra* Jan, 1863b (*nomen nudum*), *Herpetodryas carinatus macrophthalma* Jan, 1863b (*nomen nudum*), and *Herpetodyas carinatus* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type: Holotype, NHR Lin-33 (formerly MAFR), a 1500 mm male (Mus. Drottn.).
Type locality: "Indiis" [= India] (in error *fide* Hoge, 1964d: 53). Corrected to Suriname *fide* Hoge (1962c: 53).
Distribution: Northern South America. Venezuela (Amazonas, Bolívar, Delta Amacuro, Distrito Federal, Monagas, Miranda, Sucre), Trinidad & Tobago (Trinidad), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Pomeroon-Supenaam, Upper Takutu-Upper Essequibo), Suriname (Commewijne, Para, Paramaribo), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Peru (Loreto, Madre de Dios) and N Brazil (Alagras, Amazonas, Bahia, Ceara, Maranhao, Pará, Pernambuco, Roraima, Sergipe), NSL–1115 m.
Sources: E.H. Taylor, 1951, Roze, 1966a, Vanzolini et al., 1980, Lancini, 1986, Chippaux, 1987, Duellman & Salas, 1991, Pérez-Santos & Moreno, 1991, Gorzula & Señaris, 1998, Starace, 1998, Markezich, 2002, Abuys, 2003, Solórzano, 2004, Navarrete et al., 2009, Kok, 2010 and C.J. Cole et al., 2013.

3. *Chironius challenger* Kok, 2010. Zootaxa (2611): 32–37, figs. 1, 2a–c, 3a, 4d, 6 (upper and lower left).

Type: Holotype, IRSNB 2659, a 720 female (J.R. Philippe & J.R. Kok, 25 Nov. 2007).
Type locality: "southeastern slope of Maringma Tepui, Cuyuni-Mazaruni District, Guyana (05º 12' N, 060º 35' W, 1500 m elevation)."
Distribution: Venezuela (Bolívar) and Guyana (Cuyuni-Mazaruni, Potaro-Siparuni), 1400–2090 m.
Source: C.J. Cole et al., 2013.

4. *Chironius exoletus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 223. (*Coluber exoletus*)

Synonyms: *Coluber pyrrhopogon* Wied-Neuwied, 1824b and *Zaocys tornieri* F. Werner, 1896b.
Type: Holotype, ZMUU 150 (formerly JA), a 1020 mm female, *fide* L. Wallin (1992: 226) and L. Wallin *in* Dixon et al. (1995: 92).
Type locality: "Indiis" [= India] (in error). Partially corrected to South America and India *fide* Gmelin (1789: 1110). Corrected to America *fide* Wagler (1830: 180). Restricted to Brazil *fide* Fitzinger (1843: 60).
Distribution: Lower Central America and South America. Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Chiriquí, Darién, Panamá), Colombia (Amazonas, Antioquia, Caquetá, Cauca, Huila, Meta, Nariño, Norte de Santander, Vaupés), SE Venezuela (Amazonas, Bolívar, Delta Amacuro, Zulia), Guyana (Cuyuni-Mazaruni, Demerara-Mahaica, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Marowijne, Paramaribo), French Guiana (Cayenne), Brazil (Amazonas, Bahia, Espírito Santo, Goiás, Máranhao, Mato Grosso, Minas Gerais, Pará, E Paraná, Pernambuco, Rio de Janeiro, Santa Catarina, São Paulo, Sergipe, Cananéia, Cardoso, Comprida, Grande, Mar Virado, Porchat, Santo Amaro and São Vicente Is.), Ecuador (Esmeraldas, Guayas, Imbabura, Los Rios, Manabi, Morona-Santiago, Napo, Pastaza, Pichincha), E Peru (Amazonas, Ayacucho, Cusco, Huánuco, Junín, Loreto, Madre de Dios, Puno), N Bolivia (Cochabamba, El Beni, La Paz, Pando, Santa Cruz) and ext. NE Argentina (Misiones), NSL–2400 m.
Sources: P. Müller, 1969b, Hoge et al., 1976–1977, Cunha & Nascimiento, 1982d, 1983, Pérez-Santos & Moreno, 1991, Cei, 1994, Starace, 1998, Frota & Yuki, 2002, Savage, 2002, Duarte-Rocha & Van Sluys, 2006, Cicchi et al., 2007, Navarrete et al., 2009, Kok, 2010 and Morato et al., 2011.
Remarks: Holotype designation of ZMUU 135 *fide* Hoge et al. (1978b: 41–42) in error.

C

5. *Chironius flavolineatus* (Jan, 1863b). Elen. Sist. Ofidi: 80. (*Herpetodryas carinatus flavolineata*)

Type: Lectotype, formerly MSNM, specimen illustrated in Jan & Sordelli (1869 *in* 1866–1870, 2[31]: pl. 2, fig. 5), designated by Dixon et al. (1995: 112), destroyed in 1943 during World War II.
Type locality: "Brazil" via lectotype selection.
Distribution: Eastern South America. Eastern Brazil (Alagoas, Amapá, Amazonas, W Bahia, Ceará, Goiás, E Mato Grosso, Mato Gross do Sul, Minas Gerais, SE Pará, Paraiba, Paraná, W Pernambuco, Rondônia, São Paulo, Tocantins), cen. Bolivia (El Beni, Santa Cruz) and E Paraguay, 20–1380 m.
Sources: Moura-Leite et al., 1996, Colli & Péres, 1997, 1998, Pinto et al., 2010 and Albuquerque & Freitas, 2011.
Remarks: Dixon et al. (1995: 112) claimed figure for type was labeled 3 but it was labeled 5 (there is no fig. 3) and is the third figure from the top.

6. *Chironius flavopictus* (F. Werner, 1909b). Mitt. Naturhist. Mus. Hamburg 26: 220. (*Herpetodryas carinatus flavopicta*)

Type: Lectotype, ZMH 651 (formerly ZMH 3513), a 1530 mm female (F. von Buchwald, 10 June 1902), designated by Dixon et al., (1995: 78).
Type locality: "Ecuador, Guayaquil" via lectotype selection.
Distribution: Lower Central America and NW South America. Southern Costa Rica (Alajuela, Limón, Puntarenas, San José), Panama (Boca del Toro, Canal Zone, Chiriquí, Chocó, Cocle, Colón, Darién, Herrera, Panamá, Veraguas), NW Colombia (Atlántico, Caldas, Cauca, S Chocó, Nariño, Valle, Vichada) and W Ecuador (Esmeraldas, Guayas), NSL–750 m.
Sources: Savage, 2002 and Solórzano, 2004.
Remarks: A valid species *fide* Hollis (2006: 445).

7. *Chironius foveatus* Bailey, 1955. Occ. Pap. Mus. Zool. Michigan (571): 10.

Type: Holotype, MN 1840, a 2281–2267 mm male (V. Rosa).
Type locality: "Rio Fortuna, Ilhéus, Bahia," Brazil.
Distribution: Southeastern Brazil (Bahia, Espírito Santo, Rio de Janeiro, Santa Catarina, São Paulo).
Remarks: A valid species *fide* Hollis (2006: 445).

8. *Chironius fuscus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 222–223. (*Coluber fuscus*)

Synonyms: *Coluber saturninus* Linnaeus, 1758, *Natrix cinnamonea* Wagler *in* Spix, 1824, *Natrix dysgena* Wagler, 1825 (*nomen ineditum*), and *Herpetodryas sebastus* Cope, 1861c.
Type: Holotype, NHR Lin-34 (formerly MAFR), a 955–1005 mm specimen (Mus. Drottn.).
Type locality: "Asia" (in error). Corrected to Suriname *fide* Wiest (1978: 159).
Distribution: Northern South America. Eastern Colombia (Amazonas, Caquetá, Meta, Vaupés), S Venezuela (Amazonas, Bolívar, Delta Amacuro), Guyana (Barima-Waini, Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Marowijne), French Guiana (Cayenne, St. Laurent-du-Maroni), E Ecuador (Chimborazo, Morona-Santiago, Napo, Pastaza), Brazil (Acre, Amazonas, Bahia, Espírito Santo, Maranhao, Pará, Paraná, Rio de Janeiro, Roraima, São Paulo, Cardoso, Porchat, Santo Amaro and São Vicente Is.), E Peru (Amazonas, Ayacucho, Cusco, Junin, Loreto, Madre de Dios, Puno, Pasco) and N Bolivia (Beni, Cochabamba, La Paz, Santa Cruz), 100–3500 m.

10. *Chironius laevicollis* (Wied-Neuwied, 1824b). Isis von Oken 17(6): 666. (*Coluber laevicollis*)

Type: Holotype, not designated, an 1858 mm specimen (A.M.P. zu Wied-Neuwied, 26 Nov. 1815), location unknown.

Type locality: Unknown. Designated as "am Ufer des Flusses Itabapuana erlegt, als sie von der Fazenda de Muribeca aus jene Urwälder der Purís durchstreiften" *fide* Wied-Neuwied (1825c: 298–299), [= Lower Rio Itabapoana, on boundary between Espírito Santo and Rio de Janeiro, Brazil *fide* Dixon et al., 1995: 135].

Distribution: Southeastern Brazil (Bahia, Espírito Santo, E Mina Gerais, Paraná, Rio de Janeiro, Santa Catarina, São Paulo, Cardoso, Comprida, São Sebastião and São Vicente Is.), NSL–1000 m.

Sources: P. Müller, 1969b, Marques & Puorto, 1996 and Cicchi et al., 2007.

Remarks: Record from Paraguay doubtful *fide* Dixon et al. (1995: 135).

11. *Chironius laurenti* Dixon, Wiest & Cei, 1995. Mus. Reg. Sci. Nat., Torino (1993) (13): 141–146, fig. 39.

Synonym: *Chironius dixoni* Wiest, 1978 (*nomen ineditum*).

Type: Holotype, AMNH 101815, an 1846 mm male (W.P. Maclean, 8 Sept. 1965).

Type locality: "Bolivia, Department of Beni, Rio Mamoré, ca. 23 km W San Javier" [= ca. 14°36'N, 65°00'W, elevation 150 m].

Distribution: Southeastern Brazil (Mato Grosso) and Bolivia (Beni, Cochabamba, Santa Cruz), 150 m.

12. *Chironius leucometapus* Dixon, Wiest & Cei, 1995. Mus. Reg. Sci. Nat., Torino (1993) (13): 123–126, fig. 31. (*Chironius fuscus leucometapus*)

Synonym: *Chironius fuscus leucometapus* Wiest, 1978 (*nomen ineditum*).

Type: Holotype, AMNH 53317, a 1474 mm male.

Type locality: "Peru, Department of Junin, Chanchamayo."

Distribution: Peru (Huanuco, Junin, San Martin), 500–3500 m.

Remarks: A valid species *fide* Hollis (2006: 445).

13. *Chironius maculoventris* Dixon, Wiest & Cei, 1995. Mus. Reg. Sci. Nat., Torino (1993) (13): 181–184, fig. 55. (*Chironius quadricarinatus maculoventris*)

Synonym: *Chironius multriventris maculoventris* Wiest, 1978 (*nomen ineditum*).

Type: Holotype, UZMK 60816, a 1067 mm male (native, 26 Oct. 1878)

Type locality: "Argentina, Prov. of Corrientes, Plata Staterne."

Distribution: Western Paraguay (Boquerón, Presidente Hayes) and NE Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Salta), 50–275 m.

Remarks: A valid species *fide* Hollis (2006: 445).

14. *Chironius monticola* Roze, 1952a. Acta Biol. Venez. 1(5): 100–102, figs. 1–2.

Type: Holotype, MBUCV 2019, a 1225 mm female (J. Racenis, 15 July 1951).

Type locality: "la carretera Caracas-El Junguito, cerca de El Junquito, Distrito Federal, Venezuela, en una altura de 1.850 metros sobre el nivel del mar."

Distribution: Northwestern South America. Western Colombia (Antioquía, Boyacá, Caldas, Cundinamarca, Nariño), NW Venezuela (Aragua, Distrito Federal, Falcón, Mérida, Miranda, Táchira), Ecuador (Chimborazo, Esmeraldas, Guayas, Loja, Morona-Santiago, Napo, Pastaza, Tungurahua, Zamora-Chinchipe), Peru (Amazonas, Cusco, Huanuco, Junín, Loreto, Madre de Dios, Pasco, Piura, Puno, San Martín) and cen. Bolivia (Cochabamba, Santa Cruz), 90–2930 m.

17. *Chironius scurrulus* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 24–26, pl. 8. (*Natrix scurrula*)

Synonyms: *Dendrophis viridis* A.-M.-C. Duméril, Bibron Duméril, 1854a, *Herpetodryas holochlorus* Cope, 1875b, and *Chironius barrioi* Donoso-Barros, 1969a.
Type: Lectotype, ZSM 2628/0, an 1475+ mm male (K.F.P. von Martius, Dec. 1919–Feb. 1820), designated by Hoogmoed & Gruber (1983: 329).
Type locality: "in aquosis fluminis Japura, Brasil" [= Río Japura, Amazonas State, NW Brazil, from 0°24'S, 72°17'W to 3°08'S, 64°66'W *fide* Vanzolini, 1981: xxvi) via lectotype selection.
Distribution: Northwestern South America. Southeastern Colombia (Amazonas, Meta, Vaupés), Venezuela (Amazonas, Bolívar, Delta Amacuro, Monagas, Sucre), Trinidad and Tobago (Trinidad), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Pomeroon-Supenaam, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Marowijne, Nickerie, Paramaribo), French Guiana (St. Laurent-du-Maroni), Brazil (Amazonas, Maranhao, Pará), E Ecuador (Morona-Santiago, Napo, Pastaza), E Peru (Amazonas, Huánuco, Junín, Loreto, Madre de Dios, Pasco, San Martin) and N Bolivia (El Beni, La Paz, Pando), NSL–840 m.
Sources: Hoge & Naranhão, 1964, Hoge, 1969a, Lancini, 1986, Hoogmoed, 1983, Pérez-Santos & Moreno, 1991, Gorzula & Señaris, 1998, Starace, 1998, Rivas-Fuenmayor & La Marca, 2001a, Duellman, 2005, Navarrete et al., 2009, Kok, 2010 and C.J. Cole et al., 2013.
Remarks: Original description listed plate as pl. 9 in error.

18. *Chironius septentrionalis* Dixon, Wiest & Cei, 1995. Mus. Reg. Sci. Nat., Torino (1993) (13): 173–177, fig. 52. (*Chironius multiventris septentrionalis*)

Synonym: *Chironius multiventris septentrionalis* Wiest, 1978 (*nomen ineditum*).
Type: Holotype, AMNH 98228, a 1651 mm male (W. Beebe, 1942–1946).
Type locality: "Venezuela, Estado Aragua, Rancho Grande, near Maracay" [= Rancho Grande, near Maracay (10°15"N, 67°36'W, 450 m), Aragua State, N Venezuela].
Distribution: Northern Venezuela (Aragua, Carabobo, Distrito Federal, Guárico, Lara, Miranda, Sucre, Trujillo) and Trinidad and Tobago (Trinidad), NSL–1200 m.
Source: Navarrete et al., 2009.
Remarks: A valid species *fide* Hollis (2006: 445).

19. *Chironius spixii* (Hallowell, 1845). Proc. Acad. Nat. Sci. Philadelphia 2(9): 241. (*Coluber spixii*)

Type: Holotype, ANSP 5641, a 1692 mm female (S. Ashmead, 1835–1845).
Type locality: Unknown. Restricted to Venezuela *fide* Roze (1958d: 2).
Distribution: Colombia (Atlántico, Bolívar, Córdoba, Magdalena, Meta, Sucre, Vichada) and Venezuela (Amazonas, Anzoátequi, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Miranda, Monagas, Portuguesa, Sucre, Táchira, Yaracuy, Zulia), 50–460 m.
Source: Navarrete et al., 2009.
Remarks: A valid species *fide* Hollis (2006: 445).

20. *Chironius vincenti* (Boulenger, 1891f). Proc. Zool. Soc. London 59(3): 355. (*Herpetodryas carinatus vincenti*)

Type: Lectotype, BMNH 1890.11.25.21A, a 706 mm female (H.H. Smith via F.D. Godman, 1890), designated by Dixon et al. (1995: 195).
Type locality: "St. Vincent, Lesser West Indies" [= Saint Vincent & the Grenadines, Lesser Antilles, 13°15'N, 61°11'W] via lectotype selection.
Distribution: Lesser Antilles (Saint Vincent Is.), 20–600 m.
Sources: Henderson et al., 1988, A. Schwartz & R.W. Henderson, 1988 and R.W. Henderson & Powell, 1996c, 2009.
Remarks: Photograph of the type in Dixon et al. (1995: fig. 59). Possibly endangered *fide* Dixon et al. (1995: 200).

CHITULIA Gray, 1849 (Elapidae)

Synonyms: *Aturia* Gray, 1840 *(nomen nudum), Asturia* Gray, 1842c (*nomen nudum*), *Aturia* Gray, 1842d (*nomen praeoccupatum*), *Dolichodira* Wall, 1921g, *Micromastophis* Wall, 1921g, and *Polypholophis* Wall, 1921g.

Type species: *Chitulia inornata* Gray, 1849a.

Distribution: Marine waters of Indo-Australia, including Andaman Sea, Arabian Sea, Arafura Sea, Bay of Bengal, Bight of Bangkok, Bismarck Sea, Coral Sea, Damman Channel, East China Sea, Gulf of Cambay, Gulf of Carpentaria, Gulf of Martaban, Gulf of Oman, Gulf of Thailand, Indian Ocean, Java Sea, Kimanis Bay, Manila Bay, Marudu Bay, Oquair Bay, Persian Gulf, South China Sea, Strait of Hormuz, Strait of Malacca, SW Pacific Ocean, Visayan Sea, and Yellow Sea.

Sources: Kharin, 2007, 2012, Wells, 2007, I. Das, 2010, 2012, Kharin & Dotsenko, 2012 and Hoser, 2012e.

Remarks: A subgenus of *Hydrophis fide* McDowell (1972a: 226) and A. Rasmussen (1992: 91).

1. *Chitulia belcheri* (Gray, 1849a). Cat. Snakes Brit. Mus.: 46. (*Aturia belcheri*)

Synonym: *Hydrophis beleheri* – L. Rogers, 1903 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.1.97 (formerly BMNH III.3.2.a & BMNH 1842.11.22.30), an 805 mm male (E. Belcher, 1843–1846).

Type locality: "New Guinea," (possibly in error *fide* McCarthy & Warrell (1991: 163).

Distribution: Southeast Asia and East Indies. Southern Thailand (Chanthanaburi, Nakhon Si Thammarat, Pattani, Samut Sakhon), S Vietnam, Indonesia (Papua, Java, Karima Djava, S Kalimantan, Sulawesi) and Papua New Guinea (New Britain, Western).

Sources: M.A. Smith, 1935, McCarthy & Warrell, 1991, Kharin, 2005a, A.R. Rasmussen et al., 2007 and V.S. Nguyen et al., 2009.

Remarks: Type reported to be female *fide* Boulenger (1896a: 296).

2. *Chitulia bituberculata* (W.C.H. Peters, 1873a). Mber. Königl. Akad. Wiss. Berlin 1872(12): 855–856, pl. 2, figs. 2–2d. (*Hydrophis bituberculatus*)

Synonyms: *Distura bituberculata* – Oshima, 1944 *(nomen incorrectum)* and *Leioselasma bitubercualata* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Holotype, ZMB 4647, a 1090–1120 mm female (J. Nietner, 1870).

Type locality: "Colombo (Ceylon)" [= Colombo, Western Prov., Sri Lanka, 6°56'N, 79°52'E].

Distribution: Sri Lanka and S Thailand (Phuket Is.).

Sources: E.H. Taylor, 1950b, P. Silva 1980a, A.R. Rasmussen, 1992 and McCarthy, 1993.

Remarks: Type erroneously listed as ZMB 4677 in original description. A subspecies of *Leioselasma cyanocinctus* (Daudin) *fide* Deraniyagala (1955: 86).

3. *Chitulia inornata* Gray, 1849a. Cat. Snakes Brit. Mus.: 56.

Synonyms: *Chitulia fasciata* Gray, 1849a, *Thalassophis schlegelii* P. Schmidt, 1852, *Hydrophis controversa* Jan, 1857 *(nomen nudum), Hydrophis manillae* Owen, 1859 (*nomen nudum*), *Hydrophis controversus* Jan, 1863b, *Hydrophis longiceps* A.C.L.G. Günther, 1864a (*nomen substitutum*), *Distira cyanosoma* Wall, 1913e, *Hydrophis inormata* – Kinghorn, 1929 *(nomen incorrectum), Hydrophis inornatus ocellus* Kinghorn, 1929, *Hydrophis inormatus* – Beirn, 1979 *(nomen incorrectum),* and *Hydrophis inornataus* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.1.27 (formerly BMNH III.7.1.a), adult female (E. Belcher, 1843–1846).

Type locality: "Indian Ocean" (in error).

Distribution: Northern Australia (Northern Territory, Queensland) and Arabia.

Sources: E.H. Taylor, 1922a, Voris, 1972, A.R. Rasmussen, 1989b, Kharin & Czeblukov, 2005 and Kharin & Dotsenko, 2012.

Remarks: Type reported to be male *fide* Boulenger (1896a: 290). A subspecies of *Hydrophis ornatus* (Gray) *fide* Klemmer (1963: 353) and McDowell (1972a: 232). Specimens from the China and Japan area possibly in error.

4. *Chitulia laboutei* (A. R. Rasmussen & Ineich, 2000). Hamadryad 25(2): 94–97, figs. 1–3. (*Hydrophis laboutei*)

Type: Holotype, MNHN 1999.6574, a 610 mm male (P. Laboute, 22 July 1988).

Type locality: "Chesterfield Reefs, New Caledonia (20°21.98'S, 161°04.87'E), most likely caught at a depth of 62 meters."

Distribution: New Caledonia (Chesterfield Reefs). Known only from the type series.

5. *Chitulia lamberti* (M.A. Smith, 1917c). J. Nat. Hist. Soc. Siam 2(4): 340. (*Hydrophis lamberti*)

Type: Holotype, BMNH 1946.1.9.20 (formerly MAS 1112 & BMNH 1921.2.11.13), an 860 mm female (M.A. Smith, Sept. 1916).

Type locality: "mouth of the Meklong River, Gulf of Siam." Emended to Bight of Bangkok, Thailand *fide* M.A. Smith (1926a: 83).

Distribution: Southeast Asia and Philippines. Thailand (Samut Sakhon, Samut Songkhran), Singapore,

Vietnam (Mekong River) and cen. Philippines (South Gigante).

Sources: A.R. Rasmussen, 1989b, V.S. Nguyen et al., 2009 and A.R. Rasmussen et al., 2011.

6. *Chitulia lapemoides* (Gray, 1849a). Cat. Snakes Brit. Mus.: 46. (*Aturia lapemoides*)

Synonyms: *Hydrophis holdsworthii* A.C.L.G. Günther, 1872b, *Hydrophis stewartii* J. Anderson, 1872, *Distira lapemioides* Boulenger, 1890a *(nomen emendatum),* and *Distira lapimoides* – Phisalix, 1922 *(nomen incorrectum).*

Type: Lectotype, BMNH 1946.1.7.2 (formerly BMNH III.3.3.a), a 610 mm female (Zool. Soc. London), designated by A.C.L.G. Günther (1864a: 375).

Type locality: "Ceylon" [= Sri Lanka] via lectotype selection.

Distribution: Southern Asia. Eastern Saudi Arabia (Ash Shar Qiyah), Bahrain, United Arab Emirates (Abu Dhabi, Dubai, Sharjah), N Oman, S Iran (Bushehr, Hormozghan), S Pakistan (Balochistan, Sindh), W and E India (Andhra Pradesh, Orissa, Tamil Nadu), Bangladesh, Sri Lanka, S Thailand (Phuket, Samut Sakhon, Phuket Is.), Singapore and West Malaysia (Penang Is.).

Sources: Wall, 1924e, Kennedy, 1937, Volsoe, 1939, Toriba & Sawai, 1981, 1989, Tamiya et al., 1983a, A.R. Rassmussen, 1987, 1989b, 1993, Gasperetti, 1988, Gallagher, 1990, McCarthy & Warrell, 1991, Leviton et al., 1992, M.S. Khan, 2002 and A. Silva, 2009.

Remarks: Type locality redundantly restricted to Ceylon [= Sri Lanka] *fide* E.H. Taylor (1950b: 589).

7. *Chitulia mamillaris* (Daudin, 1803d). Hist. Nat. Rept. 7: 340–342. (*Anguis mamillaris*)

Synonyms: *Hydrophis tesselatus* Murray, 1886 and *Hydrophis mammillaris* Wall, 1906f *(nomen emendatum).*

Type: Neotype, BMNH 1861.12.30.38, a 650–660 mm male (R.H. Beddome, 1857–1882), designated by M.A. Smith (1926a: 89).

Type locality: "Vizagapatam, coast of Coromandel, India" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E].

Distribution: Southern Pakistan (Sindh) and India (Andhra Pradesh, Maharashtra, West Bengal).

Sources: Wall, 1921g, Minton, 1966, Talukdar & Dattagupta, 1980 and M.S. Khan, 2002.

Remarks: Original description based on P. Russell (1796: 49, pl. 44). Holotype lost *fide* M.A. Smith (1926: 89).

8. *Chitulia ornata* (Gray, 1842d). Zool. Misc. 2(May): 61. (*Aturia ornata*)

Synonyms: *Hydrophis ocellata* Gray, 1849, *Hydrophis laevis* Lütken, 1863 *(nomen praeoccupatum), Hydrophis ellioti* A.C.L.G. Günther, 1864a, *Hydrophis godeffroyi* W.C.H. Peters, 1873a, *Distira andamanica* Annandale, 1905a, *Distira mjoebergi* Lönnberg & Andersson, 1913, *Distira godeflovi* – Phisalix, 1922 *(nomen incorrectum), Distira ornate godeffroi* – Takahashi, 1935 *(nomen incorrectum), Hydrophis ornatus maresinensis* Mittleman, 1947, *Hydrophis ornate godeffrayi* – Wang & Wang, 1956 *(nomen incorrectum), Hydrophis maresianus* Klemmer, 1963 *(nomen emendatum), Hydrophis ernata* – Deraniyagala, 1974 *(nomen incorrectum), Hydrophis oranatus* – Tamiya & Puffer, 1974 *(nomen incorrectum),* and *Hydrophis elliotti* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.23.72 (formerly BMNH III.3.1.a), a juvenile male.

Type locality: Unknown. Designated as Indian Ocean *fide* A.C.L.G. Günther (1864a: 377).

Distribution: Indo/Sino-Australia. Kuwait, Iran (Hormozghan, Tanb Is.), Saudi Arabia, Bahrain, United Arab Emirates, N Oman, Pakistan (Astola Is.), India (Andaman & Nicobars, Andhra Pradesh, Gujarat, Karnataka, Kerala, Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka (Western), Myanmar (Rakhine), Thailand (Pattani, Phang Nga, Phuket, Samut Sakhon, Phuket Is.), S Vietnam (Dong Nai, Ho Chí Minh, Thuân Hai), China (Guangdong, Guangxi, Hainan, Shandong), Taiwan, ext. S Japan (Ryukyus: Amamioshima and Ishigakishima Is.), Philippines (Cebu, Gigante, Luzon, Negros, Palawan, Panay, South Gigante), West Malaysia, East Malaysia (Sabah), E Indonesia (Papua: Aru Is., Java), Papua New Guinea (Bismarck Arch., Gulf, West), Australia (New South Wales, Northern Territory, Queensland, Tasmania, Western Australia), New Caledonia and Kiribati.

9. *Chitulia pachycercos* (J.G. Fischer, 1855). Fam. Seeschlang.: 44–46. (*Hydrophis pachycercos*)

Synonym: *Hydrophis pachycerios* – Jan, 1859b *(nomen incorrectum).*

Type: Neotype, ZMUC 661230, a 1030 mm female (native, Sept. 2000), designated by A.R. Rasmussen et al. (2007: 290).

Type locality: "fish market at the Phat Thien harbour, ca. 200 km S Nha Trang, Khanh Hoa Prov., S Vietnam" via neotype selection.

Distribution: Southern Vietnam (South China Sea).

Source: A.R. Rasmussen et al., 2011.

Remarks: Holotype (ZMH 390) destroyed in July 1943 during World War II *fide* H.-W. Koepcke *in* A.R. Rasmussen et al. (2007: 288). Previously a synonym of *C. belcheri*.

10. *Chitulia sibauensis* (A.R. Rasmussen, Auliya & Böhme, 2001). Herpetologica 57(1): 24–25, figs. 1, 3. (*Hydrophis sibauensis*)

Type: Holotype, ZFMK 64891, a 735 mm gravid female (M. Auliya, 12 Dec. 1996).
Type locality: "Sibau Kecil (00°52'N, 112°55'E) in Putussibau, Kalimantan, Indonesia.
Distribution: Central Indonesia (Kalimantan).

11. *Chitulia stricticollis* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 376, pl. 25, fig. r. (*Hydrophis stricticollis*)

Synonyms: *Hydrophis neglectus* Wall, 1906f and *Distira neglecta* – Wall, 1909a.
Type: Holotype, BMNH 1946.1.6.90 (formerly BMNH 1860.3.19.1296), a 343 mm specimen (Brit. East India Comp.).
Type locality: "British India" [= India]. Restricted to Bay of Bengal, India *fide* Boulenger (1896a: 284), and M.A. Smith (1943: 459).
Distribution: Southeast Asia. Sri Lanka, E India (Orissa, Tamil Nadu, West Bengal), Bangladesh and Myanmar (Bago, Yangon).
Source: Wall, 1921g.
Remarks: A questionable record from the Sunda Sea (ZMB).

12. *Chitulia torquata* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 369–370, pl. 25, fig. h. (*Hydrophis torquata*)

Synonyms: *Hydrophis diadema* A.C.L.G. Günther, 1864a, *Hydrophis tuberculatus* M.A. Smith, 1915c, *Hydrophis siamensis* M.A. Smith, 1917c, *Hydrophis torquatus aagaardi* M.A. Smith, 1920, *Hydrophis torquatus aagardi* – Tweedie, 1953 *(nomen emendatum)*, *Hydrophys torquatus* – Anthony, 1955 *(nomen incorrectum)*, and *Hydrophis torquatus aagaard* – M.W. Lin, 1975 *(nomen incorrectum)*.
Types: Syntypes (5), BMNH 1946.1.3.82–86 (formerly BMNH 1925.9.22.1–5), two adult females, one juvenile male, and two juveniles, longest syntype 584 mm (T.E. Cantor, 1836–1846, via British East India Comp.).
Type locality: "coast of Pinang" [= Penang Is., Pinang State, NW Malay Peninsula, 5°22'N, 100°14'E].
Distribution: Southeast Asia and Greater Sundas. Southern China (Guangdong), Myanmar (Bago), W Cambodia (NE Pursat, SW Siem Reap), Thailand (Chachoengsao, Chanthaburi, Samut Sakhon, Samut Songkhram, Pattani), West Malaysia (Johore, Perak, Pinang, Selangor, Penang Is.) and Indonesia ("Borneo," Sumatra).
Sources: E.H. Taylor, 1965, Voris, 1985, Ineich, 1996, V.S. Nguyen et al., 2009 and A.R. Rasmussen et al., 2011.
Remarks: A.C.L.G. Günther (1864a: 370) listed only four syntypes.

C

†*CHOTAOPHIS* Head, 2005 (Colubridae)

Type species: †*Chotaophis padhriensis* Head, 2005.
Distribution: Miocene of Pakistan.
Source: Head, 2005.

1. †*Chotaophis padhriensis* Head, 2005. Palaeont. Electron. 8(1): 18–19, figs. 9.1–9.5.

Type: Holotype, H-GSP 24346, one trunk vertebra (E.H. Linday & W.R. Downs III).
Type locality: "Y-367 (8.95 Ma), Potwar Plateau of north-central Pakistan; Dhok Pathan Formation, Winnewala, Miocene.
Distribution: Middle Miocene (7.3–9.0 mya) of Pakistan.

CHRYSOPELEA H. Boie *in* Schlegel, 1826a (Colubridae)

Synonyms: *Chrysopelea* H. Boie *in* F. Boie, 1826, *Tyria* Fitzinger, 1826a *(nomen praeoccupatum)*, *Chrypopelea* – Schlegel, 1837 *(nomen incorrectum)*, *Coronophis* Fitzinger, 1843, *Dryodynastes* Fitzinger, 1843, *Eremophis* Gistel, 1848 *(nomen substitutum)*, *Oligotropis* A.-M.-C. Duméril, 1853, *Dryiodynastes* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum)*, *Chrysopeleia* – Palacky, 1898 *(nomen incorrectum)*, *Chrysochlora* – Andersson, 1899 *(lapsus calami)*, *Chrysophelea* – Floerikhe, 1912 *(nomen incorrectum)*, *Crysopelea* – E.H. Taylor, 1917 *(nomen incorrectum)*, *Tryria* – Briceño-Rossi, 1934 *(nomen incorrectum)*, and *Chrysopeleas* – Saint-Girons, 1972b *(nomen incorrectum)*.
Type species: *Coluber ornata* G. Shaw, 1802.
Distribution: Southeastern Asia and East Indies.
Sources: F. Werner, 1924c, Meise & Henning, 1935, M.A. Smith, 1943, C. Haas, 1950, Mertens, 1968b and Mahendra, 1984.

1. *Chrysopelea ornata* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 477–478. (*Coluber ornatus*)

Synonyms: *Coluber ibiboca* Lacépède, 1789 (*nomen rejiciendum*), *Coluber ibiboboca* Daudin, 1803c, *Coronella russellii* Blyth, 1854a (*nomen nudum*), *Chrysopelea ornata ornatissima* F. Werner, 1925, *Chrysopelea ornata lankavae* Deraniyagala, 1945, and *Chrysopelea ornata sinhaleyus* Deraniyagala, 1945.

C

Types: Syntypes (3), specimens described and illustrated by Seba (1734: 148, pl. 94, fig. 7) and Seba (1735: 8, pl. 7, fig. 1 & 60, pl. 61, fig. 2), location unknown.

Type locality: "Ceilonica," "Amboinensis" and "Ceilanica," respectively [= Sri Lanka and Ambon, Indonesia]. Restricted to East Indian islands *fide* Deraniyagala (1945: 106); further restricted to Ceylon [= Sri Lanka] *fide* Leviton (1964c: 137).

Distribution: Southeastern Asia and Indonesia. Eastern India (Arunachal Pradesh, Assam, Bihar, Goa, S Gujarat, Karnataka, Kerala, Madhya Pradesh, Manipur, Mizoram, Nagaland, Orissa, Sikkim, Tripura, Uttar Pradesh, West Bengal), Sri Lanka (Eastern, North-Western, Sabaragamuwa, Southern, Western), Bangladesh, Nepal (Bardiya, Chitwan, Jhapa, Kapilbastu, Makwanpur, Sunsari, Udayapur), Bhutan (Sarpang), Myanmar (Yangon), S China (Fujian, Guangdong, Hainan, Hong Kong, Yunnan), Vietnam (Ba Ria-Vung Tau, Cao Mau, Dak Lak, Da Nang, Dong Nam, Gia Lai, Ho Chi Minh City, Khanh Hoa, Kien Giang, Kon Tum, Nghe An, Ninh Thuan, Quang Binh, Quang Nam, Quang Tri, Son La, Tay Ninh, Thai Nguyen, Tien Giang, Vinh Long, Vinh Phuc, Yen Dai, Hon Thom Is.), Laos (Champasak), Cambodia (Kampong Speu, Kampot), Thailand (Chiang Mai, Lampang, Loei, Lop Buri, Nakhon Phanom, Nakhon Ratchasima, Nakhon Sawan, Nakhon Si Thammarat, Narathiwat, Pattani, Phang Nga, Prachuap Khiri Khan, Ratchaburi, Sakhon Nawan, Trat, Udon Thani), West Malaysia (Kedah, Perlis, Langkawi Is.) and Indonesia (Kalamantan, Java, Sulawesi, Sumatra), NSL–1500 m.

Sources: Wall, 1908a, Leviton, 1964c, E.H. Taylor, 1965, P. Silva, 1969, Campden-Main, 1970a, Saint-Girons, 1972a, G. Sharma & Nakhasi, 1980, Tweedie, 1983, Basu, 1989, A. Silva, 1990b, 2001, 2009, Vyas, 1990, Zhao & Adler, 1993, M.J. Cox et al., 1998, Chan-ard et al., 1999, Darevsky, 1999, Orlov et al., 2000, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, B.L. 2. *Chrysopelea paradisi* H. Boie *in* F. Boie, 1827. Isis von Oken 20(6): 547.

Synonyms: *Coluber constrictorius* Donndorff, 1798 *(nomen oblitum)*, *Chrysopelea paradisi* H. Boie *in* Schlegel, 1826a *(nomen nudum)*, *Chrysopelia paradisi* Schlegel, 1826b *(nomen nudum)*, *Chrysopelea paradisi celebensis* Mertens, 1968b, and *Chrysopelea paradisi variabilis* Mertens, 1968b.

Type: Neotype, RMNH 885, a female (H. Boie & H.C. Macklot, 1826), designated by Mertens (1968b: 203).

Type locality: "Java" [SW Indonesia].

Distribution: Southeastern Asia and East Indies. Eastern India (Andaman and Nicobars: Andaman Is.), peninsular Myanmar, peninsular Thailand (Phang Nga, Phuket, Satun), West Malaysia (Perak, Pinang, Sibu Tengah Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Bali, Bangka, Belitung, Java, Kalimantan, Mentawai Is., Natuna Is., Nias, Riau Arch., Sulawesi, Sumatra, Weh) and Philippines (Balabac, Bantayan, Banton, Basilan, Bongao, Bubuan, Camiguin, Cebu, Dinagat, Jolo, Kalotkot, Leyte, Luzon, Marongas, Medis, Mindanao, Mindoro, Negros, Palawan, Panay, Polillo, Romblon, Samar, Sibuyan, Siquijor, Sibutu, Sanga Sanga, Tawitawi), NSL–1525 m.

Sources: Leviton, 1964c, E.H. Taylor, 1965, Mertens, 1968b, Tweedie, 1983, Gaulke, 1994b, Gaulke & Altenbach, 1994, Stuebing, 1994a, David & Vogel, 1994, Sison & Gonzales, 1995, M.J. Cox et al., 1998, Chan-ard et al., 1999, Malkmus et al., 2002, Schleich & Kästle, 2002, Whitaker & Captain, 2004, McKay, 2006, I. Das, 2010, 2012 and Grismer, 2011.

Remarks: Original description based on H. Boie's MS (1823–1825). Holotype lost *fide* Guibé *in* Mertens (1968: 203). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Chrysopelea paradisi* H. Boie is designated a *nomen protectum* and *Coluber constrictorius* Donndorff a *nomen oblitum*.

3. *Chrysopelea pelias* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 224. (*Coluber pelias*)

Synonyms: *Chrysopelea erythrochloris* H. Boie *in* Schlegel, 1826a (*nomen nudum*), *Chrysopelia erythrochloris* Schlegel, 1826b *(nomen nudum),Chrysopelea erythrolmelas* F. Boie, 1827 *(nomen nudum), Dendrophis chrysochloros* Schlegel, 1837, *Chrysopelea erythrochloris* Schlegel, 1837 *in* 1837–1844, *Chrysopelea hasseltii* Bleeker, 1860c *(nomen nudum),* and *Chrysopelea chrysochlora* Boulenger, 1896a *(nomen emendatum).*

Type: Holotype, NHR Lin-83 (formerly MDG), a 975 mm specimen.

Type locality: "Indiis" [= India].

Distribution: Southeastern Asia and Indonesia. Eastern India (Andaman Is.), Thailand (Chon Buri, Krabi, Nakhon Sawan, Nakhon Si Thammarat, Phetchabun, Prachin Buri, Roi Et, Sakhon Nakhon, Saraburi, Sisaket, Songkhla, Sukhothai, Tak), West Malaysia (Johor, Panang, Perak, Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Bangka, Java, Kalimantan, Mentawai Is., Natuna Is., Nias, Riau Arch., Sumatra), NSL–600 m.

Sources: Tweedie, 1983, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Ferner et al., 2001, Malkmus et al., 2002 and I. Das, 2010, 2012.

Remarks: Holotype length listed as 563 mm *fide* Vestergren *in* Mertens (1968b: 210).

4. *Chrysopelea rhodopleuron* F. Boie, 1827. Isis von Oken 20(6): 547.

Synonyms: *Chrysopelea rhodopleuron* H. Boie *in* Schlegel, 1826a *(nomen nudum), Chrysopelia rhodopleuron*

Schlegel, 1826b *(nomen nudum), Chrysopelea vicina* A.C.L.G. Günther, 1872b, and *Chrysopelea viridis* J.G. Fischer, 1880.

Type: Lectotype, RMNH 889, a 1490 mm female (C.G.C. Reinwardt, 26 June–19 July 1821), designated by Mertens (1968: 211).

Type locality: "Ambon, Indonesia" via lectotype selection.

Distribution: Indonesia (Ambon, Aru Is., Banda, Batjan, Buru, Manipa, Misool, Nusa Laut, Sangi, Sulawesi, Sangihe Is., Seram, Tanimbar).

Sources: Lang & Vogel, 2005 and Koch, 2012.

5. *Chrysopelea taprobanica* M.A. Smith, 1943. Fauna Brit. India, Rept. Amph. 3: 254.

Type: Holotype, BMNH 1946.1.9.83 (formerly BMNH 1906.7.21.1), a 960 mm female (Lodge).

Type locality: "Kanthali, Ceylon" [= Kantalai, N Eastern Prov., NE Sri Lanka, 8°21'N, 81°00'E, elevation 50 m].

Distribution: Sri Lanka (Central, Eastern, Northern, North-Central, North-Western), 50 m.

Sources: E.H. Taylor, 1950b and P. Silva, 1969.

Remarks: BMNH 1946.1.9.75 listed as holotype *fide* BMNH catalogue.

†*CHUBUTOPHIS* Albino, 1993 (Boidae)

Type species: †*Chubutophis grandis* Albino, 1993.

Distribution: Lower Eocene of Argentina.

Source: Albino, 1993.

1. †*Chubutophis grandis* Albino, 1993. Hist. Biol. 7: 57–60, fig. 4.

Type: Holotype, MLP 83-III-1-150, one trunk vertebra.

Type locality: "Southern slope of Valle Hermoso, near Boliche Alma Gaucha, southeast of Chubut Prov. Gran Barranca Member, Sarmiento Formation. Casamayoran Land-Mammal Age (Early Eocene)."

Distribution: Lower Eocene (Casamayoran: 48.0–54.0 mya) of Argentina.

CLELIA Fitzinger, 1826a (Xenodontidae)

Synonyms: *Cloelia* Wagler, 1830 *(nomen emendatum), Claelia* Bonaparte, 1831 *(nomen emendatum), Deiropeda* Fitzinger, 1843, *Hydroscopus* Fitzinger, 1843, *Rhinoscytale* Fitzinger, 1843 *(nomen nudum), Chloe* Agassiz, 1847, *Diropeda* Agassiz, 1847 *(nomen emendatum), Brachyrruton* A.-M.-C. Duméril, 1853, *Brachyruton* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Brachyrrhyton* – Lichtenstein & Martens, 1856 *(nomen incorrectum), Brachyrrutron* Marschall, 1873 *(nomen emendatum), Brachyrhyton* – F. Werner, 1890 *(nomen incorrectum), Brachyrhytum* – Boettger, 1898 *(nomen incorrectum),* and *Barbourina* Amaral, 1924b.

Type species: *Coluber clelia* Daudin, 1803c.

Distribution: Latin America and Lesser Antillies.

Fossil records: Lower/middle Pleistocene (Ensenadan) of Argentina.

Sources: J.A. Peters & Orejas-Miranda, 1970, Achaval, 1973, Cadle, 1984a, Scrocchi & Viñas, 1990, Zaher, 1996, 1999, Vidal et al., 2000, Morato et al., 2003, Reichle & Embert, 2005, Scanferla, 2006, N.J. Scott et al., 2006, Jansen et al., 2009 and Zaher et al., 2009.

Remarks: Zaher et al., 2009 transferred *C. bicolor, C. montana* and *C. quimi* to *Mussurana*.

1. *Clelia clelia* (Daudin, 1803c). Hist. Nat. Rept. 6: 330–331, pl. 78. (*Coluber clelia*)

Synonyms: ? *Coluber peruvianus* Gravenhorst, 1807, *Natrix cloelia* – Merrem, 1820, *Clelia daudinii* Fitzinger, 1826a, *Rhinoscytale cloelia* Fitzinger, 1843 *(nomen nudum), Oxiropus cloelia* – Briceño-Rossi, 1934 *(nomen incorrectum), Pseudoba cloelio* – Briceño-Rossi, 1934 *(nomen incorrectum), Clelia clelia immaculata* H.M. Smith, 1942l (*partim*), and *Clelia clelia groomei* Greer, 1965a.

Types: Syntypes (2), formerly MNHN, longest syntype 864 mm (F.M. Daudin & F. Levaillant coll.), lost *fide* H.M. Smith & Taylor (1945: 36).

Type locality: "Suriname en Amérique" [= Suriname, South America].

Distribution: Mesoamerica and South America. Belize (Cayo, Stann Creek, Toledo), N Guatemala (Izabal, Petén), Honduras (Atlántida, Colón, Comayagua, Copán, Cortés, El Paraiso, Gracias a Dios, Olancho, Yoro), Nicaragua (Atlántico Sur, Jinotega, Rivas), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Chiriquí, Colón), N and W Colombia (Antioquia, Bolívar, Cauca, Caqueta. César, Chocó, Córdoba, Cundinamarca, La Guajira, Magdalena, Meta, Norte de Santander, Putumayo, Santander, Valle del Cauca, Vaupés, Gorgona Is.), Trinidad and Tobago (Trinidad), Grenada, Dominica, Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Zulia), Guyana (Essequibo Islands-West Demerara), Suriname (Brokopondo, Saramacca, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), N Brazil (Amapá, Amazonas, Rondônia), Ecuador (Bolívar, Chimborazo, Cotopaxi, Esmeraldas, Guayas, Imbabura, Loja, Los Rios, Manabi, Marona-Santiago, Napo, Orellana, Pastaza, Pichincha, Sucumbios, Tungurahura, Zamora-Chinchipe), W Peru (Amazonas, Cusco, Huánuco, Loreto, Madre de Dios, Pasco, San Martin, Ucayali), Bolivia (Santa Cruz), Paraguay (Alto Paraná, Boquerón, Caaguazú, Caazapá,

Central, Itapúa, Misiones, Neembucú, Presidente Hayes, San Pedro) and NE Argentina (E Chaco, Corrientes, E Formosa, E Santa Fe), NSL–2500 m.

Sources: E.H. Taylor, 1951, 1954, Roze, 1966a, Lancini, 1986, Pérez-Santos & Moreno, 1988, Lancini & Kornacker, 1989, Duellman & Salas, 1991, Williams & Francini, 1991, Aquino et al., 1996, Lee, 1996, 2000, Zaher, 1996, 1999, J.C. Murphy, 1997, Tiranti & Avila, 1997, J.A. Campbell, 1998b, Martins & Oliveira, 1998, Starace, 1998, G. Köhler, 1999, 2001, 2003, Mijares-Urrutia & Arends, 2000, Stafford & Meyer, 2000, Rivas-Fuenmayor & La Marca, 2001b, Lehr, 2001, Markezich, 2001, Giraudo, 2002, Savage, 2002, Abuys, 2003, J.C. Murphy & Schlager, 2003, Solórzano, 2004, Duellman, 2005, McCranie et al., 2006, Cisneros-Heredia et al., 2007, Cacciali, 2008, R.W. Henderson & Powell, 2009, Navarrete et al., 2009, McCranie, 2011, Travers et al., 2011 and C.J. Cole et al., 2013.

Remarks: The northernmost extension of the Distribution is unclear and *C. clelia* may occur in S Mexico (Zaher, 1996, Campbell, 1998b). La Pampa, Argentina record of Tiranti & Avila (1997: 109) needs confirmation. Villa et al. (1988: 61) erroneously listed El Salvador.

2. *Clelia equatoriana* (Amaral, 1924b). J. Washington Acad. Sci. 14(9): 201–202. (*Barbourina equatoriana*)

Type: Holotype, USNM 62790, a 300 mm male (F.W. Goding, April 1920).

Type locality: "sent from Guayaquil, Ecuador."

Distribution: Lower Central America and NW South America. Costa Rica (Nuevo Is.), E Panama (Darién), W and N Colombia (Antioquia, Caldas, Cauca, Santander, Valle de Cauca) and NW and Ecuador (Amazonas, Guayas, Napo, Pichincha), 245–1785 m.

Sources: Pérez-Santos & Moreno, 1988, 1991, Zaher, 1996 and Rojas-Morales, 2012b.

Remarks: Costa Rican material is either *C. equatoriana* or *C. scytalina fide* Savage, 2002.

3. *Clelia errabunda* Underwood, 1993. Bull. Nat. Hist. Mus. (Zool.) 59(1): 3–4, fig. 1.

Type: Holotype, BMNH 1889.8.14.25, a 1440 mm male (G.A. Ramage, 1889).

Type locality: "St. Lucia, West Indies" [= Saint Lucia, Lesser Antilles].

Distribution: Lesser Antilles (St. Lucia), now extinct *fide* R.W. Henderson & Powell (2009: 362)

Sources: Underwood, 1995 and R.W. Henderson & Powell, 2009.

Remarks: Record from Dominica undoubtedly in error *fide* Underwood (1995: 5).

4. *Clelia hussami* Morato, Franco & Sanches, 2003. Phyllomedusa 2(2): 94–98, figs. 1a–c.

Type: Holotype, IB 32859, a 602 mm female (L. Miynarczk, 9 Feb. 1972), destroyed by fire 15 May 2010.

Type locality: "município de Cruz Machado (26°01'S, 51°20'W, 940 m), estado do Paraná, Brasil."

Distribution: Southern Brazil (S Paraná, Rio Grande do Sul, N Santa Catarina), 760–1050 m.

Source: Borger-Martins et al., 2005.

5. *Clelia langeri* Reichle & Embert, 2005. J. Herp. 39(3): 380–382, fig. 1.

Type: Holotype, MNK 867, a 1162 mm male (F.A. Langer, 14 April 1994).

Type locality: "the area of Villa Merced (18°6'S, 64°11'W), Prov. Florida, Department of Santa Cruz, Bolivia, about 1300 m altitude in the inter-Andean dry valleys."

Distribution: Bolivia (Chuquisaca, Santa Cruz and probably Tarija), 900–1500 m.

6. *Clelia plumbea* (Wied-Neuwied, 1820a). Reise Brasil. 1: 25. (*Coluber plumbeus*)

Type: Holotype, AMNH 3481, adult male (A.P.M. zu Wied-Neuwied, Sept. 1815).

Type locality: "von São João, etwas nördlich von Cabo Frio, Brasilien" [= between Cabo Frio and Rio São João, Rio de Janeiro, Brazil].

Distribution: Southeastern South America. Southern Brazil (Alagoas, Amazonas, Bahia, Distrito Federal, Espírito Santo, Mato Grosso do Sul, Minas Gerais, Pará, Paraná, Rio de Janeiro, Santa Catarina, São Paulo, Cardoso, Grande, São Sebastião and São Vicente Is.), Paraguay (Alto Paraná, Itapúa) and NE Argentina (Misiones), NSL–1065 m.

Sources: Cunha & Nascimento, 1978, 1993, Pérez-Santos & Moreno, 1988, Lema, 1994, Zaher, 1999, Giraudo, 2002, Giraudo & Scrocchi, 2002, Duarte-Rocha & van Sluys, 2006, N.J. Scott et al., 2006 and Cicchi et al., 2007.

Remarks: Resurrected as a valid species *fide* Zaher (1996: 310).

7. *Clelia scytalina* (Cope, 1867b). Proc. Acad. Nat. Sci. Philadelphia (1866) 18(4): 320. (*Scolecophis scytalinus*)

Synonyms: *Oxyrhopus proximus* Bocourt, 1897, and *Clelia clelia immaculata* H.M. Smith, 1942l.

Type: Holotype, USNM 6581, a 584 mm specimen (C.H. Berendt, 1865–1867).

Type locality: "near Tabasco, Mexico." Emended to San Juan Bautista, Tabasco, Mexico *fide* Cochran (1961: 212).

Distribution: Mesoamerica. Southern Mexico (Chiapas, Colima, Guerrero, Jalisco, Oaxaca, Tabasco, Veracruz), N Belize (Corozal), Guatemala, Costa Rica (Alajuela, Cartago, San José) and Panama, NSL–2000 m.
Sources: García & Ceballos, 1994, Lee, 1996, 2000, Stafford & Meyer, 2000, Savage, 2002, Solórzano, 2004 and Sasa et al., 2010.
Remarks: MNHN catalogue lists MNHN 7871 and MNHN 1899.54–55 as types. Probably occurs in Nicaragua *fide* G. Köhler (1999: 66).

CLONOPHIS Cope, 1889b (Natricidae)

Synonyms: *Cora* Jan, 1863b, *Olonophis* – Surface, 1906 *(nomen incorrectum),* and *Clanophis* – Hankinson, 1917 *(nomen incorrectum).*
Type species: *Regina kirtlandii* Kennicott, 1856.
Distribution: Central and NE USA.
Sources: Conant, 1943, Rossman, 1963b, Rossman & Powell, 1985, Ernst & Barbour, 1989, Conant & Collins, 1991, 1998, Harding, 1997, Shupe & Zimmerer, 1998, Alfaro & Arnold, 2001, Zaher et al., 2009 and Frymire & Scott, 2012.

1. *Clonophis kirtlandii* (Kennicott, 1856). Proc. Acad. Nat. Sci. Philadelphia 8(2): 95–96. (*Regina kirtlandii*)

Type: Lectotype, USNM 1514, a 509 mm female (R.W. Kennicott, 1853–1855), designated by Conant (1943: 317).
Type locality: "West Northfield, Illinois" [USA] via lectotype selection.
Distribution: Central USA (N Kentucky, cen. and NE Illinois, Indiana, ext. S Michigan, NE Missouri, Ohio, W Pennsylvania, Tennessee), 90–670 m.
Remarks: USNM 1514 erroneously listed as holotype *fide* Rossman & Powell (1985: 364.1). Pennsylvania records are questionable .

COELOGNATHUS Fitzinger, 1843 (Colubridae)

Synonyms: *Calognathus* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Cynophis* Gray, 1849b, *Compsosoma* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Plagiodon* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Campsosoma* – Jan, 1857 *Campilodon* Jan, 1861c *(nomen emendatum), Composoma* – E.H. Taylor, 1922 *(nomen incorrectum), Compsoma* – Maki, 1931 *(nomen incorrectum), Plagionon* – Maki, 1931 *(nomen incorrectum), Caelognatus* – Saint-Girons, 1972 *(nomen incorrectum),* and *Euanedwardsserpens* Hoser, 2012p *(nomen illegitimum).*
Type species: *Coluber radiatus* F. Boie, 1827.
Distribution: Southeastern Asia and East Indies.
Sources: Schulz, 1996, Helfenberger, 2001, Utiger et al., 2005, Burbrink & Lawson, 2007, I. Das, 2010, 2012 and Hoser, 2012p.

C

1. *Coelognathus enganensis* (Vinciguerra, 1892). Ann. Mus. Civ. Stor. Nat. Genova (2) 12: 524–525. (*Coluber enganensis*)

Types: Syntypes (2), MSNG 32307–08, two adult females.
Type locality: "Bua Bua, Engano," Indonesia.
Distribution: Southern Indonesia (Lesser Sundas: Engano).
Sources: Auffenberg, 1980, Bosch, 1985 and Lang, 2011.
Remarks: A valid species *fide* Bosch (1985: 22–23).

2. *Coelognathus erythrurus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 175–177. (*Plagiodon erythrurus*)

Synonyms: *Elaphis melanurus celebensis* Jan, 1863b, *Elaphis melanurus manillensis* Jan, 1863b, *Coluber walli* F. Werner, 1924, and *Elaphe erythrura psephenoura* Leviton, 1979g.
Type: Lectotype, MNHN 7224 (J.R.C. Quoy & J.P. Gaimard [Coquille or Astrolabe Voy.], 1822–1829), designated by Leviton (1979: 103).
Type locality: "Samar Island, Philippine Islands" via lectotype selection.
Distribution: Philippines (Bohol, Camiguin, Catanduanes, Cebu, Dinagat, Guimaras, Jolo, Leyte, Luzón, Masbate, Mindanao, Mindoro, Negros, Pacijan, Palawan, Panay, Polillo, Ponson, Poro, Samar, Siasi) and Indonesia (Butung, Peleng, Sulawesi, Butung, Tawitawi), NSL–1065 m.
Sources: Leviton, 1979, den Bosch, 1985, Schulz, 1988c, 1989f, Ross & Gonzales, 1992, B.E. Smith, 1993 and Gaulke & Altenbach, 1994.

3. *Coelognathus flavolineatus* (Schlegel, 1837). Essai Phys. Serp. 1: 145, 2: 141–143, pl. 5, figs. 11–12. *(Coluber flavolineatus)*

Synonyms: *Coluber flavolineatus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Coluber flavo-lineatus* Schlegel, 1826b *(nomen illegitimum), Coluber melanopsis* F. Boie, 1827, *Coluber melanurus* F. Boie, 1827 *(nomen oblitum)*, *Coluber melanura* – Schlegel, 1837, *Compsosoma melanurus* Bleeker, 1859c *(nomen nudum), Elaphis melanurus bivirgata* Jan, 1863b (*nomen nudum*), and *Elaphis melanurus bivirgata* Jan, 1867 *in* Jan & Sordelli, 1866–1879.
Types: Syntypes (4), RMNH 418 (H. Boie & H.C. Macklot, 1836) [Java], RMNH 422 (S. Müller, June 1833–Dec. 1835) [Padang, Sumatra], RMNH 424 (H. Boie & H.C. Macklot, Dec. 1825–Sept. 1827) [Java], and RMNH 425 [Sumatra].
Type locality: "îles de Java et de Sumatra" [Indonesia]. Restricted to Java *fide* M.A. Smith (1943: 148).

C

Further restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Southeast Asia and Indonesia. Eastern India (Andaman & Nicobars: Andaman Is.), ext. S Myanmar (Tanintharyi, Mergui Arch.), Cambodia (Pursat), peninsular Thailand (Nakhon Si Thammarat, Narathiwat, Phang Nga, Phuket, Satun, Surat Thani), Vietnam (Binh Phuac, Gia Lai), West Malaysia (Johor, Kedah, Perak, Pinang, Selangor, Penang and Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, and Indonesia (Bali, Banggai, Bangka, Belitung, Bintan, Galang, Java, Kalimantan, Siberut, Simeulue, Sulawesi, Sumatra, Weh), NSL–1500 m.

Sources: E.H. Taylor, 1965, Tweedie, 1983, Schulz, 1987c, 1988o, Stuebing 1991, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999 Malkmus et al., 2002, P. Wood et al., 2003, Whitaker & Captain, 2004, McKay, 2006, J.C. Murphy et al., 2006, Grismer et al., 2008 and V.S. Nguyen et al., 2009.

Remarks: Reinwardt credited as collector by Schlegel (1837: 141). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Coluber flavolineatus* Schlegel is designated a *nomen protectum* and *Coluber melanurus* F. Boie a *nomen oblitum*.

4. *Coelognathus helena* (Daudin, 1803c). Hist. Nat. Rept. 6: 277–280, pl. 76, fig. 1. (*Coluber helena*)

Synonyms: *Cynophis bistrigatus* Gray, 1849b, *Herpetodryas malabaricus* Jerdon, 1854, *Cynophis malabariensis carinata* F. Müller, 1878b, and *Elaphe helena monticollaris* Schulz, 1992b.

Type: Lectotype, a 698 mm specimen described and illustrated by P. Russell (1796: 37–38, pl. 32) (P. Russell, April 1781–1791), designated herein.

Type locality: "Vizagapatam, coast of Coromandel, India" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E, elevation 25 m] via lectotype selection.

Distribution: Southern Asia. Southeastern Pakistan (S Sindh), India (Andhra Pradesh, Assam, Bihar, Goa, Gujarat, Himachal Pradesh, Jammur and Kashmir, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Nagaland, Oris (Gandaki, Lumbini, Nayayasa, Rajasthan, Tamil Nadu, Utter Pradesh, West Bengal), Nepal (Chitwan, Kaski, Kathmandu, Makwanpur, Palpa, Sunsari, Tanahu), Bangladesh and Sri Lanka (Central, Eastern, North-Central, Northern, Sabaragamuwa, Southern, Uva, Western), 610–1980 m.

Sources: Wall, 1913a, 1921g, E.H. Taylor, 1950b, P. Silva, 1969, Kramer, 1977, Mahendra, 1984, Nanhoe & Ouboter, 1987, Murthy & Chandrasekhar, 1989, A. Silva, 1990b, 2009, Schulz, 1992b, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Nande & Deshmukh, 2007, Hutton & David, 2009 and Royans & Knight, 2009.

5. *Coelognathus philippinus* (L.E. Griffin, 1909b). Philippine J. Sci. 4A(6): 597–598. (*Elaphe philippina*)

Type: Lectotype, CAS 62143 (formerly LEG 17 & BSM 291), a 1727 mm female (C.M. Weber, Feb. 1909), designated by Leviton (1979: 114).

Type locality: "Iwabig, Palawan, Philippine Islands" via lectotype selection.

Distribution: Philippines (Balabac, Bongao, Busuanga, Culion, Palawan, Sanga Sanga, Sibutu, Tawitawi).

Sources: W.C. Brown & Alcala, 1970 and Leviton, 1979.

6. *Coelognathus radiatus* (F. Boie, 1827). Isis von Oken 20(6): 536. (*Coluber radiatus*)

Synonyms: *Natrix semiornata* Wagler, 1825 (*nomen ineditum*), *Coluber radiatus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Coluber radiatus* Schlegel, 1826b *(nomen nudum), Coluber quadrifasciatus* Cantor, 1839b, and *Tropidonotus quinque* Cantor, 1839b.

Types: Syntypes (4), RMNH 432, a 1545 mm specimen, RMNH 433, RMNH 47573 (formerly RMNH 432), and RMNH 47574 (formerly RMNH 432) (H. Boie & H.C. Macklot, Dec. 1825–Sept. 1827).

Type locality: "Java, Indonesia" by type locality restriction *fide* C.H. Pope (1935: 261). Further restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14), ca. 6°43'S, 106°44'E].

Distribution: Southeastern Asia and Indonesia. Northeastern India (Assam, Arunachal Pradesh, S Bihar, Chattisgarh, Madhya Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Orissa, Sikkim, Uttaranchal, Uttar Pradesh, West Bengal), E Nepal (Dhankuta, Kaski, Kathmandu, Makwanpur, Sankhuwasabha), N Bhutan (Trashigang), Bangladesh, S China (Fujian, Guangdong, Guangxi, Guizhou, Hong Kong, Yunnan, Nan Ao Is.), Vietnam (entire country), Laos (Champasak), Cambodia, Thailand (Loei, Saraburi, Songkhla), Myanmar (Yangon), West Malaysia (Johor, Kedah, Perak, Pinang, Selangor, Terengganu, Mergui Arch.), Singapore, East Malaysia (Sarawak), Brunei and Indonesia (Bangka, Java, Kalimantan, Sumatra), NSL–1480 m.

Sources: Wall, 1914b, Kopstein, 1932a, Leviton et al., 1956, Bergman, 1961a, L. Swan & Leviton, 1962, E.H. Taylor, 1965, R. Bhatnagar, 1969, 1975, Saint Girons, 1972a, Kramer, 1977, Tweedie, 1983, Mahendra, 1984, Karsen et al., 1986, Schulz, 1986d, 1988k, Nanhoe & Ouboter, 1987, Zhao & Adler, 1993, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Lazell, 1999, Orlov et al., 2000, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, McKay, 2006, I. Das, 2007b, M.F. Ahmed et al., 2009, V.S. Nguyen et al., 2009 and Wangyal, 2011.

Remarks: Type locality restriction of C.H. Pope (1935: 261) resulted in four Javan syntypes. Kramer (1977: 641) erroneously referred to the series as the holotype. Paralectotypes are RMNH 47573–74, two juveniles.

7. *Coelognathus subradiatus* (Schlegel, 1837). Essai Phys. Serp. 1: 144, 2: 136–137. (*Coluber subradiatus*)

Synonyms: *Elaphis nyctenurus* Jan, 1863b, and *Coluber melanurus timoriensis* Bethencourt-Ferreira, 1897b.

Types: Syntypes (4), RMNH 435, a 1360–1560 mm specimen, RMNH 403, RMNH 47575 (formerly RMNH 403), and RMNH 47576 (formerly RMNH 435) (S. Müller, Oct. 1828– Nov. 1829).

Type locality: "île de Timor" [= Timor, Lesser Sundas, S Indonesia].

Distribution: Lesser Sundas of S Indonesia (Adonare, Alor, Ende, Flores, Komodo, Lombien, Lombok, Rinca, Roti, Semau, Sumba, Sumbawa, Timor, Wetar) and Timor-Leste, NSL–1185 m.

Sources: Bethencourt-Ferreira, 1898, Boulenger, 1898a, Rooij, 1917, Mertens, 1930, Brongersma, 1934, Kopstein, 1937, C. Haas, 1950, Darevsky, 1964, Auffenburg, 1980, Bosch, 1985, Schulz, 1988c, 1989f, Kaiser et al., 2011 and O'Shea et al., 2012.

Remarks: Most of the RMNH syntypes were exchanged with other institutions *fide* M.S. Hoogmoed (*in litt*.). Paralectotypes now RMNH 403, RMNH 434a–b, 2130 mm and 870 mm specimen, RMNH 47575, RMNH 76, a 560 mm specimen, and BMNH 1946.1.6.16, an adult male.

COLLORHABDIUM Smedley, 1932a (Calamariidae)

Type species: *Collorhabdium williamsoni* Smedley, 1932a.

Distribution: West Malaysia.

Sources: Smedley, 1932a, Tweedie, 1983, Wallach, 1988, Leong & Lim, 2001, B.L. Lim et al., 2002 and Zaher et al., 2009.

1. *Collorhabdium williamsoni* Smedley, 1932a. Bull. Raffles Mus. (1931) (6): 120–121, figs. 3a–b, pl. 2, fig. b.

Types: Syntypes (4), BMNH 1946.1.6.55 (formerly RMBR), ZRC 2.2168–69 (formerly RMBR), longest syntype 236 mm male (K.B. Williamson & native, 1930), location of other type unknown.

Type locality: "Tanah Rata, Cameron Highlands, Malay Peninsula" [= Tanah Rata, Cameron Highlands, Pahang State, cen. West Malaysia, 4°28'N, 101°23'E, elevation 1465 m].

Distribution: West Malaysia (Pahang, Perak) and Singapore, 1465–1860 m.

†*COLOMBOPHIS* Hoffstetter & Rage, 1977 (Aniliidae)

Type species: †*Colombophis portai* Hoffstetter & Rage, 1977.

Distribution: Middle Miocene of Colombia and Venezuela, and upper Miocene of Brazil.

Sources: Hoffstetter & Rage, 1977, Rage, 1984b, Head et al., 2006, Gómez et al., 2008 and Hsiou et al., 2010.

1. †*Colombophis portai* Hoffstetter & Rage, 1977. Ann. Paléont. (Vert.) 63(2): 174–178, fig. 4a, pl. 1, fig. 1.

Type: Holotype, MNHN VIV 6, one middle trunk vertebra.

Type locality: "Los Mangos, près de La Venta, Dépt. Huila, Colombie. Fish Bed de la Formation Villavieja. Miocène moyen (= Friasien)."

Distribution: Middle Miocene (Friasain: 15.5–16.3 mya) of Colombia (Huíla) and Venezuela (Falcón).

Source: Head, 2006.

2. †*Colombophis spinosus* Hsiou, Albino & Ferigolo, 2010. Acta Palaeontol. Pol. 55(3): 371–375, figs. 6. a–e.

Type: Holotype, UFAC-PV 2953, one middle trunk vertebra.

Type locality: "Talismã locality, Punus River, Amazonas State, Brazil. Late Miocene, Solimões Formation."

Distribution: Upper Miocene (Huayquerian: 6.8–9.0 mya) of Brazil (Amazonas).

Remarks: Holotype erroneously listed as UFAC-PV 2359 in Hsiou et al. (2010: fig. 6).

COLUBER Linnaeus, 1758 (Colubridae)

Synonyms: *Caluber* – Sturm, 1802 *(nomen incorrectum), Colubro* – Oken, 1816 *(nomen incorrectum), Scoliophis* Davis, Bigelow & Gray, 1817, *Colaber* – Wyder, 1817 *(nomen incorrectum), Colubur* – Wied-Neuwied, 1825b *(nomen incorrectum), Coluher* – Brüggemann & Wigand, 1838 *(nomen incorrectum), Colubrum* – Gené, 1839 *(nomen incorrectum), Scaliophis* Agassiz, 1845 *(nomen emendatum), Bascanion* Baird & Girard, 1853, *Bascanian* – Slack, 1876 *(nomen incorrectum), Bascaniun* – A.M. Ross, 1878 *(nomen incorrectum), Colubcr* – Rochebrune, 1885 *(nomen incorrectum), Coluteer* – A.W. Butler, 1887 *(nomen incorrectum), Basacnium* – Velasco, 1890a *(nomen incorrectum), Bacanium* – Velasco, 1890 *(nomen incorrectum), Colubus* – E. Bartlett, 1896 *(nomen incorrectum), Colnber* – Seiss, 1903 *(nomen incorrectum), Columber* – C.E. Lord & Scott, 1924 *(nomen incorrectum), Scioliophis* – Gould, 1930 *(nomen incorrectum),*

C

Coluder – Maki, 1931 *(nomen incorrectum), Colober* – Lindberg, 1932 *(nomen incorrectum), Columber* – A.H. Wright & Wright, 1952 *(nomen incorrectum), Coluder* – Bogdanov, 1965 *(nomen incorrectum), Colouber* – Schwab, 1984 *(nomen incorrectum),* and *Colluber* – D.-T. Yang & Su, 1984 *(nomen incorrectum).*

C

Type species: *Coluber constrictor* Linnaeus, 1758.

Distribution: USA, Mexico, upper Central America.

Fossil records: Upper Miocene to upper Pleistocene of USA. Fossils unassigned to species within the Distribution of *Coluber constrictor* include upper Miocene (Hemphillian) of USA (Nevada), middle Pliocene (Blancan II, III) of USA (Idaho, Nebraska), upper Pliocene (Blancan V) of USA (Idaho), and upper Pleistocene (Rancholabrean II) of USA (Missouri, Tennessee). Possibly some North American *Coluber* fossil records are *Masticophis.*

Sources: Blainville, 1818, Ortenburger, 1928, Inger & Clark, 1943, L.D. Wilson, 1973a, Schätti, 1986b, Schätti & Wilson, 1986, Schätti, 1988a, Holman, 2000a, Nagy et al., 2004 and Utiger et al., 2005.

Remarks: Official Generic Name no. 2148 *fide* Opinion 1201 (ICZN, 1982a). The following genera and species have been separated from *Coluber: Bamanophis (dorri), Dolichophis (caspius, cypriensis, gyarosensis, jugularis, laurenti, schmidti), Hemerophis (socotrae, zebrinus), Hemorrhois (algirus, hippocrepis, nummifera, †pouchetii, ravergieri), Hierophis (andreanus, †caspioides, †freybergi, gemonensis, †robertmertensi, viridiflavus),* and *Platyceps (afarensis, atayeri, brevis, collaris, elegantissimus, florulentus, gracilis, insulanus, karelinii, largeni, messanai, najadum, rhodorachis, rogersi, rubriceps, saharicus, schmidtleri, sinai, somalicus, taylori, thomasi, variabilis, ventromacularus).*

1. *Coluber constrictor* Linnaeus, 1758. Syst. Nat., ed. 10, 1: 216.

Synonyms: *Coluber ovivorus* Linnaeus, 1758, *Coluber ligament* Lacépède, 1789 (*nomen rejiciendum*), *Scoliophis atlanticus* Davis, Bigalow & Gray, 1817, *Coluber relox* Rafinesque-Schmaltz, 1818a, *Coluber flaviventris* Say *in* E. James, 1823, *Coluber mormon* Baird & Girard, 1852a, *Bascanion foxii* Baird & Girard, 1853, *Bascanion fremontii* Baird & Girard, 1853, *Bascanion vetustus* Baird & Girard, 1853, *Bascanium anthicum* Cope, 1862c, *Coryphodon oaxaca* Jan, 1863, *Zamenis conirostris*, Cope, 1895b, *Zamenis stejnegerianus* Cope, 1895b, *Bascaniun constrictor* – A.M. Ross, 1878 *(nomen incorrectum), Zamenis acuminatus* Cope, 1899a, *Coluber ortenburgeri* L.C. Stuart, 1934a, *Coluber constrictor priapus* Dunn & Wood, 1939, *Coluber constrictor haasti* Bell, 1952, *Coluber constrictor paludicola* Auffenberg & Babbitt, 1953, *Coluber constrictor helvigularis* Auffenberg, 1955, *Coluber constrictor etheridgei* L.D.Wilson, 1970, and *Coluber constrictor latrunculus* L.D. Wilson, 1970.

Type: Holotype, ? NHR Lin-456 (formerly MDG), a 1380 mm female (P. Kalm, Sept. 1748–Feb. 1751, via Mus. Drottn.).

Type locality: "Canada," (possibly in error). Probably vicinity of Philadelphia, Pennsylvania, USA *fide* Dunn & Wood (1939: 1).

Distribution: North America. Southern Canada (S British Columbia, SW Ontario, S Saskatchewan), USA (Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming), Mexico (Chiapas, Coahuila, Guerrero, Hidalgo, Nuevo León, Oaxaca, Tamaulipas, Veracruz), N Guatemala (Petén) and SW Belize (Cayo), NSL–2440 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska, Texas), lower Pliocene (Hemphillian) of USA (Kansas, Nebraska, Oklahoma), middle Pliocene (Blancan II, III) of USA (Kansas, Texas), upper Pliocene (Blancan V) of USA (Kansas, Nebraska), Pleistocene of USA (Illinois), lower/middle Pleistocene (Irvingtonian I) of USA (Florida, Kansas, Pennsylvania), middle Pleistocene (Irvingtonian II) of USA (Nebraska), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas, Maryland, Pennsylvania, West Virginia), and upper Pleistocene (Rancholabrean I, II) of USA (Alabama, California, Florida, Georgia, Kansas, Nevada, New Mexico, Ohio, Oklahoma, Pennsylvania, Texas, West Virginia).

Brown et al., 1995, Palmer & Braswell, 1995, Degenhardt et al., 1996, Lee, 1996, 2000, Harding, 1997, Tennant, 1997, J.A. Campbell, 1998b, Trauth, 1998, Fitch, 1999, Bartlett & Tennant, 2000, Holman, 2000a, D.L Thomas et al., 2000, Werler & Dixon, 2000, Burbrink et al., 2008 and Ramírez-Bautista et al., 2010.

Remarks: Six unnamed clades derived from mDNA analysis *fide* Burbrink et al. (2008: 286). Official Specific Name no. 2784 *fide* Opinion 1201 (ICZN, 1982a).

COLUBROELAPS Orlov, Kharin, Ananjeva, Nguyen & Nguyen, 2009 (Colubridae)

Type species: *Colubroelaps nguyenvansangi* Orlov, Kharin, Ananjeva, Nguyen & Nguyen, 2009.

Distribution: Vietnam.

Sources: Orlov et al., 2009 and Ziegler & Nguyen, 2010.

1. *Colubroelaps nguyenvansangi* Orlov, Kharin, Ananjeva, Nguyen & Nguyen, 2009. Russ. J. Herp. 16(3): 235–236, figs. 1–6, 7d–g, 8a–d, 9a–c, 10–19.

Type: Holotype, ZISP IEBR 25686, a 500 mm female (V.S. Nguyen, May 2003).
Type locality: "Loc Bac Forest Enterprise, Lam Dong Prov., southern Vietnam (elevation 720 m, 11º47'07" N, 107°36'14" E)."
Distribution: Southern Vietnam (Binh Phuoc, Lam Dong), 720 m. Known only from holotype.

COMPSOPHIS Mocquard, 1894b (Pseudoxyrhophiidae)

Synonyms: *Geodipsas* Boulenger, 1896a, *Conspsophie* – Briceño-Rossi, 1934 *(nomen incorrectum)* and *Cempsophis* – Guibé, 1958 *(nomen incorrectum).*
Type species: *Compsophis albiventris* Mocquard, 1894b.
Distribution: Madagascar.
Sources: Guibé, 1958, Cadle, 1996bb, Ziegler et al., 1997, Glaw and Vences, 2007, Glaw et al., 2007b, Kelly et al., 2009 and Zaher et al., 2009.
Remarks: *Geodipsas* synonymized *fide* Ziegler et al. (1997: 110) and Glaw et al. (2007: 60).

1. *Compsophis albiventris* Mocquard, 1894b. C.R. Somm. Seances Soc. Philom. Paris (17): 8–9.

Type: Holotype, MNHN 1893.212, a 167 mm specimen (C. Alluaud & Belly, 1892–1893).
Type locality: "la montagne d'Ambre, Madagascar" [= Ambohitra, N Antsiranana Prov., N Madagascar, 12°30'S, 49°10'E *fide* Cadle, 1996b: 50].
Distribution: Northern Madagascar (N Antsiranana), 860–1250 m. Known only from vicinity of type locality.

2. *Compsophis boulengerii* (Peracca, 1892). Boll. Mus. Zool. Anat. Comp. Univ. Torino 7(112): 3–4, pl. 1, figs. 2, 2a–d. (*Tachymenis boulengerii*)

Synonym: *Geodipsas heimi* Angel, 1936a.
Type: Holotype, MZUT 1874, a 348 mm male (G. Pittarelli).
Type locality: "Madagascar – Valle dell'Umbi (Andrangoloka)" [= Umbi River valley, Andrangolaoka, E Antananarivo Prov., Madagascar, 19°02'S, 47°55'E, elevation 1385 m].
Distribution: Eastern Madagascar (Atananarivo, Fianarantsoa, Toamasina), 600–1400 m.
Source: Cadle, 1996b.

3. *Compsophis fatsibe* (Mercurio & Andreone, 2005). Zootaxa (1903): 62–67, figs. 1–3. (*Geodipsas fatsibe*)

Type: Holotype, MRSN 1922, a 522 mm male (F. Andreone, H. Randriamahazo & J.E. Randrianirina, 28 Jan. 1996).
Type locality: "western slope of Anjanaharibe-Sud Massif, Valley of Analabe River, 14°46.62'S, 49°26.60'E, 1050 m a.s.l., Befandriana Fivondronana, Mahajanga Faritany (Majunga Prov.), Madagascar."
Distribution: Northern Madagascar (Mahajanga), 1050 m.

4. *Compsophis infralineata* (A.C.L.G. Günther, 1882). Ann. Mag. Nat. Hist. (5) 9(52): 265–266, 2 figs (unnumbered). (*Tachymenis infralineatus*)

Type: Holotype, BMNH 1895.10.29.61, a 761 mm female (W.D. Cowan, 1882) *fide* Cadle (1996b: 58).
Type locality: "Eastern Betsileo" [Madagascar], [= N Fianarantsoa Prov., cen. Madagascar].
Distribution: Southeastern Madagascar (Antsiranana, Atananarivo, Fianarantsoa, Toamasina, Toliara), 300–2000 m.
Sources: Boulenger, 1896a and Henkel & Schmidt, 2000.
Remarks: BMNH labeled/catalogued holotype (BMNH 1946.1.7.20 (formerly BMNH 1882.5.8.1), a 787 mm female, in error *fide* Cadle (1996b: 58).

5. *Compsophis laphystius* (Cadle, 1996b). Bull. Mus. Comp. Zool. 155(2): 35–41, fig. 1. (*Geodipsas laphystia*)

Type: Holotype, MCZ 181390 (formerly JEC 13169), a 622 mm male (J.E. Cadle, 2 Jan. 1996).
Type locality: "Talatakely, Ranomafana National Park, 950–1,000 m, Fivondronana Ifanadiana, Fianarantsoa Prov., Madagascar [21°16'S, 47°25'E]."
Distribution: Eastern Madagascar (Antsiranana, Fianarantsoa, Toamasina), 550–1100 m.
Remarks: Some records of *C. infralineata* are very likely this species *fide* Cadle (1996b: 36).

6. *Compsophis vinckei* (Domergue, 1988). Bull. Mus. Natl. Hist. Nat. (4) 10A(1): 140–141, figs. 3a–d. (*Geodipsas vinckei*)

Type: Holotype, MNHN 1977.818 (formerly CAD 973/S), a 495 mm male (M. Vincke, late March 1970).
Type locality: "Station de pisciculture de Périnet (Analamazaotra), Madagascar" [= Lake Alaotra, Toamasina Prov., Madagascar, ca. 17°28'S, 48°32'E, elevation 770 m].
Distribution: Madagascar (Toamasina), 770 m.

C

7. *Compsophis zeny* (Cadle, 1996b). Bull. Mus. Comp. Zool. 155(2): 44–49, figs. 4, 6 (upper). (*Geodipsas zeny*)

Type: Holotype, MCZ 181161, a 281 mm male (J.E. Cadle, 11 Jan. 1993).
Type locality: "Approximately 7 km SW (airline) Midongy du Sud [Midongy Atsimo], near Rianambo ("high waterfall") on Lalampo River, 670 m elev., Fivondronana Midongy du Sud, Prov. Fianarantsoa, Madagascar [23°39'S, 46°57'E]."
Distribution: Southeastern Madagascar (Fianarantsoa), 670–980 m.

†*CONANTOPHIS* Holman & Harrison, 2000 (Booidea *incertae sedis*)

Type species: †*Conantophis alachuaensis* Holman & Harrison, 2000.
Distribution: Lower Oligocene of USA (Florida).
Source: Holman & Harrison, 2000.

1. †*Conantophis alachuaensis* Holman & Harrison, 2000. Acta Zool. Cracov 43(1–2): 128–130, figs. 1a–e.

Type: Holotype, UF 190831, one middle trunk vertebra (UF field crews, 1966–1967).
Type locality: "I-75 Local Fauna (Florida Natural History Museum Locality AL018), 1.5 km WSW Gainesville, Alachua County, Florida; Early Oligocene (Whitneyan)."
Distribution: Lower Oligocene (Whitneyan: 30.8–33.34 mya) of USA (Florida).

CONIOPHANES Hallowell *in* Cope, 1860e (Dipsadidae)

Synonyms: *Scydropus* Jan, 1857 *(nomen nudum), Glaphyrophis* Jan, 1863b, *Hydrocalamus* Cope, 1885a, *Glaphirophis* – Senna, 1886 *(nomen incorrectum), Caniophanes* – Velasco, 1898 *(nomen incorrectum), Conophianes* – Briceño-Rossi, 1934 *(nomen incorrectum), Hidrocalamus* – Briceño-Rossi, 1934 *(nomen incorrectum), Cottonserpens* Hoser, 2012ai *(nomen illegitimum), Daraninserpens* Hoser, 2012ai *(nomen illegitimum), Laidlawserpens* Hoser, 2012ai *(nomen illegitimum),* and *Smythserpens* Hoser, 2012ai *(nomen illegitimum).*
Type species: *Coronella fissidens* A.C.L.G. Günther, 1858.
Distribution: Southern USA and Latin America.
Sources: Bailey, 1939a, H.M. Smith & Taylor, 1945, J.A. Peters & Orejas-Miranda, 1970, Cadle, 1984b, 1989, Villa et al., 1988, J.A. Campbell, 1989, Zaher et al., 2009 and Mulcahy et al., 2011.

1. *Coniophanes alvarezi* J.A. Campbell, 1989. Proc. Biol. Soc. Washington 102(4): 1036–1038, figs. 1–3.

Type: Holotype, UTA 12256 (formerly JAC 9389), a 375 mm male (J.A. Campbell, 7 Aug. 1983).
Type locality: "11.3 km ESE Teopisca, 2073 m elevation, Chiapas, Mexico" [= 11.3 KM ESE Teopisca (16°32'N, 92°28'W, elevation 1780 m), Chiapas State, S Mexico].
Distribution: Southern Mexico (Meseta Central of Oaxaca), 2010–2135 m.

2. *Coniophanes bipunctatus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 36–37. (*Coronella bipunctata*)

Synonyms: *Glaphyrophis pictus* Jan, 1863a and *Coniophanes bipunctatus biseriatus* H.M. Smith, 1940.
Type: Holotype, BMNH 1946.1.9.58, a 432 mm male.
Type locality: Unknown. Designated as British Honduras [= Belize] *fide* K.P. Schmidt (1941: 504).
Distribution: Mesoamerica. Southeastern Mexico (Campeche, Chiapas, Oaxaca, Quintana Roo, Tabasco, S Veracruz, Yucatán), Belize (Belize, Cayo, Orange Walk, Stann Creek), N Guatemala (Alta Verapaz, Petén), N Honduras (Atlántida, Colón, Cortés, Gracias a Dios, Islas de la Bahía, Roatán), E Nicaragua (Granada, Nueva Segovia), Costa Rica (Heredia, Limón) and NW Panama (Escudo de Veraguas Is.), NSL–1370 m.
Sources: C.W. Myers, 1969a, L.D. Wilson & Hahn, 1973, L.D. Wilson & Meyer, 1985, Lee, 1996, 2000, J.A. Campbell, 1998b, G. Köhler, 1999b, Savage, 2002, Solórzano, 2001, 2004, McCranie et al., 2006 and McCranie, 2011a.

3. *Coniophanes dromiciformis* (W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 273–275. (*Tachymenis dromiciformis*)

Synonym: *Coniophanes signatus* S.W. Garman, 1892b.
Types: Syntypes (8), ZMB 3729a–b, ZMB 3730a–c and ZMB 4550a–c, longest syntype 390 mm (C. Reiss, 1860)
Type locality: "Umgegend von Guayaquil" [= vicinity of Guayaquil, Guayas Prov., SW Ecuador, 2°12'S, 79°54'W, elevation 10 m].
Distribution: Southwestern Ecuador (Guayas), NSL–100 m.
Sources: C.W. Myers, 1969a and Cadle, 1989.
Remarks: Bauer et al. (1995: 75) listed only five syntypes (ZMB 3729, 4550). Records from Peru (ANSP 3736, MCZ 12426) doubtful *fide* Cadle (1989: 422–423).

4. *Coniophanes fissidens* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 36. (*Coronella fissidens*)

Synonyms: *Coniophanes proterops* Cope, 1860, *Coniophanes punctigularis* Cope, 1860, *Dromicus chitalonensis* F. Müller, 1878a, *Erythrolamprus violaceus*

Cope, 1887b, *Coniophanes brevifrons* Bailey, 1937a, *Coniophanes fissidens andresensis* Bailey, 1937a, *Coniophanes fissidens dispersus* H.M. Smith, 1941n, *Coniophanes fissidens convergens* Shannon & Smith, 1950, and *Coniophanes fissidens obsoletus* Minton & Smith, 1960.

Type: Lectotype, BMNH 1946.1.8.20, a 489 mm female (A. Sallé, 1846–1856), designated by H.M. Smith (1941n: 104).

Type locality: "Mexico" via lectotype selection. Restricted to San Andres Tuxtla, Veracruz, Mexico by H.M. Smith & Taylor (1950: 350).

Distribution: Mesoamerica and NW South America. Southern Mexico (N Chiapas, Guerrero, Hidalgo, S Michoacán, NE Oaxaca, Puebla, Querétaro, S San Luis Potosí, Tabasco, Tamaulipas, Veracruz), Belize (Belize, Cayo, Stann Creek), Guatemala (Alta Verapaz, Baja Verapaz, Escuintla, Izabal, Petén, Quezaltenango, San Marcos, Santa Rosa, Suchitepéquez, Zacapa), Honduras (Atlántica, Colón, Comayagua, Copán, Cortés, El Paraiso, Francisco Morazán, Gracias a Dios, Lempira, Olancho, Yoro), El Salvador (Ahuachapán, La Libertad, Morazán, San Salvador, Sonsonate), Nicaragua (Matagalpa, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Bocas del Toro, Chiriquí, Coclé, Colón, Darién, Panamá), Colombia (Antioquia, Santander, San Andrés Is.), NW Ecuador (Esmeraldas, Pichincha) and ext. NW Peru, NSL–1970 m.

Sources: E.H. Taylor, 1951, 1954, C.B. Fisher, 1968, C.W. Myers, 1969a, L.D. Wilson & Meyer, 1985, J.A. Campbell, 1989, 1998b, Pérez-Santos & Moreno, 1991, Lee, 1996, 2000, G. Köhler, 1999b, Mejenes-López et al., 1999, Savage, 2002, Farr et al., 2004, G. Köhler et al., 2004, McCranie et al., 2006, Ramírez-Bautista et al., 2010 and McCranie, 2011a.

5. *Coniophanes imperialis* (Baird, 1859a). U.S.-Mex. Bound. Surv., Rept. (1858) 2(2): 23, pl. 19, fig. 1. (*Taeniophis imperialis*)

Synonyms: *Glaphyrophis lateralis* Jan, 1863b, *Dromicus clavatus* W.C.H. Peters, 1864b, and *Coniophanes imperialis copei* Hartweg & Oliver, 1938.

Type: Holotype, USNM 2060 (S.L. Van Vliet [U.S.-Mex. Bound. Surv.], 1854–1855).

Type locality: "Brownsville, Texas" [= Cameron Co., ext. SE Texas, USA, 25°54'N, 97°30'W, elevation 10 m] (possibly in error). Corrected to Matamoras, Tamaulipas, Mexico [= Matamoros, ext. NE Mexico, 25°52'N, 97°30'W, elevation 5 m] *fide* Girard (1854: 227), Yarrow (1882: 97) and Cochran (1961: 216).

Distribution: Southern USA to N Central America. USA (S Texas), Mexico (Campeche, Chiapas, Hidalgo, Oaxaca, Quintana Roo, San Luis Potosí, Tabasco, Tamaulipas, Veracruz, Yucatán), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo), N Guatemala (Alta Verapaz, Huehuetenango, Izabal, Petén) and N Honduras (Atlántida, Colón, Copán, Cortés, Francisco Morazán, Gracias a Dios, Islas de la Bahía, Yoro, Cayo Cochino and Utila Is.), NSL–2200 m.

Sources: C.J. McCoy, 1969, L.D. Wilson & Meyer, 1985, G. Köhler, 1996a, Lee, 1996, 2000, J.A. Campbell, 1998b, Werler & Dixon, 2000, Ramírez-Bautista et al., 2010 and McCranie, 2011a

Remarks: Brownsville and Matamoros face each other across the Rio Grande River [= U.S.-Mexican border].

C

6. *Coniophanes joanae* C.W. Myers, 1966a. Copeia 1966(4): 665–667, figs. 1–2.

Type: Holotype, KU 93502, a 365–369 mm female (C.W. Myers, 27 May 1965).

Type locality: "on the southeastern slope of Cerro Pirre (also called "Mount Pirri" and "Cerro Cana"), Serranía de Pirre, 1440 m above sea level, Darién, Panama."

Distribution: Eastern Panama (Darién, Panamá), 800–1440 m.

Source: C.W. Myers, 1969a.

7. *Coniophanes lateritius* Cope, 1862a. Proc. Acad. Nat. Sci. Philadelphia (1861) 13(9): 524.

Type: Neotype, BYU 13793, a 193 mm male (W.W. Tanner & W.G. Robinson, Jr., 5 Sept. 1957), designated by W.W. Tanner & Robinson (1960a: 60).

Type locality: "7.5 miles north of Magdalena, northwestern Jalisco, Mexico" via neotype designation.

Distribution: Southwestern Mexico (Colima, ? Guerrero, Jalisco, Michoacán, Morelos, Nayarit, Sinaloa, Sonora), NSL–1850 m.

Sources: H.M. Smith & Grant, 1958a, Wellman, 1959, Ponce-Campos & Smith, 2001 and Castro-Franco & Bustos-Zagal, 2004.

Remarks: Holotype lost *fide* H.M. Smith & Taylor (1945: 41). H.M. Smith & Taylor's (1945: 41) neotype designation of FMNH 100032 (formerly EHT-HMS 5198) for *C. lateritius* invalidated by H.M. Smith & Grant's (1958b: 22) recognition of *C. melanocephalus*.

8. *Coniophanes longinquus* Cadle, 1989. Herpetologica 45(4): 412–417, fig. 2.

Type: Holotype, FMNH 231779, a 336 mm male (J.E. Cadle, 22 June 1987).

Type locality: "1 km (airline) NNW Monte Seco, approximately 80 km ESE Chiclayo, 1300–1340 m elevation, Río Zaña, Department of Cajamarca, Peru."

Distribution: Northwestern Peru (SW Cajamarca), 1200–1430 m.

9. *Coniophanes melanocephalus* (W.C.H. Peters, 1870a). Mber. Königl. Akad. Wiss. Berlin 1869(12): 876–877. (*Tachymenis melanocephala*)

Type: Holotype, ZMB 6656 (Berkenbusch, 1868–1869), lost *fide* Bauer et al. (1995: 75).

Type locality: "Puebla, Mexicos (Matamoros u.a.O.)." Restricted to "Matamoros (Izúcar), Mexico" [= Izucar de Matamoros, W Puebla State, S Mexico, 18°36'N, 98°28'W, elevation 1285 m] *fide* H.M. Smith & Taylor (1950: 341).
Distribution: Southern Mexico (Michoacán, Morelos, W Puebla), 400–1275 m.
Sources: H.M. Smith & Grant, 1958a, Bauer et al., 1995, Ponce-Campos & Smith, 2001 and Carbajal-Márquez et al., 2011a.
Remarks: A valid species *fide* Ponce-Campos & Smith (2001: 14).

10. *Coniophanes meridanus* K.P. Schmidt & Andrews, 1936. Field Mus. Nat. Hist. (Zool.) 20(18): 179.

Type: Holotype, FMNH 19427, a 313 mm (svl) female (E.R. Blackburn).
Type locality: "Merida, Yucatan" [= Merida, W Yucatán State, SE Mexico, 20°58'N, 89°37'W, elevation 10 m].
Distribution: Yucatán Peninsula of Mexico (N Campeche, Quintana Roo, Yucatán), NSL–270 m.
Sources: C.J. McCoy, 1969 and Lee, 1996, 2000.
Remarks: Type collected by E.W. Andrews *fide* Bailey (1939:43).

11. *Coniophanes michoacanensis* Flores-Villela & Smith, 2009. Herpetologica 65(4): 404–407, figs.1, 2a.

Type: Holotype, MZFC 10398, a 561 mm female (O. Flores-Villela, 26 Feb. 1992).
Type locality: "El Farito, 8 km. NW Caleta de Campos, 17 m elevation, Municipio de Aquila, Michoacán, Mexico (18.1014º N, 102.8173º W)."
Distribution: Southwestern Mexico (Guerrero, Michoacán), NSL–800 m.
Source: Mertz et al., 2012.

12. *Coniophanes piceivittis* Cope, 1870. Proc. Amer. Philos. Soc. (1869–1870) 11(81): 149–150.

Synonyms: *Tachymenis taeniata* W.C.H. Peters, 1870a and *Coniophanes frangivirgatus* J.A. Peters, 1950.
Types: Syntypes (2), USNM 30264–65 (formerly USNM 248), a 542 mm male and 481 mm female (A.-L.-J.-F. Sumichrast, 1855–1869).
Type locality: "Chihuitan, Tehuantepec, Western Mexico" [= Chihuitan, Ciudad Ixtepec, SE Oaxaca State, S Mexico, 16°33'N, 95°05'W, elevation 50 m].
Distribution: Mesoamerica. Southern Mexico (Chiapas, Hidalgo, Oaxaca, Querétaro, Veracruz), Guatemala (Huehuetenango, Quiché, Zacapa), W Honduras (Choluteca, Comayagua, Copán, Francisco Morazán, Yoro), El Salvador (Cuscatlán, La Libertad, San Miguel, San Salvador, Sonsonate), Nicaragua (Granada, Jinotepa, Managua) and Costa Rica (Guanacaste, Puntarenas, San José), NSL–1300 m.
Sources: Hall, 1951, E.H. Taylor, 1951, 1954, Martin, 1955, Neill & Allen, 1960, L.D. Wilson & Meyer, 1985, Harrison, 1992, G. Köhler, 1999b, G. Köhler et al., 2004, N. Herrera et al., 2007 and Ramírez-Bautista et al., 2010.
Remarks: Bailey (1939: 29) indicated both syntypes are 30265.

13. *Coniophanes quinquevittatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 975–977. (*Homalopsis quinquevittatus*) (*nomen corrigendum*)

Synonyms: *Homalopsis quinque-vittatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrigendum), Scydropus mexicanus* Jan, 1857 (*nomen nudum*), *Calopisma quinquevittatum* – Jan, 1863b *(nomen corrigendum), Calopisma quinquevittatum mexicana* Jan, 1863b (*nomen nudum*), *Coniophanes quinquevittatum mexicana* Jan, 1865c, and *Hydrops lubricus* Cope, 1871b.
Types: Syntypes (2), MNHN 516, a 758 mm specimen (P.M.A. Morelet, 1849), and MNHN 3766.
Type locality: "la Prov. de Peten dans l'Amérique centrale (République de Guatemala)" [= Petén Prov., Guatemala]. Restricted to Flores, Petén, Guatemala *fide* H.M. Smith & Taylor (1950: 318).
Distribution: Southeastern Mexico (Campeche, Chiapas, Tabasco, S Veracruz, Yucatán) and N Guatemala (Petén), NSL–200 m.
Sources: Lee, 1996, 2000 and J.A. Campbell, 1998b.
Remarks: MNHN catalogue lists MNHN 3766 from "Indies occidentals."

14. *Coniophanes sarae* Ponce-Campos & Smith, 2001. Bull. Maryland Herp. Soc. 37(1): 10–11.

Type: Holotype, UNAM 13030, a 125 mm female (P. Ponce-Campos, 1–5 July 1999).
Type locality: "near Tehuantepec, municipality of Chinicuila (18°42'07.7"N, 103°18'22.3"W), 1390 m, Michoacan."
Distribution: Western Mexico (W Michoacán), 800–1500 m.

15. *Coniophanes schmidti* Bailey, 1937. Occ. Pap. Mus. Zool., Univ. Michigan (362): 1–2.

Type: Holotype, UMMZ 73043, a 547 mm male (E. Creaser, 30 June 1932).
Type locality: "Chichen Itzá, Yucatán" [= Chichen-itza, Yucatán State, SE Mexico, 20°41'N, 88°34'W, elevation 35 m].
Distribution: Southeastern Mexico (Campeche, Chiapas, Quintana Roo, Yucatán), Guatemala (cen. Petén) and Belize (Cayo), NSL–600 m.
Sources: C.J. McCoy, 1969, Harrison, 1992, Lee, 1996, 2000 and J.A. Campbell, 1998b.

16. *Coniophanes taylori* Hall, 1951. Univ. Kansas Sci. Bull. 34(1), 208–211, pl. 24, figs. 1–2. (*Coniophanes piceivittis taylori*)

Type: Holotype, FMNH 100868 (formerly EHT-HMS 23523), a 340 mm male (E.H. Taylor, 1940).
Type locality: "Agua del Obispo, Gro." [= Agua del Obispo Hacienda, between Tierra Colorado and Chilpancingo, Guerrero State, W Mexico, 17°18'N, 99°28'W, elevation 915 m *fide* Mendelson et al., 2005: 12].
Distribution: Western Mexico (Guerrero), 915 m.
Remarks: Elevated to specific status by Flores-Villela & Smith, 2009.

†*CONIOPHIS* Marsh, 1892 (Alethinophidia *incertae sedis*)

Synonyms: †*Comophis* – Gowanloch *in* Gowanloch & Brown, 1943 *(nomen incorrectum)* and †*Henophis* J.G. Armstrong, 1976.
Type species: †*Coniophis precedens* Marsh, 1892.
Distribution: Middle Cretaceous of Sudan, upper Cretaceous of USA, Paleocene of Brazil, middle Paleocene of USA, middle Eocene of France and USA, and upper Eocene of France.
Sources: M.K. Hecht, 1959, Fox 1975, Holman, 1979b, 2000, Rage, 1984b, 1998, Bryant, 1989, J.D. Gardner & Cifelli, 1999, Gómez et al., 2008 and Longrich et al., 2012a–b.
Remarks: An undescribed species is known from Utah *fide* J.D. Gardner & Citelli (1999: 91–94). Possibly occurs in Canada and Bolivia. Sister group to all Serpentes *fide* Longrich et al. (2012a: 207).

1. †*Coniophis carinatus* M.K. Hecht *in* McGrew, 1959. Bull. Amer. Mus. Nat. Hist. 117(3): 138–139, pl. 52, figs. 1–5.

Type: Holotype, AMNH 3826, one middle trunk vertebra (P.O. McGrew & field crews, 1950–1952).
Type locality: "Locality 5, on the south side of Elk Mountain and Tabernacle Butte area at the northern end of the Green River Basin, about 15 miles from the southwest flank of the Wind River Mountains and 25 miles north of the village of Farson, in the southeast corner of Sublette County, Wyoming (T 27-29N, R 103-106W), [USA]; late Bridgerian, middle Eocene."
Distribution: Middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming, Colorado).

2. †*Coniophis cosgriffi* Armstrong-Ziegler, 1978. J. Paleont. 52(2): 480–482, figs. 1a–e.

Type: Holotype, MNA Pl. 1612, one trunk vertebra (J.G. Armstrong, 1974–1975).
Type locality: "MNA site A (= MNA 107) on the hogback South, 7 1/2' quadrangle, T26N, R16W (108°29'10"W Long., 36°29'10"N Lat.), (thirty miles southwest of Farmington, New Mexico; Fruitland formation, upper Campanian, upper Cretaceous."
Distribution: Upper Cretaceous (Maastrichtian, 65.5–72.1 mya and Campanian, 72.1–83.6 mya) of USA (Montana, New Mexico).
Source: J.D. Gardner & Citelli, 1999.

3. †*Coniophis dabiebus* Rage & Werner, 1999. Paleont. Afr. 35: 94–95, figs. 6–8.

Type: Holotype, TUB Vb-673, one middle trunk vertebra.
Type locality: "Wadi Abu Hashim, Sudan. Wadi Abu Hashim Member of Wadi Milk Formation; Cenomanian."
Distribution: Middle Cretaceous (Cenomanian: 93.9–100.5 mya) of Sudan. Known only from type locality.

4. †*Coniophis platycarinatus* M.K. Hecht *in* McGrew, 1959. Bull. Amer. Mus. Nat. Hist. 117(3): 139, pl. 53, figs. 1–2.

Type: Holotype, AMNH 3827, one middle trunk vertebra (P.O. McGrew and field crews, 1950–1952).
Type locality: "Locality 5, on the south side of Elk Mountain and Tabernacle Butte area at the northern end of the Green River Basin, about 15 miles from the southwest flank of the Wind River Mountains and 25 miles north of the village of Farson, in the southeast corner of Sublette County, Wyoming (T 27-29N, R 103-106W), [USA]; late Bridgerian, middle Eocene."
Distribution: Middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming). Known only from type locality.

5. †*Coniophis precedens* Marsh, 1892. Amer. J. Sci. (3) 43(257): 450, figs. 1a–e.

Type: Holotype, USNM 2134, one trunk vertebra (J.B. Hatcher, 1892).
Type locality: "Ceratops beds of Wyoming, Laramie Formation" [Peterson Quarry, Niobrara County, Wyoming (Lance formation, upper Maastrichtian, upper Cretaceous)].
Distribution: Upper Cretaceous (Maastrichtian: 65.5–72.1 mya) of USA (Montana, Wyoming), and possibly Canada (Alberta) and Brazil (Rio de Janeiro).
Sources: Gilmore, 1938, Fox, 1975 and Rage, 2011.
Remarks: Fox (1975: 1558–1560) described *Coniophis* cf. *precedens* from the upper Cretaceous (Campanian) of Alberta, Canada but Rage (1984b: 13) questioned the identification. Rage (2011: 62) listed *Coniophis cf. precedens* from Itaboraí, Rio de Janeiro, Brazil. Sister group to all Serpentes *fide* Longrich et al. (2012a: 207).

CONOPHIS W.C.H. Peters, 1860d (Xenodontidae)

Synonyms: *Eudromus* S.W. Garman, 1884, *Canophis* – Maass-Berlin, 1933 *(nomen incorrectum),* and *Whittonserpens* Hoser, 2012ai *(nomen illegitimum).*

Type species: *Conophis vittatus* W.C.H. Peters, 1860d.
Distribution: Mesoamerica.
Sources: H.M. Smith, 1941a, H.M. Smith & Taylor, 1945, Wellman, 1963, Cadle, 1984c, Villa et al., 1988 Zaher et al., 2009 and Vidal et al., 2010.

C

1. *Conophis lineatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 936–938, pl. 73, figs. 1–4. (*Tomodon lineatum*)

Synonyms: *Conophis vittatus* Cope, 1861e (*nec* Peters), *Conophis concolor* Cope, 1867b, *Conophis pulcher* Cope, 1869b, *Conophis pulcher similis* Bocourt, 1886 *in* A.H.A. Duméril, Bibron & Mocquard, 1870–1909, *Conophis lineaticeps* Cope, 1900 (*nomen substitutum*), *Conophis lineatus similis* H.M. Smith, 1941e, *Conophis lineatus dunni* H.M. Smith, 1942m, *Conophis pulcher plagosus* H.M. Smith, 1942m, and *Conophis morai* Pérez-Higareda, López-Luna & H.M. Smith, 2002.
Type: Lectotype, MNHN 3738, a 600 mm specimen (A. Ghiesbreght & F. Schlumberger), designated by Wellman (1963: 267).
Type locality: "Mexique" [= Mexico] via lectotype selection. Restricted to Veracruz, Mexico *fide* H.M. Smith & Taylor (1950: 351).
Distribution: Mesoamerica. Southern Mexico (Campeche, Chiapas, Jalisco, Oaxaca, Querétaro, Quintana Roo, Tabasco, Veracruz, Yucatán), Belize (Belize, Cayo), Guatemala (El Progreso, Huehuetenango, Jutiapa, Petén, Sacatepequez, Santa Rosa, Zacapa), El Salvador (Ahuachapán, Cabañas, Chalatenango, Cuscatlán, La Libertad, La Paz, La Unión, Morazán, San Miguel, San Salvador, Santa Ana, Sonsonate, Usulután), Honduras (Choluteca, Colón, Comayagua, Cortés, El Paraíso, Francisco Marazán, Gracias a Dios, Intibucá, Lempira, Vallé), W Nicaragua (Chinandega, Estelí, León, Managua, Masaya, Matagalpa) and Costa Rica (Alajuela, Guanacaste, Puntarenas, San José), NSL–1500 m.
Sources: Bocourt, 1886 *in* Duméril, Bocourt & Mocquard, 1870–1909, E.H. Taylor, 1951, L.D. Wilson & Meyer, 1985, Lee, 1996, 2000, Auth et al., 1998b, J.A. Campbell, 1998b, G. Köhler, 1999b, Stafford & Meyer, 2000, Savage, 2002, Barragan-Vázquez et al., 2004, G. Köhler et al., 2004, Solórzano, 2004 and McCranie, 2011a.
Remarks: *Conophis concolor* a valid species *fide* Pérez-Higareda et al. (2002: 31). Colombia record of Pérez-Santos & Moreno (1988: 129) in error *fide* Auth et al. (1998: 107).

2. *Conophis morai* Pérez-Higareda, López-Luna & Smith, 2002. Bull. Maryland Herp. Soc. 38(1): 27–31, figs. 1, 3–4.

Type: Holotype, UNAM-LT 3662, a 664 mm male (R. Mora, 12 April 1999).
Type locality: "Ejido Ruiz Cortines on the southeastern slope of San Martin Tuxla Volcano, 1050 m, southern Veracruz, México" [=Ejido Ruiz Cortines, SE Volcan San Martin Tuxtlas, S Veracruz State, SE Mexico, 18°32'N, 95°09'W, elevation 1050 m].
Distribution: Southeastern Mexico (S Veracruz), 200–1050 m.

3. *Conophis vittatus* W.C.H. Peters, 1860d. Mber. Königl. Akad. Wiss. Berlin 1860(10): 519–520, pl., figs. 3–3d.

Synonyms: *Conophis sumichrastii sumichrastii* Cope, 1875a, *Conophis sumichrasiti viduus* Cope, 1875a, and *Conophis vittatus videns* Cope, 1900.
Type: Holotype, ZMB 3819, a 555 mm male (Hamburg dealer).
Type locality: Unknown. Restricted to Acapulco, Guerrero, Mexico *fide* H.M. Smith (1941a: 119) and to Laguna Coyuca, Guerrero, Mexico *fide* H.M. Smith & Taylor (1950: 331).
Distribution: Southwestern Mexico (Chiapas, Colima, ? Durango, Guerrero, Jalisco, México, Michoacán, Morelos, Nayarit, Oaxaca, Puebla) and Guatemala (Huehuetenango), NSL–2000 m.
Sources: H.M. Smith et al., 1993, Benitez-Gálvez, 1997, Matias-Ferrer & Murillo, 2004a, N. Herrera et al., 2007 and Acevedo et al., 2011.
Remarks: Hamburg dealer who sold the type reported the boat originated from "Neu-Orleans im Mississippi." Durango, Mexico record needs confirmation *fide* Webb (2001: 159).

CONOPSIS A.C.L.G. Günther, 1858 (Colubridae)

Synonyms: *Toluca* Kennicott *in* Baird, 1859, *Achirhina* Jan, 1862b, *Epirhina* Jan, 1862b, *Exorhina* Jan, 1862b, *Oxyrhina* Jan, 1862b, *Oxyrrhina* – Troschel, 1863 *(nomen incorrectum), Ogmius* Cope, 1870 *(nomen substitutum), Oxyrrhina* Dugès, 1887 *(nomen emendatum), Ognius* – Ocaranza, 1930 *(nomen incorrectum), Agmius* – Ditmars, 1933 *(nomen incorrectum),* and *Conepsis* – W.W. Tanner & Avery, 1982 *(nomen incorrectum).*
Type species: *Conopsis nasus* A.C.L.G. Günther, 1858.
Distribution: Southern Mexico.
Sources: E.H. Taylor & Smith, 1942b, Bogert & Oliver, 1945, H.M. Smith & Laufe, 1945b, H.M. Smith & Taylor, 1945, Goyenechea, 1995 and Goyenechea & Flores-Villella, 2002, 2006.

1. *Conopsis acuta* (Cope *in* Ferrari-Pérez, 1886). Proc. U.S. Natl. Mus. 9(11): 189. (*Ogmius acutus*)

Type: Holotype, USNM 30552, a 249 mm specimen (A.-L.-J.-F. Sumichrast, 1855–1869).
Type locality: "Tuchitan, on the Pacific side of the isthmus of Tehuantepec" [= Juchitán, Oaxaca State, Mexico *fide* H.M. Smith & Taylor, 1950: 338] (in error

fide Goyenechea & Flores-Villela, 2006: 6). Restricted to 2 miles east of Ixtlán de Juárez, Oaxaca, Mexico *fide* Goyenechea & Flores-Villella (2006: 6), 17°20'N, 96°29'W, elevation 2100 m].

Distribution: Central Mexico (Guerrero, Oaxaca, Puebla, Veracruz), 1800–2660 m.

Sources: García-Vázquez et al., 2008a.

2. *Conopsis amphisticha* (H.M. Smith & Laufe, 1945b). Herpetologica 3(1): 5–10. (*Toluca amphisticha*)

Type: Holotype, USNM 120950, a 262 mm male (W.S. Miller, 15 March 1944).

Type locality: "Xuimygopk, 8,650 feet, about two-thirds of the distance from Ayutla to Cacalotepec, Oaxaca, Mexico."

Distribution: Southern Mexico (Oaxaca, Puebla), 1700–3080 m.

Source: Casas-Andreu et al., 1996.

3. *Conopsis biserialis* E.H. Taylor & Smith, 1942b. Univ. Kansas Sci. Bull. 28(15): 333–325, fig. 2, pl. 31, fig. 1, pl. 35, fig. 9.

Type: Holotype, FMNH 100062 (formerly EHT-HMS 23648 & EHT-CC x-2166), a 293 mm specimen (E.H. Taylor, 1940).

Type locality: "10 mi. west of Villa Victoria, México" [= 10 mi. W Villa Victoria, México State, cen. Mexico, ca. 19°25'N, 100°07'W, elevation 2600 m].

Distribution: Central and S Mexico (Chiapas, Colima, Distrito Federal, Guanajuato, Guerrero, Hidalgo, Jalisco, México, E Michoacán, Morelos, Puebla, Querétaro, Tlaxcala), 1900–2600 m.

Sources: Reyes-Velasco et al., 2009 and Canseco-Márquez & Gutiérrez-Mayén, 2010.

4. *Conopsis lineata* (Kennicott *in* Baird, 1859a). U.S.-Mex. Bound. Surv., Rept. (1858) 2(2): 23, pl. 21, fig. 2. (*Toluca lineata*)

Synonyms: *Stenorrhina defilippii* Jan, 1857 *(nomen nudum), Stenorrhina varians* Jan, 1857 *(nomen nudum), Oxyrhina defilippii* Jan, 1862b, *Oxyrhina varians* Jan, 1862b, and *Chionactis diasii* Cope *in* Ferrari-Pérez, 1886.

Type: Holotype, USNM 2103 (J. Potts, 1848–1855).

Type locality: "Valley of Mexico."

Distribution: Central and S Mexico (District Federal, Guanajuato, ?Guerrero, Hidalgo, Jalisco, México, cen. Michoacán, Morelos, Oaxaca, Puebla, Querétaro, S San Luis Potosí, Tlaxcala, cen. Veracruz, Zacatecas), 1750–3100 m.

Sources: Casas-Andreu et al., 1996, Benitez-Gálvez, 1997 and Carbajal-Márquez et al., 2012.

5. *Conopsis megalodon* (E.H. Taylor & Smith, 1942b). Univ. Kansas Sci. Bull. 28(15): 338–339, fig. 4, pl. 30, fig. 1, pl. 35, fig. 1. (*Toluca megalodon*)

Synonym: *Toluca conica* E.H. Taylor & Smith, 1942b.

Type: Holotype, UIMNH 25077 (formerly EHT-HMS 23640 & EHT-CC x-2162), a 251 mm specimen (E.H. Taylor, 10 July 1940).

Type locality: "summit of Cerro San Felipe, Oaxaca, Oaxaca" [= Cerro San Felipe, Benito Juárez National Park, cen. Oaxaca State, Mexico, 17°10'N, 96°41'W, elevation 3050 m].

Distribution: Southwestern Mexico (cen. Guerrero, Oaxaca), 2200–3050 m.

Sources: Casas-Andreu et al., 1996 and Canseco-Márquez & Gutiérrez-Mayén, 2010 .

6. *Conopsis nasus* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 6–7.

Synonyms: *Oxyrhina maculata* Jan, 1862b, *Epirhina tessellata* Jan, 1862b, *Oxyrrhina maculata anomala* Dugès, 1869, *Conopsis nasus heliae* Cuesta-Terron, 1930, *Conopsis nasus labialis* W.W. Tanner, 1961, and *Gyalopion atavus* Leviton & Banta, 1961.

Type: Neotype, BMNH 1883.4.16.38, a 295 mm male (A. Forrer, 16 April 1883), designated by Goyenechea & Flores-Villela (2000: 286).

Type locality: "Milpas, Durango, Mexico" [= Milpas, Durango State, NW Mexico, 24°00'N, 104°38'W, elevation 1885 m] via neotype selection.

Distribution: Northern Mexico (Aguascalientes, S Chihuahua, Distrito Federal, Durango, Guanajuato, Hidalgo, Jalisco, México, Michoacán, Oaxaco, Puebla, Querétaro, San Luis Potosí, E Sinaloa, Zacatecas), 1515–2950 m.

Sources: W.W. Tanner, 1961, J.D. Johnson, 1978a, Benitez-Gálvez, 1997 and McCranie & Wilson, 2001b.

Remarks: Holotype in BMNH lost *fide* Goyenechea & Flores-Villela (2000: 285). Photograph of neotype in Goyenechea & Flores-Villela (2000: fig. 1).

CONTIA Baird & Girard, 1853 (Carphophiidae)

Synonym: *Lodia* Baird & Girard, 1853.

Type species: *Calamaria tenuis* Baird & Girard, 1852c.

Distribution: Extreme W USA and Canada.

Sources: W.W. Tanner, 1967, Nussbaum et al., 1983, Cadle, 1984c, Stebbins, 1985, H.A. Brown et al., 1995, P.R. Brown, 1997, Leonard & Ovaska, 1998, Bartlett & Tennant, 2000, Feldman & Spicer, 2002, Pinou et al., 2004, Zaher et al., 2009 and Feldman & Hoyer, 2010.

Remarks: A distinct population may exist in the southern Sierra Nevadas of California (Tulare Co.) *fide* Feldman & Hoyer (2010: 262).

C

1. *Contia longicaudae* Feldman & Hoyer, 2010. Copeia 2010(2): 257–261, fig. 4.

Type: Holotype, CAS 231505, a 343 mm female (R.F. Hoyer, 7 July 1998).
Type locality: "California, Mendocino County, 8.6 km E of junction with Highway 1 via State Route 128, 39°10'18"N, 123°39'48"W, 5 m elevation."
Distribution: Northwestern USA (NW California, SW Oregon), NSL–80 m.
Source: Norman et al., 2012.

2. *Contia tenuis* (Baird & Girard, 1852c). Proc. Acad. Nat. Sci. Philadelphia 6(5): 176. (*Calamaria tenuis*)

Synonyms: *Contia mitis* Baird & Girard, 1853, and *Ablabes purpureocauda* A.C.L.G. Günther, 1858.
Type: Holotype, USNM 7289, ca 200 mm specimen (C. Wilkes [U.S. Explor. Exped.], 19–24 June 1841).
Type locality: "Puget Sound" [Washington, USA]. Restricted to vicinity of Gravelly Lake/Chambers Creek, Pierce County, Washington, USA *fide* Leonard & Ovaslea (1998: 4).
Distribution: Extreme SW Canada (SW British Columbia, S Vancouver, South Pender Is.) and W USA (N California, W Oregon, cen. Washington), NSL–2010 m.
Sources: Blaustein et al., 1995, Hoyer, 2001 and Feldman & Spicer, 2002.

†*COPROPHIS* Parris & Holman, 1978 (Alethinophidia *incertae sedis*)

Type species: †*Coprophis dakotaensis* Parris & Holman, 1978.
Distribution: Middle Oligocene of USA.
Sources: Parris & Holman, 1978 and Holman, 2000a.
Remarks: Possibly a member of the Booidea or Anilioidea *fide* Rage (1984b: 58).

1. †*Coprophis dakotaensis* Parris & Holman, 1978. Herpetologica 34(3): 259–260, figs. 1a–b.

Type: Holotype, PU 20732A, one trunk vertebra, (South Dakota School Mines & Tech., before 1969).
Type locality: "Big Badlands of South Dakota, Pennington and Shannon counties, USA; Scenic Member of the Brule Formation, Orellan Age, (approximate Middle Oligcene)."
Distribution: Lower Oligocene (Orellean: 33.3–33.9 mya) of USA (South Dakota). Known only from type locality.

CORALLUS Daudin, 1803b (Boidae)

Synonyms: *Caramus* Rafinesque-Schmaltz, 1815 (*nomen substitutum), Xiphosoma* Wagler *in* Spix, 1824, *Xyphosoma* Gray, 1825 *(nomen emendatum), Xiphophosoma* Schinz, 1833 *(nomen emendatum), Xiphosoma* Gray, 1842a *(nomen praeoccupatum), Xiphosoma* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen praeoccupatum), Chrysenis* Gray, 1860a, *Diphosoma* – A.C.L.G. Günther, 1895 *in* 1885–1902 *(nomen incorrectum), Xenoboa* Hoge, 1954, *Corollus* – D.E. Willard, 1977 *(nomen incorrectum),* and *Corallis* – Pinney, 1981 *(nomen incorrectum).*
Type species: *Boa hortulana* Linnaeus, 1758.
Distribution: Lower Central America, Amazonia and Lesser Antilles.
Sources: Stull, 1935, Carrillo de Espinoza, 1966, Roze, 1966a, Stimson, 1969, J.A. Peters & Orejas-Miranda, 1970, Matz & Matz, 1973, McDowell, 1975a, Chippaux, 1987, Dixon & Soini, 1986, Lancini, 1986, Pérez-Santos & Moreno, 1988, 1991, R.W. 2. *Corallus batesii* (Gray. 1860a). Proc. Zool. Soc. London 28(1): 132. (*Chrysenis batesii*)

Type: Holotype, BMNH 1859.12.28.12, a juvenile (H.W. Bates, May 1850–Dec. 1851, June–Nov. 1852, Sept.–Dec. 1854, June–Sept. 1855 or May 1856–Jan. 1858).
Type locality: "Upper Amazon" [= upper Amazon River, Amazonas State, NW Brazil]. Restricted to the Río Amazonas west of the Rio Negro *fide* Henderson et al. (2009: 575).
Distribution: Amazonia. Colombia (E Amazonas, Antioquia, Boyacá, Caldas, Córdoba, Meta), E

Ecuador (Napo), N Brazil (Acre, Amazonas, Goias, Mato Grosso, Maranhao, Pará, Rondônia, Roraima), E Peru (Amazonas, Cajamarca, Huánuco, Junín, Loreto, Madre de Díos, Pasco) and N Bolivia (Beni, La Paz), 10–1000 m.

Source: Henderson et al., 2009.

3. *Corallus blombergi* (Rendahl & Vestergren, 1941). Arkiv Zool. 33A(5): 1–2, figs. 6–7. (*Boa annulata blombergi*)

Type: Holotype, NRS 3141, a 1320 mm specimen (R. Blomberg, 1937).

Type locality: "Rio Zamora, a tributary of the Rio Santiago, eastern Ecuador" [= Morona-Santiago Prov.] (probably in error *fide* Henderson et al., 2001: 43).

Distribution: Western Ecuador (Esmeraldas, Guayas, Los Ríos), NSL–200 m.

Source: Henderson et al., 2001.

4. *Corallus caninus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 215. (*Boa canina*)

Synonyms: *Boa hipnale* Linnaeus, 1758, *Boa aurantiaca* Laurenti, 1768, *Boa exigua* Laurenti, 1768 (*nomen substitutum*), *Boa thalassina* Laurenti, 1768 (*nomen substitutum*), *Boa bojobi* Lacépède, 1789 (*nomen rejiciendum*), *Boa isebequensis* Bonnaterre, 1790, *Boa flavicans* Suckow, 1797, *Boa hipnale* G. Shaw, 1802, *Xiphosoma araramboya* Wagler *in* Spix, 1824, and *Xiphosoma caninum* A.-M.-C. Duméril & Bibron, 1844.

Type: Lectotype, NHR Lin-8 (formerly MAFR), a 1440 mm specimen, designated by Stimson (1969: 10).

Type locality: "America" via lectotype selection.

Distribution: Northern South America. Eastern Venezuela (Amazonas, Bolívar, Monagas), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Brokopondo, Para, Saramacca, Sipaliwini, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni) and NE Brazil (Amapá, Amazonas, Pará, Roraima), NSL–1000 m.

Cole et al., 2013.

Remarks: A complex of multiple, undescribed species *fide* Vidal et al. (2005: 502).

5. *Corallus cookii* Gray, 1842a. Zool. Misc. 2(Mar.): 42.

Synonym: *Corallus hortulanus melanea* Gray, 1849a.

Type: Holotype, BMNH 1946.1.1.50 (formerly BMNH IV.8.1d), an 861 mm male (E. Cook).

Type locality: "America," (in error). Corrected to West Indies *fide* Gray (1849a: 98). Restricted to St. Vincent, Lesser Antilles *fide* Henderson (1997: 207).

Distribution: Lesser Antilles. Saint Vincent and the Grenadines (St Vincent), 70–500 m.

Sources: Tolson & R.W. Henderson, 1993, R.W. Henderson, 2002, Beddard, 2008 and R.W. Henderson & Powell, 2009.

6. *Corallus cropanii* (Hoge, 1954b). Mem. Inst. Butantan (1953) 25(1): 27–28, figs. 1–5, col. pl. (*Xenoboa cropanii*)

Type: Holotype, IB 15200, a 1113–1275 mm male (J. Santos), destroyed by fire 15 May 2010.

Type locality: "Miracatu, State of São Paulo, Brazil" [= Miracatu, Vale do Ribeira, São Paulo State, SE Brazil, 24°17'S, 47°28'W, elevation 50 m].

Distribution: Southeastern Brazil (São Paulo), NSL–60 m.

Sources: Amaral, 1978, Kluge, 1991, R.W. Henderson & Puorto, 1993, Pizzatto et al., 2007 and Machado-Filho et al., 2011.

Remarks: Photograph of the holotype in Machado-Filho et al. (2011: fig. 1).

7. *Corallus grenadensis* (T. Barbour, 1914a). Mem. Mus. Comp. Zool. 44: 327. (*Boa grenadensis*)

Type: Holotype MCZ 7791, an 1170 mm male (G.M. Allen, 20 Aug. 1910).

Type locality: "St. George's, Grenada."

Distribution: Lesser Antilles (Baliceaux, Bequia, Canouan, Carriacou, Grenada, Ile Quatre, Mayreau, Mustique, Union), NSL–520 m.

Sources: R.W. Henderson, 2002 and R.W. Henderson & Powell, 2009.

8. *Corallus hortulanus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 215–216. (*Boa hortulana*)

Synonyms: *Boa enydris* Linnaeus, 1758, *Vipera bitis* Laurenti, 1768, *Vipera madarensis* Laurenti, 1768, *Boa ambleocephala* Donndorff, 1798, *Boa merremi* J.G. Schneider, 1801, *Boa annulata* G. Guo & Wang, 2011, Sumontha et al., 2011 and Hoser, 2012d, o.

1. *Craspedocephalus andalasensis* (David, Vogel, Vijayakumar & Vidal, 2006). Zootaxa (1293): 55–64, figs. 23–26. (*Trimeresurus andalasensis*)

Type: Holotype, SMF 22429, a 442 mm male (H.R. Roomaker, 1929).

Type locality: “Nord-Sumatra, Atjeh, Tawar-See, Takengon, 1200 m ü. NN Lake Tawar, Takengon, Aceh Province, Sumatra Island, Indonesia, 1200 msl.”

Distribution: Western Indonesia (N Sumatra), 500–1200 m.

Sources: David & Vogel, 1997 and I. Das, 2010, 2012.

2. *Craspedocephalus borneensis* (W.C.H. Peters, 1872d). Ann. Mus. Civ. Stor. Nat. Genova 3: 41–42. (*Atropophis borneensis*)

Synonym: *Bothrops sandakanensis* Lidth de Jeude, 1893.

Types: Syntypes (3), ZMB 7146 (R. Abendroth) and MSNG CE 8383a–b (G. Doria and O. Beccari, 1865–1868).

Type locality: “Sarawack auf Borneo” [= Sarawak, East Malaysia].

Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and cen. Indonesia (Kalimantan), NSL–1200 m.

Sources: Hoge & Romano-Hoge, 1975a, Toriba, 1992b, David & Vogel, 1996, Manthey & Grossmann, 1997, Steubing & Inger, 1999, Ziegler et al., 2001, Malkmus et al., 2002, David et al., 2006 and I. Das, 2007b, 2010, 2012.

Remarks: Previously a synonym of *T. puniceus* but a valid species *fide* David & Gernot (1996: 160).

3. *Craspedocephalus brongersmai* (Hoge, 1969d). Cienc. Cult. (1967) 21(2): 459–460. (*Trimeresurus brongersmai*)

C

Type: Holotype, RMNH 5654A, a 406 mm male (E. Jacobson, April 1913).

Type locality: “Lugu, Simeulue, Sumatra” [= Lugu, Simeulue Is. off W coast of Sumatra, Indonesia].

Distribution: Western Indonesia (Mentawai Arch.: Siberut and Simeulue).

Sources: Hoge & Romano-Hoge, 1975a, David et al., 2006 and I. Das, 2010, 2012.

Remarks: Possibly occurs on Nias and Batu Is. *fide* David et al. (2006: 68).

4. *Craspedocephalus gramineus* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 420–421. (*Coluber gramineus*)

Synonyms: *Coluber viridis* Bechstein, 1802, *Vipera viridis* Daudin, 1803c, *Trigonocephalus fario* Jan, 1859b (*nomen nudum*), *Colubar gramineus* – F. Mason, 1860 *(nomen incorrectum), Bothrops viridis fario* Jan, 1863b *(nomen nudum), Bothrops viridis genei* Jan, 1863b (*nomen nudum*), and *Trimeresurus occidentalis* C.H. Pope & Pope, 1933,

Type: Holotype, not designated, a 762 mm specimen described and illustrated in P. Russell (1796: 13–14, pl. 9) (native, Oct. 1788), location unknown.

Type locality: “hills in the vicinity of Vizagapatam, coast of Coromandel, India” [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41’N, 83°13’E].

Distribution: Southern India (Andhra Pradesh, Goa, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, ? West Bengal), NSL–400+ m.

Sources: Wall, 1905g, Stejneger, 1927, C.H. Pope & Pope, 1933, Bergman, 1961b, Regenass & Kramer, 1981, David & Vogel, 1998, McDiarmid et al., 1999, Whitaker & Captain, 2004, N. Khaire, 2006 and David et al., 2011c.

Remarks: Type locality in error *fide* Hoge & Romano-Hoge (1981: 257–258), who suggested Java, Indonesia was more accurate.

5. *Craspedocephalus malabaricus* (Jerdon, 1854). J. Asiat. Soc. Bengal (1853) 22(6): 523. (*Trigonocephalus* [*Cophias*] *malabaricus*)

Synonyms: *Trigonocephalus wardii* Jerdon, 1854, *Trimeresurus anamallensis* A.C.L.G. Günther, 1864a, and *Lachesis coorgensis* C. Rao, 1917.

Types: Syntypes (?), longest syntype 600 mm, lost *fide* M.A. Smith (1943: 513).

Type locality: "West Coast, Peninsula of India" [= SW India]. Restricted to Western Ghats, SW India *fide* M.A. Smith (1943: 513).

Distribution: Southwestern India (Western Ghats of Karanataka, Kerala, Maharashtra, Tamil Nadu), 500–2135 m.

Sources: Regenass & Kramer, 1981, Inger et al., 1984, Malhotra & Davis, 1991, David & Vogel, 1998, Whitaker & Captain, 2004, N. Khaire, 2006, Hutton & David, 2009 and Chandramouli & Ganesh, 2010.

Remarks: Types not in BMNH *fide* M. Lang *(in litt.).* Syntypes of *T. anamallensis* BMNH 1946.1.18.73–74, BMNH 1946.1.19.82, BMNH 1946.1.19.89, BMNH 1946.1.19.93–95, and BMNH 1946.1.20.3.

6. *Craspedocephalus puniceus* Kuhl, 1824. Bull. Sci. Nat. Géol., Paris 2: 80.

Synonyms: *Vipera punicea* H. Boie *in* Schlegel, 1826a *(nomen nudum), Vipera punicea* Schlegel, 1826b *(nomen nudum), Cophias punicea* – F. Boie, 1827, and *Atropos acontia* Gray, 1842b.

Types: Syntypes (3), RMNH 1557 and RMNH 1558a–b, three females (H. Boie & H.C. Macklot, Dec. 1820–Sept. 1823).

Type locality: "Java" [SW Indonesia].

Distribution: Western Indonesia (Java, Mentawai Arch., Simeulue, S Sumatra, Tinjil), 500–1600 m.

Sources: M.A. Smith, 1928a, Hoge & Romano-Hoge, 1976, Tweedie, 1983, M.J. Cox, 1991b, Nutaphand et al., 1991, Toriba, 1992b, Hodges, 1993, David & Vogel, 1996, Inger & Tan Fui Lian, 1996, M.J. Cox et al., 1998, Ziegler et al., 2001, Ryabov et al., 2002, David et al., 2006 and I. Das, 2010, 2012.

Remarks: Photographs of a syntype in David et al. (2006: figs. 5–6). David et al. (2006: 33–37) identified a closely related but possibly undescribed species from cen. Sumatra (including Mentawai, Natuna and Anambas Is.).

7. *Craspedocephalus rubeus* (Malhotra, Thorpe, Mrinalini & Stuart, 2011). Zootaxa (2757): 9–14, fig. 5. (*Cryptelytrops rubeus*)

Type: Holotype, FMNH 262718, a 590 mm female (B.L. Stuart, K. Sok and T. Neang, 1 Nov. 2003).

Type locality: "O Kamen Stream, Seima Biodiversity Conservation Area (formerly part of Samling Logging Concession), O'Rang District, Mondolkiri Province, Cambodia (12.326 N, 107.092 E), 500 m elevation."

Distribution: Eastern Cambodia (Mondolkiri) and S Vietnam (Bien Hoa, Cu Chi, Ho Chi Minh City), NSL–500 m.

8. *Craspedocephalus strigatus* (Gray, 1842b). Zool. Misc. 2(Mar.): 49. (*Trimeresurus strigatus*) *(nomen corrigendum)*

Synonyms: *Trimesurus strigatus* Gray, 1842b *(nomen incorrigendum), Atropos darwinii* A.-M.-C. Duméril, 1853 *(nomen nudum), Atropos darwini* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Trigonocephalus neelgherriensis* Jerdon, 1854, *Trimesurus neilgherriensis* Beddome, 1862 *(nomen emendatum), Trimeresurus strigolus* – Theobald, 1868b *(nomen incorrectum), Trigonocephalus nilghiriensis* Theobald, 1876 *(nomen emendatum),* and *Trimeresurus strigatus* – Theobald, 1876 *(nomen corrigendum).*

Types: Syntypes (2), BMNH 1946.1.18.78–79 (formerly AMSC & BMNH I.2.3a–b).

Type locality: "Cape of Good Hope?" [= South Africa] (in error) and "Madras?" [= India].

Distribution: Southwestern India (Western Ghats of Kerala, Tamil Nadu), 915–2400 m.

Sources: David & Vogel, 1998 and Whitaker & Captain, 2004.

Remarks: A.F. Stimson doubted that BMNH 1946.1.18.78–79 were types in 1977 note in BMNH catalogue *fide* M. Lang *(in litt.)*, supported by the fact that the collection probably decayed or was destroyed *fide* R. Prys-Jones *in* Alström & Olsson (1999: 549). A member of *Protobothrops fide* Krauss et al. 1996: 769) but a valid *Trimeresurus fide* Herrmann et al. (2004b: 219).

9. *Craspedocephalus trigonocephalus* (Donndorff, 1798). Zool. Beytr. Linn. Natursyst. 3: 203. (*Coluber trigonocephalus*) *(nomen substitutum)*

Synonyms: *Coluber capite-triangulatus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber capitetriangulatus* Bonnaterre, 1790, *Vipera trigonocephala* – Latreille in Sonnini & Latreille, 1801a, *Trigonocephalus nigromarginatus* Kuhl, 1820, *Trigonocephalus sagittiformis* Schinz, 1822 *(nomen substitutum),* and *Megaera olivacea* Gray, 1842b.

Type: Holotype, not designated, a male specimen based upon Lacépède (1789: 132, pl. 5, fig. 2) (King of France's cabinet), location unknown.

Type locality: "Africae regno Whida" [= Kingdom of Whydah, West Africa] (in error). Correctly designated as l'Isle Saint-Eustache [= Sri Lanka] *fide* Lacépède (1789: 132).

Distribution: Sri Lanka (North-Central, North-Western, Sabaragamuwa, Southern, Uva), NSL–1800 m.

Sources: Deraniyagala, 1955, Hoge & Romano-Hoge, 1981a, P.H. Silva, 1980a, A. Silva, 1990a–b, 2001, 2009, Nanayakkara, 1994, Malhotra & Thorpe, 1997, David & Vogel, 1998, McDiarmid et al., 1999 and Somaweera, 2006.

10. *Craspedocephalus wiroti* (Klemmer *in* Trutnau, 1981). Schlangen 2: 188, fig. 43. (*Trimeresurus wiroti*)

Type: Holotype, SMF 69695, a 285 mm male (W. Nutaphand, 20 June 1979).

Type locality: "100–150 km südlich von Surat Thani (Süd-Thailand) an den Hängen des Khao Luang zwischen Amphoe Thung Son und Amphoe Chawang (Provinz Nakhon Si Thammarat)…auf dem Khao Wang Hip in Höhenlagen zwischen 500 und 1196 m bei den aus etwa 10–12 Bambushütten bestehenden Ortschaften Ban Hui Hip und Amphoe Lan Saka" [= vicinity of villages Ban Hui Hip and Amphoe Lan Saka, Khao Wang Hip mtns., Nakhon Si Thammarat Prov., S Thailand, approximately 8°18'N, 99°43'E, elevation 1050 m].

Distribution: Malay Peninsula. Southern Thailand (Krabi, Nakhon Si Thammarat, Narathiwat, Surat Thani, Trang) and West Malaysia (Johore, Pahang, Perak, Selangor), 500–1195 m.

Sources: Tweedie, 1983, Nutaphand et al., 1991, Toriba, 1992, I. Das, 2010, 2012 and Grismer et al., 2010.

Remarks: Nutaphand et al. (1991: 151) listed type as female. A valid species *fide* David et al. (2006: 45).

CRISANTOPHIS Villa, 1971b (Dipsadidae)

Type species: *Conophis nevermanni* Dunn, 1937b.

Distribution: Central America.

Sources: Wellman, 1963, Villa, 1971b, 1988a, L.D. Wilson & Meyer, 1985, Villa et al., 1988, Savage, 2002, Solórzano, 2004, G. Köhler et al., 2005, Zaher et al., 2009, Vidal et al., 2010 and McCranie, 2011a.

1. *Crisantophis nevermanni* (Dunn, 1937b). Copeia 1937(4): 214. (*Conophis nevermanni*)

Type: Holotype, ANSP 22423, a 470 mm female (M. Valerio, 1927–1933).

Type locality: "Rio Poas de Aserri (a few miles south of San José), Costa Rica."

Distribution: Central America. Southwestern Guatemala, El Salvador (San Miguel), ext. S Honduras (Choluteca, Vallé), W Nicaragua (Chinandega, Chontales, Grenada, Jinotega, León, Managua, Matagalpa, Rivas) and NW Costa Rica (Guanacaste, San José), NSL–1395 m.

CROTALUS Linnaeus, 1758 (Viperidae)

Synonyms: *Crotalophorus* Gronovius, 1763 (*nomen illegitimum*), *Crotalophorus* Houttuyn, 1764, *Caudisona* Laurenti, 1768, *Crotalinus* Rafinesque-Schmaltz, 1815 (*nomen emendatum), Crotalurus* Rafinesque-Schmaltz, 1820 (*nomen emendatum), Crotulurus* – Rafinesque-Schmaltz, 1820 *(nomen incorrectum), Uropsophus* Wagler, 1830, *Crotalis* – Duvernoy, 1833 *(nomen incorrectum), Urocrotalon* Fitzinger, 1843, *Urocrotalum* Agassiz, 1847 *(nomen emendatum), Candisoma* – Chenu & Desmarest, 1857 *(nomen incorrectum), Uropscephus* Chenu & Desmarest, 1857 *(nomen incorrectum), Campilodon* Jan, 1861c *(nomen emendatum), Aploaspis* Cope, 1867a, *Uropsaphus* – Gigliloi, 1873 *(nomen incorrectum), Aechmophrys* Coues *in* Wheeler, 1875, *Aploaspsis* – Yarrow, 1875 *(nomen incorrectum), Haploaspis* Cope, 1883d *(nomen emendatum), Caudisoma* – Hoffmann, 1890 *(nomen emendatum), Uropsopus* – Cope, 1894c *(nomen incorrectum), Crotallus* – Phisalix, 1922 *(nomen incorrectum), Paracrotalus* A.F.T. Reuss, 1930c *(nomen substitutum), Candisona* – Haltom, 1931, *Crotalux* – H.W. Parker & Grandison, 1977 *(nomen incorrectum), Aploapis* – Hoge & Romano-Hoge, 1981 *(nomen incorrectum), Haploapis* – Hoge & Romano-Hoge, 1981 *(nomen incorrectum), Uropsophys* – Hoge & Romano-Hoge, 1981 *(nomen incorrectum), Crotulus* – Kundert, 1984 *(nomen incorrectum), Cottonus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Crutchfieldus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Cummingea* Hoser, 2009d & 2012f (*nomen illegitimum*), *Edwardsus* Hoser, 2009d & 2012f (*nomen illigitimum*), *Hoserea* Hoser, 2009d & 2012f (*nomen illegitimum*), *Matteoea* Hoser, 2009d & 2012f (*nomen illegitimum*), *Mullinsus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Piersonus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Pillotus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Sayersus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Smythus* Hoser, 2009d & 2012f (*nomen illegitimum*), *Piersonius* Hoser, 2012f *(nomen illegitimum)* and *Rattlewellsus* Hoser, 2012f *(nomen illegitimum).*

Type species: *Crotalus horridus* Linnaeus, 1758.

Distribution: North America and Latin America.

Fossil records: Upper Miocene to upper Pleistocene of USA and Pleistocene of Mexico. Fossils unassigned to species include upper Miocene (Clarendonian) of USA (Nebraska), upper Pliocene (Blancan) of USA (Washington), lower/middle Pleistocene (Irvingtonian I) of USA (Texas), and upper Pleistocene (Rancholabrean II) of USA (Utah).

Sources: Klauber, 1936b–c, 1937a, 1938, 1939a, 1940d, 1952, 1956a, 1972, 1997, Gloyd, 1940, A.H. Wright & Wright, 1957, Brattstrom, 1964, Hoge, 1966a, Harris & Simmons, 1977, 1978a–b, B. Armstrong & Murphy, 1979, Hoge & Romano-Hoge, 1981a, Stebbins, 1985, 2003, Stille, 1987, J.A. Campbell & Lamar, 1989, 2004, Maes, 1989, Minton, 1992, Golay et al., 1993, Knight et al., 1993, Ulber, 1993, Holman, 1995a, 2000a, Parmley & Holman, 1995, Kraus et al., 1996, Rubio, 1998, 2010, David & Ineich, 1999, McDiarmid et al., 1999, Bartlett & Tennant, 2000a, Bushar et al., 2001 and R.W. Murphy, 2002, Parmley & Walker, 2003, Castoe & Parkinson, 2006, Valencia-Hernández, 2006, Beaman

& Hayes, 2008, W.K. Hayes et al., 2008, Hoser, 2009d, 2012d, f, Hubbs & O'Connor, 2009, Parmley & Hunter, 2010 and Ernst & Ernst, 2012.

Remarks: Official Generic Name *fide* Opinion 18 (ICZN, 1926).

1. *Crotalus abyssus* Klauber, 1930b. Trans. San Diego Soc. Nat. Hist. 6(3): 114–117, pl. 11, fig. 1. (*Crotalus confluentus abyssus*)

Type: Holotype, SDSNH 2216 (formerly LMK 2216), a 905 mm male (E.D. McKee, 15 Sept. 1929).

Type locality: "Tanner Trail 300 ft. below the south rim of the Grand Canyon, Coconino County, Arizona.; altitude approximately 7000 ft." [= USA, elevation 2135 m].

Distribution: Southwestern USA (N Arizona), 1220–2135 m.

Sources: Fowlie, 1965 and Pook et al., 2000.

Remarks: A valid species *fide* Douglas et al. (2008: 38).

2. *Crotalus adamanteus* Palisot de Beauvois, 1799. Trans. Amer. Phil. Soc. 4(42): 368–369, fig. 2.

Synonyms: *Crotalus rhombifer* Latreille *in* Sonnini & Latreille, 1801a, *Crotalus rhombiferus* Brickell, 1805, †*Crotalus adamanteus pleistofloridensis* Brattstrom, 1954, and †*Crotalus giganteus* Brattstrom, 1954.

Type: Holotype, not designated (A.M.F.J. Palisot de Beauvois, summer, 1796), lost *fide* Gillispie (1992: 40).

Type locality: "southern parts of the United States" [= SE USA]. Restricted to Charleston, South Carolina *fide* K.P. Schmidt (1953a: 230).

Distribution: Southeast USA (S Alabama, Florida, Florida Keys, S Georgia, ext. SE Louisiana, ext. S Mississippi, SE North Carolina, E South Carolina), NSL–500 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida) and upper Pleistocene (Rancholabrean II) of USA (Florida).

Sources: Christman, 1980, McCranie, 1980a, Ernst & Barbour, 1989, Conant & Collins, 1991, Palmer & Braswell, 1995, Tennant, 1997, Holman, 2000a and W.H. Martin, 2000.

Remarks: Palisot's entire American collection lost in shipwreck off Halifax, Nova Scotia in 1798 as he returned to Europe (Gillispie, 1992). Extirpated in many parts of Distribution.

3. *Crotalus aquilus* Klauber, 1952. Bull. Zool. Soc. San Diego (26): 24–25, fig. 2. (*Crotalus triseriatus aquilus*)

Synonym: *Crotalus triseriatus quandrangularis* Harris & Simmons, 1978b.

Type: Holotype, MCZ 27843, a 543 mm female (W.W. Brown, 1923).

Type locality: "near Alvarez, San Luis Potosí, Mexico" [= 22°02'N, 100°36'W, elevation 2350 m].

Distribution: Central Mexico (Aguascalientes, Guanajuato, Hidalgo, Jalisco, México, NE Michoacán, Querétaro, S San Luis Potosí, NW Veracruz), 1600–3110 m.

Sources: Dorcas, 1991, 1992, McCranie & Wilson, 2001b, Bryson et al., 2011 and Reyes-Velasco et al., 2012.

4. *Crotalus atrox* Baird & Girard, 1853. Cat. No. Amer. Rept., Serp. 1: 5–6.

Synonyms: *Crotalus cinereous* LeConte *in* Hallowell, 1852a *(nomen rejiciendum), Caudisona atrox sonoraensis* Kennicott, 1861, *Crotalus tortugensis* Van Denburgh & Slevin, 1921b, and *Crotalus tortuguensis* Hoge & Romano-Hoge, 1971 *(nomen emendatum).*

Type: Holotype, USNM 7761, an 838 mm specimen (J.H. Clark [U.S.-Mex. Bound. Surv.], 1850–1852, via J.D. Graham).

Type locality: "Indianola" [Calhoun County, SE Texas, USA, 28°31'N, 96°19'W, elevation NSL].

Distribution: Southwestern USA (S Arizona, W Arkansas, ext. SE California, S Kansas [possibly introduced], ext. S Nevada, New Mexico, Oklahoma, cen. & W Texas) and N Mexico (ext. NE Baja California Norte, Chihuahua, Coahuila, Durango, ? Guanajuato, Hidalgo, México, Nuevo León, SE Oaxaca, Querétaro, San Luis Potosí, N Sinaloa, Sonora, Tamaulipas, Veracruz, Zacatecas, Tiburón, Tortuga, Turner and San Pedro Martir Is.), NSL–2440 m.

Fossil records: Middle Pliocene (Blancan III) of USA (Texas), middle/upper Pleistocene (Irvingtonian II) of USA (Texas), and upper Pleistocene (Rancholabrean II) of USA (Arizona, California, Nevada, New Mexico, Texas).

Sources: Stejneger, 1940, Klauber, 1927, 1930b, Stebbins, 1985, Van Devender & Bradley, 1994, Degenhardt et al., 1996, P.R. Brown, 1997, Bartlett & Tennant, 2000, Holman, 2000a, Werler & Dixon, 2000, Grismer, 2002, Matlock & Rehmeier, 2002, Gumprecht, 2008, Matias-Ferrer & Murillo, 2004b, Trauth et al., 2004 and Castoe et al., 2007b.

Remarks: Official Specific Name no. 505 *fide* Opinion 365 (ICZN, 1955c).

5. *Crotalus basiliscus* (Cope, 1864). Proc. Acad. Nat. Sci. Philadelphia 16(3): 166. (*Caudisona basilisca*)

Type: Holotype, USNM 53586 (formerly SIM 6118), skin of a 1260 mm specimen (J. Xantus, 1859–1861).

Type locality: "Near Colima, Mexico." Restricted to Colima, Colima, Mexico [= 19°15'N, 103°43'W, elevation 490 m] *fide* H.M. Smith & Taylor (1950: 328).

Distribution: Western Mexico (ext. SW Chihuahua, Colima, Jalisco, NW Michoacán, Nayarit, Oaxaca, Sinaloa, ext. S Sonora, Zacatecas), NSL–2450 m.

Sources: McCranie, 1981, Chiszar & Smith, 2004, Lemos-Espinal et al., 2004a–b and Ahumada-Carrillo et al., 2011.

Remarks: Probably conspecific with *C. molossus* Baird & Girard *fide* McCranie (1981: 283.2).

6. *Crotalus caliginis* Klauber, 1949b. Trans. San Diego Soc. Nat. Hist. 11(6): 90. (*Crotalus viridis caliginis*)

Synonym: *Crotalus viridis caligensis* – Khole, 1991 *(nomen incorrectum).*
Type: Holotype, SDSNH 2800, a mm male (E.H. Quayle, 2 June 1930).
Type locality: "South Coronado Island off the northwest coast of Baja California, Mexico" [= Coronado Sur Is., NW Baja California Norte, ext. NW Mexico, bet. 32°23'–25'N & 117°14'–15'W, elevation NSL–300 m].
Distribution: Northwestern Mexico (N Baja California Norte: Coronado Sur Is.), NSL–300 m. Known only from type locality.
Sources: McPeak, 2000 and Pook et al., 2000.
Remarks: A valid species *fide* Grismer (2001: 20, 2002: 340).

7. *Crotalus catalinensis* Cliff, 1954. Trans. San Diego Soc. Nat. Hist. 12(5): 80–82, pl. 7, fig. 4.

Synonym: *Crotalus catalensis* – Khole, 1991 *(nomen incorrectum).*
Type: Holotype, CAS-SU 15631 (formerly SU 15631), a 701 mm female (B. Firstman, J.C. Briggs & F.S. Cliff, 27 March 1953).
Type locality: "Isla Santa Catalina in the Gulf of California, Mexico." Restricted to northeast end of the Isla Santa Catalina *fide* Leviton & Banta (1956: 218).
Distribution: Northwestern Mexico (Baja California Sur: Santa Catalina Is.).
Sources: R.W. Murphy & Crabtree, 1985, Beaman & Wong, 2001 and Grismer, 2002.
Remarks: Original figure lised as fig. 3 *fide* Cliff (1954: 80).

8. *Crotalus cerastes* Hallowell, 1854a. Proc. Acad. Nat. Sci. Philadelphia (1854–1855) 7(3): 95–96.

Synonyms: *Crotalus cerastes laterorepens* Klauber, 1944, *Crotalus cerastes cercobombus* Savage & Cliff, 1953, and *Cortalus cerastes* – Brode *in* D.F. Williams, Toth, Evans, Brode & Reed, 1991 *(nomen incorrectum).*
Type: Holotype, ANSP 7098 (formerly USNM 352), a 248 mm female (A.L. Heermann [R.S. Williamson, Pacific Railroad Surv.], 1853–1854).
Type locality: "Borders of the Mohave river, and in the desert of the Mohave" [California, USA].
Distribution: Southwestern USA (W Arizona, SE California, S Nevada, ext. SW Utah) and NW Mexico (NE Baja California Norte, NW Sonora, Tiburón Is.), 75 m BSL–1830 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona).
Sources: Klauber, 1927, 1944, Savage & Cliff, 1953, T.W. Brown & Lillywhite, 1992, Secor, 1994, P.R. Brown, 1997, Bartlett & Tennant, 2000, Holman, 2000a, Grismer, 2002, Douglas et al., 2006 and Sievert, 2008.
Remarks: Elevation usually below 1200 m *fide* J.A. Campbell & Lamar (2004: 538).

C

9. *Crotalus cerberus* (Coues *in* Wheeler, 1875). Explor. Surv. W of 100th Merid. 5: 606–607. (*Caudisona lucifer cerberus*)

Types: Syntypes (4), ANSP 7085 (formerly EC 509), skin of an 850 mm male, ANSP 7086 (formerly EC 510), ANSP 7087 (formerly EC 672), and ANSP 7088 (formerly EC 511), a head and neck (E. Coues, July 1864).
Type locality: "San Francisco Mountains, Arizona" [= Coconino Co., Arizona].
Distribution: Southwestern USA (cen. Arizona, ext. SW New Mexico), 2440–3660 m.
Sources: Klauber, 1949, Fowlie, 1965, Pook et al., 2000 and Brennan & Holycross, 2006.
Remarks: Two of Coues specimens (ANSP 7086–87) from type locality not considered syntypes *fide* Klauber (1949: 84). A valid species *fide* Douglas et al. (2008: 38).

10. *Crotalus concolor* Woodbury, 1929. Bull. Univ. Utah 20(6): 1–3, figs. 1–2.

Type: Holotype, UUZM 306, a 700 mm male (R.V. Chamberlin, Sept. 1929).
Type locality: "King's Ranch, Garfield Co., at base of the Henry Mtns." [= Utah, USA].
Distribution: Western USA (ext. NW Colorado, NE Utah, ext. SW Wyoming), 1220–2440 m.
Sources: Pook et al., 2000, Lewis, 2011 and Young, 2011.
Remarks: A valid species *fide* Douglas et al. (2008: 38).

11. *Crotalus culminatus* Klauber, 1952. Bull. Zool. Soc. San Diego (26): 65–67. (*Crotalus durissus culminatus*)

Type: Holotype, FMNH 126616 (formerly EHT 5224), a 382 mm female (E.H. Taylor & H.M. Smith, 1936).
Type locality: "El Sabino near Uruapan, Michoacán, Mexico" [= 19°25'N, 102°01'W, elevation 1600 m].
Distribution: Western Mexico (Chiapas, Guerrero, México, Michoacán, Morelos, Oaxaca), 90–1600 m.
Sources: Wüster et al., 2005 and Sanchez de la Vega et al., 2012.
Remarks: A subspecies of *Crotalus simus fide* Campbell and Lamar (2004: 583).

12. *Crotalus durissus* Linnaeus, 1758. Syst. Nat., ed. 10, 1: 214.

Synonyms: *Crotalus dryinus* Linnaeus, 1758, *Caudisona gronovii* Laurenti, 1768, *Caudisona orientalis* Laurenti,

C

1768, *Caudisona terrifica* Laurenti, 1768, *Crotalus exalbidus* Boddaert, 1778, *Crotalus immaculatus* Latreille *in* Sonnini & Latreille, 1801a, *Crotalus strepitans* Daudin, 1803b, *Crotalus cumanensis* Humboldt *in* Humboldt & Bonpland, 1813, *Crotalus loeflingii* Humboldt *in* Humboldt & Bonpland, 1813, *Crotalus cascavella* Wagler *in* Spix, 1824, *Caudisona durissa* – Cope, 1861e, *Crotalus horridus unicolor* Lidth de Jeude, 1887, *Crotalus pulvis* Ditmars, 1905, *Crotalus terrificus collirhombeatus* Amaral, 1927c, *Crotalus terrificus collilineatus* Amaral, 1927c, *Crotalus terrificus crotaminicus* Moura-Gonçalves, 1956 (*nomen nudum*), *Crotalus durissus marajoensis* Hoge, 1966a, *Crotalus durissus ruruima* Hoge, 1966a, *Crotalus durissus trigonicus* Harris & Simmons, 1978a, *Crotalus pifanorum* Sandner-Montilla, 1980, *Crotalus maricela* Rodriguez & Rojas Suárez, 1995 (*nomen nudum*), and *Crotalus maricelae* García-Pérez, 1995 *(nomen nudum).*

Type: Neotype, RMNH 12857, an adult male, designated by Savage et al. (2005: 370).

Type locality: "2.5 km east of Tibiti, Saramacca District, Suriname (ca. 5°33'N, 55°54'W)" via neotype selection.

Distribution: South America. Colombia (Atlántico, Bolívar, Córdoba, Cundinamarca, Huila, La Guajira, Meta, Tolima), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Nueva Esparta, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia, Maragarita and Los Testigos Is.), Netherlands Antilles (Aruba), Guyana (Cuyuni-Mazaruni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), NE Suriname (Commewijne), N French Guiana (N Cayenne, N Saint-Laurent-du-Maroni), ext. SE Peru (Puno), Brazil (Amapá, Amazonas, Bahia, Ceara, Goiás, Mato Grosso, Mato Grosso do Sul, Maranhao, Minas Gerais, Pará, Paraiba, Paraná, Pernambuco, Piauí, Rio de Janeiro, Rio Grande Do Norte, Rio Grande do Sul, Rondônia, Roraima, Santa Catarina, São Paulo, Marajo Is.), cen. Bolivia (Beni, Chuquisaca, Cochabamba, La Paz, Santa Cruz), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Boquerón, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro), Uruguay (Artigas, Maldonado, Rivera, Treinta y Tres, Tucuarembó), and NE Argentina (Catamarca, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, Jujuy, La Pampa, La Rioja, Mendoza, Misiones, Salta, San Juan, San Luis, Santa Fe, Santiago del Estero, Tucumán), NSL–1000 [2800] m.

Cole et al., 2013.

Remarks: Holotype lost *fide* Klauber (1952: 60). Type locality restriction to Jalapa, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950: 348) rejected *fide* Hoge (1966a: 137). Type locality restriction to Paramaribo, Suriname *fide* J.A. Campbell & Lamar (2004: 540) invalid due to neotype designation. *Crotalus pifanorum* a valid species *fide* Navarrete et al. (2009: 66).

13. *Crotalus enyo* (Cope, 1861e). Proc. Acad. Nat. Sci. Philadelphia 13(7): 293. (*Caudisona enyo*)

Synonyms: *Crotalus enyo cerralvensis* Cliff, 1954 and *Crotalus enyo furvus* Lowe & Norris, 1954.

Type: Lectotype, ANSP 7159 (formerly JX 4663), a 755 mm male, head, skin and tail (J. Xantus, May–June 1859), designated by Klauber (1956a: 34).

Type locality: "Lower California" [Mexico]. Restricted to Cape San Lucas, Baja California, Mexico *fide* Klauber (1956a: 34).

Distribution: Northwestern Mexico (S Baja California Norte, Baja California Sur; Carmen, Cerralvo, Espíritu Santos, Partida Sur, San Francisco, San José, San Marcos Is. in Gulf; Magdalena, Santa Margarita Is. in Pacific).

Sources: Klauber, 1931c, Cliff, 1954, Lowe & Norris, 1954, Beaman & Grismer, 1994, and Grismer, 2002.

14. *Crotalus ericsmithi* J.A. Campbell & Flores-Villela, 2008. Herpetologica 64(2): 247–251, figs. 1–3, 4c.

Type: Holotype, UTA 55372, a 540 mm male (E.N. Smith).

Type locality: Carretera La Laguna–bajitos de la Laguna. Guerrero, Sierra Madre del Sur, Mexico, 1037 m. The coordinates for this locality are 17.55330°N, 100.77472° W."

Distribution: Southwestern Mexico (Guerrero), 1035 m.

15. *Crotalus estebanensis* Klauber, 1949b. Trans. San Diego Soc. Nat. Hist. 11(6): 104–106, pl. 6, fig. 2. (*Crotalus molossus estebanensis*)

Type: Holotype, SDSNH 26792 (formerly LMK 26792), a 737 mm female (G. Allan Hancock Exped., 17 April 1937).

Type locality: "San Estéban Island, in the middle of the Gulf of California, Mexico, Lat. 28° 40' N."

Distribution: Northwestern Mexico (San Estéban Is.).

Remarks: A valid species *fide* Grismer (1999: 462).

16. *Crotalus helleri* Meek, 1905. Field Columb. Mus. Publ. (Zool.) 7(1): 17–18, pl. 2.

Synonyms: *Crotalus hallowelli* Cooper, 1870 *(nomen nudum)* and *Crotalus viridis hellari* – Khole, 1991 *(nomen incorrectum)*.

Type: Holotype, FMNH (formerly CNHM 1272), a 957 mm specimen (E. Heller, May–July 1902).

Type locality: "San Jose, Lower California" [= San José, N Baja California Norte, ext. NW Mexico, 29°32'N, 114°42'W, elevation 535 m].

Distribution: Southwestern USA (SW California, Santa Catalina Is.) and NW Mexico (Baja California Norte, N Baja California Sur), NSL–3350 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (California).

Sources: Klauber, 1949, Holman, 2000a, Pook et al., 2000 and Lemm, 2006.

Remarks: A valid species *fide* Douglas et al. (2008: 38).

17. *Crotalus horridus* Linnaeus, 1758. Syst. Nat., ed. 10, 1: 214.

Synonyms: *Crotalus boiquira* Lacépède, 1789 (*nomen rejiciendum*), *Crotalus atricaudatus* Latreille *in* Sonnini & Latreille, 1801a, *Crotalus zetazomae* Brickell, 1805, *Crotalinus cyanurus* Rafinesque-Schmaltz, 1818b, *Crotalus catesbaei* Hemprich, 1820, *Crotalus durissus concolor* Jan, 1859b, *Crotalus durissus melanurus* Jan, 1859b, *Crotalus durissus mexicana* Jan, 1863b (*nomen nudum*), *Crotalus fasciatus* Higgins, 1873, and *Crotalus durissus cincolor* – Notestein, 1905 *(nomen incorrectum)*.

Type: Holotype, NHR Lin-102 (formerly MAFR), a tail with 12 rattle segments (P. Kalm, Sept. 1748–Feb. 1751, via Mus. Drottn.).

Type locality: "America." Restricted to vicinity of New York City, New York, USA *fide* K.P. Schmidt (1953a: 227).

Distribution: Eastern North America. Southeastern Canada (S Ontario) and E USA (Alabama, Arkansas, Connecticut, N Florida, Georgia, Illinois, S Indiana, S and E Iowa, E Kansas, Kentucky, Louisiana, W Maryland, Massachusetts, ext. SE Minnesota, Mississippi, Missouri, ext. SE Nebraska, S New Hampshire, New Jersey, New York, North Carolina, E Oklahoma, S and N Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, E Texas, S Vermont, Virginia, West Virginia, SW Wisconsin), NSL–2000 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska), upper Pliocene (Blancan V) of USA (Nebraska), Pleistocene of USA (Massachusetts), lower Pleistocene (Irvingtonian I [?]) of USA (Pennsylvania), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas, Maryland, Nebraska, Texas, West Virginia), and upper Pleistocene (Rancholabrean II) of USA (Alabama, Georgia, Indiana, Missouri, Pennsylvania, Tennessee, Virginia, West Virginia).

Sources: Pisani et al., 1972, Odum, 1979, Collins & Knight, 1980, C.W. Brown & Ernst, 1986, W.S. Brown, 1993, Palmer & Braswell, 1995, Harding, 1997, Tennant, 1997, Fitch, 1999, Holman, 2000a, Werler & Dixon, 2000, Clark et al., 2003, J.C. Murphy & Schlager, 2003 and Furman, 2007.

Remarks: Official Specific Name no. *fide* Opinion 92 (ICZN,). Extirpated in many areas of Distribution.

C

18. *Crotalus intermedius* Troschel *in* J.W. Müller, 1865. Reisen Ver. Staat., Can. Mex. 3: 613–614.

Synonyms: *Crotalus intermedius* Fischer, 1882 *(nomen praeoccupatum), Crotalus omiltemanus* A.C.L.G. Günther, 1895 *in* 1885–1902, *Crotalus triseriatus gloydi* E.H. Taylor, 1942a, *Crotalus gloydi lautus* H.M. Smith *in* H.M. Smith & Laufe, 1945b (*nomen nudum*), and *Crotalus gloydi lautus* H.M. Smith, 1946.

Type: Holotype, ZIB (formerly JWM), a 419 mm female, destroyed during World War II.

Type locality: "Mexico" [in one of the following states based on Müller's expedition: Distrito Federal, Guerrero, Mexico, Morelos, Oaxaca, Puebla or Veracruz *fide* Klauber, 1952: 10]

Distribution: South-central Mexico (cen. Guerrero, SE Hidalgo, Oaxaca, SE and cen. Puebla, SW Tlaxcala, W Veracruz), 2000–3050 m.

Sources: McCranie, 1991 and Alvarado-Diaz & Campbell, 2004.

Remarks: Michoacán record is *C. transversus* E.H. Taylor (= *C. tancitarensis*) *fide* J.A. Campbell & Lamar (1989: 349).

19. *Crotalus lannomi* W.W. Tanner, 1966b. Herpetologica 22(4): 298, fig. 1b.

Type: Holotype, BYU 23800, a 638 mm female (J.R. Lannom, Jr., 26 June 1966).

Type locality: "1.8 miles west of the pass, Puerto Los Mazos, or 22 miles west by road from the Rio Tuxcacuesco, a branch of the Rio Armeria on Mexican Highway No. 80, Jalisco, Mexico" (in error). Corrected to Arroyo el Tigre, 12 km SW by road from original type locality, at 550 m elevation *fide* J.R. Lannom *in* Reyes-Velasco et al., 2010: 24].

Distribution: Western Mexico (Colima, Jalisco), 550–1150 m.

Sources: W.W. Tanner, 1986, J.A. Campbell & Flores-Villela, 2008 and Reyes-Velasco et al., 2010.

20. *Crotalus lepidus* (Kennicott, 1861). Proc. Acad. Nat. Sci. Philadelphia 13(6): 206. (*Caudisona lepida*)

Synonyms: *Crotalus palmeri* S.W. Garman, 1887c, *Crotalus lepidus klauberi* Gloyd, 1936b, *Crotalus semicornutus* E.H. Taylor, 1944b, *Crotalus lepidus morulus* Klauber, 1952, *Crotalus lepidus maculosus* W.W. Tanner, Dixon & Harris, 1972, *Crotalus lepidus*

castaneus Julía-Zertuche & Treviño-Saldaña, 1978a, and *Crotalus lepidus clauberi* – Khole, 1991 *(nomen incorrectum).*

Types: Syntypes (2), two heads (W.H. Emory [U.S.-Mex. Bound. Surv.], 1848–1855), lost *fide* Stejneger (1895: 458).

Type locality: "Presidio del Norte and Eagle Pass" [Texas, USA]. Restricted to Presidio (del Norte), Presidio County, Texas *fide* H.M. Smith & Taylor (1950: 362).

Distribution: Southwestern USA (SE Arizona, S New Mexico, SW Texas) and N and N Mexico (Aguascalientes, Chihuahua, Coahuila, Durango, N Jalisco, E Nayarit, W Nuevo León, W San Luis Potosí, SE Sinaloa, NE Sonora, SW Tamaulipas, S Zacatecas), 600–2700 m.

Fossil records: Upper Pliocene (Blancan V) of USA (Arizona), and lower/middle Pleistocene (Irvingtonian I) of USA (Arizona).

Sources: Gloyd, 1936b, Klauber, 1952, Zweifel, 1954b, Julia-Zertuche & Treviño-Saldaña, 1980, Dorcas, 1992, Van Devender & Bradley, 1994, Degenhardt et al., 1996, Forstner et al., 1997, Schwinford, 1999, Bartlett & Tennant, 2000, Holman, 2000a, Werler & Dixon, 2000, Bryson & Mueller, 2001, Allsteadt et al., 2006, M.S. Price, 2009 and Bryson et al., 2011.

21. *Crotalus lutosus* Klauber, 1930b. Trans. San Diego Soc. Nat. Hist. 6(3): 100–106, pl. 10, fig. 1. (*Crotalus confluentus lutosus*)

Synonym: *Crotalus viridis letuous* – Khole, 1991 *(nomen incorrectum).*

Type: Holotype, SDSNH 1814 (formerly LMK 1814), an 832 mm male (C.B. Perkins, 12 May 1929).

Type locality: "10 miles northwest of Abraham on the road to Joy, Millard County, Utah. Altitude approximately 4650 ft." [= USA, elevation 1415 m].

Distribution: Western USA (NW Arizona, NE California, S Idaho, Nevada, SE Oregon, W Utah), 1220–2745 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Idaho).

Sources: A.H. Wright & Wright, 1957, Fowlie, 1965, Nussbaum et al., 1983, Holman, 2000a, Pook et al., 2000 and St. John, 2002.

Remarks: A valid species *fide* Douglas et al. (2008: 38).

22. *Crotalus mitchellii* (Cope, 1861e). Proc. Acad. Nat. Sci. Philadelphia 13(7): 293–294. (*Caudisona mitchellii*)

Synonyms: *Caudisona pyrrha* Cope, 1867a, *Crotalus mitcheli* Belding, 1887 *(nomen emendatum), Crotalus goldmani* K.P. Schmidt, 1922, *Crotalus mitchelli aureus* Kallert, 1927 (*nomen nudum*), *Crotalus mitchellii muertensis* Klauber, 1949b, *Crotalus mitchellii angelensis* Klauber, 1963, and *Crotalus mitchellii angelicus* Hoge, 1966 *(nomen emendatum)*..

Type: Holotype, USNM 5291b, an 1118 mm skin (J. Xantus, 1859–1861), lost *fide* Klauber (1956a: 38).

Type locality: "Cape St. Lucas, Lower California" [= Cabo San Lucas, Baja California Sur, Mexico, 22°53'N, 109°55'W, elevation 20 m].

Distribution: Southwestern USA (W Arizona, SE California, ext. SW Nevada, ext. SW Utah) and NW Mexico (ext. NW Sonora, Baja California Norte, Baja California Sur: Angel de la Guarda, Carmen, Cerralvo El Muerto, Espíritu Santo, Monserrate, Partida Sur, Piojo, Smith, Salsipuedes, San José Is. in Gulf; Santa Margarita Is. in Pacific), NSL–2400 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Nevada).

Sources: Klauber, 1927, 1930a, 1936a, 1952, McCrystal & McCoid, 1986, Strimple, 1992, Grismer, 1993, P.R. Brown, 1997, Bartlett & Tennant, 2000, 1999, 2002, Holman, 2000a, Douglas et al., 2006, 2007 and Meik et al., 2010.

Remarks: The types of *C. enyo* and *C. mitchellii* (four specimens: three *enyo* and one *mitchellii)* were both assigned USNM 5291. Grismer, 1999 & 2002 recognizes *C. mitchellii muertensis* and *C. m. angelensis* as valid species.

23. *Crotalus molossus* Baird & Girard, 1853. Cat. No. Amer. Rept., Serp. 1: 10–11.

Synonyms: *Caudisona molossa* Cope, 1867a *(nomen emendatum), Crotalus molossus nigrescens* Gloyd, 1936a, and *Crotalus basiliscus oaxacus* Gloyd, 1948, and *Crotalus moloosus* – Miranda, 1993 *(nomen incorrectum).*

Type: Holotype, USNM 485, an 861 mm male (J.H. Clark [U.S.-Mex. Bound. Surv.], 1850–1852, via J.D. Graham).

Type locality: "Fort Webster, St. Rita del Cobre, N. Mex." Restricted to Fort Webster Copper Mines, New Mexico *fide* Baird (1859a: 14), [= Santa Rita del Cobre copper mines, Grant County, New Mexico, USA].

Distribution: Southwestern USA (Arizona, SW New Mexico) and Mexico (Aguascalientes, Chihuahua, S Coahuila, Colima, Distrito Federal, Durango, Guanajuato, SW Hidalgo, E Jalisco, SW México, N Michoacán, N Morelos, E Nayarit, SW Nuevo León, W Oaxaca, cen. Puebla, Querétaro, W San Luis Potosí, Sonora, ext. N Sinaloa, ext. SW Tamaulipas, Tlaxcala, W Veracruz, Zacatecas, Tiburón Is.), NSL–2590 (3750) m.

Sources: Stejneger, 1940, Gloyd, 1936a, 1948, Klauber, 1949b, A. Price, 1980, Degenhardt et al., 1996, Grismer, 1999, 2002, Bartlett & Tennant, 2000, Werler & Dixon, 2000, Fernandez et al., 2003 and Lemos-Espinal et al., 2004.

Remarks: Type locality listed as Sonora, Mexico *fide* Baird (1859b: 16) and Yarrow (1882: 78).

24. *Crotalus oreganus* Holbrook, 1840. No. Amer. Herp. 4: 115–117, pl. 24.

Synonyms: *Crotalus oregonus* Holbrook, 1842a *(nomen emendatum), Crotalus lucifer* Baird & Girard, 1852c, *Crotalus hallowelli* Cooper *in* Cronise, 1868 (*nomen nudum*), *Crotalus oreganus niger* Kallert, 1927 (*nomen nudum*), and *Crotalus confluentus decolor* Klauber, 1930b.

Type: Holotype, ANSP 7158 (formerly ANSP 840), a shrivelled 337–381 mm specimen (T. Nuttall, May 1834–Aug. 1835).

Type locality: "west of the Rocky Mountains, on the banks of the Oregon or Columbia river, in the Oregon territory" [= Oregon *fide* ANSP jar labels and Van Denburgh, 1898: 141]. Restricted to The Dalles, Wasco County, Oregon, USA *fide* H.M. Smith & Taylor (1950: 360), to confluence of Columbia and Snake rivers, Washington, USA *fide* K.P. Schmidt (1953: 232) and between Walla Walla, Washington and the Pacific Coast *fide* Klauber (1956a: 53).

Distribution: Extreme SW Canada (S British Columbia) and W USA (NW Arizona, N California, NW Idaho, Oregon, E Washington), NSL–3655 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (California).

Sources: Klauber, 1927, 1949, A.H. Wright & Wright, 1957, Nussbaum et al., 1983, Stebbins, 1985, 2003, Quinn, 1987, M.L. Johnson, 1995, Storm et al., 1995, P.R. Brown, 1997, Holman, 2000a, Pook et al., 2000, K. Ashton & Queiroz, 2001, Douglas et al., 2002 and Brennan & Holycross, 2006

Remarks: Holbrook (1840: pl. 24) incorrectly numbered in text as pl. 29. A valid species *fide* Douglas et al. (2008: 38).

25. *Crotalus ornatus* Hallowell, 1855a. Proc. Acad. Nat. Sci. Philadelphia (1854–1855) 7(5): 192–193.

Type: Holotype, USNM 486, head, tail and connecting skin from an 1134–1162 mm female (A.L. Heermann [J.G. Parke, Pacific Railroad Surv.], 1854).

Type locality: "Near Pecos River, N.W. Texas" [USA].

Distribution: Southwestern USA (New Mexico, W Texas) and N Mexico (N Coahuila), 1220–1980 m.

Remarks: A valid species *fide* C.G. Anderson & Greenbaum, 2012. Photographs of holotype in C.G. Anderson & Greenbaum (2012: fig. 10).

26. *Crotalus polystictus* (Cope, 1865). Proc. Acad. Nat. Sci. Philadelphia 17(4): 191–192. (*Caudisona polysticta*)

Synonyms: *Crotalus lugubris* Jan, 1859b, e (*nomen rejiciendum), Crotalus lugubris multimaculata* Jan, 1863b (*nomen oblitum*), *Crotalus lugubris multimaculata* Jan, 1874 *in* Jan & Sordelli, 1870–1881, and *Crotalus jimenezii* Dugès, 1877.

Type: Holotype, formerly USNM, a 603 mm specimen, lost *fide* H.M. Smith & Taylor (1945: 173).

Type locality: "Table Land, Mexico." Restricted to Tupátaro, Guanajuato, Mexico *fide* H.M. Smith & Taylor (1950: 330).

Distribution: South-central Mexico (Aguascalientes, NE Colima, Distrito Federal, S Guanajuato, S Hidalgo, Jalisco, N México, N Michoacán, N Morelos, N Puebla, S Querétaro, ? Tlaxcala, W Veracruz, S Zacatecas), 1450–2740 m.

Sources: McCranie, 1976 and Setzer et al., 2009.

Remarks: May occur in S Durango *fide* J.A. Campbell & Lamar (2004: 571). Official Specific Name no. 506 *fide* Opinion 366 (ICZN, 1955c). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Caudisona polysticta* Cope is designated a *nomen protectum* and *Crotalus lugubris multimaculata* Jan a *nomen oblitum*.

27. *Crotalus pricei* Van Denburgh, 1895b. Proc. California Acad. Sci. (1895–1896) (2) 5: 856–857.

Synonym: *Crotalus triseriatus miquihuanus* Gloyd, 1940.

Type: Holotype, CAS-SU 1702 (formerly SU 1702), a 447 mm male (W.W. Price, July–Aug. 1893).

Type locality: "Huachuca Mts., Arizona" [= Cochise Co., SE Arizona, USA].

Distribution: Extreme SW USA (SE Arizona) and N Mexico (Aguascalientes, W Chihuahua, SE Coahuila, Durango, N Nayarit, S Nuevo León, San Luis Potosí, NE Sonora, SW Tamaulipas, SW Zacatecas), 1220–3200 m.

Sources: Gloyd, 1940, Fowlie, 1965, McCranie, 1980b, Bartlett & Tennant, 2000, Alvarado-Diaz & Campbell, 2004 and Reyes-Velasco et al., 2012.

Remarks: Type locality listed in Pima County, Arizona *fide* Leviton (1953b: 132). Probably occurs in E Sinaloa, Jalisco and Zacatecas *fide* McCranie (1980b: 266.2).

28. *Crotalus pusillus* Klauber, 1952. Bull. Zool. Soc. San Diego (26): 34–40.

Type: Holotype, FMNH 39112, a 652 mm male (F.A. Shannon, 25 June–20 July 1941).

Type locality: "Tancítaro, Michoacán, Mexico, altitude 5000 feet."

Distribution: Southwestern Mexico (Guerrero, S Jalisco, W Michoacán), 1525–2380 m.

Sources: Duellman, 1961, Armstrong & Murphy, 1979, McCranie, 1983a, Bryson et al., 2011 and Reyes-Velasco et al., 2012.

Remarks: Distribution as presently known involves three disjunct populations.

29. *Crotalus ravus* Cope, 1865. Proc. Acad. Nat. Sci. Philadelphia 17(4): 191.

Synonyms: *Caudisona rava* – Cope, 1865, *Sistrurus ravus brunneus* Harris & Simmons, 1978b, *Sistrurus*

ravus lutescens Harris & Simmons, 1978b, *Sistrurus ravus exiguus* J.A. Campbell & Armstrong, 1979, and *Sistrurus ravus sinaloensis* Juliá-Zertuche, 1982 *(nomen illegitimum).*

Types: Syntypes (2), USNM 25050–51, a 212 mm and 200 mm specimen (C. Sartorius, 1863).

Type locality: "Table land of Mexico." Emended to south tableland, Veracruz, Mexico *fide* Cochran (1961: 171). Restricted to Totalco, Veracruz, Mexico *fide* H. M. Smith & Taylor (1950: 351).

Distribution: Southern Mexico (Distrito Federal, cen. Guerrero, México, Morelos, ext. N Oaxaca, Puebla, Tlaxcala, W Veracruz), 850–3050 m.

Sources: J.A. Campbell & Armstrong, 1979, McCranie, 1988, Pérez-Higareda & Smith, 1991, Camarillo & Smith, 1992, Benitez-Gálvez, 1997, R.W. Murphy et al., 2002, Campos-Rodriguez & Mendoza-Quijano, 2004 and Bryson et al., 2011.

30. *Crotalus ruber* Cope, 1892a. Proc. U.S. Natl. Mus. (1891–1892) 14(882): 690–691. (*Crotalus adamanteus ruber*)

Synonyms: *Crotalus exsul* S.W. Garman, 1884 *(nomen suppressum), Crotalus lucasensis* Van Denburgh, 1920b, *Crotalus atrox elegans* K.P. Schmidt, 1922, *Crotalus ruber lorenzoensis* Radcliffe & Maslin, 1975, and *Crotalus ruber monserratensis* Harris & Simmons, 1978b.

Type: Holotype, USNM 9209, a 1245 mm male.

Type locality: Unknown. Designated as southern California *fide* Klauber (1956: 41). Restricted to Dulzura, San Diego Co., California, USA *fide* H.M. Smith & Taylor (1950: 356) and to vicinity of San Diego, California, USA *fide* K.P. Schmidt (1953a: 230).

Distribution: Extreme SW USA (ext. SW California) and NW Mexico (Baja Califonia Norte, Baja California Sur, Angel de la Guarda, Danzante, Monserrate, Pond, San José, San Lorenza Sur, San Marcos Is. in Gulf, Cedros, Santa Margarita Is. in Pacific), NSL–1500 m.

Sources: Klauber, 1927, 1930b, 1949a, Radcliffe & Maslin, 1975, Harris & Simmons, 1978b, Grismer et al., 1994, R.W. Murphy et al., 1995, P.R. Brown, 1997, Grismer, 1999, Bartlett & Tennant, 2000, Beaman & Dugan, 2006 and Douglas et al., 2006.

Remarks: Official Specific Name *fide* Opinion 1960 (ICZN, 2000a). The paralectotype (652b) consists of a head and tail only. Grismer (1999: 461) considered *C. ruber lorenzoensis* a distinct species.

31. *Crotalus scutulatus* (Kennicott, 1861). Proc. Acad. Nat. Sci. Philadelphia 13(6): 207–208. (*Caudisona scutulata*)

Synonyms: *Caudisona lepturus* Kennicott, 1861 *(nomen ineditum),* Crotalus *salvini* A.C.L.G. Günther, 1895 *in* 1885–1902, *Crotalus californicus* Kallert, 1927 (*nomen nudum*), and *Crotalus confluentus kellyi* Amaral, 1929a.

Type: Holotype, ANSP 7069 (formerly USNM 5027b) (B.J.D. Irwin, 30 Jan. 1861).

Type locality: Unknown. Designated as "Fort Buchanan, (Tucson) Arizona" [= 5 km SW Sonoita in Hog Canyon, Santa Cruz Co., SE Arizona, SW USA, 31°40'N, 110°42'W, elevation 1425 m] *fide* Cope (1900: 1160).

Distribution: Southwestern USA (Arizona, S California, ext. S New Mexico, S Nevada, ext. SW Texas, ext. SW Utah) and N Mexico (Aguascalientes, Chihuahua, Coahuila, Durango, NE Guanajuato, Hidalgo, N and E Jalisco, NE México, W Nuevo León, Puebla, cen. Querétaro, W San Luis Potosí, NE Sonora, ext. SW Tamaulipas, Tlaxcala, N Puebla, W Veracruz, Zacatecas), [NSL] 1800–2500 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona).

Sources: A. Price, 1982, Stebbins, 1985, Degenhardt et al., 1996, P.R. Brown, 1997, Bartlett & Tennant, 2000, Holman, 2000a, Werler & Dixon, 2000, Matias-Ferrer & Murillo, 2004c and Cardwell et al., 2013.

Remarks: Photographs of the type in Cardwell et al. (2013: figs. 1, 2b–c), who discuss the history and confusion of purported types. Type locality designated as Mojave Desert, California *fide* K.P. Schmidt (1953a: 229). Type locality restriction to Wickenburg, Maricopa Co., Arizona, USA *fide* H.M. Smith & Taylor (1950: 353) invalid.

32. *Crotalus simus* Latreille *in* Sonnini & Latreille, 1801a. Hist. Nat. Rept. 3: 202–203.

Synonym: *Crotalus terrificus copeanus* Amaral, 1937d *(nomen substitutum).*

Type: Neotype, UTA 52032, an adult male, designated by Savage et al. (2005: 370).

Type locality: "Vicinity of El Arenal, San Vicinte, Departamento de Zacapa, Guatemala, 360 m elevation (14.880176º N, 89.861817º W)" via neotype selection.

Distribution: Mesoamerica. Southern Mexico (ext. SW Campeche, Chiapas, SE Oaxaca, cen. & S Veracruz), Guatemala (Petén), El Salvador (Cabañas, Chalatenango, Cuscatlán, La Libertad, La Unión, Santa Ana, San Miguel, San Vicente, Sonsonate), W Honduras (Choluteca, Comayagua, Cortés, Francisco Morazán, Santa Bárbara, Valle, Yoro), W Nicaragua (Chontales, Matagalpa, Río San Juan) and Costa Rica (Guanacaste, Puntarenas, San José), NSL–2200, usually below 1000 m.

Sources: N. Herrera et al., 2007 and McCranie, 2011a.

Remarks: Holotype lost *fide* Thireau (1991: 4).

33. *Crotalus stejnegeri* Dunn, 1919. Proc. Biol. Soc. Washington 32: 214–216.

Type: Holotype, USNM 46586, a 590 mm male (E.W. Nelson & E.A. Goldman, 19 July 1897).

Type locality: "Plumosas, Sinaloa, Mexico" [= Plomosas, S Sonora, W Mexico, 23º04'N, 105º30'W, elevation 965 m].

Distribution: Northwestern Mexico (W Durango, SE Sinaloa), 480–1200 m.

Sources: W.W. Tanner, 1966, 1976, Collins, 1982, Webb, 1984, Strimple, 1998 and J.A. Campbell & Flores-Villela, 2008.

Remarks: Type erroneously listed as USNM 46486 *fide* Dunn (1919: 215). Probably occurs in N Nayarit *fide* J.A. Campbell & Lamar (1989: 363).

34. *Crotalus stephensi* Klauber, 1930a. Trans. San Diego Soc. Nat. Hist. 6(3): 108–109. (*Crotalus confluentus stephensi*)

Type: Holotype, MVZ 6699, a 591 mm male (J. Grinnell, 8 Oct. 1917).

Type locality: "two miles west of Jackson Springs, Panamint Mts., altitude 6200 ft., Inyo County, California."

Distribution: Southwestern USA (SE California, SW Nevada), 1900 m.

Source: M.E. Douglas et al., 2007.

35. *Crotalus tancitarensis* Alvarado-Díaz & Campbell, 2004. Herpetologica 60(2): 281–283, fig. 1a.

Type: Holotype, INIRENA 309, a 356 mm female (J. Alvarado-Diaz & A. Estrada Virgen, 17 July 2002).

Type locality: "Cerro Tancítaro, Michoacán, Mexico, 3225 m elevation (coordinates 19° 24' 13" N, 102° 19' 45" W)."

Distribution: Western Mexico (Michoacán), 1525–3225 m.

Source: Alvarado-Díaz et al., 2007.

36. *Crotalus tigris* Kennicott *in* Baird, 1859a. U.S.-Mex. Bound. Surv., Rept. (1858) 2(2): 14, pl. 4.

Type: Holotype, USNM 471 (A.C.V. Schott [U.S.-Mex. Bound. Surv.], 1854–1855).

Type locality: "Sierra Verde and Pozo Verde, Gila and Colorado Deserts." [= Sasabe, Sonora, Mexico *fide* Klauber, 1956a: 43, or Arizona, USA *fide* Cochran, 1961: 171].

Distribution: Extreme SW USA (S Arizona, possibly ext. SW New Mexico *fide* Degenhardt et al., 1996: 361) and NW Mexico (Sonora, Tiburón Is.), NSL–2400 m.

Sources: Klauber, 1931c, Bartlett & Tennant, 2000, Grismer 2002 and Douglas et al., 2006.

Remarks: Three syntypes (USNM 471–73) listed *fide* Yarrow (1882: 74), with USNM 473 now = ANSP 7160 *fide* Klauber (1956a: 43). USNM 471 designated the lectotype *fide* Klauber (1956a: 43) and Cochran (1961: 171); however, Kennicott listed USNM 471 as the type and he examined at least two specimens (i.e., dorsal rows 21–23) so his selection represents a holotype.

37. *Crotalus totonacus* Gloyd & Kauffeld, 1940. Bull. Chicago Acad. Sci. 6(2): 12–14, fig. 1.

Synonyms: *Crotalus durissus neoleonensis* Juliá-Zertuche & Trevino-Saldaña *in* Harris & Simmons, 1978b (*nomen nudum*) and *Crotalus durissus tolanacus* – Khole, 1991 *(nomen incorrectum)*.

Type: Holotype, CA 4469, a 945–972 mm female (W. Woolems, May 1933)

Type locality: "Panaco Island, about 75 miles south of Tampico, Veracruz, Mexico, 12 miles inland from Cabo Rojo."

Distribution: Northeastern Mexico (Hidalgo, cen. Michoacán, cen. Nuevo León, N Querétaro, E San Luis Potosí, S Tamaulipas, N Veracruz), NSL–1680 m.

Sources: P. Martin 1958, Auth et al., 2000b and Ramírez-Bautista et al., 2010.

Remarks: Photograph of holotype in Gloyd & Conant (1940: pl. 17, fig. 1).

38. *Crotalus transversus* E.H. Taylor, 1944b. Univ. Kansas Sci. Bull. 30(4): 47–49, figs. 1a–e, pl. 6, fig. b.

Type: Holotype, FMNH 100129 (formerly EHT-HMS 30001), a 464 mm female (E. Powell, 14 Aug. 1942).

Type locality: "about 55 km. SW México (city), near Tres Marias (Tres Cumbres), Morelos, México, elevation about 10,000 ft.," (probably in error). Restricted to Laguna Zempoala, Mexico State, Mexico *fide* Davis & Smith (1953: 141) (also in error). Any of six or more lakes known as Lagunas de Zempoala (or Cempoala), NW Morelos, Mexico *fide* J.A. Campbell (1988a: 450.1).

Distribution: South-central Mexico (Distrito Federal, ext. NW Morelos, cen. México), 2870–3430 m.

Sources: J.A. Campbell, 1988a, Camarillo & Campbell 1993, 2002, Alvarado-Diaz & Campbell, 2004 and García-Vázquez et al., 2008b.

39. *Crotalus triseriatus* (Wagler, 1830). Natur. Syst. Amph.: 176. (*Uropsophus triseriatus*)

Synonyms: *Crotalus lugubris* Jan, 1859a *(partim)*, *Crotalus triseriata* Cope, 1867a, *Crotalus pallidus* A.C.L.G. Günther, 1895 *in* 1885–1902, *Crotalus triseriatus anahuacus* Gloyd, 1940 (*partim*), and *Crotalus triseriatus armstrongi* J.A. Campbell, 1978.

Types: Syntypes (4), ZMB 2908–11.

Type locality: "Mexico."

Distribution: South-central Mexico (Colima, Distrito Federal, S Hidalgo, cen. Jalisco, México, N Michoacán, N Morelos, cen. Puebla, Tlaxacala, W Veracruz), 2085–4570 m.

Sources: Gloyd, 1940, Harris & Simmons, 1978b, Dorcas, 1992, Reyes-Velasco et al., 2009 and Bryson et al., 2011.

Remarks: Official Specific Name no. 507 *fide* Opinion 366 (ICZN, 1955). Type locality restriction to Alvarez, San Luis Potosí, Mexico *fide* H.M. Smith & Taylor (1950a: 342) invalid since *C. triseriatus* does not occur there (Alvarez is the type locality of *C. aquilus*).

40. *Crotalus tzabcan* Klauber, 1952. Bull. Zool. Soc. San Diego (26): 71–73. (*Crotalus durissus tzabcan*)

Type: Holotype, FMNH 36168, a 537 mm male (E.W. Andrews, 28 Oct. 1939).

Type locality: "Kantunil, Yucatán, Mexico" [= Kantunil, cen. Yucatán, SE Mexico, 20°47'N, 89°03'W, elevation 20 m].

Distribution: Yucatan Peninsula. Southeastern Mexico (Campeche, Quintana Roo, Yucatán), NSL–175 m.

Source: Wüster et al., 2005.

41. *Crotalus vegrandis* Klauber, 1941b. Trans. San Diego Soc. Nat. Hist. 9(30): 334–335.

Type: Holotype, CM 17384, a 636 mm male (H.A. Beatty, 1939).

Type locality: "Maturin Savannah, near Uracoa, Sotillo District, State of Monagas, Venezuela" [= Maturín savanna, vicinity of Uracoa, E Monagas State, NE Venezuela, 9°00'N, 62°21'W, elevation 10 m].

Distribution: Northeastern Venezuela (Anzoátegui, E Monagas), 30–300 m.

Sources: Hoge, 1966, Roze, 1966, Lancini, 1967, 1986, Harris & Simmons, 1978, Lancini & Kornacker, 1989, La Marca, 1997, Kornacker, 1999, J.A. Campbell & Lamar, 2004, Navarrete et al., 2009 and Rivas-Fuenmayor et al., 2012.

Remarks: Photographs of holotype in Roze (1966: figs. 74–76) and Lancini (1967: fig. 1). A valid species *fide* Rivas-Fuenmayor et al. (2012: 43).

42. *Crotalus viridis* (Rafinesque-Schmaltz, 1818b). Amer. Month. Mag. Crit. Rev. 4(1): 41. (*Crotalinus viridis*)

Synonyms: *Crotalus confluentus* Say *in* E. James, 1823, *Crotalus confluentis* – Harlan, 1835 *(nomen incorrectum), Crotalus lecontei* Hallowell, 1852a, *Crotalus confluentus pulverulentus* Cope, 1883d, and *Crotalus confluentus nuntius* Klauber, 1935a.

Type: Holotype, not designated, a 610 mm specimen (J. Bradbury, 25 April 1811), location unknown.

Type locality: "the Upper Missouri prairies" [USA]. Restricted to Gross, Boyd County, Nebraska, USA *fide* H.M. Smith & Taylor (1950: 358), and to Pierre, South Dakota, USA *fide* K.P. Schmidt (1953: 231).

Distribution: Extreme SW Canada (SE Alberta, SW Saskatchewan), W USA (NE Arizona, E Colorado, E cen. Idaho, ext. W Iowa, W Kansas, Montana, Nebraska, New Mexico, SW North Dakota, W Oklahoma, W South Dakota, W Texas, ext. SE Utah, Wyoming) and ext. N Mexico (ext. N Chihuahua, ext. NW Coahuila, N Sonora), 1370–3050 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska), lower Pliocene (Hemphillian) of USA (Oklahoma), middle Pliocene (Blancan II) of USA (Kansas), upper Pliocene (Blancan V) of USA (Kansas), Pleistocene of USA (Iowa), middle/upper Pleistocene (Irvingtonian II) of USA (Colorado, Nebraska), and upper Pleistocene (Rancholabrean I, II) of USA (Kansas).

Sources: Klauber, 1930a, 1935a, 1936c, A.H. Wright & Wright, 1957, Fowlie, 1965, Nussbaum et al., 1983, Stebbins, 1985, Quinn, 1987, Lemos-Espinal et al., 1994, Degenhardt et al., 1996, Conant & Collins, 1998, Hammerson, 1999, Pook et al., 2000, Bartlett & Tennant, 2000, A. Russell & Bauer, 2000, Werler & Dixon, 2000, Holman, 2000a, Ashton & Queiros, 2001, Grismer 2001b, Douglas et al., 2002, Brennan & Holycross, 2006, Lemos-Espinal & Smith, 2007a–b, Holycross et al., 2008, Lewis, 2011 and Young, 2011.

Remarks: The following species separated from *Crotalus viridis (abyssus, caliginis, cerberus, concolor, helleri, lutosus, oreganus) fide* Pook et al., 2000 and Douglas et al. 2008.

43. *Crotalus willardi* Meek, 1906. Field Columb. Mus., Zool. (1905) 7(1): 18–19, pl. 3.

Synonyms: *Crotalus willardi meridionalis* Klauber, 1949, *Crotalus willardi silus* Klauber, 1949, *Crotalus willardi amabilis* J.D. Anderson, 1962, *Crotalus willardi obscurus* Harris & Simmons, 1974 (*nomen nudum*), and *Crotalus willardi obscurus* Harris & Simmons, 1976.

Type: Holotype, FMNH 902, a 415 mm female (F.C. Willard, 1896–1906).

Type locality: "Tombstone, Arizona" [USA] (in error). Corrected to above Hamburg, middle branch of Ramsey Canyon, Huachuca Mtns., Cochise Co., Arizona, USA, elevation ca. 2135 m *fide* Swarth (1921: 83).

Distribution: Extreme SW USA (ext. SE Arizona, ext. SW New Mexico) and NW Mexico (W Chihuahua, W Durango, N Sonora, ext. W Zacatecas), 1460–2750 m.

Sources: Hartman, 1911, Klauber, 1949b, Bogert & Degenhardt, 1961, J.D. Anderson, 1962, Harris & Simmons, 1975, 1976, Stebbins, 1985, Barker, 1992, Degenhardt et al., 1996 and Bartlett & Tennant, 2000.

CROTAPHOPELTIS Fitzinger, 1843 (Colubridae)

Synonyms: *Heterurus* A.-M.-C. Duméril, 1853, ? *Aspidolaeme* Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854, *Crotaphopheltus* – Higgins, 1873 *(nomen incorrectum), Herurus* – Phisalix, 1922 *(nomen incorrectum), Crotophopeltis* – Corkill, 1935 *(nomen incorrectum), Cratophopeltis* – Domergue, 1955 *(nomen incorrectum), Crotapeltis* – Dessauer, 1967

(nomen incorrectum), and *Crottaphopeltis* – Stucki-Stirn, 1979 *(nomen incorrectum).*

Type species: *Coronella hotamboeia* Laurenti, 1768.

Distribution: Subsaharan Africa.

Sources: Loveridge, 1957a, Broadley, 1968b, Roman, 1974b, J.B. Rassmussen, 1985a, Gravlund, 2001 and Wallach et al., 2010.

1. *Crotaphopeltis barotseensis* Broadley, 1968b. Fieldiana: Zool. 51(10): 135, figs. 1a–b, 2.

Type: Holotype, FMNH 134249, a 544 mm female (R.G. Japp, 24 March 1962).

Type locality: "Kalabo, Barotseland, Zambia" [= Kalabo, NW Western Prov., W Zambia, 5°00'S, 22°41'E, elevation 1025 m].

Distribution: Southern Africa. Western Zambia (Western), ext. NE Namibia (Caprivi) and NW Botswana (W North West), 950–1025 m.

Sources: Auerbach, 1987, Broadley, 1983, Branch, 1988, J.B. Rasmussen, 1997a, Broadley et al., 2003, M. Griffin, 2003 and Broadley & Blaylock, 2013.

2. *Crotaphopeltis braestrupi* J.B. Rassmussen, 1985a. Steenstrupia 11(4): 114, figs. 1–2.

Type: Holotype, CAS 153373, a 480 mm male (L.G. Hoevers & P.M. Johnson, 1 Nov. 1977).

Type locality: "Lower Juba Valley: ca. Mareri, Juba Sugar Project, Somalia" [= N and S of Mareri (0°26'N, 42°43'E, elevation 20 m), Lower Juba Valley, SE Jubbada Dhexe Region, S Somalia].

Distribution: Southern Somalia (Bay, Jubbada Dhexe, Jubbada Hoose, Shabeellaha Dhexe, Shabeellaha Hoose) and SE Kenya (Coast, S North-Eastern), NSL–600 m.

Sources: Lanza, 1983a, 1990b, Largen & Rasmussen, 1993 and Spawls et al., 2002.

3. *Crotaphopeltis degeni* (Boulenger, 1906e). Proc. Zool. Soc. London 76(3–4): 572, figs. 97a–c. (*Leptodira degeni*)

Synonym: *Leptodeira attarensis* F. Werner, 1908.

Types: Syntypes (2), BMNH 1946.1.9.96–97 (formerly BMNH 1906.5.30.7–8), a male and female, longest syntype 450 mm (E.J.E. Degen, 1895–1905).

Type locality: "Entebbe, Uganda" [= Entebbe, Central Prov., S Uganda, 0°03'N, 32°28'E, elevation 1170 m].

Distribution: Central Africa. Northern Cameroon (Extreme-Nord), N Central African Republic (Vakaga), S Sudan (An Nil Al Abyad), E South Sudan (Jonglei), W Ethiopia (Illubabor), S Uganda (Central, Eastern, Western) SW Kenya (Nyanza, S Rift Valley, Western) and SW Tanzania (Iringa-Mbeya, Rukwa), 315–2700 m.

Sources: Pitman, 1974, Largen & Rasmussen, 1993, J.B. Rasmussen, 1997a, J.B. Rasmussen et al., 2000, Spawls et al., 2002, Chippaux, 2006, Chirio & LeBreton, 2007 and Largen & Spawls, 2010.

4. *Crotaphopeltis hippocrepis* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 251–252, pl. 1, figs. 18–20. (*Dipsas hippocrepis*)

Synonym: *Crotaphopeltis acarina* Roman, 1974b.

Type: Holotype, ZMUC 63127, a 240 mm female (J.R. Chenon, 1826–1836).

Type locality: "Guinea" [= coast of Ghana *fide* Hughes & Barry, 1969: 1027]. Restricted to vicinity of Accra, Ghana *fide* J.B. Rasmussen & Hughes (1997: 14, 16).

Distribution: West Africa. Western Guinea (Kindia, Télimélé), Sierra Leone, W Burkina-Faso (Centre-Est, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire), Ivory Coast, Ghana, Togo (Centrale, Plateaux), N Benin (Alibori, Atakora), S Niger (Maradi), N Nigeria (Kaduna, Kano, Plateau), N Cameroon (Adamaoua, N Est, Extreme-Nord, Nord, Nord-Ouest), and Central African Republic (Bamingui-Bangoran, Gribingui, Ouaka, Ouham), 320–1475 m.

Sources: Roman, 1980, J.B. Rasmussen & Hughes, 1997, J.B. Rasmussen et al., 2000, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Segniagbeto et al., 2011, Chirio, 2013 and Hughes, 2013.

Remarks: A valid species *fide* J.B. Rassmussen, 1985a.

5. *Crotaphopeltis hotamboeia* (Laurenti, 1768). Synop. Rept.: 85. (*Coronella hotamboeia*)

Synonyms: *Coronella virginica* Laurenti, 1768, *Coluber rufescens* Gmelin, 1789, *Coluber hotamboeja* Bonnaterre, 1790 *(nomen emendatum), Coluber bicolor* Leach *in* Bowdich, 1819, *Ophis albocinctus* Duvernoy, 1832, *Ophis heterurus* Duvernoy, 1832, *Dipsas inornatus* A. Smith, 1849, *Oxyrhopus melanocrotaphus* Cope, 1860e, *Crotaphopeltis hotamboeia kageleri* Uthmöller, 1939, *Tarbophis barnumbrowni* Bogert, 1940, and *Crotaphopeltis hotamboeia ruziziensis* Laurent, 1956a.

Type: Holotype, not designated, location unknown.

Type locality: "India orientali" [= Eastern India] (in error). Corrected to Africa *fide* Loveridge (1957a: 271).

Distribution: Subsaharan Africa. Southwestern Mauritania (Trarza), Senegal (Fatick, Kédougou, Tambacounda), Gambia (MacCarthy Island, Western), Guinea–Bissau (Bafaté, Biombo, Bissau, Cacheu), Guinea (Kissidougou, Kouroussa, Macenta, Télimélé), Sierra Leone (Eastern, Northern, Southern), Liberia, Ivory Coast (Abidjan, Bouaflé, Bouaké, Bouna, Daloa, Guiglo, Lagunes, Tabou, Toumodi), SW Mali (Kayes, Koulikoro, Sikasso, SW Tombouctou), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Nord, Sahel, Sud-Ouest, Volta-Noire), N Ghana (Upper East, Upper West), Togo (Kara, Maritime, Plateaux), Benin (Alibori, Atakora, Atlantique, Borgou, Collines), Niger (Tahoua), Nigeria

C

(Cross River, Delta), S Chad (Chari-Baguirmi, Mayo-Kebbi), Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Nord, Nord-Ouest, Ouest, Sud-Ouest), Central African Republic (Bamingui-Bangoran, Kemo-Gribingui, Haut-Kotto, Haut-Mbomou, Haute-Sangha, Mbomou, Ombella Mpoko, Ouaka, Ouham, Ouham-Pende, Sangha, Vakaga), Gabon (Haut-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Maritime), Congo (Bouenza, Brazzaville, Cuvette-Ouest, Kouilou, Lekoumou, Pool), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu), NE Angola (Lunda Sul, Moxico), SE Sudan, Eritrea, Ethiopia (Gemu Gofa, Gojjam, Gondar, Hararge, Illubabor, Kefa, Shoa, Sidamo, Wollega), S Somalia (Bakool, Hiraan, Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Alessandra Is.), Kenya (Coast, S Eastern, North-Eastern, Rift Valley), Angola (Cuando-Cubango), Uganda (Central, Eastern, Northern, Western, Kome and Sese Is.), Rwanda, Burundi, Tanzania (Arusha, Iringa, Kilimanjaro, Lindi, Mara, Mbeya, Morogoro, Mtwara, Mwanza, Pwani, Ruvuma, Tanga, Kagera, Zanzibar Is.), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawi (Central, Northern, Southern), Mozambique (Inhambane, Manica, Maputo, Niassa, Sofala, Tete, Bazaruto and Inhaca Is.), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), E Botswana (Gabornoe, Kweneng, North West, South East), N Namibia (Caprivi, Okavango, Otjozondjupa), Swaziland, Lesotho and South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, North West, Western Cape), NSL–2500 m.

Sources: Mertens, 1955, Doucet, 1963, Menzies, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Roman, 1980, Hakansson, 1981, Broadley, 1983, Hughes, 1983, 2013, Lanza, 1983a, 1990b, Pienaar et al., 1983, Auerbach, 1987, Branch, 1988, Branch & McCartney, 1993, Largen & Rasmussen, 1993, J.-F. Trape & Roux-Estève, 1995, Keogh et al., 2000, J.B. Rasmussen et al., 2000, Clauss & Clauss, 2002, Spawls et al., 2002, Broadley et al., 2003, J.-F. Trape & Mané, 2004, 2006b, Branch et al., 2005, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, Largen & Spawls, 2010, Ullenburch et al., 2010, and Segniagbeto et al., 2011, Auliya et al., 2012, Broadley & Blaylock, 2013 and Chirio, 2013.

Remarks: Broadley (1983: 245) suggested that *C. kageleri* Uthmöller, is probably a valid species.

6. *Crotaphopeltis tornieri* (F. Werner, 1908). Sitz. Akad. Wiss. Wien, Math.-Natur. Kl. (1907) 116(1): 1876. (*Leptodira tornieri*)

Type: Holotype, ZMH 652 (formerly ZMH 4576), a juvenile male (A. Müller).

Type locality: "Usambara (Deutsch-Ostafrika)" [= Usambara Mountains, Tanga Prov., NE Tanzania, ca. 4°45'N, 38°30'E].

Distribution: Southeastern Tanzania (Iringa, Lindi, Morogoro, Mtwara, Rukwa, Tanga) and N Malawi (Northern), 610–1220 m.

Sources: Broadley, 1968a, J.B. Rasmussen, 1993a and Spawls et al., 2002.

Remarks: Resurrected by Broadley, 1968b.

CRYOPHIS Bogert & Duellman, 1963 (Dipsadidae)

Type species: *Cryophis hallbergi* Bogert & Duellman, 1963.

Distribution: Southern Mexico.

Sources: Bogert & Duellman, 1963, Cadle, 1984b, Villa et al., 1988, Casas-Andreu et al., 1996, Zaher et al., 2009 and Mulcahy et al., 2011.

1. *Cryophis hallbergi* Bogert & Duellman, 1963. Amer. Mus. Novit. (2162): 4–9, figs. 1, 4–6.

Type: Holotype, KU 70901, a 650 mm male (W.E. Duellman, 27 June 1962).

Type locality: "6 kilometers south of Campamento Vista Hermosa, at an elevation of 1865 meters, at the northern periphery of the Sierra de Juárez, Distrito de Ixtlán, Oaxaca, Mexico...near latitude 17°50' N., longitude 96° 20' W., on the drainage of the Río San Cristobal, to the southwest of Valle Nacional."

Distribution: Southern Mexico (ext. N Oaxaca), 1150–1865 m.

CRYPTOPHIDION Wallach & Jones, 1994 (Colubridae)

Type species: *Cryptophidion annamense* Wallach & Jones, 1994.

Distribution: Central Vietnam.

Sources: Pauwels & Meirte, 1997 and Wallach & Jones, 1997.

1. *Cryptophidion annamense* Wallach & Jones, 1994. Cryptozoology (1992) 11: 5–12, figs. 1–3.

Type: Iconotypes (3) of holotype, MCZ-SC K948–50 (C.E. Snyder, 1968).

Type locality: "West of Da Nang, Quang Nam-Da Nang Prov., central Vietnam, ca. 16°N, 108°E, presumably in the Annam Highlands."
Distribution: Central Vietnam (Quang Nam-Da Nang). Known only from type locality.
Remarks: Holotype lost *fide* Wallach & Jones (1997: 5). A synonym of *Xenopeltis unicolor fide* Pauwels & Meirte (1997: 99–100) and Iskandar & Colijn (2001: 32).

CUBOPHIS Hedges & Vidal *in* Hedges, Couloux & Vidal, 2009 (Xenodontidae)

Type species: *Coluber cantherigerus* Bibron, 1840 *in* Ramón de la Sagra, 1838–1843.
Distribution: Cuba, Bahamas and Cayman Islands.
Sources: Hedges et al., 2009, R.W. Henderson & Powell, 2009 and Zaher et al., 2009.

1. *Cubophis cantherigerus* (Bibron, 1840 *in* Ramón de la Sagra, 1838–1843). Hist. Fís. Polít. Nat. Cuba 2(2): pl. 27, figs. 1–5. (*Coluber cantherigerus*)

Synonyms: *Dromicus angulifer* Bibron, 1843 *in* Ramón de la Sagra, 1838–1843, *Dromicus unicolor* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Dromicus angulifer adspersus* Gundlach & Peters *in* W.C.H. Peters, 1864b, *Alsophis brooksi* Barbour, 1914a, *Alsophis cantherigerus spielmani* Grant, 1959, *Alsophis cantherigerus pepei* A. Schwartz & Thomas, 1960, and *Alsophis cantherigerus schwartzi* Lando & Williams, 1969.
Types: Syntypes (6), MNHN 3545–46, MNHN 3561–63, and MCZ 2195 (formerly MNHN), longest syntype 1250 mm (D. Ramón de la Sagra, 1824–1835).
Type locality: "Cuba."
Distribution: Cuba (Camagüey, Cienfuegos, Ciego de Aviula, Granma, Guantánamo, Habana, Holguín, Matanzas, Pinar del Río, Sancti Spíritus, Santiago de Cuba, Villa Clara, Juventud, Little Swan, Los Canarreos Arch., Sabana-Camagüey Arch., San Felipe and Swan Is.), NSL–300 m.
Sources: H.M. Smith & Grant, 1958c, A. Schwartz & Thomas, 1960, Lando & Williams, 1969, Novo-Rodriguez & Arazoza-Rodriguez, 1986 and Seidel & Franz, 1994.
Remarks: Supplemental original description in Bibron, 1843 *in* Ramón de la Sagra (1838–1843: 133–134). Original description reprinted in Bibron, 1843 *in* Ramón de la Sagra (1841–1843: 222–224, pl. 27, figs. 1–5).

2. *Cubophis caymanus* (S.W. Garman, 1887a). Proc. Amer. Philos. Soc. 24(126): 276–277. (*Alsophis caymanus*)

Types: Syntypes (5), MCZ 6020a–e, adult, halfgrown and juvenile specimens (W.B. Richardson, 31 Aug. 1886).
Type locality: "Grand Cayman Island" [Cayman Islands, West Indies].
Distribution: Cayman Is. (Cayman Brac, Grand Cayman, Little Cayman Is).
Sources: Grant, 1940c and Hedges et al., 2009.
Remarks: A valid species *fide* Hedges et al. (2009: 9).

3. *Cubophis fuscicaudus* (S.W. Garman, 1888). Bull. Essex Inst. 20: 106–107. (*Alsophis fuscicauda*)

Type: Holotype, MCZ 6235, an adult (C.J. Maynard, 1888).
Type locality: "Cayman Brac, Caymans" [West Indies].
Distribution: Cayman Is. (Cayman Brac).
Remarks: A valid species *fide* Hedges et al., 2009.

4. *Cubophis ruttyi* (Grant, 1940c). Bull. Inst. Jamaica (Sci.) (1): 50–51, figs. 5–6. (*Alsophis angulifer ruttyi*)

Type: Holotype, MCZ 44876 (formerly CG 2656), an 840+ mm female (C. Grant, 9 April 1938).
Type locality: "Little Cayman" [Island, Cayman Islands, West Indies].
Distribution: Cayman Is. (Little Cayman Is.).
Remarks: A valid species *fide* Hedges et al. (2009: 9).

5. *Cubophis vudii* (Cope, 1862b). Proc. Acad. Nat. Sci. Philadelphia 14(1): 74. (*Alsophis vudii*)

Synonyms: *Diadophis rubeseans* Cope, 1885b, *Alsophis vudii aterrimus* T. Barbour & Shreve, 1935, *Alsophis vudii raineyi* T. Barbour & Shreve, 1935, *Alsophis vudii utowanae* T. Barbour & Shreve, 1935, and *Alsophis vudii picticeps* Conant, 1937a.
Types: Syntypes (6), ANSP 5567 and ANSP 5569–71 (H.C. Wood, Jr.), and ANSP 5598–99 (H. Bryant, 1859), longest syntype 991 mm.
Type locality: "New Providence Id., Bahamas."
Distribution: Bahama Bank. Bahama Is. (Acklins, Andros, Berry, Binimi, Cat, Crooked, Eleuthera, S Exumas, Grand Bahama, Great Inagua, Little San Salvador, Long, New Providence, S Ragged, Sheep Cay).

CYCLOCORUS A.-M.-C. Duméril, 1853 (Colubroidea *incertae sedis*)

Synonyms: *Cyclochorus* Jan, 1857 *(nomen emendatum)* and *Cyclorus* – Obst, Richter & Jacob, 1984 *(nomen incorrectum).*
Type species: *Lycodon lineatus* J.T. Reinhardt, 1843.
Distribution: Philippines.
Sources: Leviton, 1967, Alcala, 1986 and Zaher et al., 2009.

C

1. *Cyclocorus lineatus* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh. 10: 241–244, pl. 1, figs. 7–9. (*Lycodon lineatus*)

Synonyms: *Cyclochorus maculatus* Jan, 1870 *in* Jan & Sordelli, and *Cyclocorus lineatus alcalai* Leviton, 1967.
Type: Holotype, ZMUC 60489, a 318 mm female.
Type locality: "in insula Manillae" [Manila, SW Luzón Is., N Philippines, 14º36'N, 120º59'E, elevation 15 m].
Distribution: Philippines (Catanduanes, Cebu, Guimaras, Inampulugan, Lubang, Luzón, Masbate, Mindoro, Negros, Pacijan, Panay, Polillo, Romblon, Tablas, Zambales), NSL–1525 m.
Sources: Ross & Gonzales, 1992, J.B. Rasmussen & Hughes, 1997 and Ferner et al., 2001.

2. *Cyclocorus nuchalis* E.H. Taylor, 1923. Philippine J. Sci. (1922) 22D(5): 543–545, pl. 3, figs. 1–2.

Synonym: *Cyclocorus nuchalis taylori* Leviton, 1967.
Type: Holotype, CAS 62558 (formerly EHT 1428), a 444 mm male (E.H. Taylor, 30 Sept. 1920).
Type locality: "Pasananka, Zamboanga, Philippine Islands" [= Pasonanca, ext. W Mindanao Is., S Philippines, ca. 6°56'N, 122°04'E, elevation 10 m].
Distribution: Southern Philippines (Basilan, Camiguin, Leyte, Mindanao, Samar, Siargao), NSL–760 m.

CYCLOPHIOPS Boulenger, 1888h (Colubridae)

Synonyms: *Eurypholis* Hallowell, 1861 *(nomen praeoccupatum), Entechinus* Cope, 1895a *Entacanthus* Cope, 1900 *(nomen emendatum), Entracanthus* – Maki, 1931 *(nomen incorrectum),* and *Pheodrys* – Yao, 2012 *(nomen incorrectum).*
Type species: *Cyclophiops doriae* Boulenger, 1888h.
Distribution: Southeastern Asia.
Sources: Bourret, 1936b, M.A. Smith, 1943, Cundall, 1981 and Zhao & Adler, 1993.

1. *Cyclophiops doriae* Boulenger, 1888h. Ann. Mus. Civ. Stor. Nat. Genova (2) 6: 599, pl. 6, figs. 1–1b.

Type: Lectotype, MSNG 30384A (L. Fea, 1886), designated by Capocaccia (1961a: 105).
Type locality: "Monti ad Est di Bhamò: Kakhien Hills (Birmania)" [= mountains to the east of Bhamò (24°15'N, 97°14'E), ext. SE Kachin Division, Myanmar] via lectotype selection.
Distribution: Southern Asia. Northeastern India, N Myanmar (Kachin) and ext. SW China (SE Yunnan), 100–1375 m.
Sources: Wall, 1925b, Murthy, 1985, 1986 and R.C. Sharma, 2003, 2007.

2. *Cyclophiops hamptoni* (Boulenger, 1900d). Ann. Mag. Nat. Hist. (7) 6(34): 409. (*Ablabes hamptoni*)

Type: Holotype, BMNH 1946.1.5.32 (formerly BMNH 1900.9.20.15), a 1050 mm female (H. Hampton, 1898–1900).
Type locality: "Magok, on the Irawaddi, about 12 miles north of Mandalay, Burma" [= Mogok, N Mandalay Div., cen. Myanmar, 22°55'N, 96°32'E, elevation 1125 m]. Restricted to Ruby Mines, Mogok, Myanmar *fide* Wall (1924a: 865).
Distribution: Central Myanmar (Mandalay), 1125 m. Known only from type locality.
Remarks: A synonym of *E. doriae* (Boulenger) *fide* Mahendra (1984: 271).

3. *Cyclophiops herminae* (Boettger, 1895c). Zool. Anz. 18(479): 269–270. (*Ablabes herminae*)

Type: Holotype, SMF 19308 (formerly SMF-B 8277a), a 580 mm male (B. Schmacker, 1895).
Type locality: " Liukiu-Inseln, angeblich von Yaeyama auf Mijakoshima, Südgruppe" [= Miyako-jima Is., Yaeyama group, Okinawa Prefecture, S Ryukyu Archipelago, 24°47'N, 125°20'E].
Distribution: Extreme S Japan (Ryukyus: Aragusukujima, Haterumajima, Hatomajima, Irabujima, Ikemajima, Iriomotejima, Ishigakishima, Kayamajima, Kohamajima, Kurimajima, Kuroshima, Miyakojima, Nakanogamijima, Ogamijima, Shimojijima, Taketomijima, Taramajima and Yonagunijima Is.).
Sources: Stejneger, 1907a, Maki, 1931, Nakamura & Uéno, 1963 and M. Mori, 1986.
Remarks: Original description reprinted in Boettger (1895e: 110–111).

4. *Cyclophiops major* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 120. (*Cyclophis major*)

Synonyms: *Herpetodryas chloris* Hallowell, 1861, *Coluber delacouri* M.A. Smith, 1930b, and *Liopeltis major bicarinata* Maki, 1931.
Type: Holotype, BMNH 1946.1.1.68, a 775 mm female (H. Cuming, 1836–1840).
Type locality: "Near Ningpo, China" [= vicinity of Ningbo, NE Zhejiang Prov., E China, 29°51'N, 121°33'E, elevation 10 m].
Distribution: Southeastern Asia. Southeastern China (Anhui, Fujian, Gansu, Guangdong, Guizhou, Guangxi, Hainan, Henan, Hong Kong, Hubei, Hunan, Jiangsi, Jiangsu, Shaanxi, Sichuan, Yunnan, Zhejiang, Zhoushan Is.), Taiwan and N Vietnam (Cao Bang, Ha Tay, Lao Cai, Quang Binh, Vinh Phu), 50–1500 m.
Sources: Stejneger, 1907a, Maki, 1931, Bourret, 1934e, C.H. Pope, 1935, Kuntz, 1963, Mao, 1964, Romer, 1979a, Orlov et al., 2000, Ziegler et al., 2006, V.S. Nguyen et al., 2009, Xiang & Li, 2009, I. Das, 2010, 2012 and Yao, 2012.

5. *Cyclophiops multicinctus* (Roux, 1907b). Zool. Anz. 31(24): 762–763. (*Ablabes multicinctus*)

Synonyms: *Ablabes retrofasciatus* Angel, 1920c, *Zamenis moi* M.A. Smith, 1921a, *Ablabes multicinctus bicolor* Angel, 1929, and *Liopeltis sinii* Fan, 1931.
Type: Holotype, NMBA 1 (formerly MHNN 70), a 1060 mm specimen (Klauser).
Type locality: "Tonkin" [= N Vietnam]. Restricted to Red River, N Vietnam *fide* Schätti (1986a:100).
Distribution: Southeast Asia. Southern China (Guangxi, Hainan, Hunan, S Yunnan), N Laos (Xiangkhouang) and Vietnam (Bac Kan, Cao Bang, Da Nang, Hai Duong, Ha Tay, Ha Tinh, Hoa Binh, Koa Tum, Lai Châu, Lao Cai, Ninh Binh, Quang Binh, Quang Nam, Quang Ninh, Quang Tri, Thai Nguyen, Thua Thien-Hue, Vinh Phú), 100–1135 m.
Sources: Bourret, 1934e, C.H. Pope, 1935, M.A. Smith, 1943, Campden-Main, 1970a, Deuve, 1970, Orlov et al., 2000, Zhao, 2006, V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.

6. *Cyclophiops semicarinatus* (Hallowell, 1861). Proc. Acad. Nat. Sci. Philadelphia (1860) 12(11): 493–494. (*Eurypholis semicarinatus*)

Synonyms: *Cyclophis nebulosus* A.C.L.G. Günther, 1868 and *Liopeltis semicarinata fritzei* Maki, 1931.
Type: Lectotype, USNM 7316, a 502 mm specimen (C. Wright, Nov. 1854), designated by Maki (1931a: 112).
Type locality: "Loo Choo, near Napa" [= vicinity of Naha, SW Okinawa-jima, Ryukyu Arch., ext. S Japan] via lectotype selection.
Distribution: Extreme S Japan (Ryukyus: Agunijima, Akajima, Amamioshima, Amurojima, Fukajijima, Gishifujima, Gushikawajima, Gusukujima, Hamahigajima, Hatejima, Haterumajima, Hyanzajima, Iejima, Iheyajima, Ikeijima, Ikemajima, Irabujima, Iriomotejima, Ishigakijima, Izenajima, Kakeromajima, Kerumajima, Kikaijima, Kohamajima, Korijima, Kubajima, Kudakajima, Kumejima, Kurimajima, Kuroshima, Maejima, Minnjima, Miyagijima, Miyakojima, Nakajima, Nakanogamijima, Nohojima, Ogamijima, Ohajima, Ojima, Okierabujima, Okinawajima, Sesokojima, Shimojishima, Taketomijima, Taramajima, Tokashikijima, Tokunoshima, Tonakijima, Tsukenjima, Ukejima, Ukibarujima, Yabuchijima, Yaguchijima, Yakabijima, Yanahajima, Yonagunijima, Yorojima, Yoronjima and Zamamijima Is.).
Sources: Stejneger, 1907a, Maki, 1931, M. Mori, 1982, Toriba, 1991 and Ota et al., 1995.
Remarks: Hallowell's 536 mm length for the type appears to be the mean for both specimens *fide* Stejneger (1907a: 340).

CYCLOTYPHLOPS Bosch & Ineich, 1994 (Typhlopidae)

Type species: *Cyclotyphlops deharvengi* Bosch & Ineich, 1994.
Distribution: Indonesia (Sulawesi).
Sources: Bosch & Ineich, 1994, McDiarmid et al., 1999, Lang & Vogel, 2005 and Koch, 2012.

1. *Cyclotyphlops deharvengi* Bosch & Ineich, 1994. J. Herp. 28(2): 208–209, figs. 4–8.

Type: Holotype, MNHN 1990.4279, a 146 mm specimen (L. Deharveng ['Maros 88' Exped.], 12 July 1988).
Type locality: "Malawa, between Maros and Bone-Watampone, Selatan Prov., southeastern Sulawesi, Indonesia, at an elevation of approximately 500 m."
Distribution: Indonesia (Sulawesi), 500 m. Known only from type locality.

CYLINDROPHIS Wagler, 1828 (Cylindrophiidae)

Synonyms: *Cijlindrophis* Bleeker, 1856 *(nomen emendatum), Cylindrophus* – M.A. Smith, 1914b *(nomen incorrectum), Cilyndrophis* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Culindrophis* – McDowell, 1975 *(nomen incorrectum).*
Type species: *Anguis ruffa* Laurenti, 1768.
Distribution: Southeastern Asia and Indonesia.
Sources: McDowell, 1975a, Bosch, 1985, Welch, 1988, Cundall et al., 1994, Stuebing, 1994b, L.A. Smith & Sidik, 1998, McDiarmid et al., 1999, Iskandar & Colijn, 2001, Gower et al., 2005 and Gómez et al., 2008.

1. *Cylindrophis aruensis* Boulenger, 1920b. Ann. Mag. Nat. Hist. (9) 6(31): 108.

Types: Syntypes (2), BMNH 1946.1.16.72–73 (formerly BMNH 1900.2.9.16–17), a 169 mm and 167 mm male (F.H. Rolle, 1864–1900).
Type locality: "Aru Island" [E Maluku Prov., E Indonesia].
Distribution: Eastern Indonesia (Maluku: Aru Arch.).
Source: McDowell, 1975a.
Remarks: Record from Aru Islands doubtful and type locality in error *fide* Iskandar & Colijn (2002: 23).

2. *Cylindrophis boulengeri* Roux, 1911. Zool. Jahrb. (Syst.) 30(5): 500.

Type: Holotype, SMF 16996, a 550 mm specimen (J. Elbert, 1909).
Type locality: "Wetar, Iliwaki" [= Iliwaki, Wetar Is., Maluku Prov., SE Indonesia, 7°48'S, 126°18'E].
Distribution: Southeastern Indonesia (Maluku: Baber, Timor, Wetar).

C

3. *Cylindrophis engkariensis* Stuebing, 1994b. Raffles Bull. Zool. 42(4): 969–972, figs. 1–2.

Type: Holotype, ZRC (formerly RBS 8821), a 485 mm male (R.B. Stuebing, 12 Aug. 1993).
Type locality: "Nanga Segerak (1°25'N 122°00'E), 245 m asl, headwaters of the Engkari River, Lanjak-Entimau Wildlife Sanctuary, Lubok Antu District, Second Division, Sarawak, Malaysia."
Distribution: East Malaysia (Sarawak), 245 m.
Sources: I. Das, 2010, 2012.

4. *Cylindrophis isolepis* Boulenger, 1896d. Ann. Mag. Nat. Hist. (6) 18(103): 62.

Type: Holotype, BMNH 1946.1.1.47 (formerly BMNH 1896.4.29.45), a 430 mm specimen (A.H. Everett, 1896).
Type locality: "Jampea Island" [= Tanahjampea Is., Selayar Arch., South Sulawesi Prov., S Indonesia, ca. 7°05'S, 120°41'E].
Distribution: Southern Indonesia (S Sulawesi: Tanahjampea Is.).
Sources: Lang & Vogel, 2005 and Koch, 2012.
Remarks: Photographs of the holotype in Lang & Vogel (2005: figs. 128–129).

5. *Cylindrophis lineatus* Blanford, 1881. Proc. Zool. Soc.. London 49(1): 217–218, pl. 20.

Type: Holotype, BMNH 1946.1.16.5 (formerly RMBR & BMNH 1903.6.2.3), a 635 mm specimen (N.B. Dennys, 1878–1881).
Type locality: "island of Singapore" (in error *fide* Stuebing 1991: 327). Corrected to Borneo *fide* Smedley (1932b: 11).
Distribution: East Malaysia (W Sarawak) and Indonesia (Kalimantan)
Sources: C. Haas, 1950, Stuebing, 1991 and I. Das, 2010, 2012.
Remarks: BMNH catalogue lists Singapore as type locality *fide* McDiarmid et al. (1999: 153).

6. *Cylindrophis maculatus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 228. (*Anguis maculata*)

Synonyms: *Anguis decussata* Laurenti, 1768, *Anguis hepatica* Laurenti, 1768, *Anguis tessellata* Laurenti, 1768, and *Cylindrophis curticeps* Jerdon, 1854.
Types: Syntypes (3), NHR Lin-14a–c (formerly MAFR), a 420 mm, 325 mm and 270 mm specimen (Mus. Drottn.).
Type locality: "America" (in error). Corrected to Ceylon [= Sri Lanka] *fide* Deraniyagala (1955: 5).
Distribution: Sri Lanka (Central, North-Western, Sabaragamuwa, Southern, Uva, Western), NSL–1200 m.
Sources: Wall, 1921g, M.A. Smith, 1943, Deraniyagala, 1955, P. Silva, 1980 and Bachman, 1985.
Remarks: Considered a subspecies of *C. ruffus* (Laurenti) *fide* Mahendra 1936, 1984.

7. *Cylindrophis melanotus* Wagler, 1828 *in* 1828–1833. Descr. Icon. Amph.: pl. 5, 2 pp. *(nomen corrigendum)*

Synonyms: *Cylindrophe melanoto* Wagler, 1828 *in* 1828–1833 *(nomen incorrigendum), Cylindrophis melanotus* Wagler, 1830 *(nomen corrigendum), Cylindrophis melanota* A.-M.-C. Duméril & Bibron, 1844, *Tortrix rufa celebica* Schlegel, 1844, *Tortrix rufa celebensis* Gray, 1849 *(nomen emendatum), Cylindrophis melanota* Bleeker, 1856 *(nomen emendatum), Cylindrophis celebensis* M.A. Smith, 1927, and *Cylindrophis heinrichi* Ahl, 1933b.
Type: Holotype, RMNH 19 (formerly MLB) (A.J. van Delden, 1825–1828).
Type locality: Unknown. Designated as Célèbes [= Sulawesi, Indonesia] *fide* A.-M.-C. Duméril & Bibron (1844: 595) and RMNH catalogue.
Distribution: Eastern Indonesia (Bacan, Buton, Halmahera, Kepulauan, Sangihe, Sula, Sulawesi, Tabukan), NSL–1200 m.
Sources: Malkmus, 1993a, Lang & Vogel, 2005 and Koch, 2012.
Remarks: Possible types include RMNH 17 (Celebes, E.A. Forsten) and RMNH 18 (Manado, E.A. Forsten) but Forsten collected in East Indies from ca. 1838–1843. A.H.A. Duméril & Bibron (1844: 595) listed collectors of type as J.R.C. Quoy & J.P. Gaimard.

8. *Cylindrophis opisthorhodus* Boulenger, 1897d. Ann. Mag. Nat. Hist. (6) 19(113): 506.

Types: Syntypes (2), BMNH 1946.1.16.48–49 (formerly BMNH 1897.6.21.39–40), longest syntype 230 mm (A.H. Everett, 1895–1896).
Type locality: "Lombok...at an altitude of 1500 feet" [= Lombok Is., Lesser Sundas, S Indonesia, elevation 455 m] .
Distribution: Lesser Sundas of S Indonesia. (Flores, Komodo, Lombok, Sumbawa), NSL–455 m.
Sources: T. Barbour, 1912b, Rooij, 1917, F. Werner, 1922b, Mertens, 1930 and Auffenberg, 1980.

9. *Cylindrophis ruffus* (Laurenti, 1768). Synop. Rept.: 71. (*Anguis ruffa*)

Synonyms: *Anguis rufus* Gmelin, 1789 *(nomen emendatum), Anguis striatus* Gmelin, 1789, *Anguis scytale* P. Russell, 1801 *(nomen praeoccupatum), Anguis rufa* G. Shaw, 1802 *(nomen emendatum), Scytale scheuchzeri* Merrem, 1820, *Eryx binotata* Wagler, 1825 (*nomen ineditum*), *Eryx kuhlii* Wagler, 1825 (*nomen ineditum*), *Eryx shilay* Wagler, 1825 (*nomen ineditum*), *Cylindrophis resplendens* Wagler, 1828a, *Anguis rufa javanica* Gray, 1849a, and *Cylindrophis rufus burmanus* M.A. Smith, 1943.
Type: Holotype, formerly MG, lost *fide* Iskandar & Colijn (2002: 24).

Type locality: "Surinamei" [= Suriname] (in error). Corrected to Java, Indonesia *fide* Schlegel (1837: 11).

Distribution: Southeastern Asia. Southern China (Fujian, Hainan, Hong Kong), S Myanmar (Tanintharyi), Thailand (Chon Buri, Krabi, Nakhon Sawan, Nakhon Si Thammarat, Phang Nga, Phetchabun, Prachin Buri, Roi Et, Sakhon Nakhon, Saraburi, Sisaket, Sukhothai, Tak), Cambodia, Laos (Champasak), Vietnam (An Giang, Ba Ria-Vung Tau, Ca Mau, Can Tho, Da Nang, Dong Nai, Ho Chi Minh City, Kien Giang, Quang Binh, Quang Nam, Quang Tri, Tay Ninh, Thua Thien-Hue, Vinh Phuc), West Malaysia (Pinang), Singapore, East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Bangka, Batjan, Belitung, Buton, Java, Kalimantan, Kepulanan, Riau Arch., Sulawesi, Sangihe Arch., Sumatra), NSL–1675 m.

Sources: M.A. Smith, 1943, Bergman, 1953b, E.H. Taylor, 1965, Tweedie, 1983, Mahendra, 1984, Adler et al., 1992, Toriba, 1992c, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Orlov et al., 2000, Malkmus et al., 2002, Lang & Vogel, 2005, Ziegler & Phong, 2005, V.S. Nguyen et al., 2009 and I. Das, 2010, 2012.

10. *Cylindrophis yamdena* L.A. Smith & Sidik, 1998. Raffles Bull. Zool. 46(2): 421–423, figs. 2a–b, 3–4.

Type: Holotype, WAM 112252 (to be deposited in MZB), a 628 mm male (R.E. Johnstone, D.J. Kitchener, R.A. Howe; 23 April 1993).

Type locality: "Latdalam, Yamdena Island in 7°59'S, 131°09'E, Tamimbur Archipelago, Indonesia."

Distribution: Southeastern Indonesia (Maluku: Tanimbar Arch.: Yamdena).

D

DABOIA Gray, 1842e (Viperidae)

Synonyms: *Daboia* Gray, 1840 (*nomen nudum*), *Chersophis* Fitzinger, 1843, and *Daboya* – S. Hatori, 1913 *(nomen incorrectum)*.

Type species: *Coluber russelii* G. Shaw & Nodder, 1797 *in* 1789–1813.

Distribution: Southern Asia and North Africa.

Fossil records: Middle Pliocene of Spain. Possible records from the lower-middle Miocene of France *fide* Szyndlar & Rage, 1999.

Sources: Szyndlar, 1986, Brodmann, 1987, Golay et al., 1993, McDiarmid et al., 1999, Szyndlar & Rage, 1999, Lenk et al., 2001b, Mallow et al., 2003, Wüster et al., 2008, Stümpel & Joger, 2009, Phelps, 2010 and Hoser, 2012d.

Remarks: Includes *Daboia russelii* and *D, palaestinae fide* Groombridge, 1980, 1986, and *D. mauritanica* and *D. deserti fide* Lenk et al., 2001b.

1. *Daboia deserti* (J. Anderson, 1892). Proc. Zool. Soc. London 60(1): 20–23, pl. 1, figs. 6–7. (*Vipera lebetina deserti*)

Type: Holotype, BMNH 1946.1.18.28 (formerly BMNH 1891.5.4.150), a 707 mm female (native, May–June, 1890).

Type locality: "Duirat, on the confines of Tripoli, South Tunisia" [= Douirat, Ghomrassen Governate, Tunisia, 32°59'N, 10°15'E, elevation 400 m].

Distribution: Tunisia (Ariana, Bizerte, Kairouan, Sousse, Tataouine) and NW Libya (Gharyan), NSL–400 m.

Sources: Billing & Schätti, 1984, Nilson & Andrén, 1988b, Herrmann et al., 1992, Spawls & Branch, 1995, Bons & Geniez, 1996, Schleich et al., 1996, Herrmann & Joger, 1997 and Bogaerts, 1998.

Remarks: A valid species *fide* Brodmann, 1987 and Herrmann et al., 1992. Possibly a subspecies of *D. mauritanica fide* U. Joger *in* McDiarmid et al. (1999: 383). Coastal records from Tunisia may belong to this species *fide* Spawls & Branch (1995: 138). Possibly occurs in NE Algeria *fide* Spawls & Branch (1995: 139).

2. †*Daboia maghrebiana* (Rage, 1976). Géol. Méditerr. 3(2): 64–65, figs. 7–8, 1 pl., fig. 14. (†*Vipera maghrebiana*)

Type: Holotype, MNHN BML 905, one right maxilla.

Type locality: "Beni Mellal, Maroc, Miocène" [= Beni Mellal, Morocco, Miocene].

Distribution: Middle Miocene (Astaracian, MN 7/8: 11.1–12.8 mya) of Morocco. Known only from type locality.

Sources: Rage, 1984b, Nilson & Andrén, 1997 and Szyndlar & Rage, 1999.

Remarks: Closely related to *Macrovipera lebetina fide* Rage (1984b: 56).

3. *Daboia mauritanica* (Gray, 1849). Cat. Snakes Brit. Mus.: 27. (*Clotho mauritanica*)

Synonyms: *Echidna mauritanica* A.-M.-C. Duméril & Bibron *in* Guichenot, 1848 *(nomen nudum), Vipera minuta* Eichwald, 1851 (*nomen nudum*), *Vipera confluenta* Cope, 1863a, *Vipera mauretanica* – F. Müller, 1878b *(nomen incorrectum),*

Type: Lectotype, MNHN 4017, a female (A. Guichenot, 1840–1842), designated by J. Anderson (1892: 20).

Type locality: "Algiers" [= Algiers, Algiers Wilaya, NW Algeria, 36°37'N, 3°00'E, elevation 80 m] via lectotype selection.

Distribution; Northwestern Africa. Northern Western Sahara (ext. NE Rio de Oro, Saguia El Hamra), Morocco (Agadir, Azilal, Chechaouene, El Kelaa Des Srarhna, Figuig, Khemisset, Khenitra, Meknes, Nador, Ouarzazate, Oujda, Rabat, Settat, Tangier, Tan Tan, Taounate, Taza, Tetouan, Tiznit), N Algeria (El Oued, Ouargla) and N Tunisia (Ariana, Kairouan, Sousse), 10–2300 m.

Sources: Billing & Schätti, 1984, Brodmann, 1987, Nilson & Andrén, 1988b, Herrmann et al., 1992, Spawls & Branch, 1995, Bons & Geniez, 1996, Schleich et al., 1996, Herrmann & Joger, 1997 and Bogaerts, 1998.

Remarks: David & Ineich (1999: 324–325) discussed authorship.

4. †*Daboia maxima* (Szyndlar, 1988). Acta Zool. Cracov. 31(27): 698–702, fig. 6. (†*Vipera maxima*)

Type: Holotype, MNCN 10032, one trunk vertebra.

Type locality: "Middle Pliocene (MN 15) of Layna (Prov. of Soria, Spain)."

Distribution: Middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) Spain (Soria). Known only from type locality.

Remarks: Allocation to *Daboia* due to relationship with *D. russelii fide* Nilson & Andrén (1997: 40).

5. *Daboia palaestinae* (F. Werner, 1938b). Zool. Anz. 122(11–12): 316–317, figs. 3–4. (*Vipera Palaestinae*)

Synonyms: *Vipera palastinae* – Condrea & Vries, 1965 *(nomen incorrectum), Vipera palestina* – J.H. Brown &

Bowles, 1966 *(nomen incorrectum), Vipera palistinae* Minton, 1971 *(nomen emendatum), Daboia palestinae* Esterbauer, 1987 *(nomen emendatum), Vipera palgestinae* – García, Huang & Pérez, 1989 *(nomen incorrectum),* and *Vipera palaestina* – Janssen, Freyvogel & Meier, 1990 *(nomen incorrectum).*

Type: Holotype, ZSM 70/1938, a 975 mm female (E.H. Taylor, 13 July 1936).

Type locality: "Haifa, Palästina" [= Haifa, Hefa District, Israel, 32°50'N, 34°58'E, elevation 20 m].

Distribution: Middle East. Northwestern Jordan (Ajloun, Amman, Balqa, Irbid, Jarash, Karak, Madaba, Tafilah), N Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, N Southern, Tel Aviv, West Bank), Lebanon (Beirut, El Jnoub, Liban-Nord, Mont-Liban, Nabatiye) and W Syria (Halab, Homs, Latakia, Tartus), 20–1600 m.

Sources: Mendelssohn, 1963, Hraoui-Bloquet, 1981, Herrmann & Joger, 1997, Bouskila & Amitai, 2001, Disi et al., 2001, Hraoui-Bloquet et al., 2002, Amr & Disi, 2011, Bar & Haimovitch, 2011 and Volynchik, 2011.

Remarks: Photograph of type in Franzen & Glaw (2007: fig. 23). A member of *Daboia fide* Groombridge, 1980, 1986, Lenk et al., 2001b and Mallow et al., 2003.

6. *Daboia russelii* (G. Shaw & Nodder, 1797 *in* 1789–1813). Nat. Misc. 8: pl. 291, 2 pp. (*Coluber russelii*)

Synonyms: *Coluber daboie* Lacépède, 1789 *(nomen rejiciendum), Coluber idolum* Suckow, 1797, *Coluber trinoculus* Schneider *in* Bechstein, 1802, *Vipera daboya* Daudin, 1803c *(nomen substitutum), Vipera elegans* Daudin, 1803c, *Coluber triseriatus* Hermann, 1804, *Vipera daboia* Merrem, 1820 (*nomen substitutum*), *Natrix coillepidota* Wagler, 1825 (*nomen ineditum*), *Natrix semimaculata* Wagler, 1825 (*nomen ineditum*), *Daboia pulchella* Gray, 1842e, *Daboia russellii* Gray, 1849 *(nomen emendatum), Vipera russelli nordicus* Deraniyagala, 1945, *Vipera russellis* – Ouyang & Lin, 1970 *(nomen incorrectum),* and *Vipera ruselli* – Sawai, 1979 *(nomen incorrectum).*

Type: Lectotype, BMNH II.1.1a (P. Russell & natives, 1781–1791), designated by Golay et al. (1993: 268).

Type locality: "coast of Coromandel, India" [= Andhra Pradesh and Tamil Nadu States, SE India] via lectotype selection.

Distribution: Southern Asia. Eastern Pakistan (ext. SE Balochistan, Jammu & Kashmir, Khyber Pakhtunkhwa, Punjab, Sindh), India (Andhra Pradesh, Gujarat, Karnataka, Maharashtra, Nagaland, Madhya Pradesh, Orissa, Rajasthan, Tamil Nadu, Uttar Pradesh, West Bengal), Bangladesh, Nepal (Bardiya, Chitwan, Kanchanpur, Mahottari, Nawalparasi, Parsa, Saptari, Siraha), Bhutan, S China (Hunan, Yunnan), and Sri Lanka (Central, Eastern, North-Central, North-Western, Northern, Sabaragamuwa, Southern, Uva, Western), NSL–2755 m.

Sources: Wall, 1905d, 1907c, 1917, M.A. Smith, 1943, Brongersma, 1958, Bergman, 1961b, P. Silva, 1980a, A. Silva, 1990b, 2009, Wuster et al., 1992, Jintakune & Chanhome, 1995, Belt et al., 1997, Herrmann & Joger, 1997, Nilson & Andrén, 1997, Wüster, 1998b, David & Ineich, 1999, McDiarmid et al., 1999, M.S. Khan, 2002, 2006, J.C. Murphy & Schlager, 2003, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Zhao, 2006, Thorpe et al., 2007, Xiang & Li, 2009, I. Das, 2010, 2012, Masroor, 2012 and S.K. Sharma et al., 2013.

Remarks: BMNH catalogue lists BMNH II.1.1a as holotype. Original description based on P. Russell (1796: 10–11, pl. 7), deposited in BMNH and redrawn by Shaw & Nodder (1789 *in* 1789–1813: pl. 291). Orthography of specific epithet discussed by David & Ineich (1999: 313–314) and McDiarmid et al. (1999: 373–375).

7. †*Daboia sarmatica* (Chkhikvadze & Lungu *in* Zerova, Lungu & Chkhikvadze, 1987). Proc. Zool. Inst. Leningrad (1986) 158: 92, fig. 2. (†*Vipera sarmatica*)

Type: Holotype, SIPT 18/72–1, one trunk vertebra.

Type locality: "Kalfa, village in Moldavia State, northern Black Seaside, USSR, late Miocene (middle Sarmatian)."

Distribution: Upper Miocene (Sarmatian: 11.6–12.7 mya) of Russia (Moldavia). Known only from type locality.

Source: Nilson & Andrén, 1997

8. *Daboia siamensis* (M.A. Smith, 1917a). J. Nat. Hist. Soc. Siam 2(3): 223–224, fig. 1. (*Vipera russelli siamensis*)

Synonyms: *Vipera russelli limitis* Mertens, 1927a, *Vipera russeli formosensis* Maki, 1931, *Vipera russellii sublimitis* Kopstein, 1936, *Vipera russellii formosenses* – Sifford & Johnson, 1978 *(nomen incorrectum), Vipera russelli simamensis* – Nakada et al., 1984 *(nomen incorrectum),* and *Vipera russeli burmanus* Maung Maung Aye *in* Gopalakrishnakone & Tan, 1987 *(nomen substitutum).*

Type: Holotype, BMNH 1946.1.18.8 (formerly BMNH 1927.11.24.1), a 565 mm specimen.

Type locality: "Sam Kok, Central Siam, about 60 km. N. of Bangkok" [= Sam Khok, Pathum Thani Prov., Thailand, 14°04"N, 100°31'E, elevation 5 m].

Distribution: Southeast Asia and Lesser Sundas. Southern China (Fujian, Guangdong, Guangxi), Taiwan, Myanmar (Ayeyarwady, Bago, Magway, Mandalay, Sagaing, Shan, Yangon), Thailand (Ayutthaya, Chachoengsao, Chai Nat, Chumphon, Kamphaeng, Lop Buri, Nakhon Nayok, Nakhon Ratchasima, Nakhon Sawan, Prachin Buri, Prachuap Khiri Khan, Samut Prakan, Saraburi, Suphan Buri), Cambodia (Sosophan) and S Indonesia (? Adonara, Ende, Flores, E Java,

Komodo, Lembata, Lombien, Rinca, Solar, Sumbawa), NSL–2755 m.

Sources: Kuntz, 1963, E.H. Taylor, 1965, Auffenberg, 1980, M.J. Cox, 1991b, Wüster et al., 1992, Zhao & Adler, 1993, Belt et al., 1997, M.J. Cox et al., 1998, Chan-ard et al., 1999, Leviton et al., 2003, Thorpe et al., 2007, Lang, 2011, I. Das, 2012 and McKay & Lilley, 2012.

Remarks: Golay et al. (1993: 268) listed two syntypes as BMNH 1920.10.10.1–2. Presence in the Lesser Sundas due to human activities in 18th–19th centuries *fide* Leviton et al., (2003: 440).

†*DAKOTAOPHIS* Holman, 1976a (Dipsadidae)

Type species: †*Dakotaophis greeni* Holman, 1976a.

Distribution: Lower to middle Miocene of cen. USA.

Sources: Holman, 1976a, 1979a, 1996a, 2000a and Rage, 1984b.

1. †*Dakotaophis greeni* Holman, 1976a. Herpetologica 32(1): 45–47, figs. 4a–d.

Type: Holotype, SDSM 8380, one trunk vertebra.

Type locality: "Black Bear Quarry II, designated SDSM locality V673, Bennett County, South Dakota, USA, Rosebud Formation, early Hemingfordian, lower middle Miocene."

Distribution: Lower Miocene (Hemingfordian: 16.3–20.6 mya) of USA (Nebraska), lower-middle Miocene (Hemingfordian-Barstovian: 13.6–20.6 mya) of USA (South Dakota), and middle Miocene (Barstovian: 13.6–16.3 mya) of USA (South Dakota, Texas, Wyoming).

Fossil records: Lower Miocene (Hemingfordian) of USA (Nebraska, South Dakota), lower/middle Miocene (Hemingfordian or Barstovian) of USA (Wyoming), and middle Miocene (Barstovian) of USA (Nebraska, South Dakota, Texas).

Remarks: Holman (1979b: 45) erroneously listed the type as SDSM 9380.

DARLINGTONIA Cochran, 1935 (Xenodontidae)

Type species: *Darlingtonia haetiana* Cochran, 1935.

Distribution: Southwestern Hispaniola.

Sources: A. Schwartz, 1970b, A. Schwartz & Thomas, 1965, 1975, A. Schwartz & Rossman, 1976, A. Schwartz, 1986, A. Schwartz & R.W. Henderson, 1988, 1991, H.M. Smith & Wallach, 1993, Powell & R.W. Henderson, 1994a, Rodríguez-Robles & Greene, 1996, Hedges et al., 2009, Henderson and Powell, 2009 and Zaher et al., 2009.

1. *Darlingtonia haetiana* Cochran, 1935. Proc. Boston Soc. Nat. Hist. 40(6): 375.

Synonyms: *Darlingtonia haetiana perfector* A. Schwartz & Thomas, 1965 and *Darlingtonia haetiana vaticinata* A. Schwartz, 1970b.

Type: Holotype, MCZ 38252, a 288 mm female (P.J. Darlington, Oct. 1934).

Type locality: "Roche Croix, northeastern foothills, Massif de la Hotte, Haiti, about 5000 feet altitude."

Distribution: Hispaniola. Southwestern Haiti (Grand'Anse, Ouest, Sud, Sud-Est) and SW Dominican Republic (Perdenales), 300–1700 m.

Remarks: A valid genus *fide* Grazziotin et al. (2012: 22) but a synonym of *Ialtris fide* Hedges et al. (2009: 19).

D

DASYPELTIS Wagler, 1830 (Colubridae)

Synonyms: *Anodon* A. Smith, 1829 *(nomen rejiciendum), Analcis* Wagler, 1830, *Rachiodon* Jourdan, 1834 *(nomen substitutum), Raphiodon* – Jourdran, 1834 *(nomen incorrectum), Deirodon* Owen, 1841 *in* 1840–1845 *(nomen substitutum), Dirodon* Agassiz, 1847 *(nomen emendatum), Rhachiodon* – Lichtenstein & Martens, 1856 *(nomen incorrectum),* and *Dasipeltis* – Scortecci, 1931 *(nomen incorrectum).*

Type species: *Coluber scaber* Linnaeus, 1758.

Distribution: Subsaharan Africa.

Sources: Gans, 1959, Gravlund, 2001, Kelly, 2003, J.-F. Trape & Mané, 2006a and S. Trape et al., 2012.

Remarks: Official Generic Name no. 979 *fide* Opinion 387 (ICZN, 1956b).

1. *Dasypeltis abyssinica* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 496–497, pl. 81, figs. 1–3. (*Rachiodon abyssinicus*)

Synonym: *Rachiodon abyssinicus* A.-M.-C. Duméril, 1853 (*nomen nudum*).

Type: Lectotype, MNHN 6567, a 755 mm specimen (Cartin-Dillon), designated by J.-F. Trape & Mané (2006a: 53).

Type locality: "Abyssinie" [= Eritrea and Ethiopia] via lectotype designation.

Distribution: Eritrea (Anseba) and Ethiopia.

Sources: Trape & Mané, 2006a.

Remarks: A valid species *fide* J.-F. Trape & Mané (2006a: 53).

2. *Dasypeltis atra* Sternfeld, 1913a. Wiss. Ergebn. Dtsch. Zentr.-Afr.-Exped. (1912) 4: 272. (*Dasypeltis scabra atra*)

Types: Syntypes (3), ZMB, longest syntype 830 mm (R. Grauer, 1909–1911), lost *fide* R. Günther *(in litt.)*.

Type locality: “Randbergen am Nordwestufer des Tanganyika-Sees” [= NW shore of Lake Tanganyika, SE Sud-Kivu Prov., E Democratic Republic of the Congo].

Distribution: Eastern Africa. Southeastern South Sudan (Eastern Equatoria), N Ethiopia (Arussi, Gondar, Gojjam, Hararge, Illubabor, Shoa, Wollega), E Democratic Republic of the Congo (Katanga, Nord-Kivu, Orientale, Sud-Kivu, Idjwi Is.), Uganda (Central, Eastern, Northern, Western), W Kenya (Eastern, Nairobi, Rift Valley, Western), N Rwanda, N Burundi, and N Tanzania (Kilimanjaro), (610) 1500–3000 m.

Sources: Gans, 1964, Pitman, 1974, Largen & Rassmussen, 1993, Neças, 1995, Hughes, 1997, Gravlund et al., 1998, Spawls et al., 2002, Broadley & Bates, 2009 and Largen & Spawls, 2010.

D

3. *Dasypeltis confusa* J.-F. Trape & Mané, 2006a. Bull. Soc. Herp. France (119): 28–31, fig. 1.

Type: Holotype, MNHN 2006.0303 (formerly IRD S-3105), a 696 mm female (native, March 1993–Feb. 1994).

Type locality: “Ibel (12°3’N, 12°23’W), Tambacounda.”

Distribution: West Africa. Southern Senegal (Kédougou, Kolda, Tambacounda, Ziguinchor), Gambia (Central River), Guinea-Bissau (Biombo, Bissau, Tombali), Guinea (Boffa, Boké, Faranah, Forécariah, Kindia, Kouroussa, Mandiana, Télimélé), Sierra Leone (Northern, Southern), Togo (Centrale, Kara, Plateaux, Savanes), Benin (Atakora, Collines, Kouffo, Zou), Cameroon (Adamaoua, Centre, Est, Nord-Ouest, Ouest, Sud), Gabon (Haut-Ogooué, Moyen-Ogooué, Ogooué-Maritime), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Haute-Sangha, Lobaye, Mbomou, Ombella-Mpoko, Ouham, Ouham-Pende, Vakaga), Congo (Brazzaville, Lekoumou, Niari, Pool) and W Democratic Republic of the Congo, 15–1550 m.

Sources: J.-F. Trape & Roux-Estève, 1995, J.-F. Trape & Mané, 2006b, Pauwels & Vande weghe, 2008, Pauwels & Salle, 2009, Segniagbeto et al., 2011, Auliya et al., 2012, Chirio, 2013 and Hughes, 2013.

Remarks: Photographs of holotype in S. Trape et al. (2012: figs. 6a, 7a). Previous records of *D. scabra* from Gabon probably *D. confusa fide* Pauwels & Salle (2009: 23). Possibly a synonym of *D. scabra fide* Hughes (2013: 114).

4. *Dasypeltis fasciata* A. Smith, 1849 *in* 1838–1849. Illust. Zool. So. Africa, Rept.: footnote, p. 2 of text to pl. 73.

Synonyms: *Dipsas carinatus* Hallowell, 1844b (*nomen praeoccupatum*), *Rachiodon scaber subfasciatus* Jan, 1863b (*nomen nudum*), and *Dasypeltis macrops* Boulenger, 1907a.

Type: Holotype, not designated, a 559 mm male (A. Smith, 1829), lost *fide* Gans (1959: 89).

Type locality: “Sierra Leone.”

Distribution: Central Africa. Senegal (Fatick, Tambacounda), Gambia (Kombo Saint Mary), Guinea-Bissau, SE Guinea (Macenta, Nzérékoré), S Mali (Sikasso), Liberia, S Ivory Coast (Daloa, Guiglo, Tabou), S Ghana, Togo (Plateaux), S Nigeria (Akwa Ibom, Bayelsa, Rivers), Southern Cameroon (Est, Centre, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), S Chad, Central African Republic (Bamingui-Bangoran, Haute-Sangha, Lobaye, Mbomou, Ombella-Mpoko, Ouham, Ouham-Pende, Sangha), N Gabon (Estuaire, Ogooué-Ivindo, Wolem-Ntem), Congo (Brazzaville, Kouilou, Plateau, Sangha), Democratic Republic of the Congo (Bandundu, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Kivu, Orientale) and W Uganda (W Western), NSL–1380 m.

Sources: Doucet, 1963, Pitman, 1974, Roman, 1980, Hakansson, 1981, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.

Remarks: Possibly occurs in Benin *fide* Hughes (2013: 151).

5. *Dasypeltis gansi* J.-F. Trape & Mané, 2006a. Bull. Soc. Herp. France (119): 32–37, fig. 2.

Type: Holotype, IRSNB 2613 (formerly IRD S-6537), a 608 mm male (May 2003–April 2004).

Type locality: “Mahamouda Chérif (12°58’N, 16°30’W), Basse Casamance, Senegal.”

Distribution: West Africa. Senegal (Dakar, Kédougou, Kolda, Tambacounda, Saint-Louis, Thiès, Ziguinchor), Gambia, Guinea (Koundara, Siguiri), SW Mali (Kayes, Koulikoro, Ségou, Sikasso), Togo (Kara, Maritime, Plateaux), S Benin (Alibori, Atakora, Atlantique, Borgou, Collines, Kouffo), Nigeria, N Cameroon (Extreme-Nord, Nord), Burkina-Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Nord, Sud-Ouest, Volta-Noire), Niger (Dosso, Maradi, Niamey), SW Chad (Chari-Baguirmi) and South Sudan, NSL–910 m.

Sources: J.-F. Trape & Mané, 2006b, Chiriuo & LeBreton, 2007, Chirio, 2009, Ullenburch et al., 2010, Segniagbeto et al., 2011 and Hughes, 2013.

Remarks: Photographs of holotype in S. Trape et al. (2012: figs. 6d, 7d).

6. *Dasypeltis inornata* A. Smith, 1849 *in* 1838–1849. Illust. Zool. So. Africa, Rept.: pl. 73, figs. a–e, 2 pp.

Synonyms: *Rachiodon immaculatus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Rachiodon immaculatus* Duméril, Bibron & Duméril, 1854a, and *Rachiodon scaber unicolor* Jan, 1863b (*nomen nudum*).

Type: Holotype, BMNH 1946.1.2.47 (formerly BMNH 1865.5.4.164), a 656–737 mm male (A. Smith, 1825–1837).

Type locality: "south-central districts of the Cape Colony, and also in Kaffirland" [= Western Cape, Eastern Cape and KwaZulu Natal provinces, South Africa].

Distribution: Western Swaziland and SE South Africa (Eastern Cape, KwaZulu-Natal, Mpumalunga), NSL–1440 m.

Sources: Broadley, 1983, Branch, 1988 and Cockeran & Haagner, 1993.

Remarks: BMNH catalogue lists BMNH 1946.1.2.47 as "one of the types" (M. Lang, *in litt*.). V.F.M. FitzSimons (1962: 174), Broadley (1990: 261) and Gans (1959: 135) attribute A. Smith (1849: App. p. 20) to this species but it refers to *Crotaphopeltis hotamboeia fide* Branch & Bauer (2005: 8).

7. *Dasypeltis latericia* J.-F. Trape & Mané, 2006. Bull. Soc. Herp. France (119): 37–42, fig. 3. (*Dasypeltis gansi latericia*)

Type: Holotype, IRSNB 2615 (formerly IRD S-2088), a 751 mm female (native, March 1992–Feb. 1993).

Type locality: "Boundoukondi (12°31'N, 12°20'W), Tambacounda."

Distribution: West Africa. Southeastern Senegal (Kédougou), Guinea (Koundara, Siguiri, Sikasso) and SW Mali (Bamako, Kayes, Koulikoro), 80–400 m.

Remarks: Photographs of holotype in S. Trape et al. (2012: figs. 6b, 7b). A valid species *fide* S. Trape et al. (2012: 491).

8. *Dasypeltis medici* (Bianconi, 1859). Mem. Accad. Sci. Inst. Bologna 10: 501–502, pl. 26. (*Dipsas medici*)

Synonyms: *Dasypeltis scaber fasciolata* W.C.H. Peters, 1868a, *Dasypeltis elongata* Mocquard, 1888, and *Dasypeltis medica lamuensis* Gans, 1957.

Type: Holotype, IBI, a 531 mm male (Michaeli via C. Fornasini, 1842–1847), lost *fide* Gans (1959: 157).

Type locality: Unknown. Listed as Mosambique [= Mozambique] *fide* Jan & Sordelli (1872: 3 *in* 1870–1881). Probably Inhambane, Mozambique *fide* Broadley (1983: 265).

Distribution: Eastern Africa. Southern Somalia (Jubbada Dhexe, Jubbada Hoose, Alessandra Is.), SE Kenya (Coast, Lamu Is.), E Tanzania (Kilimanjaro, Lindi, Morogoro, Mtwara, Piwani, Tanga, Mafia and Zanzibar Is.), S Zambia (E Southern), Malawi (Northern, Southern), Mozambique (Cabo Delgado, Inhambane, Sofala, Zambézia, Bazaruto Is.) and E Zimbabwe (Manicaland), NSL–1000 m.

Sources: Gans, 1957, Broadley & Cock, 1975, Broadley, 1983, 1990b, Lanza, 1983a, 1990b, Branch, 1988, Spawls et al., 2002, Broadley et al., 2003 and Broadley & Blaylock, 2013.

Remarks: Original description reprinted in Bianconi (1850–1870: 277–278, pl. 14).

9. *Dasypeltis palmarum* (Leach *in* Tuckey, 1818). Exped. River Zaire: 408–409. (*Coluber palmarum*)

Type: Holotype, BMNH 1946.1.2.35, juvenile male (J. Cranch [Tuckey Exped.] via W.E. Leach, 1816).

Type locality: "in palm trees at Embomma" [= Boma, Bas-Congo Prov., SW Democratic Republic of the Congo, 5°51'S, 13°03'E, elevation 15 m].

Distribution: Central Africa. Southern Congo (Kouilou), W Democratic Republic of the Congo (Bandundu, Bas-Congo, Kinshasa) and NW Angola, 15–275 m.

Sources: Laurent, 1956a, J.-F. Trape & Roux-Estève, 1995 and Chippaux, 2006.

D

10. *Dasypeltis parascabra* S. Trape, Mediannikov & Trape, 2012. C. R. Biol., Paris 335(7): 492–493, figs. 3–5, 6c, 7c.

Type: Holotype, MNHN 2010.438 (formerly IRD 1555-G), a 605 mm gravid female (native, June–Oct. 2005).

Type locality: "Dalakan, Guinea (9°58'N, 9°32'W)" [= Dalakan, Kankan Prov., E Guinea, elevation 400 m].

Distribution: West Africa. Eastern Guinea (Kankan, Kouroussa), Liberia (Nimba), Ivory Coast (Toumodi), Ghana (Eastern), Togo (Plateaux) and S Nigeria (Lagos), NSL–430 m

11. *Dasypeltis sahelensis* J.-F. Trape & Mané, 2006a. Bull. Soc. Herp. France (119): 43–47, fig. 4.

Type: Holotype, MNHN 2006.0315 (formerly IRD S-4804), a 498 mm male (native, June–Oct. 2000).

Type locality: "Tialé (15°14'N, 16°49'W), Senegal" [= Thiès Prov., W Senegal, elevation 25 m].

Distribution: West Africa. Morocco (Agadir, Ouarzazate, Tan Tan), N Western Sahara (W Saguia El Hamra), SW Mauritania (Trarza), N Senegal (Louga, Matam, Saint-Louis, Tambacounda, Thiès), S Mali (Kayes, Koulikoro, Ségou, SW Tombouctou) and S Niger (W Agadez, S Diffa, Dosso, Maradi, Niamey, Tahoua, W Zinder), 20–350 m.

Source: J.-F. Trape & Mané, 2006b.

Remarks: Photographs of holotype in S. Trape et al. (2012: figs. 6e, 7e).

12. *Dasypeltis scabra* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 223. (*Coluber scaber*)

Synonyms: *Anodon typus* A. Smith, 1828, *Dasypeltis scaber breviceps* W.C.H. Peters, 1864c, *Dasypeltis scaber capensis* W.C.H. Peters, 1864c, *Dasypeltis scaber mossambicus* W.C.H. Peters, 1864c, *Dasypeltis lineolata* W.C.H. Peters, 1878, *Tropidechis dunensis* De Vis, 1911, and *Dasypeltis scabra loveridgei* Mertens, 1954b.

Type: Holotype, NHR (formerly MAFR), a female (Mus. Drottn), lost *fide* Andersson (1899: 5) and Gans (1959: 87).

Type locality: "Indiis" [= India] (in error). Corrected to South Africa *fide* Flower (1933: 818). Restricted to Namibia or Limpopo, South Africa *fide* Gans (1959: 87).

Distribution: Eastern Africa and SW Arabia. NE Egypt (Faiyum), SE Sudan (An Nil Al Azraq, Sennar), Ethiopia (Arussi, Bale, Gemu Gofa, Gojjam, Gondar, Hararge, Shoa, Sidamo, Wollega), Eritrea (Anseba, Northern Red Sea, Southern), Somalia (Bay, Gedo, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Sanaag, Shabeellaha Dhexe, Shabeellaha Hoose, Sool, Togdheer, Woqooyi Galbeed, Alessandra Is.), Kenya (Central, Coast, North-Eastern, Nyanza, S Rift Valley, Western), Uganda (Central, Eastern, Northern, Western), Democratic Republic of the Congo (Bandundu, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), E Rwanda, E Burundi, Tanzania (Arusha, Dar es Salaam, Dodoma, Iringa, Kigoma, Kilimanjaro, Lindi, Mara, Mbeya, Morogoro, Mtwara, Mwanza, Piwani, Rukwa, Ruvuma, Shinyanga, Singida, Tabora, Tanga, Kagera, Sese, Ukerewe, and Zanzibar Is.), Mozambique (Gaza, Inhambane, Manica, Maputo, Niassa, Sofala, Tete), Malawi (Central, Northern, Southern), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), NE Angola (Lunda Norte), Namibia (Caprivi, Hardap, Karas, Khomas, Kunene, Ohangwena, Okavango, Omaheke, Omusati, Oshana, Oshikoto, Otjozondjupa), Botswana (Central, Gaborone, Ghanzi, Kagatleng, Kweneng, North East, North West), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland, W Lesotho and South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, Western Cape), SW Saudi Arabia (Asir, Jazan) and W Yemen (Ad Dali', Aden, Ibb), NSL–2100 m.

Sources: Jourdan, 1833, Barros e Cunha, 1935, Mertens, 1955, 1971, Sweeney, 1961, Stemmler, 1971b, Pitman, 1974, Broadley & Cock, 1975, Broadley, 1983, Buys & Buys, 1983, Lanza, 1983a, 1990b, Pienaar et al., 1983, Branch, 1988, Gasperetti, 1988, Largen & Rasmussen, 1993, Lopez et al., 1993, Schätti & Gasperetti, 1994, Bons & Geniez, 1996, Schleich et al., 1996, Clauss & Clauss, 2002, Spawls et al., 2002, Broadley et al., 2003, J.C. Murphy & Schlager, 2003, Geniez et al., 2004, Chippaux, 2006, Scheurer, 2007, Largen & Spawls, 2010 and Broadley & Blaylock, 2013.

Remarks: Official Specific Name no. 679 *fide* Opinion 387 (ICZN, 1956b).

†*DAUNOPHIS* Swinton, 1926 (Pythonidae)

Type species: †*Daunophis langi* Swinton, 1926.
Distribution: Pliocene of Myanmar.
Source: Rage, 1984b.

1. †*Daunophis langi* Swinton, 1926. Ann. Mag. Nat. Hist. (9) 17(99): 344–348, pl. 16.

Type: Holotype, HMG V 1230, an 1170 mm nearly complete skeleton (H.F. Lang).

Type locality: "oil-shale exposed in a quarry at Tichara, near Mepale, on the eastern side of the Dawna Hills, South Burma, Pliocene age."

Distribution: Pliocene (1.8–4.9 mya) of Myanmar. Known only from holotype.

Remarks: Genus of doubtful validity *fide* Rage (1984b: 18).

†*DAWSONOPHIS* Holman, 1979b (Boidae)

Type species: †*Dawsonophis wyomingensis* Holman, 1979b.
Distribution: Upper Eocene of USA.
Sources: Rage, 1984b and Holman, 2000a.
Remarks: Possibly an undescribed subfamily of the Boidae *fide* Holman (2000a: 39).

1. †*Dawsonophis wyomingensis* Holman, 1979b. Ann. Carnegie Mus. 48(6): 105–106, fig. 1.

Type: Holotype, CM 14444, one trunk vertebra and fragment of adjacent vertebra (C. Black, M. Dawson & P. Robinson, 1962).

Type locality: "Badwater Creek area, SESE, S. 14, T. 39 N., R. 89 W, Natrona County, Wyoming. Referred to as locality 6. Late Eocene, Uintan Mammal Age. Hendry Ranch Member" [= Middle Eocene *fide* Holman, 2000a: 37].

Distribution: Middle or upper Eocene (Uintan: 42.0–46.2 mya) of USA (Wyoming). Known only from type locality.

DEINAGKISTRODON Gloyd, 1979 (Viperidae)

Synonym: *Dienagkistrodon* – Zhong & Wu, 1981 *(nomen incorrectum).*
Type species: *Halys acutus* A.C.L.G. Günther, 1888b.
Distribution: Southeastern Asia.
Sources: Maki, 1931, C.H. Pope, 1935, Kuntz, 1963, Keegan et al., 1965, Zhao, 1982, 2006, M.-H. Huang & Qu, 1983, Maes, 1989, Gloyd & Conant, 1990, Kardong, 1990, Cadle, 1992, Minton, 1992, Golay et al., 1993, Mao, 1993, Zhao & Adler, 1993, Parkinson et al., 1997, David & Ineich, 1999, P. Guo et al., 1999a, McDiarmid et al., 1999, Parkinson, 1999, Malhotra & Thorpe, 2000, Orlov et al., 2000, Ziegler et al., 2001, J.C. Murphy & Schlager, 2003, Orlov et al., 2003, Gumprecht et al., 2004, V.S. Nguyen et al., 2009, Xiang

& Li, 2009, I. Das, 2010, 2012, Malhotra et al., 2010 and Hoser, 2012d.

1. *Deinagkistrodon acutus* (A.C.L.G. Günther, 1888b). Ann. Mag. Nat. Hist. (6) 1(3): 171–172, pl. 12. (*Halys acutus*)

Types: Syntypes (3), BMNH 1946.1.19.56–58 (formerly BMNH 1881.1.30.59–61), three males, longest syntype 1168 mm (A.E. Pratt, 2 April–4 Aug. 1887).

Type locality: "mountains north of Kiu Kiang, on the Yantsze river, China," (in error). Corrected to Wu-suih, about three days' journey or 9 mi. S of the American Central China Mission in Kiu-kiang *fide* Pratt (1892: 3–5), [= Wusüeh, SE Hubei Prov., cen. China, 29°50'N, 115°41'E *fide* C.H. Pope (1935: 502].

Distribution: Southeastern Asia. Central and S China (Anhui, Fujian, Guangdong, Guangxi, Hubei, Hunan, Jiangxi, Zhejiang), Taiwan, N Laos and N Vietnam (Cao Bang, Lai Chau, Lang Son, Lao Cai, Vinh Phuc), NSL–1500 m.

Remarks: Original description reprinted in A.C.L.G. Günther (1892b: 242). Type locality is on the Yangtze River just north of Jiangxi Prov.

DEMANSIA Gray, 1842c (Elapidae)

Synonyms: *Demansia* Gray, 1842b *(nomen nudum), Diemansia* A.C.L.G. Günther, 1858 *(nomen emendatum), Diemensia* – A.C.L.G. Günther, 1862b *(nomen incorrectum), Diemenia* A.C.L.G. Günther, 1863 *(nomen praeoccupatm), Diemennia* A.C.L.G. Günther *in* Macleay, 1884b *(nomen nudum), Elapocranium* Macleay, 1884b *(nomen praeoccupatum), Demensia* – Hoffmann, 1890 *(nomen incorrectum),* and *Diemena* – Boquet, 1964 *(nomen incorrectum).*

Type species: *Lycodon reticulatus* Gray, 1842c.

Distribution: Austro-Papua.

Sources: F. Werner, 1923b, Storr, 1978, 1985, Cogger et al., 1983a, Golay, 1985, Storr et al., 1986, S.K. Wilson & Knowles, 1988, Hoser, 1989, 2012e, Ehmann, 1992, Golay et al., 1993, Greer, 1997, Keogh, 1998, David & Ineich, 1999, Cogger, 2000, Scanlon, 2003, Shea & Scanlon, 2007, Sanders et al., 2008 and Zaher et al., 2009.

1. *Demansia angusticeps* Macleay, 1888b. Proc. Linn. Soc. N.S.W. (1887–1888) (2) 3(2): 417–418. (*Diemenia angusticeps*)

Type: Holotype, AM 31921 (formerly MMS 712), a 671 mm female (W.W. Froggatt, March–Dec. 1887).

Type locality: "vicinity of King's Sound, North-West Australia." Emended to a few miles round Derby *fide* Macleay (1888a: 1018).

Distribution: Northern Australia (NW Northern Territory, ext. NW Queensland, ext. N Western Australia), 10–415 m.

Sources: Boulenger, 1896a, Shea, 1998 and Shea & Scanlon, 2007.

Remarks: Photograph and illustrations of head of holotype in Shea & Scanlon (2007: figs. 2–3).

2. *Demansia calodera* Storr, 1978. Rec. West. Aust. Mus. 6(3): 294–295, fig. 2. (*Demansia olivacea calodera*)

Type: Holotype, WAM 54992, a 416 mm female (G. Harold & M. Peterson, 29 Aug. 1976).

Type locality: "Tamala, Western Australia, in 26°42' S,113°42' E."

Distribution: Western Australia (W Western Australia, Bernier and Dirk Hartog Is.), NSL–70 m.

Source: Shea & Scanlon, 2007.

Remarks: Photograph and illustrations of head of holotype in Shea & Scanlon (2007: figs. 4–5).

3. *Demansia flagellatio* Wells & Wellington, 1985. Aust. J. Herp. (Suppl. 1): 45.

Type: Holotype, AM 64867, a 535 mm male (D. Stammer).

Type locality: "Mt. Isa district, Queensland, Australia."

Distribution: Northern Australia (NW Queensland, Bustard Is.), NSL–350 m.

Source: Shea & Scanlon, 2007.

Remarks: Illustrations of head of holotype in Shea & Scanlon (2007: fig. 6).

4. *Demansia olivacea* (Gray, 1842c). Zool. Misc. 2(Apr.): 54. (*Lycodon olivaceus*)

Synonyms: *Elapocephalus ornaticeps* Macleay, 1878b, *Demansia elivacea* – McDowell, 1967 *(nomen incorrectum),* and *Demansia olivacia* – Limpus, 1978 *(nomen incorrectum).*

Types: Syntypes (3), from BMNH 1841.10.13.4–45 series, lost *fide* Shea & Scanlon (2007: 125–126).

Type locality: "North Coast of Australia; Port Essington." Restricted to Port Essington, Australia *fide* Cogger & Lindner (1974: 90).

Distribution: Southern Papua New Guinea (Western, Daru Is.) and N Australia (N Northern Territory, N Queensland, N Western Australia, Bathurst, Groote Eylandt, Koolan, Melville and Wargul Wargul Is.), NSL–505 m.

Sources: Cogger & Lindner, 1974, Storr, 1978, Shine, 1980c and Shea & Scanlon, 2007.

Remarks: Boulenger (1896a: 324) erroneously listed two Richardson specimens (BMNH 1946.1.18.40 and BMNH 1946.1.18.95) (formerly BMNH 1844.5.13.7 and

D

BMNH 1844.9.3) as syntypes *fide* Cogger & Lindner (1974: 90–91).

5. *Demansia papuensis* Macleay, 1877. Proc. Linn. Soc. N.S.W. (1877–1878) 2(1): 40. (*Diemenia papuensis*)

Synonym: *Demansia papuensis melaena* Storr, 1978.
Type: Holotype, AMS 31919 (formerly MMS 713), a 1676 mm specimen (W.J. Macleay, 1875).
Type locality: "New Guinea, 'probably' Hall Sound."
Distribution: Austro-Papua. Eastern Indonesia (SE Papua), S Papua New Guinea (Central, Western) and N Australia (N Northern Territory, N Queensland, ext. N Western Australia, Bremer, Cotton, Elcho, Inglis, Koolan, Milingimbi and Wigram Is.), NSL–590 m.
Source: O'Shea, 1996.
Remarks: Type locality doubtful *fide* Shea (1998: 51–52).

6. *Demansia psammophis* (Schlegel, 1837). Essai Phys. Serp. 1: 182, 2: 455. (*Elaps psammophis*)

Synonym: *Pseudelaps psammophidius* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen substitutum).*
Types: Syntypes (2), MNHN 7663A, a 353–360 mm male, and MNHN 7666, a 710–720+ mm female lacking a skull (J.R.C. Quoy & J.P. Gaimard [Astrolabe Voy.], July 1827).
Type locality: "Nouvelle Hollande" [= Australia]. Restricted to King George's Sound *fide* A.-M.-C. Duméril, Bibron & Duméril (1854b: 1234).
Distribution: Australia (Australian Capital Territory, New South Wales, Northern Territory, Queensland, South Australia, Victoria, Westwern Australia, Dirk Hartog Is.), NSL–1095 m.
Sources: Guibe & Roux-Esteve, 1972a, Shine, 1980c and Bush et al., 1995.

7. *Demansia quaesitor* Shea *in* Shea & Scanlon, 2007. Rec. Aust. Mus. 59(2): 127–129, figs. 11–12.

Type: Holotype, NTM 16836, a 596 mm male (J. Woinarski, 29 May 1991).
Type locality: "'Hodgson Downs', Mt. Langdon, NT, Australia."
Distribution: Northern Australia (N Northern Territory, ext. NW Queensland, ext. N Western Australia, North Maret Is.), 45–300 m.

8. *Demansia reticulata* (Gray, 1842c). Zool. Misc. 2(Apr.): 54. (*Lycodon reticulatus*)

Synonym: *Demansia reticulata cupreiceps* Storr, 1978.
Type: Lectotype, BMNH 1946.1.19.79 (G. Krefft, 1838), designated by Storr (1978: 297).
Type locality: "Australia."
Distribution: Western Australia (S Northern Territory, South Australia, W Western Australia, Kangaroo Is.), NSL–685 m.

9. *Demansia rimicola* Scanlon *in* Shea & Scanlon, 2007. Rec. Aust. Mus. 59(2): 130–132, figs. 14–15.

Type: Holotype, AMS 62257, an 804 mm male (A. Greer, E. Cameron, H. Cogger, R. Sadlier & P. Webber, 17 July 1977).
Type locality: "61.4 km N Muttaburra via Hughenden Hwy, Qld (22°10'S 144°15'E), Australia."
Distribution: Central Australia (ext. NW New South Wales, N Northern Territory, Queensland, NE South Australia, ext. N Western Australia), 10–375 m.

10. *Demansia rufescens* Storr, 1978. Rec. West. Aust. Mus. 6(3): 292–293. (*Demansia olivacea rufescens*)

Type: Holotype, WAM 52747, a 573 mm female (W.H. Butler, 2 May 1976).
Type locality: "Marandoo minesite, near Mt Bruce, Western Australia, in 22°40' S, 118°10' E" [Australia].
Distribution: Western Australia (W Western Australia, Barrow, Dolphin and Hermite Is.), NSL–1040 m.
Source: Shea & Scanlon, 2007.
Remarks: Illustrations of head of holotype in Shea & Scanlon (2007: fig. 17).

11. *Demansia shinei* Shea *in* Shea & Scanlon, 2007. Rec. Aust. Mus. 59(2): 135–136, figs. 18–19.

Type: Holotype, NTM 6489, a 640 mm male (P. Horner, J. Griffiths & K. O'Brien, 18 March 1979).
Type locality: "Frewena, NT, in 19º25'S 135º24'E, Australia."
Distribution: Northern Australia (N Northern Territory, ext. N Western Australia), 225–420 m.

12. *Demansia simplex* Storr, 1978. Rec. West. Aust. Mus. 6(3): 290–291.

Type: Holotype, WAM 13841 (A.M. Douglas & G.F. Mees, July 1960).
Type locality: "Kalumburu, Western Australia, in 14°17' S, 126°40' E" [Australia].
Distribution: Northern Australia (N Northern Territory, ext. N Western Australia, Melville Is.), NSL–315 m.

13. *Demansia torquata* A.C.L.G. Günther, 1862b. Ann. Mag. Nat. Hist. (3) 9(49): 130, pl. 9, fig. 10. (*Diemansia torquata*)

Type: Holotype, BMNH 1946.1.17.41, a 573–586 mm female (F.M. Rayner, July, 1859).
Type locality: "Percy Islands" [= Queensland, Australia].
Distribution: Northeastern Australia (ext. NW New South Wales, Northern Territory, Queensland, Dent,

Fantome, Hayman, Hook, Long, Palm, Penrith and Magnetic Is.), 40–600 m.

Sources: Shine, 1980c and Shea & Sadlier, 1999.

Remarks: Photograph of holotype in Shea & Scanlon (2007: fig. 21).

14. *Demansia vestigiata* (De Vis, 1884b). Brisbane Courier 39(8324): 5. (*Hoplocephalus vestigiatus*)

Synonyms: *Diemenia atra* Macleay, 1884b and *Diemenia maculiceps* Boettger, 1898.

Type: Holotype, QM J206.

Type locality: Unknown.

Distribution: Papua New Guinea (Central, East Sepik, Gulf, Western) and N Australia (N Northern Territory, NE Queensland, ext. N Western Australia, Melville and Mornington Is.), NSL–510 m.

Sources: F. Parker, 1982, Ingram, 1990, Golay et al., 1993, Shea, 1996, 1998 and H.M. Smith and Wallach, 1997.

Remarks: Official Specific Name *fide* Opinion 1940 (ICZN 1999). Original description reprinted in De Vis (1884c: 138–139).

DENDRELAPHIS Boulenger, 1890 (Colubridae)

Synonyms: *Dendrophys* – J. Henle, 1839 *(nomen incorrectum), Dendrophis* Wagler *in* Fitzinger, 1843 *(nomen praeoccupatum), Dendelaphis* – F. Werner, 1901b *(nomen incorrectum), Dendorophis* – Cohn, 1905 *(nomen incorrectum), Dendralaphis* – M.A. Smith, 1915c *(nomen incorrectum), Dendrolaphis* – Luard, 1917 *(nomen incorrectum), Dendrelaphus* – Ditmars, 1933 *(nomen incorrectum), Dendriphis* – Briceño-Rossi, 1934 *(nomen incorrectum), Tachyophis* Mertens, 1934a *(nomen rejiciendum), Dendrellaphis* – Negi, 1992 *(nomen incorrectum), Dendrelophis* – B.D. Sharma *in* B.D. Sharma & Kumari, 1998 *(nomen incorrectum), Charlespiersonserpens* Hoser, 2012ab *(nomen illegitimum), Dorisious* Hoser, 2012ab *(nomen illegitimum), Downieea* Hoser, 2012ab *(nomen illegitimum), Macmillanus* Hoser, 2012ab *(nomen illegitimum),* and *Mulvanyus* Hoser, 2012ab *(nomen illegitimum).*

Type species: *Ahaetulla caudolineata* Gray, 1834 *in* Gray & Hardwicke, 1830–1835.

Distribution: Indo-Australia.

Sources: Rooij, 1917, Meise & Henning, 1932, Mertens, 1934a, M.A. Smith, 1943, Haas, 1950, F. Parker, 1982, Mahendra, 1984, McDowell, 1984, Wallach, 1998a, Ziegler & Vogel, 1999, Rooijen & Vogel, 2008a–b, I. Das, 2010, 2012 and Hoser, 2012ab.

Remarks: Official Generic Name no. 1310 *fide* Opinion 524 (ICZN, 1958a).

1. *Dendrelaphis andamanensis* (J. Anderson), 1871a. Proc. Zool. Soc. London 39(1): 184–185. (*Dendrophis pictus andamanensis*)

Type: Holotype, ZSI 7714 (formerly IM), an 815 mm specimen.

Type locality: "Andamans" [Andaman & Nicobars, E India, Bay of Bengal].

Distribution: Eastern India (Andaman & Nicobars: Little Andaman, Long, Middle Andaman, North Andaman, South Andaman, Great Nicobar Is.).

Sources: Biswas & Sanyal, 1980, R.C. Sharma, 2003, Rooijen & Vogel, 2008a and Vogel & Rooijen, 2011a.

2. *Dendrelaphis ashoki* Vogel & Rooijen, 2011a. J. Herp. 45(1): 106–107, fig. 7.

Type: Holotype, CAS 17222, an 895 mm female (R.H. Beddome, 1857–1882).

Type locality: "Anamalais, India" [= Anaimalai Hills, S Western Ghats, Kerala/Tamil Nadu, S India, ca. 10°22'N, 77°08'E].

Distribution: Southwestern India (Western Ghats of Kerala, Tamil Nadu), 2100 m.

3. *Dendrelaphis bifrenalis* (Boulenger, 1890a). Fauna Brit. India, Rept. Batr.: 338. (*Dendrophis bifrenalis*)

Types: Syntypes (3), BMNH 1946.1.6.4, a 1030 mm female, BMNH 1946.1.10.19, a 991 mm male (A. Paul), and a juvenile.

Type locality: "Ceylon" [= Sri Lanka].

Distribution: Sri Lanka (Central, Eastern, Northern, Sabaragamuwa, Southern, Western), NSL–1150 m.

Sources: Wall, 1921g, E.H. Taylor, 1950b, Deraniyagala, 1955, P. Silva, 1969, A. Silva, 1990b, 2001, 2009, Malhotra & Davis, 1991 and Vogel & Rooijen, 2011c.

Remarks: A subspecies of *D. pictus* (Gmelin) *fide* Meise & Henning, 1932 and Mertens, 1934a.

4. *Dendrelaphis biloreatus* Wall, 1908a. J. Bombay Nat. Hist. Soc. (1907–1908) 18(2): 273–274, pl. figs. 1–5.

Synonym: *Dendrophis gorei* Wall, 1910c.

Type: Holotype, BMNH, a 690–700 mm specimen (native, June, 1907).

Type locality: "Sadiya on the Bramaputra, 70 odd miles north-east of Dibrugarh, Assam" [= Sadiya, Assam State, NE India, 27°50'N, 95°40'E, elevation 125 m].

Distribution: Northeastern India (Arunachal Pradesh, Assam, Nagaland, N West Bengal), SW China (Xizang) and NE Myanmar (Shan, Yangon), NSL–2000 m.

Sources: Wall, 1910c, 1921g, 1923d, Zhao, 2006, I. Das, 2010 and Vogel & Rooijen, 2011b–c.

D

5. *Dendrelaphis calligastra* (A.C.L.G. Günther, 1867). Ann. Mag. Nat. Hist. (3) 20(115): 53. (*Dendrophis calligastra*)

Synonyms: *Dendrophis aruensis* G. Doria, 1875, *Dendrophis darnleyensis* Macleay, 1877, *Dendrophis katowensis* Macleay, 1877, *Dendrelaphis schlenckeri* Ogilby, 1898, *Dendrophis calligastra keiensis* Mertens, 1926, and *Dendrophis calligaster distinguendus* Meise & Henning, 1932.

Type: Holotype, BMNH 1867.5.6.71, a 914 specimen (E. Dämel, 1867).

Type locality: "Cape York, Australia" [Queensland].

Distribution: Austro-Papua. Eastern Indonesia (Papua, Aru, Babbar, Batanta, Halmahera, Jobi, Kei, Mefoor, Salawati, Schouten, Tanimbar, Ternate, Waigeo, Valise), coastal Papua New Guinea (Central, Eastern Highlands, East New Britain, East Sepik, Gulf, Madang, Milne Bay, Morobe, National Capital District, Western, West New Britain, West Sepik, Bismarck, Daru, d'Entrecasteaux, Ferguson, Louisiade Is.) and ext. NE Australia (NE Queensland, Torres Strait Is.), NSL–1150 m.

Sources: V.M. Tanner, 1950, Cogger et al., 1983a, O'Shea, 1996 and Cogger, 2000.

6. *Dendrelaphis caudolineatus* (Gray, 1834 *in* Gray & Hardwicke, 1830–1835). Illust. Indian Zool. 2(13–14): pl. 81. (*Ahaetulla caudolineata*)

Synonyms: *Leptophis caudalineatus* Cantor, 1847, and *Dendrophis octolineata* A.-M.-C. Duméril, Bibron & Duméril, 1854.

Type: Holotype, BMNH 1946.1.23.21 (formerly BMNH 1858.2.17.19).

Type locality: Unknown. Designated as West Malaysia *fide* Meise & Hennig (1932: 281), but Sri Lanka *fide* BMNH catalogue.

Distribution: Malay Peninsula and Greater Sundas. Southern Myanmar, Mergui Arch., S Thailand (Narathiwat, Pattani, Phang Nga, Phuket, Ranong), West Malaysia (Johor, Pahang, Pinang, Penang and Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak, Labuan Is.), Brunei and Indonesia (Aceh, Babi, Bangka, Batu, Belitung, Besar, Kalimantan, Kangean Arch., Mentawai Arch., Natuna Arch., Nias, Pemanggil, Riau Arch., Seribuat Arch., Tengah, Tinggi, Sumatra), NSL–1525 m.

Sources: Leviton, 1961a, 1970b, P. Silva, 1969, I. Das, 2007b, 2012 and Grismer, 2011.

Remarks: Official Specific Name no. 1572 *fide* Opinion 524 (ICZN, 1958a). Records from Java doubtful *fide* Rooijen & Vogel (2012: 11).

7. *Dendrelaphis caudolineolatus* (A.C.L.G. Günther, 1869). Proc. Zool. Soc. London 37(1): 506, pl. 40, fig. 1. (*Dendrophis caudolineolata*)

Synonyms: *Dendrophis gregorii* Haly, 1888 and *Dendrophis effrenis* F. Werner, 1909b.

Types: Syntypes (2), BMNH 1946.1.23.21, a 610 mm male (R.H. Barnes, 1858–1869) and BMNH 1858.2.17.19 (H.H. Higgins, 1856–1858).

Type locality: "Ceylon" [= Sri Lanka].

Distribution: Sri Lanka (Central, Sabaragamuwa, Southern) and S India (Kerala, Tamil Nadu), NSL–655 m.

Sources: M.A. Smith, 1943, E.H. Taylor, 1965, A. Silva, 1990 and R.C. Sharma, 2003, 2007.

8. *Dendrelaphis chairecacos* (F. Boie, 1827). Isis Von Oken 20(6): 541. (*Dendrophis chairecacos*)

Type: Neotype, BMNH 1924.10.13.15, a 485 (svl) mm male (A.F. Abercromby, 1888–1921), designated by Rooijen & Vogel (2009: 197).

Type locality: "Kottayam. Travancore (South India)" [= Kottayam, Kerala State, ext. SW India, 9°36'N, 76°32'E, elevation 5 m] via neotype selection.

Distribution: Southern India (Kerala, Tamil Nadu), NSL.

Sources: Rooijen & Vogel, 2008c, 2009.

Remarks: Skin of holotype in BMNH lost *fide* Bolenger (1894: 88–89). Photograph of neotype in Rooijen & Vogel (2009: fig. 3). Resurrected from synonymy of *D. schokari fide* Rooijen & Vogel, 2009.

9. *Dendrelaphis cyanochloris* (Wall, 1921f). Rec. Ind. Mus. 22(2): 155. (*Dendrophis pictus cyanochloris*)

Type: Lectotype, BMNH 1940.3.4.27 (formerly IM 7734), an 850 mm male, designated by M.A. Smith (1943: 244).

Type locality: "Darjeeling" [West Bengal State, NE India, 27°02'N, 88°16'E, elevation 2100 m] via lectotype selection and restriction *fide* Meise & Henning (1932: 290).

Distribution: Southeastern Asia. Northeastern India (Andaman & Nicobars: Andaman Is., Arunachal Pradesh, Assam, Meghalaya, Nagaland, West Bengal), Bhutan (Mongar), Bangladesh, Myanmar (Kachin, Mandalay), Thailand (Narathiwat, Phang Nga, Prachin Buri, Udon Thani), West Malaysia (Pahang, Pinang, Penang and Tioman Is.) and Singapore, NSL–3000 m.

Sources: E.H. Taylor, 1965, M.J. Cox et al., 1998, Chanard et al., 1999, Leong, 2005, Whitaker & Captain, 2004, Vogel & Rooijen, 2007, Rooijen & Vogel, 2008c, M.F. Ahmed et al., 2009, Grismer, 2011, Wangyal, 2011 and Vogel et al., 2012a.

Remarks: Wall's donation of a Burmese specimen from Mergui (Tenasserim Division) that he designated as the type (BMNH 1946.3.4.27) [and type locality restriction of M.A. Smith, 1943: 244] invalid as it was not among the syntypes (only Kachin and Mandalay Divisions). Photographs of the lectotype in Vogel & Rooijen (2007: figs. 7–8).

10. *Dendrelaphis flavescens* Gaulke, 1994b. Herpetol. J. 4(4): 138–140, fig. 2. (*Dendrelaphis caudolineatus flavescens*)

Type: Holotype, SMF 74846, a 1260 mm female.

Type locality: "Sanga-Sanga, Sulu Archipelago, Philippines."

Distribution: Southwestern Philippines (Sulu Arch.: Bongao, Bubuan, Sanga-Sanga, Sibutu, Sitanki, Tawitawi).

Sources: E.H. Taylor, 1922a and Rooijen & Vogel, 2012.

Remarks: Photograph of the type in Rooijen & Vogel (2012: fig. 6).

11. *Dendrelaphis formosus* (F. Boie, 1827). Isis von Oken 20(6): 542. (*Dendrophis formosa*)

Synonyms: *Dendrophis formosus* H. Boie *in* Schlegel, 1826a *(nomen nudum)* and *Dendrophis formosus* Schlegel, 1826b *(nomen nudum)*.

Type: Holotype, RMNH 877, a 1470 mm specimen (H. Boie & H.C. Macklot, 1825–1827).

Type locality: "Java" [SW Indonesia].

Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Narathiwat, Phang Nga, Yala), West Malaysia (Kedah, Kelantan, Pahang, Pinang, Perak, Penang Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei and Indonesia (Bangka, Belitung, Java, Kalimantan, Mentawai Arch., Riau Arch., Sumatra), NSL–1500 m.

Sources: E.H. Taylor, 1965, Tweedie, 1983, Lim & Lim, 1992, David & Vogel, 1996, M.J. Cox et al., 1998, I. Das, 2007b, Vogel & Rooijen, 2007 and Rooijen & Vogel, 2008c.

Remarks: Original description based on H. Boie's MS (1823–1825). Neotype designation of Vogel & Van Rooijen (2007: 30–31) invalid as the specimen appears to be Boie's holotype. Photographs of the type in Vogel & Rooijen (2007: figs. 3–4)

12. *Dendrelaphis fuliginosus* L.E. Griffin, 1909a. Philippine J. Sci. 6D: 55–56.

Type: Neotype, FMNH 67409, a 780 mm male (D.S. Rabor, 1935–1977), designated by Rooijen & Vogel (2012: 12)..

Type locality: "Negros, Philippines" via neotype selection.

Distribution: Central Philippines (Banton, Bantayan, Cagayancillo, Masbate, Mindoro, Negros, Panay, Ticao).

Source: Rooijen & Vogel, 2012.

Remarks: Holotype in BSM destroyed in Jan. 1945 during World War II *fide* Leviton (1970b: 390). Photograph of neotype in Rooijen & Vogel (2012: fig. 7).

13. *Dendrelaphis gastrostictus* (Boulenger, 1894a). Cat. Snakes Brit. Mus. 2: 86–87, pl. 4, figs. 3–3b. (*Dendrophis gastrostictus*)

Synonyms: *Dendrophis meeki* Boulenger, 1895b, *Dendrophis nouhuysii* Lidth de Jeude, 1911b, and *Charlespiersonserpens gastrostictus tyeipperae* Hoser, 2012ab *(nomen illegitimum)*.

Type: Holotype, BMNH 1946.1.23.20, an 1120 mm male (M.A. Linden).

Type locality: "N. W. New Guinea" [= West Papua Prov., E Indonesia].

Distribution: New Guinea. Eastern Indonesia (Papua, West Papua) and Papua New Guinea (Bay, Central, Eastern Highlands, Gulf, Milne, Morobe, Simbu, Western, Western Highlands, Normanby and Fergussen Is.), NSL–1475 m.

Source: O'Shea, 1996.

14. *Dendrelaphis girii* Vogel & Van Rooijen, 2011c. Taprobanica 3(2): 80–83, figs. 2–3.

Type: Holotype, BNHS 3494, a 1026 mm male (S. Kehimkar & V. Giri, 30 Sept. 2004).

Type locality: "Castle Rock, District Belgaum, Karanataka, India" [= Castlerock, E Karnataka State, SW India, 15°24'N, 74°20'E, elevation 615 m].

Distribution: Western Ghats of SW India (E Karnataka, Maharashtra, Tamil Nadu), 615 m.

15. *Dendrelaphis grandoculis* (Boulenger, 1890a). Fauna Brit. India, Rept. Batr.: 337. (*Dendrophis grandoculis)*

Type: Lectotype, BMNH 1946.1.23.27, a 1200–1219 mm female (R.H. Beddome, 1857–1882), by locality restriction of Meise & Henning (1932: 286).

Type locality: "Tinnevelly Hills, South India" via type locality restriction.

Distribution: Western Ghats of SW India (S Karnataka, Kerala, Tamil Nadu), 610–1290 m.

Sources: Malhotra & Davis, 1991, Whitaker & Captain, 2004 and Chandramouli & Ganesh, 2010.

16. *Dendrelaphis grismeri* Vogel & Rooijen, 2008. Herpetozoa 21(1–2): 21–27, figs. 15–16.

Type: Holotype, RMNH 40176, an 825 mm female (B. Moens, 1862).

Type locality: "Wahaaij, côte N. O. de Céram (Wahai, northeast coast of Seram)" [= Wahaaij, Seram, Maluku, E Indonesia].

Distribution: Eastern Indonesia (Ambon, Boana, Manipa, Misol, Seram).

D

17. *Dendrelaphis haasi* Rooijen & Vogel, 2008a. Amphibia-Reptilia 29(1): 108–110, figs. 4, 5a–d.

Type: Holotype, RMNH 5507, a 905 mm male (J.D. Pasteur, 1890).
Type locality: "Nias, Indonesia" [= Nias Is., off NW coast of Sumatra, W Indonesia, ca. 1°08'N, 97°31'E].
Distribution: West Malaysia (Tioman) and W Indonesia (Belitung, Borneo, Java, Mentawai Arch., Nias, Sumatra).
Source: Rooijen & Vogel, 2008a.

18. *Dendrelaphis hollinrakei* Lazell, 2002. Mem. Hong Kong Nat. Hist. Soc. 25: 46–49, figs. 19a, 20.

Type: Holotype, MCZ 173278, a 651 mm female (B. Hollinrake, 1971–1984).
Type locality: "Shek Kwu Chau, 22°12'N, 113°59'E, South China Sea."
Distribution: Southeastern China (Shek Kwu Chau Is.).

19. *Dendrelaphis humayuni* Tiwari & Biswas, 1973. J. Zool. Soc. India 25(1–2): 59–60, fig. 2c.

Type: Holotype, ZSI 22386, an 829 mm specimen (D.P. Sanyal, 1 May 1966).
Type locality: "Campbell Bay, Great Nicobar Island" [Andaman & Nicobars, E India, Bay of Bengal].
Distribution: Eastern India (Andaman & Nicobars: Great Nicobar Is.) and West Malaysia (Malacca, Pinang).
Sources: Biswas & Sanyal, 1977a, 1980, Vijayakumar & David, 2006 and Rooijen & Vogel, 2008c.

20. *Dendrelaphis inornatus* Boulenger, 1897d. Ann. Mag. Nat. Hist. (6) 19(113): 507.

Synonym: *Dendrophis pictus timorensis* M.A. Smith, 1927.
Types: Syntypes (4), BMNH 1946.1.23.23–26, males and females, longest syntype 1200 mm (A.H. Everett, 1895–1896).
Type locality: "Sumba and Savu" [Lesser Sunda Islands, S Indonesia]. Restricted to Sumba *fide* Meise & Hennig (932: 287).
Distribution: Lesser Sundas of S Indonesia (Alor, Flores, Komoto, Lombien, Moyo, Pandar, Rinca, Roti, Sawu, Semau, Sumba, Sumbawa, Timor, Wetar) and Timor-Leste, NSL–300 m.
Sources: Kaiser et al., 2011 and Lang, 2011.

21. *Dendrelaphis kopsteini* Vogel & Rooijen, 2007. Zootaxa (1394): 34–38, figs. 9–12.

Type: Holotype, MNHN 1962.1052, a 1410 mm female (P. Pfeffer).
Type locality: "Endau river, State of Johore, Federation of Malaysia" [= Endau River, Johore State, SE West Malaysia].
Distribution: Malay Peninsula and Sumatra. Peninsular Thailand (Nakhon Si Tammarat, Phang Nga), West Malaysia (Johore, Pahang, Perak, Perlis), Singapore and W Indonesia (Mentawai Arch., Sumatra), NSL–1100 m.
Sources: I. Das, 2007a, 2012 and Rooijen & Vogel, 2008c.

22. *Dendrelaphis levitoni* Rooijen & Vogel, 2012. Zootaxa (3272): 13–15, fig. 9.

Type: Holotype, CAS 15803, a 980 mm female (A. Seale, 6 July 1908).
Type locality: "Puerto Princesa, Palawan, P.I." [= Puerto Princesa, cen. Palawan, SW Philippines, 9°58'N, 118°47'E, elevation 70 m].
Distribution: Southwestern Philippines (Balabac, Busuanga, Candaraman, Palawan), 70 m.

23. *Dendrelaphis lorentzii* (Lidth de Jeude, 1911b). Nova Guinea (Zool.) 9(2): 274, pl. 8, figs. 2a–c. (*Dendrophis lorentzii*)

Synonym: *Charlespiersonserpens jackyhoserae* Hoser, 2012ab *(nomen illegitimum)*.
Type: Holotype, RMNH 4710, an 820 mm specimen (H.A. Lorentz [First Dutch New Guinea Exped.], 18 July 1907).
Type locality: "Sabang, Nouvelle-Guinée" [= Sabang, Merauke, on Lorentz River, S Papua Prov., E Indonesia, 4°46'S, 138°47'E, elevation 30 m].
Distribution: New Guinea. Eastern Indonesia (S Papua) and Papua New Guinea (Morobe, Western), NSL–665 m.
Source: O'Shea, 1996.

24. *Dendrelaphis luzonensis* Leviton, 1961a. Occ. Pap. Nat. Hist. Mus. Stanford Univ. (2): 1–4. (*Dendrelaphis caudolineatus luzonensis*)

Type: Holotype, CAS 61134, a 1264 mm female (E.H. Taylor, April 12–July, 1920).
Type locality: "Los Baños, Laguna Prov., Luzon Island, Philippines" [= 14°10'N, 121°15'E, elevation 30 m].
Distribution: Northern Philippines (Luzon, Camaguin Arch.).
Sources: Rooijen & Vogel, 2012.

25. *Dendrelaphis marenae* Vogel & Rooijen, 2008. Herpetozoa 21(1–2): 13–21, figs. 9–14, 17.

Type: Holotype, MNHN 1994.59, a 960 mm female (Montamo-Ray, 1880).
Type locality: "Prov. Albay, island of Luzon, Philippines."
Distribution: East Indies. Indonesia (Sulawesi: Buton) and Philippines (Balabac, Bantayan, Basilan, Bohol, Bongao, Busuanga, Calauit, Camiguin, Candaraman, Catanduanes, Cebu, Culion, Kalotkot, Leyte, Luzon, Masbate, Mindanao, Mindoro, Negros, Palawan,

Panay, Polillo, Romblon, Samar, Siquijor, Surigao), NSL–1000 m.
Source: Koch, 2012.

26. *Dendrelaphis modestus* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 91, pl. 4, fig. 4.

Types: Syntypes (2), BMNH 1946.1.6.65–66 (formerly BMNH 1878.1.31.4–5), 1130 mm and 785 (svl) females (H.M.S. Challenger Voy. [Stn. 197], 15–17 Oct. 1874).
Type locality: "Ternate" [Maluku, Indonesia].
Distribution: Eastern Indonesia (Maluku: Bacan, Halmahera, Morotai, Ternate)
Source: Rooijen & Vogel, 2012.

27. *Dendrelaphis ngansonensis* (Bourret, 1935d). Bull. Gén. Instr. Publ. 14(9): 292. (*Dendrophis pictus ngansonensis*)

Type: Holotype, VNUH M.449 (formerly RLB M.449, a 1067 mm specimen (M. Clémençon, 1934).
Type locality: "Ngân-Son, Tonkin (Alt. 700m)" [= Ngân Son, Bac Kan Prov., N Vietnam, 22°26'N, 106°01'E, elevation 700 m].
Distribution: Southeast Asia. Southern China (Hainan, Yunnan), Thailand, N Laos (Xiangkhouang) and N Vietnam (Bac Giang, Bac Kan, Cao Bang, Ha Giang, Hai Duong, Ha Tinh, Lang Son, Ninh Binh, Nghe An, Quang Binh, Quang Nam, Quang Tri, Son La, Thai Nguyen, Thanh Hoa, Thua Thien-Hue, Vinh Phuc), 400–1100 m.
Sources: Ziegler & Vogel, 1999, Orlov et al., 2000, Bain et al., 2007, Nicodemo & Bain, 2007, V.S. Nguyen et al., 2009 and Cox et al., 2013.

28. *Dendrelaphis nigroserratus* Vogel, Rooijen & Hauser, 2012a. Zootaxa (3392): 39–41, figs. 4a, 6.

Type: Holotype QSMI 1282, a 428 mm female (S. Hauser, 13 Oct. 2011).
Type locality: "Umphang Wildlife Sanctuary, Umphang district, province Tak, Thailand. Found on Highway 1090, at 5.1 km north and uphill from the bridge over the Mae Klong Khi, near the Karen village of Mae Klong Khi, c. 1100 m a.s.l."
Distribution: Myanmar (Mergui) and Thailand (Kanchanaburi, Phetchaburi, Tak), 900–1350 m.

29. *Dendrelaphis oliveri* (E.H. Taylor, 1950b). Univ. Kansas Sci. Bull. 33(14): 555–557, pl. 18, fig. 1. (*Ahaetulla oliveri*)

Type: Holotype, formerly EHT-HMS 30388 & EHT-CC 1184, a 756 mm specimen (E.H. Taylor, 1944), location unknown.
Type locality: "12 miles north of Trincomalee, Ceylon" [= near Nilaveli, 18 km N Trincomalee, N Eastern Prov., NE Sri Lanka, ca. 8°43'N, 81°11'E, elevation 3–5 m *fide* Bauer & Silva, 2007: 5].
Distribution: Northeastern Sri Lanka (Eastern), NSL. Known only from type locality.

30. *Dendrelaphis papuensis* Boulenger, 1895e. Ann. Mag. Nat. Hist. (6) 16(95): 409.

Synonym: *Charlespiersonserpens papuensis lizelliottae* Hoser, 2012ab *(nomen illegitimum).*
Types: Syntypes (5), BMNH 1946.1.6.57–61, two males and three females, longest syntype 1050 mm (A.S. Meek, 1894).
Type locality: "Trobriand Islands, British New Guinea" [= Trobriand Is., Milne Bay Prov., E Papua New Guinea].
Distribution: Papua New Guinea (Central, Milne Bay, Morobe, Northern, Western, Fergusson, Rossel, Sudest, Trobriand and Woodlark Is).
Source: O'Shea, 1996.

31. *Dendrelaphis philippinensis* (A.C.L.G. Günther, 1879a). Proc. Zool. Soc. London 47(1): 78, pl. 4. (*Dendrophis philippinensis*)

Synonym: *Dendrelaphis caeruleatus* Griffin, 1909a.
Type: Holotype, BMNH 1946.1.6.69 (formerly BMNH 1877.10.9.62), a 1060 mm female (A.H. Everett, March–May, 1878).
Type locality: "North Mindanao" [Philippines].
Distribution: Eastern and S Philippines (Basilan, Bohol, Camiguin, Cebu, Catanduanes, Dinagat, Kalotkot, Leyte, S Leyte, S Luzon, Mindanao, Polillo, Samar, Siquijor, Surigao).
Source: Rooijen & Vogel, 2012.
Remarks: Photograph of the type in Rooijen & Vogel (2012: fig. 12).

32. *Dendrelaphis pictus* (Gmelin, 1789). Syst. Nat., ed. 13, 1(3): 1116. (*Coluber pictus*)

Synonyms: *Coluber boiga* Lacépède, 1789 (*nomen rejiciendum*), *Coluber decorus* G. Shaw, 1802, *Ahaetulla fasciata* Link, 1807, *Coluber plinii* Merrem, 1820, *Dendrophis polychroa* Reinwardt *in* F. Boie, 1827, *Ahaetulla bellii* Gray *in* Hardwicke & Gray, 1834, *Dendrophis lateralis* Gray, 1835 *in* Gray & Hardwicke, 1830–1835, *Bungarus filum* A.C.L.G. Günther, 1858, *Dendrophis pictus polychroa* Jan, 1863b (*nomen nudum*), and *Ahaetulla boiga intermedia* Mertens, 1927b.
Type: Holotype, NHR Lin-37 (formerly MAFR), a 940 mm specimen (Mus. Drottn.).
Type locality: Unknown. Designated as Waigiu [= Waigeo, West Papua Prov., E Indonesia, 0°12'S, 130°50'E] *fide* F. Boie (1827: 543).
Distribution: Southeastern Asia and East Indies. Southern China (Guangdong, Hainan, Hong Kong, SW Yunnan), Vietnam (An Giang, Bac Giang, Binh Duong, Binh

D

Thuan, Ca Mau, Dak Nang, Da Nang, Dien Bien, Dong Nai, Gia Lai, Ho Chi Minh City, Khanh Hoa, Kien Giang, Lao Cai, Phu Tho, Phu Yen, Quang Binh, Quang Nam, Quang Ninh, Quang Tri, Soc Trang, Tay Ninh), Thailand (Chaiyaphum, Chanthaburi, Chiang Mai, Chumphon, Khon Kaen, Loei, Lop Buri, Nakhon Pathom, Nakhon Ratchasima, Nakhon Sawan, Nakhon Si Thammarat, Phang Nga, Prachin Buri, Songkhla, Surat Thani, Trang), Cambodia (Preah Vihear), West Malaysia (Perak, Perlis, Aceh, Besar, Mawat, Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Papua, West Papua, Ambon, Bali, Bangka, Belitung, Belitung, Boano, Borneo, Butung, Flores, Java, Kalimantan, Lombok, Manipa, Mentawei Arch., Misool, Natuna, Nias, Riau Arch., Roti, Sangihe Arch., Seram, Sula Arch., Sulawesi, Sumatra, Ternate, Timor) and Philippines (Bohol, Bongao, Busuanga, Cagayan, Catanduanes, Cebu, Culion, Guimaras, Jolo, Lapac, Luzon, Masbate, Mindanao, Mindoro, Negros, Palawan, Panay, Polillo, Samar, Siargao, Sula, Tawitawi), NSL–1705 m.

Sources: Wall, 1910a, Bergman, 1955d, Leviton, 1970b, Auffenberg, 1980, Karsen et al., 1986, Ross & Gonzales, 1992, Zhao & Adler, 1993, Gaulke, 1994b, Gaulke & Altenbach, 1994, Kovae et al., 1995, David & Vogel, 1996, M.J. Cox et al., 1998, Xie et al., 1998, Chan-ard et al., 1999, Ziegler & Vogel, 1999, Malkmus et al., 2002, Whitaker & Captain, 2004, Rooijen & Vogel, 2008c, Vogel & Rooijen, 2008, 2011a, V.S. Nguyen et al., 2009, Sajdak, 2010, Grismer, 2011 and T. Hartmann et al., 2013.

Remarks: Official Specific Name no. 1574 *fide* Opinion 525 (ICZN, 1958b). Original color sketches of holotypes of *Ahaetulla belli* by Hardwicke (1756–1823) (2: fig. 9) and *Dendrophis lateralis*by Hardwicke (1756–1823) (2: fig. 11) in BMNH. Type locality restrictions of Borneo *fide* Mertens (1930: 188) and Java *fide* Meise & Hennig (1932: 289) are invalid.

33. *Dendrelaphis proarchos* (Wall, 1909d). J. Bombay Nat. Hist. Soc. (1909–1910) 19(2): 347. (*Dendrophis proarchos*)

Type: Holotype, not designated, one specimen (St. Joseph's College, Darjeeling).

Type locality: "Darjeeling" [West Bengal State, NE India, 27°02'N, 88°16'E, elevation ca. 2100 m].

Distribution: Southeastern Asia. Northeastern India (Assam, Sikkim), Myanmar (Kachin, Rakhine, Shan), Laos (Phongsali) and Vietnam (Tonkin), 2100 m.

Source: Vogel & Rooijen, 2011a.

Remarks: Supplemental original description in Wall (1910c: 827–829, figs. a–d), who listed 24 syntypes (of which BMNH 1908.6.23.27–28 are known and BMNH 1908.6.23.27 was described by Vogel & Rooijen, 2011: 108) with type localities of "Dibrugarh" [21 spec.], "Sadiya" [1 spec.], "North Lakhimpur (Dejoo)" [1 spec.], and "Doom Dooma" [1 spec.]. Type locality restriction to Dibrugarh, Assam *fide* M.A. Smith (1943: 242) invalid.

34. *Dendrelaphis punctulatus* (Gray *in* King, 1827). Surv. West. Aust. 2: 432. (*Leptophis punctulatus*)

Synonyms: *Elaps lewisii* Gray *in* Grey, 1841b, *Dendrophis olivacea* Gray, 1842c, *Dendrophis lineolata* Hombron & Jacquinot, 1842, *Dendrophis prasinus* Girard, 1858a, *Dendrophis striolatus* W.C.H. Peters, 1867, *Dendrophis punctulatus astrostriata* A.B. Meyer, 1874, *Dendrophis punctulatus fasciata* A.B. Meyer, 1874, *Dendrophis gracilis* Macleay, 1875, *Dendrophis breviceps* Macleay, 1877, *Dendrophis macrops* A.C.L.G. Günther, 1877, *Dendrophis olivacea* Macleay, 1878b (*nec* Grey), *Dendrophis bilorealis* Macleay, 1884a, *Dendrophis elegans* Ogilby, 1891, and *Dendrophis papuae* Ogilby, 1891.

Type: Holotype, BMNH 1946.1.23.34, a 1219 mm specimen (J. Hunter, 1818–1822).

Type locality: "Careeing Bay, on the north coast, Australia" [= N Western Australia, 15°06'S, 125°00'E *fide* Cogger et al., 1983a: 211].

Distribution: Austro-Papua. Eastern Indonesia (Papua, West Papua), Papua New Guinea (Central, East New Britain, East Sepik, Eastern Highlands, Gulf, Madang, Milne Bay, Northern, Western, West New Britain, West Sepik, New Britain, New Ireland and Normanby Is.) and N and E Australia (E New South Wales, N Northern Territory, E Queensland, ext. N Western Australia, Angustus, Bathurst, Bickerton, Centre, Corneille, Coronation, Cotton, Croker, Groote Eylandt, Hawknest, Hayman, Hidden, King Hall, Koolan, Lachlan, Lindeman, Melville, North, North Goulburn, Vanderlin and Woodah Is.), NSL–1850 m.

Sources: J. White, 1790, Hoser, 1989, O'Shea, 1996, Crombie & Pregill, 1999, Cogger, 2000 and Kraus & Allison, 2004.

35. *Dendrelaphis salomonis* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 25. (*Dendrophis salomonis*)

Types: Syntypes (2), BMNH 1946.1.5.97 and BMNH 1946.1.6.11, longest syntype 813 mm (G. Krefft, 1861–1872).

Type locality: "Solomon Islands."

Distribution: Papua New Guinea (Milne Bay, North Solomons, Buka, Buin, Bougainville; Mismia and Sudest Is.) and Solomon Islands (Fauro, Choiseul, Kolombangara, New Georgia, Santa Cruz, Santa Isabel, Malaita, Guadalcanal), 10–20 m.

Source: O'Shea, 1996.

36. ***Dendrelaphis schokari*** (Kuhl, 1820). Zool. Vergl. Anat.: p. 80–82. (*Dipsas schokari*)

Type: Neotype, RMNH 842, a 735 mm female (G.A. Frank, 1853), designated by Rooijen & Vogel (2008b: 39).
Type locality: "Ceylon" [= Sri Lanka] via neotype designation.
Distribution: Sri Lanka (Central, Eastern, Northern, Southern, Western).
Sources: A. Silva, 1990b, 2009, Somaweera, 2006 and Rooijen & Vogel, 2008c, 2009.
Remarks: A valid species *fide* Rooijen & Vogel (2008c: 33). Syntypes in AG destroyed by fire in 1906 *fide* Rooijen & Vogel (2008c: 38). Photographs of neotype in Rooijen & Vogel (2008b: figs. 5–6).

37. ***Dendrelaphis striatus*** (Cohn, 1905). Zool. Anz. 29(17): 543–544. (*Dendrophis pictus striatus*) (*nomen corrigendum*)

Synonym: *Dendorophis pictus striata* Cohn, 1905 (*nomen incorrigendum*)
Types: Syntypes (2), UMB, a 775 mm female and 640 mm male (P. Cassens-Brake).
Type locality: "Sumatra, Asahau" [= Asahan River, NE Sumatra, W Indonesia, ca. 2°57'N, 99°48'E].
Distribution: Malay Peninsula and Greater Sundas. Peninsular Thailand (Nakhon Si Tammarat, Phang Nga), West Malaysia (Pahang, Perak, Selangor, Tioman Is.) and W Indonesia (Kalimantan, Sumatra), NSL–300 m.
Sources: Tweedie, 1983, G. Vogel, 1990, 1995, David & Vogel, 1996, M.J. Cox et al., 1998, Wood et al., 2003, Rooijen & Vogel, 2008c, Grismer, 2011 and Vogel et al., 2012a.

38. ***Dendrelaphis subocularis*** (Boulenger, 1888h). Ann. Mus. Civ. Stor. Nat. Genova (2) 6: 600, pl. 6, figs. 2, 2a–2b. (*Dendrophis subocularis*)

Types: Syntypes (2), BMNH 1946.1.6.10, a juvenile male, and MSNG CE 30455, a female, longest syntype 820 mm (M.L. Fea, 1886).
Type locality: "Bhamò, Burma" [= Bhamo, S Kachin Division, N Myanmar, 24°15°N, 97°14'E, elevation 115 m].
Distribution: Southeastern Asia. Northeastern India, S China (Guangdong, Guangxi, Yunnan), Myanmar (Yangon), Thailand (Chiang Mai, Kanchanaburi, Mae Hong Son, Nakhon Ratchasima, Phetchabun, Tak, Udon Thani, Uthai Thani), N Laos, Cambodia and N Vietnam (Hai Duong, Lam Dong, Ninh Thuau, Quang Nam), NSL–1620 m.
Sources: E.H. Taylor, 1965, Campden-Main, 1970a, Saint-Girons, 1972a, Zhao & Adler, 1993, M.J. Cox et al., 1998, Zug et al., 1998, Zhao, 2006 and V.S. Nguyen et al., 2009.
Remarks: An isolated Java population is distinct but unnamed *fide* Rooijen & Vogel (2010: 90).

39. ***Dendrelaphis terrificus*** (W.C.H. Peters, 1872a). Mber. Königl. Akad. Wiss. Berlin 1872(7): 583–584. (*Dendrophis terrificus*)

Type: Lectotype, ZMB 7416, a 307 mm juvenile (A.B. Meyer, Dec. 1870–Nov. 1871), designated by Leviton (1970b: 389, 391) and Rooijen & Vogel (2012: 20).
Type locality: "Gorontalo, Sulawesi" [Indonesia] via lectotype selection.
Distribution: Central Indonesia (N Sulawesi).
Sources: Lang & Vogel, 2005, Koch, 2012 and Rooijen & Vogel, 2012.
Remarks: Type locality restriction of Borongan, Samar Is., Philippines *fide* Meise & Hennig (1932: 281) invalid.

40. ***Dendrelaphis tristis*** (Daudin, 1803c). Hist. Nat. Rept. 6: 430–431. (*Coluber tristis*)

Synonyms: *Coluber scandens* Bechstein, 1802a, *Leptophis mancas* Bell, 1825, *Natrix comberi* Wagler, 1825 (*nomen ineditum*), *Natrix diana* Wagler, 1825 (*nomen ineditum*), *Dendrophis maniar* Russell *in* F. Boie, 1827, *Chrysopelea boiei* A. Smith, 1836, *Dendrophis boii* Cantor, 1839, *Coluber cumberi* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Dendrophis pictus vertebralis* Jan, 1863b, *Dendrophis multimaculatus* Higgins, 1873, *Dendrophis helena* F. Werner, 1893, and *Dendrelaphis tristis trapobanensis* Wall, 1921.
Type: Neotype, SMF 58442, a 665 mm male (H. Schetty), designated by Rooijen & Vogel (2008b: 40).
Type locality: "Calcutta, India" [= Kolkata, West Bengal State, NE India, 22°34'N, 88°22'E, elevation 5 m] via neotype designation.
Distribution: Southern Asia. Eastern Pakistan (Punjab), NE India (Andhra Pradesh, Assam, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh, West Bengal), Sri Lanka (Kalutara), Bangladesh, Nepal (Bardiya, Chitwan, Ilam, Kailali, Mahottari, Makwanpur, Palpa, Panchthar, Rupandehi, Sankhuwasabha, Taplejung), Bhutan (Sarpang) and Myanmar, NSL–2000 m.
Sources: Wall, 1910c, k, P. Silva, 1969, Kramer, 1977, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Rooijen & Vogel, 2008c, 2009, I. Das, 2010, Masroor, 2012 and Wangyal, 2012.
Remarks: Holotype lost *fide* Rooijen & Vogel (2008b: 37). Photographs of neotype in Rooijen & Vogel (2008b: figs. 9–10). Pakistan record doubtful *fide* M.S. Khan (2002: 206).

D

41. *Dendrelaphis underwoodi* Rooijen & Vogel, 2008b. Raffles Bull. Zool. 56(1): 191–193, figs. 1–2.

Type: Holotype, RMNH 7447, a 900 mm female (J. Semmelink, 1872–1875).
Type locality: "Radjamandala, West Java, 335 meters" [= Rajamandala, Jawa Barat Prov., Java, W Indonesia, 7°15'S, 108°11'E, elevation 335 m].
Distribution: Western Indonesia (W Java), 335–900 m.

42. *Dendrelaphis walli* Vogel & Rooijen, 2011b. Bonn. Zool. Bull. 60(1): 22–23, fig. 2.

Type: Holotype, CAS 234880, a 710 mm female (A.K. Shein & T. Nyo, 23 Aug. 2005).
Type locality: "Myanmar (Chin State: Mindat township, Mindat District, 21 26 43.5 N, 94 00 24.0 E, 3582 ft)."
Distribution: Southern Myanmar (Chin), 1090 m.

DENDROASPIS Schlegel, 1848 (Elapidae)

Synonyms: *Dinophis* Hallowell, 1852c, *Dendroëchis* J.G. Fischer, 1855 *(nomen incorrigendum), Dendraspis* A.H.A. Duméril, 1856 *(nomen praeoccupatum), Deniraspis* – F. Müller, 1878b *(nomen incorrectum), Denraspis* – Maass-Berlin, 1933 *(nomen incorrectum), Dendrospis* – Briceño-Rossi, 1934 *(nomen incorrectum), Dendroapsis* – Ionides, 1950 *(nomen incorrectum), Dendraspsis* – Anthony, 1955 *(nomen incorrectum),* and *Dendropsis* – Tanner & Avery, 1982 *(nomen incorrectum).*
Type species: *Elaps jamesoni* Traill, 1843.
Distribution: Subsaharan Africa.
Sources: Klemmer, 1963, Broadley, 1968a, 1983, Pitman, 1974, Branch, 1979, Saint-Girons & Detrait, 1980, Golay et al., 1993, Slowinskii & Keogh, 2000, Dobiey & Vogel, 2007, Kelly et al., 2009, Zaher et al., 2009 and Hoser, 2012e.
Remarks: Official Generic Name no. 1598 *fide* Opinion 709 (ICZN, 1964b).

1. *Dendroaspis angusticeps* (A. Smith, 1849 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 70, figs. a–d, 2 pp. (*Naia angusticeps*)

Synonym: *Dendroaspis sjostedti* Lönnberg, 1907.
Type: Holotype, not designated, an 1842 mm specimen (A. Smith, 1831–1834), lost *fide* Broadley *in* Golay et al. (1993: 128).
Type locality: "Natal and in the country to the eastward, towards Delegoa Bay, South Africa" [= KwaZulu Natal, South Africa and Maputo Bay, Mozambique]. Restricted to Natal [= KwaZulu Natal Prov., South Africa] *fide* Loveridge (1942: 306).
Distribution: Eastern South Africa (Eastern Cape, KwaZulu Natal), NSL–210 m.
Sources: FitzSimons, 1946a, 1974, Broadley, 1983 and Sajdak, 2010.
Remarks: Holotype not in RSM or BMNH.

2. *Dendroaspis intermedius* A.C.L.G. Günther, 1865. Ann. Mag. Nat. Hist. (3) 15(86): 98, pl. 3, fig. c. (*Dendraspis intermedius*)

Type: Holotype, BMNH 1946.1.20.48, a 1397 mm male (C.J. Meller, 1861–1864).
Type locality: "Zambesi River" [= Zambezi River, Tete or Sofala/Zambézia Prov., cen. Mozambique].
Distribution: Eastern Africa. Eastern Democratic Republic of the Congo (SE Kasai Oriental, Katanga, Maniema, Orientale), SE Kenya (Coast, Eastern), E Tanzania (Arusha, Coast, Kilimanjaro, Lindi, Mbeya, Morogoro, Mtwara, Piwani, Ruvuma, Tanga, Mafia and Zanzibar Is.), Malawi (Central, Northern, Southern), S Mozambique (Inhambane, Manica, Maputo) and E Zimbabwe (Manicaland), NSL–1700 m.
Sources: Loveridge, 1950, Witte, 1953, Sweeney, 1961, Ionides & Pitman, 1965, Broadley & Cock, 1975, Broadley, 1983, Chifundera, 1990, Spawls et al., 2002 and Broadley & Blaylock, 2013.
Remarks: A valid species *fide* W. Wüster (unpubl. data). Probably occurs in S Somalia *fide* Lanza (1983a: 229). Records from Democratic Republic of the Congo rejected *fide* David & Ineich (1999: 78).

3. *Dendroaspis jamesoni* (Traill, 1843). Edinburgh New Philos. J. 34(67): 54–55, 2 figs. (*Elaps jamesoni*)

Synonyms: *Dendraspis welwitschii* A.C.L.G. Günther, 1865, *Dinophis fasciolatus* J.G. Fischer, 1885b, *Dendraspis neglectus* Bocage, 1888, and *Dendraspis jamesoni kaimosae* Loveridge, 1936a.
Type: Holotype, NMSZ 1869.3.147 (formerly TST & RSM), an 1867 mm specimen (T.S. Traill family).
Type locality: "Demerara, Equinoxial America" [= Guyana, South America] (in error). Designated as West Indies *fide* NMSZ catalogue. Restricted to West Africa *fide* Mertens (1938: 49).
Distribution: West, cen. and E Africa. Guinea-Bissau (Bissau, Bolama Is.), S Ghana (Accra, Volta, Western), S Togo (Plateaux), S Benin (Cotonou), S Nigeria (Akwa Ibom, Bayelsa, Cross River, Rivers), S Cameroon (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), São Tomé and Príncipe (São Tomé), Central African Republic (Kemo-Gribingui, Lobaye, Mbomou, Ombella-Mpoko, Ouaka, Sangha), Gabon (Ngounié, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Cuvette, Cuvette-Ouest, Kouilou, Pool, Sangha), NE Angola (Lunda Norte), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu, Idjwi Is.), N Zambia (Luapula, Northern,

North-Western), SE Sudan, S South Sudan (SW Eastern Equatoria), S Uganda (Central, Eastern, Western), Rwanda (Butare), SW Burundi (Bururi), SW Kenya (Nyanza, Western) and NW Tanzania (Kagera), NSL–2300 m.

Sources: Loveridge, 1936a, Witte, 1962, Laurent, 1964a, Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Derleyn, 1977, Hughes, 1983, 2013, Herman et al., 1990, Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Luiselli et al., 2000, Spawls et al., 2002, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2007, Segniagbeto et al., 2011 and Auliya et al., 2012.

Remarks: Official Specific Name no. 1989 *fide* Opinion 709 (ICZN, 1964b). Original description reprinted in Traill *in* Schlegel (1843: 179, pl. 2, figs. 19–20). Hughes & Barry (1969: 1028), listed two syntypes although Traill clearly stated he had only one specimen at the time of description; he later (*in* Schlegel, 1843: 179) mentioned a headless BMNH specimen as belonging to this taxon. BMNH 1946.1.20.43 listed as a syntype *fide* Hughes & Barry (1969: 1028) and ZMB 2817 reported as a possible syntype. Reports from Benin, Ivory Coast and N Zambia need confirmation.

4. *Dendroaspis polylepis* A.C.L.G. Günther, 1864c. Proc. Zool. Soc. London 32(1): 310. (*Dendraspis polylepis*)

Synonyms: *Dendraspis antinorii* W.C.H. Peters, 1873b, *Dendraspis mamba* Gough, 1907b, *Dendroaspis polyelepis* – Ibrahim & Masr, 1975 *(nomen incorrectum)*, and *Dendroaspis polylepasis* – Khole, 1991 *(nomen incorrectum)*.

Type: Holotype, BMNH 1946.1.20.53, an 1829 mm skin (J. Kirk [Zambezi Exped.], 1858–1864).

Type locality: "regions bordering the Zambezi, including those of the Nyassa Lake." Restricted to Zambesi River, Mozambique *fide* Loveridge (1953: 290).

Distribution: Subsaharan Africa. Senegal (Dakar, Kédougou, Tambacounda, Thiès), Guinea (Kindia, Kouroussa, Télimélé), N Ivory Coast (Ferkéssédougou), SW Burkina-Faso (Hauts-Bassins, Sud-Ouest), Cameroon (Adamaoua), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Ombella-Mpoko, Ouham, Ouham-Pende), Democratic Republic of the Congo (Equateur, Katanga, Nord-Kivu, Orientale), Angola (Benguela, Huambo, Luanda), SE South Sudan (Eastern Equatoria), South Sudan (Eastern Equatoria), Eritrea (Anseba/Northern Red Sea), Ethiopia (Bale, Gemu Gofa, Gondar, Hararge, Kefa, Shoa, Sidamo), W Somalia (Awdal, Gedo, Jubbada Dhexe, Woqooyi Galbeed), Kenya (Coast, Eastern, Nairobi, N North-Eastern, Nyanza, Rift Valley, Western), N Uganda (Eastern, Northern), E Rwanda, Tanzania (Arusha, Dar es Salaam, Dodoma, Kagera, Kigoma, Kilimanjaro, Lindi, Manyara, Mara, Mtwara, Mwanza, Pwani, Rukwa, Tanga, Manda Is.), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawi (Southern), Mozambique (Gaza, Manica, Maputo, Sofala), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Namibia (Hardap, Khomas, Kunene, Otjozondjupa), Botswana (Central, Gaborone, Ghanzi, Kgalagadi, Kweneng, North West, Southern), Swaziland, Lesotho and NE South Africa (E Eastern Cape, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, North West), NSL–1830 [2000] m.

D

Remarks: Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353).

5. *Dendroaspis viridis* (Hallowell, 1844c). Proc. Acad. Nat. Sci. Philadelphia (1844–1845) 2(6): 172. (*Leptophis viridis*)

Synonyms: *Dinophis hammondii* Hallowell, 1852c, *Dendroëchis reticulata* J.G. Fischer, 1855, and *Dendroaspis viridis hallowelli* Yeomans, 1993 *(nomen ineditum)*.

Type: Lectotype, ANSP 6893, a 572 mm female (S.M.E. Goheen, 1836–1838), designated by Malnate (1971: 3673).

Type locality: "Liberia" via lectotype selection.

Distribution: West Africa. Southwestern Senegal (Ziguinchor), Gambia (Western), Guinea-Bissau (Bolama and Bubaque Is.), Guinea (Boffa, Boké, Conakry, Kouroussa, Macenta, Nzérékoré, Télimélé), Sierra Leone (Northern, Southern, Western, Sherbo Is.), Liberia, Ivory Coast (Abidjan, Bouna, Daloa, Guiglo, Lagunes, Tabou, Toumodi), S Ghana (Eastern, S Western), Togo (Kara, Plateaux), N Benin (Atlantique, Zou) and S Nigeria (Delta), NSL–400 m.

Sources: Doucet, 1963, Menzies, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Hakansson, 1981, Greenbaum & Carr, 2005, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Segniagbeto et al., 2011, Auliya et al., 2012, Chirio, 2013 and Hughes, 2013.

Remarks: Two female syntypes (ANSP 6892–93) listed *fide* Hughes & Barry (1969: 1029).

DENDROLYCUS Laurent, 1956a (Lamprophiidae)

Type species: *Lycophidium elapoides* A.C.L.G. Günther, 1874b.
Distribution: West Africa.
Sources: K.P. Schmidt, 1923, Laurent, 1952, Witte, 1962, J.-F. Trape & Roux-Estève, 1995, Chirio & LeBreton, 2007, Gonwouo et al., 2007, Kelly et al., 2009 and Zaher et al., 2009.

D

1. *Dendrolycus elapoides* (A.C.L.G. Günther, 1874b). Proc. Zool. Soc. London 42(1): 444–445. (*Lycophidium elapoides*)

Synonym: *Lycophidion elapoides angusticinctus* Laurent, 1952.
Type: Holotype, BMNH 1946.1.14.32, a 381–410 mm male (H.H. Higgins, 1856–1974).
Type locality: "Camaroon Mountains" [= Cameroon Mtns., SW Cameroon].
Distribution: Central Africa. Southern Cameroon (Sud, Sud-Ouest), Congo and NE Democratic Republic of the Congo (Nord-Kivu, Orientale, Sud-Kivu), 620–1400 m.

DENDROPHIDION Fitzinger, 1843 (Colubridae)

Synonyms: *Dendrophidium* Agassiz, 1847 *(nomen emendatum)* and *Cacocalyx* Cope, 1895c.
Type species: *Herpetodryas dendrophis* Schlegel, 1837.
Distribution: Latin America.
Sources: J.A. Peters & Orejas-Miranda, 1970, Lieb, 1988, Pérez-Santos & Moreno, 1988,1989a, Villa et al., 1988, Cadle, 2012a–b and Cadle & Savage, 2012.

1. *Dendrophidion apharocybe* Cadle, 2012a. Bull. Mus. Comp. Zool. 160(4): 198–209, figs. 1, 2a, 14c–d.

Type: Holotype, LACM 148593, a 908 mm male (C. Dock, C. Lieb & C. Toft, 9 Dec. 1974).
Type locality: "Finca La Selva, 40 m elevation, Heredia Province, Costa Rica."
Distribution: Lower Central America. Honduras (Gracias a Dios), Nicaragua (Atlántico Norte, Chontales, Matagalpa, Río San Juan), Costa Rica (Alajuela, Guanacaste, Heredia, Limón) and Panama (Bocas del Toro, Coclé, Darién, Panamá, San Blas), 40–1530 m.

2. *Dendrophidion atlantica* Freire, Caramaschi & Gonçalves, 2010. Zootaxa (2719): 63–66, figs. 1–3.

Type: Holotype, MNRJ 17108 (formerly CRE 8598), a 1040 mm male (U. Gonçalves, 5 Dec. 2006).
Type locality: "Mata do Engenbo Coimbra (08º59'S, 35º53'W, 526 m above sea level), Municipality of Ibateguara, State of Alagoas, Northwestern Brazil."
Distribution: Northeastern Brazil (Alagoas), 80–525 m.

3. *Dendrophidion bivittatum* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 540–541. (*Leptophis bivittatus*) (*nomen corrigendum*)

Synonyms: *Leptophis bi-vittatus* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Thamnosophis bivittatus* Jan, 1863b *(nomen corrigendum), Tropidonotus subradiatus* Jan, 1865c, and *Herpetodryas tetrataenia* A.C.L.G. Günther, 1872b.
Types: Syntypes (2), MNHN 517 and MNHN 1906.3460, longest syntype 680 mm.
Type locality: "Nouvelle-Grenade (Amérique du Sud)" [= Colombia].
Distribution: Central Colombia (Antioquia, Boyacá, Caldas, Cundinamarca, Santander, Tolima, Valle), 500–2630 m.
Source: Rojas-Morales, 2012b.

4. *Dendrophidion boshelli* Dunn, 1944a. Caldasia 2(10): 475–476.

Type: Holotype, ICNMNH, a 252 mm (svl) female (J. Boshell, Oct. 1943).
Type locality: "Volcanes, 250 m. alt., Municipio de Caparrapí, Cundinamarca, Colombia."
Distribution: Central Colombia (Cundinamarca, Santander), 250–500 m.

5. *Dendrophidion brunneum* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 116. (*Herpetodryas brunneus*)

Type: Holotype, BMNH 1946.1.12.98, an 867+ mm female.
Type locality: "Guayaquil" [=Guayaquil, Guayas Prov., SW Ecuador, 2°12'S, 79°54'W, elevation 10 m].
Distribution: Central Ecuador (Azuay, Chimborazo, El Oro, Guayas, Imbabura, Loja) and NW Peru (Amazonas, Cajamarca, La Libertad, Piura, Tumbes), 15–2650 m.
Sources: Kuch & Freire, 1993 and Cadle, 2010, 2012b.
Remarks: Photographs of holotype in Cadle (2012b: figs. 28–29). A.C.L.G. Günther (1858: 116) listed length of holotype as 991 mm (see remarks by Cadle, 2012b: 308).

6. *Dendrophidion clarkii* Dunn, 1933a. Occ. Pap. Boston Soc. Nat. Hist. (8): 78.

Type: Holotype, MCZ 34878, a 1067–1078 mm male (E.R. Dunn, August 1932).

Type locality: "El Valle de Anton, Panama" [= Anton Valley, Cocle Prov., cen. Panama, 8°36'N, 80°08'W, elevation 590 m].

Distribution: Lower Central America and NW South America. Costa Rica (Alajuela, Cartago, Limón, Puntarenas, San José), Panama (Bocas del Toro, Coclé, Darién, Panamá, San Blas), W Colombia (Cauca, Chocó, Nariño, Risaralda, Valle del Cauca) and W Ecuador (Carchi, Esmeraldas, Imbabura, Loja, Pichincha), 30–1800 m.

Sources: L.D. Wilson & Meyer, 1985, Lieb, 1991a, Lee, 1996, 2000, J.A. Campbell, 1998b, Stafford & Meyer, 2000, Savage, 2002, Stafford, 2002, Solórzano, 2004, McCranie, 2011a and Cadle & Savage, 2012.

Remarks: Photographs of holotype in Cadle & Savage (2012: figs. 4–6). *Dendrophidion clarkii* separated from *D. nuchale fide* McCranie (2011a: 106–107).

7. *Dendrophidion crybelum* Cadle, 2012a. Bull. Mus. Comp. Zool. 160(4): 209–217, figs. 2c, 12, 14b.

Type: Holotype, LACM 148599 (formerly CRE 3182), an 850 mm male (J.E. DeWeese & R.T. Harris, Sept. 1972).

Type locality: "Finca Las Cruces, near San Vito de Java, 4 km S San Vito, 1,200 m elevation, Puntarenas Province, Costa Rica."

Distribution: Southwestern Costa Rica (Puntarenas) and W Panama (Chiriquí), 1100–1330 m.

8. *Dendrophidion dendrophis* (Schlegel, 1837). Essai Phys. Serp. 1: 153, 2: 196–197. (*Herpetodryas dendrophis*)

Synonyms: *Herpetodryas poitei* A.-M.-C. Duméril, Bibron & Duméril, 1854a and *Herpetodryas dendrophis schlegeli* Jan, 1863b.

Type: Lectotype, MNHN 41, an 505–515 (svl) mm female (P.-A. Poiteau, 1818–1822), designated by Lieb (1988: 165).

Type locality: "Cayenne, French Guiana" [= Cayenne, Cayenne Dept., N French Guiana, 4°55'N, 52°20'E, elevation 5 m] via lectotype selection.

Distribution: Northern Amazonia. Southeastern Colombia (Amazonas, Cauca, Cundinamarca) SE Venezuela (Amazonas, Bolívar), Guyana (Mahaica-Berbice, Upper Takutu-Upper Essequibo), Suriname (Paramaribo, Saramacca, Sipaliwini), N French Guiana (N Cayenne, NW Saint-Laurent-du-Maroni), NW Brazil (Alagoas, Amazonas, Pará), E Peru (Amazonas, Junín, Loreto, Madre de Dios) and E Ecuador (Morona-Santiago, Napo, Pastaza), 50–1000 m.

Sources: E.H. Taylor, 1951, Chippaux, 1987, Lieb, 1988, Starace, 1998, Freire, 1999a, Doan & Arizábal, 2002, Abuys, 2003, Natera-Mumaw, 2008, Navarrete et al., 2009, Freire et al., 2010 and C.J. Cole et al., 2013.

Remarks: Photographs of lectotype in Lieb (1988: fig. 2).

9. *Dendrophidion graciliverpa* Cadle, 2012b. Bull. Mus. Comp. Zool. 130(6): 296–305, figs. 20–21, 23, 26a.

Type: Holotype, AMNH 110584 (formerly CWM 12250), a 964 mm male (C.W. Myers & J.W. Daly, 11 Feb. 1974).

Type locality: "3 km E Pasaje, 30 m elevation, El Oro province, Ecuador [03°20'S, 79°49'W]."

Distribution: Western Ecuador (Carchi, Chimborazo, Cotopaxi, El Oro, Esmeraldas, Guayas, Imbabura, Los Ríos, Loja, Pichincha, Santo Domingo de los Tsáchilas), 15–1750 m.

10. *Dendrophidion nuchale* (W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 285–286. (*Herpetodryas nuchalis*)

Synonym: *Dendrophidion clarkii* Dunn, 1933a.

Types: Syntypes (3), ZMB, longest syntype 1018 mm (J. Gollmer, 1856–1861), lost *fide* G. Peters *in* Lieb (1988: 166–167).

Type locality: ""Caracas" [= Caracas, Caracas State, N Venezuela, 10°29'N, 66°54'W, elevation 935 m].

Distribution: Northern Venezuela (Aragua, Carabobo, Guárico, Miranda, Yaracuy, Zulia), 100–1270 m.

Sources: Roze, 1966, Lieb, 1988, 1991a, Esqueda et al., 2001, Natera-Mumaw, 2008, Freire et al., 2010 and Cadle & Savage, 2012.

Remarks: Neotype designation of USNM 129579 *fide* Lieb (1988: 167, fig. 4) invalid via Art. 75.2 of the Code *fide* Cadle & Savage (2012: 5). At least seven disjunct populations *fide* Lieb (1988: 167). Separation *D. clarkii* from *D. nuchale* discussed by McCranie (2011a: 106–107).

11. *Dendrophidion paucicarinatum* (Cope, 1894d). Proc. Acad. Nat. Sci. Philadelphia 46: 202–203. (*Drymobius paucicarinatus*)

Type: Holotype, AMNH 17268 (formerly MNCR 116), a 1230 mm specimen (B. Carranza).

Type locality: "La Candelaria, Bruno Carranza, Costa Rica" [= Monte Redondo, Canton de Aserri, San José Prov., Costa Rica [= 9°47'N, 84°08'E, elevation 1170 m] *fide* Savage (1974: 82).

Distribution: Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José, Bonita Is.) and W Panama (Bocas del Toro, Chiriquí), 1040–1500 m.

Sources: E.H. Taylor, 1951, Lieb, 1988, 1991b, Savage, 2002 and Solórzano, 2004.

12. *Dendrophidion percarinatum* (Cope, 1894a). Proc. Amer. Philos. Soc. (1893) 31: 344–345. (*Drymobius percarinatus*)

Type: Lectotype, AMNH 17366 (formerly MNCR 326), an 815–834+ mm specimen (G.K. Cherrie, 13 Dec. 1891), designated by H.M. Smith (1941h: 73).

Type locality: "Boruca, Costa Rica" [= Boruca, Puntarenas Prov., cen. Costa Rica, 9°00'N, 83°19'W, elevation 545 m] via lectotype selection.
Distribution: Central America and NW South America. Eastern Honduras (Atlántida, Colón, Gracias a Dios, Olancho), E Nicaragua (Atlántico Norte, Boaco, Jinotega), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Bocas del Toro, Canal Zone, Colón, Darién, Los Santos, Panamá, San Blas, Veragua), W Colombia (Antioquia, Boyacá, Caldas, Chocó, Risaralda, Valle, Valle del Cauca) and N Venezuela (Aragua, Carabobo, Distrito Federal, Miranda, Zulia), NSL–1200 m.
Sources: E.H. Taylor, 1954, Roze, 1966a, Lancini, 1986, L.D. Wilson & Meyer, 1985, Lieb, 1996, G. Köhler, 1999b, Savage, 2002, McCranie et al., 2006, Rojas-Runjaic & Infante Rivero, 2008, Navarrete et al., 2009, Cadle, 2010, McCranie, 2011a and Cadle, 2012b.
Remarks: Photographs of lectotype in Cadle (2012b: figs. 4–6).

13. *Dendrophidion prolixum* Cadle, 2012b. Bull. Mus. Comp. Zool. 130(6): 282–296, figs. 10–11.

Type: Holotype, AMNH 109721 (formerly CWM 11618), a 754 mm male (C.W. Myers & J.W. Daly, 9 Feb. 1973).
Type locality: "Quebrada Guanguí, 0.5 km above Río Patia (upper Saija drainage), 100–200 m, Cauca department, Colombia [about 02°50'N, 77°25'W]."
Distribution: Western Colombia (Cauca, Chocó, Risaralda, Valle del Cauca) and NW Ecuador (Esmeraldas, Imbabura), 20–1190 m.

14. *Dendrophidion rufiterminorum* Cadle & Savage, 2012. Zootaxa (3513): 23–33, fig. 15.

Type: Holotype, LSUMZ 8901 (formerly AWP 177), a 1459 mm male (S.M. Russell & A.W. Palmisano, 19 July 1963).
Type locality: "1 mi W Baldy Sibun, Cayo district, Belize [17°00'N, 88°46'W]."
Distribution: Central America. Southeastern Guatemala (Alta Verapaz, Izabal), Belize (Cayo, Stann Creek, Toledo), N Honduras (Atlántida, Cortés, Olancho, Yoro), SE Nicaragua (Río San Juan) and Costa Rica (Alajuela, Heredia, Limón, Puntarenas), 30–970 m.
Sources: Savage, 2002, G. Köhler, 2008 and McCranie, 2011a.
Remarks: LSUMZ catalogue lists Russell as sole collector of type *fide* C. Austin *in* Cadle & Savage (2012: 23).

15. *Dendrophidion vinitor* H.M. Smith, 1941h. Proc. Biol. Soc. Washington 54: 74–75.

Type: Holotype, USNM 110662 (formerly HMS 7280), a 510+ mm female (H.M. Smith & R.B. Smith, 21 May 1939).
Type locality: "Piedras Negras, Guatemala" [= Piedras Negras, NW Petén Department, NW Guatemala, 17°11'N, 91°15'W, elevation 195 m].
Distribution: Mesoamerica and ext. NW South America. Southeastern Mexico (Chiapas, Oaxaca, Tabasco, Veracruz, Yucatán), S Belize (Toledo), N Guatemala (Petén, Alta Verapaz), Honduras (Gracias a Dios, Olancho), E Nicaragua (Atlántico Sur, Jinotega, Matagalpa, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, ? San José), Panama (Bocas del Toro, Canal Zone, Darién, Panamá, San Blas) and NW Colombia, NSL–1360 m.
Sources: E.H. Taylor, 1954, Lieb, 1988, 1991c, Casas-Andreu et al., 1996, Lee, 1996, 2000, J.A. Campbell, 1998b, G. Köhler, 1999b, Stafford & Meyer, 2000, Solórzano, 2004, McCranie et al., 2006, McCranie, 2011a and Cadle, 2012a.
Remarks: Photograph of holotype in Cadle (2012a: fig. 1).

DENISONIA Krefft, 1869a (Elapidae)

Synonyms: *Desidonia* – Phisalix, 1922 *(nomen incorrectum),* and *Dewisonia* – Anon., 1944 *(nomen incorrectum).*
Type species: *Hoplocephalus maculatus* Steindachner, 1867a.
Distribution: Australia.
Sources: Cogger et al., 1983a, Wallach, 1985, S.K. Wilson & Knowles, 1988, Hoser, 1989, 2012e, Hutchinson, 1990, Greer, 1997, David & Ineich, 1999, Cogger, 2000 and Zaher et al., 2009.

1. *Denisonia devisi* Waite & Longman, 1920. Rec. So. Aust. Mus. 1(3): 178–179, fig. 36, pl. 27, fig. 2. (*Denisonia maculata devisi*) (*nomen substitutum*)

Synonym: *Hoplocephalus ornatus* De Vis, 1884a (*nomen praeoccupatum*).
Type: Holotype, QM J199 (F.A. Blackman, 1855–1874).
Type locality: "near Surat, Western Queensland, Australia" [= 27°09'S, 149°04'E, elevation 250 m].
Distribution: Eastern Australia (N New South Wales, S Queensland), 15–375 m.
Source: De Vis, 1884a.

2. *Denisonia maculata* (Steindachner, 1867a). Reise Öster. Novara 1: 81–82, pl. 3, figs. 3–5. (*Hoplocephalus maculatus*)

Synonyms: *Denisonia ornata* Krefft, 1869a and *Hoplocephalus muelleri* J.G. Fischer, 1885b.
Types: Syntypes (2), NMW 19801.1–2, a 318 mm and 241 mm specimen (F. Steindachner [Novara Exped.], 1866).
Type locality: "Neu-Südwales" [= New South Wales, Australia]. Restricted to Rockhampton, Queensland *fide* R. MacKay (1956: 29).

Distribution: Eastern Australia (NE New South Wales, SE Queensland, North West Is.), NSL–260 m.

DIADOPHIS Baird & Girard, 1853 (Carphophiidae)

Synonyms: *Diodophis* – A.W. Butler, 1887 *(nomen incorrectum)* and *Diadophus* – Bogert, 1930 *(nomen incorrectum).*

Type species: *Coluber punctatus* Linnaeus, 1766.

Distribution: North America and Mexico.

Fossil records: Upper Miocene to upper Pleistocene of USA.

Sources: Dowling et al., 1983, Holman, 2000a, Pinou et al., 2004 and Zaher et al., 2009.

1. †*Diadophis elinorae* Auffenberg, 1963. Tulane Stud. Zool. 10(3): 170–171, fig. 18 (upper).

Type: Holotype, UF 6413 (W. Auffenberg, early 1950s–1960), one middle trunk vertebra.

Type locality: "Haile VI, Locality A.-(R 17 E, T 9 S, NW 1/4 and SW 1/4, Sec. 24): 0.2 miles east of Route 235, near the town of Haile, Alachua County, Florida; elevation approximately 84 feet; Alachua formation, Middle Pliocene, Hemphillian."

Distribution: Upper Miocene (Hemphillian: 4.9–10.3 mya) of USA (Florida) and lower Pleistocene (Irvingtonian I: 0.9–1.9 mya) of USA (Florida).

Sources: Holman, 1979a, 1981a, Meylan, 1982 and Rage, 1984b.

Remarks: Upper Miocene *fide* Rage (1984b: 46).

2. *Diadophis punctatus* (Linnaeus, 1766). Syst. Nat., ed. 12, 1: 376. (*Coluber punctatus*)

Synonyms: *Coluber torquatus* G. Shaw, 1802, *Coluber edwardsii* Merrem, 1820, *Diadophis amabilis* Baird & Girard, 1853, *Diadophis docilis* Baird & Girard, 1853, *Diadophis regalis* Baird & Girard, 1853, *Diadophis pulchellus* Baird & Girard, 1853, *Ablabes occipitalis* A.C.L.G. Günther, 1858, *Diadophis arnyi* Kennicott, 1859a, *Diadophis dysopes* Cope, 1860e, *Diadophis punctatus pallidus* Cope, 1860e, *Diadophis punctatus stictogenys* Cope, 1860e, *Diadophis texensis* Kennicott, 1860, *Diadophis punctatus laetus* Jan, 1863a, *Diadophis punctatus dugesii* Villada, 1875, *Diadophis punctatus modestus* Bocourt, 1886 *in* A.H.A. Duméril, Bibron & Mocquard, 1870–1909, *Diadophis amabilis occidentalis* Blanchard, 1923b, *Diadophis amabilis similis* Blanchard, 1923b, *Diadophis amabilis vandenburgii* Blanchard, 1923b, *Diadophis anthonyi* Van Denburgh & Slevin, 1923, *Diadophis regalis arizonae* Blanchard, 1923b, *Diadophis regalis blanchardi* K.P. Schmidt & Smith, 1944, and *Diadophis punctatus acricus* Paulson, 1968.

Type: Holotype, not designated (A. Garden, 1760–1761), location unknown.

Type locality: "Carolina" [USA]. Restricted to Charleston, South Carolina *fide* Klauber (1948: 6).

Distribution: North America and Mexico. Southeastern Canada (New Brunswick, S Nova Scotia, S Ontario, S Quebec), USA (Alabama, Arizona, Arkansas, California, Santa Catalina Is., SE Colorado, Connecticut, Delaware, District of Columbia, Florida: Big Pine Key; Georgia, Idaho, ext. W and SE Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Naushon, Martha's Vineyard and Nantucket Is., Michigan, ext. E Minnesota, Mississippi, Missouri, E Nebraska, NW Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, W Oregon, Pennsylvania, Rhode Island, South Carolina, ext. SE South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, S Washington, West Virginia, Wisconsin) and N Mexico (Aguascalientes, Baja California Norte, Islas Todos Santos Sur and San Martin in Pacific Ocean, NW Chihuahua, Coahuila, Colima, Distrito Federal, Durango, Guanajuato, Hidalgo, Jalisco, México, Michoacán, Nayarit, W Nuevo León, Querétaro, San Luis Potosí, NE Sonora, W Veracruz, Zacatecas), NSL–2400 m.

Fossil records: Middle/upper Pleistocene (Irvingtonian II) of USA (Maryland) and upper Pleistocene (Rancholabrean I, II) of USA (Alabama, Calfornia, Florida, Georgia, Kansas, Missouri, New Mexico, Pennsylvania, Tennessee, Texas, Virginia, West Virginia).

Sources: Blanchard, 1942, K.P. Schmidt & Smith, 1944, H.M. Smith & Taylor, 1945, Logier & Toner, 1961, Gehlbach, 1974, Fitch, 1975, Christman, 1980, Vogt, 1981, Cadle, 1984c, Stebbins, 1985, Ernst & Barbour, 1989, Conant & Collins, 1991, Brown et al., 1995, Palmer & Braswell, 1995, Pinou et al., 1995, Degenhardt et al., 1996, P.R. Brown, 1997, Harding, 1997, Tennant, 1997, Fitch, 1999, R.D. Bartlett & Tennant, 2000, Werler & Dixon, 2000, Grismer, 2001b, McCranie & Wilson, 2001b, 2002 and Fontanella et al., 2008.

Remarks: Probably two distinct species *fide* Pinou et al. (1995: 105) but 14 distinct lineages based on mtDNA *fide* Fontanella et al. (2008: 1066).

DIAPHOROLEPIS Jan, 1863b (Dipsadidae)

Synonyms: *Diaphorelepis* – Dunn, 1944e *(nomen incorrectum), Diapharolepis* – Dunn, 1935 *(nomen incorrectum), Diphorolepis* – Savage, 1966 *(nomen incorrectum), Diaphrolepis* – Holman, 1967 *(nomen incorrectum),* and *Diaphorolepsis* – Phelps, 1981 *(nomen incorrectum).*

Type species: *Diaphorolepis wagneri* Jan, 1863b.

Distribution: Lower Central America and NW South America.

Sources: Bogert, 1964, J.A. Peters & Orejas-Miranda, 1970, Pérez-Santos & Moreno, 1988, 1991 and Zaher et al., 2009.

1. *Diaphorolepis laevis* F. Werner, 1923a. Ann. Naturhist. Mus. Wien 36: 160–161.

Type: Holotype, NMW 14860, a 495 mm specimen (A.H. Fassl, 1910).
Type locality: "Columbien" [= Colombia].
Distribution: Colombia (Amazonas, Cundinamarca, Tolima), 1310–2600 m.

2. *Diaphorolepis wagneri* Jan, 1863b. Elenco Sist. Ofidi: 98.

Type: Holotype, ZSM 2708/0 (formerly MM), a 684 mm female (F.J.C.M. Wagner, 1857–1860).
Type locality: "Ande dell' Ecuadore" [= Andes of Ecuador].
Distribution: Panama and NW South America. Eastern Panama (Darién), Colombia and Ecuador, 100–1460 m.
Sources: F. Werner, 1897, Bogert, 1964, Franzen & Glaw, 2007 and P. Wagner et al., 2012.

DIEUROSTUS Berg, 1901 (*nomen substitutum*) (Homalopsidae)

Synonyms: *Eurostus* Duméril, Bibron & Duméril, 1854b *(nomen praeoccupatum)* and *Eurostrus* – W.C.H. Peters, 1859a *(nomen incorrectum).*
Type species: *Eurostus dussumierii* A.-M.-C. Duméril, Bibron & Duméril, 1854b.
Distribution: Tidal rivers and coastal marine waters of SW India.
Sources: Gyi, 1970, Mahendra, 1984, J.C. Murphy, 2007, A.B. Kumar & Captain, 2011, Chandrmouli et al., 2012 and A.B. Kumar et al., 2012.
Remarks: A valid genus *fide* A.B. Kumar et al. (2012: 481), previously a synonym of *Enhydris. Hypsirhina malabarica* F. Werner possibly a valid species *fide* A.B. Kumar et al. (2012: 481).

1. *Dieurostus dussumierii* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 953–955, pls. 84, 77, fig. 1. (*Eurostus dussumierii*)

Synonyms: *Eurostus dussumierii* A.-M.-C. Duméril, 1853 (*nomen nudum*) and *Hypsirhina malabarica* F. Werner, 1913.
Type: Lectotype, MNHN 3751, a 640–673 mm female with skull removed, designated by Gyi (1970: 121).
Type locality: "Bengal" [= Bangladesh or NE India] (in error) via lectotype selection. Corrected to Malabar coast *fide* J.C. Murphy (2007b: 109). Restricted to west coast of North Kerala, India *fide* J.C. Murphy (2007b: 109).
Distribution: Southwestern India (Kerala), NSL–45 m.
Remarks: Gyi (1970: 122) measured type as 665 mm. J.C. Murphy (2007b: 109) listed MNHN 3751 and 5751 as paratypes, then (p. 111) as MNHN 3751 and 5753 (3572), and finally (p. 113) as MNHN 3751 (type) and MNHN 5752 (3572). A.B. Kumar et al. (2012: 483) erroneously listed the holotype as MNHN c3458 (which is a collection shelving number). Photograph of lectotype in Chandrmouli et al. (2012: fig. 1a).

†*DINILYSIA* Woodward, 1901 (†Dinilysiidae)

Type species: †*Dinilysia patagonica* Woodward, 1901.
Distribution: Upper Cretaceous of Argentina.
Sources: Estes et al., 1970, Frazetta, 1970, M.K. Hecht, 1982, Rage, 1977a, 1984b, Rage & Albino, 1989, Bonaparte, 1991, M. Lee, 1997, Caldwell & Lee, 2001, Caldwell & Albino, 2002, M. Lee & Scanlon, 2002, Scanlon & Lee, 2002, Albino & Caldwell, 2003, Scanlon, 2003b, Albino, 2011a, Filippi & Garrido, 2012 and Zaher & Scanferla, 2012.

1. †*Dinilysia patagonica* Woodward, 1901. Proc. Zool. Soc. London 70(2): 176–179, pl. 20, figs. 1–1c, 2.

Type: Holotype, MLP 26-410, an articulated skull, jaws and most of the vertebral column (S. Roth).
Type locality: "red sandstones of Neuquen, Patagonia, supposed to be of Cretaceous age" [= Boca del Sapo, Neuquén Prov., N Argentina; Neuquén group, Rio Colorado formation, Coniacian, early upper Cretaceous *fide* Bonaparte, 1991: 26].
Distribution: Upper Cretaceous (Santonian: 83.5–85.8 mya, or Coniacian: 85.8–89.3 mya) of Argentina.
Remarks: Photographs of holotype in Zaher & Scanferla (2012: figs. 1, 5, 6b, 20). Estes et al. (1970: 25) reported type locality to be near Río Neuquén, Chubut Territory, but Rage *in* Hecht (1982: 523) corrected it to Neuquén Prov.

DINODON A.-M.-C. Duméril, Bibron & Duméril, 1854a (Colubridae)

Synonyms: *Dinodon* A.-M.-C. Duméril, 1853 *(nomen nudum), Eumesodon* Cope, 1860e, *Lepidocephalus* Hallowell, 1861 *(nomen praeoccupatum), Dianodon* Cope, 1893a *(nomen emendatum), Adiastema* F. Werner, 1925, and *Donodon* – Anon., 1993 *(nomen incorrectum).*
Type species: *Lycodon rufozonatus* Cantor, 1842a.
Distribution: Asia.

Sources: Stejneger, 1907a, C.H. Pope, 1935, M.A. Smith, 1943, Deuve, 1970, B. Hu et al., 1980, Zhao & Adler, 1993 and I. Das, 2010, 2012.

Remarks: Possibly a synonym of *Lycodon fide* Pyron et al. (2013: 976).

1. *Dinodon flavozonatum* C.H. Pope, 1928b. Amer. Mus. Novit. (325): 2–3.

Type: Holotype, AMNH 34371, a 965 mm male (C.H. Pope, April–Sept. 1926).

Type locality: "Kuatun, a village in the mountains of Ch'ungan Hsien, northwest Fukien Prov., China" [= Guadun, in Wuyishan Mtns., ext. N Fujian Prov., SE China, 27°45'N, 117°50'E, elevation 900–1200 m].

Distribution: Southeastern Asia. Southeastern China (Anhui, Fujian, Guangdong, Guizhou, Jiangxi, Sichuan, Yunnan, Zhejiang), N Vietnam (Lai Chau, Vin Phuc) and N Myanmar (E Shan), 400–1100 m.

Sources: C.H. Pope, 1935, Orlov et al., 2000, Zhao, 2006 and I. Das, 2010.

Remarks: Original description reprinted in C.H. Pope (1929: 433–434, figs. 12–13).

2. *Dinodon gammiei* (Blanford, 1878a). Proc. Asiatic Soc. Bengal 1878(6): 141–142. (*Ophites gammiei*)

Type: Holotype, ZSI 8447 (formerly IMC 8447), an 800 mm specimen (J.A. Gammie, 1865–1878).

Type locality: "Cinchona plantations, British Sikkim" [= Sikkim State, NE India]. Emended to Chichona plantation in South-eastern Sikkim, Himalayas *fide* Blanford (1878b: 131), [= Mungpu cinchona plantation, Darjeeling District, N West Bengal, India, ca. 27°00'N, 88°25'E *fide* Mistry et al., 2007: 271].

Distribution: Northeastern India (Arunachal Pradesh, Sikkim, N West Bengal), 1700–2285 m.

Sources: I. Das, 1999a, Mistry et al., 2007 and Agarwal et al., 2010.

Remarks: Supplemental original description in Blanford (1878b: 130–131). Photographs of the type in Mistry et al. (2007: fig.1). Type locality erroneously listed as Cinchona plain, Darjeeling *fide* M.A. Smith (1943: 271).

3. *Dinodon meridionale* Bourret, 1935b. Bull. Gén. Instr. Publ. 14(7): 241–242, fig. 1. (*Dinodon rufozonatum meridionale*)

Type: Holotype, MNHN 1938.129, a 926 mm male (R.L. Bourret, 1934).

Type locality: "Chapa, Indochine française" [= Sa Pa, Sa Pa Distr., W Lao Cai Prov., ext. N Vietnam, 22°20'N, 103°51'E, elevation 1500 m].

Distribution: Southern China (S Guangxi, SE Yunnan), N Laos (Xiangkhouang) and N Vietnam (Bac Giang, Cao Bang, Ha Giang, Hai Duong, Lang Son, Lao Cai, Ninh Binh, Thai Nguyen, Tuyen Guang, Vinh Phuc), 200–1700 m.

Sources: Orlov & Ryabov, 2004 and V.S. Nguyen et al., 2009.

4. *Dinodon orientale* (Hilgendorf, 1880). Sitz. Ges. Naturf. Freude Berlin 1880(8): 115–117, pl., figs. 1–5. (*Ophites orientalis*)

Synonyms: *Ophites japonicus* A.C.L.G. Günther, 1880c, and *Eumesodon carinatus* F. Müller, 1885.

Type: Holotype, ZMB 9419, a 300 mm specimen (F. Hilgendorf, May 1874).

Type locality: "Tokio, Japan" [= Tokyo, Tokyo Prefecture, cen. Japan, 35°41'N, 139°42'E, elevation 35 m].

Distribution: Exteme E Russia (S Kuril Is.) and Japan (Hokkaido, Honshu, Kyushu, Fukuejima, Iwojima, Kanagawa, Shimokoshikijima, Takeshima, Okinoshima, Oshima, Sadogashima, Tanegashima and Yakushima Is.), NSL–45 m.

Sources: Maki, 1931, Bannikov et al., 1977, M. Mori, 1984, Shibata, 1988, Mizukami et al., 1989, Toriba, 1991 and Toda & Okada, 1999.

5. *Dinodon rosozonatum* S.-Q. Hu & Zhao *in* Zhao, 1972 Mater. Herpetol. Res. Chengeu 1: 36

Type: Holotype, CIB 64-III-6089, a 1060 mm male (native, 21 May 1964).

Type locality: "Dali of Diaulo Shan, Hainan Island, Guangdong Prov., China, altitude 200 m."

Distribution: Extreme S China (Hainan) and Vietnam (Quang Binh, Quang Tri), 80–580 m.

Sources: Maslov & Kotlobay, 1998, Zhao et al., 1998, Zhao, 2005, 2006, V.S. Nguyen et al., 2009 and Shi, 2011.

Remarks: Original description reprinted in S.-Q. Hu & Zhao (1975: 379–380, pl. 1, fig. 2).

6. *Dinodon rufozonatum* (Cantor, 1842a). Zool. Chusan: pl. 11. (*Lycodon rufozonatus*) (*nomen corrigendum*)

Synonyms: *Lycodon rufo-zonatus* Cantor, 1842a *(nomen incorrigendum), Dinodon cancellatum* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Lycodon rufozonatus* A.C.L.G. Günther, 1858 *(nomen corrigendum), Coronella striata* Hallowell, 1856a, *Dinodon rufozonatus formosana* Boettger, 1885b, *Dinodon rufozonatum walli* Stejneger, 1907a, *Adiastema cervinum* F. Werner, 1925, *Dinodon rufozonatum williamsi* K.P. Schmidt, 1925b, and *Dinodon rufozonatum yunnanense* Mell, 1931a.

Type: Holotype, not designated (T.E. Cantor, July 1840–March 1841, via the British East India Comp.), location unknown.

Type locality: "island of Chusan, or Great Chusan, is situated on the East Coast of China, between the 30° and 31° of North latitude and the 122° and 123° of East longitude; separated from the nearest mainland, Keeto

Point, by an arm of the sea, about ten miles across" [= Zhoushan Is., Zhoushan Arch., Zhejiang Prov., E China].

Distribution: East Asia. Southern China (Anhui, Fujian, Gansu, Guangdong, Guangxi, Guizhou, Hainan, Hebei, Heilongjiang, Henan, Hunan, Hubei, Jiangsu, Jiangxi, Jilin, Liaoning, Ningxia, Shaanxi, Shandong, Yunnan, Zhejiang), Taiwan, N Laos, N Vietnam (Ha Tinh, Quang Binh, Quang Tri, Tuyen Quang, Vinc Phuc), Russia (Primorsky), South Korea (Kyonggi-do), North Korea (Hwanghae-pukto, Kaesong-chigu, Kangwon-do, Pyongan-namdo) and S Japan (Ryukyus: Aragusukujima, Haterumajima, Hatomajima, Irabujima, Ikemajima, Iriomotejima, Ishigakishima, Kayamajima, Kohamajima, Kurimajima, Kuroshima, Miyakojima, Nakanogamijima, Nakanoishma, Ogamijima, Okinawajima, Shimojijima, Taketomijima, Taramajima, Tsushima and Yonagunijima Is.), 400–1100 m

Sources: Supplemental original description in Cantor (1842b: 483). M.A. Smith, 1928b, C.H. Pope, 1935, Shannon, 1956, Kuntz, 1963, M. Mori, 1984, 1986, Szyndlar & Hung, 1987, Kudrjavtsev & Mamet, 1989a–b, Toriba, 1990a, Kohno & Ota, 1991, Zou & Chen, 1998, Orlov et al., 2000, Zhao, 2006, San & Lee, 2007, V.S. Nguyen et al., 2009, Xiang & Li, 2009 and Yao, 2012.

7. *Dinodon semicarinatum* (Cope, 1860e). Proc. Acad. Nat. Sci. Philadelphia 12(6): 263. (*Eumesodon semicarinatus*)

Synonym: *Lepidocephalus fasciatus* Hallowell, 1861.

Type: Holotype, ANSP 3479, a 940 mm specimen (W. Heine [No. Pacific Explor. Exped.], 1853).

Type locality: "Loo Choo" [= Ryukyu Islands, S Japan].

Distribution: Extreme S Japan (Ryukyus: Agunijima, Akajima, Amamioshima, Amurojima, Fukajijima, Gishifujima, Gushikawajima, Gusukujima, Hamahigajima, Hatejima, Hyanzajima, Iejima, Iheyajima, Ikeijima, Izenajima, Kakeromajima, Kerumajima, Kikaijima, Korijima, Kubajima, Kudakajima, Kumejima, Maejima, Miyagijima, Nakajima, Nohojima, Ohajima, Ojima, Okierabujima, Okinawajima, Sesokojima, Tokashikijima, Tokunoshima, Tonakijima, Tsukenjima, Ukejima, Ukibarujima, Yabuchijima, Yaguchijima, Yakabijima, Yanahajima, Yorojima, Yoronjima and Zamamijima Is.), NSL–270 m.

Sources: M. Mori, 1986, Toriba, 1990a and A. Mori et al., 1999.

8. *Dinodon septentrionale* (A.C.L.G. Günther, 1875). Proc. Zool. Soc. London 43(1): 233. (*Ophites septentrionalis*)

Synonym: *Dinodon septentrionale chapaensis* Angel & Bourret, 1933.

Type: Holotype, BMNH 1946.1.14.96, a 2108 mm female (T.C. Jerdon, 1836–1852).

Type locality: "northern parts of India." Restricted to the Himalayas or Assam *fide* Blanford (1878a: 131), the Himalayas or Khasi Hills *fide* Boulenger (1893a: 324), and the E. Himalayas or Khasi Hills *fide* M.A. Smith (1943: 270).

Distribution: Northeastern India (Assam, Mizorán, Nagaland, Sikkim, West Bengal), Bhutan (Trashiyangtse), S China (Yunnan), N Myanmar (Kachin, Kayin, Mon), N Thailand (Chiang Mai), N Cambodia (Mondolkiri), N Laos (Xiangkhouang) and N Vietnam (Bac Kan, Cao Bang, Ha Tinh, Lai Cai, Lao Cai, Nghe An, Quang Binh, Thua Thien-Hue, Vinh Phuc), 220–2100 m.

DIPSADOBOA A.C.L.G. Günther, 1858 (Colubridae)

Synonyms: *Chamaetortus* A.C.L.G. Günther, 1864c, *Anoplodipsas* W.C.H. Peters, 1869, *Dipsadophidium* Lindholm, 1905a, *Dipsoglyphophis* T. Barbour & Amaral, 1927, *Dipsadaboa* – P.S.M. Berry, 1970 *(nomen incorrectum), Dipsoglyphophas* – H.A. Skinner, 1973 *(nomen incorrectum),* and *Dipsadotoa* – W.W. Tanner & Avery, 1982 *(nomen incorrectum).*

Type species: *Dipsadoboa unicolor* A.C.L.G. Günther, 1858.

Distribution: Subsaharan Africa.

Sources: Laurent, 1951, Loveridge, 1957a, J.B. Rasmussen, 1979, 1993b, 1996 and Gravlund, 2001.

1. *Dipsadoboa aulica* (A.C.L.G. Günther, 1864c). Proc. Zool. Soc. London 32(1): 310, pl. 26, fig. 2. (*Chamaetortus aulicus*)

Type: Holotype, BMNH 1946.1.8.33, a 330 mm female (J. Kirk [Zambezi Exped.], 1858–1864).

Type locality: "regions bordering the Zambesi, including those of the Nyassa Lake" [= vicinity of Zambezi River (Tete, Sofala & Zambézia Prov.s), Mozambique and Lake Nyassa, S Malawi]. Restricted to Zambezi *fide* Boulenger (1896a: 153) and to Zambezi River *fide* Loveridge (1957a: 272).

Distribution: Eastern Africa. Southern Somalia (Jubbada Dhexe), SE Tanzania (Lindi), S Malawi (Southern), S Mosambique (Gaza, Inhambane, Maputo, Sofala, Tete, Zambézia), SE Zimbabwe (Masvingo, S Matebeleland South, S Midlands), Swaziland and NE South Africa (NE KwaZulu-Natal, Limpopo, E Mpumalanga), NSL–650 m.

Sources: Broadley & Stevens, 1971, Broadley & Cock, 1975, Broadley, 1983, Lanza, 1983a, 1990b, Pienaar et

al., 1983, Branch, 1988, J.B. Rasmussen, 1989a, Spawls et al., 2002 and Broadley & Blaylock, 2013.

2. *Dipsadoboa brevirostris* (Sternfeld, 1908b). Mitt. Zool. Mus. Berlin 3(4): 411–412, figs. 5–6. (*Dipsadomorphus brevirostris*)

Synonym: *Leptodira guineensis* Chabanaud, 1920b.

Type: Holotype, ZMB, a 580 mm specimen (Riegler), lost *fide* J.B. Rasmussen (1989b: 257).

Type locality: "Jabassi, Kamerun" [= Yabassi, Littoral, Cameroon, 04°30'N, 09°58"E, elevation 125 m].

Distribution: West Africa. Guinea (Boké, Kindia, Koundara, Kouroussa, Macenta, Nzérékoré), Sierra Leone (Northern), Liberia (Montserrado), S Ivory Coast (Toumodi), S Ghana (Accra, Ashanti, Eastern), S Nigeria (Ondo) and SW Cameroon (Littoral), 100–180 m.

Sources: Roux-Estève, 1969a, J.B. Rasmussen, 1989b, Chippaux, 2006, Chirio & LeBreton, 2007, W. Böhme et al., 2011 and Chirio, 2013.

Remarks: Two other syntypes (ZMB 21709–09a) of *Dipsadoboa brevirostris* were redetermined as *D. duchesnii fide* L. Müller (1910: 605) and J.B. Rasmussen (1989b: 250). Probably occurs in Togo *fide* and Segniagbeto et al. (2011: 353).

3. *Dipsadoboa duchesnii* (Boulenger, 1901a). Ann. Mus. Congo (Zool.) 2C(1): 10, pl. 4, figs. 1, 1a–1c. (*Leptodira duchesnii*)

Synonyms: *Dipsadomorphus viridis* Sternfeld, 1908b, *Dipsadomorphus brevirostris* Sternfeld, 1908b *(partim)*, *Leptodira nigeriensis* F. Werner, 1913, *Chamaetortus aulicus ellenbergeri* Chabanaud, 1917a, and *Dipsadomorphus myops* Chabanaud, 1918a.

Type: Lectotype, BMNH 1946.1.8.39 (formerly BMNH 1901.6.19.1), a 780 mm male (C. de la Kethulle & J.M. Gilson, 1893–1896), designated by Hughes & Barry (1969: 1020).

Type locality: "Mandungu, Itimbiri River, Congo-Kinshasa" [= Mandongo, Orientale Prov., NE Democratic Republic of the Congo] via lectotype selection.

Distribution: West and cen. Africa. Southern Nigeria (Akwa Ibom, Bayelsa, Cross River, Edo, Rivers), S Cameroon (Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), SW Central African Republic (Sangha), Gabon (Estuaire, Moyen-Ogooué, Ogooué-Maritime, Woleu-Ntem), Congo (Kouilou, Lekoumou, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu) and W Uganda, NSL–1200 m.

Sources: Leston & Hughes, 1968, Hughes & Barry, 1969, Hughes, 1983, J.A. Butler & Reid, 1986, J.B. Rasmussen, 1989b, 1993, 1994, Lawson, 1993, Luiselli et al., 2001, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

4. *Dipsadoboa flavida* (Broadley & Stevens, 1971). Arnoldia, Rhodesia 5(11): 5–10, fig. 1. (*Chamaetortus aulicus flavidus*)

Synonym: *Dipsadoboa flavida broadleyi* J.B. Rasmussen, 1989a.

Type: Holotype, NMZB 23124 (formerly UM), a 655 mm male (R.A. Stevens, Jan. 1969).

Type locality: "a reedbed on Chisambo Tea Estate, Mlanje, southern Malawi, at *c.* 650 metres above sea-level."

Distribution: Eastern Africa. Southern Somalia (Jubbada Dhexe), SE Kenya (Coast, S Eastern, S North-Eastern), E Tanzania (Dar es Salaam, Lindi, Morogoro, Mtwara, Pwani, Ruvuma, Tanga, Zanzibar Is.), S Malawi (Southern) and Mozambique (Maputo, Sofala), NSL–730 m.

Sources: J.B. Rasmussen, 1989a, Broadley, 1990b and Spawls et al., 2002.

5. *Dipsadoboa shrevei* (Loveridge, 1932a). Proc. Biol. Soc. Washington 45: 83–84. (*Crotaphopeltis shrevei*)

Synonym: *Crotaphopeltis hotamboeia kageleri* Üthmöller, 1939.

Type: Holotype, MCZ 32471, a 930 mm male (K.H. Prior, 1931).

Type locality: "Missao de Dondi, Bella Vista, via. Lobito, Angola" [= Missão do Dondi, Huambo Distr., Angola, 12°32'S, 16°15'E, elevation 1750 m].

Distribution: Central Africa. Southern Democratic Republic of the Congo (Bandundu, Bas-Congo, Katanga, Kinshasa, Sud-Kivu), E Tanzania (Kilimanjaro, Lindi), Zambia (Central, Copperbelt, Luapula, Northern, North-Western, Western) and E Angola (Bié, Huambo, Moxico), 780–1750 m.

Sources: Laurent, 1956a, 1964a, Spawls et al., 2002 and Broadley et al., 2003.

Remarks: Photographs of holotype in J.B. Rasmussen (1986: fig. 6).

6. *Dipsadoboa underwoodi* J.B. Rasmussen, 1993b. Steenstrupia 19(4): 169–174, figs. 30–31.

Type: Holotype, ZSM 162/1909/1, a 520 mm male (K.S. Rhode, 1909).

Type locality: "Mukonjefarm, Mundame (04°35'N 09°31'E), Cameroon."

Distribution: West Africa. Southeastern Guinea (Nzérékoré), Sierra Leone, Ivory Coast, S Ghana, Togo, SE Nigeria, S Cameroon (Centre, Est, Nord-Ouest, Ouest, Sud, Sud-Ouest) and Gabon (Moyen-Ogooué, Ogooué-Maritime, Woleu-Ntem), 10–1650 m.

Sources: Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007, Franzen & Glaw, 2007, Pauwels & Vande weghe, 2008 and Segniagbeto et al., 2011.

Remarks: Holotype erroneously listed as ZSM 162E/1909 by Rasmussen (1993b: 169).

7. *Dipsadoboa unicolor* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 183–184.

D

Synonyms: *Heterurus bicolor* Jan, 1863b (*nomen nudum*), *Heterurus bicolor* Jan, 1871 *in* Jan & Sordelli, 1870–1881, *Dipsadoboa assimilis* Matschie, 1893a, and *Dipsadoboa unicolor viridiventris* Laurent, 1956a.

Type: Holotype, BMNH 1946.1.4.84, a 584 mm female (C. Rich).

Type locality: "West Africa."

Distribution: West and cen. Africa. Guinea-Bissau, Guinea (Boké, Dalaba, Kindia, Kouroussa, Macenta, Nzérékoré, Télimélé), Sierra Leone, Liberia, S Ivory Coast (Abidjan, Dix-Huit Montagnes, Guiglo, Lagunes, Tabou, Toumodi), Ghana, Togo (Plateaux), S Nigeria, Equatorial Guinea (Bioko Is.), SW Cameroon (Centre, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Gabon, Congo (Cuvette, Kouilou, Lekoumou), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), SW Uganda (Central, Western), W Rwanda, W Burundi, and W Tanzania (Kigoma), 80–3000 m.

Sources: Laurent, 1956a, Doucet, 1963, Mertens, 1965c, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Witte, 1975, Hughes, 1983, D. Lawson, 1993, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio and Ineich, 2006, Chirio & LeBreton, 2007, Segniagbeto et al., 2011 and Chirio, 2013.

Remarks: Probably occus in Central African Republic *fide* Chirio & Ineich (2006: 46).

8. *Dipsadoboa viridis* (W.C.H. Peters, 1869). Monatsb. Akad. Wiss. Berlin 1869(5): 442–443, pl. 1, fig. 4. (*Anoplodipsas viridis*)

Synonyms: *Crotaphopeltis elongata* T. Barbour, 1914c, and *Dipsadoboa elongata gracilis* Laurent, 1956a.

Type: Holotype, ZMB 6451, a 720 mm specimen, lost *fide* J.B. Rasmussen (1993b:174).

Type locality: "Neu-Caledonien" [= New Caledonia] (in error).

Distribution: West and cen. Africa. Southeastern Guinea (Nzérékoré), Liberia, Ivory Coast (Dix-Huit Montagnes), Ghana, Togo (Plateaux), Nigeria, S Cameroon (Est, Centre, Littoral, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), SW Central African Republic (Lobaye), Gabon (Estuaire, Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Maritime, Woleu-Ntem), Congo (Kouilou, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Kasai Oriental, Kinshasa, Kivu, Orientale), Rwanda (Nyansa) and Burundi, 10–2135 m.

Sources: Laurent, 1956a, Doucet, 1963, Mertens, 1965c, Witte, 1975, Courtois & Chippaux, 1977, Bauer et al., 1995, J.-F. Trape & Roux-Estève, 1995, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Segniagbeto et al., 2011.

9. *Dipsadoboa weileri* (Lindholm, 1905a). Jahrb. Nassau Ver. Naturk. Wiesbaden 58: 186–187. (*Dipsadophidium weileri*)

Synonym: *Dipsadoboa isolepis* Boulenger, 1907a.

Type: Holotype, MWNH 1238, adult female (J. Weiler, 1905), destroyed Aug. 1940–March 1945 during World War II.

Type locality: "Umgegend von Bibundi (Kamerun)" [= vicinity of Bibundi, Sud-Ouest Prov., SW Cameroon, 4°13,N, 9°01'E, elevation 25 m].

Distribution: West and cen. Africa. Southeastern Guinea (Nzérékoré), Togo, Cameroon (Adamaoua, Est, Centre, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Gabon (Moyen-Ogooué, Ngounié, Ogooué-Ivindo, Ogooué-Maritime, Woleu-Ntem), Central African Republic (Haute-Sangha, Lobaye, Ouaka, Sangha), Congo, E Democratic Republic of the Congo (Orientale), S South Sudan (SW Eastern Equatoria), Rwanda (Nyansa) and S Uganda (Central, Western), NSL–1000 m.

Sources: L. Müller, 1910, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, W. Böhme et al., 2011 and Segniagbeto et al., 2011.

10. *Dipsadoboa werneri* (Boulenger, 1897b). Ann. Mag. Nat. Hist. (6) 19(111): 281. (*Leptodira werneri*)

Synonym: *Dipsadomorphus reticulatus* F. Werner, 1909d.

Type: Holotype, BMNH 1946.1.8.32 (formerly BMNH 1897.1.29.8), a 370 mm male (A. Müller via F. Werner).

Type locality: "Usambara, German East Africa" [= Usambara Mountains, N Tanga Prov., NE Tanzania].

Distribution: Northeastern Tanzania (Tanga), 880–1200 m.

Sources: J.B. Rasmussen, 1986 and Spawls et al., 2002.

Remarks: Collector of holotype listed as F. Werner *fide* Boulenger (1897b: 281) but Werner sent the specimen to Boulenger. Photographs and head illustration of holotype in J.B. Rasmussen (1986: figs. 1–2).

DIPSAS Laurenti, 1768 (Dipsadidae)

1. *Dipsas albifrons* (Sauvage, 1884). Bull. Soc. Philom. Paris (1883–1884) (7) 8: 145. (*Dipsadomorus albifrons*)

Synonym: *Dipsas albifrons cavalheiroi* Hoge, 1950.

Type: Lectotype, IB 17746 (formerly MNHN 6106), a 520 mm female (H. Ferry), designated by Passos et al. (2005: 26) and destroyed by fire 15 May 2010.

Type locality: “Brésil” [= Brazil].

Distribution: Southern Brazil (Espírito Santo, Mato Grosso, Paraná, Rio de Janeiro, Santa Catarina, São Paulo, Alcatrazes, Queimada Grande and São Sebastião Is.), NSL–800 m.

Sources: Hoge, 1950, Marques et al., 2001, Passos et al., 2005 and Cicchi et al., 2007.

Remarks: A listed syntype as MNHN 6106 *fide* J.A. Peters (1960b: 121). Photograph of lectotype in Passos et al. (2005: fig. 5). Distributional gaps discussed in Passos et al. (2005: 30). Paraguay records rejected *fide* Cacciali (2006: 77).

2. *Dipsas alternans* (J.G. Fischer, 1885). Jahrb. Hamburg. Wiss. Anst. 2: 105–107, pl. 4, fig. 8. (*Leptognathus alternans*)

Synonyms: *Sibynomorphus barbouri* Amaral, 1923 & 1926a and *Sibynomorphus garbei* Amaral, 1923 & 1926a.

Type: Neotype, IB 64465, a 730 mm male (F.O. Forenza, 3 Oct. 2001), designated by Passos et al. (2004: 384) and destroyed by fire 15 May 2010.

Type locality: “Sítio Rancho Colina da Vitória, Municipality of Juquitiba (23°55’S, 47°04’W), State of São Paulo, Brazil,” by neotype designation.

Distribution: Southeastern Brazil (Espírito Santo, Paraná, Rio de Janeiro, Rio Grande do Sul, Santa Catarina, São Paulo, São Sebastião Is.), NSL–725 m.

Source: Cicchi et al., 2007.

Remarks: Revalidated *fide* Passos et al., 2004. Neotype illustrated by Passos et al. (2004: fig. 1).

D

3. *Dipsas andiana* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 452, pl. 23, figs. 2–2a. (*Leptognathus andiana*)

Type: Holotype, BMNH 1946.1.20.12.

Type locality: “Quito, Ecuador” [probably a shipping point *fide* Cadle & Myers, 2003: 25].

Distribution: Western Ecuador (Bolívar, Esmeraldas, Los Rios, Pichincha), 1140–1750 m.

Sources: Cadle & Myers, 2003 and Cisneros-Heredia, 2004.

4. *Dipsas articulata* (Cope, 1868c). Proc. Acad. Nat. Sci. Philadelphia 20(2): 135. (*Leptognathus articulata*)

Type: Holotype, ANSP 10113, a 673 mm male (R.W. Mitchell, 1857–1861).

Type locality: “Veraguas, Costa Rica” (in error). Corrected to Cocuyas de Veraguas, New Grenada [= Cocuyas de Veraguas, a gold mine near the Río Concepción, N Veraguas Prov., cen. Panama, ca. 8°45’N, 81°00’W, elevation 100 m] *fide* Cope (1860e: 266).

Distribution: Western Panama (Bocas del Toro, Veraguas), 55–850 m.

Sources: Brattstrom & Howell, 1954, E.H. Taylor, 1954, L.D. Wilson & Meyer, 1985, G. Köhler, 1999b, Savage, 2002, Solórzano, 2004, Lotzkat et al., 2010 and McCranie, 2011a.

5. *Dipsas baliomelas* Harvey, 2008. Herpetologica 64(4): 423–427, figs. 1, 3.

Type: Holotype, UTA 3363, a 393 mm male (J.F. Taulman).

Type locality: “35 km WSW Vista Hermosa (Cañon Sardinata), Serranía de la Macarena, Meta, Colombia, ‘3700 ft’ (=1128 m), between 2°15’–3°15’N latitude and 73°45’–74°10’W longitude.”

Distribution: Central Colombia (SW Meta), 1130 m.

6. *Dipsas bicolor* (A.C.L.G. Günther, 1895 *in* 1885–1902). Biol. Cen.-Amer., Rept. Batr.: 178–179, pl. 56, fig. c. (*Neopareas bicolor*)

Synonym: *Neopareas tricolor* Brattstrom & Howell, 1954.

Type: Holotype, BMNH 1894.10.1.39, a 546 mm specimen (R.A. Rix, 1893–1894).

Type locality: “Nicaragua, Chontales Mines” [= Chontales gold and silver mines, vicinity of Santo Domingo, NE

Chontales Dept., Nicaragua, 12°16'N, 85°00'W, elevation 500 m].

Distribution: Central America. Southeastern Honduras (El Paraíso, Gracias a Dios, Olancho), E Nicaragua (Atlántico Norte, Chontales, Jinotega, Nuevo Segovia, Rio San Juan) and Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, San José), 10–1000 m.

Sources: Belt, 1874, L.D. Wilson & Meyer, 1985, Savage, 2004, Solórzano, 2004, and McCranie, 2011a.

Remarks: A valid species *fide* McCranie (2011a: 279).

D

7. *Dipsas brevifacies* (Cope, 1866). Proc. Acad. Nat. Sci. Philadelphia 18(2): 127. (*Tropidodipsas brevifacies*)

Synonyms: *Dipsadomorus fasciatus* Bocourt, 1884 and *Leptognathus torquatus* Cope, 1885a.

Type: Holotype, USNM 24886 (formerly USNM 753), a 244 mm male (A.C.V. Schott, 27 Sept. 1865).

Type locality: "Yucatan" [Mexico].

Distribution: Yucatán Peninsula. Southeastern Mexico (Campeche, Quintana Roo, Yucatán, Carmen Is.) and N Belize (Belize, Corozal, Orange Walk), NSL–300 m.

Sources: Kofron, 1982a, Lee, 1996, 2000 and J.A. Campbell, 1998.

8. *Dipsas bucephala* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 422–423. (*Coluber bucephalus*)

Synonym: *Leptognathus cisticeps* Boettger, 1885a.

Type: Lectotype, specimen described and illustrated by Seba (1834: 71, pl. 43, fig. 4), designated herein.

Type locality: "Ceylon" [= Sri Lanka] (in error) via lectotype selection. Restricted to Brazil *fide* J.A. Peters (1960: 73).

Distribution: Southern South America. Southeastern Brazil (Bahia, Espírito Santo, Rio Grande do Sul, São Paulo), Bolivia (Cochabamba, Santa Cruz), Paraguay (Alto Paraguay, Alto Paraná, Asunción, Canindeyú, Itapúa, Paraguarí) and Argentina (Misiones), 270–2000 m.

Sources: Hoge & Romano-Hoge, 1975b, Cacciali, 2006 and Harvey & Embert, 2009.

9. *Dipsas catesbeji* (Seetzen, 1796b). Myer's Zool. Arch. 2: 66. (*Coluber catesbeji*)

Synonyms: *Dipsas catesbeji* Seetzen, 1795 (*nomen nudum*), *Dipsas catesbaei* F. Boie, 1827 *(nomen emendatum), Dipsas catesbyi* Schlegel, 1837 *(nomen emendatum),* and *Sibynomorphus macedoi* Prado & Hoge, 1947.

Types: Syntypes (2), none designated, an 807 mm and 651 mm specimen, lost *fide* J.A. Peters (1960: 56).

Type locality: "Wahrscheinlich Amerika" [= probably America]. Restricted to Suriname and Cayenne [= French Guiana] fide Schlegel (1837: 279).

Distribution: Northern South America. Eastern Colombia (Amazonas, Antioquia, Caquetá, Cundinamarca, Meta, Putumayo, Santander, Vaupés), S Venezuela (Amazonas), N Guyana (Barima-Waini, Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Para, S Sipaliwini), French Guiana (Cayenne, Saint-Laurent-du-Maroni) Ecuador (Chimborazo, Morona-Santiago, Napo, Pastaza, Zamora-Chinchipe), E Peru (Amazonas, Huanuco, Junin, Loreto, Madre de Dios, Pasco, Puno, San Martin), N Brazil (Acre, Amazonas, Bahia, Mato Grosso do Sul, Pará, Rondônia) and NE Bolivia (Beni, Cochabamba, La Paz, Pando, Santa Cruz), NSL–940 m.

Sources: J.A. Peters, 1956, Chippaux, 1987, Lancini, 1986, Pérez-Santos & Moreno, 1988, Starace, 1998, Lehr, 2001, Doan & Arizábal, 2002, Abuys, 2003, Duellman, 2005, Harvey & Embert, 2009, Lima & Prudente, 2009, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: Original orthography of *catesbeji* was presumed a typographical error, but that spelling is consistently used in Seetzen (1795: 320; 1796a: 66) whereas Catesby's name was correctly spelled. Possibly closer to *Sibynomorphus* than other *Dipsas fide* Lima & Prudente (2009: 43–44). Colombian records from Medellín (1538 m) and Bogotá (2630 m) need confirmation *fide* Perez-Santos & Moreno (1988: 142). Paraguay records rejected *fide* Cacciali (2006: 77).

10. *Dipsas chaparensis* Reynolds & Foster, 1992. Herpetol. Monogr. (6): 101–102, fig. 9.

Type: Holotype, USNM 257869, an 830 mm female (M.S. Foster, 14 Nov. 1979).

Type locality: "Parjacti, 83.2 km by road NE Cochabamba on road to Villa Tunari, Chapare Prov., Department of Cochabamba, Bolivia, elevation approximately 2044 m."

Distribution: Bolivia (Cochabamba, Santa Cruz), 1850–2045 m.

Sources: Roze, 1966a, Lancini, 1986, Starace, 1998 and Harvey & Embert, 2009.

11. *Dipsas copei* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 30. (*Leptognathus copei*)

Type: Holotype, BMNH 1946.1.21.4 (formerly BMNH 1866.8.14.329), a 650 mm male (T.G. van Lidth de Jeude coll., 1866).

Type locality: "Suriname" [= Suriname].

Distribution: Guianas. Eastern Venezuela (Amazonas), Guyana (Essequibo Islands-West Demeara) and Suriname, NSL–1180 m.

Sources: Abuys, 2003, Passos et al., 2004, Harvey, 2008 and C.J. Cole et al., 2013.

Remarks: A valid species *fide* Harvey, 1999 and Rivas-Fuenmayor et al., 2012. Dipsas *copei* synonymized with *D. incerta* and holotype of *D. copei* (BMNH

1946.1.21.4) designated neotype of *D. incerta fide* Passos et al. (2004: 389); if the two taxa are separate species as Harvey (2008: 436) demonstrated, the neotype designation is invalid. Holotype illustrated by Passos et al. (2004: fig. 5).

12. *Dipsas elegans* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 452–453, pl. 23, fig. 3. (*Leptognathus elegans*)

Type: Holotype, BMNH 1946.1.21.77 (formerly BMNH 1871.2.7.36), a 301–310 mm specimen (A.-L.-J.-F. Sumichrast, 1855–1869).
Type locality: "Tehuantepec" [= Oaxaca State, Mexico] (in error).
Distribution: Western Ecuador (Chimborazo, Cotopaxi, Imbabura, Pichincha), 500–1920 m.
Sources: Kofron, 1982 and Cadle, 2005
Remarks: Holotype illustrated by Cadle (2005: fig. 1).

13. *Dipsas ellipsifera* (Boulenger, 1898h). Proc. Zool. Soc. London 66(1): 117–118, pl. 12, fig. 2. (*Leptognathus ellipsifera*)

Type: Lectotype, BMNH 1946.1.21.26 (formerly BMNH 1898.4.28.87), a 465 mm male, designated by Cadle (2005: 77).
Type locality: "Ibarra" [= Ibarra, Imbabura Prov., N Ecuador, 0°22'N, 78°08'W, elevation 2235 m].
Distribution: Northern Ecuador (Imbabura), 570–2600 m.
Source: Cadle, 2005.
Remarks: Photograph of lectotype in Cadle (2005: fig. 2).

14. *Dipsas gaigeae* (Oliver, 1937). Occ. Pap. Mus. Zool., Univ. Michigan (360): 22–23. (*Sibynomorphus gaigeae*)

Type: Holotype, UMMZ 80221, a 287 mm male (J.A. Oliver, 26 July 1935).
Type locality: "Paso del Río, Colima, Mexico." [= Periquillo, Haciendo Paso del Río, Colima State, Mexico *fide* Kofron, 1982b: 289].
Distribution: Western Mexico (Colima, SW Jalisco, Michoacán), NSL–610 m.
Sources: J.A. Peters, 1964, Harris & Simons, 1967, Hale, 1977, Kofron, 1982b and Reyes-Velaso et al., 2008.

15. *Dipsas gracilis* (Boulenger, 1902a). Ann. Mag. Nat. Hist. (7) 9(49): 57. (*Leptognathus gracilis*)

Synonyms: *Leptognathus hammondii* Boulenger, 1920b and *Sibynomorphus macrostomus* Amaral, 1925.
Types: Syntypes (2), BMNH 1946.1.21.24–25, two males, longest syntype 770 mm (W.F.H. Rosenberg, 1896–1901).
Type locality: "St. Javier, 60 feet, North-western Ecuador" [= San Javier, lower Cachabi/Cachavi River, Esmeraldas Prov., NW Ecuador, 1°04'N, 78°47'W, elevation 20 m].
Distribution: Northwestern South America. ? Western Colombia (Chocó), W Ecuador (Esmeraldas, Guayas, Los Rios, Pichincha) and NW Peru (Piura, Tumbes), 20–500 m.
Sources: Pérez-Santos & Moreno, 1988, 1991 and Cadle, 2005.
Remarks: Colombian record doubtful *fide* Cadle (2005: 123): possibly *D. viguieri*. *Dipsas gracilis* and *D. viguieri* possibly conspecific *fide* Harvey (2008: 429).

D

16. *Dipsas incerta* (Jan, 1863b). Elenco Sist. Ofidi: 101. (*Leptognathus incertus*)

Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.
Type locality: "Guajana francese" [= French Guiana].
Distribution: Northern South America. Southeastern Venezuela (Amazonas, Bolívar), Guyana, Suriname, French Guiana and SW Brazil (Roraima), 525–1020 m.
Sources: Marques et al., 2001, Passos et al., 2004, Harvey, 2008, Navarrete et al., 2009 and Fernandes et al., 2010.
Remarks: *Dipsas copei* synonymized with *D. incerta* and holotype of *D. copei* (BMNH 1946.1.21.4 from Suriname) designated neotype of *D. incerta fide* Passos et al. (2004: 389); if the two taxa are separate species as Harvey (2008: 436) demonstrated, the neotype designation is invalid. Holotype illustrated in Passos et al. (2004: fig. 5).

17. *Dipsas indica* Laurenti, 1768. Synop. Rept.: 90.

Synonyms: *Dipsadomorus indicus* – A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Pholidolaemus gracilis* Fitzinger, 1861, and *Dipsas indica ecuadorensis* J.A. Peters, 1960b.
Type: Lectotype, specimen described and illustrated by Seba (1734: 71, pl. 43, fig. 5), designated and lost by J.A. Peters (1960b: 68).
Type locality: "Zeylona" [= Sri Lanka] (in error). Corrected to Amazonian region of South America [= Amazonia] *fide* J.A. Peters (1960b: 68).
Distribution: South America. Southeastern Colombia (Amazonas, Cundinamarca, Meta, Putumayo, Vaupés), Venezuela (Amazonas, Bolívar), Guyana (Essequibo Islands-West Demerara, Upper Takutu-Upper Essequibo), Suriname (Commewijne), French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Ecuador (Morona-Santiago, Napo, Pastaza), E Peru (Cusco, Loreto, Madre de Dios, Putumayo, Ucayali), Brazil (Acre, Amazonas, Bahía, Ceará, Goiás, Mato Grosso do Sul, Pará, Rondônia), Bolivia (Pando), Paraguay (Alto Paraná, S Boquerón, Itapúa, S Presidente Hayes) and NE Argentina (Misiones), NSL–1000 m.
Sources: J.A. Peters, 1960b, Hoge, 1969b, Hoge & Romano-Hoge, 1975b, Pérez-Santos & Moreno, 1988,

Sazima, 1989, Cei, 1994, Alves & Argôlo, 1998, Starace, 1998, Freitas, 1999, Marques et al., 2001, Argôlo & Alves, 2002, J.C. Murphy & Schlager, 2003, Duellman, 2005, Montechiaro et al., 2006, Cicchi et al., 2007, Harvey & Embert, 2009, Cacciali, 2008, Natera-Mumaw & Battiston, 2008, Navarrete et al., 2009, Sajdak, 2010 and C.J. Cole et al., 2013.

18. *Dipsas maxillaris* (F. Werner, 1909c). Zool. Jahrb. (Abt. Syst. Ökol. Geog. Tiere) 28(3): 279. (*Leptognathus maxillaris*)

Type: Holotype, IRSNB 2026 (formerly IRSNB 120), a 335 mm female (Linden, 17 Nov. 1857).
Type locality: "Tabasco, Mexico" (in error). Corrected to South America *fide* Kofron (1982a: 46).
Distribution: South America. Known only from holotype.
Sources: Laurent, 1949 and Lang, 1990.
Remarks: Type erroneously listed as IRSNB 3042 *fide* Laurent (1949: 15) and J.A. Peters (1960b: 48). Publication date listed as 1909 *fide* cover of separate (nos. 1–5 = 1909, no. 6 and vol. = 1910). F. Werner's bibliography by Wettstein (1941: 36). Possibly a synonym of *D. elegans*.

19. *Dipsas neivai* Amaral, 1926a. Arch. Mus. Nac., Rio de Janeiro 26: 108–109, pl. 2, figs. 9–11.

Type: Holotype, IB 307, a 680 mm male (J.E.A. Coutinho, 30 July 1912), destroyed by fire 15 May 2010.
Type locality: "Caratinga, Estado de Minas Geraes, Brasil" [= Caratinga, E Minas Gerais State, SE Brazil, 19°47'S, 42°08'W, elevation 835 m].
Distribution: Southeastern Brazil (E Bahia, E Minas Gerais), 145–835 m.
Remarks: A valid species *fide* Cicchi et al. (2007: 230).

20. *Dipsas nicholsi* (Dunn, 1933b). Copeia 1933(4): 193–194. (*Sibynomorphus nicholsi*)

Type: Holotype, MCZ 37884, a head and neck (H.C. Clark, early 1933).
Type locality: "Mid-basin of Chagres River and mouth of Pequeni River, Panamá" [= junction of Río Pequeni with Río Boquerón, in upper drainage of Río Chagres, Panamá Prov., Panama, 9°21'N, 79°33'W, elevation 80 m].
Distribution: Central Panama (Canal Zone, Coclé, Colón, Darién, Panamá), NSL–960 m.
Sources: Cadle & Myers, 2003 and C.W. Myers et al., 2007.

21. *Dipsas oreas* (Cope, 1868b). Proc. Acad. Nat. Sci. Philadelphia 20(2): 109. (*Leptognathus oreas*)

Synonyms: *Leptognathus andrei* Sauvage, 1884 and *Leptognathus robusta* L. Müller, 1923.
Type: Holotype, ANSP 10115 (formerly ANSP 6707), a 660–691 mm male (J. Orton, autumn 1867–winter 1968).
Type locality: "the elevated valley of Quito" [Ecuador] (probably in error *fide* J.A. Peters, 1955: 347).
Distribution: Western Ecuador (Chimborazo, Guayas, Loja) and Peru (Cajamarca, Piura), 1400–2900 m.
Sources: Kofron, 1982a, Orcés & Almendáriz, 1987, Cadle & Myers, 2003 and Cadle, 2005.
Remarks: Photograph of holotype in Kofron (1982: fig. 2).

22. *Dipsas pakaraima* MacCulloch & Lathrop, 2004b. Rev. Biol. Trop. 52(1): 240–244, figs. 1–3.

Type: Holotype, ROM 41233, a 625 mm male (R. Edward, 21 Oct. 2000).
Type locality: "northeast plateau of Mount Ayanganna, in the Pakaraima Distribution, western Guyana, 05°24'N, 059°57'W, elevation 1490 m."
Distribution: Guyana (Cuyuni-Mazaruni), 1490 m. Known only from type locality.
Source: C.J. Cole et al., 2013.
Remarks: Similarities between *Dipsas temporalis, D. pakaraima* and *D. vermiculata* separate them from the rest of *Dipsas fide* Harvey (2008: 436).

23. *Dipsas pavonina* Schlegel, 1837. Essai Phys. Serp. 1: 162, 2: 280–281.

Synonym: *Leptognathus pavonimus* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum)*.
Types: Syntypes (5), MNHN 435, RMNH 1022a–b, one syntype 620 mm, and RMNH 1024 (formerly MNHN), a 720 mm specimen (T.G. van Lidth de Jeude), location of other syntype unknown.
Type locality: "Guyanes" [= Guianas].
Distribution: Amazonia. Colombia (Amazonas), S Venezuela (Amazonas), Guyana (Demerara-Mahaica, Essequibo Islands-West Demerara), Suriname (Para, Wanica), French Guiana (Cayenne, Saint-Laurent-du-Maroni), N Brazil (Amazonas, Pará, Rondônia), E Ecuador (Morona-Santiago, Napo, Pastaza), NE Peru (Amazonas, Cusco, Loreto, Madre de Dios) and ext. N Bolivia (La Paz, Pando), NSL–200 m.
Sources: Roze, 1966a, Lancini, 1986, Starace, 1998, Abuys, 2003, Harvey & Embert, 2009, Lima & Prudente, 2009, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: See remarks under *D. catesbyi*. Iquitos, Peru record doubtful *fide* Dixon & Soini (1986: 103). MNHN 435 not listed as a syntype *fide* MNHN catalogue.

24. *Dipsas peruana* (Boettger, 1898). Kat. Rept. Senck. Mus. 2: 128. (*Leptognathus peruana*)

Synonyms: *Leptognathus boettgeri* F. Werner, 1901c, *Leptognathus latifrontalis* Boulenger, 1905c, *Leptognathus boliviana* F. Werner, 1909b, *Leptognathus*

palmeri Boulenger, 1912b, *Leptognathus polylepis* Boulenger, 1912b, and *Leptognathus latifasciatus* Boulenger, 1913b.

Type: Holotype, SMF 20801 (formerly SMF-B 9448a), a 610 mm female (F. Emmel, 1890).

Type locality: "Sta. Ana in der peruanischen Provinz Cusco" [= Santa Ana, Cusco Department, Peru, 13°31'S, 71°59'W, elevation 3470 m].

Distribution: Western Venezuela (Aragua, Barinas, Lara, Mérida, Miranda), NE Colombia (Boyacá), E Ecuador (Morona-Santiago, Napo, Pastaza), Peru (Amazonas, Cusco, Loreto, Madre de Dios, Puno) and N Bolivia (La Paz, Pando), 500–2400 (3470) m.

Sources: Roze, 1966a, Lancini, 1986, Pérez-Santos & Moreno, 1988, 1991, Esqueda & La Marca, 1999, Fernandes et al., 2002, Cadle, 2005, Harvey & Embert, 2009, Lima & Prudente, 2009 and Rivas-Fuenmayor et al., 2012.

Remarks: *Dipsas latifrontalis* possibly a valid species *fide* Rivas-Fuenmayor et al. (2012: 44).

25. *Dipsas petersi* Hoge & Romano-Hoge, 1975b. Mem. Inst. Butantan 39: 52–56, figs. 2, 4, 9–11. (*Dipsas indica petersi*)

Type: Holotype, IB 23460, a female (V. Rodrigues, 1 Nov. 1963), destroyed by fire 15 May 2010.

Type locality: "Pedro de Toldeo, São Paulo, Brazil" [= Pedro de Toledo, SE São Paulo State, SE Brazil, 24°17'S, 47°14'W, elevation 85 m].

Distribution: Southeastern Brazil (Espirito Santo, Paraná, Rio de Janeiro, E São Paulo, E Paraná, NE Santa Catarina, Cardoso, Santo Amaro, São Sebastião and São Vicente Is.), NSL–85 m.

Source: Cicchi et al., 2007.

Remarks: A valid species *fide* Cicchi et al. (2007: 230).

26. *Dipsas praeornata* (F. Werner, 1909b). Mitt. Natur. Mus. Hamburg 26: 240. (*Leptognathus praeornata*)

Type: Holotype, formerly ZMH, a 733 mm female (R. Rauschenplat), destroyed in July 1943 during World War II.

Type locality: "Venezuela."

Distribution: Cordillera de Costa of N Venezuela (Aragua, District Federal, Libertador, Miranda).

Source: Harvey & Embert, 2008.

Remarks: A valid species *fide* Harvey & Embert (2008: 85) and Harvey (pers. comm.).

27. *Dipsas pratti* (Boulenger, 1897e). Ann. Mag. Nat. Hist. (6) 20(120): 523. (*Leptognathus pratti*)

Synonyms: *Leptognathus triseriatus* Cope, 1899b, *Leptognathus nigriceps* F. Werner, 1916, *Dipsas niceforoi* Prado, 1941b, and *Dipsas tolimensis* Prado, 1941f.

Type: Holotype, BMNH 1946.1.20.52, a 770 mm female (A.E. Pratt, 1896–1897).

Type locality: "Medellin, Republic of Colombia" [= Medellín, Antioquia Department, Colombia, 6°14'N, 75°35'W, elevation 1480 m].

Distribution: Cordillera Central of N Colombia (Antioquia, Cundinamarca, Santander, Tolima) and W Venezuela (Zulia), 1500–2400 m.

Sources: Pérez-Santos & Moreno, 1988, Moreno-Arias et al., 2006, T.R. Barros-Blanco et al., 2012 and Rivas-Fuenmayor et al., 2012.

D

28. *Dipsas sanctijoannis* (Boulenger, 1911a). Ann. Mag. Nat. Hist. (8) 7(37): 24–25. (*Leptognathus sanctijoannis*) (*nomen corrigendum*)

Synonyms: *Leptognathus sancti-joannis* Boulenger, 1911a *(nomen incorrigendum), Leptognathus sancti-johannis* F. Werner, 1916 *(nomen substitutum), Sibynomorphus caucanus* Rendahl & Vestergren, 1940, and *Dipsas sanctijoannis* J.A. Peters, 1960 *(nomen corrigendum).*

Types: Syntypes (4), BMNH 1946.9.8.56–58 (formerly BMNH 1910.7.11.34–36), a 577 mm female and 600 mm specimen, and MCZ 83209 (formerly BMNH 1946.9.8.55), a 482 mm male (G. Palmer, 1909).

Type locality: "Pueblo Rico, slopes of San Juan River, Colombian Choco, 5200 feet" [= Pueblo Rico, Risaralda Dept., cen. Colombia, 5°11'N, 76°04'W, elevation 2120 m].

Distribution: Cordilleras of N Colombia (Antioquia, Boyacá, Caldas, Cauca, Nariña, Quindio, Risaralda, Valle), 995–2300 m.

Sources: Pérez-Santos & Moreno, 1988 and Rojas-Morales, 2012b.

29. *Dipsas sazimai* Fernandes, Marques & Angólo, 2010. Zootaxa (2691): 58–60, figs. 1–4.

Type: Holotype, MNRJ 15136, a 743 mm male (C.C. Siqueira & W.C. Kiefer, 30 Oct. 2005).

Type locality: "Brazil, state of Rio de Janeiro, municipality of Casimiro de Abreu (22º28'S, 42º12'W, ca. 80l m)."

Distribution: Southeastern Brazil (Bahia, Espírito Santo, Rio de Janeiro, São Paulo), 40–800 m

30. *Dipsas schunkii* (Boulenger, 1908a). Ann. Mag. Nat. Hist. (8) 1(1): 115. (*Leptognathus schunkii*)

Types: Syntypes (3), BMNH 1946.1.21.10–12, longest syntype 920 mm (C. Schunke).

Type locality: "Chanchamayo, E. Peru" [= Chanchamayo Prov., Junin Dept., E Peru].

Distribution: Cordillera Oriental of Peru (Junin, Piura), 1000–1300 m.

D

31. *Dipsas temporalis* (F. Werner, 1909b). Mitt. Naturhist. Mus. Hamburg 26: 241–242, fig. 13. (*Leptognathus temporalis*)

Synonym: *Leptognathus spurrelli* Boulenger, 1913d.
Type: Holotype, formerly ZMH, a 520 mm specimen (E. Krause, 1900–1909), destroyed in July 1943 during World War II.
Type locality: "Esmeraldas, Ecuador" [= Esmeraldas, Esmeraldas Prov., NW Ecuador, 0°57'N, 79°40'W, elevation 80 m].
Distribution: Panama (Canal Zone, Darién, Panamá, Veraguas), NW Colombia (Chocó, Córdoba, Esmeraldas) and ext. NW Ecuador (Esmeraldas), NSL–1000 m.
Sources: Dunn & Bailey, 1939, Pérez-Santos & Moreno, 1988, 1991, Cadle, 2005, Harvey 2008, Lotzkat et al., 2010 and Carvajal-Cogollo et al., 2011a.
Remarks: Similarities between *Dipsas temporalis, D. pakaraima* and *D. vermiculata* separate them from the rest of *Dipsas fide* Harvey (2008: 436).

32. *Dipsas tenuissima* E.H. Taylor, 1954. Univ. Kansas Sci. Bull. 36(11): 771–774, figs. 28a–c, 29.

Type: Holotype, KU 31961, a 555 mm specimen (E.H. Taylor, 10 July 1952).
Type locality: "approximately 15 km. WSW San Isidro del General, on Dominical Road, in swamp, Costa Rica" [= 15 km WSW San Isidro de General, San José Prov., W Costa Rica, ca. 9°21'N, 83°45'W, elevation 800 m].
Distribution: Southwestern Costa Rica (Puntarenas, San José) and ext. W Panama (Chiriquí), NSL–970 m.
Sources: Savage, 2002 and Solórzano, 2004.

33. *Dipsas trinitatis* H.W. Parker, 1926c. Ann. Mag. Nat. Hist. (9) 18(104): 206–207.

Type: Holotype, BMNH 1926.5.1.1, a 275 mm male (E. Lehner).
Type locality: "Trinity Hill Reserve, Trinidad, British West Indies."
Distribution: Trinidad and Tobago (Trinidad), NSL–60 m.
Sources: J.C. Murphy, 1997, Boos, 2001 and Harvey & Embert, 2009.
Remarks: Previously a subspecies of *D. variegata*.

34. *Dipsas variegata* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 477. (*Leptognathus variegatus*)

Types: Syntypes (2), MNHN 7299 (F. Levaillant, 1765–1780) and RMNH 995 (G. Vrolik, 1800–1830), longest syntype 798 mm.
Type locality: "Suriname."
Distribution: Panama and N South America. Eastern Panama (Canal Zone: Barro Colorado Is.), Colombia (Tolima), Venezuela (Amazonas, Aragua, Barinas, Bolívar, Carabobo, Distrito Federal, Guárico, Mérida, Miranda, Portuguesa, Sucre, Táchira, Yaracuy), Guyana (Barima-Waini, Demerara-Mahaica, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Marowijne), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Alagoas, Amazonas, Ceará, Espírito Santo, Mato Grosso, Pará, Paraná, Santa Catarina, São Paulo, Cananéia and São Sebastião Is.), Ecuador (Chimbaraza, Pichincha, Loja), SE Peru (Madre de Dios) and Bolivia (Cochababa, La Paz), NSL–2154 m.
Sources: Amaral, 1944h, Roze, 1966a, Amaral, 1978, Lancini, 1986, Pérez-Santos & Moreno, 1988, 1991, Porto & Fernandes, 1996, J.B. Rasmussen & Hughes, 1997, Starace, 1998, Freitas, 1999, Markezich, 2002, Calcaño & Barrio, 2003a, Lotzkat et al., 2008, Harvey & Embert, 2009, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: Type locality listed as Guyane hollandaise [= Suriname] *fide* MNHN catalogue.

35. *Dipsas vermiculata* J.A. Peters, 1960b. Misc. Publ. Mus. Zool., Univ. Michigan (114): 65–67, pl., figs. 2b–c.

Type: Holotype, UMMZ 118063 (formerly EPN 741), a 609 mm male (R. Olalla, 1954).
Type locality: "Chichirota, Lower Bobonaza River, Napo-Pastaza Prov., Ecuador."
Distribution: Eastern Ecuador (Napo, Morona-Santiago, Pastaza) and NW Peru (Amazonas, Loreto), 100–230 m.
Source: Pérez-Santos & Moreno, 1991.
Remarks: Similarities between *Dipsas temporalis, D. pakaraima* and *D. vermiculata* separate them from the rest of *Dipsas fide* Harvey (2008: 436).

36. *Dipsas viguieri* (Bocourt, 1884). Bull. Soc. Philom. Paris (7) 8: 136–137. (*Leptognathus viguieri*)

Type: Holotype, MNHN 6203, a 570 mm male (C. Viguier, Nov. 1876–April 1878).
Type locality: "Isthme de Darien" [= Darién Prov., Panama].
Distribution: Eastern Panama (Canal Zone, Darién, Panamá) and Colombia (? Chocó, Piura), NSL–60 m.
Source: Cadle, 2005.
Remarks: Colombian record of *D. gracilis* may be this species *fide* Cadle (2005: 123).

DIPSINA Jan, 1863a (Psammophiidae)

Synonym: *Dipsida* – F.W. FitzSimons, 1912 *(nomen incorrectum).*
Type species: *Coronella multimaculata* A. Smith, 1847 *in* 1838–1849.

Distribution: Southwestern Africa.

Sources: Broadley, 1983, Auerbach, 1987, Branch, 1988, Chirio & Ineich, 1991, Marais, 2004, Kelly et al., 2008, 2009, Vidal et al., 2008, Zaher et al., 2009 and Broadley & Blaylock, 2013.

1. *Dipsina multimaculata* (A. Smith, 1847 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 61, figs. a–c, 2 pp. (*Coronella multimaculata*)

Types: Syntypes (2), none designated, longest syntype 330 mm (A. Smith, 1828), location unknown.

Type locality: "in the country of the Bushmen, near to the ODistribution River" [= Bushmanland, NW Northern Cape Prov., South Africa].

Distribution: Southwestern Africa. Namibia (Erongo, Hardap, Karas, Khomas, Kunene, Omaheke, Otjozondjupa), SW Botswana (Kgalagadi) and W South Africa (W Eastern Cape, Northern Cape, North West, Western Cape), NSL–1110 m.

Remarks: Types not present in RSM or BMNH *fide* V.F.M. FitzSimons (1937: 262).

DISPHOLIDUS Duvernoy, 1832 (Colubridae)

Synonyms: *Bucephalus* A. Smith, 1828 *(nomen praeoccupatum), Erymnus* Wagler, 1830, *Dispholides* – Filippi, 1840 *(nomen incorrectum), Bucephala* Gray, 1840 *(nomen emendatum), Dryomedusa* Fitzinger, 1843, *Bucephali* Hopley, 1882, *Dyspholidus* – Peracca, 1909 *(nomen incorrectum), Diopholidus* – R. Kraus & Werner, 1931 *(nomen incorrectum), Dispolidus* – Scortecci, 1943 *(nomen incorrectum),* and *Disphoridus* – Anon., 1978 *(nomen incorrectum).*

Type species: *Bucephalus typus* A. Smith, 1828.

Distribution: Subsaharan Africa.

Sources: Angel, 1933b, Laurent, 1955, 1956a, Mertens, 1955, 1971, Hoesch, 1960, Sweeney, 1961, Broadley, 1962a, 1983, V.F.M. FitzSimons, 1962a, Witte, 1962, Doucet, 1963, Laurent, 1964a, Menzies, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Roman, 1980, Branch, 1982, 1988, Buys & Buys, 1983, Hughes, 1983, 2013, Lanza, 1983a, 1990b, Pienaar et al., 1983, Largen & Rasmussen, 1993, David & Ineich, 1999, Broadley & Wallach, 2002, Clauss & Clauss, 2002, Broadley et al., 2003, M. Griffin, 2003, J.C. Murphy & Schlager, 2003, Marais, 2004, Branch & Bauer, 2005, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Largen & Spawls, 2010, Ullenburch et al., 2010, Segniagbeto et al., 2011 and Broadley & Blaylock, 2013.

1. *Dispholidus typus* (A. Smith, 1828). So. Afr. Comm. Adv. 3(144): 2. (*Bucephalus typus*)

Synonyms: *Coluber macrolepidotus* G. Shaw, 1802, *Bucephalus belli* A. Smith, 1828, *Bucephalus gutturalis* A. Smith, 1828, *Bucephalus jardinii* A. Smith, 1828, *Dispholidus lalandii* Duvernoy, 1832, *Dendrophis colubrina* Schlegel, 1837, *Bucephalus viridis* A. Smith, 1838, *Bucephalus capensis* A. Smith, 1841 *in* 1838–1849, *Dendrophis pseudodipsas* Bianconi, 1849a, *Bucephalus typus angolensis* Bocage, 1866a, *Thrasops jacksonii mossambicus* Mertens, 1937, *Dispholidus typus kivuensis* Laurent, 1955, *Dispholidus typus punctatus* Laurent, 1955, and *Dispholidus typus occidentalis* Perret, 1961 (*nomen nudum*).

Type: Holotype, RSM, a 1340 mm male, designated by FitzSimons (1937: 263).

Type locality: "eastern districts of South Africa" via lectotype selection. Restricted to Old Latakoo (= Lattakoo or Lithako), approx. 27°S, 24°E., i.e., btwn. Kuruman and Taung, N. Cape Prov., South Africa *fide* V.F.M. FitzSimons (1962a: 196).

Distribution: Subsaharan Africa. Southern Senegal (Dakar, Tambacounda), Gambia, Guinea–Bissau (Cacheu, Tombali, Bolama Is.), Guinea (Dalaba, Nzérékoré), SW Mali (Koulikoro, Sikasso), Sierra Leone (Northern, Southern), Liberia, Guinea (Dalaba, Kindia, Nzérékoré), Ivory Coast (Bouaké, Bouna, Ferkéssédougou, Guiglo, Tabou), Ghana (Upper West), Togo (Kara, Maritime, Plateaux). S Benin (Alibori, Atakora, Collines, Zou), S Burkina-Faso (Centre-Ouest, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire), Nigeria (Akwa Ibom, Bayelsa, Rivers), Cameroon (Adamaoua, Centre, Est, Nord-Ouest, Ouest), SW Chad (Mayo-Kebbi), Central African Republic (Bamingui-Bangoran, Haute-Sangha, Haut-Mbomou, Kemo-Gribingui, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende), Gabon, S Congo, Democratic Republic of the Congo (Bandundu, Bas-Congo, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), Eritrea (Northern Red Sea, E Southern, Dahlak Is.), S Ethiopia (Bale, Gemu Gofa, Hararge, Illubabor, Kefa, Shoa, Sidamo), Somalia (Bay, Galguduud, Hiraan, Jubbada Dhexe, Jubbada Hoose, Shabeellaha Dhexe, Shabeellaha Hoose, Woqooyi Galbeed), Kenya (Central, Coast, Eastern, North-Eastern, Nyanza, Western), Uganda (Central, Eastern, Northern, Western) Rwanda, Burundi, Tanzania (Arusha, Dar es Salaam, Dodoma, Iringa, Kigoma, Kilimanjaro, Lindi, Mara, Mbeya, Morogoro, Mtwara, Mwanza, Piwani, Rukwa, Ruvuma, Shinyanga, Singida, Tabora, Tanga, Kagera, Mafia, Pemba and Zanzibar Is.), Mozambique (Gaza, Inhambane, Manica, Sofala, Tete, Bazaruto and Inhaca Is.), Malawi (Central, Northern, Southern), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Angola (Cuando Cubango, Lunda Norte, Moxico), N Namibia (Caprivi, Erongo, Khomas, Okavango, Omaheke, Oshikoto, Otjozondjupa),

Botswana (Central, Gaborone, Ghanzi, Kgalagadi, Kgatleng, Kweneng, North East, North West, Southern, Tuli), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland, Lesotho and South Africa (Eastern Cape, NW Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, North West, Western Cape), NSL–2400 m.

Remarks: Original description reprinted in A. Smith (1829: 441–442). Old Latakoo (Lithako) was the principle Kraal of the Batlaping tribe *fide* Loveridge (1957a: 273). Pemba Is., Tanzania population probably a valid species *fide* Hughes *in* Broadley & Wallach, 2003.

D

DISTEIRA Lacépède, 1804 (Elapidae)

Synonyms: *Disteria* Gray, 1825 *(nomen emendatum), Distera* – Gray in Griffith & Pidgeon, 1831 *(nomen incorrectum), Hydrus* Gray, 1842d *(nomen praeoccupatum), Distira* Agassiz, 1847 *(nomen emendatum), Deisteira* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Distura* – Westphal-Castelnau, 1870 *(nomen incorrectum), Distina* – Williston, 1914 *(nomen incorrectum), Melanomystax* Wall, 1921g, *Disteia* – Maki, 1931 *(nomen incorrectum),* and *Distera* – Boquet, 1948 *(nomen incorrectum).*

Type species: *Hydrus major* G. Shaw, 1802.

Distribution: Coastal waters of Australasia, including Arafura Sea, Bay of Bengal, Coral Sea, Gulf of Carpentaria, and Timor Sea.

Sources: Wall, 1909a, M.A. Smith, 1926a, McDowell, 1972a, A.R. Rasmussen, 1994, David & Ineich, 1999, Wells, 2007, Kharin & Czeblukov, 2009, Zaher et al., 2009 and Hoser, 2012e.

Remarks: A synonym of *Hydrophis fide* Sanders et al., 2013.

1. *Disteira kingii* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 276–277. (*Hydrophis kingii*)

Type: Holotype, BMNH 1946.1.10.10 (formerly BMNH II.6.5.a), a 1200 mm male (P.P. King, 1818–1822).

Type locality: "N. Australia" [= northern Australia].

Distribution: Southern Papua New Guinea (Western) and N Australia (Northern Territory, Queensland, Western Australia, Great Barrier Reef and Barrow Is.).

Sources: L.A. Smith, 1974, Cogger, 1975, Cogger et al., 1983a, Storr et al., 1986 and O'Shea, 1996.

Remarks: Holotype is female *fide* Boulenger (1896a: 277).

2. *Disteira major* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 558–559, pl. 124. (*Hydrus major*)

Synonyms: *Disteira doliata* Lacépède, 1804, *Ophinectes major* Rafinesque-Schmaltz, 1817, *Pelamis shavii* Merrem, 1820 (*nomen substitutum*), *Hydrophis mentalis* Gray, 1842d, *Disteira dumerilii* Jan, 1859b, *Hydrophis lacepedei* Jan, 1859b, *Pelamydoidis major* – Fitzinger, 1861, and *Distira nasalis* De Vis, 1905.

Type: Lectotype, BMNH 1946.1.9.24 (formerly BMNH III.6.8.a), an 1118 mm male, designated by A.C.L.G. Günther (1864a: 364).

Type locality: "Indian Ocean" via lectotype selection.

Distribution: Austro-Papua. Southern Papua New Guinea (Western), Australia (Northern Territory, Queensland, W and N Western Australia, Great Barrier Reef and Melville Is.) and New Caledonia.

Sources: L.A. Smith, 1974, Cogger, 1975, Cogger et al., 1983a, Storr et al., 1986, O'Shea, 1996, Ineich & Rasmussen, 1997, Bauer & Sadlier, 2000 and Ineich & Laboute, 2002.

3. *Disteira nigrocincta* (Daudin, 1803d). Hist. Nat. Rept. 7: 380–382. (*Hydrophis nigrocinctus*)

Synonyms: *Hydrophis nigro-cinctus* – Duvernoy, 1832 *(nomen illegitimum), Hydrophis nigro-cincta* – Viaud-Grand-Marais, 1880b *(nomen illegitimum), Hydrophis nigrocyneta* – Anon., 1902 *(nomen incorrectum), Distira hendersoni* Boulenger, 1903e, and *Distira hendorsoni* – Phisalix, 1922 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.10.13 (formerly BMNH 1896.3.25.5), a 1016 mm female (P. Russell, 1781–1791).

Type locality: "Bengale" [India]. Specified as The Sunderbunds *fide* P. Russell (1801: 57) [= Sundarbans, Ganges River delta, SW Bangladesh and SE West Bengal, India, bet. 21.5–23°N, 88–91.5°E].

Distribution: Southesat Asia. Eastern India, Bangladesh, Myanmar, Thailand, Malaysia and Singapore.

Sources: Wall, 1921g and M.A. Smith, 1943.

Remarks: Original description based upon specimen depicted in P. Russell (1801: 6–7, pl. 6). Type locality is the salt water rivers which intersect that part of Bengal called the Sunderbunds *fide* P. Russell (1801: 7).

4. *Disteira walli* Kharin, 1989. Vestn. Zool. 1989(1): 29–31.

Type: Holotype, BMNH 1864.4.7.6, a 560 mm male (P. de Bleeker, 1842–1860).

Type locality: "Malay Archipelago" [= West Malaysia].

Distribution: West Malaysia. Known only from holotype.

DITAXODON Hoge, 1958a (Xenodontidae)

Type species: *Philodryas taeniatus* Hensel, 1868.

Distribution: Southern Brazil.

Sources: Hoge, 1958a, J.A. Peters & Orejas-Miranda, 1970, Amaral, 1978, Moura-Leite et al., 1996, R.A. Thomas et al., 2006 and Zaher et al., 2009.

1. *Ditaxodon taeniatus* (Hensel, 1868). Arch. Naturg. 34(1): 331–332. (*Philodryas taeniatus*)

Type: Neotype, IB 10545, a 543 mm male, designated by R.A. Thomas et al. (2006: 95), destroyed by fire 15 May 2010.
Type locality: "Palmeire (25°20'S 50°00'W, 860 m), state of Paraná, Brazil" via neotype selection.
Distribution: Southern Brazil (Mato Grosso do Sul, Paraná, Rio Grande do Sul, São Paulo), 800–1800 m.
Remarks: Illustrations of lost holotype (ZMB 5980) mandible, maxilla and scale micro-ornamentation in Hoge (1985a: figs. 5–6, 8c–d). Photograph of destroyed neotype in Thomas (2006: fig. 1). Sea level record doubtful *fide* R.A. Thomas et al. (2006: 94).

DITYPOPHIS A.C.L.G. Günther, 1881 (Pseudoxyrhophiidae)

Synonyms: *Dityophis* – Hoffmann, 1890 *(nomen incorrectum)* and *Didypophis* – Dowling *in* Dowling & Duellman, 1978 *(nomen incorrectum).*
Type species: *Ditypophis vivax* A.C.L.G. Günther, 1881a.
Distribution: Yemen (Socotra Island).
Sources: H.W. Parker, 1949, Corkill & Cochrane, 1965, Showler, 1994, Underwood, 1999, Gravland, 2001, Nagy et al., 2003, Rösler & Wranik, 2004, Lawson et al., 2005, Vidal et al., 2008, Kelly et al., 2009, Zaher et al., 2009 and Razzetti et al., 2011

1. *Ditypophis vivax* A.C.L.G. Günther, 1881a. Proc. Zool. Soc. London 49(4): 462–463, pl. 40.

Type: Holotype, BMNH 1946.1.4.83 (formerly BMNH 1881.3.5.4), a 356 mm female (I.B. Balfour, 1879–1880).
Type locality: "Island of Socotra" [Yemen, Arabian Sea].
Distribution: Yemen (Socotra Is.), NSL–870 m.

DOLICHOPHIS Gistel, 1868 (Colubridae)

Synonym: *Eremiophis* Fitzinger, 1843.
Type species: *Coluber caspius* Gmelin, 1789.
Distribution: Eurasia.
Fossil records: Upper Pliocene to upper Pleistocene of Europe.
Sources: Schätti & Wilson, 1986, Schätti & Utiger, 2001 and Nagy et al., 2004, 2010.

1. *Dolichophis caspius* (Gmelin, 1789). Syst. Nat., ed. 13, 1(3): 1112. (*Coluber caspius*)

Synonyms: *Coluber jaculator* Pallas, 1799, *Coluber bicolor* Georgi, 1800, *Coluber acontistes* Pallas, 1814, *Coluber thermalis* Pallas, 1814, *Coluber trabalis* Pallas, 1814, *Natrix sheltopuszik* Wagler, 1825 (*nomen ineditum*), and *Coluber griseocoeruleus* Dwigubsky, 1832.
Type: Holotype, not designated, location unknown.
Type locality: "ad littora maris Caspii" [= shore of Caspian Sea, SW Asia]. Restricted to Jaikische Steppen, Gebiet des unteren Ural-Flusses [= Yaik steppes of the lower Ural River, Russia and Kazakhstan] *fide* Mertens & Müller (1928: 46).
Distribution: Southeastern Europe and ext. W Asia. Hungary, S Romania (Calarasi, S Caras-Severin, Constanta, Galati, Ialomita, Mehedinti, Tulcea, Vrancea), E Bosnia-Herzegovina, Croatia, Macedonia, S Montenegro, Serbia, Albania, Bulgaria (Blagoevgrad, Burgas, Dobrich, Gabrovo, Haskovo, Kardzhali, Lovech, Kyustendil, Montana, Pazardzhik, Pleven, Plovdiv, Razgrad, Rousse, Shumen, Silistra, Sliven, Stara Zagora, Targovishte, Varna, Veliko Tarnovo, Vidin, Vratsa, Yambol), Macedonia, Greece (Andros, Chios, Corfu, Crete, Euboea, Goekce, Ikaria, Karpathos, Kasos, Kea, Kithnos, Lesvos, Likorima, Limnos, Samos, Samothraki, Serifos, Sifnos, Siros, Spetsai, Tinos, Thasos), W Turkey (Adana, Ankara, Antalya, Balikesir, Bursa, Denizli, Edirne, Gaziantep, Isparta, Istanbul, Izmir, Kastamonu, Kirklareli, Kocaeli, Konya, Manisa, Mugla, Sinop, Tekirday, Imroz Is.), Moldavia, S Ukraine, SW Russia (Dagestan), ext. NW Georgia, ext. NE Turkey and ext. NE Azerbaijan, NSL–915 m.
Fossil records: Upper Pliocene (Villanyian, MN 16–17: 1.8–3.2 mya) of Austria and Hungary, lower Pleistocene (Calabrian: 0.8–1.8 mya) of Austria, Czech Republic, Romania and Ukraine, middle Pleistocene (Ionian: 0.13–0.78 mya) of Austria and Bulgaria, and upper Pleistocene (Tarantian: 0.01–0.13 mya) of Bulgaria and Czech Republic.
Sources: Buresch & Zonkoff, 1934, Fuhn & Vancea, 1961, Baran, 1976a, Basoglu & Baran, 1980, Kotenko et al., 1986, Szczerbak & Böhme, 1993a, Schätti, 1993a, Ataev et al., 1994, Borkin et al., 1997, Holman, 1998a, Szyndlar, 1991a, Petkovski et al., 2000, Baker et al., 2002, Valakos et al., 2004, Ivanov, 2007, Trapp, 2007, Valakos et al., 2008, Kretecki et al., 2009, Tuniyev et al., 2009 and Stojanov et al., 2011.
Remarks: Original description based on Lepechin (1769: 513–514, pl. 21), with type locality near Krassno Jar on the Jaikian Steppes, lower Ural River, Caspian Sea shore *fide* Zinner (1972: 24).

2. *Dolichophis cypriensis* (Schätti, 1985). Rev. Suisse Zool. 92(2): 472–475, figs. 1–2. (*Coluber cypriensis*)

Type: Holotype, MHNG 2206.30, an 869 mm female (native, 14 April 1983).
Type locality: "zwischen Arakapás und Kalokhorio, Zypern" [= between Arakapás and Kalokhorio, Cyprus].
Distribution: Southern Cyprus, NSL–1900 m.

Sources: Utiger & Schätti, 2004, Venchi et al., 2006 and Baier et al., 2009.

Remarks: Illustrations of head of holotype in Baier et al. (2009: figs. 226–227).

D

3. *Dolichophis gyarosensis* (Mertens, 1968a). Senck. Biol. 49(3–4): 181–184, figs. 1–2, 4. (*Coluber gemonensis gyarosensis*)

Type: Holotype, ZFMK 4332, a 675 mm (svl) male (K. Buchholz, 28–31 Aug. 1963).

Type locality: "Insel Gyaros (= Gioura), Cycladen" [= Gioura Is., Northern Sporades, Greece, 39°23'N, 24°10'E].

Distribution: Southern Greece (N Sporades). Known only from type locality.

Sources: W. Böhme, 1993b and Utiger & Schätti, 2004.

4. *Dolichophis jugularis* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 225. (*Coluber jugularis*)

Synonyms: *Coluber colloruber* Lacépède, 1789 (*nomen rejiciendum*), *Coluber jugularis* G. Shaw, 1802, *Coluber hannasch* Seetzen, 1855, *Zamenis viridiflavus asiana* Boettger, 1880b, *Zamenis gemonensis tauricus* Venzmer, 1919, and *Dolichophis jugularis zinneri* Cattaneo, 2012.

Type: Holotype, NHR Lin-28 (formerly MAFR), a 1415 mm specimen (F. Hasselquist, 1749–1752).

Type locality: "Aegypto" [= Egypt] (in error *fide* Flower, 1933: 808). Corrected to Palestine or Syria *fide* Flower (1933: 808), Syria *fide* Bodenheimer (1944: 59), and SW Turkey in the surroundings of Selcuk and Ephesus *fide* Zinner (1972: 16).

Distribution: Southwestern Asia. Eastern Greece (Aegean Is., Kálimnos, Kos, Léros, Rhodes, Sími, Tílos), S Turkey (Adana, Antalya, Diyarbakir, Gaziantep, Icel, Isparta, Izmir, Konya, Mugla, Mus, Urfa, Tunceli), Cyprus, Syria (Damascus), W Lebanon (Beirut, Beqaa, El Jnoub, Liban-Nord, Mont-Liban, Nabatiye), Jordan (Ajloun, Amman, Balqa, Irbid, Jarash, Karak, Maan, Madaba, Mafraq, Tafilah), Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, N Southern, Tel Aviv, West Bank), ext. NE Egypt (NE North Sinai), N Iraq (As Kuwait, Sulaymaniyah, Al Anbar, Al Basrah), Kuwait and W Iran (Khuzestan), NSL–2000 m.

Sources: Anderson, 1898, Flower, 1933, Basoglu & Baran, 1980, Hraoui-Bloquet, 1981, Schätti, 1987, 1993a, Al-Mohanna et al., 1997, Bouskila & Amitai, 2001, Disi et al., 2001, Hraoui-Bloquet et al., 2002, Valakos et al., 2008, Baier et al., 2009, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

5. *Dolichophis schmidti* (Nikolsky, 1909b). Mitt. Kaula Mus. Tiflis 4: 303–304. (*Coluber schmidti*)

Synonym: *Coluber erythrogaster* Fischer von Waldheim, 1832 *(nomen praeoccupatum)*.

Type: Lectotype, MNKNU 14935 (formerly ZCIKU 268), a 390 mm (R.H. Schmidt & A.B. Schelkovnikov, 29 March 1907), designated by Vedmederya et al. (2009: 208).

Type locality: "in salsis Adzi, Mugan centr" [= Mugan' Steppe, Azerbaijan] via lectotype selection.

Distribution: Southwestern Asia. Eastern Turkey (Adana, Amasya, Ankara, Artvin, Bingöl, Gaziantep, Kars, Konya, Urfa, Van), Syria, N Jordan (Amman, Jarash, Mafraq), N Iran (Kordestan), ext. SW Armenia, Azerbaijan, E Georgia, ext. SW Russia and S Turkmenistan, 75–785 m.

Sources: Muskhelishvilli, 1970a, Bosoglu & Baran, 1980, Disi, 1985, Leviton et al., 1992, W. Böhme, 1993, Szczerbak & Böhme, 1993b, Schätti, 1993a, Szczerbak, 1994, Baker et al., 2002 and Amr & Disi, 2011.

Remarks: Photograph of head of holotype in Vedmederya et al. (2009: fig. 8). Original description erroneously cited as vol. 3 (1908) *fide* Schätti (1988: 22). Type locality restriction of Tbilisi, Georgia *fide* Szczerbak & Böhme (1993b: 169) invalid.

DREPANOIDES Dunn, 1928b (*nomen substitutum*) (Xenodontidae)

Synonyms: *Cloelia* Jan, 1863b *(nomen praeoccupatum)*, *Drepanodon* Peracca, 1896a *(nomen praeoccupatum)*, *Drepranodon* – Amaral, 1930f *(nomen incorrectum)*, *Drepanpdon* – Briceño-Rossi, 1934 *(nomen incorrectum)*, *Pseudoclelia* Rendahl & Vestergren, 1941, and *Dreprenadon* – Cunha & Nascimento, 1978 *(nomen incorrectum)*.

Type species: *Cloelia anomala* Jan, 1863b.

Distribution: Northern South America.

Sources: Peracca, 1896a, J.A. Peters & Orejas-Miranda, 1970, Dixon & Soini, 1986, Vanzolini, 1986a, Pérez-Santos & Moreno, 1988, 1991, Duellman & Salas, 1991, Starace, 1998, Vidal et al., 2000, Duellman, 2005, Zaher et al., 2009, Avila & Kawashita-Ribeiro. 2011 and C.J. Cole et al., 2013.

1. *Drepanoides anomalus* (Jan, 1863b). Elenco Sist. Ofidi: 92. (*Cloelia anomala*)

Synonyms: *Drepanodon astigmaticus* Peracca, 1896a, *Arrhyton quenselii* Andersson, 1901, and *Pseudoclelia guttata* Rendahl & Vestergren, 1941.

Type: Lectotype, MHNN 4 (formerly MZN 100) (J.J. von Tschudi, 1838–1842), designated by Schätti (1986a: 100).

Type locality: "Amérique méridionale" [= South America] via lectotype selection. Restricted to Peru *fide* Peracca (1896a: 5) and Schätti (1986a: 100).

Distribution: Western Amazonia. Southern Colombia (Putumayo), Guyana, E Ecuador (Morona-Santiago, Napo, Pastaza), E Peru (Loreto, Madre de Dios), N Bolivia (Beni, La Paz) and W Brazil (Amazonas, Bahia, Mato Grosso, Pará, Rondônia), 50–500 m.

Remarks: Type locality erroneously listed as Brazil *fide* J.A. Peters (1960a: 518).

DROMICODRYAS Boulenger, 1893a (Pseudoxyrhophiidae)

Synonyms: *Lianthera* Cope, 1893a, *Dromycodrias* – Jourdran, 1904 *(nomen incorrectum), Dromicordyas* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Dromycodryas* – Brygoo, 1983 *(nomen incorrectum).*

Type species: *Herpetodryas bernierii* A.-M.-C. Duméril, Bibron & Duméril, 1854a.

Distribution: Madagascar.

Sources: Jourdran, 1904, Andersson, 1910, Guibé, 1958, Brygoo, 1983, 1987, Gravlund, 2001, A. Mori et al., 2006, Glaw & Vences, 2007, Glaw et al., 2007a, Kelly et al., 2009 and Zaher et al., 2009.

1. *Dromicodryas bernierii* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 211–212, pl. 66, figs. 1–4. (*Herpetodryas bernierii*)

Synonyms: *Herpetodryas bernierii trilineata* Boettger, 1881d (*partim*), *Herpetodryas bernieri ramavali* Kaudern, 1922, and *Liopholidophis pseudolateralis* Guibé, 1954.

Types: Syntypes (3), MCZ 1966 (formerly MNHN 68), an 843 mm female (C.A.C.J. Bernier, 1844), USNM 6221 (Hérail) and MNHN (R.-P. Lesson & P. Garnot [Coquille Voy.], Aug. 1822–March 1825).

Type locality: "Madagascar" and "l'Ile de France," (latter in error *fide* Brygoo, 1983: 38). Restricted to Madagascar *fide* Bouleneger (1896a: 190).

Distribution: Madagascar (Antsiranana, Atananarivo, Fianarantsoa, Mahajanga, Toamasina, S Toliara), NSL–515 m.

Sources: Henkel & Schmidt, 2000 and A. Mori et al., 2006.

2. *Dromicodryas quadrilineatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 212–218. (*Herpetodryas quadrilineatus*)

Synonym: *Herpetodryas bernierii trilineata* Boettger, 1881 (*partim*).

Type: Holotype, MNHN 7245 (Clouet or C.A.C.J. Bernier, 1847).

Type locality: "Madagascar."

Distribution: Northern Madagascar (Antsiranana, Mahajanga, Toamasina, Nosy Be Is.), NSL–1000 m.

Source: Henkel & Schmidt, 2000.

Remarks: Holotype collected by Mr. Clouet and paratypes by Bernier *fide* Duméril, Bibron & Duméril (1854a: 212) but Bernier is listed as holotype collector *fide* MNHN catalogue.

DROMOPHIS W.C.H. Peters, 1869 (Psammophiidae)

D

Synonyms: *Philodendros* Fitzinger, 1843 *(nomen rejiciendum)* and *Philodendrus* Agassiz, 1847 *(nomen rejiciendum).*

Type species: *Dendrophis praeornata* Schlegel, 1837.

Distribution: West, cen. and E Africa.

Sources: F. Werner, 1924c, Loveridge, 1940, Brandstätter, 1995, 1996, Hughes, 1999, Gravlund, 2001, Nagy et al., 2003, Lawson et al., 2005, Chippaux, 2006, Kelly et al., 2008, 2009, Vidal et al., 2008, Zaher et al., 2009 and Hoser, 2012u.

Remarks: A valid genus *fide* Hughes (2013: 115) but a synonym of *Psammophis fide* Kelly et al. (2008: 1045).

1. *Dromophis lineatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 1124–1126. (*Dryophylax lineatus*)

Synonyms: *Psammophis sibilans tumbensis* Schenkel, 1901 and *Psammophis brevirostris temporalis* F. Werner, 1902.

Types: Syntypes (2), MNHN 7643–44, longest syntype 910 mm (B. d'Arnaud [Second or Third White Nile Exped.], 1840–1850).

Type locality: "Nil blanc" [= White Nile River, bet. Al Khartum (15°35'N, elevatuon 390 m), An Nil Al Abyad Prov., SE Sudan, and Juba (4°42'N, elevation 500 m), Upper Nile, Jonglei or Central Equatoria Prov., South Sudan].

Distribution: West, cen. and E Africa. Senegal (Dakar, Fatick), Gambia, Guinea–Bissau (Bafatá, Bissau, Tombali), Guinea (Boké, Conakry, Dalaba, Kerouane, Kindia, Télimélé, Tumbo Is.), Sierre Leone (Northern, Southern, Western), Ivory Coast (Daloa, Toumodi), SW Mali (Koulikoro), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Sahel, Sud-Ouest, Volta-Noire), N Ghana (Upper West), Togo (Kara, Plateaux, Savanes), Benin (Alibori, Atlantique, Collines), NE Nigeria, SW Chad (Mayo-Kebbi), Cameroon (Adamaoua, Centre, Est, Extreme-Nord, Nord, Sud), Central African Republic (Bamingui-Bangoran, Lobaye, Ombella-Mpoko, Ouham, Ouham-Pende, Sangha), Congo (Brazzaville, Plateau), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), Angola, SE Sudan (An Nil Al Abyad), E South Sudan (Eastern Equatoria, Jonglei, Upper Nile), W Ethiopia (Illubabor), SW Kenya (Western), Uganda (Central, Northern), W Burundi (Bujumbura), W Tanzania

D

(S Iringa, W Kigoma, Mbeya), Zambia (Central, Northern, Southern, Western), N Malawi (Northern), ext. W Zimbabwe (W Matebeleland North), ext. NE Nambia (E Caprivi) and ext. NE Botswana (NE North West), 250–1800 m.

2. *Dromophis praeornatus* (Schlegel, 1837). Essai Phys. Serp. 1: 157–158, 2: 236–237. (*Dendrophis praeornata*)

Synonym: *Dromophis praeornatus gribinguiensis* Angel, 1921.

Type: Holotype, MNHN 7610, a 236–611 mm male (G.S. Perrotet, 1822–1832).

Type locality: "le pays de Walo au Senegal" [= Kingdom of Waalo along lower Senegal River bet. Atlantic Ocean (15°57N, 16°30'W, elevation NSL) and Djeol (16°03'N, 13°24'W, elevation 45 m), N Senegal].

Distribution: West Africa. Senegal (Dakar, Fatick, Kédougou, Matam, Saint-Louis, Thiès), Gambia, Guinea (Kerouane, Kouroussa, Télimélé), S Mali (Kayes, Koulikoro, Mopti, Ségou, Sikasso), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Sahel, Sud-Ouest, Volta-Noire), Ivory Coast (Bouna, Daloa), Ghana (Accra, Upper East, Upper West), S Togo (Kara, Plateaux, Savanes), N Benin (Alibori, Atakora), S Niger (Dosso, Maradi, Niamey, Zinder), Nigeria (Plateau), S Chad (Lac), N Cameroon (Extreme-Nord, Nord) and Central African Republic (Ouham, Ouham-Pende, Vakaga), NSL–1210 m.

Sources: Loveridge, 1940, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, J Roman, 1980, Hughes, 1983, 2013, Greenbaum & Carr, 2005, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Segniagbeto et al., 2011 and Chirio, 2013.

Remarks: Official Specific Name *fide* Opinion 1384 (ICZN 1986b).

†*DRYINOIDES* Auffenberg, 1958 (Carphophiidae)

Type species: †*Dryinoides oxyrhachis* Auffenberg, 1958.

Distribution: Middle Miocene of N-cen. USA.

Sources: Holman, 1979b, 2000a, Meylan, l982 and Rage, 1984b.

Remarks: †*Dryinoides* sp. from Pleistocene (Irvingtonian) of USA (Florida) *fide* Meylan (1982: 46).

1. †*Dryinoides oxyrhachis* Auffenberg, 1958. Amer. Mus. Novit. (1874): 2–8, figs. 1 (top row), 2, 3a, 3h, 3m.

Type: Holotype, AMNH 7524, a fragmentary skull and 21 thoracic vertebrae (C.C. Mook & C.S. Williams, 1925).

Type locality: "Madison Valley, Gallatin County, Montana; Lower Clay, Madison Valley formation, upper Miocene (Barstovian)." [= Middle Miocene *fide* Rage (1984b: 46) and Holman, 2000a: 292].

Distribution: Middle Miocene (Barstovian: 13.6–20.6 mya) of USA (Montana). Known only from type locality.

DRYMARCHON Fitzinger, 1843 (Colubridae)

Synonyms: *Georgia* Baird & Girard, 1853, *Geoptyas* Steindachner, 1867b, *Morenoa* Dugès, 1905, *Crymarchon* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Dryonarchon* – Huene, 1956 *(nomen incorrectum).*

Type species: *Coluber corais* F. Boie, 1827.

Distribution: Southeastern USA and Latin America.

Fossil records: Pleistocene of USA (Florida), and Holocene of Mexico and USA (Florida).

Sources: Amaral, 1930i and Wüster et al., 2001a.

1. *Drymarchon caudomaculatus* Wüster, Yrausquin, & Mijares-Urrutia, 2001a. Herpetol. J. 11: 159–162, figs. 1a–d.

Type: Holotype, EBRG 3412, a 1562 mm female (W. Wüster & J.L. Yrausquin, 16 July 1997).

Type locality: "On the road to Los Tablones, 1 km from the junction with the new Coro-Churuguara road, Municipio Colima, Estado Falcón, Venezuela. The locality is situated approximately 1 km from the village Las Dos Bocas (11°18'N, 69°24'W), in the eastern foothills of the Sierra de San Luis, at an altitude of approximately 110 m."

Distribution: Northwestern Venezuela (Falcón, Zulia), 110–150 m.

Sources: Mijares-Urrutia & Arends, 2000, Infante-Rivero, 2005 and Navarrete et al., 2009.

2. *Drymarchon corais* (F. Boie, 1827). Isis von Oken 20(6): 537. (*Coluber corais*)

Synonyms: *Coluber reticularis* Daudin, 1803c (*nomen nudum*), *Coluber flavicolis* Hancock, 1830, *Geoptyas collaris* Steindachner, 1867b, *Geoptyas flaviventris* Steindachner, 1867b, *Phrynonax suborbitalis* W.C.H. Peters, 1868, *Spilotes corais xanthurus* A. Brown, 1893,

Phrynonax angulifer F. Werner, 1923a, *Drymanchor corais corais* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Drymarcho corais corais* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type: Holotype, not designated, lost *fide* Hoge (1964d: 55).

Type locality: "America." Restricted to South America *fide* A.E. Brown (1901: 44) and to Belem, Pará, Brazil *fide* K.P. Schmidt (l953a: 192).

Distribution: South America. Colombia (Guajira), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Bolívar, Carabobo, Distrito Federal, Falcón, Guárico, Mérida, Miranda, Monagas, Sucre, Zulia), Trinidad and Tobago (Tobago, Trinidad), Guyana (Pomeroon-Supenaam), N Suriname (Para, Paramaribo), N French Guiana (N Cayenne, N Saint-Laurent-du-Maroni), W Ecuador (Loja, Pichincha), ext. NW and E Peru (Cusco, Loreto, Madre a Dios, Piura), N Bolivia (El Beni, La Paz, Pando), Brazil (Alagoas, Amapá, Amazonas, Bahia, Ceará, Maranhão, Mato Grosso, Pará, Pernambuco, Piaui, Rondônia, São Paulo, Tocantins), Paraguay (Alto Paraguay, Boquerón, Central, Concepción, Presidente Hayes, San Pedro) and N Argentina (Chaco), NSL–2750 m.

3. *Drymarchon couperi* (Holbrook, 1842a). No. Amer. Herp., ed. 2, 3: 75–77, pl. 16. (*Coluber couperi*)

Type: Holotype, ANSP 3937 (J.H. Couper, 1829–1842)

Type locality: "dry pine hills, south of the Altamaha" [= Altamaha River, Georgia, USA]. Restricted to Wayne Co., Georgia, USA *fide* K.P. Schmidt (1953: 193).

Distribution: Southeastern USA (ext. S Alabama, Florida: Florida Keys; SE Georgia: St. Catherine's Is.; ext. S South Carolina), NSL–150 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Alabama, Florida).

Sources: Speake et al., 1978, Ashton & Ashton, 1988, Ernst & Barbour, 1989, Collins, 1991, Couper et al., 1996, Crother et al., 2000, Holman, 2000a and Krysko et al., 2011.

4. *Drymarchon margaritae* Roze, 1959b. Nov. Cient. Contr. Ocas. Mus. Hist. Nat. La Salle (25): 1–3, 2 figs.

Type: Holotype, MHNLS 569, a 1300 mm male (J.A. Roze, 18 Dec. 1951).

Type locality: "Cerra de San Francisco de Macanas, Isla de Margarita, Venezuela, 350 m."

Distribution: Northeastern Venezuela (Nueva Esparta: W Margarita Is.), 350–500 m.

Sources: Roze, 1962, Wüster et al., 2001a, Rivas-Fuenmayor et al., 2005 and Ugueto & Rivas, 2010.

Remarks: A valid species *fide* Wüster et al. (2001: 163).

5. *Drymarchon melanurus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 224–225. (*Spilotes melanurus*)

D

Synonyms: *Spilotes erebennus* Cope, 1860f, *Morenoa orizabensis* Dugès, 1905, *Drymarchon corais melanocercus* H.M. Smith, 1941m *(nomen rejiciendum), Drymarchon corais rubidus* H.M. Smith, 1941m, *Drymarchon corais unicolor* H.M. Smith, 1941m, and *Drymarchon corais cleofae* Brock, 1942,

Type: Lectotype, MNHN 3185, a 2217 mm specimen, designated by McCranie (1980: 200).

Type locality: "Mexique" [= Mexico] via lectotype selection.

Distribution: Mesoamerica and NW South America, Southeastern USA (S Texas), Mexico (Aguascalientes, Campeche, Chiapas, ext. SW Chihuahua, E Coahuila, Colima, Durango, ? Guanajuato, Guerrero, Hidalgo, Jalisco, Michoacán, México, Morelos, Nayarit, Nuevo León, Oaxaca, Puebla, Querétaro, Quintana Roo, San Luis Potosí, Sinaloa, S Sonora, Tabasco, Tamaulipas, Veracruz, Yucatán, Zacatecas, María Cleofas and María Madre Is.), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo), Guatemala (Alta Verapaz, Huehuetenango, Petén, Suchitépequez), Honduras (Atlántida, Choluteca, Comayagua, Copán, Cortés, El Paraíso, Francisco Morazán, Gracias a Dios, Islas de la Bahía, Ocotepeque, Olancho, Santa Bárbara, Valle, Yoro, Guanaja, Roatán and Utila Is.), El Salvador (Ahuachapán, Chalatenango, Cuscatlán, La Libertad, Morazán, San Salvador), Nicaragua (Chontales, Jinotega, Managua, Matagalpa, Río San Juan, Zelaya, Ometepec Is.), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Canal Zone, Darién, Barro Colorado Is.), Colombia (Amazonas, Antioquia, Atlántico, Bolívar, Caquetá, Cauca, Chocó, Cundinamarca, Distrito Especial, La Guajira, Santander, Tolima, Valle, Vichada), NW Venezuela (Carabobo, Distrito Federal, Mérida, Zulia) and Ecuador, NSL–1600 m.

Sources: Niceforo Maria, l942, E.H. Taylor, 1951, McCranie, 1980c, Tennant, 1984, 1997, L.D. Wilson & Meyer, 1985, Pérez-Santos & Moreno, 1988, 1991, La Marca et al., 1995, Lee, 1996, J.A. Remarks: Official Specific Name no. 2850 *fide* Opinion 1246 (ICZN, 1983).

3. *Drymobius melanotropis* (Cope, 1875a). J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 134–135, pl. 26, fig. 1. (*Dendrophidium melanotropis*)

Type: Holotype, USNM 32597, a 1240 mm male (W.M. Gabb, 1873–1875).

Type locality: "southern portion of the region of Costa Rica."

Distribution: Lower Central America. Eastern Honduras (Colón, Gracias a Dios, Olancho), Nicaragua (Atlántico Sur, Estelí, Matagalpa, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón) and Panama, 60–1200 m.

Sources: Gaige et al., 1937, E.H. Taylor, 1954, L.D.Wilson, 1970c, 1975c, L.D. Wilson & Meyer, 1985, G. Köhler, 1999b, Savage, 2002, Solórzano, 2004, McCranie et al., 2006 and McCranie, 2011a.

Remarks: *Drymobius chloroticus* and *D. melanotropis* probably conspecific *fide* Savage (2002: 662).

4. *Drymobius rhombifer* (A.C.L.G. Günther, 1860e). Proc. Zool. Soc. London 28(1): 236. (*Coryphodon rhombifer*)

Synonym: *Spilotes rhombifer* W.C.H. Peters, 1879.
Type: Holotype, BMNH 1946.1.12.96, an 1100 mm female (L. Fraser, 1857–1859).
Type locality: "Esmeraldas, Ecuador" [= Esmeraldas, Esmeraldas Prov., NW Ecuador, 0°57'N, 79°40'W, elevation 80 m].
Distribution: Lower Central America and NW South America. Eastern Nicaragua (Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Darién, Panamá), Colombia (Amazonas, Boyacá, Caquetá, Chocó, La Guajira, Meta, Narito, Tolima, Valle), Venezuela (Amazonas, Barinas, Bolívar, Zulia), S Guyana (Upper Takutu-Upper Essequibo), N Brazil (Amazonas, Roraima), Ecuador (Esmeraldas, Napo, Pastaza, Pichincha), E Peru (Loreto, Madre de Dios) and Bolivia (La Paz), NSL–1200 m.
Sources; Roze, 1966a, Lancini, 1986, Pérez-Santos & Moreno, 1988, 1991, O'Shea & Stimson, 1993, Starace, 1998, Passos, 2001, Calcaño & Barrio-Amorgós, 2002, Savage, 2002, Solórzano, 2004, Duellman, 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: Type erroneously listed as BMNH 1946.1.12.94 *fide* J.A. Peters (1960a: 519).

DRYMOLUBER Amaral, 1930j (Colubridae)

Synonym: *Drimoluber* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Herpetodryas dichroa* W.C.H. Peters, 1863c.
Distribution: South America.
Sources: J.A. Peters & Orejas-Miranda, 1970, Amaral, 1978, Lehr et al., 2004 and Caldeira-Costa et al., MS.

1. *Drymoluber apurimacensis* Lehr, Carrillo & Hocking, 2004. Copeia 2004(1): 47–49, fig. 2.

Type: Holotype, MHNSM 20672, a 279 mm female (P. Hocking, 15 Jan. 2001).
Type locality: "Abancay (13°38'38"S, 72°52'33"W, elevation 2500 m.), Provincia de Abancay, Departamento de Apurimác, Peru."
Distribution: Southern Peru (Apurimác), 2500–3300 m.

2. *Drymoluber brazili* (J. Gomés, 1918). Mem. Inst. Butantan 1(1): 81–82, pl. 14, fig. 2. (*Drymobius brazili*)

Synonym: *Drymobius rubriceps* Amaral, 1923 & 1926a.
Type: Holotype, IB 696, a 1590 mm male (Tancredo-Franca, Sept. 1914), destroyed by fire 15 May 2010.
Type locality: "Estação de Engenheiro Lisbôa, perto de Uberaba, Estado de Minas Gerais, Brasil."
Distribution: Southeastern Brazil (Bahía, Ceará, Distrito Federal, Espírito Santo, Goiás, Mato Grosso do Sul, Minas Gerais, Paraiba, Piauí, Rondônia, São Paulo, Tocantins) and Paraguay (Canindeyú), 330–1040 m.
Sources: Amaral, 1935e, Nogueira, 2001, Suzart Argôlo, 2004 and Freitas et al., 2012a.

3. *Drymoluber dichrous* (W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 284. (*Herpetodryas dichroa*)

Synonyms: *Herpetodryas occipitalis* A.C.L.G. Günther, 1868, and *Spilotes piceus* Cope, 1868b.
Type: Lectotype, ZMB 1661, an 827 mm male (G.W. Freyreiss), designated by Caldeira-Costa et al., MS.
Type locality: "Brasilien" [= Brazil].
Distribution: Northern South America. Colombia (Antioquia, Boyacá, Guaviare, Meta), SE Venezuela (Amazonas, Bolívar), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Upper Demerara-Berbice), Suriname (Brokopondo, Commewjine, Marowjine, Sipaliwini), French Guiana (Cayenne), Ecuador (Azuay, Chimborazo, Morona-Santiago, Napo, Orellano, Pastaza, Sucumbios), E Peru (Amazonas, Cusco, Huánaco, Juinín, Loreto, Madre de Dios, Pasco, San Martin, Ucayali), N Brazil (Acre, Alagoas, Amapá, Amazonas, Bahia, Ceará, Espírito Santo, Maranhão, Mato Grosso, Minas Gerais, Pará, Paraiba, Pernambuco, Rio de Janeiro, Rondônia, Roraima) and Bolivia (Beni, Cochabamba, Santa Cruz), NSL–3500 m.
Sources: Cunha & Nascimento, 1978, Lancini, 1986, Pérez-Santos & Moreno, 1988, 1991, Lancini & Kornacker, 1989, Starace, 1998, Freire, 2000, Passos & Brandão, 2002, Duellman, 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.

DRYOCALAMUS A.C.L.G. Günther, 1858 (Colubridae)

Synonyms: *Nympha* Fitzinger, 1826a *(nomen praeoccupatum), Odontomus* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Hemidipsas* A.C.L.G. Günther, 1858, *Hydrophobus* A.C.L.G. Günther, 1862b, *Nymphophidium* A.C.L.G. Günther, 1864a, *Nymphophidum* Marschall, 1873 *(nomen emendatum), Ulupe* Blanford, 1878a, *Odontonus* – Senna, 1886 *(nomen incorrectum), Dryacalamus* – F. Werner, 1901b *(nomen incorrectum),* and *Hydropholus* – Deraniyagala, 1955 *(nomen incorrectum).*
Type species: *Dryocalamus tristrigatus* A.C.L.G. Günther, 1858.
Distribution: Southern Asia and East Indies.
Sources: M.A. Smith, 1943 and I. Das, 2010, 2012.

1. *Dryocalamus davisoni* (Blanford, 1878a). Proc. Asiatic Soc Bengal 1878(6): 141. (*Ulupe davisoni*)

Synonym: *Odontomus nympha siamensis* Bocourt, 1886.
Type: Holotype, ZSI 3201 (formerly IMC 3201), a 711 mm specimen (Davison), lost *fide* I. Das et al. (1998: 158).
Type locality: "Foot of Nawlabu hill, west of Tavoy" [= Nawlabu Hill, E of Dawei (14°05'N, 98°13'E), N Tanintharyi Div., S Myanmar, elevation 455 m]. Emended to the foot of Nawlabú Hill, east of Tavoy, in evergreen forest, at an elevation of about 1,500 feet above the sea, Tenasserim Burmaniae *fide* Blanford (1878b: 129–130).
Distribution: Southeast Asia. Bhutan, S Myanmar (Tanintharyi), Thailand (Chanthaburi, Chon Buri, Krabi, Nakhon Ratchasima, Nakhon Si Thammarat, Phra Nakhon, Surat Thani), Cambodia (Kampot), Laos and Vietnam (Binh Thuan, Dong Nai, Ho Chi Minh City, Khanh Hoa, Kien Giang, Quang Binh, Quang Tri, Tay Ninh, Thanh Hoa), NSL–1900 m.
Sources: E.H. Taylor, 1965, Saint Girons, 1972a, Chanard et al., 1999, B.L. Stuart & Emmett, 2006, I. Das, 1999a, B.L. Stuart & Emmett, 2006, V.S. Nguyen et al., 2009, Orlov et al., 2011 and Wangyal, 2011.
Remarks: Supplemental original description in Blanford (1878b: 129–130). Mahendra (1984: 211) listed "Southern China."

D

2. *Dryocalamus gracilis* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 234–235. (*Odontomus gracilis*)

Synonym: *Odontomus fergusonii* Haly, 1888.
Type: Holotype, BMNH 1946.1.13.86, a 533 mm male (R.H. Beddome, 1857–1864).
Type locality: "Anamallay Mountains, Madras Presidency, British India" [= Anamalai Hills, S Western Ghats, E Kerala /W Tamil Nadu States, SW India, ca. 10°22'N, 77°08'E].
Distribution: Southern Asia. Western and Eastern Ghats of India (Andhra Pradesh, Kerala, Orissa, Tamil Nadu), N Sri Lanka (Northern, North-Central, North-Western) and SW Myanmar (Arakan: False Is.), NSL–200 m.
Sources: Wall, 1921g, Jayaram, 1974, Dowling & Jenner, 1988, O'Shea, 2003 and A. Silva & Velarathne, 2005.
Remarks: A synonym of *Dryocalamus nympha* (Daudin) *fide* Mahendra (1984: 211).

3. *Dryocalamus nympha* (Daudin, 1803c). Hist. Nat. Rept. 6: 244–245, pl. 75, fig. 1. (*Coluber nympha*)

Synonyms: *Hydrophobus semifasciatus* A.C.L.G. Günther, 1862b, *Odontomus nympha ceylonensis* F. Müller, 1887, and *Cochliophagus isolepis* Müller, 1924.
Type: Lectotype, BMNH 1946.1.13.69, a 432–440 mm male described and illustrated by P. Russell (1796: 42, pl. 36) (Duffin via P. Russell, 1781–1791), designated by Kucharzewski & Tillack (2008: 47)
Type locality: "Vellore, coast of Coromandel, India" [= Nellore, Andhra Pradesh State, SE India, 14°27'N, 79°59'E, elevation 15 m] via lectotype selection.
Distribution: Southern India (Andhra Pradesh, Karnataka, Orissa, Tamil Nadu) and Sri Lanka (Eastern, North Central, Northern, Sabaragamuwa, Southern), 15 m.
Sources: Wall, 1909c, 1921g, P. Silva, 1969, A. Silva, 1990b, 2001, 2009 and Somaweera, 2006.
Remarks: Description based on P. Russell (1796: 42–43, pls. 36–37).

4. *Dryocalamus philippinus* L.E. Griffin, 1909b. Philippine J. Sci. 4A(6): 596–597.

Type: Neotype, CAS 62174, a 470 mm specimen (L.E. Griffin), designated by A.E. Leviton herein.
Type locality: "Iwahig, Palawan Is., Palawan Prov., S Philippines" via neotype selection.
Distribution: Southern Philippines (Balábac, Palawan).
Remarks: Probably conspecific with *Dryocalamus tristrigatus* Günther *fide* Leviton (1959b: 262).
Remarks: BSM holotype, a 241 mm specimen (W. Schultze), destroyed in Jan. 1945 during World War II. Neotype designation of Leviton (1959b: 263) was unpublished and therefore invalid.

5. *Dryocalamus subannulatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 454–455. (*Odontomus subannulatus*) (*nomen corrigendum*)

Synonyms: *Odontomus sub-annulatus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Odontomus sub-annulatus* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Coronella prosopeion* Bleeker, 1857b *(nomen nudum), Odontomus subannulatus* Bleeker, 1858b *(nomen corrigendum), Hemidipsas ocellata* A.C.L.G. Günther, 1858, *Nymphophidium maculatum* A.C.L.G. Günther, 1864a, and *Dryocalamus davisonii tungsongensis* Nutaphand, 1986.
Type: Holotype, RMNH 985, a 600 mm specimen (S. Müller, 1833–1835).
Type locality: "l'ile de Sumatra" [= W Indonesia]. Restricted to Padang, W. Sumatra *fide* C. Haas (1950: 553).
Distribution: Malay Peninsula and East Indies. Peninsular Thailand (Krabi, Nakhon Si Thammarat, Phang Nga), West Malaysia (Johor, Perak, Pinang, Seribuat Arch.: Sibu, Tinggi, Tioman), Singapore, East Malaysia (Sabah), Brunei, W Indonesia (Mentawai Arch., Siberut Is., Riau Arch., Sumatra) and Philippines (Palawan), 200–350 m.
Sources: Rooij, 1917, Tweedie, 1983, Stuebing, 1991, David & Vogel, 1996, Casper & Burnham, 2001, Wood et al., 2008, Onn et al., 2010 and Grismer, 2011.

6. *Dryocalamus tristrigatus* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 121–122.

Synonym: *Dryocalamus trilineatus* A. Brown, 1902a.
Type: Holotype, BMNH 1946.1.13.78, a 360–368 mm female (Haslar, Mus.).
Type locality: Unknown.
Distribution: Borneo and Philippines. East Malaysia (Sabah, Sarawak), Brunei, N Indonesia (Natuna Arch., Riau Arch.) and S Philippines (Balabac, Palawan), 100–610 m.
Sources: Stuebing, 1991 and Dehling & I. Das, 2006.

DRYOPHIOPS Boulenger, 1896a (Colubridae)

Synonyms: *Dryophops* – Phisalix, 1922 *(nomen incorrectum), Driophiops* – Deuve, 1970 *(nomen incorrectum),* and *Dryphiops* – K.K.P. Lim & Chou, 1990 *(nomen incorrectum).*
Type species: *Dipsas rubescens* Gray, 1835 *in* Gray & Hardwicke, 1830–1835.
Distribution: Southeastern Asia and East Indies.
Sources: M.A. Smith, 1930a, C. Haas, 1950 and Leviton, 1964c.

1. *Dryophiops philippina* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 195, pl. 9, fig. 2.

Type: Lectotype, BMNH 1946.1.8.7, a male (J. Whitehead Exped., March–July 1895), designated by Leviton (1964c: 142).
Type locality: "Cape Engano, northern Luzon" [= Cape Engaño, Cagayan Prov., N Luzon, Philippines, 18°35'N, 122°08'E, elevation 50 m] via lectotype selection.
Distribution: Philippines (Luzón, Mindanao, Mindoro, Romblon, Sibuyan and Negros), NSL–1000 m.
Sources: E.H. Taylor, 1922a and B.E. Smith, 1993.

2. *Dryophiops rubescens* (Gray, 1835 *in* Gray & Hardwicke, 1830–1835). Illust. Indian Zool. 2(19–20): pl. 84, fig. 2. (*Dipsas rubescens*)

Synonym: *Dendrophis sumatrana* Bleeker, 1857a (*nomen nudum*).
Type: Holotype, BMNH 1946.1.9.62, a female (T. Hardwicke,1756–1823)
Type locality: Unknown. Designated as Bengal, India (in error) *fide* A.C.L.G. Günther (1858: 146). Corrected to Malay Peninsula *fide* Boulenger (1896a: 194).
Distribution: Southeast Asia and East Indies. Peninsular Thailand (Narathiwat, Pattani, Phuket, Surat Thani, Trang), West Malaysia (Kedah, Kelantan, Pahang, Pinang, Perak, Perlis, Selangor, Phuket, Penang and Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Java, Kalimantan, Mentawai Arch., Natuna Arch., Sumatra) and S Philippines (Corón), NSL–500 m.
Sources: E.H. Taylor, 1925, 1965, Soderberg, 1967a, C.B. Frith, 1977a, Tweedie, 1983, K.F.L. Lim & Lee, 1989, David & Vogel, 1996, M.J. Cox et al., 1998, I. Das, 2007b, 2010, 2012 and Grismer, 2011.
Remarks: Label on jar of type reads "Bengal" but locality probably in Malay Peninsula *fide* E.H. Taylor (1965: 894).

DRYSDALIA Worrell, 1961c (Elapidae)

Type species: *Hoplocephalus coronoides* A.C.L.G. Günther, 1858.
Distribution: Southern Australia.
Sources: Coventry & Rawlinson, 1980, Shine, 1981a, Cogger et al., 1983a, Golay, 1985, S.K. Wilson & Knowles, 1988, Hoser, 1989, 2012e, Hutchinson, 1990, Greer, 1997, David & Ineich, 1999, Cogger, 2000, Sanders et al., 2008 and Zaher.et al., 2009.

1. *Drysdalia coronoides* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 215–216. (*Hoplocephalus coronoides*)

Synonyms: *Alecto labialis* Jan, 1873 *in* Jan & Sordelli, 1870–1881 *(nomen praeoccupatum), Denisonia nigra* De Vis, 1905, and *Elapognathus orri* Wells & Wellington, 1985.
Type: Lectotype, BMNH 1946.1.17.39 (formerly BMNH 1852.1.15.29), a 423 mm female (R.C. Gunn, July 1832–Jan. 1847), designated by Coventry & Rawlinson (1980: 69).
Type locality: "Van Diemens Land" [= Tasmania, Australia] via lectotype selection.
Distribution: Southeastern Australia (Australian Capital Territory, E New South Wales, ext. SE South Australia, Tasmania, S Victoria, Babel, Badger, Cape Barron, Clarke, Curtis, Deal, Erith, Flinders, Great Dog, Inner Sister, King, Preservation and West Sister Is.), NSL–2125 m.
Sources: F. McCoy, 1878c and Littlejohn, 1962.

2. *Drysdalia mastersii* (Krefft, 1866a). Proc. Zool. Soc. London 34(1): 370. (*Hoplocephalus mastersii*)

Type: Lectotype, BMNH 1946.1.17.42 (formerly BMNH 1866.6.13.2), a 285 mm female (G. Masters, 13 June 1866), designated by Coventry & Rawlinson (1980: 72).
Type locality: "Flinder's Distribution, South Australia" via lectotype selection.
Distribution: Southern Australia (S South Australia, ext. W Victoria, ext. SE Western Australia, Fenelon and St. Francis Is.), NSL–315 m.

3. *Drysdalia rhodogaster* (Jan, 1873 *in* Jan & Sordelli, 1870–1881). Icon. Gén. Ophid. 3(44): 6, pl. 2, figs. 2, a–b, d, f–g, n, p, r, v. (*Alecto rhodogaster*)

Synonyms: *Alecto rhodogaster* Jan, 1863b (*nomen nudum*), *Hoplocephalus collaris* Macleay, 1887b, and *Pseudelaps minutus* D. Fry, 1915.
Type: Holotype, ZMH 747 (formerly ZMH 477), a 314 mm specimen.
Type locality: "Australia."
Distribution: Extreme SE Australia (SE New South Wales), NSL–2000 m.

D

DUBERRIA Fitzinger, 1826a (Pseudoxyrhophiidae)

Synonyms: *Homalosoma* Wagler, 1830, *Brachyblemma* Wagler, 1833 *(nomen substitutum), Duberia* – Gray, 1841b *(nomen incorrectum), Omalosoma* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Dauberria* – Steindachner, 1867a *(nomen incorrectum), Homolosoma* – Sclater, 1891b *(nomen incorrectum), Homalosona* – Cope, 1892a *(nomen incorrectum),* and *Homulosoma* – Arnold, 1982 *(nomen incorrectum).*
Type species: *Coluber lutrix* Linnaeus, 1758.
Distribution: Eastern Africa.
Sources: Loveridge, 1944b, Broadley, 1983, Vidal & Hedges, 2002, Lawson et al., 2005, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Duberria lutrix* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 216. (*Coluber lutrix*)

Synonyms: *Coluber duberria* Merrem, 1790, *Coluber angustus* Suckow, 1797, *Coluber tetragonus* Latreille *in* Sonnini & Latreille, 1801b, *Coluber arctiventris* Daudin, 1803d, *Coluber eratron* Hermann, 1804, *Cyclophis catenatus* Theobald, 1868b, *Homalosoma abyssinicum* Boulenger, 1894a, *Homalosoma lutrix atriventris* Sternfeld, 1912, *Duberria lutrix currylindahli* Laurent, 1956a, and *Duberria lutrix basilewskyi* Skelton-Bougeois, 1961.
Type: Holotype, not designated, location unknown.
Type locality: "Indiis" [= India] (in error). [= shipment received via the Cape of Good Hope, South Africa *fide* Flower (1933: 818) and Loveridge (1933: 241).
Distribution: Eastern Africa. Ethiopia (Arussi, Bale, Hararge, Shoa, Wollo), SW Kenya (Central, Nairobi, S Rift Valley), E Democratic Republic of the Congo (NE Katanga, Nord-Kivu, E Orientale), NE Tanzania (Kilimanjaro), Mozambique (Manica, Sofala, Tete), Swaziland and E South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Western Cape), NSL–3250 m.
Sources: Loveridge, 1933, 1942, Laurent, 1956a, Broadley, 1958, Witte, 1962, Pitman, 1974, Branch, 1988, Largen & Rasmussen, 1993, Spawls et al., 2002, J.C. Murphy & Schlager, 2003 and Largen & Spawls, 2009.

2. *Duberria rhodesiana* Broadley, 1958. Occ. Pap. Natl. Mus. So. Rhodesia 3B(22): 215–216. (*Duberria lutrix rhodesiana*)

Type: Holotype, NMZB 916 (formerly NM/M 916), a 275 mm female (D.G. Broadley, 29 Dec. 1956).
Type locality: "Chishawasha, near Salisbury, Southern Rhodesia" [= Chishawasha, Mashonaland East Prov., NE Zimbabwe, 17°46'S, 31°13'E, elevation 1400 m].
Distribution: Northeastern Zimbabwe (Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West), 1100–1550 m.
Sources: Broadley, 1959, Broadley & Cock, 1975 and Broadley & Blaylock, 2013.
Remarks: A valid species *fide* Broadley & Blaylock (2013: 227).

3. *Duberria shirana* (Boulenger, 1894a). Cat. Snakes Brit. Mus. 2: 276, pl. 13, fig. 1. (*Homalosoma shiranum*)

Type: Holotype, BMNH, a 310 mm female (H.H. Johnston, 1890–1894).
Type locality: "Shiré Highlands, Nyasaland" [= Shire Highlands, Southern Region, Malawi, bet. 15°15'–16°00'S, 35°00'–35°15'E].
Distribution: East Africa. Southeastern Democratic Republic of the Congo (SW Katanga, Sud-Kivu), Burundi, SW Uganda (Central, Western), S Tanzania (Iringa, Ruvuma), NE Zambia (Northern) and N Malawi (Northern), 1800–2200 m.
Sources: Loveridge, 1933, 1942, Bogert, 1940, Laurent, 1956a, Vesey-FitzGerald, 1958, Witte, 1962, Broadley & Howell, 1991 and Broadley et al., 2003.
Remarks: A valid species *fide* McDowell (1987: 37).

4. *Duberria variegata* (W.C.H. Peters, 1854). Mber. Königl. Akad. Wiss. Berlin 1854(11): 622. (*Homalosoma variegatum*)

Type: Holotype, ZMB 4802, a 325 mm female (W.C.H. Peters, June 1843–Aug. 1847).
Type locality: "Inhambane" [Inhambane Prov., Mozambique, 23°52'S, 35°23'E, elevation 10 m].
Distribution: Southeastern Africa. Southern Mozambique (Gaza, Inhambane, Maputo, Inhaca Is.) and NE South Africa (KwaZulu-Natal), NSL–50 m.
Sources: Haacke & Burton, 1978, Branch, 1988 and Broadley, 1990a.

†*DUNNOPHIS* M.K. Hecht, 1959 (Tropidophiidae)

Type species: †*Dunnophis microechinis* M.K. Hecht, 1959.

Distribution: Middle Eocene-upper Eocene of USA, lower Eocene-lower Oligocene of Belgium, France, Germany and Portugal, and middle Paleocene of USA.
Sources: Rage, 1984b, 1991, McDowell, 1987, Duffaud & Rage, 1997, Holman, 2000a and Szyndlar et al., 2008.

1. †*Dunnophis cadurcensis* Rage, 1974. Palaeovertebrata 6(3–4): 297–299, fig. 8.

Type: Holotype, USTL MAL 600, one middle trunk vertebra.
Type locality: "Malpérié, Phosphorites du Quercy, Eocène supérieur" [= Malpérié, Tarn-et-Garonne Prov., France; Phosphorites du Quercy, Headonian, upper Eocene *fide* Rage, 1984b: 29].
Distribution: Upper Eocene (Priabonian, MP 17–20, 33.9–37.2 mya) of France.

2. †*Dunnophis matronensis* Rage, 1973a. C.R. Somm. Soc. Géol. France 3: 76–77, figs. a–e.

Type: Holotype, MNHN GR 7892, one middle trunk vertebra.
Type locality: "Grauves (Marne, France); Cuisien, Éocène moyen" [= lower Rhenanian, lower Eocene *fide* Rage, 1984b: 29].
Distribution: Lower Eocene (Neustrian, MP 8/9: 48.6–55.8 mya, and Rhenanian, MP 11: 48.6 mya) and middle Eocene of France.
Source: Rage & Augé, 2010.

3. †*Dunnophis microechinis* M.K. Hecht, 1959. Bull. Amer. Mus. Nat. Hist. 117(3): 144–145, pl. 56, figs. 1–5.

Type: Holotype, AMNH 3830, one middle trunk vertebra.
Type locality: "Locality 5 (T.27-29N., R. 103–106 W.), vicinity of Tabernacle Butte and Elk Mountain, 25 miles north of the village of Farson, southeast corner of Sublette County, Wyoming, USA."
Distribution: Lower Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming). Known only from type locality.
Source: Holman, 2000a.

E

ECHINANTHERA Cope, 1894c (Xenodontidae)

Synonym: *Caapora* Bailey *in* Di-Bernardo, 1992.
Type species: *Aporophis cyanopleurus* Cope, 1885a.
Distribution: South America.
Sources: Di-Bernardo, 1992, C.W. Myers & Cadle, 1994, Schargel et al., 2005, A.P. Santos et al., 2008, Zaher et al., 2009 and Vidal et al., 2010.

1. *Echinanthera amoena* (Jan, 1863a). Arch. Zool. Anat. Fis. 2(2): 268–269. (*Enicognathus amoenus*)

Type: Holotype, formerly MSNM, a 590 mm specimen, destroyed in 1943 during World War II.
Type locality: Unknown.
Distribution: Southeastern Brazil (S Minas Gerais, Paraná, Rio de Janeiro, São Paulo), 500–1450 m.
Source: Marques et al., 2001.
Remarks: *Liophis incertae sedis fide* Dixon (1980: 5).

2. *Echinanthera cephalomaculata* Di-Bernardo, 1994. Biociències 2(2): 79–81, fig. 1.

Type: Holotype, MCP 5118 (formerly IVB 1478), a 561 mm female (F. Pedro Celestino, Dec. 1992).
Type locality: "Pedra Talhada, município de Quebrângulo, estado de Alagoas, Brasil" [= Serra da Pedra Talhada, Quebrângulo municipality Alagoas State, NE Brazil, (9°19'S, 36°28'W, elevation 380 m].
Distribution: Northeastern Brazil (Alagoas), 380 m. Known only from type locality.

3. *Echinanthera cephalostriata* Di-Bernardo, 1996. The Snake 27(2): 120–123, fig. 2.

Type: Holotype, MCP 5871, a 686 mm male (W. Regis, 18 Jan. 1963).
Type locality: "Serra de Teresópolis, Rio de Janeiro, Brazil" [= 22°25'S, 42°58'W, elevation 895 m].
Distribution: Brazil (Bahia, Espírito Santo, Minas Gerais, Paraná, Rio de Janiero, Santa Catarina, São Paulo, Cardoso, Santo Amaro, São Sebastião and São Vicente Is.), 600–900 m.
Sources: Marques et al., 2001, Cicchi et al., 2007 and Argôlo & Jesus, 2008.

4. *Echinanthera cyanopleura* (Cope, 1885a). Proc. Amer. Philos. Soc. (1884) 22: 191–192. (*Aporophis cyanopleurus*)

Types: Syntypes (2), ANSP 11198–99, longest syntype 805 mm (H.H. Smith [Morgan Exped.], 1870).
Type locality: "Rio Grande do Sul, Brazil, probably São Joao do Monte Negro."
Distribution: Southeastern and S Brazil (Espírito Santo, Minas Gerais, Paraná. Rio de Janeiro, Rio Grande do Sul, Santa Catarina, São Paulo) and NE Argentina (Misiones), 10–1025 m.
Source: Giraudo et al., 1996.

5. *Echinanthera melanostigma* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 17–18, pl. 4, fig. 2. (*Natrix melanostigma*)

Type: Lectotype, ZSM 199/0, a 716+ mm male (J.B. von Spix & K.F.P. von Martius, Sept. 1818–April 1819), designated by Hoogmoed & Gruber (1983: 327)
Type locality: "provinciae Bahiae" [= Bahia State, NE Brazil] via lectotype selection.
Distribution: Southeastern Brazil (SE Bahia, Minas Gerais, Rio de Janeiro, São Paulo, Santo Amaro and São Vicente Is.), 1100 m.
Sources: Lema, 1987, Lima-Silveira et al., 2004a and Cicchi et al., 2007.
Remarks: Dixon (1980: 11) listed as *incertae sedis* under *Liophis*.

6. *Echinanthera undulata* (Wied-Neuwied, 1824b). Isis von Oken 14(6): 667. (*Coluber undulatus*)

Synonym: *Rhadinaea binotata* F. Werner, 1909b.
Type: Holotype, not designated, a 677 mm specimen (Wied-Neuwied, 25 Sept.–23 Nov. 1815), location unknown.
Type locality: "Brasilien" [= Brazil]. Restricted to Parahyba [= Paráiba State], Brazil *fide* Wied-Neuwied (1825c: 332).
Distribution: Southeastern Colombia (Amazonas) and E Brazil (S Minas Gerais, Paraíba, Paraná, Rio de Janeiro, Santa Catarina, São Paulo, Comprida and São Vicente Is.), NSL–1025 m.
Sources: Pérez-Santos, 1986, Marques et al., 2001 and Cicchi et al., 2007.
Remarks: *Incertae sedis fide* C.W. Myers (1974: 22) and Dixon (1980: 17). Possibly occurs in E Ecuador and Guianas *fide* Hoogmoed (1979: 276).

ECHIOPSIS Fitzinger, 1843 (Elapidae)

Synonyms: *Echinopsis* – Tschudi, 1846 *(nomen incorrectum), Alecto* Jan, 1859a *(nomen praeoccupatum), Brachyaspis* Boulenger, 1896a *(nomen praeoccupatum), Brachyaspi* – Brazil, 1911 *(nomen incorrectum),* and *Echropsis* – Wallach, 1985 *(nomen incorrectum).*

Type species: *Naja curta* Schlegel, 1837.

Distribution: Southern Australia.

Sources: Storr, 1980, Shine, 1982, Cogger et al., 1983a, Mengden, 1985a, Storr et al., 1986, Hutchinson, 1990, Bush et al., 1995, Greer, 1997, David & Ineich, 1999, Scanlon & Lee, 2004, Sanders et al., 2008, Zaher et al., 2009 and Hoser, 2012e.

Remarks: A synonym of *Notechis fide* Storr, 1982 and Wallach, 1985.

1. *Echiopsis curta* (Schlegel, 1837). Essai Phys. Serp. 1: 185, 2: 486–487, and (*Naja curta*)

Synonyms: *Hoplocephalus temporalis* A.C.L.G. Günther, 1862b, *Echiopsis carata* – Mushinsky, 1987 *(nomen incorrectum),* and *Echiopsis curta martinekae* Hoser, 2012ac *(nomen illegitimum).*

Type: Holotype, MNHN 953, a 475+ mm male (J.R.C. Quoy & J.P. Gaimard [Astrolabe Voy.], July 1827).

Type locality: "dans les environs du Port du Roi Georges, à la Nouvelle Hollande" [= vicinity of King George's Sound, SW Western Australia, ext. SW Australia].

Distribution: Southern Australia (ext. SW New South Wales, S South Australia, ext. NW Victoria, SW Western Australia), NSL–640 m.

Remarks Original description reprinted in Schlegel (1844 *in* 1837–1844: 140, pl. 48, figs. 18–20).

ECHIS Merrem, 1820 (Viperidae)

Synonyms: *Scythale* I. Geoffroy-Saint-Hilaire, 1827 *(nomen emendatum), Toxicoa* Gray, 1849a, *Enchis* – Haltom, 1931 *(nomen incorrectum), Ecchis* – Rosenfeld, Kelen & Nudel, 1964 *(nomen incorrectum),* and *Turanechis* Cherlin, 1990.

Type species: *Pseudoboa carinata* J.G. Schneider, 1801.

Distribution: Northern Africa, Middle East and S Asia.

Sources: Hughes, 1976a, Arnold, 1980b, Cherlin, 1983, 1990, Joger, 1984, J.S. Ashe & Marx, 1988, Gasperetti, 1988, Cherlin & Borkin, 1990, Auffenberg & Rehman, 1991, Ineich & Tellier, 1992, Golay et al., 1993, Schätti & Gasperetti, 1994, Spawls & Branch, 1995, Herrmann & Joger, 1995, 1997, David & Ineich, 1999, Herrmann et al., 1999, Joger & Courage, 1999, McDiarmid et al., 1999, Lenk et al., 2001b, Mallow et al., 2003, Dobiey & Vogel, 2007, Arnold et al., 2009, Pook et al., 2009, Stümpel & Joger, 2009, Phelps, 2010 and Hoser, 2012d.

Remarks: Genus paraphyletic *fide* Herrmann & Joger (1997: 55).

1. *Echis borkini* Cherlin, 1990. Proc. Zool. Inst., USSR Acad. Sci. 207: 211–212. (*Echis varia borkini*)

Synonym: *Echis varia borkini* Cherlin, 1990b *(nomen nudum).*

Type: Holotype, BMNH 1899.12.5.181, a 555 mm specimen (W.R. Ogilive-Grant & Zorber, 1899).

Type locality: "Arábie, Lahij" [= Lahij, Lahij Governate, Yemen, 13°04'N, 44°53'E, elevation 140 m].

Distribution: Southwestern Saudi Arabia and W Yemen (Aden, Lahij, San'a), 140 m.

Source: Pook et al., 2009.

Remarks: A valid species *fide* Pook et al. (2009: 793).

2. *Echis carinatus* (J.G. Schneider, 1801). Hist. Amph. 2: 285–286. (*Pseudoboa carinata*)

Synonyms: *Boa horatta* G. Shaw, 1802, *Scytale bizonatus* Daudin, 1803b, *Boa horrata* – Gray, 1825 *(nomen incorrectum), Scytale zic zac* Gray, 1825 *(nomen incorrigendum), Echis ziczac* Gary, 1849 *(nomen corrigendum), Vipera noratta* – Jerdon, 1854 *(nomen incorrectum), Coluber gariba* Seetzen, 1855, *Vipera superciliosa* Jan, 1859b, *Echis carinatus nigrocincta* Ingoldby & Procter, 1923 *(nomen nudum), Echis carinatus sinhaleyus* Deraniyagala, 1951, *Echis carinatus sochureki* Stemmler, 1968a, *Echis carinatus astolae* Mertens, 1970, *Echis carinatus sinahleyus* – Hughes, 1976a *(nomen incorrectum), Echis carinas* – Latifi, 1978 *(nomen incorrectum), Echis multisquamatus* Cherlin, 1981, *Echis soshureki soshureki* – Cherlin, 1990 *(nomen incorrectum),* and *Echis carinatus sinhalensis* Auffenberg & Rehman, 1991 *(nomen emendatum).*

Type: Lectotype, a 381 mm specimen described and illustrated by P. Russell (1796: 2–3, pl. 2) (Bonniveaux, 1778), designated herein.

Type locality: "Arni, India" [= Yavatmal, Maharashtra State, W India, 20°23'N, 78°07'E, elevation 450 m] via lectotype selection.

Distribution: Arabia, SW and S Asia. United Arab Emirates (Dubai, Fujairah, Ras al Khaimah, Sharjah), N Oman (Al Batinah, Al Wusta, Ash Sharqiyah, Muscat, Masirah Is.), SE Iraq, Iran (Bushehr, Fars, Hormozghan, Kerman, Khuzestan, Sistan va Baluchestan), Uzbekistan, Turkmenistan, Tadzhikistan, Afghanistan (Helmand), Pakistan (Balochistan, F.A.T.A., Jammu & Kashmir, Khyber Pakhtunkhwa, Punjab, Sindh, Astola Is.), India (Andhra Pradesh, Bihar, Delhi, Goa, Gujarat, Jammu, N Karnataka, Kashmir, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu), Bangladesh and Sri Lanka (Eastern, Northern, North-Western, Southern, Iranetivu and other Is.) NSL–2000 m.

Sources: Wall, 1908e, 1921g, M.A. Smith, 1943, H.W. Parker, 1949, Deraniyagala, 1951, 1955, Deoras, 1965,

Stemmler, 1965, Singh, 1972, Drewes & Sacherer, 1974, Whitaker, 1978a, P. Silva, 1980a, J. Daniel, 1983, Latifi, 1991, Gasperetti, 1988, A. Silva, 1990b, 2009, Auffenberg & Rehman, 1991, M.S. Khan, 2002, 2006, J.C. Murphy & Schlager, 2003, Whitaker & Captain, 2004, N. Khaire, 2006, Somaweera, 2006, Pook et al., 2009 and Masroor, 2012.

Remarks: Original description based on P. Russell (1796: 2–3, pl. 2). Sokotra record questionable *fide* Golay et al. (1993: 270).

3. *Echis coloratus* A.C.L.G. Günther, 1878. Proc. Zool. Soc. London 46(1): 978. (*Echis colorata*) (*nomen protectum*)

Synonyms: *Echis froenata* A.-M.-C. Duméril, Bibron & Duméril, 1854b (*nomen suppressum), Echis coloratus terraesanctae* Babocsay, 2003.

Type: Holotype, BMNH 1946.1.20.84 (formerly BMNH 1878.9.28.6), a 686 mm female (R.F. Burton, 1877).

Type locality: "Jerbel Shárr, at an altitude of 4500 feet above the level of the sea, Midian" [= Jabal Shar Mountain, W Tabuk Govern., ext. NW Saudi Arabia, 27°39'N, 35°45'E, elevation 1370 m].

Distribution: Northeastern Africa, Middle East and Arabia. Eastern Egypt (Al Ahmar, El-Bahr El-Ahmar, Cairo, North Sinai, South Sinai, Suez), NE Sudan, S Israel (SE Northern, Southern, West Bank), W Jordan (Ajloun, Aqaba, Balqa, Irbid, Karak, Maan, Madaba, Tafilah), W Saudi Arabia (Asir, Bahah, N Eastern, Jazan, Madinah, Makkah, Qasim, Riyadh, Tabuk), E United Arab Emirates (Fujairah), Oman (Al Batinah, Ash Sharqiyah, Dhofar, Muscat, Musandam) and Yemen (Abyan, Aden, Hadhramaut, Ma'rib, Sa'dah, Sana'a, Shabwah), NSL–2600 m.

Sources: J. Anderson, 1900, H.W. Parker, 1949, Mendelsson, 1965, Y. Werner, 1973, Arnold & Gallagher, 1977, Joger, 1987, Gasperetti, 1988, Schätti, 1989, Leviton et al., 1992, Wilms & Hulbert, 2000, Bouskila & Amitai, 2001, Disi et al., 2001, Baker et al., 2004, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

Remarks: Official Specific Name no. 2736 *fide* Opinion 1176 (ICZN, 1981b).

4. *Echis hughesi* Cherlin, 1990. Proc. Zool. Inst., USSR Acad. Sci. 207: 212–213, pl. 4, fig. 3.

Synonym: *Echis hughesi* Cherlin, 1990 *(nomen nudum).*

Type: Holotype, BMNH 1931.7.20.405, a 322 mm female (R. Taylor, 1931).

Type locality: "Somalia, 10°02'N, 49°E" [= Within the Sol Haud, about 50 km from the Somalian coast and probably above 3000 ft (864 m) *fide* Hughes, 1976a: 365].

Distribution: Northern Somalia (NE Sanaag), 865 m.

Remarks: Possibly conspecific with *E. pyramidum*.

5. *Echis jogeri* Cherlin, 1990. Proc. Zool. Inst., USSR Acad. Sci. 207: 209, pl. 5, fig. 2.

Synonym: *Echis jogeri* Cherlin, 1990 *(nomen nudum).*

Type: Holotype, MHNH 1993.144, a 283 mm (svl) female.

Type locality: "Mali, 3 km from Tombokto" [= Timbuktu, Tombouctou Regiom, cen. Mali, 16°47'N, 3°01'W, elevation 270 m] (possibly in error *fide* Pook et al., 2009: 801).

Distribution: West Africa. Senegal (Tambacounda), N Guinea and cen. Mali (Timbuktu), 80–270 m.

Remarks: A valid species *fide* Pook et al. (2009: 793). Holotype erroneously listed as MNHN A 144 *fide* Cherlin (1990: 209).

6. *Echis khosatzkii* Cherlin, 1990. Proc. Zool. Inst., USSR Acad. Sci. 207: 213–214, pl. 4, fig. 2.

Synonyms: *Coluber hoelleik* Forskal *in* Niebuhr, 1775 *(nomen oblitum),* and *Echis khosatzkii* Cherlin, 1990 *(nomen nudum).*

Type: Holotype, BMNH 1897.3.11.117, a 464 mm male (J.T. Bent, 1893 via J. Anderson).

Type locality: "Arabia, Hadhramaut" [= eastern Yemen].

Distribution: Eastern Yemen (E Aden) and probably S Oman *fide* Arnold et al. (2009: 273).

Sources: Lenk et al., 2001b and Schätti, 2001.

Remarks: A valid species *fide* Pook et al. (2009: 793). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Echis khosatzkii* Cherlin is designated a *nomen protectum* and *Coluber hoelleik* Forskal a *nomen oblitum*.

7. *Echis leucogaster* Roman, 1972. Notes Doc. Volta. 5(4): 7–12, figs. 3–8. (*Echis carinatus leucogaster*)

Type: Holotype, CVRS 191, a 700 mm female, lost *fide* Golay et al. (1993: 271).

Type locality: "Boubon, à 20 km au Nord de Niamey, Niger" [= Niamey Dept., ext. SW Niger, 13°36' N, 1°56'E, elevation 200 m].

Distribution: North Africa. Southern Morocco (Tan Tan), S Algeria (Tamanrasset), N Western Sahara (Saguia El Hamra), Mauritania (Adrar, Guidimaka, Hodh Ech Chargui, Hodh El Gharbi, Tagant), Senegal (Dakar, Fatick, Louga, Matam, Saint-Louis, Tambacounda), Gambia, NW Guinea (Koundara), N Mali (Gao, Kayes, Koulikoro, Mopti, Ségou, S Tombouctou), NE Burkina-Faso (Sahel), Niger (Agadez, Diffa, Dosso, Maradi, Niamey, Tahoua, Zinder), N Nigeria and Chad (Kanem), 120–1325 m.

Sources: Roman, 1975, 1976, 1980, Bons & Geniez, 1996, Geniez et al., 2004, Chippaux, 2006 and J.-F. Trape & Mané, 2006b.

Remarks: Cherlin & Borkin (1990: 188) proposed the name *Echis arenicola* for two West African populations whereas the type locality of *E. arenicola* is Egypt. As *E. arenicola* appears to be conspecific with *E. pyramidum*, it is not recognized herein. A subspecies of E. *arenicolus* (= *E. pyramidum*) *fide* Schleich et al. (1996:

541). Possibly a valid species *fide* Pook et al. (2009: 12). Possibly occurs in Tunisia and SW Libya *fide* Cherlin (1990: 217).

8. *Echis megalocephalus* Cherlin, 1990. Proc. Zool. Inst., USSR Acad. Sci. 207: 212, pl. 4, fig. 1.

Synonym: *Echis megalocephalus* Cherlin, 1990 *(nomen nudum).*

Type: Holotype, ZISP 19430.1, a 601 mm male (Russian Navy surgeon).

Type locality: "island in southern Red Sea" [= Nokra Is., Dahlak Archipelago, Red Sea, Ethiopia (= Nokra Is., Northern Red Sea Prov., E Eritrea, 15°42'N, 39°56'E) *fide* Borkin & Cherlin, 1995: 136].

Distribution: Eritrea (Northern Red Sea: Nokra Is.). Known only from type locality.

Sources: Schätti, 2001 and Largen & Spawls, 2010.

Remarks: Probably occurs on Andeber Is. *fide* Schätti (2001: 145). Possibly a synonym of *E. pyramidum*.

9. *Echis ocellatus* Stemmler, 1970. Rev. Suisse Zool. 77(2): 273–274, figs. 1–2. (*Echis carinatus ocellatus*)

Type: Holotype, NMBA 17692, a 400 mm female (M. Lamantellerie, 12 May 1962).

Type locality: "Haute Volta, Garango, 048 N, 033 W" [= Garango, Centre-Est Dept., SE Burkina Faso, 11°48'N, 0°34'W, elevation 300 m].

Distribution: West Africa. Extreme SW Mauritania (Trarza), Senegal (Dakar, Kédougou, Kolda, Matam, Tambacounda), Gambia, E Guinea (Faranah), S Mali (Kayes, Koulikoro, Ségou, Sikasso, S Tombouctou), Ivory Coast (Daloa, Duékoué, Ferkéssédougou, Toumodi), Burkina-Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Sahel, Sud-Ouest, Volta-Noire), Ghana (Accra, Brong-Ahafo, Eastern, Northern, Upper East, Upper West), Togo (Centrale, Kara, Maritime, Plateaux, Savanes), Benin (Alibori, Atakora, Borgou, Collines, Ouémé, Zou), ext. SW Niger (Dosso, Niamey), Nigeria (Anambra, Benue, Gongola, Kaduna, Kwara, Plateau, Sokoto), ext. SW Chad (Chari-Baguirmi, Mayo-Kebbi Est, Tandjile), N Cameroon (Extreme-Nord, Nord) and W Central African Republic (Ombella-Mpoko, Ouham-Pende), NSL–1000 m.

Sources: Doucet, 1963, Hughes, 1976a, 2013, J.-F. Trape & Mané, 2004, 2006b, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Ullenbruch et al., 2010 and Segniagbeto et al., 2011.

10. *Echis omanensis* Babocsay, 2004. Syst. Biodiv. 1(4): 506–510, figs. 2–3.

Type: Holotype, BMNH 1973.2113, a 600 mm male (E.N. Arnold, 28 May 1973).

Type locality: "Wadi as Siji, region of Masafi (25°18'N 56°10'E), United Arab Emirates."

Distribution: Northern Oman (Al Dakhiliyah,) and E United Arab Emirates, NSL–1000 m.

Source: Grossmann et al., 2012.

Remarks: A valid species *fide* Pook et al. (2009: 793).

11. *Echis pyramidum* (I. Geoffroy-Saint-Hilaire, 1827 *in* Savigny, 1809–1829). Desc. Rept. Égypt 1(1): 152–154, pl. 8, fig. 1. (*Scytale pyramidum*)

Synonyms: *Echis arenicola* H. Boie *in* F. Boie, 1827, *Echis pavo* A. Reuss, 1834, *Vipera echis* Schlegel, 1837, *Echis carinatus leakeyi* Stemmler & Sochurek, 1969, *Echis pyramidum lucidus* Cherlin, 1990, *Echis varia darevskii* Cherlin, 1990 *(nomen nudum),* and *Echis varia darevskii* Cherlin, 1990.

Type: Lectotype, MNHN 4031, a 457 mm female, designated by Stemmler & Sochurek (1969: 90).

Type locality: "Kaire, Egypte" [= Cairo, Cairo Govern., NE Egypt, 30°03'N, 31°14'E, elevation 30 m] via lectotype selection.

Distribution: North Africa and Arabia. N Algeria, N Tunisia (Medinine), N Libya, Egypt (Assiut, Beni Suef, Cairo, SE El-Bahr El-Ahmar, Faiyum, Matrouh), NE Central African Republic (Vakaga), SE South Sudan (Eastern Equatoria), Eritrea (Anseba, Gash-Barka, Northern Red Sea, Southern Red Sea, Andeber and Nacra Is.), Ethiopia (Gemu Gofa, Hararge, Kefa, Shoa, Sidamo, Tigre, Wollo), Djibiouti, N Somalia (Awdal, Bari, Mudug, Nugaal, Sanaag, Woqooyi Galbeed), N Kenya (N Eastern, N North-Eastern, N Rift Valley), SW Saudi Arabia (Jazan), W Oman (Dhofar) and Yemen (Abyan, Ad Dali', Aden, Al Hudaydah, Hadhramaut), NSL–1700 m.

Sources: Stemmler, 1971a, 1972c, Drewes, 1972, Lanza, 1983a, 1990b, Gasperetti, 1988, Schätti, 1989, 2001, Schleich et al., 1996, Spawls et al., 2002, Chippaux, 2006, Chirio & Ineich, 2006, Pook et al., 2009 and Largen & Spawls, 2010.

Remarks: See discussion of the original description date in McDiarmid et al. (1999: 381).

12. *Echis varius* A. Reuss, 1834. Mus. Senck. 1: 160–162, pl. 7, figs. 2a–b. (*Echis varia*)

Synonym: *Echis carinatus aliaborri* Drewes & Sacherer, 1974.

Type: Holotype, SMF 21058 (formerly SMF-R III.J.J.1.a & SMF-B 9505a), a 565 mm female (E. Rüppell, 1828).

Type locality: "Abyssinien, nördliche Africa" [= Ethiopia, N Africa]. Emended to Nubia *fide* Boettger, 1898: 135 [= SE Egypt or, more probably, the Nubian Desert of NE Sudan].

Distribution: Northeastern Africa. Northeastern Sudan (El-Bahr El-Ahmar), N Somalia (Bari, Mudug, Nugaal, Samaag, Woqooyi Galbeed) and NE Kenya (N North-Eastern), 300 m.

Remarks: Possibly a valid species *fide* Pook et al. (2009: 793). Possibly a subspecies/synonym of *E. pyramidium*.

EIRENIS Jan, 1863a (Colubridae)

Synonyms: *Pediophis* Fitzinger, 1843, *Psilosoma* Jan, 1863b *(nomen praeoccupatum), Eiremias* – Westphal-Castelnau, 1870 *(nomen incorrectum), Pseudocyclophis* Boettger, 1888, *Eireinis* – Taub, 1965 *(nomen incorrectum), Eirinis* – Taub, 1965 *(nomen incorrectum), Eiremis* – J.A. Peters & Orejas-Miranda, 1970 *(nomen incorrectum), Eirensis* – Murthy, 1972b *(nomen incorrectum), Elrensis* – Gasperetti, 1974 *(nomen incorrectum), Collaria* Dotsenko, 1989, and *Eoseirenis* Nagy, Schidtler, Joger & Wink, 2003.

Type species: *Coronella modesta* Martin, 1838.

Distribution: Northeastern Africa and SW Asia.

Sources: Boulenger, 1893a, K.P. Schmidt, 1939b, Chernov, 1948, G. Haas, 1961, R.J. Clark & Clark, 1973, Baran, 1976, Schmidtler & Schmidtler, 1978, Basoglu & Baran, 1980, Dotsenko, 1985, 1989, Latifi, 1991, Nagy et al., 2003, 2004 and Mahlow et al., 2013.

Remarks: Nagy et al., 2003 and Zaher et al., 2012, divided *Eirenis* thusly: *Eirenis (aurolineatus, modestus, persicus), Eoseirenis (decemlineatus),* and *Pediophis (africanus, barani, collaris, coronella, coronelloides, eiselti, levantinus, lineomaculatus, medus, punctatolineatus, rechingeri, rothii, thospitis).* Closely related to *Hierophis fide* Nagy et al. (2004: 231).

1. *Eirenis africanus* (Boulenger, 1914c). Ann. Mag. Nat. Hist. (8) 14(84): 483–484. (*Contia africana*)

Type: Holotype, BMNH 1946.1.5.33, a 400 mm female (W.P. Lowe, [Lynes-Lowe Exped.], 1913–1914).

Type locality: "Erkowit, Red Sea Prov. of the Soudan" [= Ar Kaweit, El-Bahr El-Ahmar Prov., NE Sudan, 18°46'N, 37°06'E, elevation 1100 m].

Distribution: Northeastern Africa. Northeastern Sudan (El-Bahr El-Ahmar), Eritrea (Northern Red Sea) and Djibouti, 1000–2300 m.

Sources: Scortecci, 1930a, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

2. *Eirenis aurolineatus* (Venzmer, 1919). Arch. Naturg. (1917) 83A(11): 103–104. (*Contia collaris aurolineata*)

Types: Syntypes (2), ZMB, a 224 mm and 206 mm specimen (G. Venzmer, Jan.–Oct. 1916).

Type locality: "Bulghar Dagh aus etwa 1000 m Höhe, im cilicischen Taurus, Süd-Kleinasiens" [= Bolkar Daglari, Taurus Mountains, E Mersin Prov., S Turkey, 37°15'N, 34°20'E, elevation 1000 m].

Distribution: Southern Turkey (Adana, Mersin), 500–1800 m.

Sources: Schmidtler, 1993, 1997.

3. *Eirenis barani* Schmidtler, 1988. Salamandra 24(4): 204–208.

Synonym: *Eirenis barani bischofforum* Schmidtler, 1997.

Type: Holotype, ZSM 293/88, a 306 mm male (J.F. Schmidtler & H. Schmidtler, 27 May 1988).

Type locality: "Akdam, 35 km W Kozan (Prov. Adana), ca. 650 m ü. M., Süden der Türkei."

Distribution: Southern Turkey (Adana), 100–1100 m.

Sources: Schmidtler, 1988, 1997.

E

4. *Eirenis collaris* (Ménétriés, 1832). Cat. Zool. Voy. Caucase: 67–68. (*Coluber collaris*)

Synonyms: *Coluber reticulatus* Ménétriés, 1832, and *Contia collaris macrospilota* F. Werner, 1903a.

Types: Syntypes (2), ZISP 1546–47 (formerly AIS), longest syntype 279 mm (E. Ménétriés, July 1830).

Type locality: "près du Bèchebermak, non loin de la Côte occidentale de la mer Caspienne, Caucase" [= Beshbarmak, on the W side of the Caspian Sea, in the Caucasus = Mt. Besparmak, Mus Prov., E Turkey, 38°56'N, 41°24'E, elevation 1465 m].

Distribution: Southwestern Asia. Eastern Turkey (Adryaman, Hatay, Kars, Malatya, Mardin, Mus, Sanhurfa, Urfa), ext. SW Armenia, E Georgia, Azerbaijan, SW Russia (Dagestan), ext. NE Iraq and W Iran (Central, East Azarbaijan, Khuzestan, West Azarbaijan, Zanjhan), 500–2500 m.

5. *Eirenis coronella* (Schlegel, 1837). Essai Phys. Serp. 1: 134, 2: 48–49. (*Calamaria coronella*)

Synonyms: *Eirenis fasciatus* Jan, 1863a, *Eirenis coronella fraseri* K.P. Schmidt, 1939b, *Eirenis arabica* G. Haas, 1961, *Eirenis coronella fennelli* Arnold, 1982, and *Eirenis coronella ibrahimi* Sivan & Werner, 2003.

Type: Neotype, HUJ 8410, a 273 mm female (Y.L. Werner, 23 Mar. 1970), designated by Sivan & Werner (2003: 49).

Type locality: "Israel: Negev: near Negev crossroads (Zomet Hanagev), Israeli Grid 13500525" via neotype selection.

Distribution: Southwestern Asia and Egypt. Northeastern Egypt (North Sinai, South Sinai), Syria (Damascus), Lebanon, Israel, Jordan (Ajloun, Amman, Aqabah, Irbid, Jarash, Karak, Maan, Madaba, Mafraq, Tafilah), NW Iraq (Irbil), SW Iran (Khuzestan) and NE and SW Saudi Arabia (Asir, Eastern, Makkah, Northern, Riyadh), 60–2300 m.

Sources: C.A. Reed & Marx, 1959, Baran, 1976, Basoglu & Baran, 1980, Arnold, 1982, Latifi, 1991, Gasperetti, 1988, Leviton et al., 1992, Schätti & Gasperetti, 1994, Disi et al., 2001, Sivan & Werner, 2003, Baker et al.,

2004, Baran et al., 2004, Shwayat et al., 2009 and Amr & Disi, 2011.

Remarks: Holotype lost *fide* Sivan & Werner (2003: 48). Photograph of neotype in Sivan & Werner (2003: fig. 5). Type locality restriction of Syria *fide* K.P. Schmidt (1939: 78) invalidated by neotype selection.

E

6. *Eirenis coronelloides* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 34. (*Homalosoma coronelloides*)

Synonym: *Contia brevicauda* Nikolsky, 1907.

Type: Neotype, HUJ 21223 (formerly ZDEU 122/1975/2), a 224 mm male (native, 11 May 1975), designated by Sivan & Werner (2003: 53).

Type locality: "Turkey: Birecik (Urfa prov.)" via neotype selection.

Distribution: Middle East. Southeastern Turkey (Gaziantep, Sanliurfa, Urfa), Syria (Homs), NW Jordan (Amman, Karak, Mafraq, Zarqa), Israel (Southern, West Bank), ext. NE Egypt (Sinai) N Iraq (Baghdad, Irbil), and W Iran (Kermanshah), 570–750 m.

Sources: Y. Werner, 1988, Nagy et al., 2003, Sivan & Werner, 2003, Amr & Disi, 2011, Avci & Olgun, 2011, Bar & Haimovitch, 2011, and Nilson & Rastegar-Pouyani, 2011.

Remarks: Holotype in MNHN lost *fide* Sivan & Werner (2003: 53). Photograph of neotype in Sivan & Werner (2003: fig. 7).

7. *Eirenis decemlineatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 327. (*Ablabes decemlineatus*) (*nomen corrigendum*)

Synonyms: *Ablabes decemlineata* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Ablabes decem-lineatus* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Eirenis collaris inornata* Jan, 1863a, *Eirenis collaris decemlineata* – Jan, 1863a *(nomen corrigendum), Eirenis collaris quadrilineata* Jan, 1863a, and *Contia condoni* Boulenger, 1920h.

Type: Holotype, MNHN 3389, a 760 mm specimen.

Type locality: Unknown.

Distribution: Southeastern Turkey (Adana, Gaziantep, Icel, Mus, Siirt, Tunceli), Syria (Homs), Lebanon (S Beqaa, Mont-Liban), Israel (Central, Golan Heights, Haifa, Jerusalem, Northern, West Bank), NW Jordan (Ajloun, Amman, Balqa, Irbid, Jarash, Madaba, Tafilah, Zarqa), Iraq, and Iran, 915–1350 m.

Sources: R.J. Clark & Clark, 1973, Baran, 1976, Basoglu & Baran, 1980, Hraoui-Bloquet, 1981, Ilani, 1983a, Schmidtler & Eiselt, 1991, Leviton et al., 1992, Bouskila & Amitai, 2001, Disi et al., 2001, Schmidtler et al., 2009, Shwayat et al., 2009, Amr & Disi, 2011, and Bar & Haimovitch, 2011.

Remarks: Has been considered a subspecies of *collaris*. A Cyprus record needs confirmation.

8. *Eirenis eiselti* Schmidtler & Schmidtler, 1978. Ann. Naturhist. Mus. Wien 81: 384–386, pl. 1, fig. 3.

Type: Holotype, CAS 105438, a 298 mm male (R.J. Clark & E. D. Clark, 7 May 1967).

Type locality: "25 km W Viransehir (Prov. Urfa/Türkei), ca. 700 mü NN."

Distribution: Southeastern Turkey (Adana, Adiyaman, Diyarbakir, Gaziantep, Maras, Mardin, Siirt, Urfa), 500–1600 m.

Sources: Baran, 1976 and Schmidtler, 1997.

9. *Eirenis kermanensis* Rajabizadeh, Schmidtler, Orlov & Soleimani, 2012. Russ. J. Herp. 19(4): 311–313, figs. 2a–b, 3a–b. (*Eirenis* [*Pediophis*] *kermanensis*)

Type: Holotype, ICSTZM 7H1062, a 308 mm female (G. Soleimani, May 2008).

Type locality: "Iran, Kerman province, Sarduieh region, Babe Karafs village, (29°16' N 57°15' E), 2800 m a.s.l."

Distribution: Central Iran (Kerman), 2800 m.

10. *Eirenis levantinus* Schmidtler, 1993. Spixiana 16(1): 87–88, figs. 11.

Type: Holotype, ZSM 14/1991, a 334 mm female (J.F. Schmidtler & H. Schmidtler, 23 May 1991).

Type locality: "6 km SW Karaisali (Prov. Adana; Nr. 17 auf der Karte), Süd-Anatolien" [= Karaisali, Adana Prov., S Turkey, 37°15'N, 35°04'E, elevation 240 m].

Distribution: Middle East. Cyprus, S Turkey (Adana, Hatay, Icel), NW Syria, Lebanon (Beqaa, Mont-Liban), and ext. N Israel (N Golan Heights, N Northern), 50–1100 m.

Sources: Ilani, 1983a, Schmidtler, 1997, Sindaco et al., 2000, Hraoui-Bloquet et al., 2002, Franzen & Glaw, 2007, Baier et al., 2009, Schmidtler et al., 2009, and Bar & Haimovitch, 2011.

11. *Eirenis lineomaculatus* K.P. Schmidt, 1939b. Field Mus. Nat. Hist. (Zool.) 24(7): 80–81. (*Eirenis lineomaculata*)

Type: Holotype, FMNH 21909, a 217 mm male (P.Y. Shuwayhat, 1934).

Type locality: "Jordan Valley, Palestine" [= NE Israel].

Distribution: Middle East. Southern Turkey (Antalya, Adana, Hatay, Maras), W Syria, Lebanon (S Beqaa, Liban-Nord, Mont-Liban, Nanatiye), N Israel (Central, Golan Heights, Haifa, Jerusalem, Northern, West Bank), and NW Jordan (Amman, Balqa, Irbid, Karak, Maan, Mafraq, Tafilah, Zarqa), NSL–1000 m.

Sources: Basoglu, 1970, Baran, 1976a, Schmidtler & Schmidtler, 1978, Basoglu & Baran, 1980 and Disi, 1985, Ilani, 1983a, Y.L. Werner, 1995, Bouskila & Amitai, 2001, Disi et al., 2001, Hraoui-Bloquet et al., 2002, Shwayat et al., 2009, Amr & Disi, 2011, and Bar & Haimovitch, 2011.

12. *Eirenis medus* (Chernov *in* Terent'ev & Chernov, 1940). Opred. Presmy. Zem.: 151. (*Contia medus*)

Types: Syntypes (4+), none designated, at least 2 males and 2 females, longest syntype 320 mm, location unknown.
Type locality: "Iran and southern Turkmenia" [= Iran and Turkmenistan].
Distribution: Kopet Mountains of S Turkmenistan and N Iran (Central, Ghilan, Khuzestan, Razavi Khorasan, West Azarbaijan, Turkmenistan, Zanjhan), 20–2000 m.
Sources: Terent'ev & Chernov, 1949, 1965, Bannikov et al., 1977, Latifi, 1991 and Szczerbak, 1994.

13. *Eirenis modestus* (W.C.L. Martin, 1838). Proc. Zool. Soc. London 6(1): 82. (*Coronella modesta*)

Synonyms: *Coluber nigricollis* Dwigubsky, 1832 (*nomen rejiciendum*), *Tyria argonauta* Eichwald, 1839, ? *Psammophis moniliger* Nordmann, 1840 *in* Demidoff, *Tysia argonauta* Carus & Engelmann, 1861 *(nomen incorrectum), Ablabes modestus semimaculata* Boettger, 1876, *Contia modesta werneri* Wettstein, 1937, and *Eirenis modestus cilicius* Schmidtler, 1993.
Types: Syntypes (4), 4BMNH 1850.10.21.21–22, longest syntype 292 mm (K. Abbot [Euphrates Exped.], 1835–1837).
Type locality: "Euphrates" [River] and "Trebizond," [= Trabzon, Trabzon Prov., NE Turkey].
Distribution: Southwestern Asia. Eastern Greece (Chios, Furni, Mytilene, Samos), Cyprus, Turkey (Adana, Adiyaman, Amasya, Ankara, Antalya, Artvin, Aydin, Balikesir, Burdur, Bursa, Cahakkale, Denizli, Hakkari, Hatay, Icel, Istanbul, Izmir, Kars, Kocaeli, Konya, Lesvos, Maras, Mus, Manisa, Mugla, Nigde, Siirt, Trabzon), W Syria, Lebanon (Beirut, Beqaa, Mont-Liban), N Israel, ext. SW Russia (Dagestan), Armenia, S Georgia, Azerbaijan and NW Iran (Central, Zanjhan), NSL–2440 m.
Sources: Elpatjewsky, 1902, G. Haas, 1951, Wettstein, 1953, Bannikov et al., 1977, Baran, 1976, 1986, Basoglu & Baran, 1980, Hraoui-Bloquet, 1981, Schmidtler, 1988, 1993, 1997, Schmidtler & Eiselt, 1991, Obst & Baran, 1993, Schmidtler & Baran, 1993b, Valakos et al., 2004, 2008 and Tuniyev et al., 2009.
Remarks: See Mahlow et al. (2013: 44) for discussion of type locality.

14. *Eirenis persicus* (J. Anderson, 1872). Proc. Zool. Soc.London 40(1): 392–393, fig. 8. (*Cyclophis persicus*)

Synonyms: *Pseudocyclophis walteri* Boettger, 1888d, *Contia angusticeps* Boulenger, 1894a, *Contia transcaspica* Nikolsky, 1903a, *Contia persica nigrofasciata* Nikolsky, 1907, *Contia mcmahoni* Wall, 1911d, and *Contia zebrina* Wall, 1923e.
Type: Holotype, ZSI 4828 (formerly IMC 4828), a 155 mm specimen (Persian Mus. coll.).
Type locality: "Bushire, Persia" [= Bushehr, NW Bushehr Prov., SW Iran, 28°55'N, 50°50'E, elevation 25 m].
Distribution: Southwestern Asia. Southeastern Turkey (Adryaman, Hakkari, Mardin, Sanhurfa, Siirt, Urfa), ext. SE Armenia, S Turkmenistan, N Iraq (At Tamim), Iran (Bakhtaran, Bushehr, Central, East Azarbaijan, Fars, Khuzestan) and Pakistan (Balochistan, Khyber Pakhtunkhwa, Punjab, Sindh), 25–2200 m.
Sources: Wall, 1908d, 1923d, Nikolsky, 1916, Procter, 1921, Corkill, 1932b, M.A. Smith, 1943, C.R. Reed & Marx, 1959, S.C. Anderson, 1963, Rai, 1965, Minton, 1966, G. Haas & Werner, 1969, Eiselt, 1970, Leviton & Anderson, 1970a, Baran, 1976a, 1982, Bannikov et al., 1977, Basoglu & Baran, 1980, M.S. Khan, 1980, 1982, 2002, Dotsenko, 1985, Latifi, 1991, Agasyan, 1987, Szczerbak, 1994, Baran et al., 2004 and Tuniyev et al., 2009.
Remarks: M.A. Smith (1943: 188) erroneously listed the holotype in BMNH. Probably occurs in Afghanistan *fide* Leviton and Anderson (1970a: 197).

E

15. *Eirenis punctatolineatus* (Boettger, 1893a). Ber. Senck. Naturf. Ges. 1892: 147–148. (*Cyclophis modestus punctatolineata*)

Synonyms: *Zamenis bornmüllerorum* F. Werner, 1903c, *Contia schelkovnikovi* Nikolsky, 1909b, *Contia condoni* Boulenger, 1920f, *Eirenis iranica* K.P. Schmidt, 1939, and *Eirenis punctatolineatus kumerloevei* Eiselt, 1970.
Type: Holotype, SMF 19288 (formerly SMF-B 8261,1a), a female (J. Valentin, 1890).
Type locality: "Russisch-Armenien" [= Karabakh Highlands, E Armenia].
Distribution: Southeastern Turkey (Adryaman, Diyarbakir, Hakkari, Kars, Siirt, Van), Armenia, S Azerbaijan and Iran (Central, East Azarbaijan, Fars, Hamadan, Kerman, Kordestan, Lorestan, West Azarbaijan, Zanjhan), 200–2000 m.
Sources: Eiselt, 1970, 1976, R.J. Clark & Clark, 1973, Baran, 1976a, Bannikov et al., 1977, Basoglu & Baran, 1980, Franzen & Sigg, 1989, Schmidtler & Eiselt, 1991, Baran et al., 2004 and Tuniyev et al., 2009.

16. *Eirenis rechingeri* Eiselt, 1971. Ann. Naturhist. Mus. Wien 75: 375–380, pl. 1, fig. 2, pl. 2, figs. 2, 5.

Type: Holotype, NMW 19688, a 344 mm male (F. Ressl, 16 April 1970).
Type locality: "57 km W Schiras (= 8 km E Dashtarjan, an der alten Strasse nach Schiras), *ca*. 2100 m ü.d.M., Iran."
Distribution: Southwestern Iran (Fars), 2100 m. Known only from type locality.

17. *Eirenis rothii* Jan, 1863a. Arch. Zool. Anat. Fis. 2(2): 259–260.

Type: Holotype, ZSM 75/0, a 787 mm specimen (Roth).
Type locality: "Gerusalemme" [= Jerusalem, E Jerusalem Distr., cen. Israel, 31°46'N, 35°13'E, elevation 775 m].
Distribution: Southwestern Asia. Southern Turkey (Adiyaman, Antalya, Gaziantep, Hatay), Syria (Homs, Latakia), S Lebanon (S Beqaa), N Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, Tel Aviv, West Bank), Jordan (Amman, Balqa, Irbid, Jarash, Maan, Madaba, Mafraq, Tafilah) and NW Iraq (Irbil, Kirkuk), 700–2000 m.
Sources: F. Werner, 1939, C.A. Reed & Marx, 1959, Eiselt, 1970, Baran, 1976a, Basoglu & Baran, 1980, Ilani, 1983a, Disi et al., 1988, 2001, Bouskila & Amitai, 2001, Hraoui-Bloquet et al., 2002, Shwayar et al., 2009, Amr & Disi, 2011 and Bar & Haimovitch, 2011.
Remarks: Photograph of the type in Franzen & Glaw (2007: 252, fig. 19).

18. *Eirenis thospitis* Schmidtler & Lanza, 1990. Amphibia-Reptilia 11(4): 363–367, figs. 1–4.

Synonym: *Eirenis hakkariensis* Schmidtler & Eiselt, 1991.
Type: Holotype, MZUF 33663, a 416 mm male (P. Crucitti & A. Campese, 9 Aug. 1988).
Type locality: "2-3 km N-NE of Van, about 2000 m a.s.l. (E Turkey)."
Distribution: Extreme E Turkey (Van), 1500–2000 m.
Source: Schmidtler & Eiselt, 1991.

ELACHISTODON J.T. Reinhardt, 1863 (Colubridae)

Synonyms: *Elastistoda* – Theobald, 1868b *(nomen incorrectum), Elaschistodon* – Palacky, 1898 *(nomen incorrectum),* and *Elanchistodon* – Negi, 1992 *(nomen incorrectum).*
Type species: *Elachistodon westermanni* J.T. Reinhardt, 1863.
Distribution: South-central Asia.
Sources: Wall, 1913c, M.A. Smith, 1943, Gans & Williams, 1954, R. Fleming & Fleming, 1973, Mahendra, 1984, Basu, 1989, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Captain et al., 2005, N. Khaire, 2006, Nande & Deshmukh, 2007 and Dodge, 2008.

1. *Elachistodon westermanni* J.T. Reinhardt, 1863. Overs. Kon. Danske Vidensk. Selsk. Forhand. Kjöbenhavn 1(2): 206–209, figs. 1–5.

Type: Holotype, ZMUC R6401, a 784 mm female (B.W. Westermann, 1801–1817).
Type locality: "Rungpore, et Distrikt i den nordøstlige Deel af Bengalen, som mod Øst begraendses af Floden Berampooter og mod Nord støder op til Bhootan og Cooch Behar" [= district in NE Bengal, bordered in the east by the Brahmaputra River and in the north by Bhutan and Cooch Behar *fide* Neilson *in* Gans (1955: 1) or Rangpur Distr., N Bangladesh, ca. 25°45'N, 89°14'E].
Distribution: Southern Asia. Central Nepal (Chitwan), NE India (NE Bihar, Maharashtra, Uttaranachal, West Bengal) and Bangladesh (Dacca, Rangpur), 250–500 m.

ELAPHE Fitzinger *in* Wagler, 1833 (Colubridae)

Synonyms: *Coluber* F. Boie, 1826 *(nomen praeoccupatum), Elaphis* Bonaparte, 1834 *in* 1832–1841, *Leptophidium* Hallowell, 1861, *Natrix* Cope, 1862c *(nomen praeoccupatum), Phyllophis* A.C.L.G. Günther, 1864a, *Elephas* – F. Werner, 1895 *(nomen incorrectum), Spaniopholis* Mocquard, 1897, *Elaphs* – Fan, 1931 *(nomen incorrectum), Phillophis* Maki, 1931 *(nomen emendatum), Phyliophis* – Gans, 1949 *(nomen incorrectum), Elapho* – Bleakney, 1958 *(nomen incorrectum), Elape* Kuhn, 1963 *(nomen emendatum), Elpahe* – Chiu & Wong, 1974 *(nomen incorrectum),* and *Elahe* – Mahendra, 1984 *(nomen incorrectum).*
Type species: *Coluber quatuorlineatus* Lacépède, 1789.
Distribution: Eurasia.
Fossil records: Lower Pliocene to upper Pleistocene of Europe and Asia. Fossils unassigned to species include lower Miocene (Orleanian, MN 3: 16.9–20.0 mya) of Czech Republic, lower/middle Miocene (Orleanian/Astaracian, MN 5/6: 12.8–16.0 mya) of Germany, middle Miocene (Astaracian, MN 6–8: 11.1–13.7 mya) of France and Hungary, upper Miocene (Villesian, MN 9: 9.7–11.1 mya) of Italy and Ukraine, upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Italy, middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of France, and Pleistocene of Spain and Ukraine.
Sources: Rooij, 1917, Maki, 1931, C.H. Pope, 1935, Bourret, 1936d, M.A. Smith, 1943, Bhatnagar, 1975, B. Hu et al., 1980, Tian et al., 1986, Szyndlar, 1991a, 2012, Staszko & Walls, 1994, Holman, 1995a, Keogh, 1996, Schulz, 1996, Rodríguez-Robles & Jesús-Escobar, 1999, Helfenberger, 2001, Lenk et al., 2001a, Ivanov, 2002, Utiger et al., 2002, 2005, Burbrink & Lawson, 2007 and Zaher et al., 2012.
Remarks: Official Generic Name no. 1229 *fide* Opinion 490 (ICZN, 1957). Original description of *Elaphis* reprinted in Bonaparte, 1840. The following genera and species have been separated from *Elaphe: Bogertophis* (*rosaliae, subocularis*), *Coelognathus* (*erythurus, enganensis, flavolineatus, helenus, philippinus, radiatus, subradiatus*), *Euprepiophis* (*conspicillatus, mandarinus, perlaceus*), *Gonyosoma* (*jansenii*, *oxycephala*), *Maculophis* (*bellus*), *Oocatochus* (*rufodorsatus*), *Oreocryptophis* (*porphyraceus*), *Orthriophis* (*cantoris, hodgsonii, moellendorffi, taeniurus*), *Pantherophis* (*alleghaniensis, bairdi,* †*buisi, emoryi,*

gloydi, guttatus, †kansensis, obsoleta, †pliocenicus, slowinskii, spiloides, vulpinus), *Pseudelaphe* (*flavirufa*), *Rhynchophis* (*boulengeri, frenata, prasina*), *Senticolis* (*triaspis*), and *Zamenis* (*†algorensis, hohenackeri, †kohfidischi, †kormosi, lineata, †lobsingensis, longissima, †longivertebrata, †paralongissima, persica, †praelongissima, scalaris, situla, †szyndlari*). Allocation of extinct species based on morphology and geography.

1. *Elaphe anomala* (Boulenger, 1916). Ann. Mag. Nat. Hist. (8) 17(99): 243–244. (*Coluber anomalus*)

Synonyms: *Elaphe schrencki besenbruchi* L. Müller, 1923, and *Elaphe maculata* Ma & Zong, 1984.
Type: Holotype, BMNH 1946.1.13.1 (formerly BMNH 1916.1.15.20), a 1770 mm male (A.L. Hall).
Type locality: "Chihfeng, N. E. Chihli Prov., northern China" [= Chifeng, Nei Mongol Prov., N China, 42°15'N, 118°53'E, elevation 585 m].
Distribution: Northern China (Anhui, Beijing, Gansu, Hebei, Hubei, Jiangsu, Liaoning, Nei Mongol, Shandong, Shaanxi, Tianjin, Zhejiang), North Korea and South Korea, 585 m.
Sources: Ji & Wen, 1997, Xu, 2001, Zhao, 2006, San & Lee, 2007, Treu, 2008, An et al., 2010 and Yao, 2012.
Remarks: Previously a synonym of *E. schrenkii*.

2. *Elaphe bimaculata* K.P. Schmidt, 1925b. Amer. Mus. Novit. (175): 3.

Type: Holotype, AMNH 24640, a 770 mm female (C.H. Pope, Sept.– Oct. 1921).
Type locality: "Ningkwo, Anhwei, China" [= ? Ningbo, Zhejiang Prov., E China, 29°52'N, 121°33'E, elevation 10 m].
Distribution: Eastern China (Anhui, Gansu, Hebei, Hubei, Hunan, Jiangsu, Jiangxi, Shaanxi, Zhejiang), North Korea and South Korea, 1000 m.
Sources: C.H. Pope, 1935, Fang & Wang, 1983, Schulz, 1986b, 1988i, Zhao & Adler, 1993, Zou & Chen, 1998, Zhao, 2006 and Yao, 2012.
Remarks: Supplemental original description in K.P. Schmidt (1927b: 531–532, fig. 17). Previously a synonym of *E. schrenkii*. A subspecies of *E. schrenckii fide* An et al. (2010: 15).

3. *Elaphe carinata* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 295–296, pl. 21, fig. b. (*Phyllophis carinata*)

Synonyms: *Coluber phyllophis* Boulenger, 1891a *(nomen rejiciendum), Spaniopholis souliei* Mocquard, 1897c, *Spaniopholis kreyenbergi* Müller, 1907, *Elaphe osborni* K.P. Schmidt, 1925a, *Coluber camilloschneideri* T. Vogt, 1927, *Elaphe carinata ornithophaga* Bourret, 1936b, *Elaphe carinata yonaguniensis* Takara, 1962, and *Elaphe carinata deqinensis* D. Yang & Hu, 1983.
Type: Holotype, BMNH 1946.1.14.58 (formerly BMNH 1869.9.29.3), a 533 mm specimen.
Type locality: "China." Restricted to Lu Shan Mtns., S of Jiujiang on Lake Poyang, Jiangxi Prov., China, 29°30'N, 116°00'E *fide* Schulz (1992f: 6).
Distribution: Eastern Asia. Southern and E China (Anhui, Beijing, Fujian, S Gansu, Guangdong, Guangxi, Guizhou, Henan, Hubei, Hunan, Jiangsu, Jiangxi, Shaanxi, Shandong, Sichuan, Tianjin, Yunnan, Zhejiang, Lanyu Is.), NW Vietnam (Lai Chau, Lang Son, Lao Cai, Pescadores Is.), Taiwan (Botel-Tobago Is.) and ext. S Japan (Ryukyu Arch.), 450–2900 m.
Sources: Stejneger, 1907a, Maki, 1931, Bourret, 1937a, C. Wang & Wang, 1956, C. Wang, 1962, Kuntz, 1963, Kuntz & Ming, 1970, D. Yang & Su, 1984, M. Mori, 1986, W. Gao, 1987, Schulz, 1992c, 1992f, Zhao & Adler, 1993, H.M. Smith et al., 1995, Orlov et al., 2003, Gumprecht, 2004b, Zhao, 2006, V.S. Nguyen et al., 2009, Xiang & Li, 2009 and Yao, 2012.
Remarks: Official Specific Name *fide* Opinion 1867 (ICZN, 1997).

4. *Elaphe climacophora* (H. Boie, 1826). Isis von Oken 18(2): 210–211. (*Coluber climacophorus*)

Synonym: *Coluber virgatus* Schlegel, 1837.
Types: Syntypes (8), RMNH 382, RMNH 386, a 2020 mm specimen, RMNH 390, RMNH 47577 (formerly RMNH 386), RMNH 47578 (formerly RMNH 386), RMNH 47579 (formerly RMNH 386), RMNH 47580 (formerly RMNH 386), RMNH 47581 (formerly RMNH 386) (P.F.B. von Siebold, 1817–1829).
Type locality: "Decima, Japan, [= Dejima Is., previously in Nagasaki harbor, now part of Nagasaki, Japan, 32°45'N, 129°52'E, elevation 10 m].
Distribution: Extreme E Russia (Kuril Arch., Kunashiri Is.) and Japan (Hokkaido, Honshu, Kyushu, Shikoku, Ryukyus: Awajishima, Fukuejima, Hisakeshima, Iwoshima, Kamikoshikijima, Kamishima, Kammurijima, Kuchinoerabujima, Kuchinoshima, Mageshima, Nakadorishima, Nishinoshima, Sadogashima, Shimojima, Shimokoshikijima, Shodoshima, Takeshima, Tanegashima, Tsushima, Ukishima and Yakushima Is.), NSL–1325 m.
Sources: Stejneger, 1907a, Rendahl, 1933, Gans & Oshima, 1952, Koba, 1955, Hadley & Gans, 1972, Bannikov et al., 1977, Goris & Naganuma, 1979, M. Mori, 1982, Ota, 1983, Schulz, 1985b, 1988f, A. Mori, 1994 and Ratnikov, 2004.
Fossil records: Upper Pleistocene of Japan.
Remarks: Original description reprinted in H. Boie (1827b: 257–259). RMNH paralectotypes include RMNH 390 and RMNH 47577–81. Other possible paralectotypes include ZMA 13616a–b and ZMA 13996 *fide* Schulz (1996: 95). Type locality possibly in error *fide* Siebold *in* Temminck & Schlegel (1838: iii), who mistakenly corrected it to East Indies.

E

5. *Elaphe davidi* (Sauvage, 1884). Bull. Soc. Philom. Paris (7) 8: 144. (*Tropidonotus davidi*)

Synonyms: *Coluber halli* Boulenger, 1914a, and *Elaphe dione coreana* G. Song, 1961.
Type: Holotype, MNHN 6154 (formerly MNHN 1867.86), a 700 mm specimen (J.P.A. David, 1862–1869).
Type locality: "Chine" [= China].
Distribution: Northeastern China (Hebei, Heilongjiang, Nei Monggol, Jilin, Liaoning, Shandong, Shaanxi, Shanxi) and S North Korea (Kaesong, Kangwon, North Hwanghae, Pyongyang, South Hwanghae, South Pyongan), 100–1000 m.
Sources: Szyndlar, 1985b, Szyndlar & Hung, 1987, Jia, 1988, Schulz, 1989a, Zhao & Adler, 1993, Helfenberger & Schätti, 1998, Xu, 2001 and San & Lee, 2007.

6. *Elaphe dione* (Pallas, 1773). Reise Russ. Reichs 2(2): 717–718. (*Coluber dione*)

Synonyms: *Coluber tataricus* Güldenstedt *in* Georgi, 1801, *Coluber diana* Latreille, 1802 *in* Sonini & Latreille, *Coluber dione cumana* Pallas, 1814, *Coluber maeota* Pallas, 1814, *Coluber eremita* Eichwald, 1831, *Coluber maeoticus* Rathke, 1837, *Elaphis dione temporalis* Jan, 1863b (*nomen nudum*), *Zamenis pellioti* Mocquard, 1910, *Coluber czerskii* Nikolsky, 1914, *Elaphe dione niger* Golubev, 1923, and *Elaphe dione tenebrosa* Sobolewski, 1929.
Type: Holotype, not designated, location unknown.
Type locality: "in desertis salsis versus mare Caspium, Provinzen Russischen Reich" [= salt steppes near the Caspian Sea, Russia]. Restricted to Gratscheffskoi outpost near Semijarsk, Irtysh area, Semipalatinsk Distr., Kazakhstan *fide* Mertens & Müller (1928: 47).
Distribution: Central Asia. Southern Russia (Dagestan), S Ukraine, ext. SE Georgia, S Armenia, E Azerbaijan (Sara Is.), Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan, Tadzhikistan, N Iran (Mazanderan, Semnan), ext. N Afghanistan (Kunduz), Mongolia (Bayan Khongor, Bayan Ulegei, S Bulagan, Dornod, Dzubkhan, N East Gobi, N Gobi, Khentei, Middle Gobi, Selenga, South Gobi, Tov, Ubsa Nor), N China (Anhui, Beijing, Gansu, Hebei, Heilongjiang, Nei Monggol, Jiangsu, Jilin, Liaoning, Ningxia, Qinghai, Shaanxi, Shanxi, Shandong, Shanxi, Sichuan, Tianjin, Xinjiang), North Korea (Chagang, Kangwon, North Hamgyong, North Hwanghae, North Pyongan, Ryanggang, South Pyongan, South Hwanghae) and South Korea (Kyonggi, Seoul, South Chungchong, and Chejudo Is.), 75–3500 m.
Fossil records: Middle Miocene of Kazakhstan.
Sources: Strauch, 1873, Stejneger, 1907a, Nikolsky, 1916, Emelianov, 1929, Okada, 1935, Shannon, 1956, Webb et al., 1962, Leviton & Anderson, 1970a, Steward, 1971, Bannikov et al., 1977, Schulz, 1986a, 1988h, Szyndlar & Hung, 1987, Borkin et al., 1990a–b, Obst & Szczerbak, 1993, Zhao & Adler, 1993, Szczerbak, 1994, Kordikova, 1998, Kordikova et al., 1998, Adnagulov et al., 2000, Xu, 2001, Ratnikov, 2004, San & Lee, 2007, Tuniyev et al., 2009, True, 2012, and Yao, 2012.

7. *Elaphe quadrivirgata* (H. Boie, 1826). Isis von Oken 18(2): 209–210. (*Coluber quadrivirgatus*)

Synonyms: *Coluber vulneratus* H. Boie, 1826, ? *Leptophidium dorsale* Hallowell, 1861, *Elaphis bilineatus* Hallowell, 1861, *Elaphis quadrivirgatus atra* Jan, 1863b (*nomen nudum*), *Elaphis quadrivirgatum atra* Jan, 1867 *in* Jan and Sordelli, 1866–1870, *Elaphis quadrivirgatus interrupta* Jan, 1863b (*nomen nudum*), *Elaphis quadrivirgatus interrupta* Jan, 1867 *in* Jan & Sordelli, 1866–1870, and *Elapte quadrivirgatus* – Pavloff, 1926 *(nomen incorrectum).*
Types: Syntypes (6), RMNH 396a–f, longest syntype 775 mm (P.F.B. von Siebold, 1823–1829).
Type locality: "Decima, Japan, [= Dejima Is., previously in Nagasaki harbor, now part of Nagasaki, Japan, 32°45'N, 129°52'E, elevation 10 m].
Distribution: Extreme E Russia (Kuril Is.: Kunashiri Is.) and Japan (Hokkaido, Honshu, Kyushu, Ryukyus: Awajishima, Fukuijima, Hisakashima, Kamikoshikijima, Kamishima, Kammurijima, Kozushima, Kuchinoshima, Kushinoerabujima, Mageshima, Mikurajima, Nakadorishima, Niijima, Nishinoshima, Oshima, Sadogashima, Shikinejima, Shikoku, Shodoshima, Shikoko, Shimojima, Shimokoshikijima, Tadanaejima, Takeshima, Tanegashima, Toshima, Yakujima, Yakushima Is.), NSL–2000 m.
Fossil records: Upper Pleistocene of Japan.
Sources: Stejneger, 1907a, Takara, 1962, Nakamura & Uéno, 1963, Bannikov et al., 1977, Ota, 1983, M. Mori, 1984 and Schulz, 1987b, 1988n, 1996.
Remarks: Original description reprinted in H. Boie (1827b: 254–257). Ryukyu record (Okinawa) in error *fide* Maki (1931a: 83). Type locality possibly in error *fide* Siebold *in* Temminck & Schlegel (1838: iii), who mistakenly corrected it to East Indies.

8. *Elaphe quatuorlineata* (Lacépède, 1789). Hist. Nat. Serp. 2(2): 82 & 2(3): 163–164, pl. 7, fig. 1. (*Coluber quatuorlineatus*) (*nomen corrigendum*)

Synonyms: *Coluber quatuor-lineatus* Lacépède, 1789 *(nomen incorrigendum), Coluber quadristriatus* Donndorff, 1798, *Coluber nauii* Donndorff, 1798, *Coluber quarter-radiatus* Gmelin, 1799 *(nomen rejiciendum), Coluber pictus* Georgi, 1801, *Coluber quadrilineatus* Latreille *in* Sonnini & Latreille, 1801b, *Coluber elaphis* G. Shaw, 1802 *(nomen rejiciendum), Elaphis quaterradiatus* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Coluber quadriradiatus* Erhard, 1858, *Elaphis quaterradiatus* – A.C.L.G. Günther, 1858 *(nomen corrigendum), Elaphis dione graeca* Jan, 1863b (*nomen nudum*), *Elaphis cervone* Schreiber, 1875 *(nomen substitutum)*, *Coluber quaterradia* – Paolucci,

1880 *(nomen incorrectum), Elaphis sauromates graeca* Bedriaga, 1881 *in* 1881–1882, *Elaphis sauromates muenteri* Bedriaga, 1881 *in* 1881–1882, *Coluber quatuorlineatus* – Boulenger, 1894a *(nomen corrigendum), Elaphe quatuorlineata praematura* F. Werner, 1935, *Elaphe quatuorlineata parensis* Cattaneo, 1999, and *Elaphe quatuorlineata scyrensis* Cattaneo, 1999.

Type: Holotype, not designated, an 1143 mm specimen (King of France's cabinet, Paris), location unknown.

Type locality: Unknown. Designated as Provence, France *fide* Mertens & Müller (1928: 47).

Distribution: Southeastern Europe. Southern Italy (Abruzzi, Basilicata, Calabria, Campania, ? Emilia-Romagna, Lazio, Marche, Molise, Puglia, Toscana, Umbria), Slovenia, Croatia, Bosnia-Herzegovina, Serbia, Montenegro, Albania, Bulgaria, Macedonia and Greece (Sporades and Cyclades: Antimílos, Ias, Iráklia, Kéa, Míkonos, Mílos, Naxos, Páros, Skhoinoúsa, Skíathos, Skíros, Thíra), NSL–2500 m.

Fossil records: Lower Pliocene (Ruscinian, MN 14: 4.2–4.9 mya) of Bosnia & Herzegovina and Hungary, middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Moldavia and Slovakia, upper Pliocene (Villanyian, MN 16–17: 1.8–3.2 mya) of Austria and Hungary, lower Pleistocene (Calabrian: 0.8–1.8 mya) of Austria, Czech Republic and Hungary, middle Pleistocene (Ionian: 0.13–0.78 mya) of Austria, Bulgaria, Greece and Romania, and upper Pleistocene (Tarantian: 0.01–0.13 mya) of Bulgaria and Croatia.

Sources: Steinheil, 1913a, Buresch & Zonkow, 1934, Wettstein, 1937, 1953b, Q. Buchholz, 1961, Fuhn & Vancea, 1961, Mertens, 1961c, Buchholz & Schultze-Westrum, 1964, Bruno, 1966, 1977, 1984, R.J. Remarks: Official Specific Name no. 1436 *fide* Opinion 490 (ICZN, 1957).

9. *Elaphe rechingeri* F. Werner, 1932. Anz. Akad. Wiss. Wien (Math.-Nat.) 69(20): 232.

Type: Holotype, NMW 16672, an 800 mm (svl) male (K.H. Rechinger, June–July 1932).

Type locality: "Inseln Amorgos, (süd-östliche Cycladen), Cycladenarchipel" [= Amorgos Is., cen. Cyclades, SE Greece, bet. 36°46'–56'N & 25°44'–26°05'E].

Distribution: Southeastern Greece (Amorgos Is.).

Remarks: A valid species *fide* R. Clark (1994: 93).

10. *Elaphe sauromates* (Pallas, 1814). Zool. Rosso-Asiat. 3: 42. (*Coluber sauromates*)

Synonyms: *Coluber alpestris* Pallas, 1814, *Coluber pictus* Pallas, 1814, *Coluber xanthogaster* Andrzejowsky, 1832, *Coluber cereus* Dwigubsky, 1832, *Coluber fulvus* Dwigubsky, 1832, *Coluber poecilopholus* Fischer von Waldheim, 1832, *Coluber taeniothys* Fischer von Waldheim, 1832, *Elaphis parreyssii* Fitzinger, 1833, *Bothriophis erythrogaster* Eichwald, 1837, *Coluber poecilocephalus* Brandt, 1838, and *Sauromates parreysi* – Palacky, 1898 *(nomen incorrectum).*

Type: Holotype, not designated (P.S. Pallas, 1768–1774), location unknown.

Type locality: "isthmum Perecopensum." Restricted to Perekop Isthmus, Crimea, S Ukraine [= 46°10'N, 33°42'E, elevation NSL] *fide* Mertens & Müller (1928: 47).

Distribution: Southwestern Asia. Albania, S Romania, Bulgaria (Burgas, Dobrich, Gabrovo, Haskovo, Kardzhali, Montana, Pazardzhik, Pleven, Plovdiv, Rousse, Shumen, Silistra, Sliven, Stara Zagora, Varna, Veliko Tarnovo, Yambol), E Greece (Samothrace and Thasos Is.), Turkey (Afyon, Ankara, Antalya, Aydin, Balikesir, Bursa, Diyarbakir, Edirne, Eskisehir, Izmir, Kars, Kayseri, Kocaeli, Konya, Tokat. Trabzon, Usak), ext. W Syria, S Lebanon (Mont-Liban), ext. N Israel (N Golan Heights), Moldavia, S Ukraine, SW Russia (Dagestan), E Georgia, S Armenia, Azerbaijan, SW Kazakhstan, NW Turkmenistan and W Iran (Bakhtaran, East Azarbaijan, Hamadan, West Azarbaijan, Zanjhan), NSL–2000 m.

Sources: Ilani, 1983a, Lenk et al., 2001, Hraoui-Bloquet et al., 2002, Trapp, 2007, Valakos et al., 2008, Tuniyev et al., 2009, Bar & Haimovitch, 2011 and Stojanov et al., 2011.

Remarks: Official Specific Name no. 1437 *fide* Opinion 490 (ICZN, 1957). A valid species *fide* Lenk et al. (2001: 336).

11. *Elaphe schrenckii* (Strauch, 1873). Mém. Acad. Imp. Sci. St. Pétersbourg (7) 21(4): 100–102. (*Elaphis schrenckii*)

Type: Lectotype, ZISP 3706 (formerly AIS 415), a 1950 mm specimen (L. von Schrenck, 1856), designated *fide* Maki (1931a: 101).

Type locality: "Khinggan Military Post, SE Siberia, E Russia" via lectotype selection.

Distribution: Northeastern China (Heilongjiang, Nei Monggol, Jilin), ext. E Mongolia (E Dornov), ext. SE Russia and North Korea (Kangwon), 75–900 m.

Sources: Shannon, 1956, Webb et al., 1962, Bannikov et al., 1977, Ji et al., 1985, Schulz, 1985c, 1988d, 1988g, P. Wang, 1986, Y. Yang et al., 1986, Szyndlar & Hung, 1987, Borkin et al., 1990a–b, Zhao & Adler, 1993, Adnagulov et al., 2000, Ratnikov, 2004, San & Lee, 2007 and Treu, 2008.

Remarks: Type locality listed as Chinganski Post *fide* Nikolsky (1916: 141).

12. *Elaphe zoigeensis* S. Huang, Ding, Burbrink, Yang, Huang, Ling, Chen & Zhang, 2012. Asian Herpetol. Res. (2) 3(1): 41–43, figs. 3–4.

Type: Holotype, HUM 20110001, an 880 mm female (native, 26 July 2010).
Type locality: "20 m from mouth of Jiangzha Hot Spring (3200 m elevation, N34°12'18", E102°42'48") in Zoige County, Sichuan, China."
Distribution: Southern China (Sichuan), 3200 m.
Source: Ling et al., 2010.

ELAPOGNATHUS Boulenger, 1896a (Elapidae)

Synonyms: *Elicognatus* – Sumichrast, 1880 *(nomen incorrectum),* and *Elapoqnathus* – Anon., 1979 *(nomen incorrectum).*
Type species: *Hoplocephalus minor* A.C.L.G. Günther, 1863c.
Distribution: Extreme SW Australia.
Sources: Cogger et al., 1983a, Storr et al., 1986, Gow, 1989, Hutchinson, 1990, Ehmann, 1992, Golay et al., 1993, Greer, 1997, David & Ineich, 1999, Cogger, 2000, Keogh et al., 2000, Scanlon & Lee, 2004, Sanders et al., 2008 and Zaher et al., 2009.
Remarks: A synonym of *Notechis fide* Storr, 1982; a synonym of *Rhinoplocephalus fide* Wallach, 1985.

1. *Elapognathus coronatus* (Schlegel, 1837). Essai Phys. Serp. 1: 182, 2: 454–455. (*Elaps coronatus*)

Synonyms: *Trimesurus olivaceus* Gray *in* Grey, 1841b, *Elaps melanocephalus* Gray & Neill, 1845 *(nomen praeoccupatum)*, and *Elapognathus resolutus* Wells & Wellington, 1985.
Type: Lectotype, MNHN 321 (formerly MNHN 4696), a 305–309 mm male (J.R.C. Quoy & J.P. Gaimard [Coquille or Astrolabe Voy.], 1822–1829), designated by Coventry & Rawlinson (1980: 67).
Type locality: "King George Sound, Western Australia" via lectotype selection.
Distribution: Extreme SW Australia (ext. SW Western Australia, Mondrain, North Twin Peak and Wilson Is.), NSL–640 m.
Sources: Storr et al., 1986, Bush et al., 1995 and Shea & Sadlier, 1999.

2. *Elapognathus minor* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 362–363. (*Hoplocephalus minor*)

Types: Syntypes (5 plus skull), BMNH 1946.1.18.64 [= Boul. a], a female (Swan River, Haslar, 1863), BMNH 1946.1.20.71 [= Boul. b], a male (Swan River), MCZ 77635 (formerly BMNH 1946.1.19.13 [= Boul. c], a 445 mm female, BMNH 1946.1.19.14–15 [= Boul. d–e] (S. Australia), a male and juvenile, and BMNH 1964.962 [= Boul. g] (skull from MCZ 76635, formerly BMNH 1946.1.19.13).
Type locality: "Swan River, S.W. Australia."
Distribution: Extreme SW Australia (ext. SW Western Australia), 10–150 m.
Source: Shine, 1986b.
Remarks: Syntypes denoted above with Boulenger (1896a: 357) catalogue letters. MCZ 76635 has skull removed *fide* Cogger et al. (1983: 225).

ELAPOIDIS F. Boie, 1827 (Natricidae)

Synonyms: *Elapodis* H. Boie *in* F. Boie, 1826 *(nomen nudum), Elapodes* – Schlegel, 1837 *(nomen incorrectum), Elapoides* Jan, 1862b *(nomen emendatum),* and *Elapiodes* – S.W. Garman, 1884 *(nomen incorrectum).*
Type species: *Elapoidis fuscus* F. Boie, 1827.
Distribution: East Malaysia and Indonesia.
Sources: Rooij, 1917, Kopstein, 1938, C. Haas, 1941, 1950, Bergman, 1958a, Capocaccia, 1976, David & Vogel, 1996, Vogel & G. Köhler, 1996 and I. Das, 2010, 2012.

1. *Elapoidis fuscus* F. Boie, 1827. Isis von Oken 20(6): 519. (*Elapoidis fusca*)

Synonyms: *Elapoidis fuscus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Calamaria elapoides* Schlegel, 1837, and *Elaphis sumatranus* Bleeker, 1860b *(nomen nudum).*
Types: Syntypes (2), RMNH 73 and RMNH 10427 (H. Boie & H.C. Macklot, 1825–1832).
Type locality: "Java" [SW Indonesia].
Distribution: East Malaysia (Sabah) and Indonesia (Java, Kalimantan, Sumatra), 1000–1525 m.
Remarks: Original description based on H. Boie's MS (1823–1825). H. Boie sent numerous specimens to RMNH *fide* Schlegel (1837: 44). Collectors probably H. Boie & H.C. Macklot *fide* C. Haas (1950: 559). Boulenger (1893a: 307) listed an exchanged Javan female from RMNH, probably a type.

ELAPOMORPHUS Weigmann *in* Fitzinger, 1843 (Xenodontidae)

Synonyms: *Elapocephalus* A.C.L.G. Günther *in* Gray, 1858g, and *Elapomorpho* Boettger, 1880b *(nomen emendatum), Elapomorphis* – Ditmars, 1933 *(nomen incorrectum), Elapomurphus* – Prado, 1944 *(nomen incorrectum),* and *Elapormorphus* – Bellairs, 1969 *(nomen incorrectum).*
Type species: *Coluber quinquelineatus* Raddi, 1820.

Distribution: Eastern South America.

Sources: Strauch, 1885, J.A. Peters & Orejas-Miranda, 1970, Lema, 1979b, 1984, Ferrarezzi, 1993, Lema & Hofstadler-Deiques, 1995, Hofstadler-Deiques & Lema, 2005, Zaher et al., 2009 and Lema & Hofstadler-Deiques, 2010.

Remarks: *Elapomorphus lepidus* was transferred to *Coronelaps*.

1. *Elapomorphus quinquelineatus* (Raddi, 1820). Mem. Math. Fis. Soc. Ital. Sci. Modena 18(2): 339–340, pl. (*Coluber quinquelineatus*) (*nomen corrigendum*)

Synonyms: *Coluber 5-lineatus* Raddi, 1820 *(nomen incorrigendum), Duberria quinquelineata* – Fitzinger, 1826a *(nomen corrigendum), Calamaria blumii* Schlegel, 1837, *Elapsomorphus blumii* A.-M.-C. Duméril, 1853 *(nomen nudum), Elapocephalus taeniatus* A.C.L.G. Günther, 1858, and *Elapomorphus accedens* Jan, 1862b.

Types: Syntypes (2), formerly IRMC (G. Raddi, 1817–1818), location unknown.

Type locality: "contorni di Rio-Janeiro, Brasile" [= vicinity of Rio de Janeiro, Rio de Janeiro State, SE Brazil, 22°54'S, 43°14'W, elevation NSL].

Distribution: Southeastern Brazil (S Bahia, Espírito Santo, E Minas Gerais, Rio de Janeiro, Rio Grande do Sul, Santa Catarina, São Paulo), NSL–350 m.

Sources: Hoge, 1959e, Lema, 1984, 1992, 1994, Freitas, 1999, Marques et al., 2001 and C.J. Cole et al., 2013.

Remarks: Types not in Modena or MZUF *fide* Hoge (1959e: 267), who reported only a single type (whereas Raddi listed two ventral counts). C.J. Cole et al. (2013: 493) erroneously cited a type as MNHN 3673 (syntype of *Calamaria blumii* Schlegel). Record without specific locality from Guyana or French Guiana (USNM 6180) *fide* C.J. Cole et al. (2013: 493).

2. *Elapomorphus wuchereri* Wucherer *in* A.C.L.G. Günther, 1861b. Ann. Mag. Nat. Hist. (3) 7(41): 415–416, 3 figs.

Type: Lectotype, BMNH 1946.1.2.96, an 1165 mm specimen (O.E.H. Wucherer, 1859–1860).

Type locality: "Ilheus, Bahia" [= Ilhéus, Bahia State, Brazil, 14°48'S, 39°02'W, elevation 10 m].

Distribution: Southeastern Brazil (Bahia, Espírito Santo, ? Rio de Janeiro), 10 m.

Sources: A.C.L.G. Günther, 1861e and Lema & Hofstadier-Deiques, 2010.

Remarks: Original description reprinted in A.C.L.G. Günther (1861e: 15–16, 3 figs.).

ELAPOTINUS Jan, 1862b (Atractaspididae)

Synonym: *Elapotimus* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type species: *Elapotinus picteti* Jan, 1862b.

Distribution: Unknown.

Sources: Jan & Sordelli, 1860–1866 (13: pl. 3, fig. 1), Witte & Laurent, 1947, Wallach, 1991, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

E

1. *Elapotinus picteti* Jan, 1862b. Arch. Zool. Anat. Fis. 2(1): 31–32.

Type: Holotype, MHNG 279.37, a 312 mm male (M. Pelletier, Oct. 1840).

Type locality: Unknown. "Tropical Africa ?" *fide* Boulenger (1896a: 245).

Distribution: Unknown. Known only from the holotype and a topotype.

Remarks: According to the MHNG minutes for 1840, Pelletier purchased 17 bottles of exotic reptiles that contained a series of 10 unidentified snakes (MHNG 279.33–279.42). MHNG 279.33–34 are listed as "? Guyane". The locality column for MHNG 279.34–279.42 is blank. Localities for lizards on the same catalogue page include Senegal and Madagascar. As an atractaspidid, the most likely origin is African but Madagascar is also a possibility.

ELAPSOIDEA Bocage, 1866b (Elapidae)

Synonyms: *Elapsoidea* Bocage, 1866a *(nomen nudum), Elapechis* Boulenger, 1896a *(nomen substitutum), Elapoidea* Boulenger, 1896a *(nomen emendatum), Alapsoidea* – Anthony, 1955 *(nomen incorrectum),* and *Elapsoides* – Corkill, 1956 *(nomen incorrectum).*

Type species: *Elapsoidea guentherii* Bocage, 1866b.

Distribution: Subsaharan Africa.

Sources: Loveridge, 1944b, Broadley, 1971b, Golay, 1985, Golay et al., 1993, Jakobsen, 1997, Keogh, 1998, David & Ineich, 1999, Dobiey & Vogel, 2007, Zaher et al., 2009 and Hoser, 2012e.

1. *Elapsoidea boulengeri* Boettger, 1895b. Zool. Anz. 18(468): 62–63.

Type: Holotype, SMF 20555 (formerly SMF-B 9361a), a 170 mm specimen (O. Boettger, 1895).

Type locality: "Sambesi, Ostafrika" [= Zambezi River, East Africa]. Restricted to Boroma, Zambezi River, Zambezia Prov., cen. Mozambique *fide* M. Griffin (2003: 114).

Distribution: Southeastern Africa. Eastern Democratic Republic of the Congo (Sud-Kivu), W and SE Tanzania

(Kigoma, Mbeya, Mtwara, Ruvuma), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawai (Northern, Southern), Mozambique (Gaza, Inhambane, Manica, Nampula, Sofala, Tete, Zambézia), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), NE Namibia (Caprivi, Okavango), NE Botswana (Central, North East, North West), Swaziland and N South Africa (N KwaZulu-Natal, W Free State, Limpopo, Mpumalanga, E Northern Cape), NSL–1500 m.

Sources: Sweeney, 1961, Broadley & Cock, 1975, Auerbach, 1987, Broadley, 1998a, M. Griffin, 2003 and Broadley & Blaylock, 2013.

E

2. *Elapsoidea broadleyi* Jakobsen, 1997. Steenstrupia 22: 76–78, figs. 12–13.

Type: Holotype, MZUF 21658, a 770 mm male (G. T. Castellani, 1970).

Type locality: "Gelib (= Jilib, 0°28'N, 42°50'E), Somalia."

Distribution: Southern Somalia (Jubbada Dhexe), 25 m.

3. *Elapsoidea chelazziorum* Lanza, 1979. Monit. Zool. Ital. (2, Suppl.) 12(12): 238–243, figs. 1a–c, 2a–c4a–b. (*nomen corrigendum*)

Synonyms: *Elapsoidea chelazzii* Lanza, 1979 *(nomen incorrigendum),* and *Elapsoidea chelazziorum* Lanza, 1990b *(nomen corrigendum).*

Type: Holotype, MZUF 21964, a 415 mm male (A.M. Simonetta, 27 March 1977).

Type locality: "in the garden of the University Campus (Faculty of Agriculture), about 6 km E of Afgoi (about 02°06'N-45°11'E, SE Somalia)."

Distribution: Southern Somalia (NE Shabeellaha Hoose). Known only from type locality.

Sources: Lanza, 1979, 1983a, 1990b.

4. *Elapsoidea guentherii* Bocage, 1866b. J. Sci. Math. Phys. Nat., Lisboa 1(1): 70–71, pl. 1, figs. 3, 3a–b. (*nomen corrigendum*)

Synonyms: *Elapsoidea güntherii* Bocage, 1866b *(nomen incorrigendum), Elapsoidea hessei* Boettger, 1887a, *Elapsoidea guentheri* – Boettger, 1888e *(nomen corrigendum), Elapsoidea güntherii* – Bocage, 1895 *(nomen incorrectum),* and *Elapsoidea decosteri scalaris* Laurent, 1960.

Type: Lectotype, MBL T-103 (formerly MBL 1935), a 400 mm specimen (J. d'Anchieta, 1865), designated by H.W. Parker (1949: 97), destroyed by fire 18 March 1968.

Type locality: "Cabinda" [= Cabinda, Cabinda Distr., ext. NW Angola, 5°33'S, 12°11'E, elevation 20 m] via lectotype selection.

Distribution: CentralAfrica. Southern Congo (Kouilou), S Democratic Republic of the Congo (Bandundu, Bas-Congo, Katanga, Kinshasa, Oriental, Sud-Kivu), Angola (Benguela, Bié, Cabinda, Cuando Cubango, Cuanza, Huíla, Moxico, Lunda Norte), Zambia (Central, Copperbelt, Northern, North-Western, Southern) and cen. Zimbabwe (Mashonaland Central, Mashonaland East, Mashonaland West, Midlands), NSL–1700 m.

Sources: Laurent, 1956a, Witte, 1962, Leston & Hughes, 1968, Hughes & Barry, 1969, Broadley, 1959, 1983, Fouin, 1969, V.F.M. FitzSimons, 1974, Broadley & Cock, 1975, Branch, 1988, J.-F. Trape & Roux-Estève, 1995, Broadley et al., 2003, Chippaux, 2006 and Broadley & Blaylock, 2013.

5. *Elapsoidea laticincta* (F. Werner, 1919). Denks. Akad. Wiss. Wien Math.-Natur. Kl. 96: 507–508, fig. 8. (*Elapechis laticinctus*)

Type: Holotype, NMW 19068, a 237 mm female (F. Werner, 28 March 1914).

Type locality: "Kadugli, Kordofan, Nuba-Berg-Provinz, Sudan" [= Janub Kurdufan Prov., S. Sudan, 11°01'N, 29°43'E, elevation 525 m].

Distribution: Central Africa. Northern Cameroon (Adamaoua), S Chad, Central African Republic (Mbomou, Ombella-Mpoko, Ouham, Ouham-Pende), N Democratic Republic of the Congo (N Orientale), S Sudan (Janub Kurdufan), S Sudan (Janub Kurdufan), S South Sudan (S Central Equatoria, SW Eastern Equatoria, S Western Equatoria), NW Uganda (W Northern), and S Ethiopia (Sidamo), 270–1000 m.

Sources: Pitman, 1974, Spawls et al., 2002, Chippaux, 2006, Chirio & Ineich, 2006 and Chirio & LeBreton, 2007.

Remarks: Possibily conspecific with *E. semiannulata moebiusi* (Werner) *fide* Broadley, 1971b.

6. *Elapsoidea loveridgei* H.W. Parker, 1949. Zool. Verh. (6): 95–98. (*Elapsoidea sundevallii loveridgei*)

Synonyms: *Elapsoidea decosteri colleti* Laurent, 1956a, and *Elapsoidea decosteri multicincta* Laurent, 1956a.

Type: Holotype, BMNH 1946.1.23.57 (formerly BMNH 1902.5.26.4), a 560 mm female (S.L. Hinde, 1896–1902).

Type locality: "Machakos, Kenya Colony, 5400 ft." [= Machakos, cen. Eastern Prov., cen. Kenya, 1°31'S, 37°16'E, elevation 1645 m].

Distribution: Eastern Africa. Southern Ethiopia (Gemu Gofa, Hararge, Illubabor, Sidamo), S Somalia (Jubbada Dhexe), E Democratic Republic of the Congo (E Nord-Kivu, E Orientale), S Uganda (Central, Eastern, Western), SW Kenya (Central, S Coast, Eastern, Nairobi, Nyanza, S Rift Valley, Western), Rwanda, Burundi (Buyogoma) and NE Tanzania (Arusha, Kilimanjaro, Shinyanga, Tabora), 500–2300 m.

Sources: Laurent, 1956a, Pitman, 1974, Spawls et al., 2002 and Largen & Spawls, 2010.

7. *Elapsoidea nigra* A.C.L.G. Günther, 1888c. Ann. Mag. Nat. Hist. (6) 1(3): 332.

Synonym: *Elapechis niger* – Boulenger, 1896a.
Type: Holotype, BMNH 1946.1.18.95 (formerly BMNH 1879.11.12.3), a 406 mm female (J. Kirk, 1865–1879).
Type locality: "Ushambola" [= Usambara Mtns., N Tanga Prov., NE Tanzania].
Distribution: Northeastern Tanzania (Morogoro, Tanga), 300–1900 m.
Source: Spawls et al., 2002.

8. *Elapsoidea semiannulata* Bocage, 1882a. J. Sci. Math. Phys. Nat., Lisboa 8(32): 303. (*nomen corrigendum*)

Synonyms: *Elapsoidea semi-annulata* Bocage, 1882a *(nomen incorrigendum), Elapsoidea semiannulata* – Bocage, 1895 *(nomen corrigendum), Elapsoidea moebiusi* F. Werner, 1897b, and *Elapsoidea decosteri huilensis* Laurent, 1964a.
Type: Holotype, MBL 1938 (J.A. d'Anchieta, 1882), destroyed by fire 18 March 1978.
Type locality: "Caconda, Angola" [= Caconda, Huila Prov., SW Angola, 13°44'S, 15°04'E, elevation 1635 m].
Distribution: West and cen. Africa. Southern Mauritania (Guidimaka), Senegal (Dakar, Fatick, Kolda, Tambacounda), Gambia (Western), Guinea–Bissau (Bissau, Tombali, Bubaque Is.), Guinea (Boké, Dubréka, Kouroussa, Télimélé), Ivory Coast (Bouna, Toumodi), SW Mali (Kayes, Koulikoro, Sikasso), N Ghana (Northern, Upper East, Upper West, Volta), Togo (Maritime, Plateaux, Savanes), N Benin (Alibori, Atakora, Collines), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Haute-Bassins, Sud-Ouest, Volta-Noire), SW Niger (Dosso, Niamey), Nigeria (Bauchi, Benue, Gongola, Kaduna, Kwara, Niger, Plateau), N Cameroon (Extreme-Nord, Nord), S Chad (Mayo-Kebbi, Moyen-Chari), Central African Republic (Bamingui-Bangoran, Kemo-Gribingui, Mbomou, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende, Vakaga), E Gabon (Haut-Ogooué), Congo (Brazzaville, Cuvette-Ouest, Plateau), Democratic Republic of the Congo (Bandundu, Bas-Congo, Kinshasa, Katanga, Orientale, Sud-Kivu), Angola (Benguela, Bié, Cuanza Norte, Huambo, Huíla, Moxico, Namibe), W Zambia (Western) and NE Namibia (Omaheke, Oshikoto), NSL–2000 m.
Sources: Haacke & Finkeldey, 1967, Roman, 1973b, V.F.M. FitzSimons, 1974, Broadley & Cock, 1975, Pienaar et al., 1983, Branch, 1988, J.-F. Trape & Roux-Estève, 1995, Broadley, 1998a, Spawls et al., 2002, Broadley et al., 2003, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Chirio, 2009, Ullenbruch et al., 2010, Segniagbeto et al., 2011, Auliya et al., 2012, Chirio, 2013 and Hughes, 2013.
Remarks: Unconfirmed reports from Ivory Coast, Liberia, Mali, Sierra Leone.

9. *Elapsoidea sundevalli* (A. Smith, 1848 *in* 1838–1849). Illust. Zool. So. Africa, Rept.: pl. 66, figs. a–c, 2 pp. (*Elaps sundevalli*) (*nomen corrigendum*)

Synonyms: *Elaps sundervallii* A. Smith, 1849 *in* 1838–1849 *(nomen incorrigendum), Elaps sunderwallii* A. Smith, 1849 *in* 1838–1849 *(nomen incorrigendum), Elapsoidea sundevallii* – W.C.H. Peters, 1880a *(nomen corrigendum), Elapsoidea decosteri* Boulenger, 1888d, *Elapsoidea sundevallii fitzsimonsi* Loveridge, 1944b, *Elapsoidea sundevallii longicauda* Broadley, 1971b, and *Elapsoidea sundevallii media* Broadley, 1971b.
Type: Holotype, NHR, a 549 mm specimen (C.J. Sunderwall), lost *fide* Hughes, *in litt*.
Type locality: "Southern Africa to the eastward of the Cape Colony" [= KwaZulu-Natal Prov., South Africa].
Distribution: Southern Africa. Southern Mozambique (Gaza, Inhambane, Maputo), ext. S Zimbabwe (S Matabeleland South, S Midlands), W Botswana (Ghanzi, S Kgalagadi, North West), Namibia (Okavango, Omaheke, Otjozondjupa), Swaziland and E South Africa (Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, NE Northern Cape), NSL–1600 m.
Sources: Mertens, 1955, 1971, Hughes & Barry, 1969, FitzSimons, 1974, Broadley & Cock, 1975, Broadley, 1983, Pienaar et al., 1983, Branch, 1988 and Broadley & Blaylock, 2013.
Remarks: Specific epithet *sunderwallii* corrected to *sundevalli* in errata sheet (although text, plate and index all use the *–ii* ending).

10. *Elapsoidea trapei* Mané, 1999. Bull. Soc. Herp. France (91): 13–16, fig. 2.

Type: Holotype, MNHN 1999.6505, a 545 mm male (J.-F. Trape, 1 Aug. 1993).
Type locality: "Ndébou, Tambacounda (12°31'N-12°27'W), Senegal" [= Ndébou, S Kédougou Prov., SE Senegal, 12°31'N, 12°27'W, elevation 140 m].
Distribution: Extreme West Africa. Southern Mauritania (Guidimaka), SE Senegal (Dakar, S Kédougou, S Tambacounda), ext. W Mali and ext. N Guinea, NSL–140 m.
Sources: J.-F. Trape & Ineich, 2004, 2006b, Villiers & Condamin, 2005 and J.-F. Trape & Mané, 2006.

EMMOCHLIOPHIS Fritts & Smith, 1969 (Dipsadidae)

Type species: *Emmochliophis fugleri* Fritts & Smith, 1969.
Distribution: Northwestern Ecuador.
Sources: Bogert, 1964, Fritts & Smith, 1969, Hillis, 1990, Sheil & Grant, 2001 and Zaher et al., 2009.

1. *Emmochliophis fugleri* Fritts & Smith, 1969. Trans. Kansas Acad. Sci. 72(1): 60–64, figs. 1a–c, 2a–c.

Type: Holotype, UIMNH 78795, a male (G. Key, 8–10 Feb. 1966).
Type locality: "4 km. E Río Baba bridge, 24 km. S Santo Domingo de los Colorados, Pichincha, Ecuador, ca. 600 m."
Distribution: Ecuador (Pichincha), 600 m. Known only from type locality.

E

2. *Emmochliophis miops* (Boulenger, 1898h). Proc. Zool. Soc. London 66(1): 115, pl. 12, fig. 1. (*Synophis miops*)

Type: Holotype, BMNH 1946.1.12.30 (formerly BMNH 1898.4.28.56), a 385–390 mm female (W.F.H. Rosenberg, Oct. 1897).
Type locality: "Paramba, a farm on the W. bank of the River Mira, at 3500 feet altitude, western Ecuador."
Distribution: Ecuador (Carchi), 775 m. Known only from type locality.
Source: Sheil, 1998.

EMYDOCEPHALUS Krefft, 1869a (Elapidae)

Synonyms: *Emidocephalus* Steindachner, 1913 *(nomen emendatum), Emidocephalus* – Angel, 1950 *(nomen incorrectum), Emydocephalis* – Werler & Keegan, 1963 *(nomen incorrectum),* and *Emydocepharus* – Tamiya, 1987 *(nomen incorrectum).*
Type species: *Emydocephalus annulatus* Krefft, 1869a.
Distribution: Marine waters of Sino-Australia, including Arafura Sea, Bohol Sea, Coral Sea, East China Sea, Great Barrier Reef, Gulf of Carpentaria, SW Pacific Ocean and Timor Sea.
Sources: Boulenger, 1908b, M.A. Smith, 1926a, Voris, 1966, Halstead, 1970, Cogger, 1975, 2000, Cogger et al., 1983a, McCarthy, 1986, Welch, 1988, A.R. Rasmussen, 1997, David & Ineich, 1999, Zaher et al., 2009 and Hoser, 2012e.

1. *Emydocephalus annulatus* Krefft, 1869a. Proc. Zool. Soc. London 37(1): 322.

Synonyms: *Aipysurus chelonicephalus* Bavay, 1869, *Emydocephalus tuberculatus* Krefft, 1869a, and *Emydocephalus annualatus* – M.W. Lin, 1975 *(nomen incorrectum).*
Types: Syntypes (2), AMS 454 and AMS 6633, longest syntype 762 mm.
Type locality: "Probably the Australian seas."
Distribution: Indo-Australia. Vietnam, Philippines (Panglao), N Australia (NW Northern Territory, Queensland, N Western Australia, Ashmore and Cartier Is.), New Caledonia and Loyalty Is.
Sources: Boulenger, 1898l, 1903f, Alcala, 1986, Ehmann, 1992, Ineich & Rasmussen, 1997, Dotsenko, 1999, Bauer & Sadlier, 2000, Cogger, 2000, Ineich & Laboute, 2002, J.C. Murphy & Schlager, 2003 and A.R. Rasmussen et al., 2011.
Remarks: Original description reprinted in Krefft (1869b: 92).

2. *Emydocephalus ijimae* Stejneger, 1898. J. Sci. Coll., Imp. Univ. Tokyo 12(3): 223.

Synonyms: *Emydocephala ijimae* – Mell, 1929 *(nomen incorrectum),* and *Emydocephalis ijimae* – Werler & Keegan, 1963 *(nomen incorrectum).*
Type: Holotype, USNM 36517, an embryo taken from a gravid 890 mm female (Tashiro, 1888).
Type locality: "Riu-Kiu Sea, around Riu-Kiu Archipelago" [= Ryukyus, S Japan].
Distribution: Southern Japan (Ryukyus: Iriomote, Ishigaki, Okinawa, Takara Jima and Yaeyama Is.) and Taiwan (Botel Tobago Is.).
Sources: Stejneger, 1907a, Wall, 1909a, Maki, 1931, Shibata, 1960, Mao & Chen, 1980, M. Mori, 1986 and Xiang & Li, 2009.
Remarks: USNM 36517, although reconfirmed as the holotype *fide* Stejneger (1907a: 413) is listed as a paratype *fide* Cochran (1961: 178). Stejneger (1907a 413), Wall (1909a: 187) and Maki (1931a: 179) erroneously listed original description in vol. 13.

ENHYDRINA Gray, 1849a (Elapidae)

Synonyms: *Entrydrina* – Phipson, 1887 *(nomen incorrectum), Euhydrina* – Phipson, 1888 *(nomen incorrectum), Hydrina* – Perrier, 1928 *(nomen incorrectum), Endydrina* – Schulze, Kükenthal & Hediger, 1929 *in* 1917–1929 *(nomen incorrectum), Enhydria* – Cowan & Hick, 1951 *(nomen incorrectum),* and *Enhydrena* – Chippaux & Goyffon, 1983 *(nomen incorrectum).*
Type species: *Hydrophis schistosus* Daudin, 1803c.
Distribution: Marine waters, estuaries and tidal rivers (up to 600 km upstream in Cambodia) of Indo-Australia, including Andaman Sea, Arabian Sea, Arafura Sea, Banda Sea, Bay of Bengal, Coral Sea, Flores Sea, Gulf of Oman, Gulf of Thailand, Java Sea, Molucca Sea, Persian Gulf, South China Sea, Strait of Malacca and W Indian Ocean.
Sources: M.A. Smith, 1926a, Cogger et al., 1983a, Golay et al., 1993, O'Shea, 1996, A.R. Rasmussen, 1997, David & Ineich, 1999, Wells, 2007, Kharin & Czeblukov, 2009, Zaher et al., 2009, I. Das, 2010, 2012, A. Silva et al., 2011 and Hoser, 2012e.
Remarks: A synonym of *Hydrophis fide* Sanders et al., 2013.

1. *Enhydrina schistosa* (Daudin, 1803c). Hist. Nat. Rept. 7: 386–387. (*Hydrophis schistosus*)

Synonyms: *Enhydris valakadin* Rafinesque-Schmaltz, 1817, *Hydrophis cianura* Rafinesque-Schmaltz, 1817, *Hydrophis hoglin* Rafinesque-Schlmaltz, 1817, Hydrophis *flaviventris* Siebold, 1827, *Hydrus valakadjen* – H. Boie *in* Schlegel, 1826b *(nomen incorrectum), Hydrus valakadyn* – F. Boie *(nomen incorrectum),* 1827, *Disteira russelii* Fitzinger, 1827, *Polyodontes annulatus* Lesson, 1832 *in* Bélanger, 1831–1834, *Hydrophis bengalensis* Gray, 1842d, *Hydrophis subfasciata* Gray, 1842d, *Thalassophis werneri* P. Schmidt, 1852, *Thalassophis werneria* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Enhydrina valacadyen* – J. Anderson, 1872 *(nomen incorrectum), Entrydrina bengaensis* – Phipsoni, 1887 *(nomen incorrectum), Enhydrina vikadien* – Boettger, 1892a *(nomen incorrectum), Enhydrina valakadien* Boulenger, 1896a *(nomen emendatum), Enhydrina velakadien* – Flower, 1899 *(nomen incorrectum), Enhydrina valacadjen* – Kathariner, 1900 *(nomen incorrectum), Enhydrina schistoza* – Codoceo, 1957 *(nomen incorrectum), Enhydrina schitosa* – Boquet, 1964 *(nomen incorrectum), Enhydrena schistose* – Chippaux & Goyffon, 1983 *(nomen incorrectum), Enhydria schistose* – Murthy, 1986 *(nomen incorrectum),* and *Enhydrina valacadien* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.10.7 (formerly RCSM & BMNH 1921.7.28.1), a 926 mm male.

Type locality: "Bengale" [= Bangladesh or West Bengal, India]. Restricted to Tranquebar [= Tharangambadi, Tamil Nadu State, SE India, 11°02'N, 79°51'E, elevation 5 m] *fide* M.A. Smith (1926a: 39).

Distribution: Indo-Australia. Iraq, Iran, Oman, United Arab Emirates, Pakistan (S Balochistan, S Sindh), India (Andhra Pradesh, Gujarat, Karnataka, Kerala, Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka, Bangladesh, Myanmar, Mergui Arch., Thailand (Chumphon, Samut Sakhno, Satun, Songkhla, Surat Thani), Cambodia, Grand Lac, S Vietnam (Binh Thuan to Ba Ria-Vung Tau), West Malaysia (Johore, Kelantan, Negri Sembilan, Pahang, Perak, Perlis, Selangor, Trengganu, Penang Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (S Papua, Java, Kalimantan, Moluccas, Sumatra), Seychelles, S Papua New Guinea (Western) and N Australia (Northern Territory, Queensland, Great Barrier Reef).

Sources: Wall, 1909a, 1914g, 1918b, 1919c, Rooij, 1917, Bourret, 1934f, M.A. Smith, 1943, Bergman, 1955c, E.H. Taylor, 1965, Minton, 1966, Chhapgar & Kewalramani, 1967, Halstead, 1970, Saint Girons, 1972, B.L. Lim & Sawai, 1975, Voris et al., 1978, Voris & Jayne, 1979, Voris & Moffett, 1981. Nguyen et al., 2009 and A.R. Rasmussen et al., 2011.

Remarks: Original description based on P. Russell (1801: 11, pl. 10).

2. *Enhydrina zweifeli* Kharin, 1985. Zool. Zhur. 64(5): 786–787, figs. 1–3.

Type: Holotype, AMNH 104340, a 690 mm male (O. Burton, Feb.–March 1966).

Type locality: "New Guinea, District Sepik, mouth of Sepik River" [= East Sepik Distr., Papua New Guinea].

Distribution: Papua New Guinea (East Sepik). Known only from the holotype.

ENHYDRIS Latreille *in* Sonnini & Latreille, 1801a (Homalopsidae)

Synonyms: *Enhydra* – Fischer von Waldheim, 1813 *(nomen incorrectum), Enhydrus* Rafinesque-Schmaltz, 1817 *(nomen emendatum), Natrix* Rafinesque-Schmaltz, 1817 *(nomen praeoccupatum), Enydris* Ritgen, 1828 *(nomen emendatum), Hypsirhina* Wagler, 1830, *Hypserhina* Gray, 1834 *in* Gray & Hardwicke, 1830–1835 *(nomen incorrectum), Hypsirina* Gray, 1835 *in* Gray & Hardwicke, 1830–1835 *(nomen emendatum), Potamophis* Cantor, 1836a, *Miralia* Gray, 1842d, *Raclitia* Gray, 1842d, *Hypsiscopus* Fitzinger, 1843, *Pelophis* Fitzinger, 1843, *Enhydra* Agassiz, 1847 *(nomen praeoccupatum), Noterophis* Gistel, 1848, *Phytolopsis* Gray, 1849a, *Hypsirrhina* Lichtenstein & Martens, 1856 *(nomen emendatum), Tachyplotus* J.T. Reinhardt, 1866, *Pythonopsis* W.C.H. Peters, 1871b *(nomen substitutum), Homalophis* W.C.H. Peters, 1871b, *Phytonopsis* – Hoffmann, 1890 *(nomen incorrectum), Hipsirhina* – Palacky, 1898 *(nomen incorrectum), Hypsirhinus* – Perrier, 1928 *(nomen incorrectum), Hypsirhinae* – Maass-Berlin, 1933 *(nomen incorrectum), Hypsirhyna* – Maki, 1931 *(nomen incorrectum), Enhydres* – Briceño-Rossi, 1934 *(nomen incorrectum), Phytonopsis* – C.P.J. Haas, 1950 *(nomen incorrectum), Enhydrous* – Taub, 1966 *(nomen incorrectum),* and *Hypshirhina* – Tiedemann & Häupl, 1980 *(nomen incorrectum).*

Type species: *Hydrus enhydris* J.G. Schneider, 1799.

Distribution: Tidal rivers, lakes, estuaries, marshes and coastal marine waters of SE Asia and East Indies.

Sources: M.A. Smith, 1943, Gyi, 1970, Welch, 1988, J.C. Murphy & Voris, 1994, Voris et al., 2002, J.C. Murphy, 2007b, Alfaro et al., 2008, Zaher et al., 2009, I. Das, 2010, 2012 and Karns et al., 2010.

Remarks: A polyphyletic genus with *E. bocourti* and *E. punctata* belonging to other genera *fide* Voris et al., 2002 and Karns et al. (2010: 28). J.C. Murphy (2011: 234) placed *polylepis* in the resurrected genus *Pseudoferania* Ogilby. Two undescribed species

(*Enhydris towuti* from cen. Sulawesi and *Enhydris grey* from SE Sulawesi) *fide* Iskandar & Tjan (1996: 43).

E

1. *Enhydris albomaculata* (A.-M.-C. Duméril, Bibron & Duméril, 1854b). Erpét. Gén. 7(2): 974–975. (*Homalopsis albomaculatus*) (*nomen corrigendum*)

Synonyms: *Homalopsis albo-maculatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrigendum),* and *Homalopsis albomaculatus* – A.-M.-C. Duméril, Bibron & Duméril, 1854c *(nomen corrigendum).*
Type: Holotype, MNHN 934, a 370 mm male (O. Kunhardt, 1847).
Type locality: “les environs de Padani, île de Sumatra” [= vicinity of Padang, Sumatera Barat Prov., Sumatra, W Indonesia, 0°57’S, 100°21’E].
Distribution: Western Indonesia (Java, Nias, Simeulue, Sinabang, Sumatra).
Source: David & Vogel, 1996.
Remarks: Java and Sumatra records doubtful *fide* J.C. Murphy (2007b: 85).

2. *Enhydris alternans* (A. Reuss, 1834). Mus. Senck. 1: 155–156, pl. 9, figs. 3a–b. (*Brachyorrhos alternans*)

Synonym: *Homalopsis decussata* Schlegel, 1837.
Type: Lectotype, SMF 19465 (formerly SMF-R III.C.4.a & SMF-B 9004, 1a), a 127 mm specimen (Peitsch, 1827), designated by Mertens (1922: 181).
Type locality: “Java” [Indonesia] via lectotype selection.
Distribution: East Malaysia (Sarawak) and W Indonesia (Bangka, Belitung, Java, Sumatra).
Sources: Bergman, 1960, Iskandar, 1987 and David & Vogel, 1996.

3. *Enhydris bocourti* (Jan, 1865c). Arch. Zool. Anat. Fis. 3(2): 258–259. (*Hypsirhina bocourti*)

Synonyms: *Hypsirhina multilineata* Tirant, 1885b, *Hypsirhina gigantea* F. Werner, 1923a, and *Hypsirhina bocourtii soctDistributionnsis* Bourret 1934d.
Types: Syntypes (2), MNHN 613–613A, longest syntype 490 mm (F. Bocourt, 1862).
Type locality: “Bangkok, R. di Siam” [= Bangkok, Bangkok Prov., Thailand, 13°43’N, 100°29’E, elevation NSL].
Distribution: Southeast Asia. Southern Thailand (Bangkok, Nakhon Sawan, Pattani, Phatthalung, Phra Nakhon Si Ayutthaya, Surat Thani, Trang), Cambodia (Battambang, Kampong Chhang, Kampong Thom, Kampot, Koh Kong, Oddar Meanchey, Pursat, Siem Reap), Laos (Vientiane), S Vietnam (Binh Duong, Ca Mau, Can Tho, Dong Nai, Ho Chí Minh City, Kien Giang, Soc Trang, Táy Ninh) and N West Malaysia (Kedah), 190–200 m.
Sources: M.A. Smith, 1928b, E.H. Taylor, 1965, Campden-Main, 1970a, Saint Girons, 1972a, Tweedie, 1983, M.J. Cox, 1991b, M.J. Cox et al., 1998, B.L. Stuart & Emmett, 2006, V.S. Nguyen et al., 2009, I Das, 2010 and T. Hartmann et al., 2013.
Remarks: India and Myanmar records likely based on *E. sieboldi fide* J.C. Murphy (2007b: 95).

4. *Enhydris chanardi* J.C. Murphy & Voris, 2005. Raffles Bull. Zool. 53(1): 143–147, figs. 1a, 2.

Type: Holotype, USNM 67516, a female (Hugh M. Smith, 1 May 1928).
Type locality: “Bangkok (13°45’N 100°31’E), Thailand.”
Distribution: Thailand (Bangkok, Phra Nakhon Si Ayutthaya).
Remarks: Probably endemic to Chao Phraya freshwater swamp forest *fide* J.C. Murphy (2007b: 99).

5. *Enhydris doriae* (W.C.H. Peters, 1871b). Mber. Königl. Akad. Wiss. Berlin 1871(10): 577. (*Homalophis doriae*)

Types: Syntypes (2), MSNG CE 30665 (O. Beccari & M.J. Doria, 1865) and ZMB 7120, an 800 and 780 mm specimen.
Type locality: “Sarawak” [East Malaysia].
Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and Indonesia (W Kalimantan), NSL–500 m.
Sources: J.C. Murphy et al., 2005 and I. Das, 2007b.
Remarks: Original description reprinted in W.C.H. Peters (1872d: 38–39). W.C.H. Peters (1871b: 577) listed two syntypes. Gyi (1970: 130) stated both types are in MSNG but Capoccacia (1961a: 106) listed only one syntype. ZMB catalogue lists three syntypes, ZMS 7120–22.

6. *Enhydris enhydris* (J.G. Schneider, 1799). Hist. Amph. 1: 245–246. (*Hydrus enhydris*)

Synonyms: *Enhydris caerulea* Latreille *in* Sonnini & Latreille, 1801b, *Hydrus atrocaeruleus* G. Shaw, 1802, *Coluber pythonissa* Daudin, 1803d, *Homalopsis aer* Oppel *in* H. Boie *in* Schlegel, 1826a (*nomen nudum*), *Homalopsis aer* Oppel *in* H. Boie, 1826 (*nomen nudum*), *Potamophis lusingtonii* Cantor, 1836b, *Homalopsis olivaceus* Cantor, 1839b, *Hypsirhina bilineata* Gray, 1842d, *Hypsirhina furcata* Gray, 1842d, *Hypsirhina trilineata* Gray, 1842d, *Potamophis lushingtonii* Cantor, 1847 *(nomen nudum), Hypsirhina enhydris albolineata* Jan, 1863b (*nomen incorrectum*), *Hypsirhina enhydris albolineata* Jan, 1865c, *Hypsirhina albolineata* Morice, 1875a *(nomen nudum),* and *Helicops indicus* Annandale, 1905b.
Type: Lectotype, specimen described and illustrated by P. Russell (1796: 35, pl. 30), a 508 mm female (P. Russell, 1781–1791), designated herein.
Type locality: “lake of Ankapilly, coast of Coromandel, India” [= Ankapalle, Andhra Pradesh, E India, 17°40’N, 83°09’E, elevation 20 m] via lectotype selection.

Distribution: Southeastern Asia and Indonesia. India (N Andhra Pradesh, Assam, Bihar, Madhya Pradesh, Meghalaya, Nagaland, Orissa, Uttar Pradesh, West Bengal), E Nepal (Bardiya, Dhanusa, Kailali, Kanchanpur, Sunsari), Bangladesh, Myanmar (Ayeyarwady, Bago, Magwe, Mandalay, Sagaing, Tanintharyi, Yangon), Thailand (Bangkok, Chon Buri, Khon Kaen, Krung Thep Mahanakhon, Lop Buri, Narathiwat, Pattani, Phathalung), Cambodia (Kandal, Kompon Chan, Kampong Chnang, Siem Reap), Laos, Vietnam (Ba Ria-Vung Tau, Ca Mau, Can Tho, Dong Nai, Ho Chi Minh City, Khanh Hoa, Kien Giang, Long An, Phu Yen, Soc Trang, Tay Ninh, Tien Giang), ext. SE China (Guangdong), West Malaysia (Kedah, Pinang, Tioman Is.), Singapore, East Malaysia (Sarawak), Brunei and Indonesia (Papua, Bangka, Java, Kalimantan, Sumatra, Weh), NSL–250 m.

Sources: Wall, 1912d, C.H. Pope, 1935, Bergman, 1955a, Kuntz, 1963, E.H. Taylor, 1965, Campden-Main, 1970a, Saint-Girons, 1972, R. Fleming & Fleming, 1973, G. Sharma & Nakhasi, 1980, Tweedie, 1983, M.J. Cox, 1991b, Stuebing, 1991, David & Vogel, 1996, M.J. Cox et al., 1998, Leong & Tan, 2000, Karns 0et al., 2001, Schleich & Kästle, 2002, Ao et al., 2004, Tiwari & Shah, 2004, Whitaker & Captain, 2004, J.C. Murphy & Voris, 2005, I. Das, 2007b, M.F. Ahmed et al., 2009, V.S. Nguyen et al., 2009 and Grismer, 2011.

Remarks: Unconfirmed records from Hong Kong and Sri Lanka (Boulenger, 1896a: 7). Sulawesi records doubtful, probably *Enhydris matannensis* or *E. plumbea, fide* Lang & Vogel (2005: 251). Cox et al. (2013: 482) listed two syntypes as MHNL 42000343.

7. *Enhydris gyii* J.C. Murphy, Voris & Auliya, 2005. Raffles Bull. Zool. 53(2): 272–273, figs. 1a, 2, 3a–c.

Type: Holotype, ZFMK 65824, a 766 mm female (M. Auliya, 27 Oct. 1996).

Type locality: "Indonesia, Kalimantan Barat, Sungai Kapuas at Putussibau (0°52'N, 112°55'E), where the Sibau River empties into the Kapuas River, Kapuas Hulu Regency, West Kalimantan."

Distribution: Central Indonesia (W Kalimantan), 50 m.

Source: I. Das, 2012.

8. *Enhydris indica* (Gray, 1842d). Zool. Misc. 2(May): 67. (*Raclitia indica*)

Types: Syntypes (2), BMNH 1946.1.2.36, a 324 mm female, and BMNH 1946.1.2.46, a 345 mm male (T. Hardwicke, 1756–1823).

Type locality: "India" (in error). Corrected to Malay Peninsula *fide* Boulenger (1896a: 4).

Distribution: West Malaysia (Perak, Selanger).

Sources: Lim & Kamarudin, 1975 and Tweedie, 1983.

Remarks: BMNH catalogue lists Malay Peninsula as type locality. Probably occurs in Singapore *fide* I.Das (2010: 326).

9. *Enhydris innominata* (Morice, 1875a). Faune Cochinchine Franç.: 58. (*Hypsirhina innominata*)

Type: Holotype, MHNL 42000338, a female (A. Morice, 1870–1875).

Type locality: "Tay-ninh, Cochinchina française" [= Tây Ninh, Tây Ninh Prov., S Vietnam, 11°22'N, 106°07'E, elevation 15 m].

Distribution: Cambodia (Battambang, Kandal, Kampong Cham, Kampong Thom, Pursat, Siem Reap) and S Vietnam (Kien Giang, Tay Ninh).

Sources: M.A. Smith, 1929, E.H. Taylor, 1965, Saint-Girons, 1971a, 1972a–b, M.J. Cox, 1991b, J.C. Murphy & Voris, 2005 and V.S. Nguyen et al., 2009.

10. *Enhydris jagorii* (W.C.H. Peters, 1863b). Mber. Königl. Akad. Wiss. Berlin 1863(6): 245–247. (*Hypsirhina* [*Eurostus*] *jagorii*)

Type: Holotype, ZMB 4746, a 470 mm male (F. Jagor, 1861–1863).

Type locality: "Siam" [= Thailand]. Restricted to the vicinity of Bangkok, Thailand *fide* J.C. Murphy (2007b: 131).

Distribution: Southeast Asia. Eastern Thailand (Chanthaburi, Khon Kaen, Nakhon Ratchasima, Nakhon Si Thammarat, Sisaket, Trat, Udon Thani), Cambodia (Kampong Speu), S Laos (Borikhan, Champhon, Khammouan, Savannakhet, Vapikhamthong, Xedon) and Vietnam (Bình Tri Thiên, Hâu Giang).

Sources: E.H. Taylor, 1965, Campden-Main, 1970a, Deuve, 1970, Saint-Girons, 1972a, M.J. Cox, 1991b, M.J. Cox et al., 1998 and J.C. Murphy & Voris, 2005.

11. *Enhydris longicauda* (Bourret, 1934d). Bull. Gén. Instr. Pub. 13(1): 20–22, fig. 4. (*Hypsirhina longicauda*)

Types: Syntypes (3), MNHN 1948.95–96 and MNHN 1938.143 (formerly RLB K.1 [Tonlésap], a 530 mm specimen, RLB M.388 [Siem Réap], a 194 mm juvenile, & RLB M.425 [Tonlé Chma], a 226 mm juvenile) (Chevey, Inst. Océanographique Indochine).

Type locality: "Tonlésap, (Grand Lacs du Cambodge)" [= Tonle Sap Lake, E Bat Dambang, SW Siem Reap, NE Pursat and W Kampong Thom Prov., Cambodia, bet. 12°30'–13°15'N, 103°42'–104°30'E, elevation 5 m], "Siem Réap" [= S Siem Reap Prov., Cambodia, 13°20'N, 103°50'E, elevation 10 m], and "Tonlé Chma" [= Tonle Cham, E Kamphon Cham Prov., Cambodia].

Distribution: Western Cambodia (E Battambang, E Kampong Cham, W Kampong Thom, NE Pursat, S Siem Reap), NSL–40 m.

Sources: M.A. Smith, 1943 and Saint-Girons, 1971.

E

12. *Enhydris maculosa* (Blanford, 1881). Proc. Zool. Soc. London 49(1): 226. (*Hypsirhina maculosa*) (*nomen substitutum*)

Synonyms: *Hypsirhina maculata* Blanford, 1879a–b (*nomen praeoccupatum*), and *Hypsirhina blanfordii* Boulenger, 1890a *(nomen substitutum)*.

Type: Neotype, BMNH 1913.6.12.1, a 308 mm female, designated by J.C. Murphy (2007a: 282).

Type locality: Unknown via neotype selection. Designated as Bassein in Pegu *fide* Blanford (1879a: 217) [= Pathein, Ayeyarwady Div., SW Myanmar, 16°46'N, 94°44'E, elevation 20 m].

Distribution: Southern Myanmar (Ayeyarwady, Bago), NSL–20 m.

Source: I. Das, 1999a.

Remarks: Original description based on Blanford (1879a: 216–217) with supplemental original description in Blanford (1879b: 130–131). Holotype, ZSI 8207 (formerly IMC 8207), a 300 mm female (Baker), lost *fide* Sclater (1891: 245) and I. Das et al. (1998: 157). Record from Nias, Indonesia unconfirmed *fide* Iskandar & Colijn (2001: 91).

13. *Enhydris matannensis* (Boulenger, 1897g). Proc. Zool. Soc. London 65(1): 225–226, pl. 15, fig. 1. (*Hypsirhina matannensis*)

Type: Holotype, NMBA 1735, a 240 mm male (P. Sarasin & F. Sarasin, 1893–1896).

Type locality: "Lake Matanna, South-eastern Celebes" [= Matano Lake, Central Sulawesi, bet. 2°25–34'S, 121°13–29'E, elevation 400 m].

Distribution: Central Indonesia. Sulawesi (Buton, Muna), 400–415 m.

Sources: Iskandar, 1979 and Koch, 2012.

14. *Enhydris pahangensis* Tweedie, 1946. Ann. Mag. Nat. Hist. (11) 13(98): 142–144, 1 fig.

Type: Holotype, BMNH 1947.1.1.70, a 220 mm male (M.W.F. Tweedie, April 1940).

Type locality: "Kuala Tahan, River Tembeling, Pahang, between 500 and 1,000 feet altitude, and over 70 miles from the east coast of the Malay Peninsula." Emended to King George V National Park (*fide* Gyi, 1970: 117–118) or the Taman Negara Game Reserve (*fide* Tweedie, 1983: 102) [= N Pahang State, West Malaysia 4°17'N, 102°25'E, elevation 150–300 m].

Distribution: West Malaysia (N Pahang, Terengganu), 150–300 m.

Sources: Tweedie, 1983, Onn, 2009 and I. Das, 2012.

15. *Enhydris pakistanica* Mertens, 1959b. Senck. Biol. 40(3–4): 117–119, pl. 10, figs. 1a–b.

Type: Holotype, SMF 56340, a 708 mm male (M.G. Konieczny, 5 June 1958).

Type locality: "Jati, unteres Indus-Gebiet, Sindh, West-Pakistan" [= Jati, Induis River delta, Sindh Prov., Pakistan, 24°21'N, 68°16'E, elevation 10 m].

Distribution: Southern Pakistan (S Sindh), NSL–10 m.

Sources: Minton, 1966 and M.S. Khan, 2002.

16. *Enhydris plumbea* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 550. (*Homalopsis plumbea*)

Synonyms: *Homalopsis plumbea* H. Boie *in* Schlegel, 1826a *(nomen nudum), Homalopsis plumbea* Schlegel, 1826b *(nomen nudum), Hypsirhina hardwickii* Gray, 1834 *in* Gray & Hardwicke, 1830–1835, and *Helicops wettsteini* Amaral, 1929b.

Type: Lectotype, RMNH 1163 (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823), designated by Gyi (1970: 82).

Type locality: "Java, Indonesia" via lectotype selection. Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Southeastern Asia and Indonesia. Eastern India (Andaman & Nicobars: Andaman and Great Nicobar Is.), S China (Fujian, Guangdong, Guangxi, Hainan, Hong Kong, Jiangsu, Jiangxi, Yunnan, Zhejiang), Taiwan, Myanmar (Mandalay), Thailand (Bangkok, Chanthaburi, Chiang Mai, Chon Buri, Kanchanaburi, Khon Kaen, Lampang, Nakhon Ratchasima, Nakhon Sawan, Pattani, Phang Nga, Phetchaburi, Phrae, Prachuap Khiri Khan, Sakon Nakon, Saraburi, Trang), Laos (Attapu, Bolikhamsai, Champasak, Houaphan, Khammouan, Louangphrabang, Phongsali, Savannakhet, Vientiane, Xaignabouli, Xekong, Xiangkhouang), Vietnam (An Giang, Bac Giang, Bac Kan, Bac Lieu, Bac Ninh, Ba Ria-Vung Tau, Ben Tre, Binh Dinh, Binh Duong, Binh Phuoc, Binh Thuan, Ca Mau, Can Tho, Cao Bang, Dak Lak, Dak Nong, Da Nang, Dien Bien, Dong Nai, Dong Thap, Gia Lai, Ha Giang, Hai Duong, Hai Phong, Ha Nam, Hanoi, Ha Tay, Ha Tinh, Hau Giang, Hoa Binh, Ho Chi Minh City, Hung Yen, Khanh Hoa, Kien Giang, Kon Tum, Lai Chau, Lam Dong, Lang Son, Lao Cai, Long An, Nam Dinh, Nghe An, Ninh Binh, Ninh Thuan, Phu Tho, Phu Yen, Quang Binh, Quang Nam, Quang Ngai, Quang Ninh, Quang Tri, Soc Trang, Son La, Tai Ninh, Thai Binh, Thai Nguyen, Thanh Hoa, Thua Thien-Hue, Tien Giang, Tra Vinh, Tuyen Quang, Vinh Phuc, Vinh Long, Yen Bai), Cambodia (Kampong Chan, Kampong Cham, Kampot, Pursat, Siem Reap), West Malaysia (Johore, Kedah, Kelantan, Perlis, Pinang, Terengganu, Tioman Is.), East Malaysia (Sabah), Brunei and Indonesia (Bali, Bangka, Belitung, Java, Kalimantan, Sulawesi, Sumatra), NSL–1500 m.

Nguyen et al., 2009, Xiang & Li, 2009, Grismer, 2011 and Koch, 2012.

Remarks: Original description based on H. Boie's MS (1823–1825). Page column in original description erroneously numbered "560."

17. *Enhydris punctata* (Gray, 1849a). Cat. Snakes Brit. Mus.: 68. (*Phytolopsis punctata*)

Synonyms: *Eurostus heteraspis* Bleeker, 1857a *(nomen nudum), Tachyplotus hedemanni* J.T. Reinhardt, 1866, *Pythonopsis borneensis* W.C.H. Peters, 1871b, and *Hypsirhina hageni* Lidth de Jeude, 1890.

Type: Holotype, BMNH 1946.1.2.37, a 370 mm female (Warwick).

Type locality: "India," (in error *fide* J.C. Murphy (2007b: 160).

Distribution: Malaysia and Greater Sundas. West Malaysia (Johore, Selangor, Terengganu), East Malaysia (Sarawak), Brunei and Indonesia (Bangka, Belitung, Java, W Kalimantan, Sumatra), NSL.

Sources: Tweedie, 1983, Mahendra, 1984, David & Vogel, 1996, J.C. Murphy et al., 2005 and I. Das, 2007b.

Remarks: Probably a collection of several species that are isolated in peat swamp forests and associated streams *fide* J.C. Murphy (2007b: 160). Indian record discounted *fide* J.C. Murphy (2007b: 161).

18. *Enhydris smithii* (Boulenger, 1914e). J. Nat. Hist. Soc. Siam 1(2): 69–70, 3 figs. (*Hypsirhina smithii*)

Type: Holotype, BMNH 1948.1.2.27, a 400 mm female (native boy via Miller and M.A. Smith).

Type locality: "Messrs. L.T. Leonowens, Ltd., river Menam at Bangkok" [= Louis T. Leonowens Company on Menam River at Bangkok, Bangkok Prov., cen. Thailand, 13°44'N, 100°31'E, elevation NSL].

Distribution: Central Thailand (Bangkok, Krung Thep Mahanakhon, Phra Nakhon Si Ayutthaya, Prachuap Khiri Khan), NSL.

Sources: E.H. Taylor, 1965, M.J. Cox, 1991b, M.J. Cox et al., 1998, J.C. Murphy & Voris, 2005 and I. Das, 2010, 2012.

Remarks: A valid species *fide* M.J. Cox (1991b: 191) and I Das (2010: 328).

19. *Enhydris subtaeniata* (Bourret, 1934d). Bull. Gén. Instr. Pub. 14(1): 19–20, fig. 3. (*Hypsirhina enhydris subtaeniata*)

Type: Lectotype, MNHN 1958.0474 (formerly RLB M.388), a 202–211 mm specimen, designated by I. Ineich *in* J.C. Murphy (2007b: 166).

Type locality: "Kampong Speu, Cambodia" [= Kampong Speu, Kampong Speu Prov., S Cambodia, 11°28'N, 104°30'E, elevation 40 m] via lectotype selection.

Distribution: Indochina. Eastern Thailand (Khon Kaen), Laos, Cambodia (Kampong Speu) and Vietnam (Ca Mau, Ho Chi Minh City, Kien Giang, Kon Tum, Soc Trang, Tay Ninh), NSL–40 m.

Sources: E.H. Taylor, 1965, Deuve, 1970a, V.S. Nguyen et al., 2009 and Voris et al., 2012.

20. *Enhydris vorisi* J.C. Murphy, 2007a. Hamadryad 31(2): 283–285, figs. 1a, 1c. 1e.

Type: Holotype, KU 92465, a 586 mm female (K.K. Gyi).

Type locality: "Maubin, Ayeyarwady Division, Myanmar (about 16.73°N 95.65°E)."

Distribution: Myanmar (Ayeyarwady), NSL. Known only from type locality.

ENULIOPHIS McCranie & Villa, 1993 (Dipsadidae)

Type species: *Leptocalamus sclateri* Boulenger, 1894a.

Distribution: Central America and N South America.

Sources: Netting, 1936b, E.H. Taylor, 1954, H. Greene, 1977, Pérez-Santos & Moreno, 1988, Lips, 1993a, McCranie & Villa, 1993, Doan & Arizábal, 2002, Savage, 2002, G. Köhler, 2003, McCranie et al., 2003, G. Köhler et al., 2004, McCranie, 2004b, Solórzano, 2004, Zaher et al., 2009, McCranie, 2011a and Travers et al., 2011.

Remarks: A synonym of *Enulius fide* Savage, 2002.

1. *Enuliophis sclateri* (Boulenger, 1894a). Cat. Snakes Brit. Mus. 2: 251, pl. 12, fig. 1. (*Leptocalamus sclateri*)

Type: Holotype, BMNH 1946.1.21.72, a 380 mm female (P.L. Sclater).

Type locality: "S. America" [= South America] (in error).

Distribution: Lower Central America and NW South America. Northeastern Honduras (Gracias a Dios), Nicaragua (Jinotega, Matagalpa), Costa Rica (Alajuela, Cartago, Heredia, Limón, Puntarenas, San José), Panama (Canal Zone, Herrera, Barro Colorado Is.), W Colombia (Antioquia, Santander, Tolima) and Peru (Madre de Dios), NSL–1285 m.

E

ENULIUS Cope, 1871a (Dipsadidae)

Synonyms: *Leptocalamus* A.C.L.G. Günther, 1872b, and *Enulis* – L.D. Wilson & Meyer, 1985 *(nomen incorrectum).*
Type species: *Liophis flavitorques* Cope, 1869b.
Distribution: Latin America.
Sources: Boulenger, 1894a, Dunn, 1938a, E.H. Taylor, 1951, H.M. Smith, Arndt & Sherbrook, 1967, J.A. Peters & Orejas-Miranda, 1970, McCranie & Villa, 1993, McCranie & G. Köhler, 1999 and Zaher et al., 2009.

1. *Enulius bifoveatus* McCranie & G. Köhler, 1999. Carib. J. Sci. 35(1–2): 15–17, figs. 1–3b.

Type: Holotype, SMF 78514, a 321 mm male (G. Köhler & E. G. Köhler, 30 Aug. 1997).
Type locality: "between Savannah Bight and East End (16°29.19'N, 85°50.30'W), less than 10 m elevation, Isla de Guanaja, Islas de la Bahia, Honduras."
Distribution: Honduras (Islas de la Bahía: N Guanaja), NSL.
Sources: McCranie et al., 2005 and McCranie, 2011a.

2. *Enulius flavitorques* (Cope, 1869b). Proc. Acad. Nat. Sci. Philadelphia (1868) 20: 307–308. (*Liophis flavitorques*)

Synonyms: *Enulius murinus* Cope, 1871a, *Leptocalamus torquatus* A.C.L.G. Günther, 1872b, *Geophis unicolor* J.G. Fischer, 1880, *Enulius sumichrasti* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, and *Geagras longicaudatus* Cope, 1885a.
Type: Holotype, ANSP 3695, a 445 mm specimen (S. Buckow).
Type locality: "the Magdalena river, New Grenada" [= Colombia].
Distribution: Mesoamerica. Southern Mexico (Chiapas, Colima, Guerrero, S Jalisco, México, Michoacán, Morelos, Oaxaca, Puebla), S Guatemala (Jutiapa), El Salvador (Cuscatlán, La Libertad, San Miguel, San Salvador, Santa Ana), Honduras (Choluteca, Colón, Comayagua, Cortés, Francisco Morazán, Gracias a Dios, Intibucá, Islas de la Bahía, Yoro, Utila Is.), W Nicaragua (Chinandega, Granada, Managua, Matagalpa), W Costa Rica (Guanacaste, Puntarenas, San José), Panama (Chiriquí, Canal Zone, Darién, Los Santos, Barro Colorado, Flamenco and Pedro Gonzales Is.) ext. N Colombia (Atlántico, César, La Guajira, Sucre) and ext. NW Venezuela (Zulia), NSL–1800 m.
Sources: Booth, 1959, L.D. Wilson & Meyer, 1985, Pérez-Santos & Moreno, 1988, G. Köhler, 1999b, Savage, 2002, Gutsche, 2003, Solórzano, 2004, Canseco-Márquez et al., 2005, McCranie et al., 2005, Navarrete et al., 2009, McCranie, 2011a and Orellana, 2011.

3. *Enulius oligostichus* H.M. Smith, Arndt & Sherbrooke, 1967. Nat. Hist. Misc. (186): 1–2.

Type: Holotype, UIMNH 62740, a 275 mm male (R.G. Arndt & W.C. Sherbrooke, 8 July 1963).
Type locality: "on Mexico Highway 54 between San Blas, Nayarit, and Mexico Highway 15 (5-15 miles NE San Blas), Mexico."
Distribution: Western Mexico (Jalisco, Nayarit, S Sinaloa), 1190 m.
Sources: McDiarmid & Bezy, 1971 and Ponce-Campos, 2003.

4. *Enulius roatanensis* McCranie & G. Köhler, 1999. Carib. J. Sci. 35(1–2): 17–21, figs. 5–6a–b.

Type: Holotype, SMF 78515, a 346 mm female (G. Köhler & E. G. Köhler, 2 May 1998).
Type locality: "near Mud Hole Bay (16°20.88'N, 86°32.05W), less than 10 m elevation, Isla de Roatán, Islas de la Bahía, Honduras."
Distribution: Honduras (Islas de la Bahía: Roatán), NSL.
Sources: McCranie et al., 2005 and McCranie, 2011a.

†*EOANILIUS* Rage, 1974 (Aniliidae)

Synonym: †*Eonilius* – Rage, 1974 *(nomen incorrectum).*
Type species: †*Eoanilius europae* Rage, 1974.
Distribution: Upper Eocene of France and United Kingdom, and upper Oligocene of Germany.
Sources: Milner et al., 1982, Rage, 1984b, Cundall et al., 1993, Szyndlar & Schleich, 1993, Duffaud & Rage, 1997 and Gómez et al., 2008

1. †*Eoanilius europae* Rage, 1974. Palaeovertebrata 6(3–4): 278–281, figs. 1a–b, 2a–b.

Type: Holotype, USTL MAL 550, one middle trunk vertebra.
Type locality: "Malpérié; Eocène supérieur, Phosphorites du Quercy" [= Tarn-et Garonne Dept., France; Headonian *fide* Rage, 1984b: 13].
Distribution: Upper Eocene (Priabonian, MP 17–20: 33.9–37.2 mya) of France and United Kingdom.

2. †*Eoanilius oligocenicus* Szyndlar, 1994. J. Vert. Paleont. 14(1): 24–26, figs. 1f–j.

Type: Holotype, SMNS 58196/2, one middle trunk vertebra.
Type locality: "Herrlingen 8 (upper Oligocene, middle Arvernian, MP 28), near Ulm in Baden-Württemberg (southern Germany)."
Distribution: Upper Oligocene (Chattian, MP 28: 23.0–28.4 mya) of Germany.

EPACROPHIS Hedges, Adalsteinsson & Branch *in* Adalsteinsson, Branch, Trape, Vitt & Hedges, 2009 (Leptotyphlopidae)

Type species: *Glauconia boulengeri* Boettger *in* Voeltzkow, 1913.
Distribution: East Africa.
Sources: Hahn, 1980a, Wallach, 1998b and McDiarmid et al., 1999.

1. *Epacrophis boulengeri* (Boettger *in* Voeltzkow, 1913). Reise Ostafrika: 354, pl. 25, fig. 1. (*Glauconia boulengeri*)

Type: Holotype, SMF 16700 (formerly SMF-B 7066, a), a 110 mm specimen (A. Voeltzkow, 10–14 Feb. 1903).
Type locality: "Insel Manda, Br. Ostafrika" [= Manda Island, Coast Region, E Kenya, 2°16'S, 40°57'E, elevation < 10 m].
Distribution: Eastern Kenya (N Coast: Manda & Lamu Is.), NSL–10 m.
Sources: Boulenger, 1893a, 1915c, Loveridge, 1936c, 1957a, Hallermann & Rödel, 1995, Broadley & Wallach, 1996, Wallach, 1996c, Spawls et al., 2002 and Broadley & Wallach, 2007a.
Comment: Mertens (1922: 178 & 1967: 89) lists Voeltzkow collection date as 1905.

2. *Epacrophis drewesi* (Wallach, 1996c). J. Afr. Zool. 110(6): 426–428, fig. 1. (*Leptotyphlops drewesi*)

Type: Holotype, CAS 85756, a 143 mm female (R.E. Leach & E.S. Ross, 26 Nov. 1957).
Type locality: "Base of north slope of Mt. Kenya, 10 km south of and uphill from Isiolo (0°21'N, 37°35'E, 1250 m), south-central Eastern Province, central Kenya (about 1400 m)."
Distribution: Central Kenya (cen. Eastern), 1400 m. Known only from type locality.
Sources: Spawls et al., 2002, 2006 and Broadley & Wallach, 2007a.

3. *Epacrophis reticulatus* (Boulenger, 1906d). Ann. Mag. Nat. Hist. (7) 18(108): 441. (*Glauconia reticulata*)

Type: Holotype, BMNH 1946.1.16.53 (formerly BMNH 1905.11.7.42), a 190 mm specimen (G.W. Bury, 1905).
Type locality: "Wagga, Goolis Mountains, near Berbera, altitude 3000–4000 feet, Somaliland" [= Wagar, W Togdheer Region, NW Somalia, 10°02'N, 45°35'E, elevation 900–1200 m].
Distribution: Northwestern Somalia (Togdheer, Woqooyi Galbeed), 900–1315 m.
Sources: Boulenger, 1915d, Parker, 1949, Hahn, 1978, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993, Hallermann & Rödel, 1995, Wallach, 1996 and Broadley & Wallach, 2007a.
Comment: Possibly occurs in Ethiopia *fide* Largen & Rasmussen (1993: 324).

EPHALOPHIS M.A. Smith, 1931a (Elapidae)

Type species: *Ephalophis greyae* M.A. Smith, 1931a.
Distribution: Marine waters of W Australia.
Sources: McDowell, 1969b, 1974b, Burger & Natsuno, 1974, L. Smith, 1974, Cogger et al., 1983a, McCarthy, 1986, Gow, 1989, Golay et al., 1993, O'Shea, 1996, A.R. Rasmussen, 1997, David & Ineich, 1999, Cogger, 2000, Zaher et al., 2009, Bush & Maryan, 2011 and Hoser, 2012e.

1. *Ephalophis greyae* M.A. Smith, 1931a. Proc. Zool Soc. London 101(2): 397–398, pl. 1. (*nomen corrigendum*)

Synonyms: *Ephalophis greyi* M.A. Smith, 1931a *(nomen incorrigendum),* and *Ephalophis greyae* – Shea, 1996 *(nomen corrigendum).*
Type: Holotype, BMNH 1946.1.6.92 (formerly BMNH 1930.11.17.3), a 410 mm female (B. Grey, March 1930).
Type locality: "Cape Boileau, north-west coast of Australia" [= N of Broome, N Western Australia].
Distribution: Western Australia (NW Western Australia).

EPICRATES Wagler, 1830 (Boidae)

Synonyms: *Chilabothrus* A.-M.-C. Duméril & Bibron, 1844, *Chilobothrus* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Chilobotrus* A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Cliftia* Gray, 1849a, *Epicarsius* J.G. Fischer, 1856b, *Homalochilus* J.G. Fischer, 1856b, *Chilabotrus* Marschall, 1873 *(nomen emendatum), Piesigaster* Seoane, 1881, *Epicrafes* – Kempff-Mercado, 1975 *(nomen incorrectum), Epicratis* – Willard, 1977 *(nomen incorrectum),* and *Boella* H.M. Smith & Chiszar, 1992b.
Type species: *Boa cenchria* Linnaeus, 1758.
Distribution: Lower Central America, West Indies and South America.
Fossil records: Pleistocene of the West Indies (Bahamas, Cuba, Puerto Rico).
Sources: Amaral, 1955f, Stimson, 1969, J.A. Peters & Orejas-Miranda, 1970, Matz & Matz, 1973, Sheplan & Schwartz, 1974, Tolson, 1987, Kluge, 1988a–b, 1989, Tolson & R.W. Henderson, 1993, Henderson et al., 1995, Rodriguez-Robles & Greene, 1996, Walls, 1998a, McDiarmid et al., 1999, Noonan & Chippindale, 2006, Passos & Fernandes, 2008, R.W. Henderson & Powell, 2009 and Rivera et al., 2011.

Remarks: Rivera et al., 2011 supported conclusions of Passos & Fernandes, 2008.

1. *Epicrates alvarezi* Abalos, Báez & Nader, 1964. Acta Zool. Lilloana 20: 218–223, fig. 3. (*Epicrates cenchria alvarezi*)

Type: Holotype, IAV, an 1100 mm female (M. Mendieta, 1 July 1959).
Type locality: "Forres, Robles Department, Santiago del Estero, Argentina."
Distribution: Southeastern Bolivia (Santa Cruz, Tarija), W Paraguay (Alto Paraguay, Boquerón) and N Argentina (Chaco, Córdoba, Corrientes, Jujui, Santiago del Estero, San Miguel, Tucumán), 50–715 m.
Sources: Cacciali, 2008 and Bellosa & Bisplinghof, 2012.

E

2. *Epicrates angulifer* Bibron, 1840 *in* Ramón de la Sagra, 1838–1843. Hist. Fís. Polít. Nat. Cuba 2(2): 129–130, pl. 25, figs. 1–3.

Synonym: *Boa brachyura* Filippi, 1848.
Type: Lectotype, MNHN 3292, probably a 1990 mm specimen, designated by Stimson (1969: 11).
Type locality: "Cuba" via lectotype selection.
Distribution: West Indies. Cuba (Camaguey, Ciego de Avila, Cienfuegos, Guantánamo: Juventud Is.; Arch. de los Canarreos: Cayo Cantiles; Arch. Sabana-Camagüey: Cayo Guajaba, Cayo Santa María; Habana, Pinar del Río, Villa Clara, Sancti Spíritus, Santiago de Cuba; Matanzas), NSL–325 m.
Sources: F. Werner, 1901b, Lando & Williams, 1969, A. Schwartz & R.W. Henderson, 1991 and R.W. Henderson & Arias B., 2001.
Remarks: Original description reprinted in Sagra (1839–1843: 215–217, pl. 25). Authorship has been attributed to Cocteau & Bibron, but H.M. Smith & Grant (1958: 216) demonstrated that the snake section was written solely by Bibron (as per footnote, p. 120). Spanish edition listed as vol. 8 *fide* A. Schwartz & Thomas (1975: 183) et al.

3. *Epicrates assisi* Machado, 1944. Bol. Inst. Vital Brazil 4(27): 61, pl. 1 (middle fig.). (*Epicrates cenchria assisi*)

Synonym: *Epicrates cenchria xerophilus* Amaral, 1955f.
Type: Holotype, IVB, lost *fide* Passos & Fernandes (2009: 19).
Type locality: "Campina Grande, Paraíba, Brasil" [= Campina Grande, E Paríba State, NE Brazil, 7°14'S, 35°53'W, elevation 465 m].
Distribution: Northeastern Brazil (Bahia, Ceará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte, Sergipe), NSL–465 m.
Source: Bellosa & Bisplinghof, 2012.
Remarks: Original description date (1945) and volume (5) incorrectly cited *fide* Passos & Fernandes (2009: 19).

4. *Epicrates cenchria* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 215. (*Boa cenchria*)

Synonyms: *Boa flavescens* Boddaert, 1783, *Coluber tamachia* Scopoli, 1788, *Boa cenchris* – Gmelin, 1789, *Coluber dubius* Gmelin, 1789, *Coluber bitin* Bonnaterre, 1790, *Boa aboma* Daudin, 1803b, *Boa annulifer* Daudin, 1803b, *Boa ternatea* Daudin, 1803b, *Python liberiensis* Hallowell, 1845, *Epicrates cenchria gaigei* Stull, 1938, and *Epicrates cenchria hygrophilus* Amaral, 1955f.
Type: Holotype, NHR Lin-6 (formerly MAFR), a 475 mm specimen (Mus. Drottn.).
Type locality: "Surinamei" [= Surinam].
Distribution: Amazonia. Colombia (Amazonas, Boyacá, Casanare, Coqueta, Huila, Meta, Putumayo, Vaupé), E Venezuela (Amazonas, Bolívar, Monagas, Táchira), Guyana (Cuyuni-Mazaruni, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Saramacca, S Sipaliwini), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Ecuador (Morona, Napo, Pastaza), Brazil (Amazonas, Amapá, Bahia, Ceará, Espírito Santo, Goiás, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Paraiba, Paraná, Pernambuco, Piauí, Rio Grande do Norte, Rondônia, São Paulo, Sergipe), E Peru (Amazonas, Apurímac, Cusco, Huánuco, Junín, Loreto, Madre de Dios, San Martin) and E Bolivia (Beni, Cochabamba, La Paz, Pando, Santa Cruz, Tarija), NSL–2750 m.

5. *Epicrates chrysogaster* (Cope, 1871a). Proc. Amer. Philos. Soc. (1870) 11: 557–558. (*Homalochilus chrysogaster*)

Synonyms: *Dendrophilus tortilis* J.T. Reinhardt & Lütken, 1862 *(nomen ineditum), Epicrates relicquus* T. Barbour & Shreve, 1935, and *Epicrates chrysogaster schwartzi* Buden, 1975.
Type: Holotype, ANSP 10322, a 665 mm specimen (probably female) (A.J. Ebell).
Type locality: "Turk's Island" [Grand Turk, Turks & Caicos Is., West Indies].
Distribution: Southern Bahamas (Acklins, Crooked, Great Inagua, Sheep Cay) and Turks and Caicos (Big Ambergris Cay, Caicos, Grand Turk, Long Cay, Middle Caicos, North Caicos), NSL–10 m.

Sources: Buden, 1975, R.W. Henderson & Powell, 2009 and Reynolds, 2012.

6. *Epicrates crassus* Cope, 1862d. Proc. Acad. Nat. Sci. Philadelphia 14(5): 349.

Synonym: *Epicrates cenchria polylepis* Amaral, 1935e.
Type: Holotype, USNM 12413 (formerly SIM 5409), a 920 mm specimen (T.J. Page [Paraguay Exped.], Sept. 1853–Jan. 1856).
Type locality: "Cadosa, Parana River, Paraguay." Corrected to Gardosa, Paraná River, Paraguay *fide* J.D. Williams & Francini (1991: 60).
Distribution: Southern South America. Southeastern Brazil (Goiás, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Paraná, Rondônia, São Paulo, Tocantins), Bolivia (Santa Cruz), Paraguay (Alto Paraná, Amambay, Boquerón) and ext. NE Argentina (Missiones), 170–490 m.
Sources: J.D. Williams & Francini, 1991, D.R. Norman, 1994, Lema, 2002, Passos & Fernandes, 2009 and Bellosa & Bisplinghof, 2012.

7. *Epicrates exsul* Netting & Goin, 1944. Ann. Carnegie Mus. 30: 71–73, figs. 1a–c.

Type: Holotype, CM 21408, a 555 mm male (A.C. Twomey, 6 Feb. 1942).
Type locality: "Near Blackrock (approximately 26° 49' N. lat. and 77° 25' 30" W. long.) on the east coast of Great Abaco in the Bahama Islands."
Distribution: Northern Bahamas (Elbow Cay, Grand Bahama, Great Abaco, Little Abaco) and Little Bahama Bank, NSL–10 m.
Source: Sheplan & Schwartz, 1974.
Remarks: Holotype erroneously listed as CM 21048 in original description.

8. *Epicrates fordii* (A.C.L.G. Günther, 1861f). Proc. Zool. Soc. London 29(1): 142, pl. 23. (*Pelophilus fordii*)

Synonyms: *Chilabothrus maculatus* J.G. Fischer, 1888c, *Epicrates fordii agametus* Sheplan & Schwartz, 1974, and *Epicrates fordi manototus* A. Schwartz, 1979b.
Type: Holotype, BMNH 1946.1.1.55 (formerly BMNH 1862.3.10.4), a 678 mm female (A. Sallé, 1846–1856).
Type locality: "Western Africa" (in error). Restricted to the vicinity of Port-au-Prince, Dépt. de l'Ouest, Haiti *fide* Sheplan & Schwartz (1974: 104). Corrected to República Dominicana *fide* Wetherbee (1987: 63).
Distribution: Hispaniola. Haiti (Artibonite, Nord, Nord-Ouest, Ouest, Cabrit and Gonáve Is.) and ext. NW and S República Dominicana (Azua, Barahona, Independencia, Monte Cristi, Peravia, Catalina and Saona Is.), NSL–305 m.
Sources: A.C.L.G. Günther, 1861d, J.G. Fischer, 1888c, Boulenger, 1893a, Cochran, 1941, Sheplan & Schwartz, 1974, A. Schwartz, 1979b, Obst et al., 1984 and R.W. Henderson & Powell, 2004.

9. *Epicrates gracilis* (J.G. Fischer, 1888c). Jahrb. Hamburg. Wiss. Anst. (1887) 5: 35–36, pl. 3, figs. 8a–b. (*Chilabothrus gracilis*)

Synonym: *Epicrates gracilis hapalus* Sheplan & Schwartz, 1974.
Types: Syntypes (2), NMW 21369, an 895 mm specimen (F.H. Rolle via F. Steindachner don.), and formerly ZMH, an 834 mm specimen (F.H. Rolle), destroyed in July 1943 during World War II.
Type locality: "Cap Hayti" [= Cap Haitien, Nord Dept., N Haiti, 19°45'N, 72°12'W, elevation 5 m].
Distribution: Northern and SW Hispaniola. Southern Haiti (Ouest, Sud) and N and SW República Dominicana (Barahona, Dajabón, El Seibo, Espaillat, La Altagracia, Monte Cristi, Puerto Plata, Samaná, Santiago, Santiago Rodriguez), NSL–305 m.
Sources: Cochran, 1941 and R.W. Henderson & Powell, 2002.

10. *Epicrates inornatus* (J.T. Reinhardt, 1843). Kgl. Danske Vidensk. Selsk. Natur. Math. Afh.(4) 10: 253–257, pl. 1, figs. 21–23. (*Boa inornata*)

Synonyms: *Piesigaster boettgeri* Seoane, 1881, and *Boella tenella* H.M. Smith & Chiszar, 1992b.
Types: Syntypes (3), ZMUC 5597–98 and ZMUC 55101, longest syntypes 1857 mm and 1800 mm (P.S. Ravn, 1816–1839).
Type locality: "insula Porto-Rico, dansk-vestindiske" [= Puerto Rico, Danish West Indies].
Distribution: Puerto Rico (Bayamón, Caguas, Humacao, Las Marías, Luguillo, Mayagüez, Naguabo, Río Grande), NSL–1050 m.
Sources: Rivero, 1978, 1998, Reagan, 1984, Wallach & Smith, 1992, J.B. Rasmussen & Hughes, 1997 and Pizzatto et al., 2007.

11. *Epicrates maurus* Gray, 1849a. Cat. Snakes Brit. Mus.: 96.

Synonyms: *Cliftia fusca* Gray, 1849a, *Epicarsius cupreus* J.G. Fischer, 1856b, *Epicrates cupreus concolor* Jan, 1863b (*nomen nudum*), *Epicrates cupreus concolor* Jan, 1864 *in* Jan & Sordelli, 1860–1866, *Epicrates cenchria barbouri* Stull, 1938, *Epicrates maurus colombianus* Matz, 2004, and *Epicrates maurus guayanensis* Matz, 2004.
Type: Holotype, BMNH 1946.1.10.40 (formerly BMNH VI.6.3a & BMNH 1846.7.23.2a), a 1209 mm male (D. Dyson, 1846).
Type locality: "Venezuela."
Distribution: Lower Central America and N South America. Nicaragua, Costa Rica (Guanacaste, Limón, Puntarenas, possibly ext. W San José), Panama (Canal

Zone, Coclé, Darién, Barro Colorado Is.), NW Colombia (Arauca, Atlántico, Antioquia, Bolívar, Caldas, Cansanare, César, Chocó, Córdoba, Cundinamarca, Magdalena, Norte de Santander, Sucre), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Nueva Esparta, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia, Margarita Is.), Trinidad & Tobago (Tobago, Trinidad), N Guyana (Barima-Waini, Demerara-Mahaica, Essequibo Islands-West Demerara), Suriname (Coronie, Nickerie, Sipaliwini), N French Guiana (Cayenne, Saint-Laurent-du-Maroni) and N Brazil (Amapá, Pará, Roraima), NSL–2630 m.

Sources: Roze, 1966a, Emsley, 1977, Matz et al., 1982, Chippaux, 1987, Pérez-Santos & Moreno, 1988, Gorzula & Señaris, 1998, Starace, 1998, Mijares-Urrutia & Arends, 2000, Abuys, 2003, Solórzano, 2004, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Navarrete et al., 2009, Passos & Fernandes, 2009, Ugueto & Rivas, 2010, Bellosa & Bisplinghof, 2012 and C.J. Cole et al., 2013.

Remarks: A valid species *fide* Chippaux (1987: 37) and Passos & Fernandes (2008: 14).

E

12. *Epicrates monensis* Zenneck, 1898. Zeit. Wiss. Zool. 64(1–2): 64–66, pl. 3, figs. 58–62.

Synonym: *Epicrates inornatus granti* Stull, 1933.

Types: Syntypes (4), ZMH 2034a–d, a 1010 mm (svl) specimen, an 810 mm (svl) female, a 500 mm female and a 350 mm female (C. Beck, 1894), destroyed in July 1943 during World War II.

Type locality: "Insel Mona bei Porto Rico" [= Mona Is. near Puerto Rico]

Distribution: Greater Antilles. Puerto Rico (Cayo Diablo and Mona Is.), U.S. Virgin Is. (St. Thomas) and British Virgin Is. (Great Camanoe, Guana, Necker, St. Thomas, Tortola, Virgin Gorda), NSL–50 m.

Sources: Meerwarth, 1901, K.P. Schmidt, 1926a, Stull, 1933, Rivero, 1978, 1998, Rivero et al., 1982, Nellis et al., 1983, Tolson, 1988 and Tolson et al., 2007.

Remarks: McDiarmid et al. (1999: 198) listed 5 syntypes. *Epicrates granti* a valid species *fide* R.W. Henderson & Powell (2009: 250).

13. *Epicrates striatus* (J.G. Fischer, 1856b). Abh. Ges. Naturwiss. Ver. Hamburg 3: 102–106, pl. 2, figs. 2a–b. (*Homalochilus striatus*)

Synonyms: *Homalochilus multisectus* Cope, 1862b, *Homalochilus strigilatus* Cope, 1862b, *Epicrates versicolor* Steindachner, 1864, *Epicrates striatus fosteri* T. Barbour, 1941, *Epicrates striatus ailurus* Sheplan & Schwartz, 1974, *Epicrates striatus exagistus* Sheplan & Schwartz, 1974, *Epicrates striatus fowleri* Sheplan & Schwartz, 1974, *Epicrates striatus mccraniei* Sheplan & Schwartz, 1974, and *Epicrates striatus warreni* Sheplan & Schwartz, 1974.

Types: Syntypes (2), ZMH 53–54, a 1902 mm and 1223 mm specimen (A. Sallé, 1849), destroyed in July 1943 during World War II.

Type locality: "St. Thomas," and "St. Domingo" [= St. Thomas, U.S. Virgin Islands and Santo Domingo, Dominican Republic]. Restricted to the vicinity of Santo Domingo, Distrito Nacional, Dominican Republic *fide* Sheplan & Schwartz (1974: 66).

Distribution: Bahamas and Hispaniola. Bahamas (Alligator Cay, Andros, Berry, Booby Cay, Cat, Chub Cay, Compass Cay, East Bimini, Easter Cay, Great Eleuthera, Exuma, Great Exuma, Great Harbour Cay, Little Ragged, Long, Mangrove Cay, Margaret Cay, New Providence, North Andros, North Bimini, Rose, South Bimini), Haiti (Nord, Nord-Ouest, Ouest, Sud, Gonáve, Tortue and Vache Is.) and Dominican Republic (SW Azua, Barahona, Dajabón, Distrito Nacional, Duarte, El Seibo, Espaillat, Independencia, La Vega, Monte Cristi, Puerto Plata, Samaná, La Altagracia, Pedernales, Sánchez Ramírez, San Cristóbal, San Juan, San Pedro de Macorís, Valverde, Saona Is.), NSL–1220 m.

Source: Meerwarth, 1901.

Remarks: Probably occurs on South Andros Is. and possibly Green Cay *fide* Sheplan & Schwartz, 1974.

14. *Epicrates subflavus* Stejneger, 1901a. Proc. U.S. Natl. Mus. 23(1218): 469–470.

Type: Holotype, USNM 14507 (Zool. Soc. Philadelphia, 25 Nov. 1885).

Type locality: "Jamaica" [Greater Antilles].

Distribution: Jamaica (S Clarendon, Hanover, S St. Ann, S St. Catherine, St. Elizabeth, St. Thomas, Trelawny; Westmoreland, Goat Is.), NSL–40 m.

Sources: Oliver, 1982, 1986.

EPICTIA Gray, 1845 (Leptotyphlopidae)

Synonyms: *Stenostoma* Wagler *in* Spix, 1824 *(nomen praeoccupatum), Stenostona* – Bory de Saint-Vincent, 1829 *in* 1822–1831 *(nomen incorrectum), Sabrina* Girard, 1858a, *Stenostome* – Westphal-Castelnau, 1870 *(nomen incorrectum), Stenostomophis* Rochebrune, 1884 *(nomen substitutum), Stenostomus* – Hoffmann, 1890 *(nomen incorrectum), Sternostoma* – Freiberg, 1939 *(nomen incorrectum), Etenostoma* – Roux-Estève, 1965 *(nomen incorrectum),* and *Crishagenus* Hoser, 2012am *(nomen illegitimum).*

Type species: *Typhlops undecimstriatus* Schlegel, 1839 *in* 1837–1844.

Distribution: North America and Latin America.

Sources: Hahn, 1980, Wallach, 1998b and McDiarmid et al., 1999.

1. *Epictia albifrons* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 68–69, pl. 25, fig. 3. (*Stenostoma albifrons*)

Type: Holotype, ZSM 1348/0, a 183 mm specimen (J.B. von Spix & K.F.P. von Martius, 25 July–21 Aug. 1819), destroyed 11 April 1945 during World War II.

Type locality: "in adjacentibus urbis Para [Santa Maria de Belém do Grão Pará]" [= near Belém, Pará, Brazil, 01°27'S, 48°30'W, elevation NSL]. Possibly in error *fide* Cunha & Nascimento (1978: 31 and 1993: 11) and Avila-Pires et al. (2010: 70).

Distribution: Amazonia. Colombia (Antioquía, Cundinamarca), SE Venezuela (Amazonas, Bolívar, Cojedes, Falcón, Lara, Monagas, Nueva Esparta, Portuguesa, Margarita Is.), Netherlands Antilles (Bonaire), Trinidad & Tobago (Trinidad & Patos Is.), Guyana (Barima-Waini, Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Brokopondo, Commewijne, Marowijne, Nickerie, Saramacca, Suriname), French Guiana (Cayenne), Brazil (Amapa, Amazonas, Bahia, Mato Grosso, Pará, Rondônia, Roraima), E Peru (Amazonas, Loreto, Pasco) and E Bolivia (Beni, La Paz), NSL–2000 m.

Sources: Nicéforo María, 1942, Bailey & Carvalho, 1946, H.M. Smith & List, 1958, Abalos et al., 1964, R. Thomas, 1965a, 1975, Orejas-Miranda, 1967, L.D. Wilson & Hahn, 1973, Emsley, 1977, Cunha & Nascimento, 1978, Vanzolini et al., 1980, Hoogmoed & Gruber, 1983, Cei, 1986, 1994, Fugler & Riva, 1990, Carrillo de Espinoza & Icochea, 1995, Vanzolini, 1996, Gorzula & Señaris, 1998, Starace, 1998, Kornacker, 1999, J.C. Murphy, 1999, Lehr, 2000, Boos, 2001, Markezich, 2002, Buurt, 2005, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Börschig, 2007, Franzen & Glaw, 2007, Avila-Pires et al., 2010 and C.J. Cole et al., 2013.

Remarks: A synonym of *Leptotyphlops tenellus fide* Franco & Pinto (2009: 239) and others. *Leptotyphlops tenellus* recognized as distinct from *L. albifrons* by Klauber (1939b: 59), Orejas-Miranda (1967: 439) and Wallach *in* McDiarmid et al. (1999: 20). Populations on Bonaire, Margarita and Trinidad of uncertain affinity (could be *Leptotyphlops albifrons, L. goudotii* or *L. magnamaculatus).* References to this species in Ecuador are likely in error *fide* Cisneros-Heredia (2008: 179). The records from W Peru (Carrillo de Espinoza & Icochea, 1995; Lehr, 2002: 196) are likely in error. Specimens reported from Paraguay, Uruguay and NW Argentina are probably in error (Cei, 1994). This species complex is in need of revision. Klauber (1939b: 59) stated that "*L. albifrons,* as usually defined, is a complex of a number of species and subspecies," K.P. Schmidt & Walker (1943b: 305) asserted that there is "no doubt that the *Leptotyphlops albifrons* of authors is an *omnium gatherum* of species of varying degrees of distinctness," and R. Thomas (1965a: 6) stated that "there is obviously more than one species [of *Leptotyphlops albibrons]* involved in the material that I have seen."

2. *Epictia albipuncta* (Burmeister, 1861). Reise La Plata-Staaten 2: 527–528. (*Stenostoma albipuncta*)

Synonyms: *Stenostoma albipunctum* Jan, 1861, *Stenostoma flavifrons* Weyenbergh *in* Napp, 1876, and *Leptotyphlops abipunctus* Hahn, 1980a.

Type: Holotype, MLU IZH 461 (H. Burmeister, 1857–1860).

Type locality: "Tucumán" [= San Miguel de Tucumán, Tucumán Province, N Argentina, 26°48'S, 65°13'W, elevation 470 m].

Distribution: Southern South America. Southern Peru, SE Bolivia (Beni, Chuquisaca, La Paz, Tarija), Paraguay (Alto Paraguay, Boquerón, Central, Neembucú, Presidente Hayes) and N Argentina (Buenos Aires, Catamarca, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, Jujuy, Mendoza, Misiones, Neuquén, Salta, Santa Fe, Santiago del Estero, Tucumán), 30–1250 m.

Sources: Vanzolini, 1966, Freiberg, 1982, Fugler, 1982, Laurent, 1984, Fabrezi et al., 1985, Fugler & Riva, 1990, Cei, 1994, Aquino et al., 1996, Leynaud & Bucher, 1999, Kretzschmar, 2006, Börschig, 2007 and Cacciali, 2008.

Remarks: See McDiarmid et al. (1999: 20) and Kretzschmar (2006: 48) for remarks about the original description, which previously was attributed to Jan, 1861. Type locality possibly in error *fide* Laurent (1984: 29).

3. *Epictia alfredschmidti* (Lehr, Wallach, G. Köhler & Aguilar, 2002). Copeia 2002(2): 131–134, figs. 1–2. (*Leptotyphlops alfredschmidti*)

Type: Holotype, MHNSM 20068, a 255 mm male (E. Lehr & C. Aguilar, 4 Feb. 1997).

Type locality: "Malvas (09°55'36"S, 77°39'00"W, elevation 2940 m), Provincia de Huarmey, Departamento de Ancash, Peru."

Distribution: Western Peru (Ancash), 2940–3090 m.

Source: Lehr, 2002.

4. *Epictia ater* (E.H. Taylor, 1940d). Univ. Kansas Sci. Bull. (1939) 26(15): 536–538, fig. 4. (*Leptotyphlops ater*)

Synonym: *Leptotyphlops nasalis* Taylor, 1940d.

Type: Holotype, USNM 79947, a 185 mm specimen (H.C. Kellers, 1928–1929).

Type locality: "Managua, Nicaragua" [12°08'N, 86°15'W, elevation 100 m].

Distribution: Central America. El Salvador (Cuscatlán, La Libertad, Morazán, San Miguel, San Salvador, Santa Ana, San Vicente, Sonsonate), W Honduras (Choluteca, Comayagua, Copán, Cortés, Francisco Morazán, Gracias a Dios, Intibucá, Lempira, Santa Barbara,

Valle, Yoro), W Nicaragua (Carazo, Chinandega, Estelí, Granada, Managua, Rivas) and NW Costa Rica (Alajuela, Guanacaste, N Puntarenas, Murciélagos Is.), NSL–1100 m.

Sources: Dunn & Saxe, 1950, Villa, 1983, 1990b, L.D. Wilson & Meyer, 1985, Sasa & Solórzano, 1995, G. Köhler, 1999b, Léon-Soler & Solórzano, 2000, Marineros, 2000, 2001a–b, 2003, Savage, 2002, Solórzano, 2004, G. Köhler et al., 2006 and Porras, 2011.

Remarks: Type erroneously listed as USNM 79957 *fide* E.H. Taylor (1940d: 536 & 1944a: 156).

E

5. *Epictia australis* (Freiberg & Orejas-Miranda, 1968). Physis 28(76): 145–147, figs. 1–2. (*Leptotyphlops australis*)

Type: Holotype, MACN 12525, a 245 mm female (M. Birabén & M.I. Hylton Scott, Jan. 1953).

Type locality: "Valcheta, prov. Rio Negro, Argentina" [= 40°41'S, 66°10'W, elevation 185 m].

Distribution: Northern Argentina (Buenos Aires, Catamarca, Córdoba, La Pampa, La Rioja, Mendoza, Neuquén, Río Negro, San Luis, Tucumán), Paraguay (Boquerón, Central, Concepción, Presidente Hayes), S Brazil (W Rio Grande do Sul) and Uruguay, 75–1000 m.

Sources: Orejas-Miranda & Achaval, 1969, Lema & Fabián-Beurmann, 1977, Miranda & Tio-Vallejo, 1985, Cei, 1986, 1994, Lema, 1987, Scrocchi, 1990a, J.D. Williams & Francini, 1991, Aquino et al., 1996, Cabrera, 2004, Scolaro, 2006 and Börschig, 2007.

6. *Epictia bakewelli* (Oliver, 1937). Occ. Pap. Mus. Zool. Univ. Michigan (360): 16–17, fig. 1a. (*Leptotyphlops bakewelli*)

Synonym: *Leptotyphlops gadowi* Duellman, 1956.

Type: Holotype, UMMZ 80228 (J.A. Oliver & A. Bakewell, 26 July 1935).

Type locality: "Paso del Río, Colima, Mexico" [18°54'N, 103°53'W, elevation 30 m].

Distribution: Southwestern Mexico (Colima, Guerrero, Jalisco, Michoacán, Oaxaca), 30–850 (1560) m.

Sources: H.M. Smith, 1943a, H.M. Smith & Taylor, 1945 and Duellman, 1961, 1965.

Remarks: Previously a subspecies of *Leptotyphlops goudotii*.

7. *Epictia borapeliotes* (Vanzolini, 1996). Pap. Avulsos Zool. 39(15): 282–284. (*Leptotyphlops borapeliotes*)

Type: Holotype, MZUSP 9595 (formerly MR 87.6701) (M. Rodrigues, 1 Oct. 1987).

Type locality: "Santo Inácio, Bahia, Brazil" [= 11°07'S, 42°43'W, elevation 525 m].

Distribution: Northeastern Brazil (Alagoas, Bahia, Ceará, Paraíba, Pernambuco, Rio Grande do Norte, Sergipe), NSL–845 m.

Sources: Cordeiro & Hoge, 1974, Vanzolini et al., 1980, Ulloa, 2006 and Roberto & Veiga, 2009.

8. *Epictia clinorostris* Arredondo & Zaher, 2010. So. Amer. J. Herp. 5(3): 190–194, figs. 1a–b, 2a–b.

Type: Holotype, MZUSP 17480, a 206 mm female (A.P. Soares, 5 Sept. 2007).

Type locality: "Toricoejo locality, bank of Rio das Mortes, (15°14'21.6"S – 53°14'36.6"W), Municipality of Barra do Garças, State of Mato Grosso, Brazil" [elevation ca. 500 m].

Distribution: Central Brazil (W Goiás, E Mato Grosso), 500 m.

9. *Epictia collaris* (Hoogmoed, 1977). Zool. Meded. 51(7): 100–103, figs. 1a–c, pl. 1, pl. 2, figs. c–d. (*Leptotyphlops collaris*)

Type: Holotype, RMNH 13468, a 102 mm specimen Suriname Exped., 12 Feb. 1949).

Type locality: "Base Camp Nassau Mountains, distr. Marowijne, Suriname" [= ca. 04°48'N, 54°36'W, elevation ca. 500 m].

Distribution: Northern Suriname (Brokospondo, Marowijne) and N French Guiana (N Cayenne), NSL–475 m.

Sources: Hoogmoed, 1977, Gasc & Rodrigues, 1980, Chippaux, 1987, Starace, 1998 and Abuys, 2003.

10. *Epictia columbi* (Klauber, 1939b). Trans. San Diego Soc. Nat. Hist. 9(14): 62–64, figs. 3a–b. (*Leptotyphlops columbi*)

Type: Holotype, CM 1364, a 183 mm specimen (W.W. Worthington, 1909).

Type locality: "Watling (or San Salvador) Island, Bahama Islands" [= 24°03'N, 74°29'W, elevation NSL].

Distribution: Bahamas (San Salvador Is. and satellites), NSL.

Sources: Legler, 1959b, R. Thomas, 1965a, A. Schwartz & R.W. Henderson, 1991 and R.W. Henderson & Powell, 2009.

11. *Epictia diaplocia* (Orejas-Miranda, 1969). Comun. Zool. Mus. Hist. Nat. Montevideo 10(124): 5–8, pl. 1, fig. 2. (*Leptotyphlops diaplocius*)

Type: Holotype, AMNH 55654, a 170 mm specimen.

Type locality: "Requena, Montecarmelo, Peru" [= Loreto Dept., NE Peru, 04°59'S, 73°59'W, elevation 110 m].

Distribution: Eastern Peru (Loreto, Madre de Dios, San Martín) and NW Brazil (Amazonas, Rondônia), 45–1500 m.

Sources: Nascimento et al., 1988, Duellman & Salas, 1991, Carrillo de Espinoza & Icochea, 1995, Martins & Oliveira, 1999 and Duellman, 2005.

12. *Epictia goudotii* (A.-M.-C. Duméril & Bibron, 1844). Erpét. Gén. 6: 330. (*Stenostoma goudotii*)

Synonyms: *Stenostoma goudottii* – Cope, 1875a *(nomen incorrectum),* and *Stenostoma fallax* W.C.H. Peters, 1857b.

Type: Holotype, MNHN 1068, a 148–151 mm male (J.P. Goudot, 1822–1826 or 1837–1842).

Type locality: "la vallée de la Magdeleine, à la Nouvelle-Grenade" [= valley of the Río Magdalena, cen. Colombia].

Distribution: Panamá (Canal Zone), Colombia (Atlántica, Bolivar, Cesar, Cundinamarca, Magdalena, Meta, Santander, Tolima, Salamanca Is.) and Venezuela (Amazonas, Anzoátegui, Bolívar, Distrito Federal, Falcón, Monagas, Nueva Esparta, Sucre, Yaracuy), NSL–1535 m.

Sources: Nicéforo María, 1942, Roze, 1966a, Emsley, 1977, Pérez-Santos & Moreno, 1988, Lancini & Kornacker, 1989, Kornacker, 1999, Mijares-Urrutia & Arends, 2000, Navarrete et al., 2009, Pinto et al., 2010 and Ugueto & Rivas, 2010.

13. *Epictia magnamaculata* (E.H. Taylor, 1940d). Univ. Kansas Sci. Bull. (1939) 26(15): 532–533, fig. 1. (*Leptotyphlops magnamaculata*)

Synonym: *Leptotyphlops albifrons margaritae* Roze, 1952b.

Type: Holotype, USNM 54760, a 167 mm female (F.J. Dyer, 9 April 1916).

Type locality: "Utilla Id., Honduras" [= Útila Island, Islas de la Bahía, Honduras, 16°06'N, 86°55'W].

Distribution: Caribbean islands of SE Mexico (Quintana Roo: Cozumel Is.), N Honduras (Gracias a Dios, Islas de la Bahía, Bahia, Barbareta, Cisne, Cayo Cochino Grande, Cayo Cochino Pequeña, Grande, Guanaja, Roatán, Swan and Útila Is.), Colombia (Providencia, San Andrés) and Venezuela (Nueva Esparta: Margarita Is.), NSL–25 m.

Sources: Dunn & Saxe, 1950, L.D. Wilson & Hahn, 1973, Lee, 1996, L.D. Wilson & Meyer, 1985, G. Köhler, 2001, 2003, McCranie et al., 2005, Pinto et al., 2010 and McCranie, 2011.

Remarks: Possibly also includes the populations on Suma Is., Bonaire, Margarita and Trinidad (McCranie et al., 2005: 127).

14. *Epictia melanoterma* (Cope, 1862d). Proc. Acad. Nat. Sci. Philadelphia 14(5): 350. (*Stenostoma melanoterma*)

Synonym: *Leptotyphlops melanotermus* Orejas-Miranda, 1964.

Types: Syntypes (2), ANSP 3297–98 (T.J. Page [Paraguay Exped.], Sept. 1853–Feb. 1855).

Type locality: "Corrientes," Argentina.

Distribution: Southern South America. Southern Peru, SE Bolivia, Paraguay and N Argentina (Córdoba, Santa Fe), 20–1295 m.

Sources: Laurent, 1984, Cei, 1993, Leynaud & Bucher, 1999 and Börschig, 2007.

Remarks: A synonym of *Epictia albipuncta fide* Kretzchmar, 2006.

E

15. *Epictia melanura* (K.P. Schmidt & Walker, 1943b). Field Mus. Nat. Hist. (Zool.) 24(27): 303–304. (*Leptotyphlops melanurus*)

Type: Holotype, FMNH 34269, a 135 mm specimen (C.L. Hoyle, Nov. 1939).

Type locality: "Chiclin, Libertad, Peru" [= Chiclin, La Libertad Dept., NW Peru, 07°50'S, 79°10'W, elevation 115 m].

Distribution: Northwestern Peru (La Libertad), 115 m. Known only from type locality.

Sources: K.P. Schmidt & Walker, 1943b and Carrillo de Espinoza & Icochea, 1995.

16. *Epictia munoai* (Orejas-Miranda, 1961). Acta Biol. Venez. 3(5): 85–89, figs. 1a–c. (*Leptotyphlops munoai*) (*nomen corrigendum*)

Synonyms: *Leptotyphlops muñoai* Orejas-Miranda, 1961 *(nomen incorrigendum), Leptotyphlops munoai* – J.A. Peters & Orejas-Miranda, 1970 *(nomen corrigendum),* and *Leptotyphlops munaoi* – Hahn, 1980a *(nomen incorrectum).*

Type: Holotype, MBUCV 4547 (formerly MHNM 68), a 140 mm specimen (M.A. Klappenbach & P.R. San Martin, 12 Oct. 1956).

Type locality: "Pozo Hondo, Tambores, Departamento de Tacuarembó, República Oriental del Uruguay" [= 31°57'S, 56°15"W, elevation 215 m].

Distribution: Southeastern South America. Southern Brazil (Rio Grande do Sul, Santa Catarina), Paraguay (Central, Concepción, Neembucú, Presidente Hayes), Uruguay (Artigas, Canelones, Cerro Largo, Colonia, Duranzo, Flores, Florida, Lavelleja, Maldonado, Paysandú, Río Negro, Rivera, Rocha, Salto, San José, Soriano, Tacuarembó, Treinta y Tres) and NE Argentina (Buenos Aires, Corrientes, La Pampa, Misiones), 50–290 m.

Sources: Orejas-Miranda, 1962, Miranda et al., 1982, Miranda & Tio-Vallejo, 1985, J.D. Williams & Francini, 1991, Cei, 1994, Lema, 1994, Aquino et al., 1996, Giraudo, 2001, Carreira-Vidal, 2002, Achaval & Olmos, 2003, Carreira-Vidal et al., 2005, Cacciali, 2008 and Francisco et al., 2012.

17. *Epictia peruviana* (Orejas-Miranda, 1969). Comun. Zool. Mus. Hist. Nat. Montevideo 10(124): 9–10, pl. 2, fig. 1. (*Leptotyphlops peruvianus*)

Type: Holotype, AMNH 52437, a 94 mm specimen.
Type locality: "Chanchamayo, Departamento Junín, Peru" [= Chanchamayo, near San Ramon, Chanchamayo District, N Departamento de Junín, cen. Peru, 11°08'S, 75°21'W, elevation 900 m].
Distribution: Central Peru (Junín), 900 m. Known only from type locality.
Sources: Rodrígues et al., 1993 and Carrillo de Espinoza & Icochea, 1995 and Young & León, 1999.

18. *Epictia phenops* (Cope, 1875a). J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 128. (*Stenostoma phenops*)

Types: Syntypes (8), USNM 12444 and USNM 30289–95, longest syntype 156 mm (A.-L.-J.-F. Sumichrast, 1855–1869).
Type locality: "Tehuantepec" [= Tehuantepec, Oaxaca, México, 16°21'N, 95°16'W, elevation 60 m] via type locality restriction of H.M. Smith & Taylor (1945: 24 & 1950: 340).
Distribution: Southeastern México (N Chiapas, Hidalgo, Oaxaca, N Querétaro, Quintana Roo, Tamaulipas, Veracruz, Yucatán, Cozumel Is.), Guatemala (Petén) and Belize (Corozal), NSL–1330 m.
Sources: H.M. Smith, 1943a, H.M. Smith & Taylor, 1945, Cochran, 1961, Peréz-Higareda & Smith, 1991, Villela et al., 1991, Lee, 1996, G. Köhler et al., 2006, Flores-Benabib & Flores-Villela, 2008, Dixon & Lemos-Espinal, 2010, Márquez & Mayén, 2010, Ramírez-Bautista et al., 2010 and McCranie, 2011.

19. *Epictia rubrolineata* (F. Werner, 1901c). Abh. Ber. Kön. Zool. Anthro.-Ethno. Mus. Dresden (1900–1901) 9(2): 6. (*Glauconia albifrons rubrolineata*)

Synonym: *Leptotyphlops rubrolineatus* Hahn, 1980a.
Type: Holotype, MTKD D-1752 (A. Baessler, 1899), destroyed 13 Feb. 1945 during World War II.
Type locality: "Lima, Peru" [= Lima, Lima Dept., W Peru, 12°03'S, 77°02'W, elevation 150 m].
Distribution: Western Peru (W Lima), 150 m. Known only from type locality.
Sources: Schüz, 1929, Obst, 1977 and Carrillo de Espinoza & Icochea, 1995.

20. *Epictia rufidorsa* (E.H. Taylor, 1940d). Univ. Kansas Sci. Bull. (1939) 26(15): 533–535, fig. 2. (*Typhlops rufidorsum*)

Synonym: *Leptotyphlops rufidorsus* K.P. Schmidt & Walker, 1943b.
Type: Holotype, USNM 49993, a 265 mm specimen (C.H. Townsend, 16 April 1913).
Type locality: "Lima, Peru" [= Lima, Lima Dept., W Peru, 12°03'S, 77°02'W, elevation 150 m]. Emended to Rimac Valley, 5300 ft. *fide* Cochran (1961: 194).
Distribution: Western Peru (La Libertad, Lima), 1615 m.
Sources: K.P. Schmidt & Walker, 1943b and Carrillo de Espinoza & Icochea, 1995.

21. *Epictia signata* (Jan, 1861b). Arch. Zool. Anat. Fis. 1(2): 188. (*Stenostoma signatum*)

Synonyms: *Glauconia signata* Boulenger, 1893a, *Leptotyphlops amazonicus* Orejas-Miranda, 1969, and *Leptotyphlops signatus* Hahn, 1980a
Type: Holotype, MNHN 3235, an 87 mm specimen (G. Jan, 1858).
Type locality: Unknown. Restricted to northern Amazonian region of South America *fide* Hahn (1979: 59).
Distribution: Northwestern Amazonia. Colombia and SE Venezuela (S Amazonas, Bolívar) and E Ecuador (Morona-Santiago), 125–2020 m.
Sources: Jan & Sordelli, 1861 *in* 1860–1866, Jan, 1864, Boulenger, 1893a, Hoogmoed, 1977, Hahn, 1979a, Miyata, 1982, Lancini & Kornacker, 1989, Kornacker, 1999, Pinto, 2010 and Pinto et al., 2010.
Remarks: Holotype length erroneously reported by Jan (1864: 36) to be 130 mm, which is length of Sordelli's figure in Jan & Sordelli [1861 *in* 1860-1866 (livr. 2): pl. 5, fig. 3]. Orton's ANSP 3290, which Orejas-Miranda (1969: 4) suggested was from Amazonian Ecuador, likely in error for Venezuela *fide* Cisneros-Heredia (2008: 179).

22. *Epictia striatula* (H.M. Smith & Laufe, 1945a). Proc. Biol. Soc. Washington 58: 29–31, text figs. a–b, pl. 5, figs. a–b. (*Leptotyphlops striatula*)

Synonym: *Leptotyphlops striatulus* McDiarmid et al., 1999.
Type: Holotype, USNM 98889, a 241 mm specimen (M. Cárdenas, 1921–1945).
Type locality: "Yamachi, in the Southern Yungas, Bolivia" [= Yanacachi, La Paz Dept., W Bolivia, 16°22'S, 67°45'W, elevation 1480 m].
Distribution: Western Bolivia (El Beni, Chuquisaca, La Paz) and Argentina (Salta), 155–2510 m.
Sources: Laurent, 1984, Fugler & Riva, 1990, Cei, 1994, Börschig, 2007 and Pinto, 2010.

23. *Epictia subcrotilla* (Klauber, 1939b). Trans. San Diego Soc. Nat. Hist. 9(14): 61–62, figs. 2a–b. (*Leptotyphlops subcrotilla*)

Synonym: *Leptotyphlops subcrotillus* K.P. Schmidt & Walker, 1943b.
Type: Holotype, CAS 14554, a 188 mm specimen (G. Baer, 1902).

Type locality: "Grau Tombes, Northern Peru" (in error). Corrected to Grau, Tumbez *fide* Schmidt & Walker, 1943b: 303), [= Miguel Grau, Tumbes Dept., ext. N Peru, 03°34'S, 80°27'W, elevation 15 m].
Distribution: Western Peru (La Libertad, Piura, Tumbes) and SW Ecuador (El Oro, Esmeraldas, Guayas, Manabí, Santa Elena), 10–95 m.
Sources: K.P. Schmidt & Walker, 1943b, Miyata, 1982, Carrillo de Espinoza & Icochea, 1995, Purtschert, 2007 and Cisnero-Heredia, 2008.
Remarks: Ecuadorian specimens from El Oro, Esmeraldas and Manabí provinces may belong to this species *fide* Cisneros-Heredia (2008: 179).

24. *Epictia teaguei* (Orejas-Miranda, 1964). Comun. Zool. Mus. Hist. Nat. Montevideo 8(103): 4–6, pl. 2, figs. a–c, pl. 3, figs. a–c. (*Leptotyphlops teaguei*)

Type: Holotype, MNHNU CH 910 (formerly CWW 12526A), a 139 mm specimen (W. Weyrauch, 24 June 1956).
Type locality: "la margen izquierda del Río Chotano (Altitud: 2.350 metros) entre Chota y Cutervo, norte de Peru, vertiente oriental de la Cordillera Occidental; en savana, bajo piedras" [= Río Chotano, between Chota (06°34'S, 78°39'W) and Cutervo (06°23'S, 78°49'W), Cajamarca Dept., NW Peru, elevation 2350 m].
Distribution: Northwestern Peru (Cajamarca), 2200–2700 m. Known only from vicinity of type locality.
Sources: Laurent, 1984, Carrillo de Espinoza & Icochea, 1995 and Lehr et al., 2002.

25. *Epictia tenella* (Klauber, 1939). Trans. San Diego Soc. Nat. Hist. 9(14): 59–61, figs. 1a–b. (*Leptotyphlops tenella*)

Type: Holotype, AMNH 14269, a 177 mm specimen (W. Beebe, 1919).
Type locality: "Kartabo, British Guiana" [= Kartabo, Essequibo Islands-West Demerara Region, Guyana, ca. 06°35'N, 58°35'W, elevation NSL].
Distribution: Northern South America. Southeastern Venezuela (Bolivar), Trinidad (St. George, St. Joseph), Guyana (Essequibo Islands-West Demerara, Potaro-Siparuni) Suriname (Brokopondo, Marowijne, Nickerie, Para, Saramacca, Suriname), French Guiana (Cayenne) and N Brazil (Amazonas, Mato Grosso, Pará), NSL–495 m.
Sources: Orejas-Miranda & Zug, 1974, Hoogmoed, 1977, Chippaux, 1987, J.C. Murphy, 1997, Starace, 1998, Boos, 2001 and Abuys, 2003.
Remarks: Considered a separate species (Klauber, 1939a, Orejas-Miranda, 1967; Orejas-Miranda *in* J.A. Peters & Orejas-Miranda, 1970; Wallach *in* McDiarmid et al., 1999), a junior synonym (Hoogmoed & Gruber, 1983), or senior synonym (Franco & Pinto, 2009) of *Leptotyphlops albifrons*.

26. *Epictia tesselata* (Tschudi, 1845). Arch. Naturg. 11(1): 162–163. (*Typhlops tesselatum*)

Synonyms: *Typhlps tessellatus* Jan, 1861b *(nomen emendatum),* and *Stenostoma albifrons tessellata* Jan & Sordelli, 1861 *in* 1860–1866 *(nomen emendatum).*
Type: Lectotype, MHNN 15 (formerly MZN 60) (J.J. von Tschudi, Aug. 1838–Feb. 1841), designated by Schätti (1986a: 102).
Type locality: "Lima" [= Lima, Lima Dept., W Peru, 12°03'S, 77°02'W, elevation 155 m] via lectotype selection.
Distribution: Western Peru (Lima), 155–990 m. Known only from vicinity of type locality.
Sources: Jan & Sordelli, 1862 *in* 1860–1866, K.P. Schmidt & Walker, 1943b, Carrillo de Espinoza, 1970, Carrillo de Espinoza & Icochea, 1995 and Lehr et al., 2002.
Remarks: Original description reprinted in Tschudi (1846: 46–47).

27. *Epictia tricolor* (Orejas-Miranda & Zug, 1974). Proc. Biol. Soc. Washington 87(16): 167–171, figs. 1a–f. (*Leptotyphlops tricolor*)

Type: Holotype, MHNJP 3487 (formerly MHNJP 669), a 295 mm male (A. Ramos, 24 Feb. 1966).
Type locality: "Peru: Ancash Department, Huaylas Province, Huaylas District: Yunca Pampa, (2700 m)."
Distribution: Western Peru (Ancash, Cajamarca, Lima), 2700–3250 m.
Sources: Zug, 1977, Carrillo de Espinoza & Icochea, 1995, Lehr et al., 2002 and Aguilar et al., 2007.

28. *Epictia undecimstriata* (Schlegel, 1839 *in* 1837–1844). Abbild. Amph.: 36–37. (*Typhlops undecimstriatus*)

Type: Holotype, MNHN, a 236 mm specimen (A.C.V.M.D. d'Orbigny, Nov. 1830), lost *fide* Hahn (1980a: 28).
Type locality: "St. Crux de la Sierra, Amerika" [= Santa Cruz de la Sierra, Santa Cruz Dept., E Bolivia, 17°48'S, 63°10'W, elevation 425 m].
Distribution: Eastern Bolivia (Santa Cruz), 420 m. Known only from type locality.
Sources: Gray, 1845, J.A. Peters & Orejas-Miranda, 1970, Fugler & Riva, 1990 and Börschig, 2007.

29. *Epictia unicolor* (F. Werner, 1913). Mitt. Naturhist. Mus. Hamburg (1912) 30: 21. (*Glauconia bilineata unicolor*)

Type: Holotype, ZMH 8401 (formerly ZMH 4823), a 165–172 mm specimen (A. Brückmann, 9 Nov. 1910).
Type locality: "wahrscheinlich von Brasilien" [= Brazil].
Distribution: Brazil. Known only from type locality.
Source: Boundy & Wallach, 2008.

E

30. *Epictia vellardi* (Laurent, 1984). Acta Zool. Lilloana 38(1): 30–31, figs. 1a–c. (*Leptotyphlops vellardi*)

Type: Holotype, FML 110, a 179 mm female (A. Vellard, Dec. 1944).
Type locality: "Ciudad de Formosa. prov. de Formosa" [= Ciudad de Formosa, SE Formosa Prov., NE Argentina, 26°11'S, 58°11'W, elevation 65 m].
Distribution: Brazil (Mato Grosso do Sul) and ext. N Argentina (Chaco, Formosa), 55–185 m.
Sources: Laurent, 1984, Miranda & Tio-Vallejo, 1985, J.D. Williams & Francini, 1991, Cei, 1994, Leynaud & Bucher, 1999 and Francisco et al., 2012.

31. *Epictia weyrauchi* (Orejas-Miranda, 1964). Comun. Zool. Mus. Hist. Nat. Montevideo 8(103): 1–4, pl. 1. (*Leptotyphlops weyrauchi*)

Type: Holotype, MNHNU CH 911 (R. Golbach, 14 June 1962).
Type locality: "la Ciudad de Tucumán (Altitud: 436 metros), Prov. Tucumán, Rep. Argentina."
Distribution: Argentina (Chaco, Córdoba, Formosa, Salta, Santiago del Estero, Tucumán), 435 m.
Sources: Fabrezi et al., 1985, Cei, 1993, Vanzolini, 1996 and Leynaud & Bucher, 1999.
Remarks: A synonym of *L. albipunctus fide* Kretzschmar, 2006.

ERISTICOPHIS Alcock & Finn, 1897 (Viperidae)

Synonym: *Eristocophis* Wall, 1906d *(nomen emendatum).*
Type species: *Eristicophis macmahonii* Alcock & Finn, 1897.
Distribution: South Asia.
Sources: Blanford, 1897, Wall, 1906d, M.A. Smith, 1943, Krishna & Dave, 1956, Marx & Rabb, 1965, Minton, 1966, Joger, 1984, Latifi, 1985, J.S., Werman, 1986a, Ashe & Marx, 1988, Department of Defense, 1991, Golay et al., 1993, David & Ineich, 1999, Herrmann et al., 1999, McDiarmid et al., 1999, Lenk et al., 2001b, M.S. Khan, 2002, Mallow et al., 2003, Wüster et al., 2008, Phelps, 2010 and Hoser, 2012d.

1. *Eristicophis macmahonii* Alcock & Finn, 1897. J. Asiat. Soc. Bengal (1896) 65(4): 564–565, pl. 15, figs. 1–1a.

Synonyms: *Eristocophis mcmahoni* F. Wall, 1925a *(nomen emendatum), Pseudocerastes latirostris* Guibé, 1957, and *Eristophis macmohoni* – Khole, 1991 *(nomen incorrectum).*
Types: Syntypes (8), BMNH 1946.9.8.11 (formerly BMNH 1896.12.22.14), head and part of body, BMNH 1946.9.8.61 (formerly BMNH 1896.12.12.11), and ZSI 14179–84 (formerly IMC), longest syntype 648 mm (A.H. MacMahon & F.P. Maynard [Afghan-Baluch Bound. Comm.], 30 March–May 1896).
Type locality: "Amirchah, 3300 feet, Zeh, 2500 feet, Drana Koh, Robat I., 4300 feet, Afghan-Baluch boundary" [= Robat I (29°33'N, 63°38'E, 1310 m), S Afghanistan and Drana Koh (29°14'N, 61°57'E, 900 m), Zeh (29°15'N, 62°11'E, 760 m) and Amir Cháh (29°15'N, 62°30'E, 1000 m), W Pakistan]. W. Baluchistan *fide* BMNH catalogue or the desert south of the Helmand River, Baluchistan *fide* M.A. Smith (1943: 493).
Distribution: Southwest Asia. Southeastern Iran (Kerman, Sistan va Baluchestan), SW Afghanistan (Helmand, Heart, Nimroze) and NW Pakistan (SW Balochistan), 760–1310 m.
Remarks: BMNH 1946.9.8.61 recorded as holotype in BMNH catalogue *fide* I. Das *in* McDiarmid et al. (1999: 383). Alcock referred to as sole author of new genus and species *fide* Blanford (1897: 295). Unconfirmed record from Rajasthan, NW India *fide* Krishna & Dave, 1956. At least one of the type localities (Robat I) appears to be in Helmand Prov., Afghanistan. Two of the type localities are spelled differently on their map (pl. 11), Daran Koh and Amir Cháh.

ERPETON Lacépède, 1801 (Homalopsidae)

Synonyms: *Rhinopirus* Merrem, 1820 *(nomen substitutum), Herpeton* Oken, 1816 *(nomen rejiciendum), Herpeton* Wagler, 1830 *(nomen emendatum), Rhinopyrus* Bonaparte, 1831 *(nomen emendatum), Herpetum* Agassiz, 1847 *(nomen emendatum),* and *Herpedon* – Maass-Berlin, 1933 *(nomen incorrectum).*
Type species: *Erpeton tentaculatus* Lacépède, 1801.
Distribution: Tidal rivers, lakes, ponds and coastal marine waters of Indochina, including the Gulf of Thailand.
Sources: Morice, 1875b, M.A. Smith, 1914c–d, Bourret, 1936b, E.H. Taylor, 1965, Soderberg, 1966b, Campden-Main, 1970a, Cornelissen, 1970, Gyi, 1970, Saint-Girons, 1972a, Winokur, 1977, Martinez & Behler, 1988, K.K.P. Lim & Lee, 1989, M.J. Cox, 1991b, M.J. Cox et al., 1998, Voris et al., 2002, J.C. Murphy & Schlager, 2003, J.C. Murphy, 2007b, Alfaro et al., 2008, V.S. Nguyen et al., 2009, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Erpeton tentaculatum* Lacépède, 1801. Bull. Soc. Philom. Paris 2(46): 169.

Synonyms: *Erpeton tentaculatus* – Latreille *in* Sonnini & Latreille, 1801b, *Rhinopirus erpeton* Merrem, 1820, and *Homalopsis herpeton* Schlegel, 1837.
Type: Holotype, MNHN 22, a 500+ mm specimen (old Dutch coll.).
Type locality: Unknown.

Distribution: Indochina. Southern Thailand (Bangkok, Krung Thep Mahanakhon, Nakhon Pathom, Nakhon Si Thammarat, Phattalung, Phra Nakhon Si Ayutthaya, Prachuap Khiri Khan), S Cambodia (Kampot, Kandal, Kornpong Chhnang) and S Vietnam (An Gian, Binh Duong, Kien Giang, Long An, Tay Ninh), NSL–25 m.
Remarks: Original description reprinted in Lacépède (1803: 284, pl. 50).

ERYTHROLAMPRUS F. Boie, 1826 (Xenodontidae)

Synonyms: *Erythrolampus* – Gray *in* Griffith & Pidgeon, 1831 *(nomen incorrectum), Erythrophis* Fitzinger, 1843, *Rhinaspis* Fitzinger, 1843 *(nomen rejiciendum), Erythrolampas* – F. Müller, 1878b *(nomen incorrectum), Erythrlomprus* – Amaral, 1930f *(nomen incorrectum), Erithrolamprus* – Briceño-Rossi, 1934 *(nomen incorrectum), Erythroglamprus* – Machado, 1945 *(nomen incorrectum), Erythtrolamprus* – Villa, 1962 *(nomen incorrectum), Erythrolomprus* – Engelmann & Obst, 1981 *(nomen incorrectum),* and *Erythrocamprus* – Phelps, 1981 *(nomen incorrectum).*
Type species: *Coluber aesculapii* Linnaeus, 1758.
Distribution: Central America and South America.
Sources: J.A. Peters & Orejas-Miranda, 1970 and Vidal et al., 2000, 2010.

1. *Erythrolamprus aesculapii* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 220. (*Coluber aesculapii*)

Synonyms: *Coluber agilis* Linnaeus, 1758, *Coluber scutata* Laurenti, 1768, *Coluber nigrofasciatus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber elegantissimus* G. Shaw, 1802, *Coluber linnaei* G. Shaw, 1802 (*nomen substitutum*), *Coluber atrocinctus* Daudin, 1803c, *Coluber venustissimus* Wied-Neuweid, 1822, *Coluber binatus* Lichtenstein, 1823, *Elaps biannulatus* Wagler, 1825 (*nomen ineditum*), *Lycodon maximiliani* F. Boie, 1827, *Erythrolamprus bauperthuisii* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Erythrolamprus intricatus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Erythrolamprus milberti* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Erythrolamprus albostolatus* Cope, 1860e, *Erythrolamprus aesculapii confluentus* Jan, 1863a, *Erythrolamprus aesculapii dicranta* Jan, 1863a, *Erythrolamprus aesculapii monozona* Jan, 1863a, *Erythrolamprus aesculapii tetrazona* Jan, 1863a, and *Erythrolamprus baileyi* Roze, 1959a.
Types: Syntypes (3), NHR Lin-84 (formerly MAFR), a 610 mm specimen (Mus. Drottn.), NHR Lin-85 (formerly MAFR), 700 mm specimen (Mus. Drottn.), and ZMUU 92 (C. Grill, 1747).
Type locality: "Indiis" [= India] (in error *fide* Hoge, 1964d: 56). Corrected to Brazil *fide* Amaral (1977: 176). Restricted to Popayan, Bahia, Brazil *fide* Gasc & Rodrigues (1980: 575).
Distribution: South America. Colombia (Atlántico, Boyacá, Caldas, Cauca, Magdalena, Meta, Guaviare, Nariño, Norte de Santander, Santander, Tolima, Valle, Vaupés), Trinidad and Tobago (Trinidad), Venezuela (Amazonas, Bolívar, Delta Amacuro, Monagas, Sucre), Guyana (Essequibo Islands-West Demerara, Pomeroon-Supenaam, Upper Demerara-Berbice), Suriname (Brokopondo, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Amapá, Amazonas, Bahia, Brazilia, Goiás, Mato Grosso, Minas Gerais, Pará, Paraná, Rio de Janeiro, Rondônia, Santa Catarina, São Paulo, Barnabé, Cananéia, São Sebastião and São Vicente Is.), E Ecuador (Napo, Zamora-Chinchipe), Bolivia (El Beni, Cochabamba, La Paz, Pando, Santa Cruz, Sergipe), Peru (Huancabamba, Junin, Loreto, Madre de Dios, Pasco, San Martin, Ucayali), Paraguay (Amambay, Canindeyú, Central, Concepción, Itapúa, Misiones, Neembucú, Paraguarí) and ext. NE Argentina (Misiones), NSL–2300 m.
Sources: Roze, 1959a, 1966a, Amaral, 1978, Cunha & Nascimento, 1978, 1980, Abuys, 1983d, Dixon & Sonini, 1986, Lancini, 1986, Chippaux, 1987, Pérez-Santos & Moreno, 1988, Campbell & Lamar, 1989, Cei, 1994, J. Hardy & Boos, 1995, Marques, 1996b, Starace, 1998, H.E.A. Boos, 2001, Marques et al., 2001, Doan & Arazábal, 2002, Cicchi et al., 2007, Cacciali, 2008, Navarrete et al., 2009, Morato et al., 2011 and C.J. Cole et al., 2013.
Remarks: NHR Lin-84 and Lin-85 lengths erroneously listed as 350 and 390 mm, respectively, *fide* Andersson (1899: 16). The lectotype designation of J.A. Peters (1960a: 520) is invalid as NHR possesses two syntypes and Peters did not provide a catalogue number.

2. *Erythrolamprus bizonus* Jan, 1863a. Arch. Zool. Anat. Fis. 2(2): 314. (*Erythrolamprus aesculapii bizona*)

Types: Syntypes (3), MHNG 464.30, MSNM and NMW.
Type locality: "Bahia, Messico, Popayan, Cayenne, Brasile, Montevideo, Colombia" [= Mexico; Popayan, Colombia; Cayenne, French Guiana; Bahia, Brazil; Montevideo, Uruguay]. Restricted to Colombia *fide* Dunn & Bailey (1939: 12).
Distribution: Lower Central America and ext. NW South America. Costa Rica (Alajuela, Cartago, Guanacaste, Puntarenas, San José), Panama (Canal Zone, Darién, Barro Colorado Is.), Colombia (Antioquia, Atlántico, Bolívar, Caldas, Cauca, César, Cundinamarca, Guaviare, La Guajira, Magdalena, Meta, Nariño, Norte de Santander, Santander, Valle), Trinidad and Tobago (Trinidad) and N Venezuela (Apure, Aragua, Barinas, Carabobo, Cojedes, Distrito Federal, Falcón, Guárico, Lara, Miranda, Portuguesa, Táchira, Trujillo, Zulia), NSL–2630 m.

E

Sources: E.H. Taylor, 1951, 1954, Roze, 1966a, Lancini, 1986, Pérez-Santos & Moreno, 1988, J. Hardy & Boos, 1995, G. Köhler, 1999b, Mijares-Urrutia & Arends, 2000, H.E.A. Boos, 2001, Markezich, 2002, Savage, 2002, Solórzano, 2004, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Navarrete et al., 2009 and Rojas-Morales, 2012b.

Remarks: Type locality restriction of H.M. Smith & Taylor (1950: 364) rejected *fide* Dunn & Stuart (1951: 56). Possibly occurs in SE Honduras and Nicaragua *fide* G. Köhler (1999: 72).

E

3. *Erythrolamprus guentheri* S.W. Garman, 1884. Mem. Mus. Comp. Zool. (1883) 8(3): 63, 154.

Synonym: *Erythrolamprus albertguentheri* Grazziotin, Zaher, Murphy, Scrocchi, Benavides, Zhang & Bonatto, 2012 *(nomen substitutum).*

Type: Holotype, BMNH 1946.19.57.

Type locality: "Mexico (?)" (in error).

Distribution: Eastern Ecuador (? Azuay, Morona-Santiago, Napo, Orellana, Pastaza) and Peru (Amazonas), 600–950 m.

Sources: Fugler & Walls, 1978 and Perez-Santos & Moreno, 1991.

Remarks: Original description on p. 63 as *E. venustissimus* var. D; the name *guentheri* on p. 154. Günther (1858: 48) and Boulenger (1896a: 203) list only a single juvenile specimen that should be the holotype. Three syntypes listed as BMNH 1946.1.8.5–6 and BMNH 1946.1.8.38.

4. *Erythrolamprus mimus* (Cope, 1869b). Proc. Acad. Nat. Sci. Philadelphia (1868) 20: 307. (*Opheomorphus mimus*)

Synonyms: *Erythrolamprus aesculapii impar* K.P. Schmidt, 1936d, and *Erythrolamprus mimus micrurus* Dunn & Bailey, 1939.

Types: Syntypes (?), ANSP 3689, longest syntype 342 mm (E. Day), location of other syntypes unknown.

Type locality: "a mining district in the higher regions of Equador or New Grenada" [= Ecuador or Colombia].

Distribution: Central America and NW South America. El Salvador, Honduras (Comayagua, Cortés, El Paraíso, Gracias a Dios, Olancho, Yoro), Nicaragua (Jinotega, Matagalpa, Rio San Juan, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas), Panama (Canal Zone, Darién), W Colombia (Atlántico, Antioquia, Caquetá, Cauca, Chocó, Cundinamarca, Putumayo, Santander, Valle), E and NW Ecuador (Bolívar, Esmeraldas, Los Rios, Pichincha), Brazil (Rondônia) and E Peru, NSL–2000 m.

Sources: L.D. Wilson & Meyer, 1985, Pérez-Santos & Moreno, 1988, 1991, Campbell & Lamar, 1989, Savage, 2002, Cisneros-Heredia, 2004c, Solórzano, 2004 and McCranie, 2011a.

Remarks: Malnate (1971: 369) lists ANSP 3689 as the holotype but Cope (1869b: 307) mentioned "specimens."

5. *Erythrolamprus ocellatus* W.C.H. Peters, 1868b. Mber. Königl. Akad. Wiss. Berlin 1868((12): 642.

Type: Holotype, ZMB 5059.

Type locality: Unknown. "Süd Amerika" [= South America] *fide* ZMB catalogue. Restricted to Tobago *fide* Emsley (1966a: 129).

Distribution: Trinidad and Tobago (Tobago), 45–140 m.

Sources: Emsley, 1966a–b, 1977, J. Hardy, 1982, J. Hardy & Boos, 1995, J.C. Murphy, 1997 and H.E.A. Boos, 2001.

Remarks: Taxonomic status questionable *fide* J.C. Murphy (1997: 174).

6. *Erythrolamprus pseudocorallus* Roze, 1959a. Acta Biol. Venez. 2(35): 530–533.

Type: Holotype, MBUCV 3789, a 720 mm male (native, 1958).

Type locality: "Cerca de Maracaibo, Estado Zulia,Venezuela, en la región montañosa" [= in the mountains near Maracaibo (10°39'N, 71°38'W), Zulia State, N Venezuela].

Distribution: Northern South America. Colombia (Antioquia, Cundinamarca), W Venezuela (Distrito Federal, Mérida, Trujillo, Zulia) and NW Brazil (Amazonas), 100–1130 m, usually above 800 m.

Sources: Roze, 1966a, Lancini, 1986, Pérez-Santos & Moreno, 1988, J.C. Murphy, 1997, Fuentes & Barrio-Amorgós, 1999a, Curcio et al., 2009b and Navarrete et al., 2009.

Remarks: Probably occurs in ext. NE Colombia (La Guajira) *fide* Pérez-Santos & Moreno (1988: 164).

ERYX Daudin, 1803d (Boidae)

Synonyms: *Clothonia* Daudin, 1803d, *Erix* A.-M.-C. Duméril, 1806 *(nomen emendatum), Haemorrohous* Aldrovandi *in* Fitzinger, 1823, *Gongylophis* Wagler, 1830, *Gonylophis* – Swainson, 1839 *(nomen incorrectum), Cusoria* Gray, 1849a, *Cursoria* A.C.L.G. Günther, 1864a *(nomen emendatum), Congylophis* – Westphal-Castelnau, 1870 *(nomen incorrectum), Eryse* – Angel, 1938 *(nomen incorrectum),* †*Crythiosaurus* Gilmore, 1943, *Gongliophis* – Mishima & Yamazato, 1970 *(nomen incorrectum), Erys* – Tiwari & Sharma, 1971 *(nomen incorrectum), Ery* – Witte, 1975 *(nomen incorrectum), Gonglyophis* – Branch, 1980 *(nomen incorrectum), Neogongylophis* Tokar, 1989a, and *Pseudogongylophis* Tokar 1989a.

Type species: *Anguis jaculus* Linnaeus, 1758.

Distribution: Southeastern Europe, N and E Africa and SW and cen. Asia.

Fossil records: Lower Miocene of Czech Republic, France, Germany and Saudi Arabia, middle Miocene of France and Spain, upper Miocene of Mongolia, Spain and Ukraine, lower Pliocene of Greece and Ukraine, middle Pliocene of Greece and Ukraine, upper Pliocene of France, Greece and Turkey, Pliocene of Greece, and Pleistocene of Greece.

Sources: Jan, 1865b, Tzarevsky, 1916, Stull, 1935, Stimson, 1969, Rage, 1972, Matz, 1974, Latifi, 1985, Stafford, 1986, Tokar, 1986, 1989a, 1995a–b, Sorensen, 1988, I. Das, 1991, Szyndlar & Schleich, 1994, Walls, 1998a and McDiarmid et al., 1999.

Remarks: Fossils referrable to the Boidae are known from the Miocene of Italy and Morocco, and the Pliocene of France and Italy. *Gongylophis* a synonym of *Eryx fide* Noonan & Chippindale (2006: 352) but valid *fide* Tokar, 1995a–b and McDiarmid et al., 1999 (including *G. colubrinus, G. conicus, G. muelleri* and *G. whitakeri*). †*Eryx moldaviensis* Redkozubov, 2003 *(nomen nudum)* listed from MN 14–15 (2.9–4.5 mya) of Moldava.

1. *Eryx borrii* Lanza & Nistri, 2005. Trop. Zool. 18(1): 95–99, figs. 15–17.

Type: Holotype, BMNH 1900.11.28.4, a 390 mm female (A. Donaldson-Smith, 28 Nov. 1900).

Type locality: "Biji (400 m a.s.l.), Somalia" [= Biji, Woqooyi Galbeed Region, NW Somalia, ca. 10°10'N, 44°06'E, elevation 400 m].

Distribution: Northwestern Somalia (Woqooyi Galbeed), 400 m. Known only from holotype.

Sources: Parker, 1949 and Largen & Rasmussen, 1993.

2. *Eryx colubrinus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 228. (*Anguis colubrina*)

Synonyms: *Eryx thebaicus* Reuss, 1834, *Eryx scutata* Gray, 1842a, *Eryx jaculus sennariensis* Jan, 1863b (*nomen nudum*), *Eryx jaculus sennariensis* Jan, 1864 *in* Jan & Sordelli, 1860–1866, *Eryx thebaicus loveridgei* Stull, 1932b, and *Eryx rufescens* Ahl, 1933a.

Type: Holotype, not designated, lost *fide* Flower (1933: 805).

Type locality: "Aegypto" [= Egypt]. Restricted to Thebes, Qena Prov., Upper Egypt *fide* Flower (1933: 804).

Distribution: Northern Africa and Yemen. Central Niger (Agadez), Chad (Borkou, Chari-Baguirmi, Mayo-Kebbi Est), Egypt (Assiut, Beni Suef, S El-Bahr El-Ahmar, Giza, Minya, Qena, Sohag), E Sudan (El-Bahr El-Ahmar, Al Jazirah, Ash Sharqiyah, Sennar), Eritrea, E Ethiopia (Bale, Gemu Gofa, Hararge, Shoa, Sidamo, Tigre, Wollo), Somalia (Awdal, Bakool, Bari, Bay, Galguduud, Gedo, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Mudug, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer, Woqooyi Galbeed), Kenya (Coast, N Eastern, North-Eastern, N Rift Valley), NE Tanzania (Arusha, Kilimanjaro, Morogoro), and W Yemen, 20–800 m.

Sources: J. Anderson, 1898, Stull, 1932b, Flower, 1933, Villiers, 1950a, 1975, Papenfuss, 1969, Lanza, 1983a, 1990b, Gasperetti, 1988, Le Berre, 1989, Largen & Rasmussen, 1993, Spawls et al., 2002, J.C. Murphy & Schlager, 2003, Lanza & Nistri, 2005, Baha El Din, 2006, Chippaux, 2006, J.-F. Trape & Mané, 2006b and Largen & Spawls, 2010.

3. *Eryx conicus* (Schneider, 1801). Hist. Amph. 2: 268. (*Boa conica*)

Synonyms: *Boa viperina* G. Shaw, 1802, *Boa ornata* Daudin, 1803b *(nomen substitutum)*, *Erix bengalensis* Guérin-Méneville, 1830 *in* 1829–1844, *Eryx conicus laevis* W.C.H. Peters, 1869, *Eryx conicus brevis* Deraniyagala, 1951, and *Eryx conicus gansi* Rajendran, 1986.

Types: Syntypes (3), ZMB 1470 (C.S. John via M.E. Bloch coll.), Museo Barbyensi, and specimen described and illustrated by P. Russell (1796: 5–6, pl. 4).

Type locality: "India orientali" [= eastern India] and "Madras" [= Chennai, Tamil Nadu State, SE India, 13°04'N, 80°15'E, elevation 10 m]. Restricted to Tronquebar [= Tharangambadi, Tamil Nadu State, SE India, 11°02'N, 79°51'E, elevation 5 m] *fide* Stimson (1969: 17).

Distribution: Southern Asia. Southern Pakistan (Balochistan, S Khyber Pakhtunkhwa, Punjab, Sindh), India (Andaman & Nicobars, Andhra Pradesh, Bihar, Goa, Gujarat, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Rajasthan, Tamil Nadu, Uttar Pradesh, West Bengal), N Sri Lanka (E Eastern, Northern), Bangladesh and Nepal (Bardiya, Mugu, Parsa, Surkhet, Udayapur), 100–2680 m.

Sources: Wall, 1911f, M.A. Smith, 1943, Deraniyagala, 1951, 1963, Minton, 1966, Singh, 1972, Rieppel, 1978, P. Silva, 1980a, Daniel, 1983, Khaire & Khaire, 1986, Tokar, 1986a, M.A.R. Khan, 1988, Hallermann et al., 2001, M.S. Khan, 2002, Schleich & Kästle, 2002, Whitaker & Captain, 2004 and N. Khaire, 2006.

Remarks: Original description based upon P. Russell (1796: 5–6, pl. 4) from Madras. Jar label for ZMB 1470 reads Tronquebar *fide* Bauer et al. (2002: 167). Daudin (1803b: 213) stated Barby. Kluge (1993a: 297) listed type locality as Tranquebar, Tanjore District, SE Madras.

4. *Eryx elegans* (Gray, 1849a). Cat. Snakes Brit. Mus.: 107. (*Cusoria elegans*)

Synonym: *Eryx jaculus czarewskii* Nikolsky, 1916.

Type: Holotype, BMNH 1843.7.21.70 (formerly BMNH IV.19.1a), adult female (East India Company).

Type locality: "Afghanistan."

Distribution: Southwestern Asia. Southern Turkmenistan, N Iran (East Azarbaijan, Razavi Khorasan) and N Afghanistan (Badghis, Kabul), 1800–2440 m.

Sources: Boulenger, 1893a, Nikolsky, 1916, Terent'ev & Chernov, 1949, 1965, Fuhn & Vancea, 1961, S.C. Anderson & Leviton, 1969, Bannikov et al., 1977, Tokar, 1989b and Szczerbak, 1994.

E

5. *Eryx jaculus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 228. (*Anguis jaculus*)

Synonyms: *Anguis cerastes* Linnaeus, 1758, *Boa turcica* G. Olivier, 1801, ? *Tortrix gracilis* Merrem, 1820, *Eryx familiaris* Eichwald, 1831, *Boa charontis* Seetzen, 1855, *Eryx jaculus teherana* Jan, 1865 *in* De Filippi, *Eryx persicus* Nikolsky, 1907, *Eryx montanus* Nikolsky, 1909b, *Eryx jaculus proprius* Tzarevsky, 1916, and *Eryx jaculus urmianus* Rostombekov, 1928.

Type: Lectotype, NHR Lin-12 (formerly MAFR), a 530 mm specimen, designated by J. Anderson (1898: 244), lost *fide* Stimson (1969: 18).

Type locality: "Aegypto" [= Egypt].

Distribution: Southeastern Europe, SW Asia and N Africa. Macedonia, SE Romania, Bulgaria (Blagoevgrad, Haskovo, Kardzhali, Plovdiv, Pazardzhik, Pleven, Sliven, Stara Zagora, Veliko Tarnovo, Vratsa), SW Albania, Macedonia, Greece (Amorgós, Antikáros, Attica, Ios, Iráklia, Kálimnos, Káros, Kas, Kérkira, Kímolos, Límnos, Lesvos, Mílos, Náxos, Páros, Peloponnese, Políaigos, Síkinos, Spétsai, Tínos), Turkey (Adana, Ankara, Antalya, Aydin, Balikesir, Bitlis, Hatay, Icel, Istanbul, Izmir, Kars, Kayseri, Mugla, Siirt, Urfa, Usak), Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, Southern, Tel Aviv, West Bank), Syria (Damascus), Lebanon (Beqaa, Mont-Liban), Jordan (Ajloun, Amman, Balqa, Irbid, Jarash, Karak, Maan, Madaba, Mafraq, Tafilah), NE Saudi Arabia, ext. SW Russia (Dagestan), SE Georgia, S Azerbaijan, Armenia, S Turkmenistan, Iraq, NW Iran (Central, East Azerbaijan, Fars, Kermanshahan, Khuzestan, Kordestan, Mazandaran, Razavi Khorasan, Sistan va Baluchestan, West Azerbaijan), NE Morocco (Figuig, Nador, Oujda), N Algeria (Batna, M'Sila, Ouahran), Tunisia (Beja, Gafsa, Gabès, Kairouan, Kasserine, Le Kef, Medenine, Sfax, Siliana, Sousse, Tebessa, Tunis, Zaghouan, Kerkennah Is.), N Libya (Benghazi, Jabal al-Akhdar, Tripoli) and N Egypt (Alexandria, Beheira, Cairo, Daqahlia, Giza, Kafr El-Shaikh, Matrouh, North Sinai, Sharkeya), NSL–1500 m.

8. *Eryx miliaris* (Pallas, 1773). Reise Russ. Reichs. 2(2): 718. (*Anguis miliaris*)

Synonyms: *Anguis helluo* Pallas, 1814, *Eryx miliaris koslowi* Bedriaga, 1907, *Eryx miliaris roborowskii* Bedriaga, 1907, *Eryx miliaris nogaiorum* Nikolsky, 1910b, *Eryx miliaris incerta* Tzarevsky, 1916, *Eryx miliaris rarus* Tzarevsky, 1916, *Eryx miliaris tritus* Tzarevsky, 1916, *Eryx tataricus bogdanovi* Tzarevsky, 1916, *Eryx nogajorum* –Terent'ev, 1926 *(nomen incorrectum),* and *Eryx rickmersi* F. Werner, 1930b.

Type: Holotype, not designated, a 350 mm specimen, lost *fide* Stimson (1969: 19).

Type locality: "versus mare Caspium, Provinzen Russischen Reichs" [= near Caspian Sea, Russia]. Restricted to N shore of the Caspian Sea between the Volga and Ural rivers, Kazakhstan *fide* Darevsky (1993: 60).

Distribution: Western Asia. Southwestern Russia, Kazakhstan, Uzbekistan, Turkmenistan, Tadzhikistan, Kyrgyzstan, Iran (Esfahan, Hamadan, Khuzestan, Mazandaran, Razavi Khorasan, Sistan va Baluchestan, West Azarbaijan) W and NW Afghanistan (Badghis), NW China (Gansu, Nei Monggol, Xinjiang) and S Mongolia, 150–955 m.

Sources: Boulenger, 1889d, Nikolsky, 1916, F. Werner, 1921b, 1930b, C.H. Pope, 1935, Terent'ev & Chernov, 1949, 1965, Steward, 1971, Bannikov et al., 1977, Latifi, 1985, Li & Wang, 1989, Darevsky, 1993, Zhao & Adler, 1993, Scherbak, 1994, Shaposhninov, 2001, Xu, 2001, Tuniyev et al., 2009 and Yao, 2012.

9. †*Eryx mongoliensis* (Gilmore, 1943). Bull. Amer. Mus. Nat. Hist. 81(4): 377–379, fig. 16. (†*Crythiosaurus mongoliensis*)

Type: Holotype, AMNH 6629, an imperfect skull, posterior portions of both rami and two cervical vertebrae (AMNH Cen. Asiatic Exped., 1925).

Type locality: "Grand Canyon, north of Tsagan Nor, Inner Mongolia; Hsanda Gol, Lower Oligocene."

Distribution: Lower Oligocene (28.4–33.9 mya) of Mongolia. Known only from type locality.

10. *Eryx muelleri* (Boulenger, 1892a). Ann. Mag. Nat. Hist. (6) 9(49): 74–75. (*Gongylophis muelleri*)

Synonym: *Eryx muelleri subniger* Angel, 1938.

Type: Holotype, BMNH 1891.11.20.2, a 370 mm male (E. Marno, 1872–1876).

Type locality: "Sennar, Nubia, [= Sennar Prov., SE Sudan, ca. 13°N, 34°E].

Distribution: West Africa. Southern Mauritania (Assaba, Brakna, Fatick, Kaolack, Hodh Ech Chargui, Trarza), Senegal (Dakar, Matam, Saint-Louis, Tambacounda, Thiès, Ziguinchor), Gambia, Sierra Leone, S Mali (S Gao, Kayes, Koulikoro, Mopti, Ségou, S Tombouctou), N Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Sahel, Sud-Ouest, Volta-Noire), N Ivory Coast (Daloa), N Ghana (Upper East, Upper West), N Togo (Savanes), N Benin (Alibori), Niger (Agadez, Diffa, Dosso, Maradi, Niamey, Zinder), SW Chad (Chari-Baguirmi, Kanem), N Nigeria (Borno, Sokoto), N Cameroon (Extreme-Nord), SW Chad, N Central African Republic (Vakaga) and SE Sudan (Sennar), 300–470 m.

Sources: Boulenger, 1893a, Angel, 1938, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Roman, 1980, Hughes, 1983, 2013, Le Berre, 1989, Li & Wang, 1989, Lanza & Nistri, 2005, Villiers & Condamin, 2005, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Chirio, 2009 and Segniagbeto et al., 2011.

11. †*Eryx primitivus* Szyndlar & Schleich, 1994. Amphibia-Reptilia 15(3): 241–243, fig. 3j–l.

Type: Holotype, IPS 9147, one posterior caudal vertebra.

Type locality: "Gorafe 5 (Granada, Spain); middle Pliocene (MN 15)."

Distribution: Middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Spain. Known only from type series.

12. *Eryx somalicus* Scortecci, 1939b. Ann. Mus. Civ. Stor. Nat. "Giacomo Doria," Genova (1935–1939) 58: 269–270.

Type: Lectotype, MSNM 581 (formerly MSNM 2118), a 225 mm specimen (G. Scortecci, 1931), designated by Lanza & Nistri (2005: 88).

Type locality: "Dintorni di Mogadiscio" [= vicinity of Mogadishu, Mogadishu Region, S Somalia, 2°02'N, 45°21'E, elevation NSL] via lectotype selection.

Distribution: Northeast Africa. Extreme NE Central African Republic, Somalia (Bari, Galguduud, Mogadishu, Shabeellaha Dhexe, Sool, Togdheer) and E Ethiopia (E Hararge), NSL–1065 m.

Sources: H.W. Parker, 1949, Gans & Laurent, 1965, Lanza, 1983, 1990b, Largen & Rasmussen, 1993, Lanza & Nistri, 2005, Chippaux, 2006 and Largen & Spawls, 2010.

Remarks: Holotype illustrated in Lanza & Nistri (2005: figs. 8–9, 11–12).

13. *Eryx tataricus* (Lichtenstein *in* Eversmann, 1823). Reise Orenburg Buchara: 146–147. (*Boa tatarica*)

Synonym: *Eryx speciosus* Tzarevsky, 1916.

E

Type: Lectotype, ZMB 1461, a 420 mm specimen (E.F. Eversmann, 1820–1822), designated by Bauer et al. (2002: 167).

Type locality: "Tataria" [= Tatarstan, SW Russia] via lectotype selection. Restricted to Aral Sea [SW Kazakhstan and NW Uzbekistan] *fide* M.S. Khan (2002: 72) invalid.

Distribution: Central Asia. Western Tadzhikistan, Turkmenistan, SE Uzbekistan, ext. S Mongolia (S Bayan Hongor, S Gobi Altay, S Ömönö Gobi), ext. N China (Gansu, Nei Monggol, Ningxia, Xinjiang), W Iran (Central, East Azarbaijan, Khuzestan, West Azarbaijan, Zanjhan), 380–2650 m.

Sources: Chernov, 1959, Terentev & Chernov, 1965, Minton, 1966, Bannikov et al., 1977, Borkin et al., 1990a–b, Zhao & Adler, 1993 and M.S. Khan, 2002.

Remarks: Original description reprinted in Lichtenstein (1823: 104).

E

14. *Eryx vittatus* Chernov, 1959. Trudy Inst. Zool. Parazit. 98: 129–130, fig. 10. (*Eryx tataricus vittatus*)

Type: Holotype, ZISP 14009, a male (S.A. Chernov & A.V. Givozdev, 1934).

Type locality: "Gissar Valley, 20 Km. southwest of Dushanbe, Tadzhik."

Distribution: West-central Asia. Eastern Kazakhstan, NW Kyrgyzstan, E Uzbekistan, ext. W China, E Iran, N Afghanistan (Badakhstan, Faryab, Kabul) and W Pakistan (NW Balochistan), 700–1800 m.

Sources: S.C. Anderson & Leviton, 1969, Leviton & Anderson, 1970a and Tokar, 1989a.

15. *Eryx whitakeri* I. Das, 1991. J. Bombay Nat. Hist. Soc. 88(1): 93–96, figs. 1–3.

Type: Holotype, ZSI 24810, a 550 mm female (Mangalore Snake Park, April 1990).

Type locality: "Mangalore, Karnataka State, India" [= Mangalore, W Karnataka State, SW India, 12°55'N, 74°51'E, elevation 30 m].

Distribution: Southwestern India (Goa, W Karnataka, W Kerala, S Maharashtra), NSL–30 m.

Sources: Whitaker & Captain, 2004 and N. Khaire, 2006.

ETHERIDGEUM Wallach, 1988 (*nomen substitutum*) (Calamaridae)

Synonym: *Padangia* F. Werner, 1924a *(nomen praeoccupatum).*

Type species: *Padangia pulchra* F. Werner, 1924a.

Distribution: Western Indonesia.

Sources: Wallach, 1988, David & Vogel, 1996, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Etheridgeum pulchrum* (F. Werner, 1924a). Anz. Akad. Wiss. Wien (4): 3. (*Padangia pulchra*)

Type: Holotype, NMW 23449, a 143–145 mm (svl) female (J. Schild, 1890–1904).

Type locality: "Padang, Sumatra" [= Padang, Sumatera Barat Prov., W Sumatra, W Indonesia, 0°57'S, 100°21'E, elevation NSL].

Distribution: Western Indonesia (W Sumatra), NSL. Known only from the type specimen.

Remarks: Supplemental original description in F. Werner (1924b: 54–55, fig. 8).

EUNECTES Wagler, 1830 (Boidae)

Synonyms: *Cenchris* Gronovius, 1763 *(nomen illegitimum), Cenchrus* Link, 1807 *(nomen emendatum), Cenchrias* – Oken, 1816 *(nomen incorrectum), Eunectus* – Swainson, 1839 *(nomen incorrectum), Cenchrina* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum), Eunectis* – Plateau, 1866 *(nomen incorrectum), Euneces* – Lydekker, 1901 *(nomen incorrectum), Eunetes* – Brazil, 1914 *(nomen incorrectum), Enectes* – Briceño-Rossi, 1934 *(nomen incorrectum), Enectus* – Briceño-Rossi, 1934 *(nomen incorrectum), Eunictes* – W.W. Tanner & Avery, 1982 *(nomen incorrectum),* and *Maxhoserboa* Hoser, 2012w *(nomen illegitimum).*

Type species: *Boa murina* Linnaeus, 1758.

Distribution: South America.

Fossil records: Middle Miocene of Colombia and upper Miocene of Brazil.

Sources: Belluomini et al., 1960, Stimson, 1969, J.A. Peters & Orejas-Miranda, 1970, Matz, 1981, Petzold, 1983, Henderson et al., 1995, Wall, 1998a, Wallach, 1998a, McDiarmid et al., 1999, Dirksen & Böhme, 2005, Noonan & Chippindale, 2006 and Bisplinghof & Bellosa, 2007, Hsiou & Albino, 2009 and Hoser, 2012w.

1. *Eunectes beniensis* Dirksen, 2002. Anakondas: 169–174, figs. 115, 117–121.

Type: Holotype, AMNH 101924, a 1700 mm male (W.P. McLean, 30 Aug. 1964).

Type locality: "Trinidad, Beni, Bolivia" [= Trinidad, Beni Dept., NE Bolivia, 14°50'N, 64°54'W, elevation 160 m].

Distribution: Northeastern Bolivia (Beni), 160 m.

Source: Dirksen & Bohme, 2005.

Remarks: Type locality erroneously listed as 11º08'N, 66º10'W *fide* Dirksen & Böhme (2005: 225.).

2. *Eunectes deschauenseei* Dunn & Conant, 1936. Proc. Acad. Nat. Sci. Philadelphia 88: 505–506, pl. 14, fig. 2.

Type: Holotype, ANSP 20891, a 2477+ mm female (?) (Philadelphia Zoo via R.M. de Schauensee, 6 Oct. 1924).

Type locality: "island of Marajo" [mouth of Río Amazonas, E Pará State, N Brazil, ca. 0°53'S, 49°38'W, elevation 15 m].

Distribution: Guianas. Guyana, Suriname (Marowijne), French Guiana (Cayenne, Saint-Laurent-du-Maroni) and NE Brazil (Amapá, Pará, Marajó Is.), NSL–15 m.

Sources: Amaral, 1948, 1977, P. Müller, 1970, Chippaux, 1987, Starace, 1998, Colares-Canto, 2000, Dirksen & R.W. Henderson, 2002, Abuys, 2003 and Pizzatto et al., 2004.

Remarks: Possibly occurs in Suriname *fide* Dirksen & Henderson (2002: 755.2).

3. *Eunectes murinus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 215. (*Boa murina*)

Synonyms: *Boa scytale* Linnaeus, 1758, *Boa glauca* Boddaert, 1783, *Coluber raninus* Bonnaterre, 1790, *Boa gigas* Latreille *in* Sonnini & Latreille, 1801a, *Boa anacondo* Daudin, 1803b, *Boa aquatica* Wied-Neuwied, 1824b, and *Eunectes barbouri* Dunn & Conant, 1936.

Type: Holotype, NHR Lin-9 (formerly MAFR), a 930 mm specimen (Mus. Drottn.).

Type locality: "America." Restricted to South America *fide* Dirksen (2002: 31).

Distribution: Amazonia. Southeastern Colombia (Amazonas, Caquetá, Meta, Putumayo, Vaupés), Venezuela (Amazonas, Anzoátegui, Apure, Barinas, Bolívar, Delta Amacuro, Guárico, Monagas, Portuguesa, Sucre, Zulia), Trinidad and Tobago (Trinidad), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Mahaica-Berbice, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Nickerie, Para, Paramaribo, Saramacca, Wanica), N French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Amazonas, Amapá, Bahia, Ceará, Goias, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Piauí, Rondônia, Roraima, Santa Catarina, São Paulo, Sergipe), E Peru (Amazonas, Cusco, Loreto, Madre de Dios), NE Bolivia (Beni) and E Paraguay (Amambay, Canindeyú), NSL–750 m.

Cole et al., 2013.

4. *Eunectes notaeus* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 70.

Synonym: *Epicrates wieningeri* Steindachner, 1903b.

Types: Syntypes (2), ANSP and USNM 4707, a 2845 mm specimen (T.J. Page [Paraguay Exped.], Sept. 1853–Jan. 1856), lost *fide* J.A. Peters *in* Stimson (1969: 22).

Type locality: "Paraguay River and confluents" [Paraguay-Uruguay]. Restricted to 50 km SW Fuerte Coimbra on Río Paraguay at intersection of Bolivia, Brazil and Paraguay [= 20°10'S, 58°10'W, elevation 85 m] *fide* Dirksen (2002: 41).

Distribution: Southern South America. Southwestern Brazil (Mato Grosso, Mato Grosso do Sul, Paraná, Rio Grande do Sul, São Paulo), Bolivia, Paraguay (Alto Paraguay, Boquerón, Central, Misiones, Neembucú, Presidente Hayes), Uruguay (Artigas, Salto) and NE Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Misiones, Salta, Santa Fe), 85–100 m.

Sources: Cope, 1899b, Devincenzi, 1925, Lema & Fabián-Beurmann, 1977, Amaral, 1978, J.D. Williams & Francini, 1991, Cei, 1994, D.R. Norman, 1994, Moura-Leite et al., 1996, Leynaud & Bucher, 1999, Carreira-Vidal et al., 2005 and Cacciali, 2008.

5. †*Eunectes stirtoni* Hoffstetter & Rage, 1977. Ann. Paleont. (Vert.) 63(2): 180–183, figs. 5b, 6a, pl. 1, figs. 2–3.

Type: Holotype, MNHN VIV 7, one right prootic (R. Hoffstetter, J. de Porta, J. Perico & F. Etayo, 1966).

Type locality: "Los Mangos près La Venta, Dépt. Huila, Colombia Fish Bed de la Formation Villavieja, Miocene Moyen (Friasien)" [= Los Mangos (= Les Manguiers) près La Venta, (3°19' lat. N, 75°8' long. W, 440 m d'alt.), situé à 5 km au nord-est de Villavieja, immédiatement au nord de la Quebrada La Venta se situé dans la valleé supérieure du Rio Magdalena, département de Huila, Colombie. Fish Bed de la Formation Villavieja. Miocène moyen (Friasian)].

Distribution: Middle Miocene (Friasien: 15.5–16.3 mya) of Colombia. Known only from type locality.

Source: Hsiou & Albino, 2009.

†*EUPODOPHIS* Rage & Escuillié, 2002 (†Pachyophiidae)

Synonym: †*Podophis* Rage & Escuillie, 2000 (*nomen praeoccupatum*).

Type species: †*Podophis descouensi* Rage & Escuillié, 2000.

Distribution: Upper Cretaceous of Lebanon

Sources: Rage & Escuillié, 2000, 2002, 2003a–b, Rieppel et al., 2003 and Bardet et al., 2008.
Remarks: Replacement name for †*Podophis* Rage & Escuillié, 2000.

1. †*Eupodophis descouensi* (Rage & Escuillié, 2000). C.R. Acad. Sci. Paris (Sci. Terre) 330: 513–520, figs. 1, 1a–c, 2a–d. (†*Podophis descouensi*)

E

Type: Holotype, MGF Rh-E.F. 9001–03, a nearly complete skeleton.
Type locality: "Al Nammoura, Lebanon. Age: Cenomanian."
Distribution: Middle Cretaceous (Cenomanian: 93.9–100.5 mya) of Lebanon.
Sources: Rage & Escuillié, 2000 and Houssaye et al., 2011.

EUPREPIOPHIS Fitzinger, 1843 (Colubridae)

Synonyms: *Proterodon* Hallowell, 1861, *Proterdon* – Maki, 1931 *(nomen incorrectum),* and *Sinoelaphe* Hoser, 2012ad *(nomen illegitimum).*
Type species: *Coluber conspicillatus* H. Boie, 1826.
Distribution: East-central Asia.
Sources: Schulz, 1996, Helfenberger, 2001, Utiger et al., 2002, 2005 and Burbrink & Lawson, 2007.

1. *Eupreприophis conspicillatus* (H. Boie, 1826). Isis von Oken 18(2): 211–212. (*Coluber conspicillatus*)

Synonyms: *Proterodon tessellatus* Hallowell, 1861, *Coluber conspicillatus nagasakai* Namiye, 1903, and *Elaphe japonica* Maki, 1931.
Types: Syntypes (7), RMNH 399, an adult, RMNH 400a–b, two juveniles, RMNH 401a–b, two adults, and BMNH (2), a male and juvenile, longest syntype a 381 mm female (J.C. Blomhoff, 1817–1824).
Type locality: "Decima, Japan, [= Dejima Is., previously in Nagasaki harbor, now part of Nagasaki, Japan, 32°45'N, 129°52'E, elevation 10 m].
Distribution: Extreme E Russia (Kunashiri Is.) and Japan (Hokkaido, Honshu, Kyushu, Ryukyus: Fukuejima, Hisakeshima, Kagoshima, Kamishima, Mageshima, Nakadorishima, Nishinoshima, Okinawajima, Takeshima, Tanegashima, Shimojima, Yakushima Is.), 100–3000 m.
Fossil records: Upper Pleistocene of Japan.
Sources: Stejneger, 1907a, Maki, 1931, M. Mori, 1984, Schulz, 1988a, 1988d and Toriba, 1990a.
Remarks: Original description reprinted in H. Boie (1827b: 260–263). Possible types listed in Schulz (1996: 99) and Boulenger (1896a: 52). Type locality possibly in error *fide* Siebold *in* Temminck & Schlegel (1838: iii), who mistakenly corrected it to East Indies.

2. *Euprepiophis mandarinus* (Cantor, 1842a). Zool. Chusan: pl. 12. (*Coluber mandarinus*)

Synonyms: *Ablabes pavo* Annandale, 1912, *Elaphe takasago* Takahashi, 1930, *Holarchus roulei* Angel & Bourret, 1933, and *Elaphe mondarina* – Yao, 2012 *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.12.97 (formerly BMNH 1860.3.19.6241), a 700 mm female (T.E. Cantor, July 1840–March 1841, via British East India Comp.).
Type locality: "island of Chusan, or Great Chusan, is situated on the East Coast of China, between the 30° and 31° of North latitude and the 122° and 123° of East longitude; separated from the nearest mainland, Keeto Point, by an arm of the sea, about ten miles across" [= Zhoushan Is., Zhoushan Arch., Zhejiang Prov., E China].
Distribution: Eastern Asia. China (Anhui, Fujian, Gansu, Guangdong, Guangxi, Guizhou, Hebei, Henan, Hubei, Hunan, Jiangsu, Jiangxi, Liaoning, Shaanxi, Sichuan, Tianjin, Xizang, Yunnan, Zhejiang), Taiwan, NE India (E Arunchal Pradesh), N Myanmar (Kachin, Sagaing) and N Vietnam (Dak Lak, Ha Tinh, Lai Chai, Lang Son, Lao Cai, Son La, Tuyen Quang, Vinh Phuc), 450–3000 m.
Sources: H.-F. Li et al., 1986, T. Smith, 1989, Schulz, 1990c, Schulz & Münzenmaier, 1990, Zhao, 1990a, Wei et al., 1992, Zhao & Adler, 1993, Orlov et al., 2000, Gumprecht, 2004c, Quyet & Ziegler, 2004, Whitaker & Captain, 2004, Zhao, 2006, Bain et al., 2007, V.S. Nguyen et al., 2009, Xiang & Li, 2009, I. Das, 2010, 2012 and Yao, 2012.
Remarks: Supplemental original description in Cantor (1842b: 483). Possibly occurs in Laos *fide* I. Das (2010: 279).

3. *Euprepiophis perlaceus* (Stejneger, 1929). Proc. Biol. Soc. Washington 42: 129–130. (*Elaphe perlacea*)

Type: Holotype, USNM 76257, an 1150 mm male (D.C. Graham, June 1928), lost *fide* Schulz (1996: 183).
Type locality: "Yachow prefecture, Szechwan, China" [= Ya'an, Sichuan Prov., W China, ca. 30°N, 103°E].
Distribution: Western China (Sichuan).
Sources: C.H. Pope, 1935, Deng et al., 1983, Schulz, 1989b, Zhao, 1990a and Zhao & Adler, 1993.
Remarks: A synonym of *E. mandarinus* (or a very closely related species) *fide* Utiger et al., 2002.

EXALLODONTOPHIS Cadle, 1999 (Pseudoxyrhophiidae)

Type species: *Pararhadinaea albignaci* Domergue, 1984b.
Distribution: Madagascar.
Sources: Cadle, 1999, Glaw et al., 2005b and Zaher et al., 2009.
Remarks: Previously in *Pararhadinaea*.

1. ***Exallodontophis albignaci* (Domergue, 1984b). Bull. Mus. Natl. Hist. Nat. (4) 6A(1): 153–155, figs. 2a–c, 3a. (*Pararhadinaea albignaci*)**

Type: Holotype, MNHN 1982.1221 (formerly CAD 970/S), a 237 mm male (J. Thiel, 5 Jan. 1970).
Type locality: "Forêt tropicale d'Analamazaotra (Périnet); altitude 900 m" [=Analamazaotra forest, Andasibe, S Toamasina Prov., E Madagascar, 18°56'S, 48°25'E, elevation 900 m].
Distribution: East-central Madagascar (S Toamasina), 300–900 m.

EXILIBOA Bogert, 1968c (Ungaliophiidae)

Type species: *Exiliboa placata* Bogert, 1968c.
Distribution: Southern Mexico.
Sources: Stimson, 1969, L. Hardy, 1989, Zaher, 1994, Casas-Andreu et al., 1996, Walls, 1998a, McDiarmid et al., 1999 and Wilcox et al., 2002.

1. *Exiliboa placata* Bogert, 1968c. Amer. Mus. Novit. (2354): 6–13, figs. 1b, 2–4, 5a–b, 6a–b, 7, 8b.

Type: Holotype, AMNH 100000, a 412 mm female (J.S. Rowley & C.M. Bogert, 10 Aug. 1967).
Type locality: "near latitude 17° 37' N. and longitude 96° 25' W., at an elevation of approximately 2300 meters on the headwaters of the Río Valle Nacional on the northern slopes of the Sierra de Juárez, in the state of Oaxaca, Mexico,"
Distribution: Sierra de Juárez of S Mexico (N Oaxaca), 2300–2500 m.

F

†*FALSERYX* Szyndlar & Rage, 2003 (Tropidophiidae)

Type species: †*Falseryx petersbuchi* Szyndlar & Rage, 2003.
Distribution: Lower Oligocene of Belgium, and lower Miocene of Czech Republic and Germany.
Sources: Szyndlar & Rage, 2003 and Szyndlar et al., 2008.

1. †*Falseryx neervelpensis* Szyndlar, Smith & Rage, 2008. Zool. J. Linn. Soc. 152: 395–399, fig. 1.

Type: Holotype, IRSNB 240, one trunk vertebra.
Type locality: "Boutersem TGV (Belgium). Earliest Oligocene (MP 21)."
Distribution: Lower Oligocene (Rupelian, MP 21: 28.4–33.9 mya) of Belgium. Known only from type locality.

2. †*Falseryx petersbuchi* Szyndlar & Rage, 2003. Non-erycine Booidea Europe: 60–62, figs. 26k–o.

Type: Holotype, BSPG 1976 XXII 6124, one trunk vertebra.
Type locality: "Petersbuch 2 (Germany), lower Miocene (MN 4)."
Distribution: Lower Miocene (Orleanian, MN 4: 16.0–16.9 mya) of Germany and Czech Republic.

FARANCIA Gray, 1842d (Carphophiidae)

Synonyms: *Abastor* Gray, 1849a, and *Faranica* – F. Werner, 1929a *(nomen incorrectum).*
Type species: *Coluber abacurus* Holbrook, 1836.
Distribution: Southeastern USA.
Fossil records: Pleistocene of SE USA.
Sources: H.M. Smith, 1938, J.C. Mitchell, 1982a, Cadle, 1984c, Cundall & Rossman, 1984, Dundee & Rossman, 1989, Ernst & Barbour, 1989, Conant & Collins, 1991, 1998, Palmer & Braswell, 1995, Tennant, 1997, Holman, 2000a, Gravlund, 2001 and Pinou et al., 2004.

1. *Farancia abacura* (Holbrook, 1836). No. Amer. Herp. 1: 119–120, pl. 23. (*Coluber abacurus*)

Synonyms: *Homalopsis reinwardtii* Schlegel, 1837, *Farancia drummondii* Gray, 1842d, *Farancia fasciata* Gray, 1849a, and *Homalopsis crassa* Blyth, 1854a.
Type: Holotype, ANSP 5146, a 1346 mm female (J.E. Holbrook, 1822–1836).
Type locality: "South Carolina" [= USA]. Restricted to Charleston, South Carolina *fide* K.P. Schmidt (1953a: 185).
Distribution: Southeastern USA (Alabama, Arkansas, Florida, S Georgia, ext. S Illinois, ext. SW Indiana, W Kentucky, Louisiana, Mississippi, ext. SE Missouri, E North Carolina, ext. SE Oklahoma, E South Carolina, W Tennessee, E Texas and ext. SE Virginia), NSL–150 m.
Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida).
Sources: Karges & McDaniel, 1982, McDaniel & Karges, 1983, Dundee, 1992, Robinette & Trauth, 1992, Palmer & Braswell, 1995 and Werler & Dixon, 2000.

2. *Farancia erytrogramma* (Palisot de Beauvois *in* Sonnini & Latreille, 1801b). Hist. Nat. Rept. 4: 141–142. (*Coluber erytrogrammus*)

Synonyms: *Coluber erythrogrammus* Daudin, 1803c *(nomen emendatum), Duberria ancoralis* Berthold, 1842, *Homalopsis parviceps* Blyth, 1854a, and *Farancia erytrogramma seminola* Neill, 1964.
Type: Holotype, not designated (A.M.F.J. Palisot de Beauvois, spring–summer, 1796), lost *fide* Gillispie (1992: 40).
Type locality: "Amérique septentrionale" [= North America]. Restricted to lower Cooper River, in the vicinity of Charleston, South Carolina *fide* Harper (1940: 714) and Neill (1964: 261).
Distribution: Coastal plain of SE USA (cen. and S Alabama, N and cen. Florida, S Georgia, SE Louisiana, S Maryland, S Mississippi, E North Carolina, E South Carolina, E Virginia), NSL–150 m.
Sources: Gordon, 1957, Neill, 1964, Gibbons et al., 1977, J.C. Mitchell, 1982b and R. Miller & Zyla, 1992.
Remarks: Palisot's entire American collection lost in shipwreck off Halifax, Nova Scotia in 1798 as he returned to Europe (Gillispie, 1992). Restriction of the type locality to Alachua County, Florida *fide* K.P. Schmidt (1953a: 185) rejected *fide* Neill (1957: 141 and 1964: 261).

FERANIA Gray, 1842d (Homalopsidae)

Synonyms: *Pythomorphus* Fitzinger, 1843, *Phytomorphus* Gray, 1849 *(nomen emendatum), Trigonurus* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Phytonomorphus* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum), Feranioides*

Carlleyle, 1869, *Feronia* – Phipson, 1888 *(nomen incorrectum), Feranoides* Boulenger, 1896a *(nomen emendatum),* and *Feraniodes* – Gyi, 1970 *(nomen incorrectum).*

Type species: *Homalopsis sieboldii* Schlegel, 1837.

Distribution: Rivers of South Asia.

Sources: Gyi, 1970 and A.B. Kumar et al., 2012.

Remarks: A valid genus *fide* A.B. Kumar et al. (2012: 483), previously a synonym of *Enhydris.*

1. *Ferania sieboldii* (Schlegel, 1837). Essai Phys. Serp. 1: 172, 2: 349–350, pl. 13, figs. 4–5. (*Homalopsis sieboldii*)

F

Synonym: *Feranioides jamnaeticus* Carlleyle, 1869.

Type: Holotype, RMNH 1168, a 760 mm specimen.

Type locality: "Bengale" [= Bangladesh and NE India (Assam, Manipur, Meghalaya, Mizoram, Nagaland, West Bengal)].

Distribution: Southern Asia. Northern India (Bihar, Karnataka, Madhya Pradesh, Maharashtra, Nagaland, Uttaranchal, Uttar Pradesh, West Bengal), Bangladesh, Nepal (Bardiya, Chitwan, Kanchanpur) and Myanmar (Bago), NSL–200 m.

Sources: Wall, 1898, 1908k, M.A.R. Khan, 1988, Hallermann et al., 2001, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, Thakur & Watve, 2008 and S.K. Sharma et al., 2013.

Remarks: Penang record doubtful *fide* Wall (1923c: 350 and 1924a: 867). Possibly occurs in Myanmar *fide* I. Das (2012: 150).

FICIMIA Gray, 1849a (Colubridae)

Synonyms: *Ficinia* – Gray, 1849a *(nomen incorrectum), Amblymetopon* A.C.L.G. Günther, 1858, *Amblymepon* – Marschall, 1873 *(nomen incorrectum), Ficinea* – Velasco, 1896 *(nomen incorrectum),* and *Ficinea* – Velasco, 1890a *(nomen incorrectum).*

Type species: *Ficimia olivacea* Gray, 1849a.

Distribution: South-central USA, Mexico and upper Central America.

Fossil record: Pleistocene of USA (New Mexico).

Sources: H.M. Smith & Taylor, 1941, L.M. Hardy, 1975b–c, 1990 and Mendoza-Quijano & Smith, 1993.

1. *Ficimia hardyi* Mendoza-Quijano & Smith, 1993. J. Herp. 27(4): 407–409, fig. 1.

Type: Holotype, MZFC 4877, a 358 mm male (F. Mendoza-Quijano, 13 Jan. 1985).

Type locality: "3.8 km NW Zoquizoquipán (10 km W Zacualtipán), municipality of Metztitlán, Hidalgo, Mexico, 1480 m."

Distribution: Central Mexico (Hidalgo, San Luis Potosí), 1200–2280 m.

Sources: Hernández-Ibarra et al., 1999 and Ramirez-Bautista et al., 1999.

2. *Ficimia olivacea* Gray, 1849a. Cat. Snakes Brit. Mus.: 80.

Synonym: *Ficimia elaiacroma* Jan, 1862b.

Types: Syntypes (2), BMNH 1946.1.5.44–45, a 451 and 361 mm male (H. Finck).

Type locality: "Mexico." Restricted to Orizaba, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950a: 350).

Distribution: East-central Mexico (Chiapas, Distrito Federal, Hidalgo, Morelos, Oaxaca, S Puebla, Querétaro, San Luis Potosí, S Tamaulipas and Veracruz), 100–2300 m.

Sources: L.M. Hardy, 1978, Casas-Andreu et al., 1996 and Castro-Franco & Bustos Zagal, 2004.

3. *Ficimia publia* Cope, 1866. Proc. Acad. Nat. Sci. Philadelphia 18(2): 126.

Synonyms: *Ficimia ornata* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Ficimia publia taylori* H.M. Smith, 1947, and *Ficimia publia wolffsohni* Neill, 1965.

Type: Lectotype, USNM 16428 (formerly SIM 625 or 726), a 233 mm male (A.C.V. Schott, 28 July 1865), designated by L.M. Hardy (1975b: 135).

Type locality: "Yucatan" [= Yucatán State, Mexico]. Restricted to Chichén Itzá, Yucatán, Mexico *fide* H.M. Smith & Taylor (1950a: 352).

Distribution: Mesoamerica. Southeastern Mexico (Campeche, Chiapas, Guerrero, Hidalgo, Jalisco, Morelos, Oaxaca, Puebla, Quintana Roo, Tabasco, Veracruz, Yucatán), Belize (Cayo, Corozal, Orange Walk), Guatemala (Escuintla, Petén) and NW Honduras (Atlántida, Cortés, Yoro), NSL–1620 m.

Sources: L.M. Hardy, 1980b, L.D. Wilson & Meyer, 1985, García & Valtierra-Azotla, 1996, Lee, 1996, J.A. Campbell, 1998b, Canseco-Márquez & Gutiérrez-Mayén, 2010 and McCranie, 2011a.

4. *Ficimia ramirezi* H.M. Smith & Langebartel, 1950. J. Washington Acad. Sci. (1949) 39(12): 411–412, fig. 1 (right).

Type: Holotype, UIMNH 3767, a 313–325 mm male (J. Ramirez, 6 March 1949).

Type locality: "1 league north of Niltepec, Oaxaca, Isthmus of Tehuantepec, México" [= 5 km N Santiago Niltepec, Oaxaca, S Mexico, ca. 16°36'N, 94°37'W, elevation 80 m].

Distribution: Southern Mexico (Oaxaca), 80 m. Known only from type locality.

Source: L.M. Hardy, 1979.

5. *Ficimia ruspator* H.M. Smith & Taylor, 1941. J. Washington Acad. Sci. 31(8): 364–365, figs. 5, 10, 12.

Type: Holotype, UIMNH 25064 (formerly EHT-X 1523 & EHT-HMS 23646), a 142–164 mm female (E.H. Taylor & H.M. Smith, 29 July 1940).
Type locality: "3 miles east of Tixtla (about 10 miles east of Chilpancingo), Guerrero," Mexico.
Distribution: Southern Mexico (cen. Guerrero). Known only from type locality.
Source: L.M. Hardy, 1980a.
Remarks: Possibly occurs in Morelos *fide* L.M. Hardy (1980a: 243.1).

6. *Ficimia streckeri* E.H. Taylor, 1931. Copeia 1931(1): 5–6.

Type: Holotype, KU 9140, a 285–298 mm female (E.H. Taylor, 13 July 1930).
Type locality: "three miles east of Rio Grande City, Texas." [= Starr County].
Distribution: Extreme S USA (S Texas) and NE Mexico (ext. NE Hidalgo, E Nuevo León, Puebla, E San Luis Potosí, Tamaulipas, Veracruz), NSL–1500 m.
Sources: Hardy, 1976a, Canseco-Marquez et al., 2000 and Werler & Dixon, 2000.
Remarks: Holotype erroneously listed as KU 4140 *fide* E.H. Taylor (1931: 5) and L.M. Hardy (1975b: 158 and 1990: 471.1).

7. *Ficimia variegata* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 7–8. (*Amblymetopon variegatum*)

Types: Syntypes (2), BMNH 1946.1.5.49, a 177 mm female (A. Sallé, 1846–1856), and BMNH 1946.1.6.78, a 385–394 mm female (H. Cuming, 1828–1830).
Type locality: "Mexico." Restricted to Guichicovi, Oaxaca, Mexico *fide* H.M. Smith & Taylor (1950a: 338).
Distribution: Southern Mexico (Hidalgo, NE Oaxaca, S Veracruz), 50–2140 m.
Sources: L.M. Hardy, 1975b, 1980c.

FIMBRIOS M.A. Smith, 1921a (Xenodermatidae)

Type species: *Fimbrios klossi* M.A. Smith, 1921a.
Distribution: Indochina.
Sources: M.A. Smith, 1921a, 1943, Campden-Main, 1970a, Ziegler et al., 2008, V.S. Nguyen et al., 2009, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Fimbrios klossi* M.A. Smith, 1921a. Proc. Zool. Soc. London 91(2): 425, pl. 1, fig. 1.

Types: Syntypes (3), BMNH 1946.1.15.87–88 (formerly MAS 2143 and MAS 2145), a 345 mm and 310 mm male, and BMNH 1965.1 (formerly MAS 2144), a 395 mm female (M.A. Smith & C. B. Kloss, March–May, 1917).
Type locality: "at Dalat and Camly at 1500 metres, on the Langbian Plateau, Southern Annam, (Indo-China)" [= Da Lat (11°56'N, 108°28'E, 1485 m) and Cam Ly (12°01'N, 108°30'E, 1500 m), Lam Dong Prov., S Vietnam]. Restricted to Da Lat, S Vietnam *fide* Orlov et al. (2003: 220).
Distribution: Indochina. Cambodia, Laos (Champasak) and S Vietnam (Da Lac, Gia Lai, Kon Tum, Lam Dong, Quang Tri, Thua Thien-Hue), 690–1800 m.
Sources: Orlov et al., 2003b and B.L. Stuart & Heatwole, 2008.

2. *Fimbrios smithi* Ziegler, David, Miralles, Kien & Truong, 2008. Zootaxa (1729): 39–41, figs. 2–8.

Type: Holotype, IEBR 3157, a 440 mm male (V.K. Doan & V.H. Nguyen, 15 May 2005).
Type locality: "Phong Nha–Ke Bang National Park, Quang Binh Prov., central Vietnam, in the Cha Noi region at an altitude of ca. 350 m above sea level."
Distribution: Central Vietnam (Quang Binh), 350 m. Known only from type locality.

†*FLORIDAOPHIS* Holman, 2000c (Colubridae)

Type species: †*Floridaophis auffenbergi* Holman, 2000c.
Distribution: Lower Oligocene of USA.
Source: Holman, 1999.

1. †*Floridaophis auffenbergi* Holman, 2000c. Acta Zool. Cracov. (1999) 42(3): 450–451, fig. 2.

Type: Holotype, UF 190884, one trunk vertebra (UF field crews, 1966–1967).
Type locality: "I-75 Local Fauna (Florida Natural History Museum Locality AL018), 1.5 km WSW Gainesville, on the W side of I-75, Micanopy Quadrangle, NE1/4, Sec. 4, T10S, R19E, Alachua County, Florida; Early Oligocene (Whitneyan)."
Distribution: Lower Oligocene (Whitneyan: 30.8–33.3 mya) of the USA (Florida). Known only from type locality.

FORDONIA Gray, 1842d (Homalopsidae)

Synonyms: *Hydropsis* Fitzinger, 1843, *Hemiodontus* A.-M.-C. Duméril, 1853 *(nomen substitutum)*, and *Ferdonia* – Phipson, 1888 *(nomen incorrectum)*.
Type species: *Homalopsis leucobalia* Schlegel, 1837.
Distribution: Tidal rivers, brackish estuaries and coastal marine waters of Indo-Australia.
Sources: Schlegel & Müller, 1844a, Kopstein, 1931, C. Haas, 1950, Bergman, 1960, Gyi, 1970, C.B. Frith & MacIver, 1978, Cogger et al., 1983a, F. Parker,

1982, Tweedie, 1983, Storr et al., 1986, S.K. Wilson & Knowles, 1988, Gow, 1989, David & Vogel, 1996, O'Shea, 1996, M.J. Cox et al., 1998, Cogger, 2000, Voris et al., 2002, Whitaker & Captain, 2004, J.C. Murphy, 2007b, Alfaro et al., 2008, V.S. Nguyen et al., 2009, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Fordonia leucobalia* (Schlegel, 1837). Essai Phys. Serp. 1: 171, 2: 345–346, pl. 13, figs. 8–9. (*Homalopsis leucobalia*)

Synonyms: *Fordonia unicolor* Gray, 1849a, *Hemiodontus chalybaeus* Jan, 1863b, *Fordonia bicolor* Theobald, 1868a, *Fordonia papuensis* Macleay, 1877, and *Fordonia variabilis* Macleay, 1878b.
Type: Lectotype, RMNH 1161, a 690 mm female (H.C. Macklot & S. Müller, 1825–1832), designated by Iskandar & Colijn (2001: 92).
Type locality: "Timor, Indonesia" via lectotype selection.
Distribution: Indo-Australia. Eastern India (West Bengal, Andamans and Nicobars: Nicobar Is.), Bangladesh, S Myanmar (Yangon), ext. S Thailand (Phuket, Satun, Phuket Is.), Cambodia, ext. S Vietnam (Ca Mau, Soc Trang), West Malaysia (Penang), Singapore, East Malaysia (Sarawak), Philippines (Luzon, Mindanao), Indonesia (S Papua, Ambon, Java, Kalimantan, Seram, Sumatra, Timor, Weh, Yos Sudarso), Papua New Guinea (Central, Gulf, Western, Daru, Bobo, Bristow and Yule Is.) and N Australia (N Northern Territory, N Queensland, N Western Australia, Bentick, Elcho, Groote Eylandt, Marv, Melville, Milingimbi, Mornington and Yam Is.), NSL–195 m.
Remarks: J.C. Murphy erroneously listed the collector as unknown.

FURINA A.-M.-C. Duméril, 1853 (Elapidae)

Synonyms: *Brachysoma* Fitzinger, 1843 *(nomen praeoccupatum), Glyphodon* A.C.L.G. Günther, 1858, *Mainophis* Macleay, 1877, and *Lunelaps* Worrell, 1961.
Type species: *Calamaria diadema* Schlegel, 1837.
Distribution: Austro-Papua.
Sources: Storr, 1981a, Shine, 1981b, Cogger et al., 1983a, Shine, 1985a, S.K. Wilson & Knowles, 1988, Gow, 1989, Hoser, 1989, 2012e, Hutchinson, 1990, Greer, 1997, Cogger, 2000, Scanlon, 2003a, Scanlon & Lee, 2004, Sanders et al., 2008 and Zaher et al., 2009.

1. *Furina barnardi* (Kinghorn, 1939). Rec. Aust. Mus 20(4): 258–259, figs. 1–2. (*Glyphodon barnardi*)

Type: Holotype, CAS 77798, a 480 mm specimen (H.G. Barnard, 1936).
Type locality: "Fifteen miles south from Duaringa, Queensland" [Australia].
Distribution: Northeastern Australia (Queensland), 20–400 m.
Source: D. Ferguson et al., 2012.

2. *Furina diadema* (Schlegel, 1837). Essai Phys. Serp. 1: 131, 2: 32–33. (*Calamaria diadema*)

Synonyms: *Rabdion occipitale* Girard, 1858a, *Cacophis blackmanii* Krefft, 1869b, and *Denisonia bancrofti* De Vis, 1911.
Types: Syntypes (2), MNHN 3941, a 205 mm male, and MNHN 7668, a 260–320 mm male (J.R.C. Quoy & J.P. Gaimard [Coquille or Astrolabe Voy.], 1822–1829).
Type locality: "Nouvelle Hollande" [= Australia]. Restricted to Port Jackson, New South Wales, Australia *fide* Duméril, Bibron & Duméril (1854b: 1239).
Distribution: Eastern Australia (Australian Capital Territory, New South Wales, S Northern Territory, E Queensland, E South Australia, Bentick Is.), NSL–1115 m.

3. *Furina dunmalli* (Worrell, 1955). Proc. Roy. Zool. Soc. N.S.W. (1953–1954): 41–42, 3 figs., 1 pl. (*Glyphodon dunmalli*)

Type: Holotype, AMS 14809 (formerly JD), a 750 mm female (W. Dunmall, Jan. 1954).
Type locality: "Glenmorgan, Queenland" [Australia, 27°15'S, 149°41'E, elevation 290 m].
Distribution: Eastern Australia (SE Queensland), 90–290 m.
Remarks: Collector of type listed as Worrell *fide* Cogger (1979: 205).

4. *Furina ornata* (Gray, 1842c). Zool. Misc. 2(Apr.): 55. (*Elaps ornatus*)

Synonyms: *Brachysoma simile* Macleay, 1878b, *Denisonia bancrofti* De Vis, 1911, and *Pseudelaps christieanus* Fry, 1915.
Type: Holotype, BMNH 1946.1.21.76, a male (W. Buchanan, 1840–1842).
Type locality: "Australia, (Swan River?)."
Distribution: Australia (Northern Territory, Queensland, N South Australia, Western Australia, Barrow, Bathurst, Cotton, Groote Eylandt, Guluwuru, Horn, Koolan, Melville, North West, Prince of Wales, Thursday and Wessel Marchinbar Is.), NSL–1015 m.
Source: Worrell, 1945.

5. *Furina tristis* (A.C.L.G. Günther, 1858). Cat. Col. Snakes Brit.Mus.: 211. (*Glyphodon tristis*)

Synonyms: *Brachysoma triste* – A.C.L.G. Günther, 1863a, *Mainophis robusta* Macleay, 1877, *Denisonia fenestrata* De Vis, 1905, and *Furina somarei* Wells & Wellington, 1984.
Type: Holotype, BMNH 1946.1.18.99, an 813 mm male (J. MacGillivray, 1842–1850).
Type locality: "N.E. Coast of Australia."
Distribution: Southern Papua New Guinea (Central, Western, Daru Is.) and ext. N Australia (ext. NE Northern Territory, ext. N Queensland, Torres Strait and Lizard Is.), NSL–90 m.
Sources: Whitaker et al., 1982, F. Parker, 1982 and O'Shea, 1996.

G

†*GAIMANOPHIS* Albino, 1996a
(Boidae)

Type species: †*Gaimanophis tenuis* Albino, 1996a.
Distribution: Lower Miocene of Argentina.
Source: Albino, 1996a.

1. †*Gaimanophis tenuis* Albino, 1996a. Neues Jb. Geol. Paläont. Abh. 199(3): 421–424, fig. 2.

Type: Holotype, MACN-CH 1004-1, one middle trunk vertebra.
Type locality: "near Gaiman, southern cliff of the lower Chubut river valley, north-east Chubut Prov., Argentina; Trelew Member, Sarmiento Formation. Colhuehuapian land-mammal age (early Miocene)."
Distribution: Lower Miocene (Colhuehuapian: 17.5–21.0 mya) of Argentina.

†*GANSOPHIS* Head, 2005
(Colubridae)

Type species: †*Gansophis potwarensis* Head, 2005.
Distribution: Upper Miocene of Pakistan.
Source: Head, 2005.

1. †*Gansophis potwarensis* Head, 2005. Palaeont. Electron. 8(1): 14–15, fig. 7b.

Type: Holotype, H-GSP 49900, one trunk vertebra (E.H. Linday & W.R. Downs III).
Type locality: "Y-908 (6.78 Ma), Potwar Plateau of north-central Pakistan, Dhok Pathan Formation, Winnewala, Miocene."
Distribution: Middle Miocene (6.8 mya) of Pakistan. Known only from holotype.

GARTHIUS Malhotra & Thorpe, 2004c
(Viperidae)

Type species: *Trimeresurus chaseni* M.A. Smith, 1931b.
Distribution: East Malaysia.
Sources: Malhotra & Thorpe, 2004c, I. Das, 2010, 2012 and Malhotra et al., 2010.

1. *Garthius chaseni* (M.A. Smith, 1931b). Bull. Raffles Mus. (5): 29, pl. 2, fig. 1. (*Trimeresurus chaseni*)

Type: Holotype, BMNH 1946.1.18.84 (formerly BMNH 1929.12.22.115), a 645 mm male (F.N. Chasen & H.M. Pendlebury, April–May 1929).
Type locality: "Kiau, a Dusun village at the foot of the mountain, Mt. Kinabalu, British North Borneo, 3,000 ft. (The lower mountain zone)," [= Kampong Kiau, Mt. Kinabalu, N Sabah, NE East Malaysia, 6°02'N, 116°31'E, elevation 915 m].
Distribution: Northeastern East Malaysia (N Sabah), 915–1550 m. Known only from vicinity of type locality.

GEAGRAS Cope, 1875a
(Colubridae)

Synonym: *Sphenocalamus* J.G. Fischer, 1883.
Type species: *Geagras redimitus* Cope, 1875a.
Distribution: Southern Mexico.
Sources: Hartweg & Oliver, 1940, H.M. Smith, 1943a, L.D. Wilson, 1987d and Casas-Andreu et al., 1996.

1. *Geagras redimitus* Cope, 1875a. J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 141–142.

Synonyms: *Sphenocalamus lineolatus* J.G. Fischer, 1883, and *Tantilla depressa* Dunn, 1928a.
Type: Holotype, USNM 30115 (formerly SIM 8), a 162–166 mm male (A.-L.-J.-F. Sumichrast, 1855–1869).
Type locality: "west side of the State of Tehuantepec, Mexico" [= Pacific versant of Isthmus of Tehuantepec, Oaxaca State, Mexico].
Distribution: Southern Mexico (SE Oaxaca), 100–1000 m.

GEOPHIS Wagler, 1830
(*nomen substitutum*) (Dipsadidae)

Synonyms: *Catostoma* Wagler, 1830 *(nomen oblitum), Rabdosoma* A.-M.-C. Duméril, 1853, *Rhabdosoma* Lichtenstein & Martens, 1856 *(nomen praeoccupatum), Colobognathus* W.C.H. Peters, 1859b, *Geophidium* W.C.H. Peters, 1861e, *Colophrys* Cope, 1868c, *Parageophis* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mosquard, 1870–1909, *Catastoma* – Hoffmann, 1890 *(nomen incorrectum), Dirosema* Boulenger, 1894a, *Seophis* – Tornier, 1904 *(nomen incorrectum), Colophris* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Geophidrium* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Catostoma chalybeum* Wagler, 1830.

Distribution: Latin America.

Sources: H.M. Smith, 1941c, H.M. Smith & Taylor, 1945, Downs, 1967, Cadle, 1984b, Villa et al., 1988, Lips & Savage, 1994, L.D. Wilson et al., 1998, Townsend, 2006a, 2009, L.D. Wilson & Townsend, 2007, Savage & Watling, 2008, Zaher et al., 2009 and Pavón-Vázquez et al., 2011.

Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Geophis* Wagler is designated a *nomen protectum* and *Catostoma* Wagler a *nomen oblitum*.

1. *Geophis anocularis* Dunn, 1920b. Proc. Biol. Soc. Washington 33: 127.

G

Type: Holotype, USNM 46556, a 287 mm male (E.W. Nelson & E.A. Goldman, 26 July 1894).

Type locality: "Totontepec, Oaxaca, Mexico" [= Totontopec Villa de Morelos, Oaxaca State, S Mexico, 17°15'N, 96°02'W, elevation 1850 m].

Distribution: Southern Mexico (Oaxaca), 1850 m. Known only from the vicinity of type locality.

Sources: J.A. Campbell et al., 1983 and Casas-Andreu et al., 1996.

Remarks: Resurrected from synonymy of *G. dubius fide* J.A. Campbell et al., 1983.

2. *Geophis bellus* C.W. Myers, 2003. Amer. Mus. Novit. (3391): 30–33, figs. 11–14, 15c.

Type: Holotype, KU 110703, a 201 mm male (C.W. Myers, 13 Dec. 1964).

Type locality: "at 700 m above sea level near community of Altos de Pacora (east of Cerro Jefe), Prov. of Panamá, central Panama. The type locality is a few km northeastward of the summit of Cerro Jefe, upper Rio Pacora drainage, at roughly 9°15'N, 79°22'W."

Distribution: Eastern Panama (Darién), 700 m.

Source: Savage & Watling, 2008.

3. *Geophis betaniensis* Restrepo & Wright, 1987. J. Herp. 21(3): 191–193, figs. 1–3.

Type: Holotype, UV 7360, a 296 mm female (J.H. Restrepo, 18 Feb. 1984).

Type locality: "Eastern slope of the Cordillera Occidental, at Corregimiento de Betania, 76°21'W and 4°23'N, 1680 m elev., Municipio de Bolivar, Departamento del Valle, Colombia."

Distribution: Western Colombia (Valle), 1680 m. Known only from type locality.

Sources: Pérez-Santos & Moreno, 1989, Lips & Savage, 1994, C.W. Myers, 2003 and Savage & Watling, 2008.

4. *Geophis bicolor* A.C.L.G. Günther, 1868. Ann. Mag. Nat. Hist. (4) 1(6): 416.

Type: Lectotype, BMNH 1946.1.1.64, a 372 mm male (H. Doorman), designated by Downs (1967: 55).

Type locality: "neighbourhood of Mexico City, Mexico" via lectotype selection.

Distribution: Mexico (Distrito Federal, W Jalisco, México, Michoacán, Veracruz), 1800–2600 m.

Sources: Lara-Góngora & Flores-Villela, 1978, 1980 and H.M. Smith & Flores-Villela, 1993.

5. *Geophis blanchardi* E.H. Taylor & Smith, 1939. Univ. Kansas Sci. Bull. (1938) 25(13): 245–247, figs. 2a–d.

Type: Holotype, FMNH 100037 (formerly EHT-HMS 5194 & EHT-CC 2194), a 388 mm female (E.H. Taylor, 14 Aug. 1936).

Type locality: "about two miles southwest of Acultzingo, Veracruz, Mexico."

Distribution: Cloud forest of S Mexico (Oaxaca, SE Puebla, cen. Veracruz), 2240–2510 m.

Sources: Canseco-Márquez et al., 2004 and Canseco-Márquez & Austin, 2005.

6. *Geophis brachycephalus* (Cope, 1871b). Proc. Acad. Nat. Sci. Philadelphia 23(2): 211–212. (*Colobognathus brachycephalus*)

Synonyms: *Colobognathus dolichocephalus* Cope, 1871b, *Geophis moestus* A.C.L.G. Günther, 1872b, *Geophis chalybaea quadrangularis* A.C.L.G. Günther, 1893 *in* 1885–1902, and *Geophis bakeri* E.H. Taylor, 1954

Type: Holotype, ANSP 3337, a 305–355 mm male (C.H. Van Patten, 1865–1871).

Type locality: "near San José, Costa Rica" [= near San José, San José Prov., Costa Rica, 9°56'N, 84°05'W, elevation 1160 m].

Distribution: Costa Rica (Alajuela, Cartago, Heredia, Limón, Puntarenas, San José) and W Panama (Bocas del Toro, Chiriquí), 15–2115 m.

Sources: E.H. Taylor, 1951, 1954, Pérez-Santos & Moreno, 1988, Sasa, 1993, Savage, 2002, C.W. Myers, 2003 and Savage & Watling, 2008.

Remarks: South American records of this species are tentatively assigned to *G. nigroalbus fide* C.W. Myers (2003: 38).

7. *Geophis cancellatus* H.M. Smith, 1941c. Smithson. Misc. Coll. 99(19): 1–2.

Type: Holotype, USNM 46440, a 410 mm female (E.W. Nelson & E.A. Goldman, Feb. 1896).

Type locality: "Chicharras, Chiapas, México, ca. 1035 m elevation."

Distribution: Southeastern Mexico (Chiapas), 1035–1230 m.

Sources: Hartweg, 1959 and Landy et al., 1966.

8. *Geophis carinosus* L.C. Stuart, 1941b. Occ. Pap. Mus. Zool., Univ. Michigan (452): 3–4.

Type: Holotype, UMMZ 89082, a 240 mm male (L.C. Stuart, 2 Aug. 1940).
Type locality: "Finca San Francisco, 27 km. northeast of Nebaj, El Quiché, Guatemala. Altitude, about 1175 m."
Distribution: Southeastern Mexico (Chiapas, Oaxaca, S Veracruz) and W Guatemala (Sierra de los Cuchumatanes of El Quiché and Huehuetenango), 800–1500 m.
Sources: Pérez-Higareda & Smith, 1991, Casas-Andreu et al., 1996, Lee, 1996 and Nieto-Montes de Oca, 2003.

9. *Geophis chalybeus* (Wagler, 1830). Natur. Syst. Amph.: 194. (*Catostoma chalybeum*)

Synonym: *Rhabdosoma guttulatum* Cope, 1885b.
Type: Holotype, ? ZSM 1940/0 (H.M. von Leuchtenberg), lost *fide* Franzen & Glaw (2007: 249), or ? MSNM, destroyed in 1943 during the World War II.
Type locality: "Mexico."
Distribution: Eastern Mexico (cen. Veracruz), 1150–1800 m.
Sources: Pérez-Higareda & Smith, 1991 and Torre-Loranca et al., 2000.
Remarks: Holotype possibly extant *fide* Downs (1967: 37).

10. *Geophis championi* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 321–322, pl. 16, fig. 3.

Type: Holotype, BMNH 1946.1.1.77, a 250 mm male (G.C. Champion & F.D. Godman, 1879–1883).
Type locality: "Chiriqui, Panama" [= Chiriqui Prov., W Panama].
Distribution: Werstern Panama (Chiriquí), 1370 m.
Sources: Dunn, 1942 and C.W. Myers, 2003.

11. *Geophis damiani* L.D. Wilson, McCranie & Williams, 1998. Proc. Biol. Soc. Washington 111(2): 410–413, figs. 1–2.

Type: Holotype, USNM 498356, a 327 mm male (D. Almendarez, J.R. McCranie, L.D. Wilson & K.L. Williams, 26 July 1995).
Type locality: "2.5 airline km NNE La Fortuna (15°26'N, 87°18'W), 1750 m elev., Departmento de Yoro, Honduras."
Distribution: Honduras (Yoro), 1550–1750 m.
Sources: McCranie & Castañeda, 2004a, Townsend, 2009 and McCranie, 2011a.

12. *Geophis downsi* Savage, 1981. Copeia 1981(3): 549–551, fig. 1.

Type: Holotype, LACM 130254, an adult male (N.J. Scott & OTS field crew, 14–16 July 1972).
Type locality: "Costa Rica: Provincia de Puntarenas; Canton Corredores; Las Cruces Field Station and Botanical Garden, 4 km S San Vito de Jaba, 1,200 m."
Distribution: Southwestern Costa Rica (Cordillera Costeña of SE Puntarenas), 1100–1200 m.
Sources: Savage, 1981, 2002 and Solórzano, 2004.

13. *Geophis dubius* (W.C.H. Peters, 1861e). Mber. Königl. Akad. Wiss. Berlin 1861(10): 923–924. (*Geophidium dubium*)

Synonym: *Geophis fuscus* J.G. Fischer, 1886.
Type: Holotype, ZMB 4064, a 260 mm female.
Type locality: Unknown.
Distribution: Southern Mexico (cen. and S Oaxaca, Puebla, cen. Veracruz), 1255–2800 m.
Sources: Bogert & Porter, 1966b, J.A. Campbell et al., 1983, Pérez-Higareda & H.M. Smith, 1988, 1991, H.M. Smith & Pérez-Higareda, 1991, Casas-Andreu et al., 1996 and Nieto-Montes de Oca, 2003.

14. *Geophis duellmani* H.M. Smith & Holland, 1969. Trans. Kansas Acad. Sci. 72(1): 47–49, figs. 1, 2a, 3b.

Type: Holotype, KU 87447, adult female (R.L. Holland, 19 June 1964).
Type locality: "2 mi. S Vista Hermosa, 1750 m., Oaxaca, Mexico."
Distribution: Southern Mexico (N Oaxaca), 1570–1830 m.
Sources: J.A. Campbell et al., 1983 and H.M. Smith & Flores-Villela, 1993.

15. *Geophis dugesii* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909. Miss. Sci. Mex. Amér. Cen., Rept. 3(9): 573–574, pl. 37, figs. 1, 1a–e.

Synonym: *Geophis aquilonaris* Legler, 1959c.
Type: Holotype, MNHN 1883.278, a 220 mm male (O. Navarro via A.A.D. Dugès).
Type locality: "Tangancicuaro (Mexique)" [= Tangancicuaro de Arista, Michoacán State, SW Mexico, 19°54'N, 102°08'W, elevation 1700 m].
Distribution: Western Mexico (Aguascalientes, SW Chihuahua, Durango, Guanajuato, Jalisco, Michoacán, E Sinaloa, Sonora, Zacatecas), 1400–2500 m.
Sources: Dugès, 1884, H.M. Smith, 1939, Hartweg, 1959, Legler, 1959c, Webb, 1977, W.W. Tanner, 1985, Rodriguez-Torres & Vázquez-Díaz, 1990, Vázquez-Díaz & Quintero-Díaz, 1999, Enderson & Bezy, 2007, Recchio et al., 2007, Arenas-Monroy et al., 2012, García-Balderas & Quintero-Díaz, 2012 and R.A. Villa et al., 2012b.

16. *Geophis dunni* K.P. Schmidt, 1932b. Copeia 1932(1): 8.

Type: Holotype, MCZ 31870, a 310–367 mm female (W.B. Richardson, 1891–1927).
Type locality: "Matagalpa, Nicaragua" [= Matagalpa, Matagalpa Dept., cen. Nicaragua, 12°55'N, 85°55'W, elevation 735 m].
Distribution: Central Nicaragua (Matagalpa), 735 m. Known only from type locality.
Sources: G. Köhler, 1999b, Townsend, 2006, 2009 and Savage & Watling, 2008.
Remarks: Holotype removed from the stomach of a *Micrurus nigrocinctus.*

G

17. *Geophis fulvoguttatus* Mertens, 1952b. Zool. Anz. 149(5–6): 134–135.

Type: Holotype, SMF 43248, a 150 mm specimen (A. Zilch, 26–27 Aug. 1951).
Type locality: "Hacienda Monte Cristo, 2200 m. H., Gebirge von Metapan, Dept. Santa Ana, El Salvador."
Distribution: Western El Salvador (Santa Ana) and SW Honduras (Copán, Ocotepeque), 1680–2200 m.
Sources: Mertens, 1952c, J.A. Campbell et al., 1983, McCranie & Wilson, 1991, G. Köhler, 1996b, G. Köhler et al., 2005, Townsend & Wilson, 2006b, Townsend, 2009 and McCranie, 2011a.
Remarks: Probably occurs in highlands of S Guatemala *fide* Townsend and Wilson (2006b: 158).

18. *Geophis godmani* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 322, pl. 16, fig. 4.

Type: Lectotype, BMNH 1946.1.6.41, a 400–401 mm female (O. Salvin & F.D. Godman, 1861–1875), designated by Downs (1967: 72).
Type locality: "Irazu, Costa Rica" [= Volcan Irazú, Cartago Prov., Costa Rica, 9°59'N, 83°51'W] via lectotype selection.
Distribution: Central Costa Rica (Alajuela, SE Cartago, Puntarenas, San José) and W Panama (Chiriquí, Panamá), NSL–2200 m.
Sources: E.H. Taylor, 1951, 1954, Savage, 1981, 2002, Lips & Savage, 1994, C.W. Myers, 2003 and Solórzano, 2004.

19. *Geophis hoffmanni* (W.C.H. Peters, 1859b). Mber. Königl. Akad. Wiss. Berlin 1859(3): 276, pl., figs. 2, 2a–c. (*Colobognathus hoffmanni*)

Synonyms: *Geophis acutirostris* E.H. Taylor, 1954, and *Geophis bartholomewi* Brattstrom & Howell, 1954.
Type: Lectotype, ZMB 1870, a 254 mm female (K. Hoffmann, 1853–1859), designated by Downs (1967: 156).
Type locality: "Costa Rica" via lectotype selection.
Distribution: Lower Central America and Colombia. Eastern Honduras (Colón, El Paraíso, Gracias a Dios, Olancho), Nicaragua (Nueva Segovia, Matagalpa, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Chiriquí, Canal Zone, Cocle) and N Colombia, 20–1670 m.
Sources: E.H. Taylor, 1951, 1954, H.M. Smith & Smith, 1964, L.D. Wilson & Meyer, 1985, G. Köhler, 1999b, Savage, 2002, C.W. Myers, 2003, Solórzano, 2004, Townsend, 2006, 2009, Savage & Watling, 2008 and McCranie, 2011a.
Remarks: Lectotype listed as ZMB 4003 *fide* Savage & Watling (2008: 588).

20. *Geophis immaculatus* Downs, 1967. Misc. Publ. Mus. Zool., Univ. Michigan (131): 90–91.

Type: Holotype, UMMZ 107297, a 305 mm female (L.C. Stuart, 18 April 1949).
Type locality: "Guatemala, Quetzaltenango, Finca Lorena, Pacific versant of Guatemala; about 1700 meters above sea level."
Distribution: Southern Mexico (Chiapas) and SW Guatemala (Quetzaltenango), 1700 m.
Source: Espinosa et al., 1999.

21. *Geophis incomptus* Duellman, 1959. Occ. Pap. Mus. Zool., Univ. Michigan (605): 3–5, fig. 2, pl. 1 (lower, a paratype).

Type: Holotype, UMMZ 118840 (formerly WED 12437), a 275 mm male (W.E. Duellman & J. Wellman, 18 June 1958).
Type locality: "Dos Aguas, Michoacán, México (2100 meters)."
Distribution: Southwestern Mexico (Sierra de Coalcomán of Michoacán), 2100 m. Known only from type locality.
Sources: Bogert & Porter, 1966a and J.A. Campbell & Murphy, 1977a.

22. *Geophis isthmicus* (Boulenger, 1894a). Cat. Snakes Brit. Mus. 2: 307–308. (*Atractus isthmicus*) (*nomen substitutum*)

Synonym: *Rhabdosoma zebrinum* Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909 *(nomen praeoccupatum).*
Type: Holotype, MNHN 1984, a 155 mm female.
Type locality: "Tehuantepec" [= Tehuantepec, Oaxaca, Mexico].
Distribution: Southern Mexico (Oaxaca). Known only from the holotype.
Sources: Bocourt, 1883 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, Dunn, 1928 and Casas-Andreu et al., 1996.

23. *Geophis juarezi* Nieto-Montes de Oca, 2003. Herpetologica 59(4): 574–578, figs. 1a–c.

Type: Holotype, MZFC 2236, a 275+ mm female (P. García & natives, April 1986)
Type locality: "vicinity of Metates, municipality of Santiago Comaltepec, Sierra de Juárez, Oaxaca, Mexico, 17°39' 03"N, 96°21' 26"W, 900 m elevation."
Distribution: Southern Mexico (N Oaxaca), 800–1200 m. Known only from vicinity of the type locality.

24. *Geophis juliai* Pérez-Higareda, Smith & López-Luna, 2001. Bull. Maryland Herp. Soc. 37(2): 42–44, fig. 1.

Type: Holotype, UNAM-LT 2775, a 314 mm male (native, 10 Aug. 1984).
Type locality: "Estación de Biología Tropical Los Tuxtlas (EBTLT), 150m, southern Veracruz, Mexico."
Distribution: Eastern Mexico (S Veracruz), 150–600 m.

25. *Geophis laticinctus* H.M. Smith & Williams, 1963. Herpetologica 19(1): 24–27, fig. 1.

Synonym: *Geophis laticinctus albiventris* H.M. Smith & Holland, 1969.
Type: Holotype, UIMNH 51352, a 384 mm female (T. MacDougall, 23 Dec. 1961).
Type locality: "±1800 m., near Colonia Francisco I. Madero, municipality of Jitotol, Chiapas, México" [= vicinity of Francisco I. Madero (16°48'N, 93°46'W), W Chiapas State, SE Mexico, elevation ca. 1800 m].
Distribution: Southeastern Mexico (W Chiapas, Oaxaca), 600–2000 m.
Sources: J.D. Johnson, 1976, 1979.
Remarks: Type locality elevation probably in error as the highest mountains within 10 km are 1100 m.

26. *Geophis laticollaris* H.M. Smith, Lynch & Altig, 1965. Nat. Hist. Misc., Acad. Chicago Nat. Sci. (180): 2–4, figs. 1–2.

Type: Holotype, UIMNH 57170, a 139 mm female (R. Altig, 29 June 1964).
Type locality: "3 miles south of Putla, Oaxaca, Mexico" [= ca. 16°59'N, 97°56'W, elevation 750 m].
Distribution: Southern Mexico (Oaxaca), 750 m. Known only from type locality.
Sources: H.M. Smith & Chiszar, 1992a and Pavón-Vázquez et al., 2011.
Remarks: Previously a synonym of *G. sallei*. Possible relationship to *G. russatus*.

27. *Geophis latifrontalis* S.W. Garman, 1884. Mem. Mus. Comp. Zool. (1883) 8(3): 103.

Synonym: *Geophis semiannulatus* H.M. Smith, 1941g.
Type: Holotype, MCZ 4538, a 387 mm female (E. Palmer, Aug. 1879).
Type locality: "mts. of Alvarez, fifty miles south of San Luis Potosi, Mexico."
Distribution: Central Mexico (SE Hidalgo, Querétaro, S San Luis Potosí, SW Tamaulipas), 800–2600 m.
Sources: H.M. Smith, 1941 and Dixon & Thomas, 1974.

28. *Geophis maculiferus* E.H. Taylor, 1942a. Univ. Kansas Sci. Bull. (1941) 27(7): 119–121, fig. 1.

Type: Holotype, UIMNH 25078 (formerly EHT-HMS 23552 & EHT-CC X-1648), a 152 mm male (E.H. Taylor, 14 Aug. 1940).
Type locality: "on the `Huetamo' road, about a kilometer north of the village of Cício, Michoacán, 17 Km. south of the Mexico-Guadalajara highway, Mexico" [= 1 km N Tzitzio, Michoacán, Mexico, 19°36'N, 100°55'W, elevation 1630 m *fide* Duellman, 1961: 97].
Distribution: Southwestern Mexico (NE Michoacán), 1630 m. Known only from type locality.
Sources: E.H. Taylor, 1941, Duellman, 1961 and Bogert & Porter, 1966a.
Remarks: Duellman (1961: 97) erroneously listed the type as female.

29. *Geophis mutitorques* (Cope, 1885b). Proc. Amer. Philos. Soc. 22: 384. (*Rhabdosoma mutitorques*)

Synonym: *Rhabdosoma longiceps* Cope *in* Ferrari-Pérez, 1886.
Type: Lectotype, ANSP 14762, a 337 mm female (S. Bernad, 1885), designated by Downs (1967: 105).
Type locality: "Zacualtipan, Mexico" [Hidalgo State, elevation 1975 m] via lectotype selection. Emended to highlands [= 2000–2200 m] above Zacualtipan, Mexico *fide* Malnate (1971: 369).
Distribution: Mexico (Hidalgo, Puebla, Querétaro, San Luis Potosí, Veracruz), usually 1500–2525 m.
Sources: H.M. Smith, 1941 and Bogert & Porter, 1966.

30. *Geophis nasalis* (Cope, 1868c). Proc. Acad. Nat. Sci. Philadelphia 20(2): 131, 3 figs. (*Catostoma nasale*)

Type: Lectotype, ANSP 3320, a 293 mm female (C.H. Van Patten, 1865–1868), designated by Downs (1967: 160).
Type locality: "near the city of Guatemala" [= near Guatemala city (14°38'N, 90°32'W, elevation 1520 m), Guatemala Dept., S Guatemala].
Distribution: Southeastern Mexico (SE Chiapas) and S Guatemala (Chimaltenango, Guatemala, Sacatepéquez, San Marcos, Santa Rosa, Sololá, Suchitepéquez), 600–1830 m.

31. *Geophis nephodrymus* Townsend & Wilson, 2006a. Proc. Biol. Soc. Washington 119: 151–155, figs. 1–2.

Type: Holotype, UF 142577, a 253 mm female (S.M. Hughes & J.H. Townsend, 11 July 2004).
Type locality: "Sendero Las Minas" (15°29.525'N, 88°12.705'W), 1570 m elevation, Parque Nacional El Cusuco, Sierra de Omoa, Departamento de Cortés, Honduras."
Distribution: Honduras (Sierra de Omoa in Cortés), 1540–1780 m.
Sources: Townsend 2006a, 2009, Townsend et al., 2006 and McCranie, 2011a.

32. *Geophis nigroalbus* Boulenger, 1908j. Ann. Mag. Nat. Hist. (8) 2(12): 522. (*nomen corrigendum*)

Synonyms: *Geophis nigro-albus* Boulenger, 1908j *(nomen incorrigendum), Catastoma nigroalbum* – Amaral, 1930f *(nomen corrigendum),* and *Geophis negroalbus* – C.W. Myers, 2003 *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.6.50 (formerly BMNH 1909.4.30.71), a 134–135 mm male (N.G. Palmer).
Type locality: "Pavas" [= La Cumbre, Valle del Cauca Dept., Colombia, 3°41'N, 76°35'W, elevation 1400 m].
Distribution: Panama (Panamá) and Colombia (Antioquia, Santander, Valle del Cauca), 1350–1680 m.
Sources: Restrepo & Wright, 1987, Pérez-Santos & Moreno, 1989, Lips & Savage, 1994, Ibánez D., et al., 2001, C.W. Myers, 2003 and Savage & Watling, 2008.
Remarks: Photographs of the holotype are in C.W. Myers (2003: figs. 15a, 16).

33. *Geophis nigrocinctus* Duellman, 1959. Occ. Pap. Mus. Zool., Univ. Michigan (605): 1–3, fig. 1, pl. 1 (upper).

Type: Holotype, UMMZ 118841 (formerly WED 12433), a 368 mm male (J. Wellman, 18 June 1958).
Type locality: "Dos Aguas, Michoacán, México (2100 meters)" [= Dos Aguas, SW Michoacán State, SW Mexico, 18°48'N, 102°56'W, elevation 2215 m].
Distribution: Southwestern Mexico (Jalisco, SW Michoacán), 1900–2100 m.
Sources: J.A. Campbell & Murphy, 1977a and Flores-Villela et al., 1995.

34. *Geophis occabus* Pavón-Vázquez, García-Vázquez, Blancas-Hernández & Nieto-Montes de Oca, 2011. Herpetologica 67(3): 334–339, fig. 1.

Type: Holotype, MZFC 25530, a 178 mm female (J.C. Blancas-Hernández, summer, 2006).
Type locality: "El Molote, municipality of Atoyac de Álvarez, Guerrero, Mexico (17º25'14.4"N, 100º10'15.7"W, datum = WGS84), elevation 1787 m."
Distribution: Southwestern Mexico (Sierra Madre del Sur of S Guerrero), 1785–2015 m.

35. *Geophis omiltemanus* A.C.L.G. Günther, 1893 *in* 1885–1902. Biol. Cen.-Amer., Rept. Batr.: 92, pl. 33, fig. a. (*Geophis omiltemana*)

Type: Lectotype, BMNH 1946.1.6.37, a 292 mm male (H.H. Smith, 1887–1889), designated by Downs (1967: 124).
Type locality: "Omilteme, Guerrero, Mexico" [= Omilteme, cen. Guerreo, SW Mexico, 17°33'N, 99°41'W, elevation 2440 m] via lectotype selection.
Distribution: Southwestern Mexico (Guerrero, W Oaxaca), 2440 m.
Sources: L.M. Hardy 1976 and J.A. Campbell, 1988.

36. *Geophis petersii* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 321, pl. 16, fig. 2.

Type: Lectotype, BMNH 1946.1.6.31, a 200–208 mm male (H. Doorman), designated by Downs (1967: 166).
Type locality: "City of Mexico" [= Mexico city, Distrito Federal, cen. Mexico, 19°26'N, 99°08'W, elevation 2245 m] via lectotype selection. Restricted to Pátzcuaro, Michoacán, Mexico *fide* H.M. Smith & Taylor (1950a: 335) but rejected *fide* Downs (1967: 168).
Distribution: Southern Mexico (Distrito Federal, N Michoacán), 1800–2500 m.
Sources: Hartweg, 1959 and Duellman, 1961.
Remarks: Type locality dubious *fide* Duellman (1961: 98) and Downs (1967: 166).

37. *Geophis pyburni* J.A. Campbell & Murphy, 1977a. J. Herp. 11(4): 397–399, figs. 1–2.

Type: Holotype, UTA 4404, a 299 mm female (J.A. Campbell, 8 July 1974).
Type locality: "Rancho La Pastilla, ca. 2.5 airline kms. W. Dos Aguas, Sierra de Coalcomán, Michoacán, Mexico, 2164 m" [= 18°49'N, 102°58'W].
Distribution: Southwestern Mexico (SW Michoacán), 2000–2180 m. Known only from type locality.

38. *Geophis rhodogaster* (Cope, 1868c). Proc. Acad. Nat. Sci. Philadelphia 20(2): 130–131, 2 figs. (*Colophrys rhodogaster*)

Type: Lectotype, ANSP 3317, a 305 mm female (C.H. Van Patten, 1865–1868), designated by Downs (1967: 93).
Type locality: "the elevated country in the neighborhood of the city of Guatemala" [= highlands near Guatemala city (14°38'N, 90°32'W, elevation 1520 m), Guatemala Dept., S Guatemala] via lectotype selection.
Distribution: Upper Central America. Southeastern Mexico (SW Chiapas), S Guatemala (Baja Verapaz, Chimaltenango), Guatemala (San Marcos, Sololá), W El Salvador (Chalatenango, Santa Ana) and Honduras (Ocotepeque), 1500–2745 m.
Sources: E.N. Smith, 1995, Nieto Montes de Oca, 2003, G. Köhler et al., 2005, Townsend, 2006, 2009, McCranie & Castañeda, 2007 and McCranie, 2011a.

39. *Geophis rostralis* (Jan, 1865 *in* Jan & Sordelli, 1860–1866). Icon. Gén. Ophid. 1(12): 8, pl. 2, figs. 2, a–b, f–g, n–p, r, v. (*Elapoides rostralis*)

Type: Holotype, ZMB 6407.
Type locality: "Mexique" [= Mexico].
Distribution: Southern Mexico (Sierra Madre del Sur of Oaxaca), 1680 m.
Sources: H.M. Smith, 1959, Bogert & Porter, 1966, Downs, 1967 and J.A. Campbell et al., 1983.
Remarks: Holotype listed as MNHN *fide* original description (p. 8). Possibly a synonym of *G. dubius fide* H.M. Smith et al. (1959: 267). See remarks in L.D. Wilson & Townsend (2007: 17).

40. *Geophis russatus* H.M. Smith & Williams, 1966a. J. Ohio Herp. Soc. 5(3): 90–91, fig. 1. (*Geophis sallaei russatus*)

Type: Holotype, UIMNH 61409, a 323 mm male (T. MacDougall, 25 May 1965).
Type locality: "La Concepción, near Putla, Oaxaca, México."
Distribution: Southern Mexico (Oaxaca), 1000 m. Known only from type locality.
Sources: Casas-Andreu et al., 1996 and Pavón-Vázquez et al., 2011.

41. *Geophis ruthveni* F. Werner, 1925. Sitz. Akad. Wiss. Wien Math.-Natur. Kl. Abt. I, 134(1–2): 60.

Type: Holotype, NMW 16508, a 245 mm male (native, 1899).
Type locality: "Sarapigui, Brasilien" [= Sarapigui, Brazil] (in error). Corrected to Sarapiqui, Costa Rica [= Puerto Viejo de Sarapiqui, Heredia Prov., N Costa Rica, 10°27'N, 84°00'W, elevation 40 m] *fide* Dunn *in* Savage (1960f: 31) and Downs (1967: 75).
Distribution: Northwestern Costa Rica (Alajuela, Guanacaste, Heredia, Limón), 100–1600 m.
Sources: Savage, 1981, 2002 and Solórzano, 2004.

42. *Geophis sallaei* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 318, pl. 16, fig. 1.

Type: Lectotype, BMNH 1946.1.6.27, a 232 mm female (A. Sallé, 1846–1856), designated by Downs (1967: 168).
Type locality: "Mexico." Restricted to Pluma Hidalgo, Oaxaca, Mexico [= Pluma Hidalgo, S Oaxaca State, S Mexico, 15°56'N, 96°25'W, elevation 1240 m] *fide* H.M. Smith & Taylor (1950a: 338).
Distribution: Southern Mexico (Sierra Madre del Sur of Oaxaca), 1000–2000 m.
Sources: Hartweg, 1959, H.M. Smith & Chiszar, 1992a, Casas-Andreu et al., 1996 and Pavón-Vázquez et al., 2011.

43. *Geophis semidoliatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 93–95. (*Rabdosoma semidoliatum*) (*nomen corrigendum*)

Synonyms: *Rabdosoma semi-doliatum* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Catastoma semidoliatum* – Cope, 1860b *(nomen corrigendum),* and *Geophis semidoliata* – A.C.L.G. Günther, 1893 *in* 1885–1902.
Type: Lectotype, MNHN 4522, a 310 mm female (Parduracki), designated by Downs (1967: 133).
Type locality: "Mexique" [= Mexico]. Restricted to Córdoba, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950a: 347).
Distribution: Eastern Mexico (Hidalgo, E Puebla, cen. and S Veracruz), 500–1400 m.
Sources: Hartweg, 1959, Pérez-Higareda & Smith, 1991, Canseco-Marquez et al., 2000, Pérez-Higareda et al., 2001 and Ramírez-Bautista et al., 2010.

44. *Geophis sieboldi* (Jan, 1862b). Arch. Zool. Anat. Fis. 2(1): 21–22, pl. 17. (*Elapoides sieboldi*)

Types: Syntypes (4), MSNM (2), a 345 mm female and 155 mm male, NMW, a 360 mm male, and MM, a 340 mm female, probably all destroyed in 1943 during World War II.
Type locality: "Messico" [= Mexico] and "Guadalupa" [= ? Guadalupe, Oaxaca, Mexico].
Distribution: Southwestern Mexico (México, S Michoacán).
Sources: Lara-Góngora & Flores-Villela, 1980 and Savage and Watling, 2008.
Remarks: Distribution uncertain *fide* Downs (1967: 171). Guerrero record in error *fide* Pavón-Vázquez et al. (2011: 339).

45. *Geophis talamancae* Lips & Savage, 1994. Proc. Biol. Soc. Washington 107(2): 410–413, fig. 1.

Type: Holotype, LACM 147196 (formerly CRE 5343), a 212–218 mm female (K.R. Lips, 1 Sept. 1992).
Type locality: "Costa Rica: Puntarenas Prov.: Cantón Coto Brus: Zona Protectora Las Tablas, Finca Jaguar, 1800 m elevation."
Distribution: Southwestern Costa Rica (Puntarenas) and W Panama (Chiriquí), 1200–1800 m.
Sources: Savage, 2002, C.W. Myers, 2003, Solórzano, 2004 and Savage and Watling, 2008.
Remarks: Holotype is a juvenile (not an adult) *fide* C.W. Myers (2003: 35).

46. *Geophis tarascae* Hartweg, 1959. Occ. Pap. Mus. Zool., Univ. Michigan (601): 1–4, fig. 1, pl. 1.

Type: Holotype, UMMZ 99151, a 302 mm male (N. Hartweg, 18 July 1947).

Type locality: "at 5500 feet above sea level in the Parque Nacional on the outskirts of Uruapan, Michoacán" [Mexico].

Distribution: Southwestern Mexico (Cordillera Volcánica of Jalisco and Michoacán), 1400–1965 m.

Sources: Dixon, 1968 and Medica et al., 1975.

47. *Geophis tectus* Savage & Watling, 2008. Zool. J. Linn. Soc. 153: 585–586.

Type: Holotype, MCZ 19326, a 253 mm male (E.R. Dunn & C.B. Duryea, July–Aug. 1923).

Type locality: "La Loma (= Buena Vista), Distrito de Chiriquí Grande, Provincia de Bocas del Toro, Panama; c. 8°50'N, 82°13'W (300 m)."

Distribution: Panama (Bocas del Toro, Panamá), 40–1700 m.

48. *Geophis zeledoni* E.H. Taylor, 1954. Univ. Kansas Sci. Bull. 36(11): 693–695, figs. 4a–c.

Type: Holotype, KU 31992, a 397 mm female (E.H. Taylor, 24 July 1952).

Type locality: "Finca Zeledón, between Volcán Barba and Volcán Poás (elev. circa 6000 ft.), Costa Rica."

Distribution: Costa Rica (probably Alajuela, Heredia, San José), 1830–2100 m.

Sources: Savage, 2002, C.W. Myers, 2003, Solórzano, 2004 and Savage & Watling, 2008.

GERARDA Gray, 1849a (Homalopsidae)

Synonyms: *Campylodon* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum), Campilodon* Jan, 1861c *(nomen emendatum), Campitodon* Jan, 1862b *(nomen incorrectum), Heleophis* F. Müller, 1884, *Heliophis* – Cope, 1887c *(nomen incorrectum),* and *Gerardia* Boulenger, 1890 *(nomen praeoccupatum).*

Type species: *Coluber prevostianus* Eydoux & Gervais, 1837a.

Distribution: Tidal rivers and coastal marine waters of SE Asia and East Indies.

Sources: M.A. Smith, 1943, B.L. Lim, 1963b, E.H. Taylor, 1965, Gyi, 1970, Singh, 1972, P. Silva, 1980a, Tweedie, 1983, M.A.R. Khan, 1988, Auth et al., 1990, M.J. Cox, 1991b, M.J. Cox et al., 1998, Porej, 2001, Voris et al., 2002, Whitaker & Captain, 2004, N. Khaire, 2006, J.C. Murphy, 2007b, Alfaro et al., 2008, Zaher et al., 2009 and Das et al., 2013.

1. *Gerarda prevostiana* (Eydoux & Gervais, 1837a). Mag. Zool., Paris 7(3): 5–7, pl. 16, figs. 4–6. (*Coluber* [*Homalopsis*] *prevostianus*)

Synonyms: *Gerarda bicolor* Gray, 1849a, and *Heleophis flavescens* F. Müller, 1884.

Types: Syntypes (2), MNHN 3758 and MNHN 7593, longest syntype 540 mm (J.F.T. Eydoux & F.L.A. Souleyet, Feb. 1836–Nov. 1837).

Type locality: "Manille" [= Manila, Manila Prov., SW Luzon Is., N Philippines, 14°36'N, 120°59'E, elevation 10 m].

Distribution: Southeastern Asia and East Indies. India (Andhra Pradesh, Gujarat, Karnataka, Kerala, Maharashtra, Orissa, N Tamil Nadu, West Bengal), SW Sri Lanka (Western), Bangladesh, Myanmar (Ayeyarwady, Bago), S Thailand (Chon Buri), W West Malaysia (Perak, Selangor), East Malaysia (W Sarawak) and SW Philippines (Palawan), NSL–90 m.

Remarks: Original description reprinted in Eydoux & Gervais (1837b: 70–72, pl. 30, figs. 4–6). Plates incorrectly labeled 15 in text (1837a: 5) and 29 in text (1837b: 70).

†*GERINGOPHIS* Holman, 1976b (Boidae)

Type species: †*Geringophis depressus* Holman, 1976b.

Distribution: Lower and upper Oligocene of USA, and lower, middle and upper Miocene of USA.

Sources: Holman, 1979b, 1982d, 1995b, 2000a, Rage, 1984b and Holman & Harrison, 2001.

1. †*Geringophis depressus* Holman, 1976b. Herpetologica 32(1): 90, figs. 2a–c.

Type: Holotype, UNSM 4517, one trunk vertebra.

Type locality: "Loc. III. Apparently from center, S edge, SE 1/4, sec. 27, T 31 N, R 52 W, 4 miles S, 1/4 mile W of Crawford, Dawes County, Nebraska; Gering formation, Arikareean, lower Miocene."

Distribution: Lower Oligocene (Orellan: 33.3–33.9 mya) of USA (South Dakota), upper Oligocene (Arikareean: 20.6–30.8 mya) of USA (Wyoming), lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska), middle Miocene (Barstovian: 13.6–16.3 mya) of USA (Nebraska), and upper Miocene (Barstovian: 13.6–16.3 mya) of USA (Nebraska).

Sources: Holman, 1977c–e, 1981b and Parmley & Holman, 2009.

2. †*Geringophis robustus* Holman & Harrison, 2001. Acta Zool. Cracov. 44(1): 30–33, figs. 5–7.

Type: Holotype, UF 190837, one trunk vertebra (UF field crews, 1966–1967)

Type locality: "I–75 Local Fauna (Florida Natural History Museum Locality AL018), 1.5 km WSW Gainesville, Alachua County, Florida. Early Oligocene (Whitneyan)."

Distribution: Lower Oligocene (Whitneyan: 30.8–33.3 mya) of USA (Florida).

3. †*Geringophis vetus* Holman, 1982d. Herpetologica 38(4): 490–491, fig. 1.

Type: Holotype, KUVP 49126, one trunk vertebra (KU field crews, 1970's).
Type locality: "Site KU-NEBR-22, Brule Formation, Late Orellan Land Mammal Age of the middle Oligocene, in the vicinity of Toadstool Park area near Orella, Sioux County, Nebraska, 42°53'N; 103°35'W" [USA].
Distribution: Lower Oligocene (Orellan: 33.3–33.9 mya) of USA (Colorado, Nebraska and South Dakota).

4. †*Geringophis yatkolai* Holman, 1977c. Herpetologica 33(4): 443–444, figs. 1a–e. (*nomen corrigendum*)

Synonyms: †*Geringophis yatkolae* Holman, 1977c *(nomen incorrigendum),* and †*Geringophis yatkolai* – Holman, 2000 *(nomen corrigendum).*
Type: Holotype, UNSM 46514, one trunk vertebra (D.A. Yatkola).
Type locality: "Harrison Formation, Locality 2, Lizard Quarry, Sioux County, Nebraska, late early Miocene" [USA].
Distribution: Lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska). Known only from type locality.

GERRHOPILUS Fitzinger, 1843 (Gerrhopilidae)

Type species: *Typhlops ater* Schlegel, 1839 *in* 1837–1844.
Distribution: Asia.
Sources: Hahn, 1980a, Wallach, 1998b, McDiarmid et al., 1999 and Vidal et al. 2010.

1. *Gerrhopilus andamanensis* (Stoliczka, 1871). J. Asiat. Soc. Bengal 40(2): 428–429, pl. 25, figs. 9–12. (*Typhlops andamanensis*)

Type: Holotype, NMW 15427 (formerly IMC), a 165 mm specimen (F. Stoliczka, Feb. 1874).
Type locality: "Andaman islands" [= Andaman & Nicobars, E India, Bay of Bengal, ca. 12'30'N, 92°45'E].
Distribution: Eastern India (Andaman & Nicobars: Andaman Is.). Known only from type locality.
Sources: Wall, 1923c, M.A. Smith, 1943, Biswas & Sanyal, 1980, R.C. Sharma, 2003, 2007 and Kraus, 2005.

2. *Gerrhopilus ater* (Schlegel, 1839 *in* 1837–1844). Abbild. Amph.: 39–40, pl. 32, figs. 29–31. (*Typhlops ater*)

Synonym: *Typhlops ater suturalis* Brongersma, 1934.
Type: Holotype, RMNH 3714, a 130 mm specimen (S. Müller, 1825–1832).
Type locality: "Inner von Java" [= interior of Java, W Indonesia].
Distribution: Eastern Indonesia (West Papua, Bali, Buton, Halmahera, Salawati, Java, N Sulawesi, Ternate, Waigeo), NSL–1000 m.
Sources: Boulenger, 1893a, M.A. Smith, 1943, McDowell, 1974a, Inger et al., 1984, Murthy, 1990, Wallach, 1996d, 2009, R.C. Sharma, 2003, 2007 and Whitaker & Captain, 2004 and Koch, 2012.

G

3. *Gerrhopilus beddomii* (Boulenger, 1890a). Fauna Brit. India, Rept. Batr.: 237. (*Typhlops beddomii*)

Synonym: *Typhlops beddomei* Wall, 1923c *(nomen emendatum).*
Types: Syntypes (13), BMNH 1946.1.10.69–72 [Anaimalai], 1946.1.11.27–30 (formerly BMNH 1884.5.8.39–42) [Vizagapatnam], BMNH 1946.1.11.93–95 [Travancore], BMNH 1946.1.10.48 (formerly BMNH 1874.4.29.247) [Travancore], and MCZ 22372 (formerly BMNH) [Travancore], longest syntype 127 mm (R.H. Beddome, 1857–1882).
Type locality: "Kimedy Hills (Vizagapatam district) and in the Anaimalai and Travancore Hills, between 2000 and 5000 feet" [= Kimedy Hills, NE Andhra Pradesh State, E India, and Anamalai Hills, E Kerala/W Tamil Nadu States, and Travancore Hills, S Kerala State, S Western Ghats, SW India, 600–1500 m].
Distribution: Southern India (Andhra Pradesh, Kerala, Maharashtra, Tamil Nadu), 10–1525 m.
Sources: Boulenger, 1993a, M.A. Smith, 1943, McDowell, 1974a, Inger et al., 1984, Murthy, 1990, Wallach, 1996d, 2009, R.C. Sharma, 2003, 2007 and Whitaker & Captain, 2007.

4. *Gerrhopilus bisubocularis* (Boettger, 1893d). Zool. Anz. 16(427): 336–337. (*Typhlops bisubocularis*)

Type: Holotype, SMF 16683, a 131 mm specimen (H. Fruhstorfer, 1893).
Type locality: "West-Java" [Indonesia].
Distribution: Indonesia (Jawa Barat).
Sources: Mertens, 1967a, Wallach, 1996d and Kraus, 2005.
Remarks: Possibly occurs on Sumatra *fide* Iskandar & Colijn (2001: 17).

5. *Gerrhopilus ceylonicus* (M.A. Smith, 1943). Fauna Brit. India, Rept. Amph.: 55–56. (*Typhlops ceylonicus*)

Type: Holotype, IMC, a 140 mm specimen.
Type locality: "Peradeniya, Ceylon" [= Peradiniya, Central Prov., Sri Lanka, 7°16'N, 80°36'E, elevation 480 m].
Distribution: Sri Lanka (Central), 480 m. Known only from type locality.
Sources: Deraniyagala, 1955, P. Silva, 1980 and A. Silva, 1990.
Remarks: A subspecies of *G. mirus fide* Deraniyagala (1955: 18). A valid species *fide* Hahn (1980: 54), McDiarmid et al. (1999: 95) and Somaweera (2006: 206).

G

6. *Gerrhopilus depressiceps* (Sternfeld, 1913b). Sitz. Ges. Naturf. Freunde Berlin 1913(8): 384. (*Typhlops depressiceps*)

Synonyms: *Typhlops monochrus* T. Vogt, 1932b, and *Typhlops monochrous* Loveridge, 1948 *(nomen emendatum).*
Type: Holotype, ZMB 23986, a 328 mm specimen (? Sammler).
Type locality: "Neuguinea" [= Papua New Guinea].
Distribution: Papua New Guinea (East Sepik, Madang, Milne Bay, Kiriwina, Morobe and Oro Is.).
Sources: McDowell, 1974a, O'Shea, 1996, Wallach, 1996d, Fougopoulos, 2001, Bauer et al., 2002 and Kraus, 2005.
Remarks: Type description clearly based on single specimen *fide* Wallach & Günther (2002: 163).

7. *Gerrhopilus floweri* (Boulenger *in* Flower, 1899). Proc. Zool. Soc. London 67(3): 654, pl. 37, fig. 2. (*Typhlops floweri*)

Type: Holotype, BMNH 1946.1.10.55 (formerly BMNH 1898.11.8.26), a 210 mm specimen (S.S. Flower, Nov. 1896–Sept. 1898).
Type locality: "Siam" [= Thailand].
Distribution: Southern Thailand (Bangkok, Chanthaburi, Phra Nakhon Si Ayutthaya, Rayong) and S Vietnam (Hué), 110–205 m.
Sources: E.H. Taylor, 1965, Wallach, 1996d, 2001, 2004, Niyomwan, 1999, Ineich et al., 2002, Kraus, 2005 and I. Das, 2010.

8. *Gerrhopilus fredparkeri* (Wallach *in* O'Shea, 1996). Snakes Papua New Guinea: 60. (*Typhlops fredparkeri*)

Type: Holotype, MCZ 142651 (formerly MCZ-F 14163), a 149 mm female (F. Parker, 24 Oct. 1973).
Type locality: "Korobosea (9°29'S, 147°11'E), 9 km east of Port Moresby, Central Province, Papua New Guinea, 40–60 m."
Distribution: Southeastern Papua New Guinea (Central), 40–60 m. Known only from type locality.
Source: Kraus, 2005.
Remarks: Supplemental original description in Wallach (1996d: 111–113, figs. 2a–c).

9. *Gerrhopilus hades* (Kraus, 2005). J. Herp. 39(4): 592–593, figs. 1a–b. (*Typhlops hades*)

Type: Holotype, BPBM 20819 (formerly FK 10449), a 127 mm male (F. Krause, 14 May 2004).
Type locality: "forest along Rupu River at Bibikea, 11.33537°S, 154.22470°E, 280 m, Rossel Island, Milne Bay Province, Papua New Guinea."
Distribution: Southeastern Papua New Guinea (Milne Bay: Rossel Is.), NSL–280 m.

10. *Gerrhopilus hedraeus* (Savage, 1950). Proc. California Zool. Club 1(10): 49–50, figs. 2a–c. (*Typhlops hedraea*)

Synonym: *Gerrhopilus carollinehoserae* Hoser, 2012am *(nomen illegitimum).*
Type: Holotype, CAS-SU 12346 (formerly SU 12346), a 130 mm specimen (A.W. Herre, 9 Aug. 1940).
Type locality: "a coco palm bole about 1500 feet above Luzuriaga, approximately six miles southwest of Dumaguete, Oriental Negros, Philippine Islands" [= 10 km SW Dumaguete, Negros Is., cen. Philippines, ca. 09°16N, 123°13'E, elevation 450 m].
Distribution: Philippines (Bohol, Camotes, Luzon, Marinduque, Mindanao, Mindoro, Negros), 15–450 m.
Sources: McDowell, 1974b, A.H. Wynn & Leviton, 1993 and Wallach, 1996d.
Remarks: Illustrations of holotype mislabeled as figs. 1a–c in Savage (1950: 49) (but corrected in reprint).

11. *Gerrhopilus inornatus* (Boulenger, 1888b). Ann. Mag. Nat. Hist. (6) 1(5): 344. (*Typhlops inornatus*)

Type: Holotype, BMNH 1946.1.11.80 (formerly BMNH 1888.3.21.6), a 170 mm specimen (H.O. Forbes, 1885–1886).
Type locality: "Camp of Sogere, in interior, 1750 feet above sea" [= Sogeri, Central District, Papua New Guinea, 09°25'S, 147°26'E, elevation 475–535 m].
Distribution: Papua New Guinea (Central, Milne Bay, Morobe, Northern, Western, Western Highlands), 275–2730 m.
Sources: Boulenger, 1893a, McDowell, 1974b, O'Shea, 1996, Wallach, 1996d, Kraus & Allison, 2004 and Kraus, 2005.

12. *Gerrhopilus mcdowelli* (Wallach *in* O'Shea, 1996). Snakes Papua New Guinea: 61. (*Typhlops mcdowelli*)

Type: Holotype, UPNG 7502, a 199 mm male.
Type locality: "Hombron's Bluff (9° 23' S, 147° 20' E), Central Province, Papua New Guinea, ca. 600 m."
Distribution: Southeastern Papua New Guinea (Central), 50–600 m.
Source: Shea & Wallach, 2000.
Remarks: Supplemental originbal description in Wallach (1996d: 108–111, figs. 1a–c).

13. *Gerrhopilus mirus* (Jan, 1860 *in* Jan & Sordelli, 1860–1866). Icon. Gén. Ophid. 1(1): 1, pl. 5, fig. 7, pl. 6, figs. 7a–c, f–g, n, p, r, v, x. (*Typhlops mirus*)

Type: Holotype, RMNH 3721, a 135 mm specimen.
Type locality: "Ceylan" [= Sri Lanka].
Distribution: Sri Lanka (Central, Uva, Western), 10–1825 m.
Sources: Wall, 1921, E.H. Taylor, 1947, Deraniyagala, 1955, P. Silva, 1980a, A. Silva, 1990, I. Das, 1996, Wallach, 1996d, R. Sharma, 2003, 2007 and Somaweera, 2006.

14. *Gerrhopilus oligolepis* (Wall, 1909d). J. Bombay Nat. Hist. Soc. (1909–1910) 19(2): 339–340, 1 fig. (*Typhlops oligolepis*)

Type: Holotype, BMNH 1946.1.11.85 (formerly BMNH 1924.5.19.1), a 140 mm specimen (Seal via Darjeeling Mus.).
Type locality: "on a road in the Nagri Valley below Darjeeling at an altitude of about 5,000 feet" [= West Bengal State, NE India, ca. 27°00'N, 88°12'E, elevation 1525 m].
Distribution: Northeast India (West Bengal), 1525 m.
Sources: G.E. Shaw et al., 1938, M.A. Smith, 1943 and Schleich & Kästle, 2002.
Remarks: Probably occurs in E Nepal *fide* Schleich & Kästle (2002: 1004).

15 *Gerrhopilus tindalli* (M.A. Smith, 1943). Fauna Brit. India, Rept. Amph. 3: 53–54. (*Typhlops tindalli*)

Types: Syntypes (3), BMNH 1946.1.8.92–93, (formerly BMNH 1891.7.4.1–2) and BMNH 1946.1.8.95 (formerly BMNH 1893.11.2.1), longest syntype 175 mm.
Type locality: "Nilambur, Malabar district" [= Nilambur, Kerala, S India, 11°16'N, 76°13'E, elevation 40 m].
Distribution: Southern India (Kerala, Tamil Nadu), 40–750 m.
Sources: M.A. Smith, 1943 and R. Sharma, 2003, 2007.

†*GIGANTOPHIS* C.W. Andrews, 1901 (†Madtsoiidae)

Type species: †*Gigantophis garstini* C.W. Andrews, 1901.
Distribution: Upper Eocene of Egypt and Libya.
Sources: C.W. Andrews, 1906, Hoffstetter, 1961b and Rage, 1984b.

1. †*Gigantophis garstini* C.W. Andrews, 1901. Geol. Mag. (4) 8(10): 437–438, figs. 1a–c.

Types: Syntypes, CGM C.10022, ca. 20 vertebrae and fragments of two ribs.
Type locality: "Egypt." Emended to Qasr-el-Sagha beds (Middle Eocene): north of Birket-el-Qurun, the Fayûm, Egypt *fide* C.W. Andrews (1906:307).
Distribution: Upper Eocene (Bartonian: 37.2–40.4 mya) of Egypt and Libya.

G

GLOYDIUS Hoge & Romano-Hoge, 1981a (*nomen substitutum*) (Viperidae)

Synonyms: *Trigonocephalus* Kuhl & Hasselt, 1822b (*nomen praeoccupatum*), *Halys* Gray, 1849a *(nomen praeoccupatum), Trigonocephalophis* – Bleeker, 1860e *(nomen incorrectum), Trigonocephalo* – Higgins, 1873 *(nomen incorrectum), Halyx* – Palacky, 1898 *(nomen incorrectum), Trigonophalus* – Palacky, 1898 *(nomen incorrectum), Trigonscephalus* – Brazil, 1911 *(nomen incorrectum), Habys* – Steindachner, 1913b *(nomen incorrectum), Gloydins* – Hoge & Romano-Hoge, 1983 *(nomen incorrectum),* and *Cloydius* – Yao, 2012 *(nomen incorrectum).*
Type species: *Coluber halys* Pallas, 1776.
Distribution: Eurasia.
Sources: Hoge & Romano-Hoge, 1981a, Y.-C. Chen et al., 1984, Maes, 1989, Gloyd & Conant, 1990, Kardong, 1990, A. Knight et al., 1992, Minton, 1992, Golay et al., 1993, Zhao & Adler, 1993, Kraus et al., 1996, Cullings et al., 1997, Parkinson et al., 1997, Vidal et al., 1997, David & Ineich, 1999, McDiarmid et al., 1999, Orlov & Barabanov, 1999, Parkinson, 1999, Shen et al., 1999, Gumprecht et al., 2004, Castoe & Parkinson, 2006, Malhotra et al., 2010, Hoser, 2012d and Xu et al., 2012.

1. *Gloydius blomhoffi* (H. Boie, 1826). Isis von Oken 18(2): 214–215. (*Trigonocephalus blomhoffi*)

Synonyms: *Trigonocephalus affinis* Gray, 1849a, *Trigonocephalus blomhoffii megaspilus* Cope, 1860b, and *Agkistrodon blomhoffii dubitatus* Gloyd, 1977.
Type: Holotype, ZMA 15179 (J.C. Blomhoff, 1817–1824).
Type locality: "Decima, Japan, [= Dejima Is., previously in Nagasaki harbor, now part of Nagasaki, Japan, 32°45'N, 129°52'E, elevation 10 m]
Distribution: Extreme E Russia (Kunashir and Sakhalin Is.) and Japan (Hokkaido, Honshu, Kyushu, Shikoko, Amakusa, Awaji, Chichijima, Goto, Hachijojima, Iki, Ishigakijima, Izuoshima, Mageshima, Mishima, Oki, Oshima, Sado, Tanegashima, Teuri, Tsushima, Yagishiri, Yakushima Is.), NSL–1500 m.

Sources: Maki, 1931, Takara, 1962, Gloyd, 1972b, 1977, Bannikov et al., 1977, M. Mori, 1982, Szyndlar & Hung, 1987, Toriba, 1988, 1989b, Ji et al., 1989, Paik et al., 1993, Isogawa et al., 1994 and Wang & Zhao, 2007.

Remarks: Original description reprinted in H. Boie (1827b: 266–268) with illustration of type in Siebold (1838: 6, figs. 1–10). *Gloydiud ussuriensis* a subspecies *fide* Gloyd & Conant (1990: 309) and Ji et al. (1989: 189). Conspecific with *G. halys fide* Ji et al. (1989: 185). Records from Kuril Arch. rejected *fide* Orlov & Barabanov (1999: 169). Type locality possibly in error *fide* Siebold *in* Temminck & Schlegel (1838: iii), who mistakenly corrected it to East Indies. Pescadores record suspect *fide* Gloyd & Conant (1990: 281).

2. *Gloydius brevicaudus* (Stejneger, 1907a). Bull. U.S. Natl. Mus. (58): 463–464. (*Agkistrodon blomhoffii brevicaudus*)

Synonyms: *Agkistrodon blomhoffii brevicaudatus* Mori, 1928 *(nomen emendatum), Ankistrodon halys brevicaudus* – Pavloff, 1926 *(nomen incorrectum), Ancistrodon blomhoffii brevicaudus coloratus* Pavloff, 1932 (*nomen illegitimum*), *Ancistrodon blomhoffii brevicaudus rubrum* Pavloff, 1932 (*nomen illegitimum*), and *Agkistrodon blomhoffii siniticus* Gloyd, 1977.

Type: Holotype, USNM 17507, a 595 mm female (P.L. Jouy, 1885).

Type locality: "Fusan, Korea" [= Busan, Busan Region, SE South Korea (Kwangwon, Kyonggi, North Chungchong, North Kyongsang, South Chungchong, South Kyongsang,), 35°11'N, 129°05'E, elevation 70 m].

Distribution: Northern China (Gansu, Heliongjiang, Liaoning, Nei Monggol), North Korea and South Korea, 70–1100 m.

Sources: Toriba, 1988, Paik et al., 1998, P. Guo et al., 1999a, Orlov & Barabanov, 1999, 2000, Xu, 2001, Watkins-Colwell & Leenders, 2002, San & Lee, 2007, Wang & Zhao, 2007 and Yao, 2012.

Remarks: Original description lists holotype as a male. A valid species *fide* Paik et al. (1998: 101) and P. Guo et al., (1999a.: 38). Previously a subspecies of *G. blomhoffii*.

3. *Gloydius halys* (Pallas, 1776). Reise Russ. Reichs 3(2): 703. (*Coluber halys*)

Synonyms: *Echidna aspis pallasii* Merrem, 1820, *Trigonocephalus caraganus* Eichwald, 1831, *Ancistrodon halys caucasicus* Nikolsky, 1916, *Ancistrodon halys paramonovi* Nikolsky, 1931, A*ncistrodon halys persicus* Rendahl, 1933, *Ancistrodon halys stejnegeri* Rendahl, 1933, *Agkistrodon halys cognatus* Gloyd, 1977, *Agkistrodon halys boehmei* Nilson, 1983, *Agkistrodon halys karaguana* – Jucker, 1987 *(nomen incorrectum),* and *Agkistrodon halys mogoi* Bour, 1993.

Type: Neotype, ZISP 14784, a 714 mm male (P.S. Mikhno, 20 July 1930), designated by Orlov & Barabanov (1999: 175).

Type locality: "Borgaiskaya steppe, 84 km W from Kyakhta town, Burin-Khan mountain, approximate 50°25' N, 105°15' E," via neotype selection.

Distribution: Central Asia. Southeastern Azerbaijan, N Iran (Gilan, Mazandaran, N Razavi Khorasan), Afghanistan, Tadzhikistan, Uzbekistan, Turkmenistan, Kazakhstan, Kyrgystan, Mongolia (Arhangay, Bayanhongor, Bayanolgiy, Bulgan, Dornod, Dornogovi, Dundgovi, Dzavhan, Govi-Altay, Hentiy, Hovsgol, Hovd, Omnogovi, Ovorhangay, Selenge, Suhbaatar, Tov, Uvs), Russia (S Siberia) and China (Gansu, Hebei, Jiangsu, Nei Monggol, Qinghai, Shanxi), 75–4000 m.

Sources: Rendahl, 1933, Koba, 1938, Shannon, 1956, Goris 1967, Bannikov et al., 1977, Conant, 1982, Nilson, 1983, Ji et al., 1989, 1991, Toriba, 1989b, Borkin et al., 1990a–b, Cadle, 1992, Bour, 1993, Paik et al., 1993, Szczerbak, 1994, Kubykin & Brushko, 1998, Paik et al., 1998, Zou & Chen, 1998, Orlov & Barabanov, 1999, 2000 and Tuniyev et al., 2009.

Remarks: Syntypes lost *fide* Orlov & Barabanov (1999: 171). *Trigonocephalus caraganus* possibly a synonym of *G. saxatilis fide* Paik et al. (1998: 101).

4. *Gloydius himalayanus* (A.C.L.G. Günther, 1864a). Rept. Brit. India: 393–394, pl. 24, figs. a–a'. (*Halys himalayanus*)

Synonym: *Agkistrodon himalayana* – Underwood, 1979.

Types: Syntypes (2), BMNH 1946.1.18.75 (formerly BMNH 1860.3.19.1189), (T.E. Cantor, 1834–1855, via British East India Comp.), and BMNH 1946.1.19.64 (formerly BMNH 1860.3.19.1358) (H.R.A. von Schlagintwelt, 1854–1858), two males, longest syntype 635 mm.

Type locality: "Garhval, Himalayas (altitude 9000 feet),"[= Garhwal, Himalaya Mtns., Uttar Pradesh State, N India, elevation 2745 m].

Distribution: Himalayas of N Pakistan (Jammu, Khyber Pakhtunkhwa, N Punjab), N India (N Haryana, Himachal Pradesh, Kashmir, N Punjab, Uttaranchal, Uttar Pradesh) and Nepal (Baglung, Dolpa, Doti, Ilam, Jumla, Kalikot, Kaski, Khotang, Manang, Mugu, Mustang, Myagdi, Parbat), 1525–3050 (4800) m.

Sources: Wall, 1910g, Hubrecht, 1882, Kramer, 1977, Mahendra, 1984, M.S. Khan & Tasnim,1986c, Nanhoe & Ouboter, 1987, Hallermann et al., 2001, M.S. Khan, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004 and S.K. Sharma et al., 2013.

Remarks: Type locality erroneously listed as N West Pakistan *fide* Leviton (1968b: 559). Records from Afghanistan, Bangladesh and Sikkim, India need confirmation *fide* Whitaker & Captain (2007: 414).

5. *Gloydius intermedius* (Strauch, 1868). Trudy. Russ. Estest. 1: 295–296. (*Trigonocephalus intermedius*)

Synonyms: *Trigonocephalus vittatus* Maack, 1859 (*nomen nudum*), *Ankistrodon halys intermedius* – Pavloff, 1926 *(nomen incorrectum), Ancistrodon halys intermedius viridis* Pavloff, 1932 (*nomen illegitimum*), and *Agkistrodon shedaoensis continentalis* Zhao, 1980.
Type: Lectotype, ZISP 2221, a 614 mm female (Schrenck, 1855), designated by Orlov & Barabanov (1999: 186).
Type locality: "Cape Tyr, Amur River, Amurskaya Region, Russian Far East, approximate 49°11' N, 130°54' E" via lectotype selection.
Distribution: Eastern Asia. Eastern Russia, NW China (Beijing, Gansu, Heilonjiang, Liaoning, Nei Monggol, Ninxia, Qinghai, Shanxi, Xinjiang), North Korea and South Korea, 500–3000 m.
Sources: Schmidt, 1926b, Joger, 1984, M.-P. Huang, 1984, 1989, P. Guo et al., 1999a, Orlov & Barabanov, 1999, 2000, Adnagulov et al., 2000, Xu, 2001, Zhao, 2006 and Yao, 2012.

6. *Gloydius lijianlii* F. Jiang & Zhao, 2009. Acta Zool. Sinica 34(3), 642–645, fig. 2.

Type: Holotype, CIB 95886, a male (X.-H. Wang & F. Jiang, 27 Sept. 2008).
Type locality: "Daheishan Island (37°58'N, 121°35'E; alt. 174 m), Shandong, China."
Distribution: Eastern China (Shandong: Daheishan Is.), 175 m.

7. *Gloydius monticola* (F. Werner, 1922a). Anz. Akad. Wiss. Wien 59(24–25): 222. (*Ancistrodon blomhoffii monticola*)

Synonym: *Agkistrodon strauchi popei* Mell, 1931a.
Types: Syntypes (2), NMW 17089.1–2, two juveniles (H. Handel-Mazzetti, June 1915).
Type locality: "Yao-Schan bei Lidjiang, NW-Yünnan, 3600 m, Süd-China." [= Yaoshan, near Lijiang (26°54'N, 100°14'E), Yunnan Prov., SW China, elevation 3600 m].
Distribution: Southwestern China (NW Yunnan), 3600–4000 m.
Source: C.H. Pope, 1935.
Remarks: Original description reprinted in F. Werner (1924b: 49).

8. *Gloydius saxatilis* (Emelianov, 1937). Bull. Far East. Br. Acad. Sci. USSR 1937(24): 26–31, 39–40, figs. 1a–c, 2. (*Ancistrodon saxatilis*)

Synonym: *Agkistrodon shedaoensis continentalis* Zhao, 1980, and *Gloydius saxatilis changdaoensis* J.-L. Li, 1999.
Types: Syntypes (39), ZIAS 9456, 13291–92 [Vladivostok] and ZIAS 13308 [Suchan], location of other syntypes unknown.
Type locality: "near Vladivostok, Voroshilov-Ussuriski (formerly Nikolsk-Ussurisk) and river Sutchan" [= Vladivostok, 43°10,N, 131°56'E, elevation 65 m, Ussuriysk, 43°48'N, 131°57'E, elevation 20 m, S Primorsky Krai, Siberia, ext. E Russia].
Distribution: East Asia. Extreme E Russia (ext. SE Siberia), NE China (Heilongjiang, Jilin, Liaoning, Nei Monggol, Shanxi), North Korea and South Korea.
Sources: Paik & Yang, 1989, Ji et al., 1991, Paik et al., 1993, 1998, P. Guo et al., 1999a, Xu, 2001, Zhao, 2006 and San & Lee, 2007.
Remarks: Only two syntypes *fide* McDiarmid et al. (1999: 307): ZIAS #7, Zoolog. Cab. GDU, vic. Vladivostok (A.A. Emelianov, 30 Sept. 1927), a 220 mm juvenile, and ZIAS #17, D.V.U. Suchan (Gasovskii, 8 Aug. 1927), a 625 mm male. A subspecies of *G. intermedius fide* Gloyd & Conant (1990: 357).

9. *Gloydius shedaoensis* (Zhao, 1979b). Acta Herp. Sinica 1(1): 4–6, figs. 1–2. (*Agkistrodon shedaoensis*)

Synonym: *Gloydius shedaoensis qianshanensis* J.-L. Li, 1999.
Type: Holotype, CIB 79-I-0005, adult male (native, 19 June 1979).
Type locality: "Shedao (Snake Island), situated about 24 nautical miles from and to the north-west of Lüshun (Port Arther), Liaoning Province, altitude below 215 m." [= 38°57'N, 120°59'E, NE China].
Distribution: Northeastern China (Liaoning: Shedao Is.), NSL–215 m. Known only from type locality.
Sources: Zhao, 1980, J.-L. Li, 1995, Orlov & Barab, anov, 1999 and Shine et al., 2002.

10. *Gloydius strauchi* (Bedriaga, 1912). Przewalski Cen.-Asien Reisen, Amph. Rept. 3(1): 728–732, pl. 10, figs. 1, 1a–1d. (*Ancistrodon strauchi*)

Synonyms: *Agkistrodon tibetanus* T. Barbour, 1912a, *Agkistrodon halys qinlingensis* M.-T. Song & Chen, 1985, and *Agkistrodon halys liupanensis* N. Liu, Song & Luo, 1989.
Type: Lectotype, ZISP 8534 (Dy-tschu, 1884), designated by Orlov & Barabanov (1999: 169).
Type locality: "Daudsen-Lu (= Ta-Tsian-lu), Sichuan Province, China" via lectotype selection.
Distribution: Western China (Gansu, Ningxia, Qinghai, S Shaanxi, Sichuan, E Xizang), 3150–4600 m.
Sources: C.H. Pope, 1935, P. Guo et al., 1999a and Orlov & Barabanov, 2000, J.C. Murphy & Schlager, 2003 and Yao, 2012.
Remarks: *Gloydius qinlingensis* and *G. liupanensis* valid species *fide* Xu et al., 2012.

11. *Gloydius tsushimaensis* (Isogawa, Moriya & Mitsui, 1994). Jap. J. Herp. 15(3): 102–106, fig. 2. (*Agkistrodon tsushimaensis*)

Type: Holotype, OMNH R3934, a 563 mm male (Yomeishu Seizo Research team, 28 July 1987).
Type locality: "Yora-Naiin, Izuhara-cho, Shimoagata-gun, Nagasaki Prefecture, Japan."
Distribution: Japan (Kyushu, Tsushima Is.), NSL–20 m.

12. *Gloydius ussuriensis* (Emelianov, 1929). Snakes Far East. Distr.: 123–130, figs. 38–41, pl. 1, fig. 49, pl. 5. (*Ancistrodon blomhoffii ussuriensis*)

G

Synonym: *Agkistrodon caliginosus* Gloyd, 1972b.
Type: Lectotype, SRAR 125/46, a 645 mm male (P. Pravdin, 1927), designated by Chernov (1934: 356).
Type locality: "the river Suchan" [= Suchan River, Primorsky Krai, Siberia, ext. E Russia] via lectotype selection.
Distribution: East Asia. Extreme E Russia (SE Siberia), NE China (Heilongjiang, Jilin, Liaoning, Nei Monggol), North Korea, and South Korea (Quelpart Is.).
Sources: Stejneger, 1907a, Chernov, 1934, Toriba, 1988, Golay et al., 1993, Paik et al., 1993, 1998, P. Guo et al., 1999a, Orlov & Barabanov, 1999, 2000, Adnagulov et al., 2000, Xu, 2001 and San & Lee, 2007.
Remarks: Lectotype designation of ZISP 13327 *fide* Orlov & Barabanov (1999: 188) invalid. Toriba, 1988 considered *caliginosis* a synonym.

†*GOINOPHIS* Holman, 1976b (Serpentes *incertae sedis*)

Type species: †*Goinophis minusculus* Holman, 1976b.
Distribution: Lower Miocene of USA.
Sources: Rage, 1984b and Holman, 2000a.

1. †*Goinophis minusculus* Holman, 1976b. Herpetologica 32(1): 92–93, figs. 4a–d.

Type: Holotype, UNSM 4521, one trunk vertebra.
Type locality: "Loc. I. (Durnal Locality). Lower Gering (earliest part of the lower Miocene): University of Nebraska State Museum Locality MO-119 (NW 1/4, SE 1/4, sec. 32, T 20 N, R 52 W, 10.46 km S and 2.01 km W of Bayard, Morrill County, Nebraska" [USA].
Distribution: Lower Miocene (Arikareean: 20.6–30.8 mya) of USA (Nebraska. and Wyoming).

GOMESOPHIS Hoge & Mertens, 1959 (Xenodontidae)

Type species: *Tachymenis brasiliensis* Gomés, 1918.
Distribution: Southeastern Brazil.
Sources: J.A. Peters & Orejas-Miranda, 1970, Amaral, 1978, Costa Prudente & Brandão, 1998, Marques et al., 2002 and Zaher et al., 2009.

1. *Gomesophis brasiliensis* (Gomés, 1918). Mem. Inst. Butantan 1(1): 78–80, pl. 14, fig. 1. (*Tachymenis brasiliensis*)

Type: Holotype, IB 1316, a 466 mm female (Ribeiro & Irmaos, May 1917).
Type locality: "Pindamonhangaba, Estado de São Paulo, à margem do rio Paraíba do Sul, Brasil" [= Pindamonhangaba, São Paulo State, SE Brazil, 22°55'S, 45°28'W, elevation 555 m].
Distribution: Southeastern Brazil (Distrito Federal, Minas Gerais, Paraná, Rio Grande do Sul, São Paulo), 555 m.

GONGYLOSOMA Fitzinger, 1843 (Colubridae)

Synonym: *Gonglyosoma* – F. Werner, 1929a *(nomen incorrectum).*
Type species: *Coronella baliodeira* F. Boie, 1827.
Distribution: Southeastern Asia and Greater Sundas.
Sources: Leviton, 1964a, Grismer et al., 2003 and I. Das, 2010, 2012.

1. *Gongylosoma baliodeira* (F. Boie, 1827). Isis von Oken 20(6): 539. (*Coronella baliodeira*)

Synonyms: *Coronella baliodeira* H. Boie *in* Schlegel, 1826a *(nomen nudum), Coronella baliodeira* Schlegel, 1826b *(nomen nudum), Ablabes baliodeirus* – A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Ablabes baliode-rus* – A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrectum), Ablabes baliodeiroides* Bleeker, 1857a *(nomen nudum), Ablabes baliodirus cinctus* J.G. Fischer, 1885b, and *Liopeltis baliodeirus cochranae* E.H. Taylor, 1962.
Types: Syntypes (2), RMNH 4035 and BMNH (formerly RMNH), one specimen male (? H. Kuhl, Dec. 1820–Sept. 1821).
Type locality: "Java" [Indonesia].
Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Chanthaburi), West Malaysia (Pahang, Perak, Pinang, Selangor), Singapore, East Malaysia (Sabah, Sarawak), Brunei and W Indonesia (Bali, Java, Kalimantan, Nias Arch., Riau Arch., Sumatra, Weh), NSL–1525 m.
Sources: Rooij, 1917, Sworder, 1922, C. Haas, 1941, E.H. Taylor, 1962, 1965, B.L. Lim, 1963, Bergman, 1963, Leviton, 1964a, Stuebing, 1991, David & Vogel, 1996, Malkmus et al., 2002, McKay, 2006 and I. Das, 2007b, 2010.
Remarks: Original description based on H. Boie's MS (1823–1825).

2. *Gongylosoma longicaudum* (W.C.H. Peters, 1871b). Mber. Königl. Akad. Wiss. Berlin 1871(10): 574–575. (*Ablabes longicaudus*)

Synonyms: *Ablabes quinquestriatus* F. Müller, 1878b, and *Diadophis bipunctatus* Lidth de Jeude, 1890.
Types: Syntypes (2), MSNG CE 30385 and ZMB 7142 (G. Doria & O. Beccari, 1865), longest syntype 385 mm.
Type locality: "Sarawak (Borneo)" [= East Malaysia].
Distribution: Malay Peninsula and Greater Sundas. East Malaysia (Sabah, Sarawak), West Malaysia (Pahang, Pinang, Selangor, Penang Is.) and W Indonesia (Java, Sumatra), NSL–610 m.
Sources: B.L. Lim, 1967a, Grandison, 1972, Tweedie, 1983 and David & Vogel, 1996.
Remarks: Original description reprinted in W.C.H. Peters (1872d: 35–36, pl. 5, figs 1–1c). Doria listed as sole collector *fide* W.C.H. Peters (1871b: 575).

3. *Gongylosoma mukutense* Grismer, Das & Leong, 2003. Herpetologica 59(4): 566–567, figs. 2–3.

Type: Holotype, ZRC 2.5143, a 429 mm male (L.L. Grismer, C.A. Ledbetter, S. Guerrero, S.C. Newbold & R.E. Diaz, 10 July 2001).
Type locality: "on the coast 0.5 km south of Kampung Mukut on the trail to Sungai Raya, Pulau Tioman (02°43-54'N; 104°07-3.5'E), Pahang, West Malaysia, at 10 m elevation."
Distribution: West Malaysia (Pahang: Tioman Is.), 10 m. Known only from vicinity of type locality.
Sources: Grismer et al., 2003b, 2008a.

4. *Gongylosoma nicobariensis* (Stoliczka, 1870a). Proc. Asiatic Soc. Bengal 1870(4): 106. (*Ablabes nicobariensis*)

Synonym: *Abalbes nikobariensis* – Theobald, 1876 *(nomen incorrectum).*
Type: Holotype, ZSI 7201 (formerly IMC 7201), a 440–445 mm female (F. Stoliczka, 1870).
Type locality: "Nicobars" [= Nicobar Is., Andaman & Nicobars, E India, Bay of Bengal]. Emended to the Nancowry haven on Camorta (Nicobars) *fide* Stoliczka (1870d: 185).
Distribution: India (Nicobar Is.: Camorta). Known only from type locality.
Sources: M.A. Smith, 1943 and I. Das, 1999a.
Remarks: Original description reprinted in Stoliczka (1870b: 107) and supplemental original description in Stoliczka (1870d: 184–185, pl. 11, figs. 1, 1a–b).

5. *Gongylosoma scriptum* (Theobald, 1868a). J. Linn. Soc. London 10(41): 42. (*Ablabes scriptus*)

Type: Holotype, ZSI 7207 (formerly IMC 7207) (T.M. Berdmore, 1855–1856).
Type locality: "Martaban, British Birma" [= Mottama, Myanmar, 16°34'N, 97°37'E, elevation 10 m].
Distribution: Southern Myanmar (Mon) and S Thailand (Chon Buri, Nakhon Si Thammarat, Phet Buri, Phuket, Panjang Is.), 10 m.
Sources: M.A. Smith, 1930a, 1943 and E.H. Taylor, 1965.
Remarks: Theobald (1868b: 49) is a repeat of the original description.

GONIONOTOPHIS Boulenger, 1893a (*nomen substitutum*) (Lamprophiidae)

G

Synonyms: *Gonionotus* Mocquard, 1889 *(nomen praeoccupatum), Gonyonotus* Boulenger, 1891b *(nomen emendatum), Cephalosimus* Chabanaud, 1917a, *Gonionothophis* – Briceño-Rossi, 1934 *(nomen incorrectum), Goniotophis* – Monard, 1951 *(nomen incorrectum), Gonisonotophis* – Dunger, 1971a *(nomen incorrectum),* and *Gonionotohis* – Stucki-Stirn, 1979 *(nomen incorrectum).*
Type species: *Gonionotus brussauxi* Mocquard, 1889.
Distribution: West and cen. Africa.
Sources: Mocquard, 1887a, Boulenger, 1891d, 1893a, Sternfeld, 1908b, Angel, 1933b, Loveridge, 1939, 1957a, McDowell, 1961, 1986, Doucet, 1963, Villiers, 1975, Kelly et al., 2003, Villiers & Condamin, 2005, Vidal et al., 2008 and Zaher et al., 2012.
Remarks: *Mehelya* synonymized with *Gonionotophis fide* Vidal et al., 2008, but valid *fide* Zaher et al., 2012.

1. *Gonionotophis brussauxi* (Mocquard, 1889). Bull. Soc. Philom. Paris (1888–1889) (8) 1(12): 146–148, pl. 2, figs. 1–4. (*Gonionotus brussauxi*)

Synonyms: *Gonionotus vossi* Boettger, 1892b, *Simocephalus insignis* Chabanaud, 1917a, and *Gonionotophis brussauxi prigoginei* Laurent, 1956a.
Type: Holotype, MNHN 1890.54, a 440 mm female (E. Brussaux, 1886–1889).
Type locality: "Loudinia-Niari, sur le fleuve Niari, entre Loango sur le littoral, et Brazzaville sur le fleuve Congo" [= between Ludinia and Niari Rivers, French Congo *fide* Loveridge (1939: 150).
Distribution: Central Africa. Southern Cameroon, Gabon (Moyen-Ogooué, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Central African Republic (Ngotto Forest), Congo (Kouilou, Lekoumou, Sangha), N Democratic Republic of the Congo (Equateur, Nord-Kivu, Orientale), W Uganda (Western) and NE Angola (Lunda Norte), 10–1000 m.
Sources: Perret, 1961, Laurent, 1954a, 1956a, Witte, 1962, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Ineich, 2003, Chippaux, 2006, Chirio & LeBreton, 2007 and Ineich et al., 2007.
Remarks: MNHN catalogue entry for type reads Monts du Mayumbe à 80 km. de Loango entre Loango et Loudima (Rep. du Congo) *fide* M. Lang (*in litt*.). Togo record questionable *fide* Chippaux (2006: 61).

2. *Gonionotophis grantii* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 360, pl. 5, fig. f. (*Simocephalus grantii*)

Synonym: *Simocephalus rostralis* Sternfeld, 1910b.
Types: Syntypes (2), BMNH 1946.1.12.47–48 (formerly BMNH 1863.10.5.3a–b), two males, longest syntype 410 mm (Grant).
Type locality: "West Africa."
Distribution: Western Africa. Western Senegal, Guinea–Bissau (Bissau), Guinea (Nzérékoré), Ivory Coast (Bouna, Toumodi), S Burkina Faso (Centre, Centre-Est, Est, Hauts-Bassins, Sud-Ouest, Volta-Noire), Ghana (Upper East), Togo (Kara, Plateaux), SW Niger (Niamey), Nigeria (Kwara, Plateau, Taraba), Cameroon (Adamaoua, Est, Extreme-Nord), SW Chad and Central African Republic (Ombella-Mpoko, Ouham), 200–1170 m.
Sources: Boulenger, 1893a, F. Werner, 1901b, Perret, 1961, *fide* Hughes & Barry (1969: 1011), Roman, 1969, 1980, Roux-Estève, 1969a, Dunger, 1971a, Hughes, 1983, 2013, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.
Remarks: Possibly occurs in Benin *fide* Hughes (2013: 152).

3. *Gonionotophis klingi* Matschie, 1893a. Sitz. Ges. Natur. Freunde Berlin 1893: 172–173.

Type: Holotype, ZMB 13951, a 420 mm specimen (O.A.R. Büttner, 1890–1891).
Type locality: "Bismarckburg, Togo, West-Afrika" [= near Sotouboua, Centrale Region, Togo, 8°34'N, 0°59'E, elevation 380 m].
Distribution: West Africa. Southeastern Guinea (Nzérékoré), Liberia (Sinoe), Ivory Coast (Guiglo, Tabou, Toumodi), S Ghana (SE Eastern), S Togo (Centrale, Plateaux) and SE Nigeria (Lagos), 380 m.
Sources: Dunger, 1971a, Leston & Hughes, 1968, Hughes & Barry, 1969, Roux-Estève, 1969a, Dunger, 1971a, Huselmans et al., 1971, Hughes, 1983, Chippindale, 1989, Ineich, 2003, Chippaux, 2006 and Segniagbeto et al., 2011.
Remarks: Hughes & Barry (1969: 1011) pointed out erroneous type locality in Gans, 1959 and Loveridge, 1957a. Possibly occurs in Benin *fide* Hughes (2013: 151).

GONYOPHIS Boulenger, 1891c (Colubridae)

Synonym: *Goniophis* – Palacky, 1898 *(nomen incorrectum).*
Type species: *Gonyosoma margaritatum* W.C.H. Peters, 1871b.
Distribution: Malaysia.
Sources: Rooij, 1917, C. Haas, 1950, Tweedie, 1983, Stuebing, 1991, Malkmus et al., 2002 and I. Das, 2010, 2012.

1. *Gonyophis margaritatus* (W.C.H. Peters, 1871b). Mber. Königl. Akad. Wiss. Berlin 1871(10): 578. (*Gonyosoma margaritatum*)

Type: Holotype, MSNG 30613, a 1530 mm specimen (G. Doria & O. Beccari, 1865).
Type locality: "Sarawak (Borneo)" [= East Malaysia].
Distribution: West Malaysia (Johore, Kelantan, Pahang, Perak, Selangor), Singapore and East Malaysia (Sabah, Sarawak), NSL–670 (2000) m.
Remarks: Original description reprinted in W.C.H. Peters (1872d: figs. 3, 3a–c). Doria listed as collector *fide* W.C.H. Peters (1871b: 578).

GONYOSOMA Wagler, 1828a (Colubridae)

Synonyns: *Gonyasoma* Wagler, 1828 *(nomen emendatum), Goniosoma* A.-M.-C. Duméril & Bibron, 1844 *(nomen emendatum), Gonysoma* Agassiz, 1847 *(nomen emendatum), Alopecophis* Gray, 1849b, *Gonijosoma* Bleeker, 1856 *(nomen emendatum), Aepidea* Hallowell, 1861, *Aepidia* Marschall, 1873 *(nomen emendatum), Allophis* W.C.H. Peters, 1872c., and *Gynyosoma* – Murthy, 1986 *(nomen incorrectum).*
Type species: *Coluber oxycephalus* F. Boie, 1827.
Distribution: Southeastern Asia, Indonesia and Philippines.
Sources: M.A. Smith, 1943, Dowling, 1958, Lopez & Maxson, 1995, Schulz, 1996, Gravlund, 2001, Helfenberger, 2001 and Burbrink & Lawson, 2007.
Remarks: Official Generic Name no. 1230 *fide* Opinion 490 (ICZN, 1957). Burbrink & Lawson (2007: 186) transferred *Elaphe frenata* and *E. prasina* to *Rhadinophis* but they form a monophyletic clade with *Rhynchophis fide* Zaher et al., 2012.

1. *Gonyosoma jansenii* Bleeker, 1858e. Nat. Tijds. Nederl. Indië (4) 16(2): 242.

Synonym: *Allophis nigricaudus* W.C.H. Peters, 1872c.
Type: Holotype, BMNH 1946.1.6.20 (formerly BMNH 1863.12.4.134), an adult male (A.J.F. Jansen, 1848–1858, via P. de Bleeker).
Type locality: "Manado, Celebes" [= Manado, ext. NE Sulawesi, 1°30'N, 124°50'E, elevation NSL].
Distribution: Eastern Indonesia (Sulawesi).
Sources: Boulenger, 1894a, P. Müller, 1895, Rooij, 1917, C. Haas, 1950, E.H. Taylor, 1965 and Bosch, 1985, Gumprecxht, 2004e and Koch, 2012.
Remarks: P. Bleeker listed as source of type *fide* Boulenger (1894a: 58).

2. *Gonyosoma oxycephalum* (F. Boie, 1827). Isis von Oken 20(6): 537. (*Coluber oxycephalus*)

Synonyms: *Coluber oxycephalus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Coluber oxycephalus* Schlegel, 1826b *(nomen nudum), Gonyosoma viride* Wagler, 1828a, *Alopecophis chalybeus* Gray, 1849b, *Gonijosoma oxijcephalum* Bleeker, 1856 *(nomen emendatum), Aepidea robusta* Hallowell, 1861, *Coluber deroyi* F. Werner, 1923, *Coluber floweri* F. Werner, 1925, and *Composoma elegans* F. Werner, 1926.

Type: Holotype, RMNH 677 (C.G.C. Reinwardt, 1816–1821).

Type locality: "Java" [SW Indonesia].

Distribution: Southeastern Asia and Indonesia. Eastern India (Andaman & Nicobars: Andaman Is.), S Myanmar (Rangoon, Tanintharyi), Thailand (Chiang Mai, Chiang Rai, Kanchanaburi, Krabi, Mae Hong Son, Nakhon Ratchasima, Narathiwat, Pattani, Phang Nga, Phuket, Ratchaburi, Satun, Tak, Trang, Trat, Uthai Thani), Laos, Cambodia (Kampot, Koh Kong, Siem Reap), S Vietnam (Dong Nai, Lâm Dong, Phú Khánh, Tây Ninh), West Malaysia (Kedah, Johore, Kelantan, Melaka, Pahang, Pinang, Perak, Penang and Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak, Labuan Is.), Brunei, Indonesia (Bali, Banka, Belitung, Borneo, Java, Kalimantan, Karimata, Lombok, Mentawai Is.: South Pagai, Natuna Is., Nias, Riau Arch., Sumatra) and Philippines (Balabac, Bohol, Bongao, Dinagat, Lubang, Luzon, Mindoro, Negros, Palawan, Panay), 20–1300 m.

Sources: Flower, 1899, T. Barbour, 1912b, Robinson & Kloss, 1916, Rooij, 1917, M.A. Smith, 1928b, Mertens, 1930, Bourret, 1936b, Leviton, 1959b, E.H. Taylor, 1965, Campden-Main, 1970a, Deuve, 1970, Saint Girons, 1972a, H. Müller, 1991, Gaulke, 1994b, Staszko & Walls, 1994, David & Vogel, 1996, M.J. Cox et al.,1998, Chan-ard et al., 1999, Ferner et al., 2001, Malkmus et al., 2002, Gumprecht, 2004e, Whitaker & Captain, 2004, McKay, 2006, B.L. Stuart & Emmett, 2006 and I. Das, 2007b, 2010, 2012.

Remarks: Original description based on H. Boie's MS (1823–1825). Official Specific Name no. 1435 *fide* Opinion 490 (ICZN, 1957). Eastern Himalayas *fide* Flower (1899: 668) and S China *fide* Leviton (1959b: 301). Sulawesi records doubtful, probably *Gonyosoma jansenii, fide* Lang & Vogel (2005: 248). RMNH 675 and RMNH 677b collected by S. Müller in Borneo *fide* RMNH catalogue.

GRAYIA A.C.L.G. Günther, 1858 (Natricidae)

Synonyms: *Heteronotus* Hallowell, 1857b *(nomen praeoccupatum), Graya* A.-H.-A. Duméril, 1859 *(nomen incorrectum), Glaniolestes* Cope *in* Slack, 1862 *(nomen substitutum), Lejonotus* Jan, 1863b, *Xenurophis* A.C.L.G. Günther, 1863c, *Macrophis* Bocage, 1866a, and *Gryia* – Stucki-Stirn, 1979 *Graya* A.-M.-C. Duméril, 1859 *(nomen incorrectum).*

Type species: *Coluber smythii* Leach, 1818.

Distribution: West cen. and E Africa.

Sources: Mocquard, 1897d, Boulenger, 1909b, 1915a, Witte, 1953, 1962, Laurent, 1956a, Perret, 1961, Dunger, 1972, J.-F. Trape & Roux-Estève, 1995, Kelly et al., 2003, Chippaux, 2006 and Chirio & Ineich, 2006.

1. *Grayia caesar* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 357, pl. 6, fig. c. (*Xenurophis caesar*)

Synonym: *Grayia longicaudata* Mocquard, 1891.

Type: Holotype, BMNH 1946.1.6.38 (formerly BMNH 1843.1.10.7), a 470 mm (svl) specimen (W. Raddon).

Type locality: "Bioko" [= Bioko Is., Equatorial Guinea, 3°13–3°48'N, 8°25–8°58'E].

Distribution: Central Africa. Southern Cameroon (Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), Gabon (Ogooué-Maritime, Woleu-Ntem), Congo (Kouilou, Plateau, Sangha), SW Central African Republic (Sangha, Haute-Sangha), Congo (Kouilou, Sangha) and Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Katanga, Nord-Kivu, Orientale, Sud-Kivu), 265–1500 m.

Sources: Mertens, 1965c, Roux-Estève, 1965, D. Lawson, 1993, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

2. *Grayia ornata* (Bocage, 1866a). J. Sci. Math. Phys. Nat., Lisboa 1(1): 47. (*Macrophis ornatus*)

Synonyms: *Grayia furcata* Mocquard, 1887c, and *Grayia striata* Sternfeld, 1910c.

Types: Syntypes (3), ZMB 7772 (formerly MBL), two adults and a juvenile, longest syntype 1640 mm (F.A.P. Bayão, 1864).

Type locality: "l'interior d'Angola (Duque de Braganca)" [= Duque de Bragança, cen. Malanje Distr., Angola, 09°06'S, 15°57'E, elevation 1110 m].

Distribution: Central Africa. Cameroon (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Ouest, Sud), Equatorial Guinea, Gabon (Estuaire, Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Congo (Brazzaville, Kouilou, Plateau, Sangha), W Central African Republic (Bamingui-Bangoran, Haute-Sangha, Lobaye, Ombella-Mboko, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu), NE Angola (Lunda Norte, Malanje) and W Zambia (North-Western, Western), NSL–1140 m.

Sources: Laurent, 1964a, Knoepffler, 1966, J.B. Rasmussen, 1991, Broadley et al., 2003 and Chirio & LeBreton, 2007.

G

Remarks: Original description reprinted in Bocage (1866b: 67–68, pl. 1, figs. 2–2b).

3. *Grayia smythii* (Leach *in* Tuckey, 1818). Exped. River Zaire: 409. (*Coluber smythii*)

Synonyms: *Coluber laevis* Hallowell, 1844b *(nomen praeoccupatum), Coronella triangularis* Hallowell, 1854c, *Grayia silurophaga* A.C.L.G. Günther, 1858, *Lejonotus schlegeli* Jan, 1863b, and *Grayia smithi* Laurent, 1956a *(nomen emendatum).*

Type: Lectotype, BMNH 1946.1.1.67 or BMNH 1946.1.5.16, a female specimen with 147 V + 93 SC (J. Cranch [Tuckey Exped.] via W.E. Leach, 1816), designated by Boulenger (1894a: 287).

Type locality: "near Embomma, Congo" [= vicinity of Boma, Bas-Congo Prov., SW Democratic Republic of the Congo, 5°51'S, 13°03'E, elevation 15 m].

Distribution: West, cen. and E Africa. Southeastern Senegal (Kédougou, Kolda, Tambacounda, Ziguinchor), Gambia (Western), Guinea–Bissau (Bissau, Gabú), Guinea (Boké, Dabola, Kindia, Kouroussa, Macenta, Nzérékobé, Télimélé), Sierra Leone (Eastern, Northern, Southern, Western), Liberia (Grand Cape Mount, Montserrado, Nimba), Ivory Coast (Abidjan, Bouaflé, Bouaké, Bouna, Daloa, Ferkéssédougou, Guiglo, Katiola, Lagunes, Tabou, Toumodi), S Burkina Faso (Centre, Hauts-Bassins, Volta-Noire), Ghana (Ashanti, Eastern), Togo (Plateaux), Benin (Atlantique, Borgou, Plateau), SW Niger (Dosso), Nigeria (Akwa Ibom, Bauchi, Cross River, Delta, Lagos, Oyo, Plateau, Rivers, Sokoto), Cameroon (Adamaoua, Centre, Littoral, Nord, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), SW Chad (Mayo-Kebbi), Gabon, Congo (Brazzaville, Kouilou, Likouala, Sangha), Central African Republic (Bamingui-Bangoran, Haut-Kotto, Kemo-Gribingui, Lobaye, Mbomou, Ombella-Mpoko, Ouaka, Ouham, Ouham-Pende), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Katanga, Kinshasa, Maniema, Nord-Kivu, Orientale, Sud-Kivu), Angola (Bié, Lunda Norte), South Sudan, Uganda (Central, Eastern, Northern, Western, Kome Is.), SW Kenya (Nyanza, Western) and NW Tanzania (Mara, Mwanza, Kagera), 15–1385 m.

Sources: Sternfeld, 1908c, Manaças, 1957, Laurent, 1956a, 1964a, Doucet, 1963, Mertens, 1965c, Roux-Estève, 1965, Leston & Hughes, 1968, Hughes & Barry, 1969, Roman, 1969, Dunger, 1972, Pitman, 1974, Roman, 1980, Joger, 1981, Hughes, 1983, 2013, J.A. Butler & Reid, 1986, D. Lawson, 1993, Akani & Luiselli, 2001b, Spawls et al., 2002, Ineich, 2003, Greenbaum & Carr, 2005, Luiselli et al., 2005, J.F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Segniagbeto et al., 2011, Auliya et al., 2012 and Chirio, 2013.

Remarks: Laurent (1956a: 135), Meirtre (1992: 113) and Hughes (2013: 116) argue for correcting *smythii* to *smithii*. However, there is no indication that the species was named after the Dr. Smith of the expedition and P. David pointed out that the name Smith can be transliterated into the Latin as *Smythius,* the genetive form being *Smythii.* Also, Art. 32.5 of the Code prohibits changing an incorrect original spelling unless there is clear evidence of an inadvertent error or else a correction in an errata sheet at the time of publication.

4. *Grayia tholloni* Mocquard, 1897d. Bull. Soc. Philom. Paris (8) 9(1): 11–12.

Synonym: *Grayia fasciata* Boulenger, 1901a.

Types: Syntypes (4), MNHNa–b (F.-R. Thollon, 1875–1882), and MTa–b, longest syntype 810 mm, shortest syntype 282 mm.

Type locality: "Brazzaville," and "Congo francais" [= Brazzaville, Brazzaville Region, S Congo, 4°16'S, 15°17'E, elevation 285 m, and French Congo = Congo].

Distribution: West and cen. Africa. Southern Senegal (Dakar, Fatick, Kaolack, Kédougou), W Gambia (Banjul), N Nigeria (Adamawa, Benue, Kebbi, Plateau), SW Chad (Mayo-Kebbi), Cameroon (Adamaoua, Centre, Nord-Ouest, Ouest), Central African Republic (Bamingui-Bangoran, Ouham, Ouham-Pende), Congo (Brazzaville, Plateau, Pool), Democratic Republic of the Congo (Bandundu, Bas-Congo, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Orientale), NE Angola (Lunda), NW Zambia (Luapula, North-Western), South Sudan, SE Ethiopia (Gemu Gofa, Illubabor), SW Kenya (Nyanza, Western), Uganda (Central, Eastern, Northern, Western), E Rwanda (Byumba, Kibungo), E Burundi (Bubanza, Bujumbura, Ruyigi) and W Tanzania (Kigoma, Mara, Mwanza, Rukwa, Kagera, Ukewere Is.), 265–1600 m.

Sources: Boulenger, 1901a, Laurent, 1954b, Dunger, 1972, Pitman, 1974, Joger, 1990, Broadley & Howell, 1991, Largen & Rasmussen, 1993, J.-F. Trape & Mané, 1995b, 2006, Pauwels, 1996, Spawls et al., 2002, Broadley et al., 2003, Chirio & LeBreton, 2007 and Largen & Spawls, 2010.

Remarks: Possibly occurs in Benin *fide* Hughes (2013: 152).

GRYPOTYPHLOPS W.C.H. Peters, 1881b (Typhlopidae)

Synonyms: *Gryptotyphlops* Boulenger, 1893a *(nomen emendatum),* and *Cryptotyphlops* – Nikolsky, 1916 *(nomen incorrectum).*

Type species: *Onychocephalus acutus* A.-M.-C. Duméril & Bibron, 1844.

Distribution: India.

Sources: Hahn, 1908a, Murthy & Rao, 1989, Wallach, 1994b, 1998b, 2003, McDiarmid et al., 1999, Whitaker & Captain, 2004 and N. Khaire, 2006.

1. *Grypotyphlops acutus* (A.-M.-C. Duméril & Bibron, 1844). Erpét. Gén. 6: 333–334. (*Onychocephalus acutus*)

Synonyms: *Onychocephalus unilineatus* A.-M.-C. Duméril & Bibron, 1844, *Typhlops russellii* Gray, 1845 *(non* Schlegel), *Onychocephalus westermanni* Lütken, 1863, *Typhlops excipiens* Jan, 1864, *Onychocephalus malabaricus* Beddome *in* A.C.L.G. Günther, 1875 (*nomen nudum*), *Typhlops psittacus* F. Werner, 1903b, *Typhlops acuta* Constable, 1949, and *Typhlops acuts* – Rajendran, 1986 *(nomen incorrectum).*

Type: Neotype, UF 19902, a 381 mm specimen (W. Auffenberg, 23 June 1964), designated by Wallach (1994b: 214).

Type locality: "one of the Kanheri Caves at the base of the Kanheri Hills, Kanheri National Park, 5 mi. E Borivli and *ca*. 20 mi. NNE Bombay, west-central India, elevation ca. 180 m, 19°14'N, 72°51'E" via neotype selection.

Distribution: Peninsular India (Andhra Pradesh, Bihar, Goa, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Pondicherry, Rajasthan, Tamil Nadu, West Bengal), NSL–300 m.

Sources: Wall, 1918a, M.A. Smith, 1943 and R. Sharma, 2003, 2007.

Remarks: Holotype in MNHN lost *fide* Hahn (1980a: 49).

GYALOPION Cope, 1860e (Colubridae)

Synonym: *Gyalopium* Cope, 1863c *(nomen emendatum).*

Type species: *Gyalopion canum* Cope, 1860e.

Distribution: Southwestern USA and N Mexico.

Fossil records: Upper Pleistocene of SW USA.

Sources: H.M. Smith & Taylor, 1941, L.M. Hardy, 1975a, 1976b, Holman, 1995a and R.D. Bartlett & Tennant, 2000.

1. *Gyalopion canum* Cope, 1860e. Proc. Acad. Nat. Sci. Philadelphia 12(6): 243.

Type: Holotype, USNM 5284 (formerly SIM 4675), a 188–190 mm male (B.J.D. Irwin, 1857–1860).

Type locality: "near Ft. Buchanan, Arizona" [= 5 km SW Sonoita in Hog Canyon, Santa Cruz Co., SE Arizona, SW USA, 31°40'N, 110°42'W, elevation 1425 m].

Distribution: Southwestern USA (ext. SE Arizona, S New Mexico, SW Texas) and N Mexico (Chihuahua, Coahuila, E Durango, Jalisco, Michoacán, S Nuevo León, Querétaro, NW San Luis Potosí, N Sonora, W Zacatecas), 300–2600 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona, New Mexico, Texas).

Sources: Stebbins, 1985, T. Van Devender & Bradley, 1994, Degenhardt et al., 1996, Ponce-Campos & Huerta-Ortega, 1999, Holman, 2000a, Werler & Dixon, 2000 and Ponce-Campos et al., 2001.

Remarks: H.M. Smith & Taylor (1945: 71) erroneously listed the types as USNM 16427–28 (= *Ficimia publia fide* L.M. Hardy, 1975a: 117).

2. *Gyalopion quadrangulare* (A.C.L.G. Günther, 1893 *in* 1885–1902). Biol. Cen.-Amer., Rept. Batr.: 99, pl. 35, fig. a. (*Ficimia quadrangularis*)

Synonym: *Ficimia desertorum* E.H. Taylor, 1936a.

Type: Holotype, BMNH 1946.1.1.75, a 305–319 mm specimen (A. Forrer, 1883).

Type locality: "Mexico, Presidio de Mazatlan in Sinaloa" [= Mazatlan, S Sinaloa State, NW Mexico, 23°14'N, 106°25'W, elevation 10 m].

Distribution: Extreme SW USA (ext. S-cen Arizona) and NW Mexico (S Chihuahua, Nayarit, Sinaloa, E Sonora), 15–1250 m.

Sources: H.M. Smith et al., 2005a–b and H.M. Smith & Lemos-Espinal, 2006b.

H

†*HAASIOPHIS* Tchernov, Rieppel, Zaher, Polcyn & Jacobs, 2000 (†Pachyophiidae)

Type species: †*Haasiophis terrasanctus* Tchernov, Rieppel, Zaher, Polcyn & Jacobs, 2000.
Distribution: Upper Cretaceous of Israel.
Sources: Tchernov et al., 2000, Lee & Scanlon, 2002, Rage & Escuillié, 2003, Rieppel et al., 2003 and Bardet et al., 2008.
Remarks: Possibly a synonym of *Simoliophis fide* Rage & Escuillié (2003: 7).

1. †*Haasiophis terrasanctus* Tchernov, Rieppel, Zaher, Polcyn & Jacobs, 2000. Science 287(5460): 2011–2012, figs. 1–2.

Type: Holotype, HUJ-PAL EJ 695, cranium, 155 trunk vertebrae and 12 caudal vertebrae from a 717 mm (svl) specimen.
Type locality: "Limestone quarries of 'Ein Yabrud, Judean hills, 20 km north of Jerusalem. Aminadav Formation or the slightly younger Bet-Meir Formation, middle part of the Judea Group, early to middle Cenomanian, basal Upper Cretaceous" [Israel].
Distribution: Middle Cretaceous (Cenomanian: 93.9–100.5 mya) of Israel.

HAPSIDOPHRYS J.G. Fischer, 1856b (Colubridae)

Synonyms: *Hapsidrophis* – Jan, 1857 *(nomen incorrectum), Gastropyxis* Cope, 1861c, *Hapsidophis* Reichenow, 1874 *(nomen emendatum), Hapidophrys* – Sauvage, 1877 *(nomen incorrectum), Tropidophidion* F. Werner, 1902, *Hapsidophris* – Sternfeld, 1908b *(nomen incorrectum), Gastrophyxis* – Boulenger, 1919 *(nomen incorrectum), Gastrohis* – Briceño-Rossi, 1934 *(nomen incorrectum), Gastropyrix* – Roux-Estève, 1965 *(nomen incorrectum), Hapsidiphrys* – Knoepffler, 1968 *(nomen incorrectum),* and *Gastrophixis* – Stucki-Stirn, 1979 *(nomen incorrectum).*
Type species: *Hapsidophrys lineatus* J.G. Fischer, 1856b.
Distribution: West and cen. Africa.
Sources: Sternfeld, 1917, Bogert, 1940, Loveridge, 1942, 1957a, Laurent, 1956a, Witte, 1962, Doucet, 1963, Roux-Estève, 1965, Thys van den Audenaerde, 1965, Broadley, 1966a, Dunger, 1973, Pitman, 1974, Villiers, 1975, J.-F. Trape & Roux-Estève, 1995, Villiers & Condamin, 2005, Chirio & Ineich, 2006, Jesus et al., 2009 and Pauwels & Vande weghe, 2008.

1. *Hapsidophrys lineatus* J.G. Fischer, 1856b. Abh. Naturwiss. Ver. Hamburg 3: 111, pl. 2, figs. 5a–b.

Synonyms: *Dendrophis nigrolineatus* Lichtenstein, 1856, *Hapsidophrys lineatus coeruleus* J.G. Fischer, 1856b, and *Gastropyxis orientalis* F. Werner, 1909d.
Types: Syntypes (3), ZMH 4399–4400 (formerly ZMH 102) and ZMH 39, a 958 mm, 932 mm and 781 mm specimen (C. Weiss, 1848), latter syntype lost.
Type locality: "Elmine (West-Afrika)" [= Elmina, Central Region, Ghana, 5°05'N, 1°21'W, elevation NSL].
Distribution: West and cen. Africa. Southeastern Guinea, Sierra Leone, SE Guinea (Macenta, Nzérékoré), Sierra Leone (Southern), Liberia, Ivory Coast (Albidjan, Daloa, Lagunes, San Pédro), S Ghana, S Togo (Plateaux), S Benin (Maritime), S Nigeria (Abia, Anambra, Bayelsa, Delta, Lagos, Rivers), Cameroon (Adamaoua, Centre, Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Central African Republic (Haut-Mbomou, Haute-Sangha, Lobaye, Mbomou, Ombella-Mpoko, Sangha), Gabon (Haut-Ogooué, Moyen-Ogooué, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime), Equatorial Guinea (Bioko Is.), Congo (Brazzaville, Cuvette, Kouilou, Lekoumou, Pool, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), SW Uganda (Central, Western), SW Kenya (Nyanza, cen. Rift Valley, Western), NSL–1830 m.
Sources: Doucet, 1963, Mertens, 1965c, Knoepffler, 1966, Menzies, 1966, Luiselli et al., 2001, Spawls et al., 2002, Chippaux, 2006, Chirio & LeBreton, 2007, Segniagbeto et al., 2011 and Hughes, 2013.
Remarks: Possibly occurs in Rwanda *fide* Spawls et al. (2002: 364).

2. *Hapsidophrys principis* (Boulenger, 1906f). Ann. Mus. Civ. Stor. Nat. Genova (3) 2(42): 213, fig. 8. (*Gastropyxis principis*)

Types: Syntypes (3), MSNG CE 28144A–B and BMNH 1946.1.5.99, longest syntype 1150 mm.
Type locality: "Prince's Island, Gulf of Guinea, West Africa" [= Príncipe Is., São Tomé & Príncipe, 1°32'–1°43'N, 7°20'–7°28'E].
Distribution: São Tomé and Príncipe (Príncipe Is.), 100–300 m.
Sources: Manaças, 1958 and Capoccacia, 1961b.

Remarks: A valid species *fide* Jesus et al., 2009.

3. *Hapsidophrys smaragdinus* (Schlegel, 1837). Essai Phys. Serp. 1: 158, 2: 237–238. (*Dendrophis smaragdina*)

Synonyms: *Chrysopelea smaragdina* H. Boie *in* Schlegel, 1826a *(nomen nudum), Chrysopelia smaragdina* Schlegel, 1826b *(nomen nudum), Leptophis gracilis* Hallowell, 1844a, *Hapsidophrys coeruleus* J.G. Fischer, 1856b, and *Tropidophidion steini* F. Werner, 1902.
Type: Lectotype, RMNH 909 (D.F. Eschricht, 1830–1837), designated by Hoogmoed *in* Hughes & Barry (1969: 1017), longest syntype 750 mm.
Type locality: "Côte de Guinée" [= coastal Ghana *fide* Hughes & Barry, 1969: 1017] via lectotype selection
Distribution: West and cen. Africa. Gambia (Western), Guinea–Bissau (Bolama Is.), SE Guinea (Macenta, Nzérékoré), Sierra Leone (Southern), Liberia (Bong, Grand Gedah, Lofa, Bushrod Is.), Ivory Coast (Abidjan, Guiglo, Lagunes, Tabou, Toumodi), Ghana (Brong-Ahafo, Eastern, Volta), Togo (Maritime, Plateaux), Benin (Atlantique, Borgou, Cotonou, Maritime, Zou), S Nigeria (Akwa Ibom, Anambra, Bayelsa, Cross River, Delta, Lagos, Rivers), S Cameroon (Centre, Est, Littoral, Nord-Ouest, Ouest, Sud, Sud-Ouest), Equatorial Guinea (Littoral, Bioko Is.), Gabon (Estuaire, Haut-Ogooué, Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime, Woleu-Ntem), Central African Republic (Haut-Mbomou, Haute-Sangha, Kemo-Gribingui, Lobaye, Mbomou, Ombella-Mpoko, Sangha), Congo (Brazzaville, Cuvette, Cuvette-Ouest, Kouilou, Lekoumou, Niari, Plateau, Pool, Sangha), E Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), N Angola (Cabinda, Lunda Norte), S Uganda (Central, Western, Bunjako and Sese Is.) and NW Tanzania (Arusha, Kagera, Rubondo Is.), 600–2200 m.
Sources: Johnsen, 1962, Laurent, 1964a, Doucet, 1963, Mertens, 1965c, Thys van den Audenaerde, 1966, Menzies, 1966, Villiers, 1966, Leston & Hughes, 1968, Hughes & Barry, 1969, Leston, 1970, Dunger, 1973, Hakansson, 1981, Hughes, 1983, 2013, J.A. Butler & Reid, 1986, J.B. Rasmussen, 1991, D. Lawson, 1993, Gravlund, 2000a, Spawls et al., 2002, Leaché, 2005, Villiers & Condamin, 2005, Chippaux, 2006, Chirio & LeBreton, 2007, Segniagbeto et al., 2011 and Auliya et al., 2012.
Remarks: Possibly occurs in Rwanda and Burundi *fide* Spawls et al. (2002: 365).

†*HEADONOPHIS* Holman, 1993 (Colubroidea *incertae sedis*)

Type species: †*Headonophis harrisoni* Holman, 1993.
Distribution: Upper Eocene of United Kingdom.
Source: Holman, 1993.

1. †*Headonophis harrisoni* Holman, 1993. Tertiary Res. 14(4): 152–153, figs. 1a–e.

Type: Holotype, MSUVP 1342, one trunk vertebra (D.L. Harrison, late 1980s–1992).
Type locality: "Hatherwood Point, SW Headon Hill Locality, Isle of Wight, England. Totland Bay Member of the Headon Hill Formation (Upper Eocene)."
Distribution: Upper Eocene (Chattian: 33.9–33.9 mya) of United Kingdom (England). Known only from type locality.

†*HECHTOPHIS* Rage, 2001 (Boidae)

Type species: †*Hechtophis austrinus* Rage, 2001.
Distribution: Middle Paleocene of Brazil.
Sources: Rage 2001, 2011.

1. †*Hechtophis austrinus* Rage, 2001. Palaeovertebrata 30(3–4): 116–118, fig. 2.

Type: Holotype, DGM 1326-R, one middle trunk vertebra (J.S. Carvalho, 1949).
Type locality: "São José de Itaboraí, State of Rio de Janeiro, Brazil; middle Paleocene."
Distribution: Middle Paleocene (Itaboraian: 57.0–59.0 mya) of Brazil.

†*HELAGRAS* Cope, 1883a (Boidae)

Type species: †*Helagras prisciformis* Cope, 1883a.
Distribution: Lower and middle Paleocene of USA, and middle Oligocene of USA.
Sources: Holman, 2000a and Longrich et al., 2012b.
Remarks: Hoffstetter & Rage (1972: 111) and Holman (1979a: 209) considered it an Erycine boid.

1. †*Helagras orellanensis* Holman, 1983. J. Herp. 17(4): 417–419, fig. 1.

Type: Holotype, KUVP 49127, one trunk vertebra (KU field crews, 1970s).
Type locality: "University of Kansas Museum of Natural History Site KU-NEBR-22, Brule Formation, late Orellan Land Mammal Age of the middle Oligocene, Toadstool Park Area near Orella, Sioux County, Nebraska, 42°53'N, 103° 35'W."
Distribution: Middle Oligocene (Orellan: 33.3–33.9 mya) of USA (Nebraska). Known only from type locality.
Remarks: Lower Oligocene *fide* Holman (2000a: 75).

2. †*Helagras prisciformis* Cope, 1883a. Proc. Amer. Philos. Soc. 20: 545–546.

Type: Holotype, AMNH 1628, two posterior trunk vertebrae (D. Baldwin, 1881).
Type locality: "Puerco Eocene." Emended to San Juan Basin, northwestern New Mexico, USA *fide* Gilmore (1938: 81) and Rage (1984b: 25).
Distribution: Lower Paleocene (Puercan: 63.3–65.5 mya) and middle Paleocene (Torrejonian: 60.2–63.3 mya) of USA (New Mexico).
Sources: Gilmore, 1938, Holman, 1979a and Rage, 1984b.
Remarks: Original description reprinted in Cope (1883b: 191).

HELICOPS Wagler, 1828a (Xenodontidae)

Synonyms: *Tachynectes* Fitzinger, 1843, *Uranops* Fitzinger, 1843, *Stranops* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Tachynectes* Gray, 1849, and *Uranops* Gray, 1849.
Type species: *Coluber carinicaudus* Wied-Neuwied, 1825c.
Distribution: South America.
Sources: Rossman *in* J.A. Peters & Orejas-Miranda, 1970, Rossman, 1974, Cadle, 1984a, Dixon & Soini, 1986, Pérez-Santos & Moreno, 1988, 1991, Vidal et al., 2000 and Zaher et al., 2009.

1. *Helicops angulatus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 217. (*Coluber angulatus*)

Synonyms: *Coluber alidras* Linnaeus, 1758, *Coluber Surinamensis* G. Shaw, 1802, *Natrix aspera* Wagler *in* Spix, 1824, *Natrix lampronota* Wagler, 1825 (*nomen ineditum*), *Helicops cyclops* Cope, 1869b, *Helicops fumigatus* Cope, 1869b, and *Helicops caralina* Briceño-Rossi, 1934.
Type: Holotype, NHR Lin-17 (formerly MAFR), a 600 mm female (Mus. Drottn.).
Type locality: "Asia" (in error *fide* Hoge, 1964d: 56).
Distribution: Northern South America. Colombia (Amazonas, Atlántico, Antioquia, Boyacá, Caquetá, Casanare, Guaviare, Meta, Vaupés), Venezuela (Amazonas, Anzoátegui, Apure, Barinas, Bolívar, Cojedes, Delta Amacuro, Guárico, Mérida, Monagas, Portuguesa, Sucre, Zulia), Trinidad and Tobago (Trinidad), Guyana (Barima-Waini, Cuyuni-Mazaruni, Demerara-Mahaica, Essequibo Islands-West Demerara, Mahaica-Berbice, Pomeroon-Supenaam, Upper Demerara-Berbice), Suriname (Commewijne, Coronie, Marowijne, Nickerie, Saramanca, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Ecuador (Napo, Pastaza), E Peru (Loreto, Madre de Dios, Pasco, San Martin), E Bolivia (Beni, Santa Cruz) and N Brazil (Acre, Amazonas, Bahia, Ceará, Distrito Federal, Goiás, Maranhão, ? Mato Grosso, Pará, ? Pernambuco, Rondônia, Roraima, Sergipe, Tocantins), NSL–2410 m.
Sources: Hoge, 1960d, Roze, 1966a, Emsley, 1977, Cunha & Nascimento, 1978, Abuys, 1983d, Chippaux, 1987, Dixon & Soini, 1986, Lancini, 1986, Duellman, 1990, 2005, Duellman & Salas, 1991, Henle & Ehrl, 1991, Perez-Santos & Moreno, 1991, Gorzula & Señaris, 1998, Starace, 1998, Freitas, 1999, Frota. 2005, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Infante-Rivero et al., 2008, Navarrete et al., 2009, Roberto et al., 2009, Morato et al., 2011 and C.J. Cole et al., 2013.
Remarks: ZMUU has one Linnaean specimen *fide* Lönnberg (1896: 7).

2. *Helicops carinicaudus* (Wied-Neuwied, 1825c). Beitr. Natur. Brasil. 1: 300–304. (*Coluber carinicaudus*)

Synonyms: *Homalopsis carinicauda* – Schlegel, 1837, *Helicops trivittatus* Cope, 1878b, and *Helicops carinicauda triserialis* Lindholm *in* Lampe & Lindholm, 1902.
Type: Holotype, AMNH 3365, a 909 mm specimen (A.M.P. zu Wied–Neuwied, 26 Nov.–19 Dec. 1815).
Type locality: "Urwäldern am Flusse Itapémirim (Itapémiri), Brasilien" [= Brazil, Estado do Espírito Santo, Río Itapémirim, from label in bottle containing holotype].
Distribution: Southeastern Brazil (Espírito Santo, Paraná, Rio de Janeiro, Rio Grande do Sul, Santa Caterina, São Paulo, Cannanéia, Cardoso, Comprida, Porchat, Santo Amaro and São Vicente Is.), NSL–925 m.
Sources: Bertoni, 1918, Lema, 1958, 1961a, Vaz-Ferreira & Sierra de Soriano, 1960, Lema & Fabían-Beurmann, 1977, J.D. Williams & Francini, 1991, Hofstadler-Dieques & Cechin, 1992, Marques et al., 2001, Yuki & Lema, 2006 and Cicchi et al., 2007.
Remarks: Colombian record (Magdalena Valley) needs confirmation *fide* Pérez-Santos & Moreno (1989: 174).

3. *Helicops danieli* Amaral, 1938b. Mem. Inst. Butantan (1937) 11: 232–233.

Type: Holotype, IB 9872, a 235 mm female ("Hno. Daniel" J.G. Patiño, 1928–1938), destroyed by fire on 15 May 2010.
Type locality: "Carare (Santander), Colombia" [= Carare, Puerto Parra, W Santander Dept., NW Colombia, 6°47'N, 74°06'E, elevation 90 m].
Distribution: Northwestern Colombia (Antioquia, Atlántico, Bolívar, Chocó, Córdoba, Santander, Sucre), NSL–2050 m.
Sources: Nicéforo-Maria, 1942 and Rossman, 2002b.
Remarks: Usually occurs below 500 m *fide* Rossman (2002b: 592).

4. *Helicops gomesi* Amaral, 1921. Anex. Mem. Inst. Butantan 1(1): 7–10, pl. 1, figs. 1–4.

Type: Holotype, IB 1843, a 695 mm female (A.V. d'Alkmim, 4 Dec. 1919), destroyed by fire on 15 May 2010.
Type locality: "Estação Costa Pinto, na linha Sorocabana, Estado de S. Paulo, Brasil."
Distribution: Southeastern Brazil (São Paulo), 750 m.
Source: Valdujo & Nogueira, 2001.

5. *Helicops hagmanni* Roux, 1910a. Zool. Anz. 36(25): 439–440.

Synonym: ? *Uranops lepricurii* Fitzinger, 1867.
Type: Holotype, NMBA 6281, a 630–634 mm male (G.A. Hagmann, 1894–1910).
Type locality: "in der Nähe von Santarem, N. Brasilien" [= vicinity of Santarem, Pará State, N Brazil, 2°26'S, 54°42'W, elevation 35 m].
Distribution: Northern South America. Southern Colombia (Amazonas, Caquetá, Vaupés [UTA R3782]), S Venezuela (Amazonas) and N Brazil (Amapá, Amazonas, Pará, Rondônia), 35–70 m.
Sources: Hoge, 1964d, Hoge et al., 1973, Rossman, 1975, Cunha & Nascimento, 1978, Hoogmoed, 1979 and Navarrete et al., 2009.
Remarks: Type listed as female *fide* Roux (1910: 439). Type locality erroneously listed as near to Suriname *fide* Hoge (1967: 220) and Amazonas Dept. *fide* Rossman (1975: 415). Probably occurs in Peru *fide* Rossman (1975: 415).

H

6. *Helicops infrataeniatus* Jan, 1865c. Arch. Zool. Anat. Fis. 3(2): 253.

Synonyms: *Helicops infrataeniatus* Jan, 1863b (*nomen nudum*), *Helicops carinicaudus gastrosticta* Jan, 1863b (*nomen nudum*), *Helicops carinicaudus gastrosticta* Jan, 1865c, *Helicops trivittatus* Cope, 1877 (*non* Gray), *Calopisma septemvittatum* J.G. Fischer, 1879, *Helicops baliogaster* Cope, 1885a, and *Helicops pictiventris* F. Werner, 1897a.
Type: Lectotype, ZMH 4331 (formerly ZMH B88 da), a 515 mm male, designated by Rossman (2000: 126).
Type locality: "Suriname" [= Suriname] (in error *fide* Rossman, 2000: 126) via lectotype selection.
Distribution: Southern Brazil (Mato Grosso do Sul, Paraná, Rio Grande do Sul, Santa Catarina, São Paulo), E Paraguay (Alto Paraná, Amambaty, Canindeyú, Itapúa, San Pedro), Uruguay (Artigas, Canelones, Cerro Largo, Rivera, Rocha, Salto, Tacuarenbo, Treinta y Tres) and N Argentina (Buenos Aires, Chaco, Corrientes, Entre Ríos, Formosa, Misiones, Santa Fe), NSL–925 m.
Sources: Cei, 1994, Lema, 1995, Rossman, 2000, Carreira-Vidal et al., 2005, Yuki & Lema, 2005, J. Köhler & Güsten, 2007, Cacciali, 2008 and Filho & Aoki, 2011.
Remarks: Photographs of the lectotype in Rossman (2000: fig. 2).

7. *Helicops leopardinus* (Schlegel, 1837). Essai Phys. Serp. 1: 173, 2: 358–359. (*Homalopsis leopardina*)

Synonyms: *Helicops prieurii* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Helicops leprieurii* A.-M.-C. Duméril, Bibron & Duméril, 1854a, and *Helicops prieurii* A.-M.-C. Duméril, Bibron & Duméril, 1854c (*nomen emendatum*).
Types: Syntypes (2), RMNH 1158, a 480 mm male, and RMNH 1159, a 600 mm female (N.C. de Fremery).
Type locality: Unknown.
Distribution: South America. Southern Colombia (Amazonas), Guyana, Suriname (Saramacca), N French Guiana (Cayenne, Saint-Laurent du Moroni), Brazil (Amapá, Bahia, Ceara, Distrito Federal, Goias, Mato Grosso, Pará, Pernambuco, Piauí, Tocantins), E Peru (Loreto, Madre de Dios), Bolivia (Beni, Cochabamba, La Paz, Santa Cruz), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro, Kururu, Modesto, Talavera and Yacyreta Is.) and N Argentina (Buenos Aires, Chaco, Corrientes, Entre Ríos, Formosa, Jujuy, Misiones, Salta, Santa Fe), NSL–340 m.
Sources: Vanzolini et al., 1980, Abuys, 1983d, Chippaux, 1987, F.D. Williams & Francini, 1991, Cei, 1994, Starace, 1998, Freitas, 1999, Leynaud & Bucher, 1999, Campos-Nogueira, 2001, Doan & Arizábal, 2002, Frota, 2005, Cacciali, 2008 and Recorder et al., 2011.

8. *Helicops modestus* A.C.L.G. Günther, 1861c. Ann. Mag. Nat. Hist. (3) 7(42): 425–426, 2 figs.

Synonyms: *Helicops leprieurii moestus* Jan, 1863b (*nomen nudum*), *Helicops leprieurii moesta* Jan, 1865c, and *Helicops assimilis* J.T. Reinhardt, 1866.
Type: Holotype, BMNH 1946.1.14.42 (formerly RMNH), a 525 mm female.
Type locality: "North America" (in error). Corrected to Tropical America *fide* A.C.L.G. Günther (1861c: 426).
Distribution: Central and S Brazil (Bahia, Distrito Federal, Goiás, Minas Gerais, Rio de Janeiro, São Paulo), 970–1010 m.
Sources: Nogueira, 2001 and Freitas & Santos, 2011.

9. *Helicops pastazae* Shreve, 1934. Occ. Pap. Boston Soc. Nat. Hist. (8): 129–130.

Type: Holotype, MCZ 36993, a 322 mm female (C. Spencer, Jan. 1931–Aug. 1932).
Type locality: "along the Pastaza River, from Canelos to the Marañon River, Ecuador" [= Río Pastaza bet. Canelos (1°35'S, 77°45'W, 500 m), Pastaza Prov., Ecuador and Río Marañon junction (4°55'S, 76°25'W, 130 m), Loreto Dept., Peru].
Distribution: Northwestern South America. Venezuela (Barinas, Bolívar, Táchira, Zulia), Colombia (Amazonas, Antioquia, Caquetá, Meta, Norte de Santander), E Ecuador (Morona-Santiago, Napo,

Pastaza, Zamora-Chinchipe) and N Peru (Amazonas, Loreto), NSL–1140 m.

Sources: Rossman, 1976, Markezich & Rossman, 1992, Markezich, 2002 and Navarrete et al., 2009.

Remarks: Type erroneously listed as MCZ 36963 *fide* Shreve (1934: 130). Collection date listed as 1932 *fide* Rossman (1976: 4).

10. *Helicops petersi* Rossman, 1976. Occ. Pap. Mus. Zool., Louisiana St. Univ. (50): 2–4, fig. 1 (paratype).

Type: Holotype, USNM 196360 (formerly JAP 2758), a 573 mm male (J.A. Peters, 31 Oct.–3 Nov. 1958).

Type locality: "from the east bank of the Mishualli River, 1 mile NE Tena, Napo-Pastaza Prov., Ecuador" [= 1 mi. NE Tena along Río Misahuallí, Napo Prov., NE Peru, ca. 0°59'S, 77°48'W, elevation 535 m].

Distribution: Northeastern Ecuador (Napo, Orellana, Sucumbios), 300–570 m.

11. *Helicops polylepis* A.C.L.G. Günther, 1861c. Ann. Mag. Nat. Hist. (3) 7(42): 426–427.

Synonyms: *Tachynectes chrysostictus* Cope, 1862b, and *Helicops spixii* Jan, 1863b.

Type: Holotype, BMNH 1946.1.13.25, a 426 mm male.

Type locality: "Upper Amazon" [= Río Amazonas, Amazonas State, NW Brazil].

Distribution: Northern South America. Southern Colombia (Amazonas, Meta, Putumayo), Ecuador (Oriente, [FMNH 23484]), E Peru (Loreto, Madre de Dios), N Bolivia (Beni, Cochabamba, La Paz) and N Brazil (? Amapá, Amazonas, Maranhão [UOMNH 31518], Mato Grosso, Pará), 200–1000 m.

Sources: F. Werner, 1901b, Cunha & Nascimento, 1978, 1993, Duellman, 1990, 2005, Duellman & Salas, 1991 and Frota, 2005.

12. *Helicops scalaris* Jan, 1863b. Elenco Sist. Ofidi: 76.

Synonym: *Helicops hogei* Lancini, 1964.

Type: Holotype, MZUT, a 410 mm male, lost *fide* O. Elter *in* Rossman (2002a: 3).

Type locality: "Venezuela."

Distribution: Extreme NW South America. Northern Colombia (Norte de Santander) and Venezuela (Amazonas, Delta Amacuro, Mérida, Táchira, Trujillo, Zulia), NSL–500 m.

Sources: Jan, 1868 *in* Jan & Sordelli, 1866–1870, Lancini-V, 1964, 1986, Roze, 1966a, Perez-Bravo, 1978, Hoogmoed, 1979, Lancini, 1986, Rossman, 2002a and Navarrete et al., 2009.

Remarks: Photograph of the holotype of *H. hogei* in Rossman (2002a: fig. 11).

13. *Helicops tapajonicus* Frota, 2005. Phyllomedusa 4(1): 62–66, figs. 1–3.

Type: Holotype, MCP 15380, a 582 mm female (J. Lúcio, 20 May 2001).

Type locality: "Comunidade de Parauá (02°50'38" S, 55°10'54" W), margem direita do rio Tapajós, municipio e Santarém, estado do Pará, Brasil."

Distribution: Northeastern Brazil (Pará), 15 m.

14. *Helicops trivittatus* (Gray, 1849a). Cat. Snakes Brit. Mus.: 70–71. (*Myron trivittatus*)

Type: Holotype, BMNH 1946.1.13.99, an adult female (Zool. Soc. London).

Type locality: Unknown.

Distribution: Northeastern Brazil (Amapá, NE Mato Grosso, Pará, Tocatins, Marajó Is.), NSL–300 m.

Sources: Boulenger, 1893a, Cunha & Nascimento, 1993 and Rossman, 2010.

Remarks: Type specimen discussed by Rossman (2010: 272). A second specimen was labeled "India?" (in error).

15. *Helicops yacu* Rossman & Dixon, 1975. Herpetologica 31(4): 412–413.

Type: Holotype, TCWC 39093, a 352 mm (svl) female (P. Soini, May 1972).

Type locality: "Moropon, Departamento de Loreto, Peru."

Distribution: Eastern Peru (Loreto) and W Brazil (Acre), 100 m.

Remarks: Probably a subspecies of *H. pastazae* Shreve *fide* Rossman & Abe (1979: 9).

HELMINTHOPHIS W.C.H. Peters, 1860d (Anomalepididae)

Synonyms: *Idiotyphlops* Jan, 1860 *in* Jan & Sordelli, 1860–1866, and *Helmintophis* – Hoffmann, 1890 *(nomen incorrectum).*

Type species: *Typhlops frontalis* W.C.H. Peters, 1860d.

Distribution: Lower Central America and NW South America.

Sources: F. Werner, 1921a, Dunn, 1944, Robb & Smith, 1966, J.A. Peters & Orejas-Miranda, 1970, Hahn, 1980a, Pérez-Santos & Moreno, 1988, Wallach, 1993a, McDiarmid et al., 1999 and Tipton, 2005.

Remarks: An undescribed species present on Trinidad *fide* Wynn & Wallach (unpubl. data).

1. *Helminthophis flavoterminatus* (W.C.H. Peters, 1857b). Mber. Königl. Akad. Wiss. Berlin 1857(8): 402. (*Typhlops flavoterminatus*)

Synonym: *Typhlops multilatus* F. Werner, 1900a.

Types: Syntypes (6), ZMB 1426–30, and ZMH, longest syntype 240 mm (C. Moritz), the latter destroyed in July 1943 during World War II.
Type locality: "Carácas" [= Caracas, Distrito Federal State, N Venezuela, 10º29'N, 66º54'W, elevation 925 m].
Distribution: Northwestern Venezuela (Amazonas, Aragua, Distrito Federal, Miranda, Zulia) and W Colombia (Chocó, Norte de Santander), NSL–1800 m. Introduced into Mauritius.
Sources: A.C.L.G. Günther, 1870, Roze, 1966a, Lancini & Kornacker, 1989, Wallach & Günther, 1997, Mijares-Urrutia & Arends, 2000 and Navarrete et al., 2009.
Remarks: ZMB catalogue records Moritz as collector, not Gollmer and Moritz as stated in original description *fide* Bauer et al. (2002: 158).

2. *Helminthophis frontalis* (W.C.H. Peters, 1860d). Mber. Königl. Akad. Wiss. Berlin 1860(10): 517–518, pl., figs. 1, 1a–1c. (*Typhlops frontalis*)

Types: Lectotype, ZMB 3925, possibly a 145 mm female (K. Hoffmann, 1853–1859), designated by Hahn (1980a: 2).
Type locality: "Costa Rica" via lectotype selection.
Distribution: Costa Rica (Alajuela, Heredia, San José) and W Panama (Chiriquí), 95–1435 m.
Sources: Bocourt, 1882 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, E.H. Taylor, 1951, Savage, 2002 and Solórzano, 2004.

3. *Helminthophis praeocularis* Amaral, 1924a. Proc. New England Zool. Club 9: 28.

Type: Holotype, MCZ 17960, a 214 mm specimen (H. Nicéforo-Maria, March 1924).
Type locality: "Honda, Colombia" [= Honda, upper Río Magdalena Valley, Tolima Dept., cen. Colombia, 05º12'N, 74º45'W, elevation 210 m].
Distribution: Central Colombia (Antioquia, Meta, Norte de Santander, Santander, Tolima), 200–1280 m.
Source: Medem, 1965.

HELOPHIS Witte & Laurent, 1942 (*nomen substitutum*) (Natricidae)

Synonym: *Pelophis* Witte, 1922 *(nomen praeoccupatum).*
Type species: *Pelophis schoutedeni* Witte, 1922.
Distribution: Democratic Republic of the Congo.
Sources: Witte, 1933a, 1962, Witte & Laurent, 1942 and Laurent, 1956b.

1. *Helophis schoutedeni* (Witte, 1922). Rev. Zool. Bot. Afr. 10(3): 318–319. (*Pelophis schoutedeni*)

Types: Syntypes (2), MRAC 2468, a 446 mm specimen (H. Schouteden, 24 Feb. 1924), and MRAC 2469, a 540 mm specimen (H. Schouteden, 23 May 1921).
Type locality: "Kwamouth (district du Moyen-Congo), Congo" [= W Bandundu Region, Democratic Republic of the Congo, 3°20'S, 16°10'E] and "Tondu, sur le Lac Tumba (district de l'Équateur), Congo" [= W Equateur Prov., Democratic Republic of the Congo, 0°50'S, 18°10'E].
Distribution: Western Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa), 285–450 m.

HEMACHATUS J. Fleming, 1822 (Elapidae)

Synonyms: *Sepedon* Merrem, 1820 *(nomen praeoccupatum), Haemacathus* Gray *in* Griffith & Pidgeon, 1831 *(nomen emendatum), Haemachates* – Duvernoy, 1833b *(nomen incorrectum), Spedon* – Schinz, 1833 *(nomen incorrectum), Sepidon* Swainson, 1839 *(nomen emendatum), Hamachates* – A.-M.C., Duméril, Bibron & Duméril, 1854b *(nomen incorrectum), Sipedon* – Lockington, 1886 *(nomen incorrectum), Merremia* Berg, 1901 *(nomen substitutum), Sepedonophis* H.M. Smith, 1936 *(nomen substitutum), Hemachtus* – J.H. Welsh, 1966 *(nomen incorrectum), Haemachatus* – H.A. Skinner, 1973 *(nomen incorrectum), Haemachates* – Golay, Smith, Broadley, Dixon, McCarthy, Rage, Schätti & Toriba, 1993 *(nomen incorrectum),* and *Hamachates* – Golay, Smith, Broadley, Dixon, McCarthy, Rage, Schätti & Toriba, 1993 *(nomen incorrectum).*
Type species: *Coluber haemachates* Bonnaterre, 1790.
Distribution: Southeastern Africa.
Sources: V.F.M. FitzSimons, 1962a, 1974, Broadley, 1962c, 1983, Broadley & Cock, 1975, Keogh, 1998, Marais, 2004, Dobiey & Vogel, 2007, Zaher et al., 2009, Hoser, 2012e and Broadley & Blaylock, 2013.

1. *Hemachatus haemachates* (Bonnaterre, 1790). Tabl. Ency. Méth., Ophiol.: 31–32, pl. 37, fig. 2. (*Coluber haemachates*)

Synonyms: *Coronella catus* Laurenti, 1768 (*nomen oblitum*), *Vipera haemachate* Lacépède, 1789 *(nomen rejiciendum)*, *Coluber hikkanella* Bonnaterre, 1790, *Hemachatus vulgaris* Fleming, 1822, *Natrix diphorolepidota* Wagler, 1825 (*nomen ineditum*), *Naia capensis* A. Smith, 1826, *Sepedon hemachata* – Flower, 1929, and *Hemachatus haemachatus* – Moroz, Grotto, Goldblum & Vries, 1967 *(nomen incorrectum).*
Type: Holotype, formerly MNHN, a 423 mm specimen (King of France's cabinet, Paris), lost *fide* Broadley *in* Golay et al. (1993: 138).
Type locality: "Le Japon, la Perse" [= Japan and Iran] (in error). Corrected to South Africa *fide* Bogert (1940: 87) and V.F.M. FitzSimons (1962a: 287).
Distribution: Southeastern Africa. Eastern Zimbabwe (Manicaland), Swaziland, Lesotho and South Africa

(Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Mpumalanga Western Cape), NSL–2500 m.

Remarks: NHR Lin-1632 (MAFR, Mus. Drottn.) is a Linnaean specimen. In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Coluber haemachates* Bonnaterre is designated a *nomen protectum* and *Coronella catus* Laurenti a *nomen oblitum*.

HEMEROPHIS Schätti & Utiger, 2001 (Colubridae)

Type species: *Zamenis socotrae* A.C.L.G. Günther, 1881a.
Distribution: Yemen (Socotra Is.).
Sources: Showler, 1994, Schätti & Utiger, 2001, Nagy et al., 2004 and Utiger et al., 2005.

1. *Hemerophis socotrae* (A.C.L.G. Günther, 1881a). Proc. Zool. Soc. London 49(2): 463, pl. 41. (*Zamenis socotrae*)

Types: Syntypes (3), BMNH 1946.1.14.97–99, one male and two females, longest syntype 826–860 mm (I.B. Balfour, 1879–1880).
Type locality: "Island of Socotra" [= Socotra Is., Yemen, Arabian Sea].
Distribution: Yemen (Socotra Is.), NSL– 900 m.
Source: Razzetti et al., 2011.

2. *Hemerophis zebrinus* (Broadley & Schätti, 2000). Madoqua (1997) 19(2): 172–174, figs. 2–3, 5. (*Coluber zebrinus*)

Type: Holotype, SMWN 8046, a 385 mm male (M. Lindeque & M. Griffin, 10 April 1991).
Type locality: "near the Canene River, at Ruacana, western Owamboland, Namibia (17º25'S, 14º10'E)."
Distribution: Namibia (Damaraland, Kaokoland, Owambo), 780 m.
Source: Schätti, 1986b.

HEMIASPIS Fitzinger, 1861 (Elapidae)

Synonyms: *Drepanodontis* Worrell, 1961a, and *Hemiaspus* – Vitt, 1983 *(nomen incorrectum).*
Type species: *Alecto signata* Jan, 1859a.
Distribution: Eastern Australia.
Sources: Cogger et al., 1983a, Shine, 1987a, Gow, 1989, Hutchinson, 1990, Greer, 1997, Cogger, 2000, Scanlon & Lee, 2004, Sanders et al., 2008, Zaher et al., 2009 and Hoser, 2012e.

1. *Hemiaspis damelii* (A.C.L.G. Günther, 1876). J. Mus. Godeffroy 5(12): 46. (*Hoplocephalus damelii*)

Synonyms: *Hoplocephalus dämelii* – F. Müller, 1878b *(nomen incorrigendum), Hoplocephalus suboccipitalis* Ogilby, 1892, and *Denisonia daemelii* Boulenger, 1896a *(nomen emendatum).*
Types: Syntypes (3+), BMNH 1946.1.18.89–90 [Peak Downs], and ZMH 4369 (formerly ZMH 824) [Queensland], longest syntype 381 mm (Dämel), location of other syntypes unknown *fide* Cogger et al. (1983: 226).
Type locality: "Rockhampton and Peak Downs, Australia" [= Rockhampton, 23°23'S, 150°31'E, elevation 15 m, and Peak Downs, 23°04'S, 148°10'E, elevation 220 m, SE Queeensland, Australia].
Distribution: Eastern Australia (SE Queensland, NE New South Wales), NSL–340 m.

2. *Hemiaspis signata* (Jan, 1859a). Rev. Mag. Zool. (2) 11: 124, 128. (*Alecto signata*)

Synonyms: *Hoplocephalus signatus* – De Vis, 1884, and *Denisonia vagrans* S.W. Garman, 1901.
Type: Holotype, SMF-B 9338,2a, a 460 mm specimen (W. Kirchner & A. becker, 1847–1859), lost *fide* Cogger et al. (1983: 226).
Type locality: "Nouvelle-Hollande" [= Australia]. Restricted to Sydney, New South Wales, Australia *fide* Boettger (1898: 117).
Distribution: Eastern Australia (ext. E Queensland, ext. E New South Wales, S Victoria), NSL–1320 m.
Remarks: Supplemental original description in Jan (1859e: pl. C, fig. 4). Hallerman (1998: 206) listed holotype as ZMH 4433 (formerly ZMH 775) from Sydney (Kraft, 1861).

HEMIBUNGARUS W.C.H. Peters, 1862b (Elapidae)

Synonyms: *Brachyrhynchus* Fitzinger, 1843 *(nomen praeoccupatum), Hemibungars* – Noguchi, 1909 *(nomen incorrectum), Hemibungaros* – Brazil, 1914 *(nomen incorrectum), Hemibungaus* – Takahashi, 1930 *(nomen incorrectum),* and *Hemibngarus* – Maik, 1933 *(nomen incorrectum).*
Type species: *Elaps calligaster* Wiegmann *in* Meyen, 1834.
Distribution: Philippines.
Sources: Golay et al., 1993, David & Ineich, 1999, Ota et al., 1999, Slowinski et al., 2001, Castoe et al., 2007, Zaher et al., 2009 and Hoser, 2012e.
Remarks: A valid genus *fide* Castoe et al. (2007a: 824).

1. *Hemibungarus calligaster* (Wiegmann *in* Meyen, 1834). Nova Acta Caesar.-Leop. Carol. 17(1): 253–254, pl. 20, fig. 2. (*Elaps calligaster*)

Synonyms: *Elaps caligaster* – Jan, 1858, *(nomen incorrectum), Naja fasciata* W.C.H. Peters, 1861c *(nomen*

praeoccupatum), Hemibungarus gemianulis W.C.H. Peters, 1872b, *Hemibungarus gemmiannulis* – Boettger, 1886c *(nomen incorrectum),* and *Hemibungarus mcclungi* E.H. Taylor, 1922a.

Type: Holotype, ZMB 2742, a 376–377 mm specimen (F.J.F. Meyen, 1830–1832), lost *fide* R. Günther (*in litt.*)

Type locality: "Manila" [= Manila, Manila Prov., SW Luzon Is., N Philippines, 14°36'N, 120°59'E, elevation 10 m].

Distribution: Philippines (Catanduanes, Cebu, Luzon, Masbate, Mindoro, Negros, Panay, Polillo), 10–800 m.

Sources: Leviton, 1964b, McDowell, 1987, Ross & Gonzales, 1992, Gaulke & Altenbach, 1994, Kucharzewski & Tillack, 2007 and Siler et al., 2011.

Remarks: Records for Balabac, Paraqua, Mindanao and Samar need confirmation *fide* Leviton (1964b: 544) and Kucharzewski & Tillack (2007: 54).

H

HEMIRHAGERRHIS Boettger, 1893c (Psammophiidae)

Synonyms: *Rhamphophis* – Boulenger, 1892d *(lapsus calami), Hemirhagerchis* – Palacky, 1898 *(nomen incorrectum), Hemirhagerchis* – Palacky, 1898 *(nomen incorrectum), Hemirhagerhis* – Palacky, 1898 *(nomen incorrectum), Hemirhaggeris* – Scortecci, 1931 *(nomen incorrectum), Hemihagerrhis* – Briceño-Rossi, 1934 *(nomen incorrectum), Hemiphagerris* – Ionides, 1950 *(nomen incorrectum), Hemirhaggerhis* – Laurent, 1964a *(nomen incorrectum), Hemirhaggerrhis* – H.A. Skinner, 1973 *(nomen incorrectum), Hemirrhagerris* – H.A. Skinner, 1973 *(nomen incorrectum), Hemirhagerris* – Dowling *in* Dowling & Duellman, 1978 *(nomen incorrectum),* and *Hermirhagerrhis* – Spawls, 1978 *(nomen incorrectum).*

Type species: *Hemirhagerrhis kelleri* Boettger, 1893c.

Distribution: Central and East Africa.

Sources: Bogert, 1940, Loveridge, 1957a, V.F.M. FitzSimons, 1962a, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993, Brandstätter, 1995, Broadley & Hughes, 2000, Spawls et al., 2002, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Hemirhagerrhis hildebrandtii* (W.C.H. Peters, 1878). Mber. Königl. Akad. Wiss. Berlin 1878(3): 205–206, pl. 2, fig. 6. (*Ablabes hildebrandtii*)

Type: Holotype, ZMB 9282.

Type locality: "Kitui (Ukamba)" [= Kitui Catholic Church, Ukamba Distr., S Eastern Prov., Kenya, 1°31'S, 37°14'E, elevation 1615 m].

Distribution: Northeastern Africa. South Sudan, SE Ethiopia (Bale, Hararge, Sidamo), SW Somalia (Bakool, Gedo), N Kenya (N North-Eastern, N Rift Valley) and NE Tanzania (Arusha, Kilimanjaro, Tanga), 150–1615 m.

Source: Largen & Spawls, 2010.

Remarks: Resurrected as a valid species *fide* Broadley & Hughes (2000: 9).

2. *Hemirhagerrhis kelleri* Boettger, 1893c. Zool. Anz. 16(417): 129.

Synonym: *Amplorhinus taeniatus* Sternfeld, 1908e.

Type: Lectotype, SMF 19906 (formerly SMF-B 9119, 1a), possibly a 350 mm adult female (C. Keller, 1893), designated by Mertens (1922:181).

Type locality: "Abdallah, südlich vom Webiflusse, Somaliland" [= Abdula, S of Webi River, Hararge Prov., E Ethiopia, 9°27'N, 42°16'E, elevation 2485 m] via lectotype selection.

Distribution: Northeastern Africa. South Sudan, SE Ethiopia (Bale, Hararge, Sidamo), Somalia (Bay, Gedo, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer), Kenya (Coast, North-Eastern, Lamu Is.) and N Tanzania (Arush), 200–2485 m.

Source: Largen & Spawls, 2010.

Remarks: Three syntypes listed in original description but one specimen listed by Boettger (1898: 99). Lectotype listed as holotype *fide* Broadley & Hughes (2000: 6–7).

3. *Hemirhagerrhis nototaenia* (A.C.L.G. Günther, 1864c). Proc. Zool. Soc. London 32(1): 309, pl. 26, fig. 1 (*Coronella nototaenia*)

Synonyms: *Amplorhinus güntheri* Mocquard, 1906 *(nomen incorrigendum).*

Type: Holotype, BMNH 1946.1.8.51, a 368 mm male (J. Kirk, 1858–1864).

Type locality: "regions bordering the Zambesi" [= vicinity of Zambezi River, Mozambique]. Emended to Rios de Sena, Zambezi *fide* Boulenger, 1896a: 126 [= Villa de Senna, S bank of Zambezi River, Sofala Prov., Mozambique, 17°27'S, 35°02'E, elevation 75 m].

Distribution: West, cen. and E Africa. Southeastern Burkina Faso (Est), N Togo (Kara), N Benin (Alibori), S Niger (Maradi), SW Chad (Chari-Baguirmi), Central African Republic (Ombella-Mpoko, Ouham, Vakaga), S Sudan (Janub Kurdufan) W South Sudan (Bahr El Ghazal, Western Equatoria), Somalia (Bay, Galguduud, Gedo, Jubbada Dhexe, Jubbada Hoose, Shabeellaha Hoose), E Kenya (Eastern, North-Eastern, N Rift Valley), E Tanzania (Kilimanjaro, Lindi, Morogoro, Mwanza, Mtwara, Piwani, Rukwa, Tanga), E Democratic Republic of the Congo (Katanga, Orientale), SW Angola (Huambo, Huíla), Zambia (Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, Western), Malawi (Northern), S Mozambique (Gaza, Inhambane, Manica, Niassa, Sofala, Tete), Zimbabwe (Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), N Botswana (Central, North West), N Namibia (Caprivi,), Swaziland, and NE South Africa

(KwaZulu-Natal, Limpopo, Mpumalanga), NSL–1600 m.

Sources: Mertens, 1955, 1971, Sweeney, 1961, Witte, 1962, Pitman, 1974, Broadley & Cock, 1975, Broadley, 1983, Roman, 1980, 1984, Branch, 1988, Haagner, 1990, Chirio & Ineich, 1993, Broadley et al., 2003, Marais, 2004, Branch et al., 2005, Chirio & Ineich, 2006, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Segniagbeto et al., 2011, Broadley & Blaylock, 2013 and Hughes, 2013.

Remarks: Probably occus in Cameroon *fide* Chirio & LeBreton (2007: 448) and possibly occurs in Uganda *fide* Pitman (1974: 146). Record from Bas Congo, Democratic Republic of the Congo doubtful *fide* Thys van den Audenaerde (1965: 380).

4. *Hemirhagerrhis viperina* (Bocage, 1873a). J. Sci. Math. Phys. Nat. Lisbon (1)1: 222–223. (*Psammophylax viperinus*)

Type: Holotype, MBL 1715, destroyed by fire 18 March 1978.

Type locality: "Dombe (Benguella)" [= Dombe Grande, Benguela Distr., W Angola, 12°57'S, 13°06'E, elevation 45 m].

Distribution: Southwestern Angola (Benguela, Huambo, Huíla, Namibe) and N Namibia (Erongo, Kunene, Omaheke, W Otjozondjupa), 45–1400 m.

Sources: Mertens, 1955, 1971 and Elzen, 1980.

Remarks: A valid species *fide* Broadley & Hughes (2000: 7).

HEMORRHOIS F. Boie, 1826 (Colubridae)

Synonyms: *Haemorrhois* F. Boie, 1827 *(nomen emendatum),* and *Periops* Wagler, 1830.

Type species: *Coluber hippocrepis* Linnaeus, 1758.

Distribution: Southern Eurasia, Middle East and North Africa.

Fossil records: Upper Pliocene to upper Pleistocene of Morocco and Spain.

Sources: Welch, 1980, 1983a, Schätti & Wilson, 1986, Schátti & Utiger, 2001 and Nagy et al., 2004.

1. *Hemorrhois algirus* (Jan, 1863b). Elenco Sist. Ofidi: 60. (*Periops algira*)

Synonyms: *Periops hippocrepis algira* Jan, 1857 (*nomen nudum*), *Coluber algirus intermedius* F. Werner, 1929b, and *Coluber algirus villiersi* Bons, 1962.

Types: Syntypes (4), MNHN 3575, MNHN 7464, and formerly MSNM, destroyed in 1943 during World War II.

Type locality: "Algeri, and Sphax d' Algeria" [= Tunisia].

Distribution: Northwestern Africa. Northern Mauritania (Adrar, Dakhlet Nouadhibou, Tiris Zemmour), Western Sahara (Rio de Oro, Saguia El Hamra), Southern Morocco (Agadir, Kaar Es Souk, Ouarzazate, Tan Tan, Tata, Tiznit), S Algeria (El Bayadh, Oran, Tamanrasset), S Tunisia (Gabès, Gafsa, Kairouan, Kasserine, Kebili, Medenine, Sfax, Sidi Bou Zid, Sousse, Tataounie, Tunis, Tozeur, Djerba and Kerkennah Is.), Malta, N Libya (Ajbabiya, Al Jabar Al Akhdar, Al Murqub, Banghazi, Darnah, Gharyan, Misratah, Surt) and NW Egypt (NW Matrouh), NSL–1600 m.

Sources: Doumergue, 1901, Mayet, 1903, Chpakowsky & Chnéour, 1954, Kramer & Schnurrenberger, 1963, Pozuelo, 1974, Bruno, 1984, Schätti, 1986d, 1993a, Lang, 1993, Bons & Geniez, 1996, Schleich et al., 1996, Bogaerts, 1998, Geniez et al., 2004, Baha El Disi, 2006, Chippaux, 2006, Carranza et al., 2006 and J.-F. Trape & Mané, 2006b.

Remarks: MNHN catalogue lists MNHN 1961.315 from Mauritania as holotype. A subspecies of *Platyceps florulentus* Geoffroy-Saint-Hilaire *fide* Kramer & Schnurrenberger, 1963.

2. *Hemorrhois hippocrepis* (Linnaeus, 1758). Syst. Nat. ed., 10, 1: 226. (*Coluber hippocrepis*)

Synonyms: *Coluber domesticus* Linnaeus, 1766, *Natrix bahiensis* Wagler *in* Spix, 1824, *Coluber diadema* Gené, 1834, and *Coluber hippocrepis nigrescens* Cattaneo, 1985.

Type: Holotype, NHR Lin-29 (formerly MAFR), a 340 mm specimen (P. Loeflingius, 1751, via Mus. Drottn.).

Type locality: "America" (in error). Corrected to Spain, Iberian Peninsula *fide* Bruno (1968a: 176).

Distribution: Iberian Peninsula and ext. NW Africa. Southern Portugal (Beja, Braga, Bragansa, Castelo Branco, Coimbra, Évora, Faro, Guarda, Leiria, Lisboa, Portalegre, W Santarém, Setubal, Vila Real, Viseu), S Spain (S Albacete, Alicante, Almería, Ávila, Badajoz, Barcelona, Cáceres, Cádiz, Castellón, Ciudad Real, Córdoba, Gerona, Granada, Huelva, Huesca, Jaén, Lérida, Madrid, Málaga, Murcia, Salamanca, Seville, Tarragona, W Toledo, Valencia, Zamora), W Italy (S Sardinia), NW Morocco (Agadir, Al Hoceima, Al Jadida, Azilal, Beni Mellel, Boulemane, Casablanca, Chechaouene, El Kelaa des Srarhna, Essaouira, Fes, Kenitra, Khemisset, Khenitra, Khouribga, Marrakech, Meknes, Nador, Oujda, Rabat, Safi, Settat, Tangier, Tan Tan, Taonate, Taza, Tetouan, Tiznit), N Algeria (El Bayadh, Naama, Tlemcen) and Tunisia (Bizerte, Gabès, Jendouba, Nabeul, Tunis, Zembra Is.), NSL–2660 m.

Fossil records: Upper Pliocene of Morocco, middle Pleistocene (Ionian: 0.13–0.78 mya) of Spain, and upper Pleistocene (Tarantian: 0.01–0.13 mya) of Spain.

Sources: Doumergue, 1901, Mayet, 1903, Pozuelo, 1974, Bruno & Mangeri, 1977, Salvador, 1985, 1998, Schätti, 1986d, 1993b, Blanc, 1988, Bons & Geniez, 1996, Schleich et al., 1996, Bogaerts, 1998, Holman, 1998a, Pleguezuelos & Feriche, 1999, Bailon, 2000, Corti et al., 2000, Salvador & Pleguezuelos, 2002, Carranza et al., 2006, Sindaco et al., 2006 and Feriche et al., 2008.

3. *Hemorrhois nummifera* (A. Reuss, 1834). Mus. Senck. 1: 135–137. (*Coluber nummifer*)

Synonyms: *Coluber tyria* Linnaeus, 1758 (*nomen rejiciendum*), *Tyria linnaei* Fitzinger, 1826a (*nomen oblitum*), *Coluber barbarus* H. Boie *in* Schlegel, 1826a (*nomen nudum*), *Coluber barbarus* Schlegel, 1826b (*nomen nudum*), *Coluber barbarus* F. Boie, 1827 (*nomen oblitum*), *Zamenis caudaelineatus* A.C.L.G. Günther, 1858 (*partim*), *Periops neglectus* Jan, 1863b, *Zamenis glazunowi* Nikolski, 1896 (*partim*), *Zamenis ater* Venzmer, 1919, *Elaphe dione plumbea* Chernov, 1926, *Zamenis venzmeri* F. Werner, 1929 (*partim*), *Coluber nummifer pallaryi* Angel, 1936c, and *Elaphe quatuorlineatus sauromates bahtiyari* Bodenheimer, 1944 (*nomen illegitimum*).

Type: Holotype, SMF 18236 (formerly SMF-R III.O.4.a & SMF-B 7407 a), a 914 mm female (E. Rüppel, 1832).

Type locality: "Aegypten" [= Egypt].

Distribution: Southwestern Asia. Greece (Kalymnos, Kastellorizo, Kos, Leipsi, Leros, Syme, Rhodes), Cyprus, S Turkey, W Syria (Homs, Latakia), Lebanon (Beirut, Mont-Liban, Nabatiye), Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, N Southern, Tel Aviv, West Bank), Jordan (Ajloun, Amman, Balqa, Irbid, Jarash, Karak, Maan, Tafilah), NE Egypt (Cairo, South Sinai), S Armenia, N Iraq and NW Iran, 100–2000 m.

Sources: F. Werner, 1939, Schätti & Agarian, 1985, Szczcerbak, 1994, Y.L. Werner, 1995, Bouskila & Amitai, 2001, Disi et al., 2001, Hraoui-Bloquet et al., 2002, Baier et al., 2009, Schätti et al., 2009, Tuniyev et al., 2009, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

Remarks: Official Specific Name *fide* Opinion 2282 (ICZN, 2011). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Tyria linnaei* Fitzinger and *Coluber barbarus* F. Boie are designated *nomina oblita*.

4. *Hemorrhois ravergieri* (Ménétriés, 1832). Cat. Zool. Voy. Caucase: 69–70. (*Coluber ravergieri*)

Synonyms: *Coluber maculatus* Dwigubsky, 1832, *Coluber cliffordi* Martin, 1838, *Zamenis caudaelineatus* A.C.L.G. Günther, 1858 (*partim*), *Periops caudilineatus neva* Jan *in* DeFilippi, 1865, *Zamenis fedtschenkboi* Strauch, 1873 (*partim*), *Zamenis kaufmanni* Grum-Grzimailo, 1885, *Zamenis glazunowi* Nikolsky (1896 (*partim*), and *Coluber ravergieri cernovi* Mertens, 1952d..

Types: Syntypes (2), ZISP 8681–82 (formerly AIS), longest syntype 280–305 mm (Ravergier, 1828–1832).

Type locality: "Géorgie," "Prés de Bakou," and "côtes occidentales de la mer Caspienne, Caucase." [= Georgia; Baku, Azerbaijan; W coast of Caspian Sea in Caucasus Mtns., E Azerbaian]. Restricted to Georgia *fide* Flower (1933: 812) and Schätti & Agasian (1985: 110).

Distribution: Middle East and SW Asia. Lebanon (Mont-Liban), N Jordan (Mafraq), Israel (Golan Heights), NE Turkey, SE Georgia, Armenia, Azerbaijan, E Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan, Tadzhikistan, N Iran, N Afghanistan, cen. Pakistan (N Balochistan, Khyber Pakhtunkhwa), W China (Zingjiang) and W Mongolia, 30–4000 m.

Fossil records: Upper Miocene/lower Plioicene of Kazakhstan.

Sources: Minton, 1966, Leviton & Anderson, 1970a, Baran, 1976a, Bannikov et al., 1977, Hraoui-Bloquet, 1981, Schätti & Agasian, 1985, W. Böhme, 1993c, Disi, 1993, Zhao & Adler, 1993, Szczcerbak, 1994, M.S. Khan, 1997, 2002, Kordikova et al., 1998, Disi et al., 2001, Hraoui-Bloquet et al., 2002, Tuniyev et al., 2009 and Amr & Disi, 2011.

†*HERENSUGEA* Rage, 1996 (†Madtsoiidae)

Type species: †*Herensugea caristiorum* Rage, 1996.

Distribution: Upper Cretaceous of Spain.

Sources: Rage, 1996, 1999.

1. †*Herensugea caristiorum* Rage, 1996. C. R. Acad. Sci. Paris (2A) 322: 606–607, fig. 2.

Type: Holotype, MCNA 5387, one middle trunk vertebra.

Type locality: "le Crétacé terminal de Laño (Pays Basque espagnol)" [= upper Cretaceous of Laño, Condado de Treviño Prov., Basque Country, N Spain, 42°40'N, 2°37'W]. Clarified as a sand quarry near the village of Laño, about 20 km SE of the city of Vitoria, Basque Country, Spain; Upper Cretaceous (Early Maastrichian) *fide* Astibia et al. (1990: 462).

Distribution: Upper Cretaceous (Maastrichian: 65.5–72.1 mya) of Spain. Known only from type locality.

HETERODON Latreille *in* Sonnini & Latreille, 1801b (Carphophiidae)

Synonyms: *Hetorodon* – Latreille *in* Sonnini & Latreille, 1801 *(nomen incorrectum), Heterodus* – Goode, 1883 *(nomen incorrectum), Heterodoa* – Adcock, 1922 *(nomen incorrectum),* and *Heteroden* – F. Werner, 1922c *(nomen incorrectum).*

Type species: *Heterodon platirhinos* Latreille *in* Sonnini & Latreille, 1801b.

Distribution: Extreme S Canada, cen. and E USA and N Mexico.

Fossil records: Upper Miocene to upper Pleistocene of E USA. Fossils unassigned to species include middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas), and lower Pleistocene (Irvingtonian I) of USA (South Dakota).

Sources: Edgren, 1952, Bennett, 1979, Meylan, 1982, D.R. Platt, 1983, Cadle, 1984c, Ernst & Barbour, 1989, Conant & Collins, 1991, 1998, Holman, 1995a, 2000a, Pinou et al., 2004 and J.R. Berry, 2012.

1. †*Heterodon brevis* Auffenberg, 1963. Tulane Stud. Zool. 10(3): 174, fig. 22.

Type: Holotype, UF 6153, a middle trunk vertebra (W. Auffenberg, early 1950s–1960).

Type locality: "Haile VI, Locality A. 0.2 miles east of route 235, near the town of Haile, Alachua County, Florida, elevation approximately 84 feet. Middle Pliocene, Hemphillian, Alachua formation."

Distribution: Upper Miocene (Hemphillian: 4.9–10.3 mya) of USA (Florida). Known only from type locality.

Source: Rage, 1984b.

2. *Heterodon kennerlyi* Kennicott, 1860. Proc. Acad. Nat. Sci. Philadelphia 12(8): 336–337.

Type: Lectotype, USNM 1282 (C.B.R. Kennerly & D.N. Couch [A.W. Whipple, U.S.-Mex. Bound. Surv.], 1853–1854), designated by Cope (1900: 774).

Type locality: "Matamoros, Mexico" (in error) via lectotype selection. Restricted to lower Rio Grande River, Texas and Matamoros, Mexico (latter in error) *fide* Coues & Yarrow (1878: 271). Sonora corrected to south of the Gila River in Santa Cruz or Cochise Co., SE Arizona, USA *fide* Bogert (1939a: 198–199), Stejneger (1940: 204) and Stickel (1943: 120).

Distribution: Southern USA (ext. SE Arizona, S New Mexico, SW Texas) and NE Mexico (Aguascalientes, Chihuahua, Coahuila, NE Durango, Nuevo León, NE Sonora, N San Luis Potosí, Tamaulipas, N Zacatecas), NSL–2440 m.

Sources: Ernst & Ernst, 2003 and J.R. Berry, 2012.

Remarks: Kennicott (1860: 337) listed Kennerly as collector and Cochran (1961: 185) listed Couch. A valid species *fide* H.M. Smith et al. (2003: 19). Lectotype designation of USNM 1282 by Cope (1900: 774) possibly invalid. If so, three syntypes are USNM 7290 (A.C.V. Schott, 1852–1858) [Rio Grande], and USNM 1282a–b (C.B.R. Kennerly & D.N. Couch [Whipple, U.S.-Mex. Bound. Surv.], 1853–1854 [Sonora]).

3. *Heterodon nasicus* Baird & Girard, 1852a. Proc. Acad. Nat. Sci. Philadelphia 6(1): 70. (*Heterodon nasicum*)

Synonyms: *Heterodon cognatus* Baird & Girard, 1853, and *Heterodon nasicus gloydi* Edgren, 1952.

Type: Neotype, USNM 1249, a 659 mm female (A.C.V. Schott [U.S.-Mex. Bound. Surv.], 1852–1853), designated by Webb & Eckerman (1998: 104).

Type locality: "Eagle Pass, Texas, USA" via neotype selection. Restricted to the Río Grande approximately 4.3 air miles (7 km) southwest El Indio or approximately 19 air miles (30.6 km) downstream from Eagle Pass, Maverick County, Texas *fide* Webb & Eckerman (1998: 102).

Distribution: North America. Southern Canada (SE Alberta, S Manitoba, S Saskatchewan) and cen. USA (E and NW Colorado, W Illinois, NW and SE Iowa, Kansas, W and SE Minnesota, NW and SE Missouri, E Montana, Nebraska, E New Mexico, North Dakota, Oklahoma, South Dakota, Texas, E Wyoming), NSL–2440 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Arizona), upper Pliocene (Blancan V) of USA (Kansas, Nebraska), lower/middle Pleistocene (Irvingtonian I) of USA (Florida, Kansas), middle Pleistocene (Irvingtonian II) of USA (Nebraska), middle/upper Pleistocene (Irvingtonian II) of USA (Colorado), and upper Pleistocene (Rancholabrean II) of USA (Kansas, New Mexico, Oklahoma, Texas).

Sources: Logier & Toner, 1961, D.R. Platt, 1969, Stebbins, 1985, Degenhardt et al., 1996, Vazquez-Dias & Quintero-Diaz, 1998, Webb & Eckerman, 1998, Hammerson, 1999, Walley & Eckerman, 1999, R.D. Bartlett & Tennant, 2000, Werler & Dixon, 2000, K.J. Irwin, 2001, Parmley & Peck, 2002, H.M. Smith et al., 2003, 2005, T. Schmidt, 2009 and J. Berry, 2012.

Remarks: Holotype (SIM 1272) lost *fide* R.G. Webb & Eckerman (1998: 100). USNM 1285 erroneously listed as the holotype *fide* Yarrow (1883: 141). Type locality restriction to Amarillo, Texas *fide* Edgren (1952a: 203), cited by K.P. Schmidt (1953a: 179), invalid due to neotype selection.

4. *Heterodon platirhinos* Latreille *in* Sonnini & Latreille, 1801b. Hist. Nat. Rept. 4: 32–37, pl. 4, figs. 1–3.

Synonyms: *Boa porcaria* Lacépède, 1789 (*nomen rejiciendum*), *Coluber cacodaemon* G. Shaw, 1802, *Coluber heterodon* Daudin, 1803b, *Scytale niger* Daudin, 1803d *(nomen rejiciendum), Coluber thraso* Harlan, 1835, *Heterodon annulatus* Troost, 1836, *Heterodon niger* Troost, 1836, *Heterodon tigrinus* Troost, 1836, *Heterodon platyrhinos* Schlegel, 1837 *(nomen emendatum), Heterodon atmodes* Baird & Girard, 1853, *Heterodon platyrhinus* – A.-M.-C. Duméril, Bibron & Duméril, 1854a, and *Heterodon browni* Stejneger, 1903.

Type: Holotype, not designated, location unknown.

Type locality: "les environs de Philadelphie" [= vicinity of Philadelphia, Pennsylvania, USA].

Distribution: Extreme S Canada (SE Ontario) and E USA (Alabama, Arkansas, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, S Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, E Michigan, SE Minnesota, Mississippi, Missouri, NE and S Nebraska, S New Hampshire, New Jersey, SE and W New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, ext. SE

South Dakota, Tennessee, E Texas, Virginia, West Virginia, Wisconsin), NSL–1000 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska), middle Pliocene (Blancan II, III) of USA (Kansas, Nebraska, Texas), upper Pliocene (Blancan V) of USA (Kansas, Nebraska), lower Pleistocene (Irvingtonian I) of USA (Florida, Pennsylvania), lower/middle Pleistocene (Irvingtonian I) of USA (Kansas), middle Pleistocene (Irvingtonian II) of USA (Nebraska), middle/upper Pleistocene (Irvingtonian II) of USA (Maryland, West Virginia), and upper Pleistocene (Rancholabrean II) of USA (Alabama, Florida, Georgia, Kansas, Missouri, Oklahoma, Pennsylvania, Tennessee, Texas, Virginia, West Virginia).

Sources: D. Davis, 1946, Munyer, 1967, D.R. Platt, 1969, Blem, 1981, Palmer & Braswell, 1995, J. Harding, 1997, Tennant, 1997, Werler & Dixon, 2000 and J.C. Murphy & Schlager, 2003.

Remarks: Official Specific Name no. 686 *fide* Opinion 390 (ICZN, 1956).

5. †*Heterodon plionasicus* J.A. Peters, 1953. J. Paleont. 27(3): 328–331, figs. 3, 5–6.

Type: Holotype, UMMP 28113, one left maxilla (UMMZ Paleont. field crews, 1947 & 1951).

Type locality: "Upper Pliocene, Rexroad formation, Rexroad fauna. Locality UM-Kl-47, in Fox Canyon, in sec. 35, T. 34 S., R 30 W., XI Ranch, Meade County, Kansas."

Distribution: Lower Pliocene (Hemphillian) of USA (Oklahoma), and middle Pliocene (Blancan II, III) of USA (Kansas, Texas).

Source: Rage, 1984b.

6. *Heterodon simus* (Linnaeus, 1766). Syst. Nat., ed. 12, 1: 375. (*Coluber simus*)

Synonym: *Heterodon catesbyi* A.C.L.G. Günther, 1858.

Type: Holotype, not designated, (A. Garden, 1760–1761), lost *fide* Edgren (1953: 640).

Type locality: "Carolina" [USA]. Restricted to the vicinity of Charleston, South Carolina *fide* Klauber (1948: 6).

Distribution: Southeastern USA (Alabama, Georgia, N Florida, S Mississippi, SE North Carolina, South Carolina), NSL–150 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida).

Sources: Meylan, 1985, Ashton & Ashton, 1988, Palmer & Braswell, 1995, Tennant, 1997 and Tuberville et al., 2000.

Remarks: Official Specific Name no. 685 *fide* Opinion 390 (ICZN, 1956).

HETEROLIODON Boettger, 1913 (Pseudoxyrhophiidae)

Synonym: *Heteroloidon* – Phelps, 1981 *(nomen incorrectum).*

Type species: *Pseudoxyrhopus occipitalis* Boulenger, 1896a.

Distribution: Madagascar.

Sources: Guibé, 1958, Glaw & Vences, 1994, Raxworthy & Nussbaum, 1994, Cadle, 1999, Nussbaum & Raxworthy, 2000, Glaw et al., 2005b, Nagy et al., 2005, Kelly et al., 2009 and Zaher et al., 2009.

1. *Heteroliodon fohy* Glaw, Vences & Nussbaum, 2005. Herpetologica 61(3): 276–278, figs. 1–2.

Type: Holotype, ZSM 548/2000, a 280 mm male (M. Landsberger, M. Vences, F. Glaw, & K. Schmidt, 13 March 2000).

Type locality: "Montagne des Français (12° 19' 17" S, 49° 20' 13" E, ca. 170 m elevation), Antsiranana Prov., northern Madagascar."

Distribution: Extreme N Madagascar (Antsiranana), NSL–170 m.

Source: Megson et al., 2009.

2. *Heteroliodon lava* Nussbaum & Raxworthy, 2000. Herpetologica 56(4): 494–497, figs. 3–4.

Type: Holotype, UMMZ 221787 (formerly RAN 55066), a 440 mm female (J.-B. Ramanamanjato, A. Razafiminantsoa & A. Razafiminantsoa, 25 April 1996).

Type locality: "Lac Vert, Ankarana Special Reserve, 12°52'S, 49°06'E, 100 m elevation, Ambilobe Fivondronana, Antsiranana Prov., Madagascar."

Distribution: Western Madagascar (Antsiranana, Mahajanga), 100 m.

3. *Heteroliodon occipitalis* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 613–614. (*Pseudoxyrhopus occipitalis*)

Synonym: *Heteroliodon torquatus* Boettger, 1913.

Type: Holotype, BMNH 1946.1.12.28, a 310 mm specimen (J.T. Last, 1890–1895).

Type locality: "S.W. Madagascar."

Distribution: Southwestern Madagascar (Toliara), NSL–280 m.

HEURNIA Jong, 1926a (Homalopsidae)

Type species: *Heurnia ventromaculata* Jong, 1926a.

Distribution: Eastern Indonesia.

Sources: Jong, 1927, Gyi, 1970, O'Shea, 1996, J.C. Murphy, 2007b and Zaher et al., 2009.

1. *Heurnia ventromaculata* Jong, 1926a. Zool. Anz. 67(11–12): 303–304.

Type: Holotype, ZMA 11066, a 702–730 mm male (W.C. van Heurn, 12 July 1920).

Type locality: "Pionierbivak am Mamberamofluss, Nord-Neu-Guinea" [= Pionierbivak, Mamberano River, N Papua Prov., E Indonesia, 2°04'S, 137°50'E, elevation 35 m].

Distribution: Eastern Indonesia (N Papua). Known only from type locality.

Remarks: Type erroneously listed as 30 mm in length *fide* Jong (1927: 305). Photographs of the type in J.C. Murphy (2007b: pl. 34, figs. a–f).

HIEROPHIS Fitzinger *in* Bonaparte, 1834 (Colubridae)

Synonyms: †*Tamnophis* Rochebrune, 1880, and †*Sansanosaurus* Kuhn, 1939a *(nomen substitutum).*

Type species: *Coluber viridiflavus* Lacépède, 1789.

Distribution: Southern Eurasia.

Fossil records: Lower Oligocene to upper Pleistocene of Europe. Fossils unassigned to species include lower Miocene (Orleanian, MN 4, 5: 13.7–16.9 mya) of Portugal and Spain, middle Miocene (Astaracian, MN 6–8: 11.1–13.7 mya) of Hungary, and middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Spain.

Sources: Schätti & Wilson, 1986, Schätti, 1988a, Gruber, 1989, Szyndlar, 1991a, Schätti & Utiger, 2001, Nagy et al., 2004 and Szyndlar, 2009.

Remarks: Genus resurrected for species formerly in *Coluber fide* Schätti, 1988a.

1. *Hierophis andreanus* (F. Werner, 1917c). Verh. Zool. Bot. Ges. Wien 67(5–6): 207–208. (*Zamenis andreana*)

Synonym: *Zamenis hotsoni* Boulenger, 1920.

Types: Syntypes (2), ZMG 160, a 660 mm male, and ZMG 164, a 750 mm female (F.C. Andreas, 1877–1878 & 1905).

Type locality: "Persien (Provinz Fars)" [= Fars Province, SW Iran].

Distribution: Iran (Bushehr, Fars, Kerman, Kermanshah, Lorestan), 1000 m.

Sources: Schätti, 2001b and Rajabizadeh & Rastegar-Pouyani, 2009.

2. †*Hierophis arcuatus* (H. Meyer, 1845). Fauna der Vorwelt: 42, pl. 2, fig. 5. (†*Coluber arcuatus*)

Type: Holotype, SMNK TE/57, a section of axial skeleton.

Type locality: "Molasse-Mergel Steinbrüche von Öningen" [= Oeningen, Baden-Württemberg State, SW Germany; Astaracian, middle Miocene].

Distribution: Middle Miocene (Astaracian, MN 7–8: 11.1–112.8 mya) of Germany. Known only from holotype.

Sources: Rage, 1984b and Szyndlar, 2012.

Remarks: Generic allocation uncertain.

3. †*Hierophis cadurci* (Rage, 1974). Palaeovertebrata 6(3–4): 295–297, fig. 7. (†*Coluber cadurci*)

Type: Holotype, USTL MGT 3505, one trunk vertebra.

Type locality: "Mas-de-Got, Iocus A, Oligocène moyen, Phosphorites du Quercy" [= Mas-de-Got Dept., France; Upper Suevian, Middle Oligocene *fide* Rage, 1984b: 44].

Distribution: Lower Oligocene (Rupelian, MP 21–23: 28.4–33.9 mya) of France, upper Oligocene (Chattian, MP 25: 23.0–28.4 mya) of France, and lower Miocene (Agenian–Orleanian, MN 1–4: 16.0–23.0 mya) of France, Germany and Spain.

Sources: Rage, 1984b, 1988, Rage et al., 1992, Augé & Rage, 1995, Szyndlar & Alférez, 2005 and Szyndlar, 2012.

Remarks: Generic allocation uncertain.

4. †*Hierophis caspioides* (Szyndlar & Schleich, 1993). Stuttgarter Beitr. Naturk. (192): 23–26, figs. 6a–j. (†*Coluber caspioides*)

Type: Holotype, BSPG 1976 XXII 7096, one trunk vertebra.

Type species: .

Type locality: "Peterrsbuch 2 near Eichstätt, Bayern, southern Germany. Lower Miocene (middle Orleanian; MN 4)."

Distribution: Lower Miocene (Orleanian, MN 3–5: 13.7–20 mya) of Austria, Czech Republic, France and Germany.

Sources: Ivanov, 2002, Ivanov & Böhme, 2011 and Szyndlar, 2012.

5. †*Hierophis dolnicensis* (Szyndlar, 1987). J. Vert. Paleont. 7(1): 65, figs. 8b–f.

Type: Holotype, CUP 4558, one trunk vertebra.

Type locality: "MN4 locality of Dolnice (West Czechoslovakia) near to the town of Cheb in western-most Bohemia, lower Miocene (Early Orleanian or Ottnangian)."

Distribution: Lower Miocene (Orleanian, MN 3–4: 16.0–20.0 mya) of Czech Republic, and middle Miocene (Astaracian, MN 7–8: 11.1–12.8 mya) of France.

Source: Ivanov, 2002 and Szyndlar, 2012.

6. †*Hierophis freybergi* (G. Brunner, 1954). Neues Jb. Geol. Paläont., Abh. 100(1): 108, figs. 18.1–2. (†*Coluber freybergi*)

Types: Syntypes (5), BSPG 1982 X, one maxilla, one palatine, one dentary and two fragmentary compound bones.

Type locality: "Fuchsloch, bei Siegmannsbrunn (Oberfr.). (Eine mediterrane Riss-Würm-Fauna)." [= Fuchsloch, Bayern, Germany; middle Pleistocene, Riss-Würm].

Distribution: Pleistocene (Riss-Würm Interglacial, 0.116–0.128 mya) of Germany. Known only from type series.

Sources: Rage, 1984b and Holman, 1998a.

Remarks: Possibly conspecific with *H. viridiflavus* (Lacépède) *fide* Rage (1984b: 44) and Holman (1998a: 104).

H

7. *Hierophis gemonensis* (Laurenti, 1768). Synop. Rept.: 76. (*Natrix gemonensis*)

Synonyms: *Coluber pethola* Georgi, 1801 *(nomen praeoccupatum), Zamenis atrovirens dalmatina* F. Müller, 1878b, *Zamenis gemonensis laurenti* Bedriaga, 1882, and *Zamenis atrovirens jaculator* Sordelli, 1886.

Type: Neotype, MHNG 1357.70, a 916 mm male (W. Zinniker, May 1962), designated by Opinion 1686 (ICZN, 1992).

Type locality: "Cegar (Zadar, Yugoslavia)" [= Zadar, Zadar Prov., Croatia, 44°07'N, 15°15'E, elevation 25 m] via neotype selection.

Distribution: Southeastern Europe. Northeastern Italy (Venezia), W Slovenia, W Croatia (Ada, Brac, Cres, Hvar, Korcula, Krk, Lastovo, Losinj, Mljet, Rab, Silba, Sipan, Solta, Veli Palagruza and Vis Is.), SW Bosnia-Herzegovina, Montenegro, Albania and Greece (Macedonia: Agria Gramvousa, Angístri, Antikithira, Aspronisi, Corfù, Dia, Dragoáda, Effira, Egina, Eúboia, Gavdopoúla, Gávdos, Giura, Gramvoúsa, Gyáros, Ipdili, Itháke, Janusada, Kefallinía, Kérkyra, Kíthira, Kriti, Lefkáda, Lerkas, Paxos, Platía, Póros, Skíathos, Skópelos, Spétses, Spinalónga, Theocloros, Tolon, Zákinthos and Zogriá Is.), NSL–2450 m.

Fossil records: Lower Pliocene (Ruscinian, MN 14: 4.2–4.9 mya) of Bosnia & Herzegovina, middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Moldavia, upper Pliocene (Villanyian, MN 16: 2.6–3.2 MYA) of Austria, lower Pleistocene (Calabrian: 0.8–1.8 mya) of Austria and Czech Republic, middle Pleistocene (Ionian: 0.13–0.78 mya) of Austria, Bulgaria and Italy, and upper Pleistocene (Tarantian: 0.01–0.13 mya) of Bulgaria, Greece and Italy.

Sources: Mertens, 1968a, Bruno, 1977, 1980, 1984, Kock, 1979, Schätti, 1983a, Bruno & Maugeri, 1990, Henle, 1993, Holman, 1998a, Szyndlar, 1991a, 2012, Ivanov, 2007, Trapp, 2007, Valakos et al., 2008 and Jablonski et al., 2012.

Remarks: Holotype lost *fide* Schätti et al. (1991: 50). Official Specific Name *fide* Opinion 1686 (ICZN,1992). *Hierophis laurenti* a valid species *fide* Ferri (1994: 73).

8. †*Hierophis hungaricus* (Bolkay, 1913). Mitt. Jahrb. Kgl. Ungar. 2: 223–224, pl. 12, fig. 3. (†*Zamenis hungaricus*)

Type: Holotype, HGIM Ob-4464/vt. 76, one right quadrate.

Type locality: "Polgárdi" [= quarries of Somló-Hill and Kószár-Hill near the village of Polgárdi, W Hungary; late Miocene (Pontian or Upper Turolian *fide* Venczel, 1998: 1].

Distribution: Lower Miocene (Orleanian, MN 5: 13.7–16.0 mya) of Germany, middle Miocene (Astaracian, MN 7–8: 11.1–12.8 mya) of Romania, upper Miocene (Villesian, MN 9: 9.7–11.1 mya) of Hungary, upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Hungary, and lower Pliocene (Ruscinian, MN 14: 4.2–4.9 mya) of Hungary.

Sources: Szyndlar, 1991a, 2012, Vogel, 1994b, Venczel, 1998, Venczel & Stiuca, 2008 and Szyndlar, 1991a, 2000, 2005, 2012, Ivanov, 2007 and Ivanov & Böhme, 2011.

Remarks: Generic allocation uncertain but similar to *H. gemonensis* and *H. caspioides fide* Venczel (1998: 6).

9. †*Hierophis pouchetii* (Rochebrune, 1880). Nouv. Arch. Mus. Hist. Nat. (2) 3: 281, pl. 12, figs. 9a–d. (†*Tamnophis pouchetii*)

Types: Syntypes (7), MNHN SA 9872, six trunk vertebrae and one rib.

Type locality: "Colline de Sansan" [= Sansan, Gers Prov., France; Astaracian, middle Miocene *fide* Rage, 1984b: 44].

Distribution: Lower Miocene (Orleanian, MN 4, 5: 13.7–16.9 mya) of France and Germany, middle Miocene (Astaracian, MN 6: 12.8–13.7 mya) of France, and upper Miocene (Villesian, MN 9: 9.7–11.1 mya) of Hungary.

Sources: Rage, 1981, Augé & Rage, 2000 and Szyndlar, 2012.

Remarks: Generic allocation uncertain.

10. †*Hierophis robertmertensi* (Mlynarski, 1964). Senck. Biol. 45(3–5): 331–332, figs. 9–12. (†*Coluber robertmertensi*)

Types: Syntypes (2), ZZSD T.R.F. 1/63, one quadrate and one compound bone (Steinbruches, 1962).

Type locality: "Rebielice Królewskie bei Klobuck im NW-Teil dei von Krakau-Wiekau, Polen; Jungpliozán" [= Rebielice Królewskie, N Slaskie Prov., Poland]

Distribution: Lower Pliocene (Ruscinian, MP 14–15, 3.2–4.9 mya) of Moldova and Poland.

Remarks: Generic allocation uncertain but similar to *H. viridiflavus fide* Mlynarski (1964: 332).

11. †*Hierophis suevicus* (Fraas, 1870) Jahresh. Ver. Vaterland. Natuuk. Wurttemb. (1869) 26: 291. (†*Naja suevica*)

Type: Lectotype, SMNS 51026, one middle trunk vertebra (Bauer), designated by Rage (1984b: 45).
Type locality: "Steinheim, Baden-Württemberg, Western Germany; Astaracian, Middle Miocene" via lectotype selection.
Distribution: Lower Miocene (Orleanian, MN 3: 16.9–20.0 mya) of Czech Republic, and middle Miocene (Astaracian, MN 7–8: 11.1–12.8 mya) of Germany.
Sources: Ivanov, 2002 and Szyndlar, 2012.
Remarks: Generic allocation uncertain.

12. *Hierophis viridiflavus* (Lacépède, 1789). Hist. Nat. Serp. 2: 137–146, pl. 6, fig. 1. (*Coluber viridiflavus*)

Synonyms: *Coluber luteostriatus* Gmelin, 1789, *Coluber vulgaris* Bonnaterre, 1790, *Coluber communis* Donndorff, 1798, *Coluber franciae* Suckow, 1798, *Coluber sardus* Suckow, 1798, *Coluber petolarius* Georgi, 1800, *Coluber atroviriens* G. Remarks: Official Specific Name *fide* Opinion 1686 (ICZN, 1992).

HIMALAYOPHIS Malhotra & Thorpe, 2004c (Viperidae)

Type species: *Trimeresurus tibetanus* Z.-Y. Huang, 1982.
Distribution: China and Nepal.
Sources: David & Tong, 1997 and Tiwari & Shah, 1999, Schleich & Kästle, 2002, Tiwari & Shah, 2004 and S.K. Sharma et al., 2013.

1. *Himalayophis tibetanus* (Z.-Y. Huang, 1982). Acta Fudan Univ. (Nat. Sci.) 21(1): 116–118, figs. 1–5. (*Trimeresurus tibetanus*)

Synonym: *Trimeresurus karanshahi* Orlov & Helfenberger, 1997.
Type: Holotype, Fudan Univ. 80001, a 640 mm female (J.R. Sog Lang, 5 May 1979).

Type locality: "Naylam, Chokesumo, altitude 3200m, Tibetan" [= Nayalam, S Xizang Prov., SW China, 28°09'N, 85°59'E, elevation 3200 m].
Distribution: Southwestern China (Xizang) and N Nepal (Lalitpur, Sindhupalchok), 1400–3200 m.

†*HISPANOPHIS* Szyndlar, 1985a (Colubridae)

Type species: †*Hispanophis coronelloideus* Szyndlar, 1985a.
Distribution: Upper Miocene of Spain.
Source: Szyndlar, 1985a, 2012.

1. †*Hispanophis coronelloideus* Szyndlar, 1985a. Estud. Geol. 41(5–6): 453–455, fig. 5.

Type: Holotype, MNCN Alg. I-27, one basiparasphenoid.
Type locality: "Uppermost Miocene (Turolian, NM 13) of Algora (Guadalajara, Spain)."
Distribution: Upper Miocene (NM 13, 4.9–7.3 mya) of Spain. Known only from type locality.

†*HOFFSTETTERELLA* Rage, 1998 (Aniliidae)

Type species: †*Hoffstetterella brasiliensis* Rage, 1998.
Distribution: Middle Paleocene of Brazil.
Sources: Rage, 1998, 2011, Gómez et al., 2008 and Albino, 2011b.

1. †*Hoffstetterella brasiliensis* Rage, 1998. Palaeovertebrata 27(3–4): 132–137, fig. 16.

Type: Holotype, DGM 1323-R, one middle trunk vertebra (L.I. Price & D. de Campos, 1968).
Type locality: "Itaboraí, state of Rio de Janeiro, Brazil; middle Palaeocene."
Distribution: Middle Paleocene (Itaboraian: 57.0–59.0 mya) of Brazil. Known only from type locality.

HOLOGERRHUM A.C.L.G. Günther, 1858 (Natricidae)

Synonym: *Holorgermi* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Hologerrhum philippinum* A.C.L.G. Günther, 1858.
Distribution: Philippines.
Sources: Leviton, 1959b, Ross & Gonzales, 1992, R.M. Brown et al., 2001 and Zaher et al., 2009.

1. *Hologerrhum dermali* R.M. Brown, Leviton, Ferner & Sison, 2001. Asiatic Herpetol. Res. 9: 17–19.

Type: Holotype, PNM 2711, a 288 mm female (R.M. Brown, 9 April 1992).
Type locality: "at 1510 m above sea level in the area known locally as "Hanggud Tubig" ("Big Water"), on the western face of Mt. Madja-as, Barangay Alojipan, Municipality of Culasi, Antique Prov., Panay Island, Philippines (11°23'N, 122°09'E)."
Distribution: Central Philippines (Panay Is.), 450–1510 m.
Source: Ferner et al., 2001.

2. *Hologerrhum philippinum* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 186–187.

Type: Holotype, BMNH 1946.1.2.41, a 292 mm female (H. Cuming, 1836–1840).
Type locality: "Philippine Islands." Restricted to Luzon Island *fide* Leviton (1959b: 311).
Distribution: Northern Philippines (Catanduanes, Luzon, Marinduque, Polillo).

HOMALOPSIS Kuhl & Hasselt, 1822 (Homalopsidae)

Synonyms: *Homolopsis* – Gray *in* Griffith & Pidgeon, 1831 *(nomen incorrectum), Homolopsis* Bonaparte, 1832 *(nomen emendatum), Homatopsis* – J. Müller, 1832 *(nomen incorrectum), Homalpepsis* – Cantor, 1847 *(nomen incorrectum), Homalopis* – Mason, 1852 *(nomen incorrectum), Pythonia* Blyth, 1859, *Pythonella* Carlleyle, 1869 *(lapsus calami),* and *Honalopsis* – Deuve, 1970 *(nomen incorrectum).*
Type species: *Coluber buccatus* Linnaeus, 1758.
Distribution: Tidal rivers, canals, lakes and ponds and coastal marine waters of SE Asia and Indonesia.
Sources: Boulenger, 1890a, Rooij, 1917, F. Werner, 1923b, M.A. Smith, 1943, B.L. Lim,1964, E.H. Taylor, 1965, Deuve, 1970, Gyi, 1970, Saint-Girons, 1972a, Stuebing, 1991, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Schleich & Kästle, 2002, Voris et al., 2002, B.L. Stuart et al., 2006, J.C. Murphy, 2007b, Alfaro et al., 2008, Zaher et al., 2009 and J.C. Murphy et al., 2012.

1. *Homalopsis buccata* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 217. (*Coluber buccatus*)

Synonyms: *Coluber monilis* Linnaeus, 1758, *Coluber subalbidus* Gmelin, 1789, *Coluber margaritaceus* Donndorff, 1798, *Coluber horridus* Daudin, 1803d, and *Homalopsis albomaculata* A.-M.-C. Duméril, 1853 (*nomen nudum*).
Type: Neotype, FMNH 250114, a 496 mm female (K. Lim, 1 May 1992), designated by J.C. Murphy et al. (2012: 10) .

Type locality: "Singapore" via neotype selection.

Distribution: West Malaysia and Indonesia. West Malaysia (Johore, Melaka, Perak, Selangor), East Malaysia (Sabah, Sarawak) and Indonesia (Bangka, Java, Kalimantan, Sumatra), NSL–410 m.

Sources: V.S. Nguyen et al., 2009, I. Das, 2010, 2012 and J.C. Murphy et al., 2012.

Remarks: Holotype lost *fide* Andersson (1899: 16). Sulawesi record doubtful *fide* Lang & Vogel (2005: 253).

2. *Homalopsis hardwickii* Gray, 1842d. Zool. Misc. 2(May): 65.

Type: Holotype, BMNH 1946.1.7.26, a 683 mm male.

Type locality: Unknown. Designated as NE India *fide* J.C. Murphy et al. (2012: 12).

Distribution: Probably NE India and cen. Nepal (Chitwan), 200 m.

Sources: Mitchell & Zug, 1986, Tiwari & Shah, 2004 and J.C. Murphy et al., 2012.

3. *Homalopsis mereljcoxi* J.C. Murphy, Voris, Murthy, Traub & Cumberbatch, 2012. Zootaxa (3208): 13–14, figs. 1c, 7b, 8.

Type: Holotype, FMNH 263756, a 457 mm female (D.R. Karns & J.C. Murphy, 16 June 2004).

Type locality: "Thailand, Nakhon Ratchasima Prov., Wang Nam Khieo, Udom Sap (subdistrict), Ban Badan Reservoir (14º31'04" N, 101º58'25" E)."

Distribution: Thailand (Bangkok, Krung Thep, Mahanakhon, Nakhon Ratchasima, Nakhon Si Thammarat, Pattani, Phang Nga, Phattalung, Phuket, Ranong, Songkhla, Trang, Uttaradit), Cambodia (Chhnang, Siem Reap) and Vietnam (Can Tho, Vinh Thuan), NSL–235 m.

4. *Homalopsis nigroventralis* Deuve, 1970. Mém. Off. Rech. Sci. Tech. Outre-Mer, Paris (39): 183–185, pl. 21, figs. 1–4, pl. 22, figs. 1–3, 7. (*Homalopsis buccata nigroventralis*)

Type: Holotype, not designated, lost *fide* David (2009: 23), destroyed by fire *fide* J.C. Murphy et al. (2012: 16).

Type locality: "Nam Ngum River Valley, Laos."

Distribution: Mekong River valley of E Thailand (Sakon Nakhon),p Cambodia (Kratie, Ratanakiri, Siem Pang, Stung Treng, Koh Kapeung and Koh Khlap Is.) and Laos (Champasak, Louang Phrabang, Vientiane), 150–285 m.

Sources: E.H. Taylor & Elbel, 1958, B.L. Stuart et al., 2006, J.C. Murphy, 2007b, I. Das, 2010, 2012 and J.C. Murphy et al., 2012.

Remarks: A resurrected species *fide* B.L. Stuart et al. (2006: 149–150).

5. *Homalopsis semizonata* Blyth, 1855a. Proc. Asiatic Soc. Bengal 24(2): 187–188. (*Homolopsis semizonata*)

Type: Holotype, ZSI 8137, a 728 mm male (T.M. Berdmore, 1855).

Type locality: "Martaban (= Mottama, southern Myanmar)" *fide* I. Das et al. (1998: 149) [= Mottama, Mon Div., S Myanmar, 16°32'N, 97°36'E, elevation NSL].

Distribution: Myanmar (Mon, Yangon), NSL.

Sources: Firth, 1977 and J.C. Murphy et al., 2012.

Remarks: Type locality seems to be "Scheu Gyen, Pegu" *fide* Blyth (1855: 187). Possibly occurs in Phuket, Thailand *fide* Firth, 1977.

HOMOROSELAPS Jan, 1858b (Atractaspididae)

Synonyms: *Poecilophis* A.C.L.G. Günther, 1859b, *Homeroselaps* – Cope, 1862c *(nomen incorrectum),* and *Homorelaps* Boulenger, 1896a *(nomen emendatum).*

Type species: *Coluber lacteus* Linnaeus, 1758.

Distribution: Southern Africa.

Sources: McDowell, 1968, Kochva & Wollberg, 1970, V.F.M. FitzSimons, 1974, Branch, 1981, 1982, Broadley, 1983, Cadle, 1983, McCarthy, 1985, Lombard et al., 1986, McDowell, 1986, Branch, 1988, Wallach, 1991, Golay et al., 1993, Vidal & Hedges, 2002, Kelly et al., 2003, 2009, Slowinski & Keogh, 2004, Lawson et al., 2005, Nagy et al., 2005, Slowinski & Lawson, 2005, Dobiey & Vogel, 2007, Zaher et al., 2009 and Hoser, 2012e.

Remarks: Official Generic Name no. 2145 *fide* Opinion 1201 (ICZN, 1982a).

1. *Homoroselaps dorsalis* (A. Smith, 1849 *in* 1838–1849). Illust. Zool. So. Africa, Rept. (App.): 21. (*Elaps dorsalis*)

Synonym: *Elaps dorsalis* A. Smith, 1849 *in* 1838–1849 *(nomen praeoccupatum).*

Type: Holotype, not designated, lost *fide* Broadley *in* Golay et al. (1993: 143).

Type locality: "Kaffirland, and the country towards Port Natal, southern Africa" [= KwaZulu-Natal, South Africa *fide* Loveridge, 1944b: 161]. Restricted to the vicinity of Durban, Natal Province, South Africa *fide* David & Ineich (1999: 100).

Distribution: South Africa (Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga), and Swaziland, 525–1535 m.

Remarks: Holotype not present in RSM or BMNH *fide* V.F.M. FitzSimons (1937: 264). See Broadley (1983: 215) for discussion of nomenclatural history.

2. *Homoroselaps lacteus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 220. (*Coluber lacteus*)

Synonyms: *Coluber domicella* Linnaeus, 1758, *Coluber domicellarum* Lacépède, 1789 (*nomen rejiciendum*), *Coluber guineensis* Bonnaterre, 1790, *Coluber picatus* Shaw & Nodder, 1798 *in* 1789–1813, *Coluber siamensis* Donndorff, 1798, *Vipera lactea* – Latreille in Sonnini & Latreille, 1801, Coluber *hygeiae* G. Shaw, 1802, *Coluber iphisa* Daudin, 1803c, *Coluber melanogaster* Hermann, 1804, ? *Elaps fuscus* Merrem, 1820, *Elaps punctatus* A. Smith, 1826, *Elaps domicella* Wagler, 1830, *Elaps bipunctiger* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Poecilophis hygiae* A.C.L.G. Günther, 1859b *(nomen emendatum), Elaps hygiae chrysopeleoides* F. Müller, 1887, and *Micropechis crucifer* De Vis, 1905.

Type: Holotype, NHR Lin-92 (formerly MAFR), a 480 mm male (Mus. Drottn.), lost *fide* Broadley *in* Golay et al. (1993: 144).

Type locality: “Indiis” [= India] (in error). Corrected to South Africa *fide* V.F.M. FitzSimons (1962a: 283).

Distribution: South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, W Northern Cape, Western Cape), Lesotho and Swaziland, NSL–1200 m.

Remarks: Official Specific Name no. 2781 *fide* Opinion 1201 (ICZN, 1982a).

H

HOPLOCEPHALUS Wagler, 1830 (Elapidae)

Synonyms: *Elapocormus* Fitzinger, 1843, *Hoplicephalus* – Lydekker, 1901 *(nomen incorrectum), Hipocephalus* – Brazil, 1914 *(nomen incorrectum), Hoplosephalus* – Brazil, 1914 *(nomen incorrectum), Hoplocephalis* – Boquet, 1948 *(nomen incorrectum),* and *Hyplocephalus* – J.H. Brown, 1973 *(nomen incorrectum).*

Type species: *Naja bungaroides* Schlegel, 1837.

Distribution: Eastern Australia.

Sources: F. Werner, 1923b, Kinghorn, 1964, Cogger et al., 1983a, Shine, 1983a, Longmore, 1986, S.K. Wilson & Knowles, 1988, Gow, 1989, Hoser, 1989, 2012e, Hutchinson, 1990, G. Swan, 1990, Covacevich & Couper, 1991, Greer, 1997, Cogger, 2000, Keogh et al., 2003, Sanders et al., 2008 and Zaher et al., 2009.

1. *Hoplocephalus bitorquatus* (Jan, 1859a). Rev. Mag. Zool. (2) 11: 124, 128. (*Alecto bitorquata*)

Synonyms: *Hoplocephalus sulcans* De Vis, 1884c, *Hoplocephalus waitii* Ogilby, 1894, *Denisonia angulata* De Vis, 1905, and *Denisonia revelata* De Vis, 1911.

Type: Holotype, SMF 20533 (formerly SMF-B 9349a), a 330 mm specimen (W. Kirchner, 1848).

Type locality: “Nouvelle-Hollande” [= Australia].

Distribution: Eastern Australia (NE New South Wales, E Queensland), NSL–1040 m.

Remarks: Supplemental original description in Jan (1859e: pl. c, fig. 5). ZMB catalogue entry reads Sydney, Neusüdwales (in error *fide* Cogger et al., 1983a: 227, probably because Kirchner was the German consul in Sydney).

2. *Hoplocephalus bungaroides* (Schlegel, 1837). Essai Phys. Serp. 1: 184, 2: 477–478. (*Naja bungaroides*)

Synonyms: *Naja bungaroides* H. Boie *in* Schlegel, 1828 *(nomen nudum), Naja bungaroides* Schlegel, 1837, *Alecto variegata* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Alecto variegata* A.-M.-C. Duméril, Bibron & Duméril, 1854b, and *Hoplocephalus variegatus* – A.C.L.G. Günther, 1858.

Types: Syntypes (2), MNHN 7678, a 340 mm male lacking a skull (J.R.C. Quoy & J.P. Gaimard [Coquille or Astrolabe Voy.], 1822–1829) and MNHN 7679, a 620–640 mm male (P.F. Keraudren, 1800–1804).

Type locality: “environs de Port-Jackson” [New South Wales, Australia] and “Indes,” (latter in error), respectively. Corrected to Nouvelle-Hollande [= Australia] by A.-M.-C. Duméril, Bibron & Duméril (1854b: 1254).

Distribution: Southeastern Australia (E New South Wales), NSL–740 m.

Sources: Guibé & Roux-Estévè, 1972 and Hosmer, 1952.

3. *Hoplocephalus stephensii* Krefft, 1869b. Snakes Aust.: 58–59, pl. 6, fig. 7.

Synonyms: *Hoplocaphalus stephensi* – McDowell, 1967 *(nomen incorrectum),* and *Haplocephalus stephensii* – Khole, 1991 *(nomen incorrectum).*

Type: Holotype, AMS 37361 (formerly AMS 6588, exch. JH [1897] & USNM 55999 *fide* Cogger, 1979: 206), a 762 mm specimen.

Type locality: “Port Macquarie, on the Hastings River” [= Port Macquarie, E New South Wales, SE Australia, 31°26’S, 152°54’E, elevation 10 m].

Distribution: Eastern Australia (ext. SE Queensland, NE New South Wales), NSL–1025 m.

Remarks: ZMB 8547 labelled a type but probably in error *fide* Cogger et al. (1983: 228).

†*HORDLEOPHIS* Holman, 1996b (Boidae)

Type species: †*Hordleophis balconae* Holman, 1996b.

Distribution: Upper Eocene of United Kingdom.

Source: Holman, 1996b.

1. †*Hordleophis balconae* Holman, 1996b. Tertiary Res. 17(1–2): 11–13, figs. 1a–e.

Type: Holotype, MSUVP 1361, one trunk vertebra.

Type locality: "Hordle Cliff, Hampshire, England. Rodent Bed upper part of the Totland Bay Member of the Headon Hill Formation (Upper Eocene)."
Distribution: Upper Eocene (33.9–37.2 mya) of United Kingdom (England).

HORMONOTUS Hallowell, 1857b (Lamprophiidae)

Synonyms: *Homonotus* – Gray, 1858b *(nomen incorrectum),* and *Hormonothus* – Stucki-Stirn, 1979 *(nomen incorrectum).*
Type species: *Lamprophis modestus* A.-M.-C. Duméril, Bibron & Duméril, 1854a.
Distribution: West and cen. Africa.
Sources: K.P. Schmidt, 1923, Angel, 1933b, Bogert, 1940, Witte, 1962, Doucet, 1963, Mertens, 1965c, Roux-Estève, 1965, Leston & Hughes, 1968, Hughes & Barry, 1969, Pitman, 1974, Villiers, 1975, Hughes, 1983, 2013, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Villiers & Condamin, 2005, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008, Kelly et al., 2009, Zaher et al., 2009, Segniagbeto et al., 2011 and Chirio, 2013.

1. *Hormonotus modestus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 429–430. (*Lamprophis modestus*)

Synonyms: *Hormonotus audax* Hallowell, 1857b, *Heterolepis glaber* Jan, 1863b (*nomen nudum*), *Heterolepis glaber* Jan, 1870 *in* Jan & Sordelli, 1870–1881, and *Boodon vossii* J.G. Fischer, 1888a.
Type: Holotype, RMNH 304, a 581 mm female (H.S. Pel, 1840–1854).
Type locality: "côte de Guinée" [= Ghana]. Restricted to Dabocrom, Ghana *fide* Hughes & Barry (1969: 1015).
Distribution: West and cen. Africa. Guinea (Nzérékoré, Télimélé), Sierra Leone, S Ivory Coast (Abidjan, Danané, Dix-Huit Montagnes, Guiglo, Lagunes, Tabou), S Ghana, S Togo (Plateaux), S Benin (Maritime, Plateau), S Nigeria, S Cameroon (Centre, Est, Littoral, Sud-Ouest), S Central African Republic (Lobaye, Mbomou, Ombella-Mpoko), Equatorial Guinea (Bioko Is.), Gabon (Haut-Ogooué, Moyen-Ogooué, Ogooué-Maritime), Congo (Kouilou, Sangha), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Orientale, Sud-Kivu), W Uganda (Central, Western), ext. SW Kenya (Western) and Angola, 10–1300 m.

†*HUBEROPHIS* Holman, 1977 (Boidae)

Type species: †*Huberophis georgiensis* Holman, 1977a.
Distribution: Upper Eocene of USA.
Sources: Holman, 1977, 1979b, 2000a and Rage, 1984b, 2011.

1. †*Huberophis georgiensis* Holman, 1977a. J. Herp. 11(2): 143–144, figs. 2a–c.

Type: Holotype, UGVP 51, one trunk vertebra (M. Voorhies).
Type locality: "red sandy clay 50 ft above the base of the Twiggs Clay, in an abandoned Kaolin (Clay) Pit (Pit no. 22, J.M. Huber Corporation) from approximately 9 mi SSE of Macon and 4 mi ENE of Huber, Twiggs County, Georgia; Upper Eocene (Twiggs Clay)."
Distribution: Upper Eocene (Duchesnean: 38.0–42.0 mya) of USA (Georgia). Known only from type locality.

HYDRABLABES Boulenger, 1891b (Natricidae)

Synonyms: *Hydrables* – Shelford, 1901, and *Hydrablabis* – F. Werner, 1925 *(nomen incorrectum).*
Type species: *Ablabes periops* A.C.L.G. Günther, 1872a.
Distribution: Borneo.
Sources: Rooij, 1917c, Haas, 1950, Haile, 1959, Stuebing, 1991, Stuebing & Inger, 2002, Zaher et al., 2009 and I. Das, 2010, 2012.
Remarks: Both taxa are conspecific *fide* Stuebing & Inger, 2002.

1. *Hydrablabes periops* (A.C.L.G. Günther, 1872a). Proc. Zool. Soc. London 40(1): 595–596, fig. 3. (*Ablabes periops*)

Types: Syntypes (2), BMNH 1946.1.14.16–17, a 398 mm male and juvenile (A.H. Everett, 1869–1872).
Type locality: "Matang in the district of Sarawak, Borneo" [= Kampong Matang, First Division, Kidi Distr., W Sarawak, East Malaysia, 1°35'N, 110°14'E, elevation 15 m].
Distribution: Borneo. East Malaysia (Sabah, Sarawak), Brunei and cen. Indonesia (W Kalimantan), 15–600 m.
Sources: Das, 2007, 2012.

2. *Hydrablabes praefrontalis* (Mocquard, 1890a). Naturaliste (2) 12(80): 154. (*Ablabes periops praefrontalis*) (*nomen corrigendum*)

Synonyms: *Ablabes periops prefrontalis* Mocquard, 1890a *(nomen incorrigendum),* and *Hydrablabes praefrontalis* – Boulenger, 1891b *(nomen corrigendum).*
Types: Syntypes (2), MNHN 1889.202–03, longest syntype 436 mm (J. Whitehead, 1885).
Type locality: "Kina Balu, Bornéo," Emended to North Borneo, Mt. Kina Balu, between 1,000 and 4,000 or even 6,000 feet *fide* Mocquard (1890b: 118), [=

Mt. Kinabalu, N Sabah, NE East Malaysia, 6°05'N, 116°30'E, elevation 300–1800 m].
Distribution: East Malaysia (N Sabah), 300–1800 m.
Remarks: Original description reprinted in Mocquard (1890b: 137–138, pl. 9, figs. 1, 1a–c).

HYDRAETHIOPS A.C.L.G. Günther, 1872b (Natricidae)

Synonym: *Hydraethips* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Hydraethiops melanogaster* A.C.L.G. Günther, 1872b.
Distribution: Central Africa.
Sources: Boulenger, 1920c, Perret, 1961, Chippaux, 2006, Chirio & LeBreton, 2007, Pauwels & Vande weghe, 2008 and Zaher et al., 2009.

1. *Hydraethiops laevis* Boulenger, 1904b. Ann. Mag. Nat. Hist. (7) 13(78): 450–451.

Types: Syntypes (2), BMNH 1946.1.15.35–36, longest syntype 570 mm (G.L. Bates, 1901–1904).
Type locality: "Efulen, S. Cameroon" [= Efulen, W Sud Prov., SW Cameroon, 2°46'N, 10°43'E, elevation 420 m].
Distribution: Southern Cameroon (Sud) and Gabon (Ngounié), 420–670 m.
Sources: Girardin, 1978.
Remarks: Elevation of type locality 670 m *fide* Pauwels & Vande weghe (2008: 224).

2. *Hydraethiops melanogaster* A.C.L.G. Günther, 1872b. Ann. Mag. Nat. Hist. (4) 9(49): 28, pl. 3, fig. g.

Synonyms: *Helicops marginatus* J.G. Fischer, 1883, and *Helicops lineofasciatus* Sauvage, 1884.
Types: Syntypes (4), BMNH 1946.1.7.72–75, one male and three females, longest syntype 610 mm.
Type locality: "Gaboon, West Africa" [= Gabon].
Distribution: Central Africa. Cameroon (Adamaoua, Centre, Est, Littoral, Ouest, Nord-Ouest, Sud, Sud-Ouest), Central African Republic (Haute-Sangha, Lobaye, Mbomou, Ouaka, Sangha), Gabon (Estuaire, Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Ivindo, Ogooué-Lolo, Ogooué-Maritime), Congo (Kouilou, Lekoumou, Sangha) and N Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Nord-Kivu, Orientale, Sud-Kivu), NSL–1250 m.
Sources: Witte, 1962, Roux-Estève, 1965, Knoepffler, 1966, J.-F. Trape, 1981, 1985, Joger, 1990, J.B. Rasmussen, 1991, J.-F. Trape & Roux-Estève, 1995 and Chirio & Ineich, 2006.
Remarks: Probably occurs in Equatorial Guinea.

HYDRELAPS Boulenger, 1896a (Elapidae)

Synonym: *Hidrelaps* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Hydrelaps darwiniensis* Boulenger, 1896a.
Distribution: Mangrove creeks, estuaries and shallow marine waters of Austro-Papua, including Arafura Sea and Gulf of Carpentaria.
Sources: M.A. Smith, 1926a, Brongersma, 1956c, McDowell, 1969b, 1972a, L.A. Smith, 1974, Cogger, 1975, 1992, Whitaker et al., 1982, Cogger et al., 1983a, F. Parker, 1982, Storr et al., 1986, Gow, 1989, O'Shea, 1996, A.R. Rasmussen, 1997, Keogh, 1998, David & Ineich, 1999, Wells, 2007, Kharin, 2008, Zaher et al., 2009 and Hoser, 2012e.
Remarks: Kharin (2008: 103) proposed the subfamily Hydrelapinae. Wells (2007: 20) placed in the family Hydrelapidae.

1. *Hydrelaps darwiniensis* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 270, pl. 12, figs. 1–la.

Type: Lectotype, BMNH 1946.1.1.91 (formerly BMNH 1884.9.13.24), an adult female, longest syntype 435 mm (R.G.S. Buckland, 1877–1884), designated by Kharin (2008: 106).
Type locality: "Port Darwin, North Australia" [= Northern Territory, Australia].
Distribution: Austro-Papua. Eastern Indonesia (S Papua), SW Papua New Guinea (Gulf, Western, Daru Is.) and N Australia (N Western Australia, Northern Territory, NW Queensland, Melville Is.), NSL–10 m.
Remarks: Photographs of the lectotype in Kharin (2008: figs. 4–5).

HYDRODYNASTES Fitzinger, 1843 (Xenodontidae)

Synonyms: *Lejosophis* Jan, 1863a *(nomen emendatum), Leiosophis* – Jan, 1863a *(nomen incorrectum), Cyclagras* Cope, 1885a *(nomen substitutum), Ciclagras* – Brazil, 1911 *(nomen incorrectum), Xyclagras* – Freiberg, 1939 *(nomen incorrectum), Dugandia* Dunn, 1944d, *Hydrodinastes* – Cunha & Nascimento, 1978 *(nomen incorrectum), Leitosphis* – Cunha & Nascimento, 1978 *(nomen incorrectum), Cyglagras* – Engelmann & Obst, 1981 *(nomen incorrectum),* and *Azdronestes* – Fugler, 1983 *(nomen incorrectum).*
Type species: *Coluber bicinctus* Hermann, 1804.
Distribution: South America.
Sources: Hoge, 1958b, J.A. Peters & Orejas-Miranda, 1970, Dowling & Gibson, 1970a, Cadle, 1984a, Chippaux, 1987, Starace, 1998, Franco et al., 2007 and Zaher et al., 2009.

1. *Hydrodynastes bicinctus* (Hermann, 1804). Observ. Zool.: 276. (*Coluber bicinctus*)

Synonyms: *Coronella anguiformis* Laurenti, 1768 *(partim, nomen oblitum), Elaps annulatus* Schneider, 1801 *(partim, nomen oblitum), Coluber thalia* Daudin, 1803d *(partim, nomen oblitum), Elaps schrankii* Wagler *in* Spix, 1824, *Coluber cuvieri* Kaup, 1827, and *Hydrodynastes bicinctus schultzi* Hoge, 1966b.
Type: Holotype, not designated, location unknown.
Type locality: Unknown.
Distribution: Amazonia. Southeastern Colombia (Amazonas, Meta, Vaupéss), S Venezuela (Amazonas, Bolívar), Guyana (Upper Takutu-Upper Essequibo), S Suriname (S Sipaliwini), N French Guiana (Cayenne, Saint-Laurent-du-Maroni) and N Brazil (Amazonas, Distrito Federal, Goiás, Pará, Paraná, Rondônia, São Paulo), NSL–750 m.
Sources: Roze, 1966a, P. Muller, 1975, Cunha & Nascimento, 1978, Abuys, 1983d, Lancini, 1986, Pérez-Santos, 1986, Chippaux, 1987, Pérez-Santos & Moreno, 1988, Kuch, 1990, N.J. Silva & Sousa, 2002, Abuys, 2003, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Coluber bicinctus* Hermann is designated a *nomen protectum* and *Coronella anguiformis* Laurenti, *Elaps annulatus* Schneider, and *Coluber thalia* Daudin are *nomina oblita*.

2. *Hydrodynastes gigas* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 761–763. (*Xenodon gigas*)

Synonym: *Xenodon gigas* A.-M.-C. Duméril, 1853 (*nomen nudum*).
Types: Syntypes (3), MNHN 2493a–c, longest syntype 2270 mm (A.C.V.M.D. d'Orbigny, 22 April 1827–20 April 1828).
Type locality: "la Prov. de Corrientes (Confédér. du Rio de la Plata), l'Amérique du Sud" [= Corrientes Prov., ext. NE Argentina].
Distribution: South America. Suriname, N French Guiana (Cayenne, Saint-Laurent-du-Maroni, Cayenne), Brazil (Amapá, Distrito Federal, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Pará, Paraíba, Paraná, Piauí, Rio Grande do Sul, Rondônia, São Paulo, Tocantins, Marajo Is.), E Bolivia (Beni), Paraguay (Alto Paraguay, Alto Paraná, Asunción, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro) and N Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Misiones, Santa Fe), NSL–100 m.
Sources: P. Müller, 1975, Amaral, 1978, Hoge et al., 1978b, Hoogmoed, 1979, J.A. Campbell & Murphy, 1984, Bels, 1987, Chippaux, 1987, F.E. Hayes, 1991, Strüssmann & Sazima, 1991, J.D. Williams & Francini, 1991, Cei, 1994, D.R. Norman, 1994, Fugler et al., 1995, Moura-Leite et al., 1996, Bernarde & Moura-Leite, 1999, Leynaud & Bucher, 1999, Abuys, 2003, Pereira-Filho & Montingelle, 2006, Cacciali, 2008 and Silva-Leite et al., 2009.

3. *Hydrodynastes melanogigas* Franco, Fernandes & Bentim, 2007. Zootaxa (1613): 58–61, 4 figs.

Type: Holotype, IB 65796, a 1795 mm male (M.M.T. da Rocha, M.E.V. Calleffo & S.R. Travaglia-Cardoso, 21–30 Jan. 2002), destroyed by fire 15 May 2010.
Type locality: "Municipality of Palmas (10°12'46"S 48°21'37"W, 230 m above sea level), State of Tocantins, Brazil."
Distribution: Central Brazil (Tocantins), 200–230 m.

H

HYDROMORPHUS W.C.H. Peters, 1859b (Dipsadidae)

Type species: *Hydromorphus concolor* W.C.H. Peters, 1859b.
Distribution: Central America.
Sources: Nelson, 1966, Villa, 1970b, 1990a, Savage & Donnelly, 1988 and Cunha & Nascimento, 1993.

1. *Hydromorphus concolor* W.C.H. Peters, 1859b. Mber. Königl. Akad. Wiss. Berlin 1859(3): 277, pl. figs. 3, 3a–3c.

Synonym: *Hydromorphus clarki* Dunn, 1942.
Type: Holotype, ZMB 2493, an 850 mm female (K. Hoffmann, 1853–1859).
Type locality: "Costa Rica."
Distribution: Central America. Eastern Guatemala (Izabal), NW Honduras (Atlántida, Cortés, Gracias a Dios, Olancho, Santa Bárbara, Yoro), Nicaragua (Jinotega, S Matagalpa), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José) and Panama (Bocas del Toro, Panamá, Bastimentas Is.), NSL–1500 m.
Sources: E.H. Taylor, 1951, 1954, L.D. Wilson & Meyer, 1985, Crother, 1989, Solórzano et al., 1989, G. Köhler, 1999b, Savage, 2002, Solórzano, 2004, McCranie et al., 2006 and McCranie, 2011a.

2. *Hydromorphus dunni* Slevin, 1942. Proc. California Acad. Sci. (4) 23(32): 474, pl. 39, figs. 2–3.

Type: Holotype, CAS 78939, adult male (J.R. Slevin, 30 July 1939).
Type locality: "Vicinity North of Boquete, Chiriqui Prov., Panama."
Distribution: Western Panama (W Chiriquí), 1150–1250 m. Known only from type locality.

HYDROPHIS Latreille *in* Sonnini & Latreille, 1801b (Elapidae)

Synonyms: *Hydrophys* Bory de St. Vincent, 1825 *(nomen emendatum), Hydrus* Wagler, 1830, *Nauticophis* Lesson, 1832 *in* Bélanger, 1831–1834 *(nomen substitutum), Polyodontes* Lesson, 1832 *in* Bélanger, 1831–1834 *(nomen praeoccupatum), Hydrophes* Agassiz, 1846 *(nomen emendatum), Noterophis* Gistel, 1848, *Polydontes* – Gray, 1849a *(nomen incorrectum), Colubrinus* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Hijdrophis* Bleeker, 1856 *(nomen emendatum), Hydrophtis* – Gervais & Beneden, 1859 *(nomen incorrectum), Hydrophia* – Cope, 1860b *(nomen incorrectum), Hidrophis* – Kulagin, 1888 *(nomen incorrectum), Polyodontus* Boulenger, 1896a *(nomen emendatum), Porrecticollis* Wall, 1921g, *Enhydrophis* – Maki, 1933 *(nomen incorrectum), Hygrophis* – Brygoo, 1983 *(nomen incorrectum),* and *Porreticollis* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type species: *Hydrus fasciatus* J.G. Schneider, 1799.

Distribution: Marine waters of Indo-Australia, including Arafura Sea, Arabian Sea, Bay of Bengal, Chilka Lake, Coral Sea, Gulf of Carpentaria, Gulf of Thailand, Java Sea, Indian Ocean, South China Sea, Strait of Madura, Strait of Malacca and Timor Sea.

Sources: Wall, 1909a, 1914g, M.A. Smith, 1926a, 1943, C. Haas, 1950, Klemmer, 1963, Barme, 1968, Halstead, 1970, McDowell, 1972a, Cogger, 1975, 1992, Minton, 1975, Voris, 1977, Cogger et al., 1983a, Burger & Natsuno, 1984, Schwaner et al., 1985, Ehmann, 1992, A.R. Rasmussen, 1994, 1997, David & Ineich, 1999, A.R. Rasmussen et al., 2001, Kelly et al., 2003, Kharin, 2004b, Scanlon & Lee, 2004, Kharin & Cheblukov, 2007, A.R. Rasmussen et al., 2007, Wells, 2007, Sanders et al., 2008, Zaher et al., 2009, I. Das, 2010, 2012, Hoser, 2012e and Ukuwela et al., 2012.

Remarks: Official Generic Name no. 2146 *fide* Opinion 1201 (ICZN, 1982a). The following genera and species have been separated from *Hydrophis: Chitulia (belcheri, bituberculatus, inornatus, laboutei, lamberti, lapemoides, mamillaris, ornata, sibauensis, sticticollis, torquatus), Disteira (kingii, major, nigrocincta, walli), Leioselasma (coggeri, cynocincta, czeblukovi, elegans, melanocephala, pacifica, semperi, spiralis), Mediohydrophis (klossi, melanosoma),* and *Polyodontognathus (caerulescens).*

H

1. *Hydrophis atriceps* A.C.L.G. Günther, 1864a. Rept. Brit. India: 371, pl. 25, figs. i–i′.

Synonyms: *Aturia lindsayi* Gray, 1842d, *Hydrophis alcocki* Wall, 1906g, *Disteira cincinnatii* Van Denburgh & Thompson, 1908, and *Distira cincinatii* – Phisalix, 1922 *(nomen incorrectum).*

Types: Syntypes (2), BMNH 1946.1.2.62 (formerly BMNH 1862.11.1.255) and BMNH 1863.9.29.5, two males, longest syntype 787 mm.

Type locality: "Siam" [= Thailand].

Distribution: Indo-Australia. Thailand (Krung Thep Maharakhom, Surat Thani, Songkhla), Cambodia (Kaoh Kong), Vietnam (Dong Nai), China (Fujian, Guangdong, Guangxi, Hainan, Liaoning), E West Malaysia (Kelantan), East Malaysia (Sabah, Sarawak), Indonesia (Papua, Aru Is., Java, Kalimantan, Sumatra), Philippines (Luzon), S Papua New Guinea (Gulf) and N Australia (Northern Australia, Queensland).

Sources: Bourret, 1934g, M.A. Smith, 1935, Bergman, 1962b, E.H. Taylor, 1965, Tian et al., 1986, Stuebing, 1991, O'Shea, 1996 and V.S. Nguyen et al., 2009.

Remarks: A valid species *fide* Cogger et al., 1983a, Gow, 1989 and Cogger, 2000. Previously a subspecies of *Hydrophis fasciatus* (Schrieber). Possibly occurs in West Malaysia *fide* I. Das (2012: 149).

2. *Hydrophis brookii* A.C.L.G. Günther, 1872a. Proc. Zool. Soc. London 40(1): 597, fig. 5.

Synonyms: *Hydrophis consobrinus* M.A. Smith, 1917c, *Hydrophis brookei* Rooij, 1917 *(nomen emendatum),* and *Disteira consobrina* Oshima, 1944.

Type: Holotype, BMNH 1946.1.1.57 (formerly BMNH 1872.2.16.58), a 914 mm female (A.H. Everett, 1872–1876 or 1885–1890).

Type locality: "Sarawak, Borneo" [East Malaysia].

Distribution: Southeast Asia and Greater Sundas. Southern Thailand (Krung Thep Mahanakhon, Songkhla, Trang), ext. S Vietnam (Dong Nai, Ke Ga Cape, Phan Ri, Phan Thiet, Vung Tau), West Malaysia (Johore, Perak, Pinang), Singapore, N East Malaysia (Sarawak) and W Indonesia (N Java).

Sources: E.H. Taylor, 1965, B.L. Lim & Sawai, 1975 and V.S. Nguyen et al., 2009.

3. *Hydrophis donaldi* Ukuwela, Sanders & Fry, 2012. Zootaxa (3201): 48–51, fig. 2.

Type: Holotype, QM J90700, an 860 mm male (B.G. Fry, 15 Oct. 2000).

Type locality: "Gulf of Carpentaria, Weipa, Queensland, Australia (12°35'10.88"S, 141°57'47.21"E)."

Distribution: Northern Australia (N Queensland).

Remarks: Generic allocation uncertain.

4. *Hydrophis fasciatus* (J.G. Schneider, 1799). Hist. Amph. 1: 240–241. (*Hydrus fasciatus*)

Synonyms: *Hydrophis laticauda* Latreille *in* Sonnini & Latreille, 1801b, *Anguis xiphura* Hermann, 1804, *Hydrophis lanceolatus* Oken, 1817, *Hydrus chlorus* Merrem, 1820, *Hydrus chloris* Gray *in* Griffith & Pidgeon, 1831 *(nomen emendatum), Pelamis lindsayi* Gray *in* Griffith & Pidgeon, 1831, *Colubrinus*

hydrus A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Hydrophis leptodira* Boulenger, 1896a, *Hydrophis rhombifer* Boulenger, 1900a, *Hydrophis lindsays* – Mocquard, 1904b *(nomen incorrectum), Hydrophis laindsaya* – Wall, 1921g *(nomen incorrectum), Hydrophis fasciatus faciatus* – M.W. Lin, 1975 *(nomen incorrectum),* and *Pelamis fasciataus* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Lectotype, ZMB 2836, a juvenile female (M.E. Block, 1760), designated by Iskandar & Colijn (2001: 134).

Type locality: Unknown. "East Indies" via lectotype selection.

Distribution: Southern Asia and Greater Sundas. Pakistan, India (Andhra Pradesh, Karnataka, Kerala, Orissa, Tamil Nadu, West Bengal), Bangladesh, Myanmar (Rakhine), China (Fujian, Guangdong, Guangxi, Hainan), Vietnam (Con Dao Is.), West Malaysia (Perak, Perlis, Phuket, Selangor, Angsa, Langkawi and Phuket Is.), Singapore and Indonesia (N Java, Sumatra).

Sources: Wall, 1921g, Singh, 1972, B.L. Lim & Sawai, 1975, M.S. Khan, 2002, V.S. Nguyen et al., 2009 and A. Silva et al., 2011.

Remarks: Official Specific Name no. 2782 *fide* Opinion 1201 (ICZN, 1982a). ZMB catalogue lists type locality as "ostindien" and ZMB 2837 as holotype but "Sudamerika" *fide* Bauer (1998: 137).

5. *Hydrophis macdowelli* Kharin, 1983. Zool. Zhur. 62(11): 1751–1753, figs. 1–4.

Type: Holotype, ZISP 19678, a 708 mm male (U.P. Shuntov, 1969).

Type locality: "North Australian shelf."

Distribution: Australasia. Papua New Guinea (Western), N Australia (Northern Territory, Queensland, N Western Australia) and New Caledonia.

Sources: Gow, 1989, O'Shea, 1996, Ineich & Rasmussen, 1997, Bauer & Sadlier, 2000 and Ineich & Laboute, 2002.

6. *Hydrophis obscurus* Daudin, 1803d. Hist. Nat. Rept. 7: 375–376.

Synonyms: *Hydrophis cloris* Daudin, 1803d, *Hydrophis shootur* Rafinesque-Schmaltz, 1817, *Pelamis chloris* Merrem, 1820 *(nomen emendatum), Leioselasma obscura* – Fitzinger, 1827, *Hydrophis subcinctus* Gray, 1842d, *Hydrophis coronata* A.C.L.G. Günther, 1864a, *Hydrophis latifasciata* A.C.L.G. Günther, 1864a, *Hydrophis subcincta* – A.C.L.G. Günther, 1864a, and *Porreticollis obscurus* – Culotta & Pickwell, 1993 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.9.27 (formerly BMNH 1896.3.25.4), a 914 mm male (P. Russell, 1781–1791).

Type locality: "Coromandel" [India] (in error). Specified as The Sunderbunds *fide* P. Russell (1801: 57) [= Sundarbans, Ganges River delta, SW Bangladesh and SE West Bengal, India, bet. 21.5–23°N, 88–91.5°E]

Distribution: Southern Asia. Eastern India (Kerala, Orissa, Tamil Nadu, West Bengal, Barkuda Is.), Bangladesh (Chittagong) and Myanmar (Irrawaddy, Mergui Arch., Tanintharyi).

Sources: Wall, 1921g, F. Scott et al., 1977, Ahmed, 1978 and M.A.R. Khan, 1988.

Remarks: Original description based on P. Russell (1801: 9, pl. 8).

7. *Hydrophis parviceps* M.A. Smith, 1935. Dana Report (8): 5, fig. 2.

Type: Holotype, ZMUC 66182 (formerly MBLC St. 3692), an 890 mm male (R.S. Dana crew, 11 April 1929).

Type locality: "coast of Cochin China (9°59' N 107°23.5' E)" [= south of Vung Tau, Dong Nai Prov., S Vietnam].

Distribution: Southern Vietnam (Bihn Thuan, Dong Nai, Han Tam).

Sources: E.H. Taylor, 1963, V.S. Nguyen et al., 2009 and A.R. Rasmussen et al., 2011, 2012.

Remarks: Photograph and head illustrations of holotype in A.R. Rasmussen et al. (2012: figs. 1–2).

8. *Hydrophis vorisi* Kharin, 1984a. Zool. Zh. 63(4): 630–631, figs. 1–4.

Type: Holotype, AMNH 58869, a 635 mm female (Second Archibold Exped., 1937).

Type locality: "East Bank of Fly River opposite Stuart Island, Western District, Papua New Guinea."

Distribution: Southern Papua New Guinea (Western) and N Australia (Torres Strait).

Sources: Cogger, 1975 and O'Shea, 1996.

Remarks: India and Myanmar erroneously included as part of Distribution *fide* Gow (1989: 159).

HYDROPS Wagler, 1830 (Xenodontidae)

Synonyms: *Higina* Gray, 1842d, *Hygina* Gray, 1849 *(nomen emendatum),* and *Hydrophs* – Orcés & Matheus, 1988 *(nomen incorrectum).*

Type species: *Elaps martii* Wagler *in* Spix, 1824.

Distribution: South America.

Sources: Roze, 1957b, 1957c, J.A. Peters & Orejas-Miranda, 1970, Cunha & Nascimento, 1978, Dixon & Soini, 1986, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988, Vidal et al., 2000, Albuquerque, 2002, Scrocchi et al., 2005, Albuquerque & Lema, 2008 and Zaher et al., 2009.

1. *Hydrops caesurus* Scrocchi, Ferreira, Giraudo, Avila, & Motte, 2005. Herpetologica 61(4): 470–472, fig. 2.

Type: Holotype, MNHNP 6698 (formerly MCZ-FS 2-11689), a 656 mm female (Consultora FORACRO, 4 Aug. 1994).
Type locality: "Departamento Itapúa; Isla Paloma, Canal de los Jesuitas, Paraguay" [= Los Jesuitas canal, Paloma Is., S Itapúa Dept., ext. SE Paraguay, 27°28'S, 56°25'W, elevation 75 m].
Distribution: Brazil (Mato Grosso, Mato Grosso do Sul), S Paraguay (Alto Paraná, Canindeyú, Central, Itapúa, Misiones, Neembucú, Presidente Hayes, Paloma and Yacyretá Is.) and Argentina (Corrientes, San Miguel), NSL–185 m.
Source: Cacciali, 2008.

H

2. *Hydrops martii* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 3–4, pl. 2, fig. 2. (*Elaps martii*)

Synonyms: *Coronella anguiformis* Laurenti, 1768 (*partim, nomen oblitum*), *Elaps annulatus* Schneider, 1801 (*partim, nomen oblitum*), *Coluber thalia* Daudin, 1803d (*partim, nomen oblitum*), *Hydrops martii ornatissimus* Jan, 1857 (*nomen nudum*), and *Hydrops callostictus* A.C.L.G. Günther, 1868.
Type: Holotype, ZSM 1844/0, a 596 mm specimen (J.B. von Spix & K.F.P. von Martius, May–July 1819).
Type locality: "provincia Maranhao ad flumen Itapicurú" [= between Caxias (4°50'S, 43°21'W) and Arrarial (2°37'S, 44°41'W), Río Itapicuru, Maranhão Prov., Brazil *fide* Franzen & Glaw, 2007: 253].
Distribution: Amazonia. Southeastern Colombia (E Amazonas, Vaupés), S Venezuela (SE Amazonas), N Brazil (Amazonas, Maranhão, Pará, Roraîma, Marajo Is.) and NE Peru (Loreto), NSL–250 m.
Sources: Albuquerque, 2000 and Rivas-Fuenmayor et al., 2012.
Remarks: Plate figure of original description erroneously listed in text as fig. 1. Photograph of holotype in Albuquerque (2000: fig. 1) and Franzen & Glaw (2007: fig. 20). In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Elaps martii* Wagler is designated a *nomen protectum* and *Coronella anguiformis* Laurenti, *Elaps annulatus* Schneider, and *Coluber thalia* Daudin are *nomina oblita*.

3. *Hydrops triangularis* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 5–6, pl. 2a, fig. [1] (right). (*Elaps triangularis*) (*nomen protectum*)

Synonyms: *Coronella anguiformis* Laurent, 1768 (*partim, nomen oblitum*), *Elaps annulatus* Schneider, 1801 (*partim, nomen oblitum*), *Coluber thalia* Daudin, 1803d (*partim, nomen oblitum*), *Coluber nicandri* Merrem, 1820, *Higina fasciata* Gray, 1842d, *Pseudoeryx inagnitus* Bocourt, 1894, *Hydrops triangularis bassleri* Roze, 1957c, *Hydrops triangularis bolivianus* Roze, 1957c, *Hydrops triangularis neglectus* Roze, 1957c, and *Hydrops triangularis venezuelensis* Roze, 1957c.
Type: Holotype, ZSM 1846/0, a 611 mm male (J.B. von Spix, Nov.–Dec. 1819).
Type locality: "prope Ega ad lacum Teffé cum flumine Solimöens confluentem" [= Téfé, confluence of Lago Tefé with Río Amazonas, Amazonas State, NW Brazil, 3°19'S, 64°43'W, elevation 50 m].
Distribution: South America. Southeastern Colombia (Amazonas, Meta, Vaupés), S Venezuela (Amazonas, Apure, Barinas, Bolívar, Cojedes, Delta Amacuro, Portuguesa), Trinidad and Tobago (Trinidad), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara), Suriname (Brokopondo, Para, Sipaliwini), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Ecuador (Napo), N Brazil (Amazonas, Amapá, Maranhao, Pará, Piauí, Rondônia, Tocantins), E Peru (Loreto), NE Bolivia (Beni, Santa Cruz) and Paraguay (Presidente Hayes), NSL–240 m.
Sources: Roze, 1966a, Nicéforo-María, 1970, J.D. Williams & Couturier, 1984, Lancini, 1986, Chippaux, 1987, Cei, 1994, Yuki, 1997a, Buongerminip & Waller, 1998, Starace, 1998, Rivas-Fuenmayor & Fuentes, 2000, Albuquerque, 2001, Markezich & Dixon, 2001, Guedes et al., 2002 and Franzen & Glaw, 2007, Albuquerque & Lema, 2008, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: Original description listed figure as pl. 2a, fig. 1 but both figures are unnumbered and *E. triangularis* is on the right. In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Elaps triangularis* Wagler is designated a *nomen protectum* and *Coronella anguiformis* Laurenti, *Elaps annulatus* Schneider, and *Coluber thalia* Daudin are *nomina oblita*.

HYPNALE Fitzinger, 1843 (Viperidae)

Synonyms: *Hynale* – Chenu & Desmarest, 1857 *(nomen incorrectum), Hypuale* – Canton, 1895 *(nomen incorrectum),* and *Hypinale* – Hoge & Romano-Hoge, 1983 *(nomen incorrectum).*
Type species: *Cophias hypnale* Merrem, 1820.
Distribution: Southern India and Sri Lanka.
Sources: Wall, 1921g, M.A. Smith, 1943, Deraniyagala, 1955, Gloyd, 1977, Hoge & Romano-Hoge, 1981a, Chiasson et al., 1989, Maes, 1989, Gloyd & Conant, 1990, Kardong, 1990, Kraus et al., 1996, Parkinson et al., 1997, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Gumprecht et al., 2004 and Maduwage et al., 2009.
Remarks: An undescribed species occurs in Galle, Sri Lanka *fide* Maduwage et al. (2009: 20–23, fig. 9).

1. *Hypnale hypnale* (Merrem, 1820). Tent. Syst. Amph.: 155. (*Cophias hypnale*)

Synonyms: *Trimesurus ceylonensis* Gray, 1842b, *Trigonocephalus hypnalis* – Blyth *in* Kelaart, 1852, *Hypnale affinis* J. Anderson, 1871b, and *Ancistrodon millardi* Wall, 1908b.
Type: Neotype, BNHS 2531.759, a 350 (svl) mm female (H.S. Wise, 31 Dec. 1907), designated by Maduwage et al. (2009: 4).
Type locality: "Castle Rock in Karnataka State, India, 15º23'52"N, 74º19'56"E, alt. 620 m" via neotype selection.
Distribution: Southwestern India (Karnataka, Kerala, Tamil Nadu) and Sri Lanka (Central, Eastern, North-Central, Northern, North-Western, Sabaragamuwa. Southern, Uva, Western), NSL–1525 m.
Sources: P. Silva, 1980a, Nanayakkara, 1989, A. Silva, 1990a–b, 2001, 2009, Whitaker & Captain, 2004 and N. Khaire, 2006.
Remarks: Original description based on Russell (1801: 26–27, pl. 22). Type specimen(s) lost *fide* Maduwage et al. (2009: 3). Photograph of neotype in Maduwage et al. (2009: 9, fig. 3a).

2. *Hypnale nepa* (Laurenti, 1768). Synop. Rept.: 97. (*Coluber nepa*)

Synonym: *Hypnale walli* Gloyd, 1977.
Type: Neotype, WHT 6515, a 367 (svl) mm male (S.V. Nanayakkara, 4 March 2006), designated by Maduwage et al. (2009: 10).
Type locality: "Agra Arboretum, Agarapatana, 06º50'N, 80º40'E, alt. 1665 m" via neotype selection.
Distribution: Southern Sri Lanka (Central, Sabaragamuwa, Uva, Western), 1250–1850 m.
Source: J.C. Murphy & Schlager, 2003.
Remarks: Original description based on Seba (1735: 55–56, pl. 55, figs. 1, 2, 4). Type specimen(s) lost *fide* Maduwage et al. (2009: 3). Photographs of neotype in Maduwage et al. (2009: figs. 4a–e, 5b). Maduwage et al., 2009 considered *H. walli* a synonym of *nepa*.

3. *Hypnale zara* (Gray, 1849a). Cat. Snakes British Mus.: 15. (*Trigonocephalus zara*)

Type: Holotype, BMNH 1946.1.19.96, a 303 (svl) male (Argent coll.)
Type locality: "Singapore," (in error *fide* Maduwage et al., 2009: 25).
Distribution: Sri Lanka (Central, Sabaragamuwa, Southern), 60–1310 m.
Remarks: Photograph of holotype in Maduwage et al. (2009: fig. 7a).

HYPOPTOPHIS Boulenger, 1908g (Atractaspididae)

Synonyms: *Michellia* L. Müller, 1911, and *Hypostrophis* – Phisalix, 1922 *(nomen incorrectum).*
Type species: *Hypoptophis wilsonii* Boulenger, 1908g.
Distribution: Central Africa.
Sources: Witte & Laurent, 1947, Laurent, 1950c, Witte, 1953, 1962, Broadley, 1971d, Underwood & Kochva, 1993, Kelly et al., 2009 and Zaher et al., 2009.

1. *Hypoptophis wilsonii* Boulenger, 1908g. Ann. Mag. Nat. Hist. (8) 2(7): 93–94.

Synonym: *Michellia katangae* L. Müller, 1911.
Type: Holotype, BMNH 1946.1.2.99 (formerly BMNH 1908.6.16.5), a 560 mm female (H. Wilson, June 1904–Dec. 1907).
Type locality: "Inkongo, on the Sankuru River, in the Kassai Prov. of the Congo" [= Inkongo, Kasai Oriental Prov., S Democratic Republic of the Congo, 4°55'S, 23°15'E, elevation 520 m].
Distribution: Southeastern Democratic Republic of the Congo (Kasai Occidental, Kasai Oriental, Katanga) and NW Zambia (North-Western, Western), 520–1095 m.

H

HYPSIGLENA Cope, 1860e (Dipsadidae)

Synonyms: *Pseudodipsas* W.C.H. Peters, 1860d, *Comastes* Jan, 1863b, *Hypseglena* Scudder, 1882 *(nomen emendatum), Pseudodipas* – W.W. Tanner, 1944 *(nomen incorrectum), Hypseglena* – Hoge & Garcia, 1949 *(nomen incorrectum), Eridiphas* Leviton & Tanner, 1960, and *Hypsoglena* – Obst, Richter & Jacob, 1984 *(nomen incorrectum).*
Type species: *Hypsiglena ochrorhyncha* Cope, 1860e.
Distribution: North America.
Fossil records: Upper Pleistocene of SW USA.
Sources: W.W. Tanner, 1939, Mulcahy, 2008, Zaher et al., 2009 and Mulcahy et al., 2011.

1. *Hypsiglena affinis* Boulenger, 1894a. Cat. Snakes Brit. Mus. 2: 210–211, pl. 8, fig. 1.

Types: Syntypes (3), BMNH 1946.1.1.21 (J.M. Cameron), BMNH 1946.1.1.22 (F.D. Godman, 1885–1889), and BMNH 1946.1.1.23 (A.G. Butler), longest syntype 310 mm.
Type locality: "Zacatecas" [= Zacatecas State, Mexico], "Mezquital del Oro, Zacatecas" [= Mezquital del Oro, S Zacatecas State, Mexico, 21°13'N, 103°22'W, elevation 1255 m], and "Jalisco," = Jalisco State, Mexico].
Distribution: Western Mexico (Jalisco, ext. S Zacatecas), 1000–2100 m.

2. *Hypsiglena chlorophaea* Cope, 1860e. Proc. Acad. Nat. Sci. Philadelphia 12(6): 247.

Synonyms: *Hypsiglena ochrorhynchus deserticola* W.W. Tanner, 1946, *Hypsiglena ochrorhynchus lorealus* W.W. Tanner, 1946, *Hypsiglena torquata catalinae* W.W. Tanner, 1966a, and *Hypsiglena torquata tiburonensis* W.W. Tanner, 1981.
Types: Syntypes (2), USNM 4676, longest syntype 380 mm (B.J.D. Irwin, 1857–1860), location of other syntype unknown.
Type locality: "Fort Buchanan, Arizona" [= 5 km SW Sonoita in Hog Canyon, Santa Cruz Co., SE Arizona, SW USA, 31°40'N, 110°42'W, elevation 1425 m].
Distribution: North America. Canada (ext. S British Columbia), W USA (Arizona, E California, W Colorado, S Idaho, Nevada, E Oregon, Utah, E Washington) and W Mexico (ext. SW Chihuahua, Sonora), NSL–1545 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona, California, Nevada).
Sources: P.R. Brown, 1997, Grismer, 1999, 2001b, 2002 and Holman, 2000a.

H

3. *Hypsiglena jani* (Dugès, 1865). Mem. Acad. Sci. Lett. Montpellier 6: 32–33. (*Liophis janii*)

Synonyms: *Hypsiglena texana* Stejneger, 1893b, and *Hypsiglena torquata dunklei* E.H. Taylor, 1939a
Type: Neotype, USNM 9889 (native, 1877), designated by H.M. Smith & Necker (1943: 204).
Type locality: "Guanájuato, Guan., Mexico" [= Guanajuato, Guanajuato State, cen. Mexico, 21°01'N, 101°15'W, elevation 2010 m].
Distribution: USA (E Arizona, SE Colorado, New Mexico, W Oklahoma, W and S Texas) and Mexico (Aguascalientes, N and E Chihuahua, Coahuila, E Durango, Guanajuato, Hidalgo, Jalisco, Nuevo León, Querétaro, San Luis Potosí, Tamaulipas, Zacatecas), NSL–2450 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (New Mexico, Texas).
Sources: E.H. Taylor, 1939a, W.W. Tanner, 1943, 1946, 1966a, 1981, 1985, 1987, Dixon, 1965, R.W. Murphy & Ottley, 1984, Stebbins, 1985, Dixon & Dean, 1986, Van Devender & Bradley, 1994, H.A. Brown et al., 1995, Degenhardt et al., 1996, Macey et al., 1996, R.S. Bartlett & Tennant, 2000, Holman, 2000a, McAfee & Gilardi, 2000, Werler & Dixon, 2000, Lemos-Espinal et al., 2004b and Reyes-Velasco et al., 2012.

4. *Hypsiglena ochrorhyncha* Cope, 1860e. Proc. Acad. Nat. Sci. Philadelphia 12(6): 246–247.

Synonyms: *Hypsiglena venusta* Mocquard, 1899, *Hypsiglena nuchalatus* W.W. Tanner, 1943, *Hypsiglena ochrorhynchus klauberi* W.W. Tanner, 1946, *Hypsiglena ochrorhynchus tortugaensis* W.W. Tanner, 1946, *Hypsiglena ochrorhynchus unaocularus* W.W. Tanner, 1946, *Hypsiglena torquata gularis* W.W. Tanner, 1954, *Hypsiglena torquata baueri* Zweifel, 1958, and *Hypsiglena torquata martinensis* W.W. Tanner & Banta, 1962a,
Types: Syntypes (11), USNM 5283a–c, USNM 9216, USNM 69538–40, USNM 131733, ANSP 3537–38, and MCZ 9503 (formerly USNM 5283d), longest syntype 295 mm (J. Xantus, Dec. 1859)
Type locality: "Cape St. Lucas, California" [= Cabo San Lucas, S Baja California Sur, NW Mexico, 22°53'N, 109°55'W, elevation 25 m].
Distribution: Western USA (S California), W Mexico (Baja California Norte, Baja California Sur, Salsipuedes, San Estaban, San Lorenzo Sur, Angel de la Guarda, Carmen, Cedros, Ceralvo, Danzante, Montserrat, Partida Norte, Partida Sur, San Esteban, San José, San Lorenzo, San Marcos, Santa Catalina, Tiburon and Tortuga Is.), NSL–2745 m.
Fossil records*:* Upper Pleistocene (Rancholabrean II) of USA (California).
Sources: Grismer, 1999, 2002 and Holman, 2000a.

5. *Hypsiglena slevini* W.W. Tanner, 1943. Great Basin Nat. 4(1–2): 53 –54.

Synonym: *Eridiphas slevini marcosensis* Ottley & Tanner, 1978.
Type: Holotype, CAS 53631, a 213 mm male (J.R. Slevin, 14 June 1921).
Type locality: "Puerto Escondido, Lower California" [= a few miles south of Loreto (25°59'N, 111°21'W, elevation NSL), Baja California Sur, NW Mexico].
Distribution: Western Mexico (S Baja California Norte, Baja California Sur, Coronados, Cerralvo, Danzante, La Peña and San Marcos Is.), NSL–1600 m.
Sources: W.W. Tanner, 1946, Ottley & Tanner, 1978, Cadle, 1984b, R. Murphy & Ottley, 1984, Castro Franco & Gaviño, 1990, Mellink, 1996, Grismer, 1999, 2002, Youmans et al., 2002 and Mulcahy & Archibald, 2003.
Remarks: Grismer (1999: 458) considered *E. sleveni marcosensis* a distinct species.

6. *Hypsiglena tanzeri* Dixon & Lieb, 1972. Contr. Sci. Nat. Hist. Mus. Los Angeles Co. (222): 2–5, figs. 1a–b, 2 (right).

Type: Holotype, TCWC 34079, a 328 mm male (F. Guyer, 13 April 1971).
Type locality: "5 km E. Jalpan, Querétaro, Mexico, 762 m, 99° 27' W., 21° 13 N."
Distribution: Central Mexico (Querétaro), 760–1070 m.
Source: Dixon & Dean, 1986.
Remarks: A subspecies of *H. torquata fide* W.W. Tanner (1981: 141).

7. *Hypsiglena torquata* (A.C.L.G. Günther, 1860j). Ann. Mag. Nat. Hist. (3) 5(27): 170–171, pl. 10, fig. a. (*Leptodeira torquata*)

Synonyms: *Pseudodipsas fallax* W.C.H. Peters, 1860d, and *Comastes quincunciatus* Jan, 1863b.

Types: Syntypes (2), BMNH 1946.1.1.15 (formerly BMNH 1861.12.30.97), a female, and WML, 451 and 417 mm specimens (Derby Mus.).

Type locality: "Nicaragua; Island of Laguna," (in error).

Distribution: Western Mexico (Colima, Guerrero, Jalisco, Michoacán, Morelos, Nayarit, Oaxaca, ext. S Puebla, S Sinaloa), NSL–800 m.

Sources: Dixon and Dean, 1986, Boundy et al. *in* Crother, 2000, H.M. Smith et al., 2005b and Canseco-Márquez & Gutiérrez-Mayén, 2010.

HYPSIRHYNCHUS A.C.L.G. Günther, 1858 (Xenodontidae)

Synonym: *Hipsirhynchus* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type species: *Hypsirhynchus ferox* A.C.L.G. Günther, 1858.

Distribution: Hispaniola.

Sources: A. Schwartz, 1971, A. Schwartz & Thomas, 1975, A. Schwartz & R.W. Henderson, 1988, 1991, Sosa et al., 1995, Rodríguez-Robles & Greene, 1996, Hedges et al., 2009 and Zaher et al., 2009.

1. *Hypsirhynchus ferox* A.C.L.G. Günther, 1858. Cat. Colub. Snakes Brit. Mus.: 49.

Synonyms: *Hypsirhynchus ferox exedrus* A. Schwartz, 1971, and *Hypsirhynchus ferox paracrousis* A. Schwartz, 1971.

Type: Holotype, BMNH 1946.1.4.96, a 756 mm female (A. Sallé via H. Cuming, 1859).

Type locality: "Barbadoes" [= Barbados Is.] (in error). Corrected to Santo Domingo *fide* Boulenger (1894a: 118). Restricted incorrectly to the vicinity of Port-au-Prince, Departement de l'Ouest, Haiti *fide* A. Schwartz (1971: 74). Corrected restriction to Republica Dominica *fide* Wetherbee (1987: 63).

Distribution: Hispaniola. Haiti (Artibonite, Nord-Ouest, Nord, Ouest, Sud-Est, Gonave Is.) and República Dominicana (Azua, Barahona, Buoruco, Dajabón, Distrito Nacional, Independencia, Monte Cristi, Pedernales, Peravia, San Juan, Valverde, Saona Is.), NSL–1700 m.

Remarks: The source of H. Cuming's Hispaniolan reptile collection was Auguste Sallé (whose expedition he sponsored) *fide* Wetherbee (1987: 63).

2. *Hypsirhynchus scalaris* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 72.

Type: Holotype, MCZ 3611 (formerly MCZ 1517), a 483 mm specimebn (D.F. Weinland, 1859).

Type locality: "Hayti, (near Jeremie)" [= vicinity of Jérémie (18°39'N, 74°07'W, elevation 15 m), Grand'Anse Dept., SW Haiti].

Distribution: Southwestern Haiti (Grand'Anse, Ouest, Sud, Sud-Est), NSL–305 m.

Source: R.W. Henderson & Powell, 2009.

Remarks: Collector of type listed as A.F. Weinland *fide* Cope (1862b: 72).

I

IALTRIS Cope, 1862b (Xenodontidae)

Synonym: *Jaltris* Cope, 1862e *(nomen emendatum).*
Type species: *Philodryas dorsalis* A.C.L.G. Günther, 1858.
Distribution: Hispaniola.
Sources: A. Schwartz & Thomas, 1975, A. Schwartz & Rossman, 1976, A. Schwartz, 1986, A. Schwartz & R.W. Henderson, 1988, 1991, H.M. Smith & Wallach, 1993, Powell & R.W. Henderson, 1994a, Rodríguez-Robles & Greene, 1996, Hedges et al., 2009, Henderson and Powell, 2009 and Zaher et al., 2009.

1. *Ialtris agyrtes* A. Schwartz & Rossman, 1976. Stud. Fauna Curaçao Carib. Is. 50(165): 90–91.

Type: Holotype, LSUMZ 28564, a 455 mm (svl) female (A. Schwartz, 25 July 1969).
Type locality: "Barreras, Azua Province, República Dominicana" [= Barrea, S Azua Prov., SW Dominican Republic, 18°19'N, 70°54'W, elevation 220 m].
Distribution: Hispaniola. Southwestern Domincan Republic (Azua, Pedernales), 220 m.
Source: Powell & R.W. Henderson, 1994b.

2. *Ialtris dorsalis* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 126. (*Philodryas dorsalis*)

Synonyms: *Dromicus mentalis* A.C.L.G. Günther, 1862b, *Ialtris vultuosa* Cope, 1862b, and *Dromicus w-nigrum* F. Werner, 1909b.
Type: Holotype, BMNH 1946.1.2.77, a 1090–1118 mm male (A. Sallé, 1849).
Type locality: "St. Domingo" [= Santo Domingo, Distrito Nacional Prov., Dominican Republic, 18°30'N, 69°59'W, elevation 50 m].
Distribution: Hispaniola. Haiti (Grand'Anse, Nord, Ouest, Sud, Sud-Est, Gônave, Tortuga and Vache Is.) and República Dominicana (Barahona, Duarte, La Altagracia, Monseñor Nouel, Pedernales, Samaná), NSL–1000 m.
Sources: F. Werner, 1924a, Cochran, 1941 and Zippel et al., 1994.
Remarks: Restriction to vicinity of Port-au-Prince, Ouest Dept., Haiti *fide* A. Schwartz & Rossman (1976: 80), in the belief that A.C.L.G. Günther's (1858: 126) Santo Domingo referred to Hispaniola, is invalid because Santo Domingo is an older name for the Dominican Republic as pointed out by Wetherbee (1986a: 116).

3. *Ialtris parishi* Cochran, 1932. Proc. Biol. Soc. Washington 45: 189–190.

Type: Holotype, USNM 80773, a 945+ mm male (L.H. Parish & W.M. Perrygo, 7 April 1930).
Type locality: "ten miles east of Baradères, southwestern peninsula of Haiti" [= Grand'Anse Dept.].
Distribution: Hispaniola. Extreme NW and SW Haiti (Grand'Anse, Tortue Is.), NSL–140 m.
Sources: Cochran, 1941 and Powell & R.W. Henderson, 1994c.
Remarks: W.M. Perrygo is collector of type *fide* original data tag.

IGUANOGNATHUS Boulenger, 1898c (Colubridae)

Synonym: *Iguanagnathus* – E.H. Taylor, 1922 *(nomen incorrectum).*
Type species: *Iguanognathus werneri* Boulenger, 1898c.
Distribution: Western Indonesia.
Sources: Rooij, 1917, Underwood, 1967, David & Vogel, 1996 and K. Jackson et al., 1999.

1. *Iguanognathus werneri* Boulenger, 1898c. Ann. Mag. Nat. Hist. (7) 2(7): 74, 4 figs.

Type: Holotype, BMNH 1946.1.6.34, a 350 mm female G. Schneider, Jr., 1897–1898, via (F. Werner).
Type locality: "Sumatra" [W Indonesia].
Distribution: Western Indonesia (Sumatra). Known only from holotype.

IMANTODES A.-M.-C. Duméril, 1853 (Dipsadidae)

Synonyms: *Bungarus* Oppel, 1811a *(nomen praeoccupatum), Himantodes* Cope, 1860e *(nomen emendatum), Himantodas* – Briceño-Rossi, 1934 *(nomen incorrectum), Himantodos* – Briceño-Rossi, 1934 *(nomen incorrectum), Imantodos* – Briceño-Rossi, 1934 *(nomen incorrectum), Imantrodus* A.L. Herrera, 1899 *(nomen emendatum), Maclachlanus* Hoser, 2012x *(nomen nudum), Maconchieus* Hoser, 2012x *(nomen illegitimum),* and *Neilsimpsonus* Hoser, 2012x *(nomen illegitimum).*
Type species: *Coluber cenchoa* Linnaeus, 1758.
Distribution: Latin America.

Sources: Cope, 1894b, F. Werner, 1924c, J.A. Peters & Orejas-Miranda, 1970, C.W. Myers, 1982, Cadle, 1984b, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988, 1991, Villa et al., 1988, Daza et al., 2009, Zaher et al., 2009, Mulcahy et al., 2011 and Hoser, 2012x.

1. *Imantodes cenchoa* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 226. (*Coluber cenchoa*)

Synonyms: *Coluber virgatus* Thunberg, 1787, *Dipsas weigelii* Fitzinger, 1826a *(nomen substitutum), Himantodes leucomelas* Cope, 1861e, *Dipsas cenchoa rhombeata* F. Müller, 1880 (*nomen nudum*), *Himantodes anisolepis* Cope, 1894b, *Himantodes semifasciatus* Cope, 1894b and *Himantodes platycephalus* Cope, 1899b.

Types: Syntypes (3), NHR Lin-66 (formerly MAFR) (Mus. Drottn.), and ZMUU 46a–b (formerly MP), a male with everted hemipenes.

Type locality: "America." Restricted to Suriname *fide* C. Myers (1982: 14). Restricted to vicinity of Bogotá, Colombia *fide* J.D. Williams & Francini (1991: 67).

Distribution: Latin America. Mexico (Campeche, Chiapas, Oaxaca, Puebla, Quintana Roo, San Luis Potosí, Tabasco, Tamaulipas, Veracruz), Belize (Belize, Corazal, Orange Walk, Stann Creek, Toledo), Guatemala (Alta Verapaz, Baja Verapaz, Escuintla, Huehuetenango, Izabal, Petén, Quezaltenango, San Marcos, Sololá, Zacapa), N Honduras (Atlántida, Colón, Comayagua, Copán, Cortés, El Paraíso, Gracias a Dios, Islas de la Bahía, Olancho, Yoro, Utila Is.), E Nicaragua (Atlántico Sur, Jinotega, Matagalpa, Zelaya), Costa Rica (Alajuela, Cartago, Colón, Guanacaste, Heredia, Limón, San José, Puntarenas), Panama (Bocas del Toro, Canal Zone, Chiriquí, Coclé, Darién, Los Santos, Panamá, San Blas, Barro Colorado and San Miguel Is.), Colombia (Amazonas, Antioquia, Atlántico, Bolívar, Boyacá, Caldas, Caquetá, Cauca, Chocó, Córdoba, Cundinamarca, La Guajira, Magdalena, Meta, Norte de Santander, Putumayo, Risaralda, Santander, Sucre, Tolima, Valle, Vaupés), NW and S Venezuela (Amazonas, Aragua, Bolívar, Carabobo, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Portuguesa, Zulia), Trinidad and Tobago (Tobago, Trinidad), Guyana (Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Para), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Acre, Amapá, Amazonas, Bahia, Ceará, Espírito Santo, Goiás, N Mato Grosso, Minas Gerais, Rio de Janeiro, Pará, Paraná, Rondônia, Santa Catarina, São Paulo, Cardoso and Grande Is.), E Ecuador (Carchi, Cotopaxi, El Oro, Esmeraldas, Guayas, Morona-Santiago, Napo, Orellana, Pastaza, Pichincha, Sucumbíos), E Peru (Loreto, Madre de Dios), Bolivia (La Paz, Santa Cruz), Paraguay and N Argentina (Chaco, Formosa), NSL–2200 m.

Costa et al., 2010c, McCranie, 2011a, Rojas-Morales, 2012b and C.J. Cole et al., 2013.

I

2. *Imantodes chocoensis* Torres-Carvajal, Yánez-Muñoz, Quirola, Smith & Almendáriz, 2012. ZooKeys (244), 95–102, figs. 1–2, 3a.

Type: Holotype, QCAZ 7984, a 97 mm male (E. Carrillo-Ponce, I.G. Tapia & E.E. Tapia, 24 April 2007).

Type locality: "4 km N Durango, 1.0283°N; -78.5950°W (DD), 253 m, Provincia Esmeraldas, Ecuador."

Distribution: Northwestern Ecuador (Carchi, Esmeraldas), 115–260 m.

3. *Imantodes gemmistratus* Cope, 1861e. Proc. Acad. Nat. Sci. Philadelphia 13(7): 296–297. (*Himantodes gemmistratus*)

Synonyms: *Himantodes cenchoa elegans* Jan, 1863b (*nomen nudum*), *Himantodes cenchoa elegans* Jan, 1871 *in* Jan & Sordelli, 1870–1881, *Dipsas cenchoa reticulata* F. Müller, 1880, *Dipsas cenchoa reticulata* Müller, 1882 (*nomen nudum*), *Leptognathus stratissima* Cope, 1886b, *Dipsas gemmistrata latistrata* Cope, 1887c, *Dipsas gracillima* A.C.L.G. Günther, 1895 *in* 1885–1902, *Dipsas splendida* A.C.L.G. Günther, 1895 *in* 1885–1902, *Himantodes hemigenius* Cope, 1899b, *Imantodes luciodorsus* Oliver, 1942b, and *Imantodes splendidus oliveri* H.M. Smith, 1942k.

Type: Holotype, ANSP 156, a 762 mm specimen (J.M. Dow, 1860–1861), lost *fide* E.V. Malnate *in* P. Yingling (1972: 23).

Type locality: "San Salvador, Centr. America," Near Isalco, San Salvador [= vicinity of Volcán Izalco, N Sonsonate Dept., W El Salvador, 13°49'N, 89°38'W] *fide* Cope (1860e: 265).

Distribution: Latin America. Southern Mexico (Campeche, Chiapas, SW Chihuahua, Colima, Guerrero, Jalisco, México, Michoacán, Morelos, Nayarit, Oaxaca, Puebla, Querétaro, Quintana Roo, Sinaloa, S Sonora, Tamaulipas, Veracruz, Yucatán, María Madre Is.), SW Guatemala (Escuintla, Petén, Retalhuleu, San Marcos, Santa Rosa, Sololá, Suchitepéquez), W Honduras (Choluteca, Cortés, Francisco Morazán, Valle), W El Salvador (Ahuachapán, Cabañas, La Libertad, La Unión, San Ana, San Salvador, Sonsonate), SW Nicaragua (Granada, Jinotega, Managua, Rivas), Costa Rica (Alajuela, Cartago, Guanacaste, ? Heredia, Limón, Puntarenas, San José), Panama (Canal Zone, Chiriquí,

Coclé, Darién, Herrera, Panamá) and W Colombia (Tolima), NSL–2500 m.

Sources: H.M. Smith, 1942k, Zweifel, 1959c, L.C. Stuart, 1963, Yingling, 1972, Savage & Scott, 1985, L.D. Wilson & Meyer, 1985, H.M. Smith et al., 1995, Lee, 1996, 2000, J.A. Campbell, 1998b, Canseco-Marquez et al., 2000, Savage, 2002, G. Köhler et al., 2005, H.M. Smith & Lemos-Espinal, 2006a, N. Herrera et al., 2007 and McCranie, 2011a.

Remarks: ANSP 4133 (near Volcano Isalco, San Salvador Dept., El Salvador, J.M. Dow donor) possible type *fide* ANSP catalogue.

4. *Imantodes inornatus* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 88, pl. 5, fig. 1. (*Himantodes inornatus*)

Synonym: *Himantodes unonatus* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Types: Syntypes (2), BMNH 1946.1.2.63a, an 820 mm female, and BMNH 1946.1.2.63b, head and neck of adult (E. Rothschuh, 1893–1894).

Type locality: "Hacienda Rosa de Jericho, 3250 ft., Nicaragua" [= Jericó, Matagalpa Dept., Nicaragua].

Distribution: Central America and NW South America. Extreme NW Honduras (Gracias a Dios, Olancho), Nicaragua (Jinotega, Matagalpa), Costa Rica (Alajuela, Cartago, Heredia, Limón, Puntarenas, San José), Panamá (Bocas del Toro, Colón, Darién, San Blas), W Colombia (Chocó, Valle) and NW Ecuador (Esmeraldas, Manabí), NSL–1600 m.

Sources: Savage & Scott, 1985, L.A. Wilson et al., 1981a, L.D. Wilson & Meyer, 1985, Savage, 2002, Solórzano, 2004, Ortega-Andrade et al., 2010, Sajdak, 2010, McCranie, 2011a and Travers et al., 2011.

Remarks: Record from Honduras (Cortés) doubtful *fide* McCranie (2011a: 320).

5. *Imantodes lentiferus* Cope, 1894b. Amer. Nat. 28(331): 613–614. (*Himantodes lentiferus)*

Synonym: *Himantodes fulviventer* Poeppig *in* Obst, 1977.

Type: Lectotype, ANSP 11459, a male (J. Hauxwell or J. Orton, 1867–1877), designated by C.W. Myers (1982: 40).

Type locality: "upper Amazonian drainage, either Pebas, Peru, or eastern Ecuador" via lectotype selection.

Distribution: Amazonia. Southern Colombia (Amazonas, Putumayo, Vaupés), Venezuela (Amazonas, Bolívar), NW Guyana (Barima-Waini), Suriname (Saramacca), French Guiana (SE Cayenne, Saint-Laurent-du-Maroni), N Brazil (Acre, Amazonas, Mato Grosso, Pará, Rondônia), E Ecuador (Morona-Santiago, Napo, Orellana, Pastaza, Pichincha, Sucumbíos, Zamora-Chinchipe), E Peru (Amazonas, Huanuco, Loreto, Madre de Dios, San Martín) and Bolivia (Cochabamba, La Paz), 90–1150 m.

Sources: Cunha & Nascimento, 1978, 1993, Chippaux, 1987, Donnelly & Myers, 1991, Fugler et al., 1995, Starace, 1998, Duellman, 2005, Navarrete et al., 2009, Avila & Kawashita-Ribeiro, 2011, Sampaio & Lima-Maciel, 2012 and C.J. Cole et al., 2013.

Remarks: Holotype of *Himantodes fulviventer* discovered by Obst (1977: 169).

6. *Imantodes phantasma* C.W. Myers, 1982. Amer. Mus. Novit. (2738): 3–7, figs. 1–3, 4d, 4e.

Type: Holotype, KU 110217, a 1053 mm male (C.W. Myers & T. Quintero, 24 Jan. 1966).

Type locality: "at 1030 m. elevation on the southeastern slope of Cerro Cituro, a peak on the northern end of the Serranía de Pirre, Province of Darién, Republic of Panama."

Distribution: Extreme E Panama (E Darién), 1030–1100 m. Known only from vicinity of type locality.

7. *Imantodes tenuissimus* Cope, 1867b. Proc. Acad. Nat. Sci. Philadelphia (1866) 18(4): 317–318. (*Himantodes tenuissimus*)

Type: Holotype, USNM 6563 (formerly ACVS 903), an 838 mm specimen (A.C.V. Schott, 7 Jan. 1866).

Type locality: "Yucatan, Mexico." Restricted to Chichen Itza, Yucatán State, SE Mexico *fide* H.M. Smith & Taylor (1950a: 352).

Distribution: Yucatán Peninsula. Southeastern Mexico (Campeche, Quintana Roo, Yucatán), NSL–100 m.

Sources: J.C. Lee, 1980, 1996, 2000.

Remarks: Chiapas, Mexico record doubtful *fide* J.C. Lee (1996: 328).

†*INCONGRUELAPS* Scanlon, Lee & Archer, 2003 (Elapidae)

Type species: †*Incongruelaps iteratus* Scanlon, Lee & Archer, 2003.

Distribution: Upper Miocene of Australia.

Source: Scanlon et al., 2003.

1. †*Incongruelaps iteratus* Scanlon, Lee & Archer, 2003. Géobios 36: 580–588, fig. 3c.

Type: Holotype, QM F42691, one middle trunk vertebra.

Type locality: "Encore Site, Gregory River, Riversleigh World Heritage Fossil Property, north-west Queensland, Australia (19°01'S, 138°40'E); Late Miocene, approximately 10 MYA."

Distribution: Upper Miocene (10.0 mya) of Australia. Known only from type locality.

†*INDOPHIS* Rage & Prasad, 1992 (†Nigerophiidae)

Type species: †*Indophis sahnii* Rage & Prasad, 1992.
Distribution: Upper Cretaceous of India.
Sources: Rage & Prasad, 1992 and LaDuke et al., 2010.

1. †*Indophis sahnii* Rage & Prasad, 1992. Neues Jb. Geol. Paläont. Abh. 187(1): 84–89, figs. 1–5.

Type: Holotype, JU 500, one trunk vertebra.
Type locality: "intertrappean bed outcropping 2 km northeast of Naskal, Pargi Taluq, Andhra Pradesh (about 70 km west of Hyderabad), India; late Cretaceous (Maastrichtian)."
Distribution: Upper Cretaceous (Maastrichtian: 65.5–72.1 mya) of India. Known only from type series.
INYOKA Branch & Kelly

I

INYOKA Branch & Kelly *in* Kelly, Branch, Broadley, Barker & Villet, 2011 (Lamprophiidae)

Type species: *Lamprophis swazicus* N. Schaefer, 1970.
Distribution: South Africa and Swaziland.
Sources: Visser, 1978, 1979a, Branch, 1988 and R. Hermann, 1993.
Remarks: Not congeneric with *Lamprophis fide* Visser, 1978, 1979a, a view supported by Vidal et al. (2008: 58).

1. *Inyoka swazicus* (N. Schaefer, 1970). Ann. Cape Prov. Mus. (Nat. Hist.) 8(14): 205–207, fig. 1. (*Lamprophis swazicus*)

Type: Holotype, PEM 1514/81, a 568 mm specimen (J. Culverwell, Oct. 1968?).
Type locality: "Forbes Reef, Swaziland (26° 42' S, 31° 05' E)" [= Manzini Distr., W Swaziland, elevation 930 m].
Distribution: Northeastern South Africa (N KwaZulu-Natal, Limpopo, Mpumalanga) and W Swaziland (Hhohho, Manzini), 930–1900 m.

†*ITABORAIOPHIS* Rage, 2011 (Booidea *incertae sedis*)

Type species: †*Itaboraiophis depressus* Rage, 2011.
Distribution: Middle Palaeocene of Brazil.
Source: Rage, 2011.

1. †*Itaboraiophis depressus* Rage, 2011. Palaeovertebrata (2008) 36(1–4): 46–49, fig. 3.

Type: Holotype, DGM 1357-R, one middle trunk vertebra (J.S. Carvalho & O.S. Santos, 1953).
Type locality: "Itabouraí, State of Río de Janeiro, Brazil; middle Palaeocene."
Distribution: Middle Paleocene (Itaboraian: 57.0–59.0 mya) of Brazil.

ITHYCYPHUS A.C.L.G. Günther, 1873a (Pseudoxyrhophiidae)

Synonyms: *Periscopus* Fitzinger, 1843, *Ichthycyphus* – Cope, 1886c *(nomen incorrectum), Itycyphus* – Boettger, 1898 *(nomen incorrectum), Ithyciphus* – Phisalix, 1922 *(nomen incorrectum),* and *Pseudoithycyphus* Domergue, 1988.
Type species: *Herpetodryas goudotii* Schlegel, 1837.
Distribution: Madagascar.
Sources: Domergue, 1986, Glaw & Vences, 1994, Nagy et al., 2003, Lawson et al., 2005, Kelly et al., 2009 and Zaher et al., 2009
Remarks: Domergue, 1988, erected a new subgenus (*Pseudoithycyphus*).

1. *Ithycyphus blanci* Domergue, 1988. Bull. Mus. Natl. Hist. Nat. (4) 10A(1): 138–139, figs. 2a–f.

Type: Holotype, MNHN 1977.819 (formerly CAD 1112/S), a 610 mm male (C.P. Blanc, 15 Dec. 1972).
Type locality: "Massif montagneux de Marojezy, vers 300 m d'altitude, la région malgache" [= Antsiranana Province, Madagascar].
Distribution: Extreme N Madagascar (E Antsiranana), 300 m. Known only from type locality.

2. *Ithycyphus goudotii* (Schlegel, 1837). Essai Phys. Serp. 1: 152, 2: 187–188. (*Herpetodryas goudotii*)

Synonyms: *Ithycyphus caudolineatus* A.C.L.G. Günther, 1873a, and *Stenophis longicaudus* Boettger, 1913.
Type: Holotype, RMNH 690, a 650 mm specimen (J.P. Goudot [Barberie Voy.], 1827–1836).
Type locality: "Madagascar." Emended to the vicinity of Tamatave, Toamasina Prov., Madagascar *fide* Domergue (1986: 415).
Distribution: Eastern Madagascar (Fianarantsoa, Toamasina, Sainte Marie Is.), 10–270 m.
Sources: Guibé, 1958 and Henkel & Schmidt, 2000.
Remarks: MNHN 3855 is possibly a type *fide* Domergue (1986: 412).

3. *Ithycyphus miniatus* (Schlegel, 1837). Essai Phys. Serp. 1: 146–147, 2: 148–149. (*Coluber miniatus*)

Type: Holotype, MNHN 3852, a 1325–1340+ mm male (R.-P. Lesson & P. Garnot [Coquille Voy.], Aug. 1822–March 1825).
Type locality: "'île de France" [= Mauritius] (in error). Corrected to Madagascar *fide* Duméril, Bibron & Duméril (1854b: 1122).

Distribution: Western and NW Madagascar (W Antsiranana, NW Mahajanga, NW Toliara, Nosy Be Is.), 20–700 m.

Sources: Jourdran, 1904, Guibé, 1958 and A. Mori et al., 2006.

Remarks: Record from Mayotte, Comoro Is. rejected *fide* Blanc (1972: 516) and Domergue (1986: 419).

4. *Ithycyphus oursi* Domergue, 1986. Bull. Mus. Natl. Hist. Nat. (4) 8A(2): 424–425, figs. 6a–c, 7a–b.

Type: Holotype, MNHN 1982.1225 (formerly CAD 143/S), a 1535 mm female (J. de Saint-Ours, 1 Feb. 1961).

Type locality: "Entrée est de la piste de Soalara, un peu au sud du village d'Ambatry (Betioky) (province de Tuléar), région malgache; altitude 300 m" [= SW Toliara Prov., SW Madagascar].

Distribution: Southern Madagascar (Toliara), NSL–680 m.

5. *Ithycyphus perineti* Domergue, 1986. Bull. Mus. Natl. Hist. Nat. (4) 8A(2): 419–421, figs. 4, 5a–c.

Type: Holotype, MNHN 1982.1226 (formerly CAD 454/S), a 1200 mm female (J. Thiel, Jan. 1964).

Type locality: "Analamazotra (Périnet), aux environs des bassins de pisciculture. Altitude 900 m."

Distribution: Northern and E Madagascar (Antsiranana, Toamasina, Nosy Be Is.), 20–900 m.

Source: Henkel & Schmidt, 2000.

K

†*KELYOPHIS* LaDuke, Krause, Scanlon & Kley, 2010 (†Nigerophiidae)

Type species: †*Kelyophis hechti* LaDuke, Krause, Scanlon & Kley, 2010.
Distribution: Upper Cretaceous of Madagascar.
Source: LaDuke et al., 2010.

1. †*Kelyophis hechti* LaDuke, Krause, Scanlon & Kley, 2010. J. Vert. Paleont. 30(1): 126–128, fig. 10.

Type: Holotype, UA 9682, one middle trunk vertebra (Mahajanga Basin field party, 1993–2007).
Type locality: "MAD93–01, Berivotra Study Area, Mahajanga Basin, northwestern Madagascar; Upper Cretaceous (Maastrichtian) Maevarano Formation."
Distribution: Upper Cretaceous (Maastrichtian: 65.5–72.1 mya) of Madagascar.

KERILIA Gray, 1849a (Elapidae)

Type species: *Kerilia jerdonii* Gray, 1849a.
Distribution: Marine waters of SE Asia and Indonesia, including Andaman Sea, Bay of Bengal, Gulf of Thailand, Pattani Bay, Singgora Sea, South China Sea and Strait of Malacca.
Sources: Wall, 1921g, M.A. Smith, 1926a, 1943, Bourret, 1934g, 1936b, Deraniyagala, 1955, E.H. Taylor, 1965, Voris, 1977, B.L. Lim, 1982, A.R. Rasmussen & Anderson, 1990, Stuebing, 1991, Zhao & Adler, 993, A.R. Rasmussen, 1997, David & Ineich, 1999, Whitaker & Captain, 2004, I. Das, 2007b, 2010, 2012, V.S. Nguyen et al., 2009, Xiang & Li, 2009, Zaher et al., 2009, A.R. Rasmussen et al., 2011 and Hoser, 2012e.
Remarks: A synonym of *Hydrophis fide* Sanders et al., 2013.

1. *Kerilia jerdonii* Gray, 1849a. Cat. Snakes Brit. Mus.: 57.

Synonyms: *Eryx shiddil* Wagler, 1825 (*nomen ineditum*), *Hydrus schiddil* F. Boie, 1827 (*nomen nudum*), *Hydrus cantori* Jerdon, 1854, *Kerilia jerdoni siamensis* M.A. Smith, 1926a, and *Hydrophis jerdone* – Culotta & Pickwell, 1993 *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.10.11 (formerly BMNH III.8.1.a), an adult male (T.C. Jerdon, 1836–1852).
Type locality: "Madras" [= Chennai, NE Tamil Nadu State, SE India, 13°04'N, 80°15'E, elevation 10 m].
Distribution: Southeastern Asia and Greater Sundas. Southern India (Andhra Pradesh, Gujarat, Kerala, Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka (Eastern, Western), Myanmar (Mergui Arch.), S Thailand (Pattani, Phuket, Songkhla, Phuket Is.), S Vietnam (Bac Lieu, Ba Ria-Vung Tau, Ben Tre, Binh Thuan, Ca Mau, Ho Chi Minh City, Soc Trang, Tien Giang, Tra Vinh), S China, Taiwan, Singapore, West Malaysia (Penang Is.), East Malaysia (Sabah), Brunei and W Indonesia (Kalimantan, Sumatra).

KOLPOPHIS M.A. Smith, 1926a (Elapidae)

Synonym: *Kolphophis* – Dowling *in* Dowling & Duellman, 1978 *(nomen incorrectum).*
Type species: *Distira annandalei* Laidlaw, 1902.
Distribution: Marine waters of Southeast Asia and Indonesia, including Gulf of Thailand, Java Sea, Pattani Bay, Singgora Sea and South China Sea.
Sources: Rooij, 1917, M.A. Smith, 1926a, 1943, Bourret, 1934g, 1936b, E.H. Taylor, 1965, McDowell, 1972a, Voris, 1977, B.L. Lim, 1982, I. Das, 1993, A.R. Rasmussen, 1997, David & Ineich, 1999, I. Das, 2007b, 2010, 2012, V.S. Nguyen et al., 2009, A.R. Rasmussen et al., 2011 and Hoser, 2012e.
Remarks: A synonym of *Lapemis fide* McDowell *in* Golay et al. (1993: 243).

1. *Kolpophis annandalei* (Laidlaw, 1902). Proc. Zool. Soc. London (1901) 71(2): 579–580, pl. 35, fig. 1. (*Distira annandalei*)

Synonyms: *Kolpophis annandali* – J.H. Brown, 1973 *(nomen incorrectum), Kolpopis annandalei* – G. Haas, 1973 *(nomen incorrectum),* and *Kolpophis annanadalei* – Tu, 1974 *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.17.56 (formerly BMNH 1926.10.18.1), a 500 mm female (N. Annandale, 1899–1900).
Type locality: "Patani, Malay Peninsula" [= Pattani, Pattani Prov., S Thailand, 6°54'N, 101°15'E]. Specified as Patani Bay *fide* M.A. Smith (1926a: 107).
Distribution: Southeast Asia and Greater Sundas. Southern Thailand (Songkhla, Pattani), Cambodia, S Vietnam (from Binh Thuan to Ba Ria-Vung Tau), West

Malaysia, Singapore, Brunei and W Indonesia (Java, Kalimantan).

Remarks: Possibly occurs in Sumatra *fide* I. Das (2012: 149).

†*KREBSOPHIS* Rage & Werner, 1999 (†Russellophiidae)

Type species: †*Krebsophis thobanus* Rage & Werner, 1999.

Distribution: Middle Cretaceous of Sudan.

Source: Rage & Werner, 1999.

1. †*Krebsophis thobanus* Rage & Werner, 1999. Palaeont. Afr. 35: 100–102, figs. 16, 17 (paratype).

Type: Holotype, TUB-SFB69 Vb-681, one middle trunk vertebra.

Type locality: "Wadi Abu Hashim, N Sudan; Wadi Milk Formation, Mid-Cretaceous (Cenomanian)" [= Ash Shamaliyah Prov., N Sudan, ca. 17°09'N, 31°01'E].

Distribution: Middle Cretaceous (Cenomanian: 93.9–100.5 mya) of Sudan. Known only from type locality.

L

LACHESIS Daudin, 1803b (Viperidae)

Synonyms: *Trigonocephalus* Oppel, 1811a, *Trigalus* Rafinesque-Schmaltz, 1815 *(nomen substitutum), Cophias* Merrem, 1820, *Lachensis* – Gray, 1825 *(nomen incorrectum), Lestes* Gistel, 1848 (*nomen nudum*), *Lachoesis* – Liais, 1872 *(nomen incorrectum), Trigonophalus* – Palacky, 1898 *(nomen incorrectum), Lanchesis* – F. Werner, 1909b *(nomen incorrectum), Lachess* – Amaral, 1930f *(nomen incorrectum), Lachesus* – L. Ribeiro, 1939 *(nomen incorrectum), Lahcesis* – Anon., 1979 *(nomen incorrectum),* and *Lachesi* – Hoge & Romano-Hoge, 1981b *(nomen incorrectum).*

Type species: *Crotalus mutus* Linnaeus, 1766.

Distribution: Lower Central America and N South America.

Sources: Hoge, 1966a, J.A. Peters & Orejas-Miranda, 1970, Abuys, 1988a, Campbell & Lamar, 1989, 2004, Maes, 1989, Cullings et al., 1997, David & Ineich, 1999, McDiarmid et al., 1999, Parkinson, 1999, Ripa, 1999, Castoe & Parkinson, 2006 and Hoser, 2012d.

1. *Lachesis acrochorda* (García, 1896). Ofidios Venen. Cauca: 23–25, pl. 4. (*Bothrops acrochordus*) (*nomen corrigendum*)

Synonyms: *Botrops arochordus* García, 1896 (*nomen incorrigendum*), *Bothrops verrucosus* Posada-Arango, 1909, and *Lachesis calcaratus* Posada-Arango, 1909.

Type: Holotype, not designated, location unknown.

Type locality: "las selvas del Chocó, á orillas de los ríos Atrato, San Juan, Dagua y Telembí y … el camino de Buenaventura" [= Chocó forests, Atrato, San Juan, Dagua and Telembí riverbanks, and the Buenaventura highway, Chocó, Valle del Cauca, Cauca and Nariño Dept., W Colombia].

Distribution: Panama and NW South America. Eastern Panama (Darién), Colombia (Antioquia, Atlántico, Bolívar, Caldas, Cauca, Chocó, Córdoba, Cundinamarca, Nariño, Santander, Sucre, Tolima, Valle de Cauca) and Ecuador (Esmeraldas, Manabi), NSL–820 m.

Sources: Nicéforo-Maria, 1929, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988, 1991, Ripa, 2004 and Jaramillo et al., 2010.

2. *Lachesis melanocephala* Solórzano & Cedras, 1986. J. Herp. 20(3): 463–464, fig. 1. (*Lachesis muta melanocephala*)

Type: Holotype, MICP 301, a 2150 mm male (A. Solórzano & L. Cerdas, 31 May 1984).

Type locality: "9 km northern of Ciudad Neily in south-eastern Provincia de Puntarenas, Costa Rica."

Distribution: Southwestern Costa Rica (Puntarenas, San José) and W Panama (Chiriquí), NSL–l600 m.

Sources: E.H. Taylor, 1951, Ripa, 2001, Savage, 2002, J.C. Murphy & Schlager, 2003, Solórzano, 2004, Dwyer & Perez, 2009 and Jaramillo et al., 2010.

3. *Lachesis muta* (Linnaeus, 1766). Syst. Nat., ed. 12, 1: 373. (*Crotalus mutus*)

Synonyms: *Coluber crotalinus* Gmelin, 1789, *Scytale ammodytes* Latreille *in* Sonnini & Latreille, 1801a, *Scytale catenatus* Latreille *in* Sonnini & Latreille, 1801a, *Coluber alecto* G. Shaw, 1802, *Lachesis ater* Daudin, 1803b, *Scytale catenata* – Schinz, 1822, *Bothrops surucucu* Wagler *in* Spix, 1824, *Lachesis rhombeata* Wied-Neuwied, 1824a, *Trigonocephalus brasiliensis* Liais, 1872, *Trigonocephalus rhumbeatus* Liais, 1872 *(nomen emendatum), Lachoesis rhumbeata* Liais, 1872 *(nomen emendatum),* and *Lachesis muta noctivaga* Hoge, 1966a.

Type: Holotype, not designated, location unknown.

Type locality: "Surinamei" [= Suriname, or more likely the Guianas].

Distribution: Northern South America. Colombia (Amazonas, Casanare, Meta, Vaupés), E Venezuela (Amazonas, Anzoátegui, Bolívar, Delta Amacuro, Monagas, Sucre, Jotacuay Is.), Trinidad and Tobago (Trinidad), Guyana (Cuyuni-Mazaruni, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Para, Saramacca), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Acre, Amapa, Amazonas, Bahia, Ceará, Espírito Santo, Goias, Maranhão, Mato Grosso, Minas Gerais, Pará, Paraíba, Pernambuco, Rio de Janeiro, Rio Grande do Norte, Rondônia, São Paulo), Ecuador (Orellana, Morona-Santiago, Napo, Pichincha), E Peru (Loreto, Madre de Dios) and NE Bolivia (Beni, Cochabamba, La Paz, Pando, Santa Cruz), 100–1000 m.

Sources: Beebe, 1946, Roze, 1966a, Cunha & Nascimento, 1975c, 1978, 1993, Emsley, 1977, Dixon & Soini, 1986, Chippaux, 1987, Ripa, 1994, Visinoni, 1994, Gorzula & Señaris, 1998, Starace, 1998, Borges-Nojosa &

L

Lima-Verde, 1999, Freitas, 1999, D.S. Fernandes et al., 2004, Duellman, 2005, Harvey et al., 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: Holotype possibly in NHR, a head in rather bad condition which does not belong to any *Crotalus* and possibly it is the head of a *Lachesis mutus fide* Andersson (1899: 27).

4. *Lachesis stenophrys* Cope, 1875a. J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 152.

Type: Holotype, USNM 32479, a 495 mm male (W.M. Gabb, 1873–1875).

Type locality: "Sipurio, Costa Rica" [= Sipurio, SE Limón Prov., SE Costa Rica, 9°32'N, 82°55'W, elevation 200 m].

Distribution: Lower Central America. Nicaragua (Chontales), N Costa Rica (Alajuela, Heredia, Limón) and N Panama (Bocas del Toro, Canal Zone, Chiriquí, Colón, Panamá, Veraguas, Barro Colorado Is.), NSL–1000 m.

Sources: Vial & Jiménez-Porras, 1967, Martínez & Bolaños, 1982, Villa, 1984, Solórzano, 1887 et al., Villa et al., 1988, Ripa, 1994, Zamudio & Greene, 1997 and Savage, 2002.

L

LAMPROPELTIS Fitzinger, 1843 (Colubridae)

Synonyms: *Sphenophis* Fitzinger, 1843, *Ophibolus* Baird & Girard, 1853, *Osceola* Baird & Girard, 1853, *Ophibulus* – Westphal-Castelnau, 1870 *(nomen incorrectum), Bellophis* Lockington, 1877, *Stilosoma* A. Brown, 1890, *Opzibolus* – Velasco, 1890a *(nomen incorrectum), Ophilobus* – Velasco, 1890a *(nomen incorrectum), Ophylobus* – Velasco, 1891 *(nomen incorrectum), Stylosoma* Cope, 1893a *(nomen emendatum), Oreophis* Dugès, 1897a, *Stilosema*– Palacky, 1898 *(nomen incorrectum), Stylophis* Berg, 1901 *(nomen substitutum), Ophobolus* – Speck, 1923 *(nomen incorrectum), Triaenopholis* F. Werner, 1924a, *Styliphis* – Briceño-Rossi, 1934 *(nomen incorrectum), Lamtropeltis* – Conant, 1937b *(nomen incorrectum), Ophiobolus* – Nicoli, 1963 *(nomen incorrectum), Lampropelitis* – T.H. Bullock & Barrett, 1968 *(nomen incorrectum), Lamoropeltis* – Kashyap & Sohoni, 1973 *(nomen incorrectum), Lampropeltus* – McDermid, Board & Agar, 1977 *(nomen incorrectum), Lamplopeltis* – Anon., 1978 *(nomen incorrectum), Campropeltis* – Gruber & Pace, 1978 *Campilodon* Jan, 1861c *(nomen emendatum),* and *Eksteinus* Hoser, 2012z *(nomen illegitimum).*

Type species: *Coluber getulus* Linnaeus, 1766.

Distribution: North America and Latin America.

Fossil records: Upper Miocene to upper Pleistocene of USA and S-cen. Canada. Fossils unassigned to species include middle Pliocene (Blancan V) of USA (Idaho), and upper Pleistocene (Rancholabrean II) of USA (Utah).

Sources: Blanchard, 1920b, 1921, Blaney, 1973, Dowling et al., 1983, Stebbins, 1985, Markel, 1990, Conant & Collins, 1991, 1998, Keogh, 1996, Rodríguez-Robles & Jesús-Escobar, 1999, Holman, 2000a, Bryson et al., 2005, 2007, Applegate, 2007, Pyron & Burbrink, 2009a and Hoser, 2012z.

Remarks: *Stilosoma* congeneric with *Lampropeltis fide* Rodríguez-Robles & Jesús-Escobar, 1999.

1. *Lampropeltis alterna* (A.E. Brown, 1902c). Proc. Acad. Nat. Sci. Philadelphia (1901) 53(1): 612–613, pl. 34. (*Ophibolus alternus*)

Synonym: *Lampropeltis blairi* Flury, 1950.

Type: Holotype, ANSP 14977, a 710 mm female (E. Meyenberg, 1901–1902).

Type locality: "Davis Mountains, Jeff Davis county, Texas" [USA]. Restricted to vicinity of Madera Canyon, Little Aguja Canyon, and Big Aguja Canyon *fide* D. Rhoads & Salmon (2012: 271).

Distribution: Extreme S USA (SE New Mexico, SW Texas) and N Mexico (ext. E Chihuahua, S Coahuila, NE Durango, ext. W Nuevo León), 400–2220 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Texas).

Sources: Webb, 1961, Gehlbach & Baker, 1962, Gehlbach & McCoy, 1965, Gehlbach, 1967, Tanzer, 1970, Worthington and Arvizo, 1974, Miller, 1978, Garstka, 1982, Cranston, 1991, Degenhardt et al.,1996, Hilken & Schlepper, 1998, Bartlett & Tennant, 2000, Dixon & Werler, 2000, Salmon et al., 2004, Merker & Merker, 2005 and D. Rhoads & Salmon, 2012.

Remarks: Probably a subspecies of *L. mexicana* S.W. Garman *fide* Bryson et al. (2007: 682).

2. *Lampropeltis californiae* (Blainville, 1835). Nouv. Ann. Mus. Hist. Nat. Paris (3) 4(3): 292, pl. 27, figs. 1, 1a–b. (*Coluber [Ophis]californiae*)

Synonyms: *Coronella balteata* Hallowell, 1853a, *Ophibolus boylii* Baird & Girard, 1853, *Lampropeltis boylii conjuncta* Cope, 1861e, *Coronella pseudogetulus* Jan, 1863a, *Liophis poecilogyrus californica* Jan, 1863b, *Ophibolus getulus eiseni* Yarrow, 1882, *Lampropeltis nitida* Van Denburgh, 1895a, *Lampropeltis getulus yumensis* Blanchard, 1919, *Lampropeltis catalinensis* Van Denburgh & Slevin, 1921b, and, *Lampropeltis getulus nigritus* Zweifel & Norris, 1955.

Type: Holotype, not designated, a 660 mm specimen (P.E. Botta [Le Héros Exped.], 1827–1829), location unknown.

Type locality: "Californie" [= Alta California or California, USA]. Restricted to vicinity of Fresno, California *fide* K.P. Schmidt (1953: 207).

Distribution: Southwestern USA (W Arizona, California, S Colorado, E and S Nevada, S Oregon, ext. S Utah) and

NW Mexico (Baja California Norte, Baja California Sur, Angel de la Catalina, Cerralvo, Montserrat, Salsipuedes, San Pedro Martir, San Lorenzo Norte, Santa Catalina and Tortuga Is.], N Sinaloa, Sonora), NSL–1830 m.

Fossil records: Upper Miocene (Hemphillian) of USA (Arizona), and upper Pleistocene (Rancholabrean II) of USA (Arizona, California, Nevada).

Sources: Klauber, 1939e, Brattstrom, 1955b–c, Blaney, 1977, 1979a, Zweifel, 1980, 1981a–b, Zweifel & Dessauer, 1983, R.W. Murphy & Ottley, 1984, Briggs & McKeown, 1994, Parmley, 1994, H.A. Brown et al., 1995, Cranston & Loza, 1995, P.R. Brown, 1997, Grismer, 1999, 2002, Grismer & Hollingsworth, 2000, Holman, 2000a, Parmley & Peck, 2002, Hubbs, 2009 and Pyron & Burbrink, 2009b–c.

Remarks: *Lampropeltis catalinensis* Van Denburgh & Slevin a valid species *fide* Grismer (1999: 459).

3. *Lampropeltis calligaster* (Harlan, 1827). J. Acad. Nat. Sci. Philadelphia (1826–1827) 5(2): 359. (*Coluber calligaster*)

Synonyms: *Coluber rhombo-maculatus* Holbrook, 1840 *(nomen incorrigendum), Coluber rhombomaculatus* – Holbrook, 1840 *(nomen corrigendum), Ophibolus evansii* Kennicott *in* Baird, 1859, ? *Coronella tigrina* Jan, 1863b, and *Lampropeltis calligaster occipitolineata* Price, 1987b.

Types: Syntypes (?), not designated, PM, longest syntype 1220 mm, and a stuffed skin (T. Say, June 1819– Oct. 1820), lost *fide* Blanchard (1921: 116).

Type locality: "Missouri" [USA]. Restricted to vicinity of St. Louis, Missouri, USA *fide* K.P. Schmidt (1953a: 205).

Distribution: Eastern USA (Alabama, Arkansas, Florida, Georgia, Illinois, W Indiana, S Iowa, Kansas, W Kentucky, Louisiana, S Maryland, Mississippi, Missouri, ext. SE Nebraska, North Carolina, Oklahoma, South Carolina, Tennessee, E Texas, Virginia), NSL–915 m.

Fossil records: Upper Pliocene (Blancan V) of USA (Nebraska), lower/middle Pleistocene (Irvingtonian I) of USA (Kansas), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas), and upper Pleistocene (Rancholabrean I, II) of USA (Florida, Georgia, Kansas, Pennsylvania, Texas, Virginia).

Sources: P.W. Smith, 1961, Mount, 1975, Blaney, 1979b, Ashton & Ashton, 1988, T.R. Johnson, 1987, Ernst & Barbour, 1989, Palmer & Braswell, 1995, Tennant, 1997, Fitch, 1999 and Werler & Dixon, 2000.

Remarks: One syntype had eight entire subcaudals *fide* Harlan (1835: 122).

4. *Lampropeltis elapsoides* (Holbrook, 1838). No. Amer. Herp. 2: 123–125, pl. 28. (*Coluber elapsoides*) (*nomen corrigendum*)

Synonyms: *Coluber elapsoïdes* Holbrook, 1838 *(nomen incorrigendum), Coluber elapsoides* – Holbrook, 1838 *(nomen corrigendum), Ophibolus elapsoideus* S.W. Garman, 1894 *(nomen emendatum),* and *Lampropeltis elapsoides virginiana* Blanchard, 1920a.

Type: Holotype, not designated, location unknown.

Type locality: "South Carolina and Georgia" [SE USA]. Restricted to vicinity of Charleston, South Carolina, USA *fide* K.P. Schmidt (1953: 208).

Distribution: Southeastern USA (Alabama, Florida, Georgia, E Kentucky, SE Louisiana, Mississippi, North Carolina, South Carolina, Tennessee), NSL–450 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida, Georgia).

Sources: Blanchard, 1920a, K.L. Williams, 1974, 1988, 1994, T. Mills, 1995 and Palmer & Braswell, 1995.

Remarks: Previously a subspecies of *L. triangulum,* recognized as a valid species *fide* Pyron & Burbrink, 2009a.

5. *Lampropeltis extenuata* (A. Brown, 1890). Proc. Acad. Nat. Sci. Philadelphia 42: 199. (*Stilosoma extenuata*)

Synonyms: *Stilosoma extenuatum arenicola* Highton, 1956, and *Stilosoma extenuatum multistictum* Highton, 1956.

Type: Holotype, ANSP 3351, a 532 mm male (N.P. Fry, summer).

Type locality: "Lake Kerr, Florida" [Marion County, USA].

Distribution: Extreme SE USA (cen. and N Florida), NSL–30 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Florida).

Sources: Highton, 1956, 1976, Ashton & Ashton, 1988, Ernst & Barbour, 1989, Dowling & Maxson, 1990, Conant & Collins, 1991, Rossi & Rossi, 1993, Keogh, 1996, Tennant, 1997 and Holman, 2000b.

Remarks: Head illustration of holotype in Highton (1956: fig. 2).

6. *Lampropeltis getula* (Linnaeus, 1766). Syst. Nat., ed. 12, 1: 382. (*Coluber getulus*)

Synonyms: *Coluber catena* Lacépède, 1789 (*nomen rejiciendum*), *Coluber labiatus* Kuhl, 1820, *Lampropeltis getulus brooksi* T. Barbour, 1919, *Lampropeltis getulus floridana* Blanchard, 1919, *Triaenopholis arenarius* F. Werner, 1924a, *Lampropeltis getulus sticticeps* Barbour & Engels, 1942, *Lampropeltis getulus goini* Neill & Allen, 1949, and *Lampropeltis getula meansi* Krysko & Judd, 2006.

Type: Holotype, not designated (A. Garden, 1760–1761), location unknown.

Type locality: "Carolina" [USA]. Restricted to vicinity of Charleston, South Carolina *fide* Klauber (1948: 6).

Distribution: Southeastern USA (SE Alabama, Delaware, Florida, Georgia, Maryland, S New Jersey, North

Carolina: Outer Banks; ext. SE Pennsylvania, South Carolina, Virginia, West Virginia), NSL–760 m.

Fossil records: Lower Pleistocene (Irvingtonian I) of USA (Florida), and upper Pleistocene (Rancholabrean II) of USA (Florida, Georgia, Virginia).

Sources: Lazell & Musick, 1973, Blaney, 1977, 1979a, Holman, 1979a, Christman, 1980, Ernst & Barbour, 1989, Cranston, 1994a, Palmer & Braswell, 1995, Tennant, 1997, D. Schmidt, 2004c, Krysko & Judd, 2006, Hubbs, 2009, Pyron & Burbrink, 2009b–c and Parmley & Hunter, 2010.

7. *Lampropeltis holbrooki* Stejneger, 1902b. Proc. U.S. Natl. Mus. 25(1282): 152. (*nomen substitutum*)

Synonym: *Coronella sayi* Holbrook, 1842a (*nomen praeoccupatum*).

Type: Lectotype, a 1200 mm specimen described and illustrated by Holbrook (1842a: 99–101, pl. 22), designated herein.

Type locality: "valley of the Mississippi…from Louisiana, high up Red river, from Missouri, from Arkansas, and…from Alabama, United States" *fide* Holbrook (1842a: 101) via lectotype selection. Restricted to central or northeastern Arkansas *fide* Blaney (1977: 78).

Distribution: Central USA (Arkansas, ext. SE Colorado, S Iowa, Kansas, Louisiana [W of Mississippi River], Missouri, SE Nebraska, E New Mexico, Oklahoma, E Texas), NSL–1200 m..

Fossil records: Upper Miocene (Clarendonian) of USA (Nebraska), upper Miocene (Hemphillian) of USA (Nebraska), middle Pliocene (Blancan II) of USA (Kansas), upper Pliocene (Blancan V) of USA (Kansas), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas), and upper Pleistocene (Rancholabrean I, II) of USA (Kansas, Missouri, Oklahoma).

Sources: Blaney, 1977, 1979a, Ernst & Barbour, 1989, Degenhardt et al., 1996, Fitch, 1999, Hammerson, 1999, Werler & Dixon, 2000, Hubbs, 2009, Pyron & Burbrink, 2009b–c and Parmley & Hunter, 2010.

Remarks: Original description in Holbrook (1842a: 99–101, pl. 22).

8. *Lampropeltis knoblochi* E.H. Taylor, 1940e. Copeia 1940(4): 253–255, figs. 1–2 (paratype).

Synonym: *Lampropeltis pyromelana woodini* W.W. Tanner, 1953.

Type: Holotype, FMNH 100013 (formerly EHT-HMS 23017 & EHT-CC x-1687), a 717 mm specimen (I. Knobloch, 1939)

Type locality: "Mojárachic, Chihuahua, Mexico."

Distribution: Southwestern USA (ext. SE Arizona, SW New Mexico) and NW Mexico (W Chihuahua, E Sonora), 840–2730 m.

Sources: W.W. Tanner, 1083, Hubbs, 2004, Lemos-Espinal et al., 2004a–b and Burbrink et al., 2011.

Remarks: Possibly occurs in N Durango *fide* W.W. Tanner (1985: 635) and Hubbs, 2004. Resurrected *fide* Burbrink et al., 2011.

9. *Lampropeltis mexicana* (S.W. Garman, 1884). Mem. Mus. Comp. Zool. (1883) 8(3): 66. (*Ophibolus triangulus mexicanus*)

Synonyms: *Coronella leonis* A.C.L.G. Günther, 1893 *in* 1885–1909, *Oreophis boulengeri* Dugès, 1897a, *Lampropeltis thayeri* Loveridge,1924a, and *Lampropeltis greeri* Webb, 1961.

Types: Syntypes (2), MCZ 4652, a 435 mm female, and MCZ 4653, a 774 mm female (E. Palmer, Aug. 1879).

Type locality: "Mexico, near San Luis Potosi."

Distribution: Northern Mexico (Aguascalientes, ext. SE Coahuila, S Durango, Guanajuato, Jalisco, Nayarit, S Nuevo León, San Luis Potosí, W Tamaulipas, S Zacatecas), 1035–2500 m.

Sources: Webb, 1961, Gehlbach & Baker, 1962, Gehlbach & McCoy, 1965, Gehlbach, 1967, Garstka, 1982, Parmley, 1990,Van Devender & Bradley, 1994, Hilken & Schlepper, 1998, Bryson et al., 2001, McCranie & Wilson, 2001b, Quintero-Díaz et al., 2001, Salmon et al., 2001, Hansen & Bryson, 2009 and Hansen et al., 2011.

10. *Lampropeltis nigra* (Yarrow, 1882). Proc. U.S. Natl. Mus. 5(299): 438. (*Ophibolus getulus niger*)

Types: Syntypes (2), USNM 12149a–b (R. Ridgway, 1881).

Type locality: "Wheatland, Indiana" [USA].

Distribution: Eastern USA (Alabama, Georgia, S Illinois, S Indiana, Kentucky, E Louisiana, Mississippi, S Ohio, Tennessee, W Virginia, West Virginia), NSL–750 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Alabama, Pennsylvania, Tennessee).

Sources: P.W. Smith, 1961, Blaney, 1977, 1979a, Hubbs, 2009, Pyron & Burbrink, 2009b–c and Burbrink et al., 2011.

11. *Lampropeltis pyromelana* (Cope, 1867a). Proc. Acad. Nat. Sci. Philadelphia (1866) 18(4): 305. (*Ophibolus pyromelanus*)

Synonym: *Lampropeltis pyromelana infralabialis* W.W. Tanner, 1953.

Type: Lectotype, USNM 11421, a 632–775 mm male (E. Coues, 1865), designated by Cope (1900: 908).

Type locality: "Fort Whipple, Arizona" via lectotype selection.

Distribution: Southwestern USA (Arizona, ext. E Nevada, SW New Mexico, W Utah), 850–2375 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Arizona, Nevada, New Mexico).

Sources: Van Denburgh, 1922, Fowlie, 1965, W.W. Tanner, 1953, Cranston, 1993b, Degenhardt et al., 1996,

Bartlett & Tennant, 2000, Hubbs, 2004 and Burbrink et al., 2011.

Remarks: Cochran (1961: 204) listed USNM 7845 as a syntype.

12. *Lampropeltis ruthveni* Blanchard, 1920a. Occ. Pap. Mus. Zool., Univ. Michigan (81): 8–10, pl. 1, fig. 2.

Type: Holotype, USNM 46558, skin and head of 745 mm specimen (E.W. Nelson, 2 Aug. 1892).

Type locality: "Patzcuaro, Michoacan, Mexico" (in error). Corrected to "Potrenaro, Michoacán, Mexico *fide* Garstka (1982: 30) and USNM catalogue entry.

Distribution: West-central Mexico (Hidalgo, Jalisco, Morelos, N Michoacán, Querétaro), 1515–2600 m.

Sources: Garstka, 1982, K.L. Williams, 1978, Hilken & Schlepper, 1998, Hubbs, 2004 and Roth-Monzón et al., 2011.

13. †*Lampropeltis similis* Holman, 1964. Copeia 1964(4): 635, fig. 3.

Type: Holotype, UNSM 61035, one trunk vertebra (J.A. Tihen & C.J. Chantell, 1962–1963).

Type locality: "Near the Norden-Johnstown Road, about 300 yards south of the bridge across the Niobrara River; on the Ed McCall Ranch, SE 1/4, SW 1/4 of Sect. 33, T 33 N, R 23 W, Brown County, Nebraska. Valentinian; Valentine formation, Norden Bridge Quarry." [= Barstovian].

Distribution: Middle Miocene (Barstovian: 13.6–16.3 mya) of Canada (Saskatchewan) and USA (Nebraska, South Dakota), middle/upper Miocene (Clarendonian: 10.3–13.6 mya) of USA (Kansas, South Dakota), and upper Miocene (Hemphillian: 4.9–10.3 mya) of USA (Texas).

Sources: Holman, 1970, 1973c, 1975, 1979a, M. Green & Holman, 1977, Rage, 1984b, Parmley, 1987 and Parmley & Hunter, 2010.

14. *Lampropeltis splendida* (Baird & Girard, 1853). Cat. No. Amer. Rept., Serp. 1: 83–84. (*Ophibolus splendidus*)

Synonym: †*Lampropeltis intermedius* Brattstrom, 1955b.

Type: Holotype, USNM 1726, head, tail and connecting skin of a 915 mm specimen (J.H. Clark [U.S.-Mex. Bound. Surv.], 1851, via J.D. Graham).

Type locality: "Sonora, Mexico" (in error). Corrected to south of the Gila River in Santa Cruz or Cochise Co., SE Arizona, USA *fide* Bogert (1939a: 198–199), Stejneger (1940: 204) and Stickel (1943: 120).

Distribution: Southwestern USA (E Arizona, S New Mexico, ext. SW Texas) and N Mexico (Chihuahua, Coahuila, Durango, San Luis Potosí, Zacatacas)., NSL–2135 m.

Fossil records: Middle Pliocene (Blancan III) of USA (Texas), lower/middle Pleistocene (Irvingtonian I) of USA (Arizona), middle/upper Pleistocene (Irvingtonian II) of USA (Texas), and upper Pleistocene (Rancholabrean I, II) of USA (New Mexico, Texas).

Sources: Stejneger, 1940, Blaney, 1977, 1979a, Zweifel, 1980, Zweifel & Dessauer, 1983, Degenhardt et al., 1996, Hubbs, 2009 and Pyron & Burbrink, 2009b–c.

Remarks: Yarrow (1882: 93) and Cope (1900: 919) listed Graham's Sonora type specimen as USNM 1709 (and USNM 1726 from Pecos River, Texas) but Cochran (1961: 204) listed the type as USNM 1726 (skin).

15. *Lampropeltis triangulum* (Lacépède, 1789). Hist. Nat. Serp. 2: 86, 331. (*Coluber triangulum*)

Synonyms: *Coluber americanus* Suckow, 1797, *Coluber eximius* Harlan, 1827, *Pseudoelaps Y* Berthold, 1842, *Ophibolus clericus* Baird & Girard, 1853, *Ophibolus gentilis* Baird & Girard, 1853, *Lampropeltis amaura* Cope, 1860e, *Lampropeltis micropholis* Cope, 1860e, *Lampropeltis polyzona* Cope, 1860e, *Lampropeltis annulata* Kennicott *in* Cope, 1860e, *Lampropeltis multistriata* Kennicott, 1860, *Coronella doliata conjuncta* Jan, 1863b, *Coronella doliata formosa* Jan, 1863b, *Coronella formosa abnorma* Bocourt, 1886 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Coronella formosa anomala* Bocourt, 1886 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Coronella formosa oligozona* Bocourt, 1886 *in* A.H.A. Duméril, Mocquard & Bocourt, 1870–1909, *Ophibolus doliatus collaris* Cope, 1889a, *Ophibolus doliatus occipitalis* Cope, 1889a, *Ophibolus doliatus parallelus* Cope, 1889a, *Ophibolus doliatus syspilus* Cope, 1889a, *Ophibolus doliatus temporalis* Cope, 1893b, *Lampropeltis micropholis arcifera* F. Werner, 1903a, *Lampropeltis pyrrhomelaena celaenops* Stejneger, 1902b, *Lampropeltis doliatus coccineus* Wright & Bishop, 1916, *Lampropeltis triangulum nelsoni* Blanchard, 1920a, *Lampropeltis polyzona blanchardi* L.C. Stuart, 1935c, *Lampropeltis triangulum schmidti* L.C. Stuart, 1935a, *Lampropeltis triangulum gaigae* [*sic*] Dunn, 1937a, *Lampropeltis doliata taylori* W.W. Tanner & Loomis, 1957, *Lampropeltis triangulum andesiana* K.L. Williams, 1978, *Lampropeltis triangulum conanti* K.L. Williams, 1978, *Lampropeltis triangulum hondurensis* K.L. Williams, 1978, *Lampropeltis triangulum sinaloae* K.L. Williams, 1978, *Lampropeltis triangulum smithi* K.L. Williams, 1978, *Lampropeltis triangulum stuarti* K.L. Williams, 1978, *Lampropeltis triangulum campbelli* Quinn, 1983, and *Lampropeltis triangulum dixoni* Quinn, 1983.

Type: Holotype, not designated, a 792 mm specimen (King of France's cabinet, Paris), lost *fide* K.L. Williams (1978: 75).

L

Type locality: "Amérique" [= America]. Restricted to vicinity of New York City, New York, USA *fide* K.P. Schmidt (1953a: 208).

Distribution: North America, Mesaoamerica and NW South America. Extreme SE Canada (ext. SE Ontario and ext. SW Quebec) USA (N Alabama, cen. and E Arizona, Arkansas, Colorado, Connecticut, Delaware, District of Columbia, ext. N Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, cen. & N Louisiana, SE Maine, Maryland, Massachusetts, S Michigan, SE Minnesota, N Mississippi, Missouri, SE Montana, Nebraska, NE Nevada, New Hampshire, New Jersey, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, S Wisconsin, Wyoming), Mexico (Campeche, Chiapas, ext. SW Chihuahua, NE Coahuila, Colima, Guanajuato, Guerrero, Hidalgo, Jalisco, México, Michoacán, Morelos, Nayarit, Nuevo León, Oaxaca, Puebla, Querétaro, Quintana Roo, San Luis Potosí, Sinaloa, ext. S Sonora, Tabasco, Tamaulipas, Veracruz, Yucatán, María Madre Is.), Guatemala (Alta Verapaz, Escuintla, Jutiapa, Retalhuleu, Petén), Belize (Cayo, Orange Walk, Stann Creek), El Salvador (La Libertad, La Paz, Morazán, San Miguel, San Salvador, Santa Ana), Honduras (Atlántida, Choluteca, Colón, Copán, Cortés, El Paraíso, Francisco Morazán, Gracias a Dios, Olancho, Santa Bárbara, Yoro), Nicaragua (Estelí, Granada, Managua, Matagalpa, Río San Juan, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Canal Zone, Chiriquí, Darién, Panamá), W Colombia (Antioquia, Atlántico, Caldas, Caqueta, Cauca, Cesar, Chocó, Cundinamarca, Huila, Magdalena, Tolima, Valle), W Venezuela (Distrito Federal, Mérida, Táchira, Trujillo, Zulia) and W Ecuador, NSL–3330 m.

L

Fossil records: Upper Miocene (Hemphillian) of USA (Nebraska), lower Pliocene (Hemphillian) of USA (Oklahoma), middle Pliocene (Blancan II, III) of USA (Kansas, Nebraska, Texas), upper Pliocene (Blancan V) of USA (Kansas, Nebraska), lower Pleistocene (Irvingtonian I [?]) of USA (Pennsylvania), lower/middle Pleistocene (Irvingtonian I) of USA (Kansas), middle Pleistocene (Irvingtonian II) of USA (Nebraska), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas, Maryland, Texas, West Virginia), and upper Pleistocene (Rancholabrean I, II) of USA (Alabama, Kansas, Missouri, Nevada, Ohio, Oklahoma, Pennsylvania, Tennessee, Texas, Virginia, West Virginia, Wisconsin).

Remarks: Official Specific Name no. 2186 *fide* Opinion 804 (ICZN, 1967). It is likely that populations of this wide-ranging species will be recognized as multiple species *fide* Bryson et al., 2007.

16. †*Lampropeltis vetustum* (Auffenberg, 1963). Tulane Stud. Zool. 10(3): 186–187, fig. 35 (lower). (†*Stilosoma vetustum*)

Type: Holotype, UF 6467, one trunk vertebra (W. Auffenberg, June 1954).

Type locality: "Haile VI, locality A (R 17 E, T 9 S, NW1/4 and SW1/4, sec. 24), 0.2 miles east of Route 235, near the town of Haile, Alachua County, Florida; elevation approximately 84 feet. Middle Pliocene, Hemphilian, Alachua fm."

Distribution: Upper Miocene (Hemphilian: 4.9–10.3 mya) of USA (Florida).

Sources: Holman, 1979a, 2000b and Rage, 1984b.

17. *Lampropeltis webbi* Bryson, Dixon & Lazcano-Villarreal, 2005. J. Herp. 39(2): 208–210, figs. 1–2.

Type: Holotype, UANL 5684, a 266 mm female (R. Bryson, D. Hartman & J. Banda, 30 June 2000).

Type locality: "4.0 km west of El Palmito on Hwy. 40, Municipio Concordia, Sinaloa, Mexico (23° 33' 14.2" N, 105° 50' 47.2" W), 2000 m elevation."

Distribution: Western Mexico (W Durango, S Sinaloa), 2000 m.

Remarks: Photographs of this species in Applegate (2007: 73, 75), who suggested that it possibly occurs in Nayarit.

18. *Lampropeltis zonata* (Blainville, 1835). Nouv. Ann. Mus. Hist. Nat. Paris (3) 4(3): 293–294. (*Coluber zonatus*)

Synonyms: *Bellophis zonatus* Lockington, 1877, *Ophibolus getulus multicinctus* Yarrow, 1882, *Coronella multifasciata* Bocourt, 1886 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Lampropeltis agalma* Van Denburgh & Slevin, 1923, *Lampropeltis herrerae* Van Denburgh & Slevin, 1923, *Lampropeltis zonata parvirubra* Zweifel, 1952, and *Lampropeltis zonata pulchra* Zweifel, 1952.

Type: Holotype, MNHN, a 415 mm specimen (P.E. Botta, 1827–1829), lost *fide* Bocourt *in* Stejneger (1902b: 153).

Type locality: "Californie" [= Alta California or California, USA]. Restricted to northern California, USA *fide* K.P. Schmidt (1953a: 210).

Distribution: Western USA (California, SW Oregon, S Washington) and ext. NW Mexico (cen. Baja California Norte, Todos Santos Sur Is.), NSL–2750 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Nevada).

Sources: Stejneger, 1902b, Blanchard, 1921a, Linsdale, 1932, Burt, 1936, J.L. Peters, 1938, and Klauber, 1943c, Zweifel, 1952, 1974, M.P. Hayes, 1975, McGurty, 1988, Cranston, 1994b, H.A. Brown et al., 1995, P.R Brown, 1997, Rodríguez-Robles et al., 1999, Bartlett & Tennant, 2000, Grismer, 2002, Hubbs, 2004, Mulks, 2004 and Bryson et al., 2007.

Remarks: *Lampropeltis herrerae* a valid species *fide* Grismer, 1999.

LAMPROPHIS Fitzinger, 1843 (Lamprophiidae)

Synonyms: *Iridophis* Fitzinger, 1861, and *Pachyophis* F. Werner, 1924a *(nomen praeoccupatum),* and *Trachyophis* F. Werner, 1925 *(nomen substitutum).*

Type species: *Coluber aurora* Linnaeus, 1758.

Distribution: Southern Africa.

Sources: Loveridge, 1957a, V.F.M. FitzSimons, 1962a, 1974, Roux-Estève & Guibé, 1965b, Dunger, 1971b, Broadley, 1983, Scheidt, 1996, Kelly et al., 2003, 2009, Marais, 2004, Vital et al., 2008 and Zaher et al., 2009.

1. *Lamprophis aurora* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 219. (*Coluber aurora*)

Type: Holotype, NHR Lin-20 (formerly MAFR), a 660 mm female (Mus. Drottn.).

Type locality: "America" (in error). Corrected to Africa *fide* V.F.M. FitzSimons (1962a: 112).

Distribution: Southern Africa. Eastern Botswana (Central), Lesotho, Swaziland and South Africa (Eastern Cape, KwaZulu-Natal, Free State, Gauteng, Limpopo, Mpumalanga, North-West, Western Cape), NSL–1350 m.

Sources: V.F.M. FitzSimons, 1974, Branch, 1988, Hermann, 1989b and Broadley & Blaylock, 2013.

2. *Lamprophis fiski* Boulenger, 1887i. Proc. Zool. Soc. London 55(3): 398, pl. 34.

Type: Holotype, BMNH 1946.1.12.41, a 315 mm specimen (W.G. Atherstone via G.H.R. Fisk).

Type locality: "Touw's River, S.-Africa" [= Touws River, Western Cape Prov., SW South Africa, 33°20'S, 20°02'E, elevation 810 m].

Distribution: Southwestern South Africa (Eastern Cape, Northern Cape, Western Cape), NSL–1275 m.

Sources: Visser, 1978, 1979a, Branch, 1988, Branch & Haagner, 1991 and Bartys et al., 2012..

Remarks: Possibly occurs in S Namibia *fide* M. Griffin (2003: 128).

3. *Lamprophis fuscus* Boulenger, 1893a. Cat. Snakes Brit. Mus. 1: 322, pl. 20, fig. 4.

Synonym: *Coluber simplex* Gravenhorst, 1807 *(nomen oblitum).*

Type: Holotype, BMNH 1946.1.12.43, a 560 mm male.

Type locality: "Cape of Good Hope" [= Cape of Good Hope, Western Cape Prov., SW South Africa, 34°21'S, 18°28'E, elevation 20 m].

Distribution: Southeastern South Africa (Eastern Cape, Free State, Gauteng, S KwaZulu-Natal, S Mpumalanga, Western Cape), NSL–900 m.

Sources: Broadley, 1983, Branch, 1988 and R. Hermann, 1991.

Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Lamprophis fuscus* Boulenger is designated a *nomen protectum* and *Coluber simplex* Gravenhorst a *nomen oblitum.*

LANGAHA Bonnaterre, 1790 (Pseudoxyrhophiidae)

Synonyms: *Langaha* Lacepède, 1789 *(nomen rejiciendum), Langaya* G. Shaw, 1802 *(nomen emendatum), Langaia* Cuvier, 1817 *(nomen emendatum), Amphistrate* Goldfuss, 1820, *Langhaha* Ritgen, 1828 *(nomen emendatum), Xiphorhynchus* Wagler, 1830, *Xiphorhina* Fitzinger, 1843, *Xiphorrhynchus* Hoffmann, 1890 *(nomen incorrectum), Xyphorhynchus* Boulenger, 1896a *(nomen emendatum), Xiphoryncus* – Brongersma, 1972 *(nomen incorrectum),* and *Lanagaha* – Anon., 1976 *(nomen incorrectum).*

Type species: *Langaha madagascariensis* Bonnaterre**,** 1790.

Distribution: Madagascar.

Sources: F. Werner, 1924c, Guibé, 1948, 1949b, 1958, Domergue, 1988, Nagy et al., 2003, Glaw & Vences, 2007, Kelly et al., 2009 and Zaher et al., 2009.

1. *Langaha alluaudi* Mocquard, 1901. Bull. Mus. Hist. Nat., Paris 7(6): 253.

Type: Holotype, MNHN 1901.193, a female (C. Alluaud, 1892–1893).

Type locality: "Andrahomana, sud de Madagascar" [= Tanjon'Andavaka, SE Toliara Prov., S Madagascar, 25°12'S, 46°38'E, elevation NSL].

Distribution: Southern Madagascar (Toliara), NSL–135 m.

Source: Brongersma, 1972.

Remarks: Original description reprinted in Mocquard (1902a: 12–13, pl. 1, fig. 4).

2. *Langaha madagascariensis* Bonnaterre, 1790. Tabl. Ency. Méth., Ophiol.: 71, pl. 35, fig. 4.

Synonyms: *Langaya nasuta* Shaw & Nodder, 1790 *in* 1789–1813, *Amphisbaena langaha* J.G. Schneider,

L

1801, *Langaha cristagalli* A.-M.-C. Duméril, Bibron & Duméril, 1854b, *Langaha ensifera* A.-M.-C. Duméril, Bibron & Duméril, 1854b, and *Langaha intermedia* Boulenger, 1888a.

Type: Lectotype, an 867 mm specimen described and illustrated in Brugnière (1784: 132–133, pl. 2), designated herein.

Type locality: "ile de Madagascar" via lectotype selection.

Distribution: Madagascar (Antsiranana, Mahajanga, Toamasina, Toliara), NSL–540 m.

Sources: Brongersma, 1972, Lamar, 1977, Love, 1993 and Henkel & Schmidt, 2000.

Remarks: Original description based on Brugnière (1784: 132–133, pl. 2). Official Specific Name *fide* Opinion 1463 (ICZN, 1987).

3. *Langaha pseudoalluaudi* Domergue, 1988. Bull. Mus. Natl. Hist. Nat. (4) 10A(1): 142–143, figs. 4a–e.

Type: Holotype, MNHN 1986.1352 (formerly CAD 664/S), a 1290 mm female (P. Randrianarivelo, 10 Oct. 1966).

Type locality: "Région d'Ambilobe, nord de Madagascar" [= vicinity of Ambilobe (13°12'S, 49°03'E, elevation 35 m), N Antsiranana Prov., N Madagascar].

Distribution: Madagascar (N Antsiranana, Mahajanga, Toliara), 35–170 m.

L

LAPEMIS Gray, 1835 *in* Gray & Hardwicke, 1830–1835 (Elapidae)

Synonyms: *Enhydris* Merrem, 1820 *(nomen praeoccupatum), Lapemys* Agassiz, 1847 *(nomen emendatum), Pelamydoidis* Fitzinger, 1861, *Lampemis* – Westphal-Castelnau, 1870 *(nomen incorrectum), Lepemis* – Angel, 1950 *(nomen incorrectum),* and *Pelamydoides* Iskandar & Colijn, 2001 *(nomen nudum).*

Type species: *Hydrus curtus* G. Shaw, 1802.

Distribution: Marine waters of Indo-Australia, including Arabian Sea, Arafura Sea, Bay of Bengal, Coral Sea, Coromandel Coast, Gulf of Carpentaria, Gulf of Oman, Gulf of Papua, Gulf of Thailand, Indian Ocean, Java Sea, Kimanis Bay, Malabar Coast, Manila Bay, Marudu Bay, Persian Gulf, South China Sea, Strait of Hormuz, Strait of Madura, Strait of Malacca, Taiwan Strait, Taraba Bay, Timor Sea, Torres Strait and Yellow Sea.

Type: Holotype, BMNH 1946.1.17.59 (formerly BMNH III.2.1.a), a 300 mm female.

Type locality: "East-India." Emended to India *fide* Boulenger (1896a: 300).

Distribution: Indo-Australia. Bahrain, Iran (Hormozghan, Sistan va Baluchestan, Qeshm Is.), United Arab Emirates, Oman, Pakistan (Balochistan, Sindh), India (Andaman & Nicobars, Andhra Pradesh, Karnataka, Kerala, Maharashtra, Orissa, Tamil Nadu), Sri Lanka, Bangladesh, S Myanmar (Bassein, Mergui Arch.), China (Fujian, Guangdong, Guangxi, Hainan, Hong Kong, Shandong), Vietnam (Dong Nai, Thuân Hai), Cambodia (Koh Kong), Thailand (Chanthaburi, Chumphon, Nakhon Si Thammarat, Phet Buri, Samut Sakhon, Songkhla, Surat Thani, Trang), West Malaysia (Johore, Kelantan, Melaka, Pahang, Perak, Selangor, Terengganu, Langkawi Is.), Singapore, East Malaysia

(Sabah, Sarawak), Brunei, Indonesia (Papua, Flores, Java, Lingga Arch., Maluku, Sulawesi, Sumatra, Sumba), Papua New Guinea (Central, East Sepik, Gulf, Morobe, Western), Philippines (Luzon, Negros, Panay) and N Australia (Northern Territory, Queensland, Western Australia, Ashmore and Cartier Is.).

Remarks: Presence in Japan doubtful *fide* Stejneger (1907a: 436) and Taiwan doubtful *fide* Mao & Chen (1980: 51). *Lapemis hardwickii* a valid species *fide* Leviton et al. (2003: 436).

†*LAPPARENTOPHIS* Hoffstetter, 1960a (†Lapparentophiidae)

Type species: †*Lapparentophis defrennei* Hoffstetter, 1960a.

Distribution: Lower Cretaceous of Algeria.

Sources: Rage, 1984b and Cuny et al., 1990.

1. †*Lapparentophis defrennei* Hoffstetter, 1960a. Bull. Soc. Géol. France (1959) (7) 1(9): 899–900, fig. 2.

Type: Holotype, MNHN 1959.11A, one trunk vertebra (P. Defrenne, Dec. 1947).

Type locality: "le 'continental intercalaire' (Crétacé inférieur) des buttes d'In Akhamil (Sahara), 30 km au SSE d'Ohanet (N du Sahara central, bordure du Tinrhert) et environ 120 km au NW d'Edjeleh" [= lower Cretaceous of Ouargla Wilaya, Algeria].

Distribution: Lower Cretaceous (Albian: 100.5–113 mya) of Algeria. Known only from type locality.

LATICAUDA Laurenti, 1768 (Elapidae)

Synonyms: *Platurus* Latreille *in* Sonnini & Latreille, 1801a, *Platyurus* Ritgen, 1828 *(nomen emendatum),* and *Platura* Gray, 1840 *(nomen emendatum), Laticaude* – Chenu & Desmarest, 1857 *(nomen incorrectum), Laticaudatus* – Higgins, 1873 *(nomen incorrectum), Laticaudata* – Oshima, 1910 *(nomen incorrectum), Lalicauda* – Steindachner, 1913 *(nomen incorrectum), Colubrinus* Cyrén, 1934 *(lapsus calami), Laticouda* – Gasperetti, 1974 *(nomen incorrectum),* and *Latacauda* – Dowling *in* Dowling & Duellman, 1978 *(nomen incorrectum).*

Type species: *Coluber laticaudatus* Linnaeus, 1758.

Distribution: Marine waters and rocky shores of Sino-Australia, including Andaman Sea, Arafura Sea, Banda Sea, Bay of Bengal, Bismarck Sea, Bohol Straits, Coral Sea, East China Sea, Flores Sea, Gulf of Thailand, Java Sea, Lake Te-Nggano, Manila Bay, Maruda Bay, Melanesia, Moluccan Sea, Philippine Sea, Polynesia, Prony Bay, Seram Sea, South China Sea, Solomon Sea, South China Sea, South Pacific Ocean, Strait of Malacca, Sulawesi Sea, Sulu Sea, Taiwan Strait, Tasman Sea, Timor Sea, and West Pacific Ocean.

Sources: Stejneger, 1907a, Rooij, 1917, F. Werner, 1924c, Maki, 1931, C. Haas, 1950, Werler & Keegan, 1963, Halstead, 1970, Voris, 1977, Mao & Chen, 1980, Gorman, 1981, Kharin, 1984c, McCarthy, 1986, R.W. Murphy, 1988, Slowinski, 1989, Ehmann, 1992, Golay et al., 1993, Zhao & Adler, 1993, Greer, 1997, A.R. Remarks: Photographs of holotype in Kharin & Czeblukov (2006: figs. 11a–b). Photograph of Linnaeus' type of *L. colubrina* (NHR 88) in Heatwole et al. (2005: pl. 1 [upper]) and Kharin & Czeblukov (2006: fig 9), the latter erroneously designating it as lectotype of *L. laticaudata*. Unconfirmed reports from Mexico, El Salvador and Nicaragua doubtful *fide* McCarthy (1986: 134).

2. *Laticauda crockeri* Slevin, 1934. Proc. California Acad. Sci. (4) 21(15): 186.

L

Synonym: *Laticauda laticaudata wolffi* Vølsoe, 1958.

Type: Holotype, CAS 7200l, a 479 mm male (T. Crocker [Templeton Crocker Exped.], 8 June 1933).

Type locality: "Lake Tungano, situated about two miles inland from the east point of Rennell Island, Solomon Islands" [= Te-Nggano Lake, Rennell Is., S Solomons, 160°30'E, 11°45'S, elevation 20 m].

Distribution: Southern Solomons (Rennell Is.). Known only from type locality.

Sources: Volsøe, 1958a–b, M. McCoy, 1980 and Cogger et al., 1987.

3. *Laticauda frontalis* (De Vis, 1905). Ann. Queensland Mus. (6): 48. (*Platurus frontalis*)

Type: Holotype, QM J202, a 327 mm specimen.

Type locality: "New Guinea," (possibly in error *fide* Cogger & Heatwole, 2006: 248).

Distribution: Southwest Pacific. Eastern Papua New Guinea (New Britain), New Caledonia, Loyalty Is. and Vanuatu (Efate, Elephant, Espiritu Santo).

Sources: Shine et al., 2002, Heatwole et al., 2005 and Kharin et al., 2010.

Remarks: Photograph of holo type in Cogger & Heatwole (2006: fig. 1). A valid species *fide* Cogger & Heatwole (2006: 247).

4. *Laticauda guineai* Heatwole, Busack & Cogger, 2005. Herpetol. Monogr. (19): 97–98, pl. 1 (middle).

Type: Holotype, AMS 69514, a 910 mm male (F. Parker, 1 Feb.–22 Mar. 1977).

Type locality: "Bava Island, near Port Moresby, Papua New-Guinea."

Distribution: Southwest Pacific. Southeastern Papua New Guinea (Central, National Capital Province, Milne Bay, Bava, Lion, Manu, Manubada, Motupore and New Britain Is.), Loyalty Is. and Vanuatu.

5. *Laticauda laticaudata* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 222. (*Coluber laticaudatus*)

Synonyms: *Laticauda scutata* Laurenti, 1768 *(nomen substitutum), Platurus fasciatus* Latreille *in* Sonnini & Latreille, 1801b, *Platurus laurenti* Rafinesque-Schmaltz, 1817 (*nomen praeoccupatum*), *Aspisurus laticaudatus* – Gray *in* Grey, 1841b *(nomen incorrectum), Platurus fasciatus* Jan, 1859b *(nomen praeoccupatum), Platurus fischeri* Jan, 1859b, *Platurus affinis* J. Anderson, 1871a, *Platurus fisheri* – Tirant, 1884 *(nomen incorrectum), Platurus muelleri* Boulenger, 1896a, *Laticaudata laticaudata* – Oshima, 1910 *(nomen incorrectum), Laticauda laticauda* – Brehm, 1913 *(nomen incorrectum),* and *Laticauda laticoudata* – Khole, 1991 *(nomen incorrectum).*

Type: Lectotype, NHR Lin-87 (formerly MAFR), a 690 mm specimen (Mus. Drottn.), designated by Stejneger (1907a: 402).

Type locality: "Indiis" [= India] via lectotype selection.

Distribution: Southeast Asia and Indo-Australia. Eastern India (Andaman & Nicobars: Andaman Is., West Bengal), Sri Lanka, Bangladesh, Myanmar (Tanintharyi: Ramri Is.), Thailand (Chanthaburi), West Malaysia (Pinang, Selangor), Singapore, East Malaysia (Sabah, Kalampuian Damit and Si Amil Is.), S Japan (Ryukyus: Okinawa and Ishigakishima Is.), China (Fujian), Taiwan, Philippines (Bantayan, Gato, Luzon, Mindanao, Mindoro, Samar, Sulu Arch.: Jolo), Indonesia (Ambon, Aru Is.: Babi, Poeloe, Jobi; Babi, Buru, Flores, Halmahera, Java, Kai Is., Mansalar, Nias, Simeulue, N Sulawesi, Sumatra, Ternate, Timor, Weh), Papua New Guinea (Central, Milne Bay, Duke of York, Schouten, New Ireland, New Britain and Samarui Is.), E Australia (New South Wales, Queensland, Tasmania, Great Barrier Reef), Vanuatu, Etate Is., New Caladonia (Anse Vata, Goro, Grand Taenia, Nounéa, Petit Taenia, Signal), Fiji Is., Tonga Is. and Society Is.

Sources: W.C.H. Peters, 1877a, Rooij, 1922, E.H. Taylor, 1922a, 1965, M.A. Smith, 1943, Saint-Girons, 1964, 1990, Klemmer, 1967, Cogger, 1975, Bosch, 1985, Tian et al., 1986, Toriba & Yosida, 1986, M.A.R. Khan, 1988, Bauer & Vindum, 1990, Stuebing, 1991, Ehmann, 1992, O'Shea, 1996, Bauer & Sadlier, 2000, Ineich & Laboute, 2002, Xiang & Li, 2009, I. Das, 2010, 2012 and A.R. Rasmussen et al., 2011.

Remarks: Kharin & Czeblukov (2006a: 233) erroneously designated NHR 88 (via figs. 9a–b = *L. colubrina fide* Heatwole et al., 2005: pl. 1, upper fig.) as lectotype.

6. *Laticauda saintgironsi* Cogger & Heatwole, 2006. Rec. Aust. Mus. 58(2): 249–254, figs. 3a–b.

Type: Holotype, AMS 162999 (formerly AMS-FN 34602), an 815 mm male (H.G. Cogger & H.F. Heatwole, 14 Sept. 1993).

Type locality: "Porc-épic Island, Le Lagon, near Noumea, New Caledonia, 22°19'45.6"S 166°34'08.5E."

Distribution: Southwest Pacific. New Caledonia (Alter, Atire, Bayonnaise, Belep, Lange, Mâitre, Moro, Mouac, Nou, Noumea, Pins, Porc-Epic, Redika, Signal and Uatio Is.), Loyalty Is. (Lifou, Maré, Ouvéa), Caroline Is. and New Zealand.

Remarks: Original description reprinted in Heatwole et al. (2005: 6, 23, 98, 136, figs. 19, 23).

LEIOHETERODON A.-M.-C. Duméril, Bibron & Duméril, 1854a (Pseudoxyrhophiidae)

Synonyms: *Anomalodon* Jan, 1863a, *Lioheterodon* Boulenger, 1893a *(nomen emendatum), Licheterodon* – Maass-Berlin, 1933 *(nomen incorrectum),* and *Michaelnicholsus* Hoser, 2012t *(nomen illegitimum).*

Type species: *Heterodon madagascariensis* A.-M.-C. Duméril, Bibron & Duméril, 1854a.

Distribution: Madagascar.

Sources: Methuen & Hewitt, 1913, Angel, 1931, G.S. Myers, 1949, Guibé, 1958, Brygoo, 1983, Glaw & Vences, 1994, Nagy et al., 2003, Lawson et al., 2005, Kelly et al., 2009 and Hoser, 2012t.

1. *Leioheterodon geayi* Mocquard, 1905c. Bull. Mus. Hist. Nat., Paris 11(5): 288–289. (*Lioheterodon geayi*)

Synonym: *Lioheterodon voeltzkowi* Boettger, 1913.

Type: Holotype, MNHN 1905.137, a 930 mm male (F. Geay, 1904–1905).

Type locality: "de la plaine de Fiherena" [Toliara Prov., S Madagascar].

Distribution: Southwestern Madagascar (Toliara), NSL–290 m.

2. *Leioheterodon madagascariensis* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 776–777, pl. 69. (*Heterodon madagascariensis*)

Types: Syntypes (6), BMNH 1946.1.15.19, MCZ 2202 (formerly MNHN 87), a 1644 mm male, MNHN 7501, MNHN 7558–59, and MNHN 1991.1629, longest MNHN syntype 1570 mm specimen (C.A.C.J. Bernier, 1831–1846 & L.-H. Boivin, 1847–1852).

Type locality: "Madagascar."

Distribution: Madagascar (Antsiranana, Fíanarantsoa, Mahajanga, Toamasina, Toliara, Nosy Be and Sainte Marie Is.) and Comoro Is. (Grande Comore), 100–1200 m.

Sources: Desquez, 1884, Conant, 1938, Arnoult & Fourmanoir, 1967, J.A. Campbell & Murphy, 1977b, Raxworthy, 1988, Wallach, 1985, Meirte, 1993 and Henkel & Schmidt, 2000.

3. *Leioheterodon modestus* (A.C.L.G. Günther, 1863c). Ann. Mag. Nat. Hist. (3) 12(71): 356–357. (*Heterodon modestus*)

Type: Holotype, BMNH 1946.1.7.79 (formerly RMNH), a 940 mm specimen (1863).

Type locality: "Madagascar."

Distribution: Western Madagascar (Antsiranana, Atananarivo, Mahajanga, Toliara), 20–650 m.

Sources: Henkel & Schmidt, 2000 and A. Mori et al., 2006.

LEIOPYTHON Hubrecht, 1879a (Pythonidae)

Synonym: *Liopython* O'Shaughnessy, 1880 *(nomen emendatum).*

Type species: *Liasis albertisii* W.C.H. Peters & Doria, 1878.

Distribution: Austro-Papua.

Sources: Brongersma, 1953, 1956b, McDowell, 1975a, Whitaker et al., 1982, F. Parker, 1982, Kluge, 1993b, D.G. Barker & Barker, 1994, O'Shea, 1996, Walls, 1998b, McDiarmid et al., 1999, Cogger, 2000, Schleip, 2008, Schleip & O"Shea, 2010 and Hoser, 2012b.

1. *Leiopython albertisii* (W.C.H. Peters & Doria, 1878). Ann. Mus. Civ. Stor. Nat. Genova 13: 401–403, pl. 3, figs. 2. (*Liasis albertisii*)

Synonyms: *Leiopython gracilis* Hubrecht, 1879a, *Leiopython albertisii barkeri* Hoser, 2000b *(nomen incorrigendum), Leiopython barkerorum* – Wüster et al., 2001b *(nomen corrigendum),* and *Leiopython albertisii barkerorum* Hoser, 2009b & 2012b *(nomen illegitimum).*

Types: Syntypes (2), MSNG 29989 [Andai] (O. Beccari, 11 June 1875) and MSNG 29990 [Kapaor], a 2230 mm specimen (L.M. d'Albertis, April 1872).

Type locality: "prope Andai presso Dorei" and "Kapaor fra i Papua Onin in Nova Guinea boreali occidentali" [= Andai, near Dorei, N West Papua Prov., 0°55'S, 134°00'E, and Kapaor, Fak Fak District, Onin Peninsula, West Papua Prov., E Indonesia].

Distribution: New Guinea. Eastern Indonesia (West Papua, Biak, Salawati) and Papua New Guinea (Eastern Highlands, East Sepik, Enga, Madang, Morobe, Northern, Northern Highlands, Western Highlands, West Sepik, Bismarck Arch., d'Entrecasteaux Arch., Mussau and Normanby Is.), NSL–1600 m.

2. *Leiopython bennettorum* Hoser, 2000b. Ophidia Rev. (1): 19. (*Leiopython albertisii bennettorum*) (*nomen corrigendum*)

Synonyms: *Leiopython albertisii bennetti* Hoser, 2000b *(nomen incorrigendum),* and *Leiopython albertisii bennettorum* – Wüster *et al.,* 2001b *(nomen corrigendum).*
Type: Holotype, BPBM 5452, a 635 mm female (A.C. Ziegler, 13 June 1967).
Type locality: "near Wau, PNG, Lat: 7° 20' Long: 146° 40'" [= vicinity of Wau (7°20'S, 146°43'E, elevation 1140 m), Morobe Prov., Papua New Guinea].
Distribution: Papua New Guinea (Morobe), 1050–1400 m.
Remarks: A valid species *fide* by Schleip (2008: 658).

3. *Leiopython biakensis* Schleip, 2008. J. Herp. 42(4): 661–662.

Type: Holotype, RMNH 10193, a 1670 mm female (Fleet Air Arm Royal Netherlands Navy, 1952–1953).
Type locality: "Biak, Schouten Islands, Indonesia" [= Biak, Supiori Is., Papua Prov., E Indonesia, 1°11'S, 136°06'E, elevation 10 m].
Distribution: Eastern Indonesia (Biak), 10 m.

L

4. *Leiopython fredparkeri* Schleip, 2008. J. Herp. 42(4): 659–660, figs. 6e, g.

Type: Holotype, CAS 118906, a 1620 mm male (F. Parker, 7 July 1967).
Type locality: "near Wau, PNG" [= vicinity of Wau (7°20'S, 146°43'E, elevation 1140 m), Morobe Prov., Papua New Guinea].
Distribution: Papua New Guinea (Morobe), 1100–1500 m.

5. *Leiopython hoserae* Hoser, 2000b. Ophidia Rev. (1): 19.

Type: Holotype, AMNH 107150, a 2413 mm male (F. Parker, Aug. 1969).
Type locality: "Wipim (= Wipam), Western District, PNG, Lat. 8°40' Long. 142°55'."
Distribution: Austro-Papua. Eastern Indonesia (Papua, Aru Arch.), Papua New Guinea (Central, Chimbu, Eastern Highlands, Gulf, Southern Highlands, Western) and N Australia (Queensland: Torres Strait Is.), NSL–80 m.
Remarks: Redescribed by Schleip (2008: 656–657) who supported its recognition.

6. *Leiopython huonensis* Schleip, 2008. J. Herp. 42(4): 660–661, figs. 6i–j.

Type: Holotype, AMNH 95535, a 776 mm female (L. van Royen, 1964)
Type locality: "about 16 km west of Lae" [= 16 km W Lae (6°43'S, 146°59'E, elevation 35 m), Morobe Prov., Papua New Guinea].
Distribution: Eastern Papua New Guinea (Morobe), 35 m.

LEIOSELASMA Lacépède, 1804 (Elapidae)

Synonyms: *Lejoselasmus* Fischer von Waldheim, 1808 (*nomen emendatum*), *Enhydris* Wagler, 1830 *(nomen praeoccupatum), Leioselama* Bonaparte, 1831 *(nomen emendatum), Leyoselasma* – Cuvier & Voigt, 1832 *(nomen incorrectum), Lielasma* Agassiz, 1847 (*nomen emendatum), Noterophis* Gistel, 1848 *(nomen substitutum),* and *Lioselasma* Wall, 1921g *(nomen emendatum).*
Type species: *Hydrophis cyanocinctus* Daudin, 1803d.
Distribution: Marine waters and mangrove swamps including Arabian Sea, Arafura Sea, Astrolabé Bay, Bay of Bengal, Bight of Bangkok, Bismarck Sea, Coral Sea, Coromandel Coast, East China Sea, Geographe Bay, Gulf of Carpentaria, Gulf of Martaban, Gulf of Thailand, Hainan Strait, Half Moon Bay, Idzu Sea, N Indian Ocean, Java Sea, Karachi Sea, Kimanis Bay, King Sound, Malabar Coast, Manila Bay, Marudu Bay, Okinawa Sea, Persian Gulf, Philippine Sea, Safety Bay, Shark Bay, South China Sea, Strait of Hormuz, Strait of Madura, Strait of Malacca, Sulawesi Sea, Taiwan Strait, Taraba Bay, Timor Sea, Torres Strait and Yellow Sea.
Sources: Wall, 1909a, Rooij, 1917, M.A. Smith, 1926a, 1943, Halstead, 1970, McDowell, 1972a, Minton, 1975, Voris, 1977, Kharin, 1984b, 2005b, Golay et al., 1993, David & Ineich, 1999, Wells, 2007, I. Das, 2010, 2012 and Hoser, 2012e.
Remarks: Formerly in the genus *Hydrophis* and still considered so by some.

1. *Leioselasma coggeri* Kharin, 1984b. Zool. Zh. 63(10): 1538–1541, fig. 1b (upper right).

Type: Holotype, ZISP 19681, an 845 mm female (V.Z. Boldyrev, March 1975).
Type locality: "Port Suva, Fiji Islands."
Distribution: Indonesia and SW Pacific. Indonesia (N Sulawesi, Timor), Fiji Is., New Caledonia and Vanuatu.
Sources: Ineich & Rasmussen, 1997, Bauer & Sadlier, 2000, Ineich & Laboute, 2002 and Kharin, 2005a.

2. *Leioselasma cyanocincta* (Daudin, 1803d). Hist. Nat. Rept. 7: 383–385. (*Hydrophis cyanocinctus*)

Synonyms: *Leioselasma striata* Lacépède, 1804, *Hydrophis chittul* Rafinesque-Schmaltz, 1817, *Hydrophis sublaevis* Gray 1842d *(partim), Hydrophis aspera* Gray, 1849a, *Hydrophis subannulata* Gray, 1849a, *Hydrophis westermani* Jan, 1859b, *Hydrophis westermnani* Jan, 1863b *(nomen emendatum),*

Hydrophis trachyceps Theobald, 1868b, *Hydrophis crassicollis* J. Anderson, 1871b, *Hydrophis tuberculata* J. Anderson, 1871b, *Hydrophis dayanus* Stoliczka, 1872b, *Hydrophis tenuicollis* W.C.H. Peters, 1872e, *Hydrophis asperrimus* Murray, 1886, *Hydrophis phipsoni* Murray, 1887, *Hydrophis taprobanica* Haly, 1887, *Distira saravacensis* Boulenger, 1900f, *Distira sarawacensis* Shelford, 1901 *(nomen emendatum), Hydrophis cyanocyneta* – Anon., 1902 *(nomen incorrectum), Distira longissima* Rosén, 1905, *Distina cyanocincta* – Aiyar, 1906 *(nomen incorrectum), Distra cyanocincta* – Castellani & Chalmers, 1913 *(nomen incorrectum), Hydrophis asperriums* – G.S. Myers, 1947 *(nomen incorrectum), Hydrophys cyanocinctus* – Anthony, 1955 *(nomen incorrectum), Disteira saravaciensis* – Culotta & Pickwell, 1993 *(nomen incorrectum),* and *Hydrophis asperimus* – Culotta & Pickwell, 1993.

Type: Holotype, BMNH 1946.1.9.23 (formerly BMNH 1896.3.25.6), a 1524 mm female (P. Russell, 1781–1791).

Type locality: "Bengale" [= Bengal, India]. The Sunderbunds *fide* P. Russell (1801: 57) [= Sundarbans, Ganges River delta, SW Bangladesh and SE West Bengal, India, bet. 21.5–23°N, 88–91.5°E]

Distribution: South, SE and E Asia. Kuwait, Saudi Arabia, Bahrain, United Arab Emirates (Abu Dhabi, Das Is.), Oman, Iran (Bushehr, Hormozghan, Basuida and Qeshm Is.), Pakistan (Balochistan, Sindh), India (Andhra Pradesh, Kerala, Maharashtra, Orissa, Tamil Nadu, West Bengal), Sri Lanka, Bangladesh, Myanmar (Ayeyarwady. Tanintharyi), Thailand (Chanthaburi, Chumphon, Krung Thep Mahanakhon, Nakhon Si Thammarat, Pattani, Samut Sakhon, Singgora, Songkhla, Trang), Vietnam (Gulf of Tonkin to central coast) West Malaysia (Johor, Kelantan, Melaka, Perak, Pinang, Selangor), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Java, W Kalimantan, Aru Is.), Papua New Guinea (Madang), Vietnam (Dong Nai, Minh Hai, Thuân Hai), Philippines (Cebu, Luzon, Sulu Arch.), China (Fujian, Guangdong, Guangxi, Hainan, Jiangsu, Liaoning, Shandong, Zhejiang), Hong Kong, W Taiwan (P'eng Hu Is.) and S Japan (Kyushu: Kumamoto, Ryukyus: Amamioshima and Misaki Is.).

L

5. *Leioselasma melanocephala* (Gray, 1849a). Cat. Snakes Brit. Mus.: 53. (*Hydrophis sublaevis melanocephala*)

Synonym: *Disteira orientalis* Stejneger, 1901d.

Type: Lectotype, BMNH 1946.1.9.22 (formerly BMNH 1847.3.4.68), adult female (E. Belcher [Samarang Exped.], 1847), designated by Stejneger (1907a: 426).,

Type locality: "Indian Ocean," (probably in error *fide* Stejneger (1907a: 425) and M.A. Smith (1926a: 65). "China Sea or even…the Ryukyus" via lectotype selection.

Distribution: Sino-Australia. Southern Japan (Ryukyus: Iriomotejima, Ishigakishima, Miyakoshima, Okinawa and Yaeyamashima Is.), China (Fujian, Guangdong, Zhejiang), Vietnam, Taiwan (T'ai-nan, P'eng Hu Is.) and NW Australia (Ashmore and Cartier Is. and Scott Reef).

Sources: Stejneger, 1907a, Mao & Chen, 1980, Cogger et al., 1983a, M. Mori, 1984, Storr et al., 1986, Tian et al., 1986, Ehmann, 1992, V.S. Nguyen et al., 2009 and Xiang & Li, 2009.

Remarks: Collection date of lectotype erroneously listed as 1897 *fide* Stejneger (1907a: 426). A subspecies of *L. spiralis* (Shaw) *fide* Klemmer (1963: 354) and Gasperetti (1988: 316). A synonym of *L. cyanocinctus* *fide* Cheh et al. (1987: 143).

6. *Leioselasma pacifica* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 278–279, pl. 12, fig. 2. (*Hydrophis pacificus*)

Synonym: *Distira macfarlani* Boulenger, 1896a.
Type: Holotype, BMNH 1946.1.10.14 (formerly BMNH 1883.3.17.15), an 840–940 mm male (Mus. Godeffroy).
Type locality: "New Britain" [= West or East New Britain Prov., Bismarck Archipelago, E Papua New Guinea].
Distribution: Australasia. Eastern Indonesia (Papua), Papua New Guinea (Gulf, New Britian, Western [MCZ 142380]) and Gilbert Is.
Sources: Whitaker et al., 1982, O'Shea, 1996 and Kharin, 2005a.
Remarks: A synonym of *L. cyanocincta* (Daudin) *fide* Wall (1909a: 219); a synonym of *Hydrophis belcheri* (Gray) *fide* M.A. Smith (1926a: 52); a synonym of *L. elegans* (Gray) *fide* McDowell (1972a: 217).

L

7. *Leioselasma semperi* (S.W. Garman, 1881). Bull. Mus. Comp. Zool. 8(3): 85. (*Hydrophis semperi*)

Type: Holotype, MCZ 4352, a 323 mm female (C.G. Semper, 1877).
Type locality: "Lake Taal, Luzon Island, Philippines" [Batangas Prov., SW Luzon].
Distribution: Northern Philippines (SW Luzon). Known only from type locality.
Remarks: A synonym of *L. melanocephala* (Gray) *fide* McDowell (1972a: 216).

8. *Leioselasma spiralis* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 564–565, pl. 125. (*Hydrus spiralis*)

Synonyms: *Hydrus brugmannii* H. Boie *in* Schlegel, 1826a *(nomen nudum), Hydrophis brugmansii* F. Boie, 1827 *(nomen emendatum), Hydrophis melanurus* Wagler, 1828a, *Hydrophis sublaevis* Gray 1842d *(partim), Hydrophis rappii* Jan, 1863b (*nomen nudum*), *Hydrophis robusta* A.C.L.G. Günther, 1864a, *Hydrophis robustus* – Theobald, 1868b, *Hydrophis rappii* Jan, 1872 *in* Jan & Sordelli, 1870–1881, *Hydrophis temporalis* Blanford, 1881, *Hydrophis bishopii* Murray, 1884, *Hydrophis aurifasciata* Murray, 1886, *Hydrophis melanocinctus* Wall, 1906g, *Distira spiralis typica* Raj, 1926, and *Hydrophis rapii* – Culotta & Pickwell, 1993 *(lapsus calami).*
Type: Holotype, BMNH 1946.1.6.94 (formerly BMNH III.6.10.c), a 381 mm specimen.
Type locality: Unknown. Designated as Indian Ocean *fide* A.C.L.G. Günther (1864a: 366).
Distribution: Southern Asia and East Indies. Iran (Bushehr, Sistan va Baluchestan), E Saudi Arabia, United Arab Emirates, Oman, Bahrain, SE Pakistan (Sindh), India (Andhra Pradesh, Gujarat, Kerala, Maharashtra, Orissa, Tamil Nadu), Sri Lanka, Bangladesh, Myanmar (Ayeyarwady, Bago, Mon, Tanintharyi, Mergui Arch.), ext. S Thailand (Phang Nga, Phuket Is.), Vietnam, West Malaysia (Kedah, Melaka, Perak, Perlis, Pinang, Selangor, Penang Is.), Singapore, East Malaysia (Sabah, Sarawak), Philippines (Tablas), Indonesia (Java, Sumatra, Sumba, Sulawesi: South; Waigeo) and New Caledonia.
Sources: Wall, 1907h, 1911b, 1919a, Minton, 1966, Singh, 1972, Voris, 1972, B.L. Lim & Sawai, 1975, C.B. Frith, 1977b, B.L. Lim, 1982, Gasperetti, 1988, Stuebing, 1991, Leviton et al., 1992, Ineich & Rasmussen, 1997, Bauer & Sadlier, 2000, Ineich & Laboute, 2002 and A.R. Rasmussen et al., 2011.
Remarks: Holotype erroneously listed by J.E. Gray as BMNH III.6.10.a *fide* M.A. Smith (1926a: 50). Luzon, Philippine record doubtful *fide* E.H. Taylor (1922a: 239). ZMB record of Mergusi, Philippines (M.A. Smith, 1926a: 50) probably a *lapsus* for Mergui Arch., Myanmar.

LEPTODEIRA Fitzinger, 1843 (Dipsadidae)

Synonyms: *Leptodira* Agassiz, 1847 *(nomen emendatum), Megalops* Hallowell, 1861, *Leptogeira* – F. Müller, 1878b *(nomen incorrectum), Crossmanus* Hoser, 2012x *(nomen illegitimum), Ginafabaserpenae* Hoser, 2012x *(nomen illegitimum),* and *Lukefabaserpens* Hoser, 2012x *(nomen illegitimum).*
Type species: *Coluber annulatus* Linnaeus, 1758.
Distribution: Extreme S USA and Latin America.
Sources: F. Werner, 1924c, Duellman, 1958a, 1966b, J.A. Peters & Orejas-Miranda, 1970, Willard, 1972, Cadle, 1984b, Villa et al., 1988, Daza et al., 2009, Zaher et al., 2009, Mulcahy et al., 2011 and Hoser, 2012x.

1. *Leptodeira annulata* (Linnaeus, 1758). Syst. Nat., ed. 10,1: 224. (*Coluber annulatus*)

Synonyms: *Coronella taeniata* Laurenti, 1768, *Coluber albofuscus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber candidulus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber epidaurius* Hermann, 1804, *Coluber ashmeadii* Hallowell, 1845a, *Megalops maculatus* Hallowell, 1861, *Eteirodipsas annulata rhomboidalis* Jan, 1863b (*nomen nudum*), *Leptodeira personata* Cope, 1869b, *Dipsas approximans* A.C.L.G. Günther, 1872b, *Leptodira rhombifera* A.C.L.G. Günther, 1872b, *Eteirodipsas wieneri* Sauvage, 1884, *Leptodira ocellata* A.C.L.G. Günther, 1895 *in* 1885–1902, *Leptodira nycthemera* F. Werner, 1901a, *Tarbophis dipsadomorphoides* Ahl, 1925, *Urotheca aureorostris* Briceño-Rossi,

1934, *Leptodeira smithi* E.H. Taylor, 1938, *Leptodeira rhombifera kugleri* Shreve, 1947, *Leptodeira annulata cussiliris* Duellman, 1958a, and *Leptodeira annulata pulchriceps* Duellman, 1958a.

Type: Lectotype, ZMUU 9 (formerly MP), a male, designated by Duellman (1958a: 47).

Type locality: "America" via lectotype selection. Restricted to the lower Amazon River, Pará State, Brazil *fide* Duellman (1958a: 48).

Distribution: Latin America. Mexico (Chiapas, Colima, Guerrero, Hidalgo, México, Michoacán, Oaxaca, Puebla, San Luis Potosí, Sinaloa, S Tamaulipas, Veracruz), SE Guatemala (Baja Verapaz, Chiquimula, El Progresso, Escuintla, Guatemala, Izabal, Jutiapa, Sacatepéquez, Santa Rosa, Sololá, Zacapa), El Salvador (Ahuachapán, Cabañas, Cuscatlán, La Libertad, La Unión, Morazán, San Ana, San Miguel, San Vicente, San Salvador, Sonsonate), Honduras (Choluteca, Comayagua, Colón, Copán, Cortés, El Paraíso, Francisco Morazán, Gracias a Dios, Intibucá, La Paz, Lempira, Ocotepeque, Olancho, Santa Bárbara, Valle, Yoro), Nicaragua (Boaco, Chinandega, Chontales, Estelí, Granada, Jinotega, León, Managua, Matagalpa, Nueva Segovia, Río San Juan, Rivas, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Canal Zone: Colorado Is.: Chiriqui, Coclé, Colón, Darién, Herrera, Los Santos, Panamá: Gorgona Is. Perlas Arch.: San José), Colombia (Amazonas, Antioquia, Arauca, Atlántico, Bolívar, Boyaca, Caquetá, Casanare, Cauca, César, Chocó, Córdoba, Cundinamarca, La Guajira, Magdalena, Meta, Norte de Santander, Putumayo, Santander, Sucre, Tolima, Valle, Vaupés, Vichada, Gorgona Is.), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Nueva Esparta, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia, Margarita Is.), Trinidad and Tobago (Huevos, Tobago, Trinidad), Guyana (Demerara-Mahaica, Essequibo Islands-West Demerara, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Acre, Amapá, Amazonas, Bahia, Distrito Federal, Espiríto Santo, Goiás, Maranhao, Mato Grosso, Mato Grosso do Sul, Pará, Paraiba, Pernambuco, Rio de Janeiro, Rondônia, Roraima, São Paulo, Tocantins, Marajo Is.), E Ecuador (Chimborazo, Morona-Santiago, Napo, Pastaza, Zamora-Chinchipe), E Peru (Amazonas, Huanuco, Junín, Loreto, Madre de Dios, San Martín, Pasco, Cedros Is.), Bolivia (Beni, Chuquisaca, Cochchamba, La Paz, Pando, Santa Cruz, Tarija), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Boquerón, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro) and Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Salta, Santa Fe, Tucumán), NSL–2300 m.

Remarks: Lectotype designation of NHR Lin-69 *fide* Hoge (1964d: 59) invalid. Type locality listed as Amazon Basin *fide* Pérez-Santos (1986: 442) and as Amazon *fide* Chippaux (1987: 62). This taxon is a complex of multiple species *fide* Daza et al. (2009: 663). McCranie (2011a: 325) transferred the Honduran group into *L. rhombifera*.

2. *Leptodeira bakeri* Ruthven, 1936. Occ. Pap. Mus. Zool., Univ. Michigan (330): 1–2.

Type: Holotype, UMMZ 57130, a 591 mm female (H.B. Baker, 6 Aug. 1922).

Type locality: "Bubali, Aruba" [= Bubali, Noord, Aruba, Netherlands Antilles, 12°33'N, 70°03'W, elevation NSL].

Distribution: Netherlands Antilles (Aruba Is.) and N Venezuela (Falcón).

Sources: Brongersma, 1940, 1959, Mijares-Urrutia et al., 1995 and Navarrete et al., 2009.

Remarks: Suriname record doubtful *fide* Duellman (1958a: 114). A subspecies of *L. annulata fide* Brongersma (1940: 128).

3. *Leptodeira frenata* (Cope *in* Ferrari-Pérez, 1886). Proc. U.S. Natl. Mus. 9(11): 184. (*Sibon frenatum*)

Synonyms: *Sibon annulata yucatanensis* Cope, 1887c, *Leptodira dunckeri* F. Werner, 1913, and *Leptodeira yucatanensis malleisi* Dunn & Stuart, 1935.

Type: Holotype, GECM 298, a 305 mm female (F. Ferrari-Pérez, Oct. 1884–Jan. 1885), lost *fide* Duellman (1958a: 61).

Type locality: "Republic of Mexico, State of Vera Cruz, Jalapa" [= Jalapa, Veracruz State, E Mexico, 19°33'N, 96°55'W, elevation 1370 m].

Distribution: Mexico and upper central America. Southeastern Mexico (Campeche, Chiapas, Quintana Roo, Tabasco, Veracruz, Yucatán, Cozumel Is.), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo) and N Guatemala (N Petén), NSL–450 m.

Sources: Duellman & Werler, 1955, R.W. Henderson & Hoevers, 1975, J.C. Lee, 1980, 1996, 2000, J.A.

Campbell, 1998b, Stafford & Meyer, 2000 and Reyes-Velasco & Mulcahy, 2010.

4. *Leptodeira nigrofasciata* A.C.L.G. Günther, 1868. Ann. Mag. Nat. Hist. (4) 1(6): 425. (*Leptodira nigrofasciata*)

Synonym: *Leptodira mystacina* Cope, 1870.

Type: Holotype, BMNH 1946.1.8.37, a 356 mm male (B.C. Seemann, 1866–1867).

Type locality: "Nicaragua."

Distribution: Mexico and upper central America. Southern Mexico (Chiapas, S Guerrero, Oaxaca), E Guatemala (Chiquimula), El Salvador (Cuscatlán, La Libertad, San Salvador), Honduras (Choluteca, Copán, Cortés, El Paraíso, Francisco Morazán, Valle, Yoro), W Nicaragua (Chinandega, Granada, Managua, Matagalpa, Nueva Segovia) and Costa Rica (Alajueta, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), NSL–1300 m.

Sources: E.H. Taylor, 1951, 1954, Hidalgo, 1980a, Alvarez del Toro, 1982, Golder, 1984, L.D. Wilson & Meyer, 1985, Dowling & Jenner, 1987, G. Köhler, 1999b, Savage, 2002, G. Köhler et al., 2006 and McCranie, 2011a.

5. *Leptodeira ornata* (Bocourt, 1884). Bull. Soc. Philom. Paris (1883–1884) (7) 8(3): 141–142. (*Comastes ornatus*)

Synonyms: *Coluber ignobilis* Laurenti, 1768, *Leptodira affinis* A.C.L.G. Günther, 1895 *in* 1885–1902, *Leptodeira albofusca* Boulenger, 1896a *(partim),* ? *Leptodeira dunckeri* Werner, 1913, and *Leptodeira larcorum* K.P. Schmidt & Walker, 1943b.

Types: Syntypes (2), MNHN 6201a–b, longest syntype 347 mm (C. Viguier, Nov. 1876–April 1878).

Type locality: "Isthme de Darien, Amérique inter-tropicale" [= Darién Prov., Panama].

Distribution: Lower Central America and NW South America. Costa Rica (Alajueda, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Bocas del Toro, Canal Zone, Chiriquí, Coclé, Darién, Panamá, San Blas, Barro Colorado Is.), W Colombia (Atlántico, Antioquia, Bolívar, Boyaca, Caldas, Cauca, Chocó, Cordoba, Cundinamarca, La Guajira, Magdalena, Meta, Putumayo, Santander, Norte del Santander, Tolima, Valle), W Venzuela (? Falcón, Zulia), Ecuador (Bolívar, El Oro, Esmeraldas, Guayas, Imbabura, Los Rios, Pichincha) and NW Peru (Cajamarca, La Libertad), NSL–2000 m.

Source: Navarrete et al., 2009.

Remarks: A valid species *fide* Daza et al. (2009: 663) and Daza (2010: 33).

6. *Leptodeira polysticta* A.C.L.G. Günther, 1895 *in* 1885–1902. Biol. Cen.-Amer., Rept. Batr.: 172, pl. 55, fig. a. (*Leptodira polysticta*)

Synonyms: *Leptodeira albofusca* Boulenger, 1896a *(partim),* and *Leptodeira annulata taylori* H.M. Smith, 1941k.

Type: Lectotype, BMNH 1946.1.8.45, a female (F.D. Godman, 1861–1869), designated by H.M. Smith & Taylor (1950a: 316).

Type locality: "Belize, British Honduras" [= Belize city, Belize, 17°30'N, 88°11'W, elevation NSL] via type locality restriction *fide* Smith & Taylor (1950: 316).

Distribution: Mesoamerica. Mexico (Campeche, Chiapas, Colima, Guerrero, Jalisco, México, Michoacán, Nayarit, Oaxaca, Puebla, Quintana Roo, Sinaloa, S Sonora, Tabasco, Veracruz, Yucatán), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo), Guatemala (Alta Verapaz, Chimaltenango, Guatemala, Izabal, Petén, Quezaltenango, Retalhuleu, San Marcos, Santa Rosa, Sololá), El Salvador (Ahuachapán, Chalatenango, La Libertad, Morazán, San Salvador, Santa Ana, San Vicente), N Honduras (Atlántida, Colón, Copán, Cortés, Gracias a Dios, Intabucá, Islas de la Bahía, Lempira, Ocotopeque, Olancho, Santa Bárbara, Yoro, Cayo Cochino Pequeño Is.), E Nicaragua (Atlántico Norte, Chinandega, Chontales, Estelí, Granada, Jinotega, Managua, Matagalpa, Río San Juan, Zelaya) and Costa Rica (Alajueda, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José), 75–2200 m.

Remarks: A valid species *fide* J.A. Campbell, 1982, 1998, Daza et al. (2009: 663) and Daza (2010: 33).

7. *Leptodeira punctata* (W.C.H. Peters, 1866). Mber. Königl. Akad. Wiss. Berlin 1866(2): 93–94. (*Crotaphopeltis punctata*)

Synonym: *Leptodira pacifica* Cope, 1869b.

Type: Holotype, ZMB 5378, a 493 mm male (Mus. Godeffroy).

Type locality: "Südafrica" [= South Africa] (in error). Restricted to Mazatlán, Sinaloa, Mexico *fide* H.M. Smith & Taylor (1950a: 343).

Distribution: Western Mexico (Jalisco, Nayarit, Sinaloa), NSL–1500 m.

Sources: Davis & Dixon, 1957, Shannon & Humphrey, 1964 and Greer, 1965b.

Remarks: Date of publication erroneously cited as 1867 *fide* Duellman (1958a: 94). Type collected in Mexico, transported to South Africa, probably from Mazatlán seaport, where purchased by Mr. Godeffroy *fide* Duellman (1958a: 94).

8. *Leptodeira rubricata* (Cope, 1894a). Proc. Amer. Philos. Soc. (1893) 31: 347. (*Sibon septentrionale rubricatum*)

Type: Holotype, AMNH 17367 (formerly MNCR 346), a 660 mm specimen (G.K. Cherrie, 1894–1897).
Type locality: "Boca Mala, Pacific slope of Costa Rica" [Puntarenas Prov.].
Distribution: Southwestern Costa Rica (Puntarenas) and Panama (USNM 52493), NSL.
Sources: E.H. Taylor, 1951, Savage, 2002 and Solórzano, 2004.

9. *Leptodeira septentrionalis* (Kennicott *in* Baird 1859a). U.S.-Mex. Bound. Surv., Rept. 2(2): 16, pl. 8, fig. 1. (*Dipsas septentrionalis*)

Type: Lectotype, USNM 131739 (formerly SIM 2288), a 607 mm female (S. Van Vliet, 1853–1859), designated by H.M. Smith & Taylor (1950a: 361).
Type locality: "Brownsville, Cameron Co., Texas" [= 25°54'N, 97°30'W, elevation 5 m] via lectotype selection.
Distribution: USA and E Mexico. Extreme S USA (ext. S Texas) and E Mexico (Coahuila, Guanajuato, Hidalgo, Jalisco, México, Nuevo León, Puebla, Querétaro, San Luis Potosí, Tamaulipas, Veracruz), NSL–1990 m.
Sources: R.W. Henderson & Hoevers, 1975, J.C. Lee, 1980, 1996, 2000, N.J. Scott et al., 1983, L.D. Wilson & Meyer, 1985, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988, G. Köhler, 1999b, Mijares-Urrutia & Arends, 2000, Stafford & Meyer, 2000, Werler & Dixon, 2000, J.C. Murphy & Schlager, 2003, Campos-Rodríguez et al., 2004, G. Köhler et al., 2006, McCranie et al., 2005, 2006, McCranie, 2011a and Travers et al., 2011.
Remarks: *Leptodeira polysticta* a valid species *fide* J.A. Campbell (1998b: 221–222), Daza et al. (2009: 680) and Daza (2010: 33).

10. *Leptodeira splendida* A.C.L.G. Günther, 1895 *in* 1885–1902. Biol. Cen.-Amer., Rept. Batr.: 171, pl. 53, fig. b. (*Leptodira splendida*)

Synonyms: *Leptodeira bressoni* E.H. Taylor, 1938, *Leptodeira ephippiata* H.M. Smith & Tanner, 1944, and *Leptodeira duellmani*, J.A. Peters, 1954.
Types: Syntypes (2), BMNH 1946.1.9.94–95, a 660 mm female and juvenile (A. Boucard, 1854–1870).
Type locality: "Mexico, Izucar" [= Izucar de Matamoros, Puebla State, cen. Mexico, 18°36'N, 98°28'W, elevation 1275 m].
Distribution: Western Mexico (ext. SW Chihuahua, Colima, Durango, Guerrero, Jalisco, México, Michoacán, Morelos, SW Puebla, Sinaloa, S Sonora, Zacatecas), 500–1700 m.
Sources: Benitez-Gálvez, 1997, Lemos-Espinal et al., 2004b, Enderson & Bezy, 2007, Ahumada-Carrillo et al., 2011 and Valdez-Lares & Muñiz-Martinez, 2011a.

11. *Leptodeira uribei* (Ramírez-Bautista & Smith, 1992). Bull. Maryland Herp. Soc. 28(3): 83–86, figs. 1–5, 9. (*Pseudoleptodeira uribei*)

Type: Holotype, CNAR 7528 (formerly IBHUNAM), a 481 mm male (A. Rodríguez-Palafox, 27 Nov. 1991).
Type locality: "Estación de Biología 'Chamela' (EBCH, less than 5 km from the Pacific coast, at approximately 19°30'N, 105°03'W, el. 10-584 m), Mexico" [= Jalisco].
Distribution: Western Mexico (Colima, Guerrero, W Jalisco, Michoacán, S Oaxaca), 10–585 m.
Sources: Mijangos et al., 2006, Reyes-Velasco et al., 2009, 2010 and Mertz et al., 2011.

LEPTODRYMUS Amaral, 1927b (Colubridae)

Type species: *Masticophis pulcherrimus* Cope, 1874b.
Distribution: Central America.
Sources: Bogert, 1939a, 1947, E.H. Taylor, 1951, Mertens, 1952c, J.A. Peters & Orejas-Miranda, 1970, L.D. Wilson & Meyer, 1985, Villa et al., 1988, Savage, 2002, Solórzano, 2004 and McCranie, 2011a.

1. *Leptodrymus pulcherrimus* (Cope, 1874b). Proc. Acad. Nat. Sci. Philadelphia 26(1): 65. (*Masticophis pulcherrimus*)

Synonyms: *Zamenis bitaeniatus* Boettger, 1898, and *Leptodrymus clarki* Amaral, 1927b.
Type: Lectotype, ANSP 14688a, an 875 mm specimen (G. Davidson, 1873–1874), designated by Bogert (1939a: 182).
Type locality: "western side of Central America" via lectotype selection.
Distribution: Central America. Southwestern Guatemala (Retalhuleu), SW El Salvador (Sonsonate), Honduras (Atlántida, Choluteca, Cortés, Francisco Morazán, Intibucá, Olancho, Yoro), W Nicaragua (Carazo, Managua, Matagalpa, Rivas: Ometepe Is.) and NW Costa Rica (Guanacaste, San José), NSL–1300 m.
Remarks: ANSP 14688 consists of two syntypes *fide* Malnate (1971: 370).

LEPTOPHIS Bell, 1825 (Colubridae)

Synonyms: *Ahaetulla* Gray, 1825 *(nomen rejiciendum), Ahoetula* Gray, 1831 *(nomen substitutum), Dendrophis* H. Boie *in* Fitzinger, 1826a *(nomen rejiciendum), Dendrophis* H. Boie *in* F. Boie, 1827 *(nomen rejiciendum), Dendrophis* H. Boie *in* Schlegel, 1826a *(nomen rejiciendum), Leptopthis* – Kelaart, 1853 *(nomen incorrectum), Diplotropis* A.C.L.G. Günther, 1872b, *Lepthophis* – García-Cubas, 1893 *(nomen incorrectum), Leptophius* A.L. Herrera, 1899 *(nomen emendatum),*

L

Thalerophis Oliver, 1948 *(nomen substitutum),* and *Talerophis* – Beltrán, 1953 *(nomen incorrectum).*

Type species: *Coluber ahaetulla* Linnaeus, 1758.

Distribution: Latin America.

Sources: Oliver, 1942a, 1948, J.A. Peters & Orejas-Miranda, 1970, Mertens, 1973, Pérez-Santos & Moreno, 1988, 1991 and Villa et al., 1988.

Remarks: Official Generic Name no. 1309 *fide* Opinion 524 (ICZN, 1958a). Original description reprinted in Bell (1826: 104–105 & 1830: 1035–1038).

1. *Leptophis ahaetulla* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 225. (*Coluber ahaetulla*)

Synonyms: *Coluber filiformis* Lacépède, 1789 (*nomen rejiciendum*), *Coluber boiguatrara* Gravenhorst, 1807, *Coluber caninana* Raddi, 1820, *Coluber cepedii* Merrem, 1820, *Coluber viridis* Raddi, 1820, *Coluber richardii* Bory de St. Vincent, 1823 *in* 1822–1831, *Coluber liocercus* Wied-Neuwied, 1824a, *Ahaetula linnei* Gray, 1831, *Ahaetulla occidentalis* A.C.L.G. Günther, 1859c, *Thrasops marginatus* Cope, 1862d, *Ahaetulla nigromarginata* A.C.L.G. Günther, 1866, *Thrasops praestans* Cope, 1869b, *Herpetodryas affinis* Steindachner, 1870b, *Ahaetulla urosticta* W.C.H. Peters, 1873c, *Leptophis ortonii* Cope, 1875b, *Thrasops sargii* J.G. Fischer, 1881, *Leptophis ultramarinus* Cope, 1894d, *Leptophis bocourti* Boulenger, 1898h, *Leptophis flagellum* Andersson, 1901, *Leptophis rostralis* Lönnberg, 1902, *Leptophis argentinus* F. Werner, 1903a, *Leptophis occidentalis insularis* T. Barbour, 1905, *Leptophis vertebralis* F. Werner, 1909b, *Leptophis maximus* Weller, 1930, and *Leptophis ahuetulla* – Briceño-Rossi, 1934 *(nomen incorrectum). Leptophis ahaetulla bolivianus* Oliver, 1942a, *Leptophis coeruleodorsus* Oliver, 1942a, *Leptophis copei* Oliver, 1942a, *Leptophis occidentalis chocoensis* Oliver, 1942a, and *Leptophis santamartensis* Bernal-Carlo & Roze, 1994.

Type: Lectotype, ZMUU 2 (C. Gyllenborg, 1744), designated by Savage & Oliver (1956: 149).

Type locality: "America" via first revisor selection of Andersson (1899: 22). Restricted to South America *fide* Savage & Oliver (1956: 148) and to Suriname *fide* Hoge (1964d: 60).

Distribution: Latin America. Southeastern Mexico (Campeche, Chiapas, Oaxaca, Puebla, Quintana Roo, Tabasco, Veracruz, Yucatán), Belize (Belize, Cayo, Orange Walk, Stann Creek, Toledo), N Guatemala (Alta Verapaz, Petén), Honduras (Atlántida, Colón, Cortés, El Paraíso, Francisco Morazán, Gracias a Dios, Olancho, Yoro), Nicaragua (Chontales, Matagalpa, Río San Juan, Zelaya), Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, San José, Puntarenas), Panama (Bocas del Toro, Canal Zone: Barro Colorado Is.; Chiriquí, Darién, San Miguel Is.; Los Santos), Colombia (Amazonas, Antioquia, Arauca, Atlántico, Bolívar, Boyacá, Caquetá, Cauca, Chocó, Córdoba, Cundinamarca, Magdalena, Meta, Nariño, Norte de Santander, Putumayo, Risaralda, Sucre, Tolima, Vaupés, Valle, Gorgona Is.), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Miranda, Monagas, Nueva Esparta, Portuguesa, Táchira, Trujillo, Yaracuy, Zulia, Margarita Is.), Trinidad and Tobago (Tobago, Trinidad), Guyana (Baramita-Waini, Essequibo Islands-West Demerara, Mahaica-Berbice, Pomeroon-Supenaam, Potaro-Siparuni, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo), Suriname (N Nickerie, Marowijne, Para, Suriname), French Guinea (Cayenne), Brazil (Amapá, Amazonas, Bahia, Distrito Federal, Espírito Santo, Goías, Maranhão, Mato Grosso, Minas Gerais, Pará, Pernambuco, Rio de Janeiro, Rio Grande do Norte, São Paulo, Baraja and Marajo Is.), W Ecuador (Esmeraldas, Guayas, Imbabura, Napo), E Peru (Amazonas, Junín, Loreto, Madre de Dios, San Martín), E Bolivia (Beni, Santa Cruz, Tarija), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Boquerón, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro), Uruguay (Artigas) and NE Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Misiones), NSL–2750 m.

Sources: Beebe, 1946, E.H. Taylor, 1951, 1954, Roze, 1966a, N.J. Scott, 1969, R.W. Henderson & Hoevers, 1975, Emsley, 1977, Medem, 1979, J.C. Lee, 1980, 1996, 2000, Abuys, 1983a, L.D. Wilson & Meyer, 1985, Lancini, 1986, Fugler & Riva, 1990, J.D. Williams & Francini, 1991, Cei, 1994, D.R. Norman, 1994, Yanosky et al., 1996, Meneghel & Achaval, 1997, J.A. Campbell, 1998b, Starace, 1998, Freitas, 1999, Leynaud & Bucher, 1999, Canseco-Marquez et al., 2000, Stafford & Meyer, 2000, Savage, 2002, Souza & Silva, 2002a., Duellman, 2005, Rivas-Fuenemayer & Barrio-Amorgós, 2005, McCranie et al., 2006, Cacciali, 2008, Albuquerque, 2009, Navarrete et al., 2009, Ugueto & Rivas, 2010, McCranie, 2011a, Albuquerque et al., 2012 and C.J. Cole et al., 2013.

Remarks: Official Specific Name no. 1571 *fide* Opinion 524 (ICZN, 1958a). Paralectotypes include NHR Lin-37, NHR Lin-40–41, and ZMUU 90. Lectotype designation of NHR Lin-40 *fide* Hoge (1964d: 60) invalid (antedated by Savage & Oliver, 1956). L.D. Wilson & Meyer (1985: 65) inadvertently listed Chile as part of Distribution. *Leptophis coeruleodorsus* and *L. occidentalis* valid species *fide* Navarrete et al. (2009: 61).

2. *Leptophis cupreus* (Cope, 1868b). Proc. Acad. Nat. Sci. Philadelphia 20(2): 106. (*Thrasops cupreus*)

Type: Holotype, ANSP 5202 (formerly USNM 6666), a 521 mm female (J. Orton, fall 1867–winter 1868).

Type locality: "River Napo and Maranon, Ecuador" [= Napo/Orellana Prov., NE Ecuador, or Loreto Dept., NE Peru].

Distribution: Southeastern Colombia (Cauca, Guaviare, Meta, Gorgona Is.), Venezuela (Bolívar), E Ecuador (Napo, Orellana, Pastaza) and NE Peru (Loreto), 250–1880 m.

Sources: J.A. Peters & Orcés-V., 1960, Dixon & Soini, 1986, Pérez-Santos, 1986 and Albuquerque & McDiarmid, 2010.

Remarks: A valid species *fide* J.A. Peters & Orcés V. (1960: 139), who erroneously reported the type lost. Photographs of the holotype in Albuquerque & McDiarmid (2010: 326–327, figs. 1–2).

3. *Leptophis depressirostris* (Cope, 1861c). Proc. Acad. Nat. Sci. Philadelphia (1860) 12(12): 557. (*Philothamnus depressirostris*)

Synonyms: *Diplotropis bilineata* A.C.L.G. Günther, 1872, *Leptophis aeruginosus* Cope, 1875a, *Leptophis saturatus* Cope, 1875a, *Leptophis bileneatus* – Briceño-Rossi, 1934 *(nomen incorrectum)*. and *Leptophis saturus* – Briceño-Rossi, 1934 *(nomen incorrectum)*.

Type: Holotype, ANSP 5207, an 1155 mm female (R.W. Mitchell, 1857–1860).

Type locality: “Cocuyas de Veraguas, New Granada” [= Cocuyas de Veraguas, a gold mine near the Río Concepción, N Veraguas Prov., cen. Panama, ca. 8°45’N, 81°00’W, elevation 100 m]

Distribution: Central America and NW South America. Western Honduras (Gracias a Dios), E Nicaragua (Chontales, Jinotega, Matagalpa, Río San Juan, Zelaya), Costa Rica (Alajuela, Cartago, SE Guanacaste, Heredia, Limón, Puntarenas, San José), Panama (Colón, Veraguas), W Colombia (Cauca, Chocó, Nariño, Valle, Gorgona Is.), NW Ecuador (Carachi, Esmeraldas) and Peru (Lambayeque, Loreto), NSL–1300 m.

Sources: E.H. Taylor, 1951, Pérez-Santos, 1986, G. Köhler, 1999b, Savage, 2002, Venegas, 2005, G. Köhler & Ferrari, 2009 and McCranie, 2011a.

Remarks: Type locality listed as Colombia *fide* E.H. Taylor (1951: 85). Record from Junín, Peru doubtful *fide* Oliver (1948: 207).

4. *Leptophis diplotropis* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 25–26, pl. 6, fig. a. (*Ahaetulla diplotropis*)

Synonyms: *Leptophis diplotropis aeneus* Bocourt, 1897 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, and *Leptophis diplotropis forreri* H.M. Smith, 1943a.

Types: Syntypes (3), BMNH 1946.1.4.1–3, one male and two females, longest syntype 838 mm (A.-L.-J.-F. Sumichrast, 1855–1869).

Type locality: “Tehuantepec” [= vicinity of Tehuantepec (16°19’N, 95°14’W, 40 m), S Oaxaca State, S Mexico].

Distribution: Western Mexico (Chiapas, ext. SW Chihuahua, Colima, Durango, Guanajuato, Guerrero, Jalisco, México, Michoacán, Morelos, Nayarit, Oaxaca, Puebla, Sinaloa, ext. S Sonora, María Magdalena and María Madre Is.), NSL–2575 m.

Sources: H.M. Smith, 1943a, W.B. Davis & Smith, 1953, Alvarez del Toro & Smith, 1956, H.M. Smith & Grant, 1958a, Zweifel, 1960, Telford, 1964, McDiarmid et al., 1976, Pérez-Higareda & Smith, 1989, Benitez-Gálvez, 1997, Auth et al., 2000b, Sánchez-Luna et al., 2009, Canseco-Máquez & Guitiérrez-Mayén, 2010 and Valdez-Lares & Muñiz-Martinez, 2011b.

Remarks: Collector listed as Boucard *fide* A.C.L.G. Günther (1872b: 14) but F. Sumichrast *fide* BMNH catalogue. If the latter, then the type locality is the western side of the Isthmus of Tehuantepec *fide* Sumichrast (1873: 246 & 1880: 183). Boulenger (1894a: 110) listed all types as female; at least one male is present *fide* M. Lang (*in litt*.).

5. *Leptophis mexicanus* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 536–537.

Synonyms: *Leptophis mexicanus yucatanensis* Oliver, 1942a, *Leptophis mexicanus septentrionalis* Mertens, 1972a, and *Leptophis mexicanus hoeversi* R.W. Henderson, 1976.

Type: Lectotype, MNHN 3455, a 965 mm specimen, designated by Mertens (1973: 146).

Type locality: “Mexique” [= Mexico] via lectotype selection. Restricted to Potrero Viejo, Veracruz, Mexico *fide* H.M. Smith & Taylor (1950a: 350).

Distribution: Mesoamerica. Eastern Mexico (Campeche, Chiapas, Hidalgo, Michoacán, Nuevo León, Querétaro, Quintana Roo, E Oaxaca, Puebla, San Luis Potosí, Tabasco, S Tamaulipas, Veracruz, Yucatán), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo), N Guatemala (Alta Verapaz, Baja Verapaz, Izabal, Péten), El Salvador (Cabañas, Chalatenango, Cuscatlán, La Libertad, La Paz, San Salvador), Honduras (Atlántida, Colón, Comayagua, Copán, Cortés, Francisco Morazán, Gracias a Dios, Islas de la Bahía, Lempira, Olancho, Yoro, Cayos Cochino and Utila Is.), Nicaragua (Atlanta Sur, Granada, Managua, Matagalpa, Río San Juan, Zelaya, Great Corn and Ometepe Is.) and Costa Rica (Alajueta, Guanacaste, Heredia, Limón, Puntarenas, San José), NSL–1600 m.

Sources: E.H. Taylor, 1951, 1954, Mertens, 1972a, Villa, 1972, L.D. Wilson & Hahn, 1973, R.W. Henderson & Hoevers, 1975, R.W. Henderson, 1976, J.C. Lee, 1980, 1996, 2000, L.D. Wilson & Meyer, 1985, Carmarillo-R., 1995, Mancilla-Moreno & Ballardo, 1995, J.A. Campbell, 1998b, G. Köhler, 1999b, Auth et al., 2000b, Stafford & Meyer, 2000, Savage, 2002, Solórzano, 2004, G. Köhler et al., 2006, Frazier et al., 2007, N. Herrera et al., 2007, García-Vázquez et al., 2009 and McCranie, 2011a.

6. *Leptophis modestus* (A.C.L.G. Günther, 1872b). Ann. Mag. Nat. Hist. (4) 9(49): 26, pl. 6, fig. c. (*Ahaetulla modesta*)

Type: Holotype, BMNH 1946.1.21.50, a 1300–1321 mm male (O. Salvin, 1857–1875).
Type locality: "banks of the Rio Chisoy, below the town of Cubulco" [= Río Chixoy or Negro, Baja Verapaz Dept., Guatemala].
Distribution: Southern Mexico and upper Central America. Extreme SE Mexico (NE Chiapas), cen. Guatemala (Baja Verapaz), NW El Salvador (Santa Ana) and SW Honduras (Comayagua, Cortés, Intibucá, Lempira, Ocotepeque), 1335–2590 m.
Sources: A.C.L.G. Günther, 1895 *in* 1885–1902, Hoyt, 1964, K.L. Williams & Smith, 1966, L.D. Wilson et al., 1978, 1986, L.D.Wilson & Meyer, 1985, 1986, McCranie & Wilson, 1993, P. Holm, 1995 and McCranie, 2011a.

7. *Leptophis nebulosus* Oliver, 1942a. Occ. Pap. Mus. Zool., Univ. Michigan (462): 12–14.

Type: Holotype, MCZ 15287 (formerly MNCR), a 798 mm male.
Type locality: "Cariblanca, Costa Rica" [= Cariblanco, Heredia Prov., Costa Rica, 10°16'N, 84°11'W, elevation 880 m].
Distribution: Central America. Northeastern Honduras (Colón, Gracias a Dios), E Nicaragua (Matagalpa, Río San Juan) and Costa Rica (Cartago [UMMZ 117655], Guanacaste, Heredia, Limón, Puntarenas) and Panama (Coclé, Panamá), NSL–1600 m.
Sources: E.H. Taylor, 1951, 1954, L.D. Wilson & Meyer, 1985, Savage, 2002, Jaramillo & Ibáñez, 2003, McCranie, 2011a and Ray, 2011.

8. *Leptophis riveti* Despax, 1910. Bull. Mus. Hist. Nat., Paris 16(7): 368–369.

Synonym: *Leptophis brevior* Boulenger, 1914b.
Type: Holotype, MNHN 1906.259, a 576 mm specimen (P. Rivet, 1901–1906).
Type locality: "Gualaquiza, Équateur" [= Gualaquiza, S Morona-Santiago Prov., E Ecuador, 3°24'S, 78°34'W, elevation 730 m].
Distribution: Southwestern Costa Rica (S Puntarenas), Panama (Canal Zone), NW Colombia (Antioquia, Chocó), Ecuador (Cañar, Esmeraldas, Guayas, Loja, Los Ríos, Pichincha [MCZ 154613]) and E Peru (Amazonas), NSL–1525 m.
Sources: Hardy, 1995 and Savage, 2002.
Remarks: Original description reprinted in Despax (1911: 26–28, pl. 1, figs. 1, 1a–1b).

9. *Leptophis stimsoni* K. Harding, 1995. Trop. Zool. 8(2): 222–223, figs. 1–2.

Type: Holotype, BMNH 1940.3.11.84, a 593 mm male (I.T. Sanderson, 1937).
Type locality: "Mount Aripo, Northern Distribution, Trinidad, altitude about 914 m."
Distribution: Trinidad and Tobago (Trinidad), 135–915 m
Sources: J.C. Murphy, 1997 and Boos, 2001.

LEPTOTYPHLOPS Fitzinger, 1843 (Leptotyphlopidae)

Synonyms: *Stenostoma* A.-M.-C. Duméril & Bibron, 1844, *Glauconia* Gray, 1845, *Stenostomophis* Rochebrune, 1885, *Rhamphostoma* Boulenger, 1893a *(nomen emendatum), Leptotyphlus* – Devincenzi, 1925 *(nomen incorrectum), Leptatyphlops* – Brongersma, 1933 *(nomen incorrectum), Leptotyphlos* – Briceño-Rossi, 1934 *(nomen incorrectum), Leptotypheops* – Sundersingh, 1960 *(nomen incorrectum), Leptophlops* – Cunha & Nascimento, 1978 *(nomen incorrectum), Glaukonia* – Tiedemann & Häupl, 1980 *(nomen incorrectum), Leptothyphlops* – Pérez-Santos, 1986 *(nomen incorrectum), Karimdaouesus* Hoser, 2012am *(nomen illegitimum), Ottobreus* Hoser, 2012am *(nomen illegitimum),* and *Teesleptotyphlops* Hoser, 2012am *(nomen illegitimum).*
Type species: *Typhlops nigricans* Schlegel, 1839 *in* 1837–1844.
Distribution: Africa.
Sources: Hahn, 1980a, Wallach, 1998b, Broadley & Broadley, 1999, McDiarmid et al., 1999 and Broadley & Wallach, 2007a.
Remarks: Official Generic Name no. 2155 *fide* Opinion 1207 (ICZN, 1982b). The following genera and species have been separated from *Leptotyphlops: Epacrophis (boulengeri, drewesi, reticulatus), Epictia (albifrons, albipunctata, alfredschmidi, ater, australis, borapeliotes, collaris, columbi, diaplocia, goudotii, magnamaculata, melanurus, munoai, nasalis, peruviana, rubrolineata, rufidorsa, signata, striatula, subcrotilla, teaguei, tenella, tesselata, tricolor, undecimstriata, vellardi), Leptotyphlops (aethiopicus, conjunctus, distanti, emini, howelli, incognitus, jacobseni, kafubi, keniensis, latirostris, macrops, mbanjensis, merkeri, monticolus, nigricans, nigroterminus, pembae, pitmani, pungwensis, scutifrons, sylvicolus, telloi), Mitophis (asbolepis, calypso, leptepileptus, pyrites), Myriopholis (adleri, albiventer, algeriensis, blanfordi, boueti, braccianii, burii, cairi, erythraeus, filiformis, ionidesi, longicauda, macrorhyncha, macrura, nasirostris, natatrix, nursii, perreti, phillipsi, rouxestevae, tanae, wilsoni, yemenica), Namibiana (labialis, latifrons, occidentalis, rostrata, Rena (affinis, boettgeri, bressoni, dissecta, dulcis, humilis, maxima, myopica, unguirostris), Rhinoleptus (koniagui, parkeri), Siagonodon (acutirostris, borrichianus, cupinensis, septemstriatus), Tetracheilostoma (bilineatum, breuili, carlae), Tricheilostoma (bicolor, broadleyi, dissimilis, greenwelli, sundewalli),* and *Trilepida (anthracina, brasiliensis, brevissima, dimidiata, dugandi, fulfinosa,*

guayaquilensis, jani, joshuai, koppesi, macrolepis, nicefori, salgueiroi).

1. *Leptotyphlops aethiopicus* Broadley & Wallach, 2007a. Zootaxa (1408): 38–40, pl. 10, fig. 4.

Type: Holotype, BMNH 1911.12.13.17, a 145 mm specimen (G. Kristensen, 1910–1911).

Type locality: "near Harrar [=Harar], Hararge Region, Ethiopia (09°18'N, 42°08'E, elevation ca. 2000 m)."

Distribution: Northeastern Africa. Southern Ethiopia (Hararge, Sidamo), S Somalia (Gedo) and N Kenya (N Eastern), 1365–2100 m.

Sources: Lanza, 1983a, 1990b and Largen & Spawls, 2010.

2. *Leptotyphlops conjunctus* (Jan, 1861b). Arch. Zool. Anat. Fis. 1(2): 189–190. (*Stenostoma conjunctum*)

Synonym: *Glauconia conjuncta* Boulenger, 1890d, and *Stenostoma groutii* Cope, 1875a.

Type: Holotype, SMNS 2519 A, a 111 mm specimen (C.F.F. Krauss, 1860).

Type locality: Unknown. Designated as Cap de Bonne Espérance [= Cape of Good Hope, South Africa] *fide* Jan & Sordelli (1861 *in* 1860–1866: 2). Restricted to Eastern Cape Province, South Africa *fide* Broadley & Watson (1976: 483 & 493).

Distribution: Southeastern Africa. Lesotho, W Swaziland and E South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Mpumalanga, S Transvaal), 100–1720 m.

Sources: Jan & Sordelli, 1861 *in* 1860–1866, Boulenger, 1893a, 1915c, FitzSimons, 1956, 1962a, Broadley & Watson, 1976, Broadley, 1983, Bates, 1996, Branch, 1998, Broadley & Broadley, 1999 and Marais, 2004.

Remarks: Krauss collected in South Africa from May 1838–April 1840.

3. *Leptotyphlops distanti* (Boulenger, 1892c). Naturalist Transvaal: 175–176, 3 figs. (*Glauconia distanti*)

Type: Holotype, BMNH 1946.1.10.82 (formerly BMNH 1890.12.16.10), a 130 mm specimen.

Type locality: "Pretoria, Transvaal" [= Pretoria, Gauteng Prov., NE South Africa, 25°44'S, 28°13'E, elevation 1300 m].

Distribution: Southern Mozambique (Gaza, Maputo) and NE South Africa (Eastern Cape, Free State, Gauteng, Kwazulu-Natal, Limpopo, Mpumalanga, North West), NSL–1500 m.

Sources: Boulenger, 1893a, 1915c, Mertens, 1955, V.F.M. FitzSimons, 1962a, 1974, Broadley, 1983, Pienaar et al., 1983, Branch, 1988, 1998, 2001 and Broadley & Wallach, 1997a–b and Marais, 2004.

4. *Leptotyphlops emini* (Boulenger, 1890d). Ann. Mag. Nat. Hist. (6) 6(31): 91. (*Glauconia emini*)

Type: Lectotype, BMNH 1946.1.10.87 (formerly BMNH 1890.5.14.1) (E. Pasha, 1890), designated by Broadley & Wallach (2007a: 34–35).

Type locality: "Karagwe, Victoria Nyanza, Tanzania (ca. 01°S, 31°E, elevation above 1200 m" via lectotype selection [= Karagwe, Karagwe District, Kiwa Magharibi Region, ext. NW Tanzania, 1°30'S, 30°59'E, elevation 1400 m].

Distribution: East Africa. Eastern Democratic Republic of the Congo (Kivu), SE South Sudan (Eastern Equatoria), Uganda (S Central, Western), Kenya (Central, Coast, Eastern, Rift Valley), Rwanda (Gisenyi), Burundi, Tanzania (Lindi, Morogoro, Mtwara, Mwanza, Rukwa, Kagera) and NE Zambia (N Northern), 650–1490 m.

Sources: Boulenger, 1893a, 1915c–d, Witte, 1941, Loveridge, 1942, 1957a, Laurent, 1956, Pitman, 1974, Broadley & Wallach, 1996, 2007a, Wallach, 1996c and Spawls et al., 2002.

Remarks: Type locality listed as Bukoba, Karagwe district, Tanganyika Territory *fide* Loveridge (1957a: 247).

L

5. *Leptotyphlops howelli* Broadley & Wallach, 2007a. Zootaxa (1408): 30–32.

Type: Holotype, NMZB 10455 (formerly KMH 7041), a 158 mm male (K.M. Howell, 5 Sept. 1990).

Type locality: "Mchungu Forest Reserve, Rufiji District, Piwani Region, Tanzania (07°44'S, 39°17'E, elevation 15 m)."

Distribution: Eastern Tanzania (SE Piwani) and SW Kenya (N Nyanza), 15–1180 m.

6. *Leptotyphlops incognitus* Broadley & Watson, 1976. Occ. Pap. Natl. Mus. Rhodesia 5B(8): 494–496, fig. 14. (*Leptotyphlops conjunctus incognitus*)

Type: Holotype, NMZB-UM 6121, a 166 mm specimen (R.A. Barton, Nov. 1963).

Type locality: "Umtali, Rhodesia" [= Mutare, Manicaland, E Zimbabwe, 18°58'S, 32°39'E, elevation 1100 m].

Distribution: Southeastern Africa. Southern Zambia (Central, Eastern, Southern), S Malawi (Southern), Zimbabwe (Manicaland, Mashonaland Central, Mashonaland East, Matebeleland North, Matabeleland South), S Mozambique (Inhambane, Manica, Maputo, Sofala, Bazaruto, Benguerra and Santa Carolina Is.), E Swaziland, Lesotho and NE South Africa (Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga), 45–1550 m.

Sources: De Waal, 1978, Broadley, 1988, 1992a, Broadley & Wallach, 1997b, Branch, 1998, Broadley & Broadley, 1999, Broadley et al. 2003, M. Griffin, 2003, Marais, 2004 and Broadley & Blaylock, 2013.

7. *Leptotyphlops jacobseni* Broadley & Broadley, 1999. Syntarsus (5): 19–20.

Type: Holotype, TM 57919, a 151 mm male (C.R. Owen, 5 Aug. 1984).
Type locality: "Buffelsvley, 388KT Lydenburg District, Mpumalanga Province, South Africa (24°52'S: 30°19'E)" [= elevation ca. 1000 m].
Distribution: Eastern South Africa (NE Eastern Cape, Limpopo, N Mpumalanga), 750–1700 m.
Source: Marais, 2004.

8. *Leptotyphlops kafubi* (Boulenger, 1919b). Rev. Zool. Afr. (1919–1920) 7(2): 186–187. (*Glauconia kafubi*)

Types: Syntypes (3), BMNH 1946.1.11.7–8 (formerly BMNH 1919.8.26.13–14) and MRAC 2085, longest syntype 105 mm (L. Stappers, 1911–1919).
Type locality: "la rivière Kafubo, à Élisabethville" [= Kafubu River, Lubumbashi, SE Katanga Prov., SE Democratic Republic of the Congo, 11°40'S, 27°29'E, elevation 1250 m].
Distribution: Southeastern Africa. Eastern Angola, SE Democratic Republic of the Congo (Katanga), Zambia (Central, Copperbelt, Northern, North-Western), Malawi (Central) and N Zimbabwe (Mashonaland West), 585–1500 m.
Sources: Witte, 1953, Broadley, 1971, Broadley & Watson, 1976, Broadley, 1991, Broadley & Broadley, 1999 and Broadley et al., 2003.

L

9. *Leptotyphlops keniensis* Broadley & Wallach, 2007a. Zootaxa (1408): 38, pl. 10, fig. 3.

Type: Holotype, NMK/O 2903, a 189 mm female (F.J. McCartney, 24 Feb. 1983).
Type locality: "Nyeri, Central Province, Kenya (00°25' S, 36°56' E, just below 2000 m)"
Distribution: Southern Kenya (Central, Eastern) and NE Tanzania (Kilimanjaro), 1250–2000 m.

10. *Leptotyphlops latirostris* (Sternfeld, 1913a). Wiss. Deutsch. Zentr.-Afrika Exp. (1912) 4(2): 264.

Type: Holotype, ZMB 22376, a 155 mm specimen (R. Grauer, 1907–1908).
Type locality: "Nordwestufer des Tanganyika" [= NW shore of Lake Tanganyika, elevation above 775 m, E Kivu Region, Democratic Republic of the Congo].
Distribution: Eastern Democratic Republic of the Congo (Sud-Kivu) and SW Burundi (Bujumbura, Bururi), 700–1565 m.
Sources: Witte, 1933, 1962, Laurent, 1956 and Broadley & Wallach, 2007a.

11. *Leptotyphlops macrops* Broadley & Wallach, 1996. Copeia 1996(1): 162–165, figs. 1a–c.

Type: Holotype, NMZB 11352, a 198 mm male (A. Cockle, 10 Sept. 1991).
Type locality: "Mkwaja forest, Pangani District, Tanga Region, Tanzania (5°52'S, 38°47'E), altitude below 100 m."
Distribution: Southeastern Kenya (S Coast) and NE Tanzania (Piwani, Tanga), NSL–100 m.
Sources: Wallach, 1996c, Spawls et al., 2002 and Broadley & Wallach, 2007a.
Remarks: Problematic records from W Kenya (Central, Western) at 1600–2285 m *fide* Spawls et al. (2002: 303).

12. *Leptotyphlops mbanjensis* Broadley & Wallach, 2007a. Zootaxa (1408): 37, pl. 10, fig. 2.

Type: Holotype, MCZ 48040, a 132–135 mm female (A. Loveridge, 26 April 1939)
Type locality: "Mbanja, ca. 6 km N Lindi, Lindi District, Lindi Region, Southern Province, Tanzania (09°24'S, 39°45'E, 130 m)."
Distribution: Southeastern Tanzania (Lindi), 90–130 m.
Remarks: Holotype erroneously listed as MCZ 45040 *fide* Broadley & Wallach (2007a: 37).

13. *Leptotyphlops monticolus* (Chabanaud, 1917a). Bull. Mus. Hist. Nat., Paris (1916) 22(7): 366–367, figs. 7–9. (*Glauconia monticola*)

Type: Holotype, MNHN 1916.213, a 138 mm specimen (E. Gromier & P. Le Petit, 1911).
Type locality: "Congo belge: volcans de Kivori (altitude 1,500 mètres)" [= volcanoes of the Virunga Mountains, E. Kivu Region, Democratic Republic of the Congo, elevation 1500 m].
Distribution: Eastern Democratic Republic of the Congo (Nord-Kivu, Sud-Kivu) and W Rwanda (Western), 900–1965 m.
Sources: Witte, 1941, Laurent, 1956, and Broadley & Wallach, 2007a.
Remarks: Possibly occurs in W Burundi *fide* Broadley & Wallach (2007a: fig. 5).

14. *Leptotyphlops nigricans* (Schlegel, 1839 *in* 1837–1844). Abbild. Amph.: 38, pl. 32, figs. 21–24. (*Typhlops nigricans*)

Types: Syntypes (3), MNHN 3232, a 125 mm specimen, RMNH 3705, and ZMB 5244, one of latter syntypes 105 mm (P.A. Delalande, 1818–1820).
Type locality: "auf dem Vorgebirge der guten Hoffnung" [= Cape of Good Hope, Western Cape Prov., SW South Africa, 34°21'S, 18°28'E, elevation 20 m].
Distribution: Southern South Africa (Eastern Cape, Western Cape), NSL–1450 m.
Sources: V.F.M. FitzSimons, 1956, 1962a, 1974, Guibé & Roux-Estève, 1972, Broadley & Watson, 1976,

Broadley, 1983, Branch, 1988, 1998, Marais, 1992, 2004, Broadley & Wallach, 1996, Broadley & Broadley, 1999, Bauer et al., 2002 and Marais, 2004.

Remarks: Official Specific Name no. 2797 *fide* Opinion 1207 (ICZN, 1982b).

15. *Leptotyphlops nigroterminus* Broadley & Wallach, 2007a. Zootaxa (1408): 40–42, pl. 12, fig. 1.

Type: Holotype, MCZ 54813, a 159 mm male (C.J.P. Ionides, 7 July 1956).

Type locality: "Karema, eastern shore of Lake Tanganyika, Mpanda District, Rukwa Region, Tanzania (06°50'S, 30°50'E, elevation 950 m)."

Distribution: Southwestern Kenya (S Rift Valley) and W Tanzania (Rukwa, Singida, Tabora), 775–1585 m.

16. *Leptotyphlops nursii* (J. Anderson *in* Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 591. (*Glauconia nursii*)

Type: Lectotype, BMNH, 1946.1.16.91 (formerly BMNH 1895.11.27.1), a 242 mm specimen (C.G. Nurse, ca. 1890), designated by Hahn (1978: 487).

Type locality: "Aden" [= Yemen, 12°46'N, 45°01'E, elevation NSL] via lectotype selection.

Distribution: Northeastern Africa and SW Arabia. Southeastern Egypt (S El-Bahr El-Ahmar), N Sudan (Ash Shamaliyah), E Ethiopia (NE Hararge), NW Somalia (Woqooyi Galbeed), SW Saudi Arabia (Makkah, Najran, Riyadh,) and Yemen (Al Bayda, Al Hudaydah, Hadhramaut, Ibb, Lahij, Sadah, Ta'izz), NSL–1825 m.

Sources: Hahn, 1978, Gasperetti, 1988, Schätti & Gasperetti, 1994, Baha El Din, 2006, Broadley & Wallach, 2007a and Largen & Spawls, 2010.

17. *Leptotyphlops pembae* Loveridge, 1941. Proc. Biol. Soc. Washington 54: 177–178. (*Leptotyphlops emini pembae*)

Type: Holotype, MCZ 46116, a 201 mm female (R.H.W. Pakenham, 4 Oct. 1940).

Type locality: "Wingwi Pwana, Pemba Island, East Africa" [= Wingwi Pwana, NE Pemba Island, Tanzania Territory, NE Tanzania, 05°01' S, 39°50' E, elevation NSL].

Distribution: Northeastern Tanzania (Mafia and Pemba Is.), NSL–50 m.

Sources: Loveridge, 1957a, Pakenham, 1983, Broadley & Howell, 1991, Spawls et al., 2002 and Broadley & Wallach, 2007a.

18. *Leptotyphlops pungwensis* Broadley & Wallach, 1997b. Arnoldia, Zimbabwe 10(11): 116–117, fig. 1.

Type: Holotype, NMZB-UM 7251 (formerly UM 7251), a 90 mm female (D.G. Broadley, 8 Nov. 1963).

Type locality: "between Muda and Lamego railroad sidings, Pungwe Flats, Mozambique (19°22'S: 34°22'E), altitude ca. 50 metres" [= Sofala Prov., cen. Mozambique, elevation 25 m].

Distribution: Central Mozambique (Manica, Sofala), 25–50 m.

Sources: Broadley & Watson, 1976, Branch, 1998, Broadley & Broadley, 1999 and Marais, 2004.

19. *Leptotyphlops scutifrons* (W.C.H. Peters, 1854). Verh. Preuss. Akad. Wiss. Berlin 1854(11): 621. (*Stenostoma scutifrons*)

Synonyms: *Glauconia merkeri* F. Werner, 1909d, *Glauconia okahandjana* Ahl, 1924b, and *Leptotyphlops scutifrons pitmani* Broadley & Wallach, 2007a.

Type: Holotype, ZMB 4826, an 83 mm specimen (W.C.H. Peters, 21 Dec. 1845).

Type locality: "Sena" [= Vila da Sena, Zambezi River, Sofala Prov., cen. Mozambique, 17°27'S, 35°02'E, elevation 65 m]. Emended to "dem Zambeze bei Sena" *fide* Peters (1882d: 104).

Distribution: Southern Africa. Angola (Benguela, Bié, Cuanza Norte, Cuanza Sul, Huambo, Huíla, Malanje, Namibe), E Zambia (Eastern), S Malawi (Southern), SE Tanzania (Lindi, Mtwara), Mozambique (Inhambane, Manica, Sofala, Tete, Zambézia), Namibia (Caprivi, Hardap, Khomas, Okavango, Omaheke, Oshikoto, Otjozondjupa), Botswana (Central, Ghanzi, Kgalagadi, Kweneng, North East, North West, South East), Zimbabwe (Eastern, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Swaziland and E South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, North West, Northern Cape), 10–2025 m.

Sources: W.C.H. Peters, 1882d, Boulenger, 1893a, 1915c, Sternfeld, 1908f, V.F.M. FitzSimons, 1935b, 1956, 1962a, 1974, Loveridge, 1936c, 1942, 1957a, Monard, 1937, Mertens, 1955, 1971, Broadley, 1959, 1983, Broadley & Watson, 1976, De Waal, 1978, Pienaar et al., 1983, Auerbach, 1987, Patterson, 1987, Branch, 1988, 1998, Bates, 1996, Wallach, 1996c, Broadley & Wallach, 1997a–b, 2007a, Branch, 1998, 2001, 2005, Broadley & Broadley, 1999, Bauer et al., 2002, Razzetti & Msuya, 2002, Spawls et al., 2002, Broadley et al., 2003, M. Griffin, 2003, J.C. Murphy & Schlager, 2003, Marais, 2004 and Broadley & Blaylock, 2013.

Remarks: Original description reprinted in W.C.H. Peters (1855: 51).

20. *Leptotyphlops sylvicolus* Broadley & Wallach, 1997a. Durban Mus. Novit. (22): 37–40, fig. 1.

Type: Holotype, NMZB-UM 11903 (formerly UM 11903), a 90 mm male (E. Moll, Sept. 1966).

Type locality: "Hlogwene Forest, Kwazulu-Natal, South Africa" [= ca. 29°15'S, 31°27'E, elevation 25–100 m].
Distribution: Southeastern South Africa (Eastern Cape, N KwaZulu-Natal), 20–960 m.
Sources: Branch, 1998, Hahn & Wallach, 1998, Broadley & Broadley, 1999 and Marais, 2004.

21. *Leptotyphlops tanae* Broadley & Wallach, 2007a. Zootaxa (1408): 28–29, pl. 8, fig. 4.

Type: Holotype, MCZ 40099, a 99 mm male (A. Loveridge, 14–21 June 1934).
Type locality: "old village of Ngatana, ca. one mile northwest from new village of Wema, in the lower Tana River, Coast Region, Kenya (02°30'S, 40°15'E, elevation 50 m)."
Distribution: Northeastern Africa. Southern Ethiopia (Gemu Gofa), S Somalia (Mogadishu) and SE Kenya (NE Coast), NSL–460 m.
Sources: Loveridge, 1936c, Lanza, 1983, 1990, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

22. *Leptotyphlops telloi* Broadley & Watson, 1976. Occ. Pap. Natl. Mus. Rhodesia 5B(8): 500–501, fig. 16.

Type: Holotype, NMZB-UM 30635 (formerly UM 30635), a 143–152 mm specimen (J.L.P.L. Tello, 8 Feb. 1974).
Type locality: "Estatuane, Moçambique" [= Estatuane, SW Maputo Prov., S Mozambique, 26°30'S, 32°08'E, elevation 200 m].
Distribution: Eastern Swaziland and S Mozambique (SW Maputo), 200–530 m.
Sources: Broadley, 1983, Branch, 1988, 1998 and Broadley & Wallach, 1997b, Broadley & Broadley, 1999 and Marais, 2004.

LEPTUROPHIS Boulenger, 1900f (Colubridae)

Synonym: *Sphecodes* A.-M.-C. Duméril, 1853 *(nomen praeoccupatum).*
Type species: *Sphecodes albofuscus* A.-M.-C. Duméril, Bibron & Duméril, 1854a.
Distribution: Malay Peninsula and Indonesia.
Sources: Rooij, 1917, C. Haas, 1950, Grandison, 1972, B.L. Lim & Sharef bin Kamarudin, 1975, McDowell, 1987, Stuebing, 1991, David & Vogel, 1996, Manthey & Grossman, 1997, M. J. Cox et al., 1998, Chan-ard et al., 1999, Stuebing & Inger, 1999, Malkmus et al., 2002, Cota et al., 2011 and Grismer, 2011.
Remarks: A synonym of *Lycodon fide* McDowell (1987: 42) and I. Das (2012: 44).

1. *Lepturophis albofuscus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 394–397. (*Sphecodes albofuscus*) (*nomen corrigendum*)

Synonyms: *Sphecodes albofuscus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Sphecodes albo-fuscus* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Ophites albofuscus* – A.C.L.G. Günther, 1858 *(nomen corrigendum),* and *Lepturophis borneensis* Boulenger, 1900f.
Type: Holotype, formerly MNHN, a 632 mm specimen, lost *fide* Iskandar & Colijn, 2001: 65.
Type locality: "Sumatra" [W Indonesia].
Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Nakhon Si Thammarat, Phatthalung, Songkhla, Yala), West Malaysia (Selangor, Pahang, Johore, Tioman Is.), Singapore, East Malaysia (Sabah, Sarawak) and Indonesia (Kalimantan, Nias, Sumatra), 215–1100 m.
Remarks: Type listed in SMK *fide* Cox e al. (2013: 224).

LETHEOBIA Cope, 1869c (Typhlopidae)

Synonyms: *Cottontyphlops* Hoser, 2012am *(nomen illegitimum), Gleesontyphlops* Hoser, 2012am *(nomen illegitimum), Laidlawtyphlops* Hoser, 2012am *(nomen illegitimum), Pillotttyphlops* Hoser, 2012am *(nomen illegitimum), Trioanotyphlops* Hoser, 2012am *(nomen illegitimum), Whybrowtyphlops* Hoser, 2012am *(nomen illegitimum),* and *Wilsontyphlops* Hoser, 2012am *(nomen illegitimum).*
Type species: *Letheobia pallida* Cope, 1869c.
Distribution: Central and E Africa and the Middle East.
Sources: F. Werner, 1921a, Witte, 1962, Pitman, 1974, Roux-Estève, 1974, Hahn, 1977, 1980a, Broadley, 1983, Wallach, 1994, Wallach & Ineich, 1996, McDiarmid et al., 1999, Franzen & Wallach, 2002 and Broadley & Wallach, 2007, 2009.

1. *Letheobia acutirostrata* (Andersson, 1916). Meddel. Göteborgs Mus. Zool. Afd. (9) 17(5): 23–24, fig. 3. (*Typhlops acutirostratus*)

Synonyms: *Typhlops avakubae* K.P. Schmidt, 1923, and *Typhlops caecus pitmani* Witte, 1961.
Type: Holotype, NHMG 1375, a 360 mm specimen (G. Göransson, 1910).
Type locality: "Irebu, Belgian Congo" [= Irebu, Bandundu Prov., NE Democratic Republic of the Congo, 00°37'S, 17°45'E, elevation 300 m].
Distribution: Northern Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kinshasa, Oriental), 150–400 m.
Sources: Witte, 1966 and Young & Wallach, 1998.
Remarks: Previously a synonym of *Typhlops* (= *Rhinotyphlops*) *graueri fide* Witte (1962: 43).

Resurrected as a species *fide* Young & Wallach (1998: 252).

2. *Letheobia ataeniata* (Boulenger, 1912). Ann. Mus. Civ. Stor. Nat. Genova (3) 5: 331. (*Typhlops unitaeniatus ataeniatus*)

Synonym: *Typhlops ataenitus* – Gans & Laurent *in* Gans, Laurent & Pandit, 1965 *(nomen incorrectum).*
Types: Syntypes (3), BMNH 1946.1.10.78 (formerly BMNH 1912.6.6.12) and MSNG (2) (C. Citerni, Mar.–July 1911).
Type locality: "Dolo, la frontiera Italo-Etiopica" [= Ethiopia-Somalia border, 04º11'N, 42º05'E, elevation 200 m].
Distribution: Northeast Africa. Southeastern Ethiopia (Bale, Hararge, Sidamo), Somalia (Bay, Gedo, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Mudug, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer) and ext. NE Kenya (N North-Eastern), 25–1000 m.
Sources: Gans & Laurent, 1965, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993, Wallach, 1994, Spawls et al., 2002 and Largen & Spawls, 2010.
Remarks: Broadley & Wallach (2007b: 56) discussed type locality.

3. *Letheobia caeca* (A.H.A. Duméril, 1856). Rev. Mag. Zool. (2) 8(10): 462–463, pl. 21, figs. 4, 4a–4c. (*Onychocephalus caecus*)

Synonym: *Typhlops coecus* Jan, 1863b *(nomen emendatum).*
Types: Syntypes (2), MNHN 1063 and MNHN 1994.1166 (formerly MNH 1063A), longest syntype 380 mm (C.-E. Aubry-Lecomte, 1853–1856).
Type locality: "côte du Gabon, l'Afrique occidentale" [= Gabon, West Africa].
Distribution: Central Africa. Southern Cameroon (Centre, Sud, Sud-Ouest), Equatorial Guinea (Rio Muni), Gabon (Moyen-Ogooué) and Congo (Kouilou), 65–1300 m.
Sources: J.-F. Trape & Roux-Estève, 1990, 1995, Chirio & LeBreton, 2007 and Pauwels & Vande weghe, 2008.

4. *Letheobia crossii* (Boulenger, 1893a). Cat. Snakes Brit. Mus. 1: 52, pl. 3, figs. 5a–c. (*Typhlops crossii*)

Type: Holotype, BMNH 1946.1.11.55 (formerly BMNH 1892.6.23.3), a 270 mm specimen (W.H. Crosse, 1890–1893).
Type locality: "Asaba, 180 miles up the Niger, West Africa" [= Nigeria, 06°11'N, 06°45'E, elevation 55 m].
Distribution: Southern Nigeria (Anambra, Bayelsa, Cross River) and cen. Togo (Centrale, Kara), 55–545 m.
Sources: J.A. Butler & Reid, 1986, Trape & Segniagbeto, 2008 and Segniagbeto et al., 2011.

5. *Letheobia debilis* (Joger *in* G. Peters & Hutterer, 1990). Vert. Tropics: 93–94, figs. 3–5. (*Rhinotyphlops debilis*)

Type: Holotype, ZFMK 33684, a 380 mm specimen (N. Degallier & J.-P. Hervé).
Type locality: "near Bangui, Central African Republic" [= 04º23'N, 18°33'E, elevation 450 m].
Distribution: Central African Republic (Haut-Mbomou, Ombella-Mpoko), 450–800 m.
Source: Chirio & Ineich, 2006.

6. *Letheobia decorosa* (Buchholz & Peters *in* W.C.H. Peters, 1875b). Mber. Königl. Akad. Wiss. Berlin 1875(3): 197–198. (*Typhlops decorosus*)

Synonym: *Typhlops buchholzi* W.C.H. Peters, 1881b.
Type: Holotype, ZMB 8322, a 330 mm specimen (R. Buchholz, 1875).
Type locality: "Cameruns" [= Cameroon].
Distribution: Cameroon (Adamaoua, Est, Littoral, Nord, Nord-Ouest, Ouest, Sud) and W Central African Republic (Haute-Sangha, Sangha), 10–1775 m.
Sources: Chirio & Ineich, 2006 and Chirio & LeBreton, 2007.

L

7. *Letheobia episcopus* (Franzen & Wallach, 2002). J. Herp. 36(2): 177–180, figs. 1–2. (*Rhinotyphlops episcopus*)

Type: Holotype, ZFMK 74224, a 318 mm female (W. Bischoff, 8 April 2000).
Type locality: "3 km north of Halfeti (37°16'N, 37°51'E) on road to Savasan Köyü, upper slopes of Euphrates River Valley, Sanliurfa Province, southeastern Turkey, about 500 m above sea level."
Distribution: Southeastern Turkey (Sanliurfa), 500 m. Known only from vicinity of type locality.
Source: Franzen, 2000.
Remarks: Specific epithet is a noun in apposition and thus requires a "*-us"* ending *fide* Franzen & Wallach (2007: 261).

8. *Letheobia erythraea* (Scortecci, 1928). Atti Soc. Ital. Sci. Nat. Mus. Civ. Stor. Nat. Milano 67(3–4): 291–292, fig. 1. (*Typhlops erythraeus*) (*nomen corrigendum*)

Synonym: *Typhlos erythraeus* Scortecci, 1928 (*nomen incorrigendum*).
Type: Holotype, MSNM 3353 (formerly MSNM 2015), a 205 mm specimen (L. Fossati).
Type locality: "Sanganeiti" [= Segheneyti, Southern Prov., SE Eritrea, 15º03'N, 39º11'E, elevation 2180 m].
Distribution: Southeastern Eritrea (Northern Red Sea, Southern), 1800–2180 m.
Sources: Largen & Rasmussen, 1993, Largen, 1997, Wallach & Lanza, 2004 and Largen & Spawls, 2010.

9. *Letheobia feae* (Boulenger, 1906f). Ann. Mus. Civ. Stor. Nat. Genova (3) 2(42): 209, fig. 5. (*Typhlops feae*)

Synonym: *Typhlops principis* Boulenger, 1906.
Type: Holotype, MSNG 28871, a 205 mm specimen (L. Fea, 1901).
Type locality: "Vista Alegre, San Thomé, 200–300 m" [= São Tomé Island, São Tomé and Príncipe, Gulf of Guinea].
Distribution: São Tomé and Príncipe (São Tomé Is.), 200–300 m.

10. *Letheobia gracilis* (Sternfeld, 1910c). Mitt. Zool. Mus. Berlin 5(1): 70. (*Typhlops gracilis*)

Synonyms: *Typhlops katangensis* Witte, 1933, and *Typhlops leptosoma* Witte, 1933.
Type: Holotype, ZMB 22030, a 450 mm specimen (H. Fromm, 1910).
Type locality: "Kitungulu in Urungu, Deutsch-Ostafrika" [= Sumbawanga District, Tanzania, ca. 04°32'S, 34°13'E, elevation 1370 m].
Distribution: Southeastern Africa. Southeastern Democratic Republic of the Congo (Katanga), S Tanzania (Morogoro, Rukwa) and NE Zambia (Luapula, Northern), 700–1400 m.
Source: Spawls et al., 2002.

L

11. *Letheobia graueri* (Sternfeld, 1913a). Wiss. Deutsch. Zentr.-Afrika Exp. (1912) 4(2): 264. (*Typhlops graueri*)

Synonyms: *Typhlops leptosoma polli* Laurent, 1956, and *Typhlops graveri* – Robb, 1967 *(nomen incorrectum).*
Type: Holotype, ZMB 27161, a 355 mm specimen (R. Grauer, 1907–1908).
Type locality: "Urwald hinter den Randbergen am Nordwestufer des Tanganyika" [= rainforest behind boundary mountains on northwest shore of Lake Tanganyika, Democratic Republic of the Congo].
Distribution: East Africa. Southeastern Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Orientale, Katanga, Orientale, Sud-Kivu), W Uganda (Western), SW Burundi (Bururi) and W Tanzania (Kigoma), 750–2000 m.
Source: Spawls et al., 2002.

12. *Letheobia jubana* Broadley & Wallach, 2007b. Zootaxa (1515): 44–45, fig. 3c.

Type: Holotype, CAS 151201, a 347 mm female (P.M. Johnson, 25 Jan. 1979).
Type locality: "vicinity of Mareri, Juba Sugar Project, west bank of Juba River, Middle Juba region, southern Somalia (00°30'N, 42°46'E, elevation ca. 20 m)."
Distribution: Southern Somalia (Jubbada Dhexe), 20 m. Known only from type locality.

13. *Letheobia kibarae* (Witte, 1953). Explor. Parc Natl. Upemba 6: 150–151, figs. 35a–c. (*Typhlops kibarae*)

Type: Holotype, IRSNB 2201, a 525 mm specimen (G.-F. de Witte, 31 Jan. 1949).
Type locality: "Kaswabilenga (région du cours inférieur de la Lupiala, affluent de la rive droit de la Lufira), Parc National de l'Upemba" [= Katanga, SE Democratic Republic of the Congo, 08°48'S, 26°41'E, elevation 700 m].
Distribution: Southeastern Demoncratic Republic of the Congo (Katanga), 700–1250 m.

14. *Letheobia largeni* Broadley & Wallach, 2007b. Zootaxa (1515): 48, fig. 5b.

Type: Holotype, BMNH 1974.5162, a 270–274 mm female (E. McConnell, 19 April 1974).
Type locality: "Gambela, Wollega District, Ethiopia (08°15'N, 34°35'E, elevation 515 m)." Emended to vicinity of Gambela, on the Baro River *fide* Largen & Spawls (2010: 444).
Distribution: Southwestern Ethiopia (Illubabor), 515 m. Known only from type locality.
Source: Largen & Spawls, 2010.

15. *Letheobia leucosticta* (Boulenger, 1898b). Ann. Mag. Nat. Hist. (7) 1(2): 124. (*Typhlops leucostictus*)

Type: Holotype, BMNH 1946.1.11.24 (formerly BMNH 1897.5.8.16), a 225 mm specimen.
Type locality: "Liberia."
Distribution: Liberia. Known only from type locality.
Source: Wallach, 1993b.

16. *Letheobia lumbriciformis* (W.C.H. Peters, 1874b). Mber. Königl. Akad. Wiss. Berlin 1874(6): 377. (*Onychocephalus lumbriciformis*)

Synonym: *Typhlops kleebergi* F. Werner, 1904.
Types: Syntypes (2), ZMB 8045, a 445 mm specimen, and ZMB 63440 (formerly ZMB 8045A), a 160 mm specimen (J.M. Hildebrandt, 1872–1874).
Type locality: "Küste Zanzibar" [= Zanzibar coast, Tanzania].
Distribution: Extreme SE Kenya (S Coast) and ext. NE Tanzania (Tanga, Zanzibar Is.), NSL–55 m.
Source: Spawls et al., 2002.
Remarks: Possibly occurs on Pemba Is. *fide* Spawls et al. (2002: 295).

17. *Letheobia newtoni* (Bocage, 1890). J. Sci. Math. Phys. Nat., Lisboa (2) 2(5): 61–62. (*Typhlops newtoni*)

Synonym: *Typhlops naveli* Angel, 1920.

Type: Holotype, MBL 1890, a 40 mm specimen (F. Newton, 1890), destroyed by fire 18 March 1978.
Type locality: "l'Ilheo das Rolas, ilot situé au sud de l'île St Thomé" [= Rolas Island, south of São Tomé Is., São Tomé and Príncipe, Gulf of Guinea].
Distribution: São Tomé and Príncipe (Rolas and Príncipe Is.).

18. *Letheobia obtusa* (W.C.H. Peters, 1865). Mber. Königl. Akad. Wiss. Berlin 1865(6): 260–261, pl. fig. 2. (*Typhlops obtusus*)

Synonym: *Typhlops obtusus algravei* Laurent, 1968.
Types: Syntypes (2), BMNH 1946.1.11.31–32 (formerly BMNH 1864.10.29.15–16), a 303 mm and 296 mm specimen.
Type locality: "Thale des Shireflusses (Mossambique)" [= Shire River, Malawi]. Emended to vallée du Schire, Nyassaland *fide* Roux-Estève (1974: 69) and Shire Valley *fide* Broadley (1983: 39).
Distribution: Southeastern Africa. Southern Malawi (Southern), N Mozambique (Zambézia) and NE Zimbabwe (Manicaland), 600–1415 m.
Sources: Laurent, 1964b, 1968a, Broadley, 1983, Branch, 1998 and Broadley & Blaylock, 2013.

19. *Letheobia pallida* Cope, 1869c. Proc. Acad. Sci. Philadelphia (1868) 20(5): 322.

Synonym: *Typhlops pallidus* Boulenger, 1893a.
Type: Lectotype, MCZ 5723 (formerly EIS 504), a 196 mm female (C. Cooke, 1860–1865), designated by Broadley & Wallach (2007: 45).
Type locality: "Zanzibar" [= Zanzibar Is., Tanzania].
Distribution: Northeastern Tanzania (Tanga, Pemba and Zanzibar Is.) and SE Kenya (Coast), NSL–50 m.
Sources: Pitman, 1974 and Pakenham, 1983.
Remarks: See Broadley & Wallach (2007: 45) for a discussion of the type specimens. In the 1860's when Cooke collected the types (plus numerous other specimens now deposited in the MCZ all with the label "Zanzibar"), Zanzibar referred to 1) a large region including Tanzania, Kenya and S Somalia, 2) the island of Zanzibar, and 3) the capital city of Zanzibar (06°10'S, 39°12'E, elevation NSL). Even though Pakenham (1983: 21) cited the type locality as "Zanzibar Island," Cooke's locality may have been the city, island, or mainland area.

20. *Letheobia pauwelsi* Wallach, 2005. Afr. J. Herp. 54(1): 86–89, fig. 1.

Type: Holotype, IRSNB 2580 (formerly OSGP 806), a 310 mm male (O.S.G. Pauwels, 18 Nov. 2001).
Type locality: "Eastern base of Mont Iboundji, Dpartment de Offoué-Onoy, Ogooué-Lolo Province, central Gabon, ca. 1º 08' S, 11º 52' E, 580 m."
Distribution: Central Gabon (Ogooué-Lolo), 580 m. Known only from type locality.
Source: Pauwels & Vande weghe, 2008.

21. *Letheobia pembana* Broadley & Wallach, 2007b. Zootaxa (1515): 45.

Type: Holotype, SMF 16688, a 158 mm male (A. Voeltzkow, 1905).
Type locality: "Pemba Island, Tanzania (05°15'S, 39°50'E, elevation NSL–100 m)."
Distribution: Northeastern Tanzania (Pemba Is.), NSL–100 m. Known only from type locality.

22. *Letheobia praeocularis* (Stejneger, 1894a). Proc. U.S. Natl. Mus. (1893) 16(970): 709–710. (*Typhlops praeocularis*)

Synonym: *Typhlops praeocularis lundensis* Laurent, 1964.
Type: Holotype, USNM 20799, a 340 mm specimen (J.H. Camp, 1887–1893).
Type locality: "Leopoldville, or Stanley Pool, Congo Free State, Africa" [= Kinshasa, Democratic Republic of the Congo, 04°20'S, 15°19'E, elevation 240 m].
Distribution: Central Africa. Southern Congo (Brazzaville), SW Democratic Republic of the Congo (Bandundu, Bas-Congo, Kinshasa) and NE Angola (Lunda Norte), 240–700 m.
Sources: J.-F. Trape & Roux-Estève, 1995, J.B. Rasmussen, 1997b and Chirio & LeBreton, 2007.
Remarks: Probably occurs in Nigeria and Cameroon *fide* Chirio & LeBreton (2007: 328).

23. *Letheobia rufescens* (Chabanaud, 1917a). Bull. Mus. Hist. Nat., Paris (1916) 22(7): 365–366, figs. 4–6. (*Typhlops rufescens*)

Synonyms: *Typhlops vrydaghi* Laurent, 1956, and *Typhlops vrijdaghi* Witte, 1966 *(nomen emendatum).*
Type: Holotype, MNHN 1916.262, a 422 mm specimen (J. du Rouchet de Chazotte, 1908).
Type locality: "Congo français" [= Haut-Oubangui, Central African Republic *fide* Roux-Estève, 1974: 230].
Distribution: Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Mbomou, Ombella-Mpoko, Ouham) and N Democratic Republic of Congo (Orientale), 450–650 m.
Sources: Joger, 1990 and Chirio & Ineich, 2006.

24. *Letheobia scorteccii* (Gans & Laurent, 1965). Ann. Mus. Roy. Congo Belge Tervuron (8) (134): 56–60, fig. 12, pl. 6. (*Typhlops scorteccii*)

Type: Holotype, MCZ 74455, a 221 mm specimen (C. Gans, 25 July 1961).
Type locality: "10 km south of Afgoí (40 km south of Mogadiscio), on the sand dune road to Merca, Benadir

Province, Somali Republic" [= 10 km S Afgoye on road to Merca, NE Shabeellaha Hoose Region, S Somalia, 2º04'N, 45º03'E, elevation 80 m].

Distribution: Southern Somalia (Benadir, Mogadishu, Shabeellaha Hoose), NSL–100 m.

25. *Letheobia simoni* (Boettger, 1879). Ber. Senck. Naturf. Ges. 1879a: 58–60. (*Onychocephalus simoni*)

Type: Lectotype, SMF 16673 (formerly SMF-B 7051,1a), a 196 mm specimen (H. Simon, 1879), designated by Mertens (1922: 178).

Type locality: "Haiffa, Syrien" [= Haifa, Palestine Distr., Israel, 32°49'N, 35°02'E, elevation 10 m] via lectotype selection.

Distribution: Middle East. Southwestern Turkey (Urfa), Israel (Central, Gaza Strip, Golan Heights, Haifa, Jerusalem, Northern, Southern, Tel Aviv, West Bank), SW Syria, and NW Jordan (Ajloun, Balqa, Irbid, Jarash, Madaba), 10–585 m.

Sources: Disi, 1985, Disi et al., 1988, Wallach, 1994, Franzen, 2000, Bouskila & Amitai, 2001, Disi et al., 2001, Amr & Disi, 2011 and Bar & Haimovitch, 2011.

L

26. *Letheobia somalica* (Boulenger, 1895h). Proc. Zool. Soc. London 63(3): 536, pl. 30, fig. 1. (*Typhlops somalicus*)

Synonyms: *Typhlops acutirostris* Mocquard, 1905, and *Typhlops somalicu* – K.P. Schmidt, 1923 *(nomen incorrectum).*

Type: Holotype, BMNH 1946.1.11.54 (formerly BMNH 1895.6.11.5), a 450 mm specimen (A. Donaldson-Smith, 19 Dec. 1894).

Type locality: "Beearso, Galla or western Somali-land" [= Bio Asse River, E Ethiopia, 06º53'N, 42°18'E, elevation 600 m].

Distribution: Ethiopia (Bale, Gojjam, Gondar, Hararge, Kefa, Shoa, Wollega), 600–2200 m.

Sources: Largen, 1978, Largen & Rasmussen, 1993 and Largen & Spawls, 2010.

27. *Letheobia stejnegeri* (Loveridge, 1931). Copeia 1931(3): 92–93, figs. 1–2. (*Typhlops stejnegeri*)

Synonym: *Typhlops vanderysti* Witte, 1933.

Type: Holotype, USNM 23979, a 418 mm specimen (D.W. Snyder, 1897).

Type locality: "Luebo District, Belgian Congo" [= Luebo Distr., Kasai Occidental Prov., S Democratic Republic of the Congo].

Distribution: Democratic Republic of the Congo (Bandundu, Kasai Occidental, Kasai Oriental, Kinshasa), 300–475 m.

Source: Witte, 1933.

28. *Letheobia sudanensis* (K.P. Schmidt, 1923). Bull. Amer. Mus. Nat. Hist. 49(1): 51–52, fig. 2. (*Typhlops sudanensis*)

Type: Holotype, AMNH 11677, a 469 mm specimen (H. Lang & J.P. Chapin, Nov. 1911).

Type locality: "Faradje, Sudan (ca. 3° 40' N., 29° 40' E.)" [= Ituri, Orientale Prov., NE Democratic Republic of the Congo, 03º43'N, 29º42'E, elevation 820 m].

Distribution: Northeastern Democratic Republic of the Congo (Orientale), 700–1300 m.

Source: Pitman, 1974.

Remarks: Type locality erroneously listed as Garamba (04°10'N, 29°40'E) *fide* K.P. Schmidt (1923: 4).

29. *Letheobia swahilica* Broadley & Wallach, 2007b. Zootaxa (1515): 46–47, fig. 4b.

Type: Holotype, MCZ 40076, a 166 mm male (A. Loveridge, 14 June 1934).

Type locality: "old village of Ngatana, ca. one mile northwest from new village of Wema, in the lower Tana River, Coast Region, Kenya (02º30'S, 40º15'E, elevation 50 m)."

Distribution: Southeastern Kenya (Coast) and NE Tanzania (Tanga, Zanzibar Is.), NSL–50 m.

30, *Letheobia toritensis* Broadley & Wallach, 2007b. Zootaxa (1515): 47–48, fig. 4c.

Type: Holotype, MCZ 53324, a 270 mm female (J.S. Owen, 19 June 1950).

Type locality: "Torit, Equatoria Province, Sudan (04º27'N, 32º31'E, elevation 625 m)" [= Torit, Eastern Equatoria Prov., SE South Sudan, 4°25'N, 32°35'E, elevation 620 m].

Distribution: Southeastern South Sudan (Eastern Equatoria), 620–1200 m.

31. *Letheobia uluguruensis* (T. Barbour & Loveridge, 1928). Mem. Mus. Comp. Zool. 50(2): 104–105. (*Typhlops uluguruensis*)

Type: Holotype, MCZ 23080, a 240 mm male (A. Loveridge, 6 Oct. 1926).

Type locality: "Nyange, Uluguru Mountains, Tanganyika Territory" [= Tanzania, 06º52'S, 37º46'E, elevation 760–850 m].

Distribution: Eastern Tanzania (Uluguru Mtns. of Morogoro), 760–1000 m.

Sources: Spawls et al., 2002 and Gower et al., 2004.

32. *Letheobia unitaeniata* (W.C.H. Peters, 1878b). Mber. Königl. Akad. Wiss. Berlin 1878(3): 205, pl. 2, fig. 5. (*Typhlops unitaeniatus*)

Type: Holotype, ZMB 9246, a 157 mm specimen (J.M. Hildebrandt, 1872–1878).

Type locality: "Districten von Taita, Kenia" [= Taita Hills, Kenya, ca. 03°25'S, 38°25'E].
Distribution: Eastern Africa. Southern Somalia (Bay, Gedo, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Shabeellaha Hoose, Alessandra Is.), E Kenya (Coast, S Eastern) and ext. NE Tanzania (Kilamanjaro, Tanga), 20–1600 m.
Sources: Largen, 1978, Lanza, 1983a, 1990b, Largen & Rasmussen, 1993, Wallach, 1994 and Spawls et al., 2002.
Remarks: Uganda (Taru) record of Gans & Laurent (1965: 60) is from Taru, Kenya.

33. *Letheobia wittei* (Roux-Estève, 1974a). Mem. Mus. Natl. Hist. Nat. (2) 87A: 239–240, fig. 179a–c. (*Rhinotyphlops wittei*)

Type: Holotype, IRSNB 2511, a 285 mm specimen (R. Cremer & M. Neumann [Congo Exped.], 23 Aug. 1948).
Type locality: "Vandia-Poshe, rég. riv. Liki-Bembe, terr. Libenge, Distr. Ubangui, Prov. Équateur, Zaire,"[= Vandia-Poshe, NW Equateur Prov., NW Democratic Republic of the Congo, ca. 04°30'N, 19°00'E, elevation 520 m].
Distribution: Northwestern Democratic Republic of the Congo (NW Equateur), 520 m.
Sources: Joger, 1990 and Chirio & Ineich, 2006.
Remarks: Possibly occurs in Central African Republic (Ombella-Mpoko) *fide* Joger (1990: 95).

LIASIS Gray, 1842a (Pythonidae)

Synonyms: *Liasis* Gray, 1840 *(nomen nudum), Lisalia* Gray, 1849a, *Simalia* Gray, 1849a *(partim), Liases* – Bleeker, 1860g *(nomen incorrectum),* and *Katrinus* Hoser, 2000b.
Type species: *Liasis mackloti* A.-M.-C. Duméril & Bibron, 1844.
Distribution: Indo-Australia.
Fossil Record: Lower Pliocene of Australia.
Sources: Kluge, 1993b, D.G. Barker & Barker, 1994, Walls, 1998b, McDiarmid et al., 1999, Rawlings et al., 2008, Schleip & O'Shea, 2010 and Hoser, 2012b.
Remarks: Official Generic Name *fide* Opinion 1514 (ICZN, 1988).

1. †*Liasis dubudingala* Scanlon & Mackness, 2002. Alcheringa 25(3): 428–432, figs. 1, 2e.

Type: Holotype, QMF 9132, one middle trunk vertebra (M. Archer, 1975).
Type locality: "Main Quarry (Lat. 19°43'S, Long. 145°36'E), Allingham Formation, Bluff Downs Station, northeastern Queensland, Australia. Early Pliocene."
Distribution: Lower Pliocene (4.0–4.5 mya) of Australia. Known only from type locality.
Source: Archer & Wade, 1976.

2. *Liasis fuscus* W.C.H. Peters. 1873c. Mber. Kønigl. Akad. Wiss. Berlin 1873(10): 607–608.

Synonyms: *Liasis cornwallisius* A.C.L.G. Günther, 1879b, *Nardoa crassa* Macleay, 1885b, *Lisalia fusca* Wells & Wellington, 1985, and *Katrinus fuscus jackyae* Hoser, 2003a.
Type: Holotype, ZMB 7840, a 955 mm specimen (A. Dietrich, 1863–1872, via Mus. Godeffroy), lost *fide* Cogger et al. (1983: 203).
Type locality: "Port Bowen" [= Port Bowen, E Queensland, Australia, 20°01'S, 148°15'E, elevation NSL].
Distribution: Papua New Guinea (Western) and N Australia (N Northern Territory, N Queensland, ext. N Western Australia, Groote Eylandt, Maria, McClure, Melville and Mornington Is.), NSL–425 m.
Sources: O'Shea, 1996, C. Hay, 1998 and Torr, 2000.
Remarks: A synonym of *L. mackloti fide* Kluge (1993: 6).

3. *Liasis mackloti* A.-M.-C. Duméril & Bibron, 1844. Erpét. Gén. 6: 440–442.

Synonyms: *Python timorensis* S. Müller & Schlegel, 1844 *(nomen rejiciendum), Python timoriensis* S. Müller, 1857 *(nomen rejiciendum), Liasis timoriensis* W.C.H. Peters, 1876b *(nomen rejiciendum), Liasis macloti* – T. Barbour, 1912b *(nomen incorrectum), Liasis mackloti dunni* Stull, 1932b, and *Liasis mackloti savuensis* Brongersma, 1956b.
Type: Lectotype, MNHN 1625, longest type specimen 457 mm (S. Müller & H.C. Macklot, Sept. 1829), designated by Brongersma (1968: 57).
Type locality: "Timor" [Lesser Sundas, SE Indonesia] via lectotype selection.
Distribution: Southeastern Indonesia (Alor Roti, Savu, Semau, Timor, Wetar) and Timor-Leste, NSL–10 m.
Sources: Stull, 1932b, C. Haas, 1950, L.A. Smith, 1981b, O'Shea, 1996, Hoser, 2000b, C.K. Carmichael, 2007 and O'Shea et al., 2012.
Remarks: Official Specific Name no. 2426 *fide* Opinion 939 (ICZN, 1970).

L

4. *Liasis olivaceus* Gray, 1842a. Zool. Misc. 2(Mar.): 45. (*Liasis olivacea*)

Synonyms: *Liasi olivaceo* – F. Werner, 1936 *(nomen incorrectum),* and *Liasis olivaceus barroni* L.A. Smith, 1981.
Type: Holotype, BMNH 1946.1.1.56 (formerly BMNH IV.4.4a), a 965 mm specimen (J. Gilbert, 1840–1842).
Type locality: "North Australia; Port Essington" [= ruins at tip of Cobourg Peninsula, N Northern Territory, N Australia, ca. 11°09'N, 132°00'E, elevation NSL].
Distribution: Northern Australia (N Northern Territory, NW Queensland, N Western Australia, Augustus, Bickerton, Groote Eylandt, Heywood, Inglis, Melville,

North, St. Andrew, Vanderlin and Warnawi Is.), NSL–650 m.
Sources: L.A. Smith, 1981b, Cogger, 2000 and Torr, 2000.

LICHANURA Cope, 1861e (Boidae)

Synonym: *Lichanotus* – Wallace, 1876 *(lapsus calami).*
Type species: *Lichanura trivirgata* Cope, 1861e.
Distribution: Southwestern USA and NW Mexico.
Fossil records: Upper Miocene and upper Pleistocene of SW USA. Fossils tentatively assigned to *Lichanura* include middle Miocene (Clarendonian) of USA (California), upper Miocene (Clarendonian) of USA (California), and upper Miocene (Hemphillian) of USA (Nebraska).
Sources: Holman, 2000a, Wood et al., 2008 and Limburg et al., 2011.

1. *Lichanura orcutti* Stejneger, 1889. West. Amer. Sci. 6(46): 83.

Synonyms: *Lichanura simplex* Stejneger, 1890a, and *Lichanura roseofusca gracia* Klauber, 1931a.
Type: Holotype, USNM 15503, an 870 mm specimen (C.R. Orcutt, April 1889).
Type locality: "Colorado Desert, San Diego County, California."
Distribution: Southwestern USA (S California, W Arizona, S Nevada), 100–915 m.
Fossil records: Upper Pleistocene (Rancholabrean II) of USA (California).
Source: Stejneger, 1890a.
Remarks: Original description reprinted in Stejneger (1890a: 96–97, fig. 1). A valid species *fide* Wood et al. (2008: 496).

L

2. *Lichanura trivirgata* Cope, 1861e. Proc. Acad. Nat. Sci. Philadelphia 13(7): 304–305.

Synonyms: *Lichanura myriolepis* Cope, 1868a, *Lichanura roseofusca* Cope, 1868a, *Lichanura trivirgata bostici* Ottley, 1978, *Lichanura trivirgata saslowi* Mehrtens 1987 (*nomen nudum*), *Lichanura trivirgata saslowi* Spiteri, 1988, *Lichanura trivirgata myriolepsis* – McDiarmid, Campbell & Touré, 1999 *(nomen incorrectum),* and *Lichanura trivirgata arizonia* C. Scott, 1996.
Type: Lectotype, USNM 15502 (formerly SIM 5023), a 291 mm male (J. Xantus, Sept. 1859), designated by Cochran (1961: 195).
Type locality: "the southern region of Lower California" [= S Baja California, Mexico]. Emended to Cape San Lucas, Lower California [= Cabo San Lucas, S Baja California Sur State, NW Mexico, 22°53'N, 109°55'W, elevation 25 m] *fide* Stejneger (1891: 515).
Distribution: Southwestern USA (SW Arizona, ext. S California) and NW Mexico (Baja California Norte, Baja California Sur, Sonora, Angel de la Guarda, Cedros, Cerralro, Mejia, Natividad, San Marcos and Tiburon, Is.), NSL–1370 m.
Sources: Stejneger, 1891, Klauber, 1933, Fowlie, 1965, Gorman, 1965, Kurfess, 1967, Bostic, 1971, Ottley, 1978, Ottley et al., 1980, Yingling, 1982, R.W. Murphy & Ottley, 1984, Stebbins, 1985, Spiteri, 1988, 1991, 1993, 1994, P.R. Brown, 1997, Bartlett & Tennant, 2000, Grismer, 2002 and J.C. Murphy & Schlager, 2003.
Remarks: USNM 5023 is also the type of *Thamnophis cyrtopsis cyclides* Cope. Gorman (1965: 283) suggested that *L. roseofusca* Cope is a valid species.

LIMNOPHIS A.C.L.G. Günther, 1865 (Natricidae)

Synonym: *Lymnophis* – Cope, 1887c *(nomen emendatum).*
Type species: *Limnophis bicolor* A.C.L.G. Günther, 1865.
Distribution: Southern Africa.
Remarks: *Limnophis* Günther not preoccupied by *Limnophis* Blanchard, 1845 (Diptera) *contra* K.L. Williams & Wallach (1989: 86) as it is a misspelling for *Limnobia* Meigen.

1. *Limnophis bangweolicus* (Mertens, 1936). Zool. Anz. 114(9–10): 284–285. (*Helicops bangweolicus*)

Type: Holotype, SMF 22172, a 520 mm female (F. Haas, 26 Oct. 1931).
Type locality: "Nsombo, Nordende das Bangweolo-Sees, Nord-Rhodesien" [= Nsombo, Lake Bangweulu, Northern Prov., Zambia, 10°48'S, 30°00'E, elevation 1200 m].
Distribution: Southwestern Africa. Eastern Angola (Lunda Sul, Moxico), SE Democratic Republic of the Congo (Katanga), Zambia (Luapula, Northern, Southern, Western), ext. W Zimbabwe (NW Matebeleland North), NE Namibia (Caprivi) and N Botswana (North West), 950–1690 m.
Sources: Broadley et al., 2003 and Broadley & Blaylock, 2013.
Remarks: A valid species *fide* Griffin (2003: 96).

2. *Limnophis bicolor* A.C.L.G. Günther, 1865. Ann. Mag. Nat. Hist. (3) 15(86): 96–97, pl. 2, fig. c.

Types: Syntypes (2), BMNH, 660 mm and 530 mm females (F.A.P. Bayão, 1864).
Type locality: "the province Duque de Bragance (Angola)" [= Duque de Bragança, cen. Malanje Prov., N Angola, 9°06'S, 15°57'E, elevation 1110 m].
Distribution: Southern Africa. Southern Democratic Republic of the Congo (Bandundu, Bas-Congo, Katanga), Angola (Benguela, Huíla, Cabinda, Luanda,

Lunda Norte, Malanje), W Zambia (NW North-Western) and ext. W Zimbabwe (W Matebeleland North), 100–1725 m.

Sources: Witte, 1953, 1962, Mertens, 1963, Laurent, 1964a, Broadley & Cock, 1975, Broadley & Blake, 1979, Broadley, 1983, Auerbach, 1987, Branch, 1988, H.M. Smith et al., 1992, M. Griffin, 2003 and Zaher et al., 2009.

Remarks: Bocage listed as collector *fide* A.C.L.G. Günther (1865: 97) and Boulenger (1893a: 275) but Bocage (1866a: 47, 1866b: 68, and 1895a: 77) sent the specimens to BMNH and listed Bayão as collector. Democratic Republic of the Congo (Bas-Congo) record doubtful *fide* Thys van der Audenaerde (1965: 370).

LIOHETEROPHIS Amaral, 1934b (Xenodontidae)

Type species: *Lioheterophis iheringi* Amaral, 1934b.

Distribution: Brazil.

Sources: J.A. Peters & Orejas-Miranda, 1970 and Amaral, 1978.

1. *Lioheterophis iheringi* Amaral, 1934b. Mem. Inst. Butantan (1933–1934) 8: 187–188.

Type: Holotype, IB 8362, a 360 mm female (R.T.G.W. von Ihering, 1933), destroyed by fire 15 May 2010.

Type locality: "Campina Grande, Estado da Parahyba, nordeste do Brasil" [= Campina Grande, E Paraiba State, NE Brazil, 7°14'S, 35°53'W, elevation 465 m].

Distribution: Extreme NE Brazil (Paraíba), 465 m. Known only from holotype.

LIOPELTIS Fitzinger, 1843 (Colubridae)

Synonyms: *Phragmitophus* A.C.L.G. Günther, 1862b, *Leopeltis* – J.F. James, 1887 *(nomen incorrectum), Lopeltis* – Takahashi, 1930 *(nomen incorrectum), Lipopeltis* – Gharpurey, 1962 *(nomen incorrectum),* and *Liopelitis* – Kuntz, 1970 *(nomen incorrectum).*

Type species: *Herpetodryas tricolor* Schlegel, 1837.

Distribution: Southern and SE Asia and East Indies.

Sources: Boulenger, 1894a, M.A. Smith, 1943 and Welch, 1988.

1. *Liopeltis calamarius* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 250–251. (*Cyclophis calamaria*)

Synonyms: *Homalosoma baliolum* Jan, 1862b, *Cyclophis nasalis* A.C.L.G. Günther, 1864a, and *Cyclophia calamaria* – Phipson, 1888 *(nomen incorrectum).*

Types: Syntypes (2), BMNH 1946.1.21.64, two males, longest syntype 343 mm (Zool. Soc. London).

Type locality: "Ceylon" [= Sri Lanka].

Distribution: India (Andhra Pradesh, Bihar, Karnataka, Kerala, Maharashtra, Tamil Nadu, Uttar Pradesh) and Sri Lanka (North-Central, North-Western, Southern, Uva), 1190–1690 m.

Sources: Ferguson, 1902, Wall, 1921d, 1924b, Deraniyagala, 1955, P. Silva, 1969, Murthy, 1986, A. Silva, 1990b, 2009, Malhotra & Davis, 1991, N. Khaire, 2006 and Srinivasulu & I. Das, 2008.

2. *Liopeltis frenatus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 120–121. (*Cyclophis frenatus*)

Type: Holotype, BMNH 1946.1.1.72, a 686 mm male (W. Griffith, June 1937).

Type locality: "Mountains near Affghanistan" [= Afghanistan] (in error). Corrected to Khasi Hills, India *fide* Boulenger (1894a: 280).

Distribution: Southeast Asia. Northeastern India (Arunachal Pradesh, Assam, Meghalaya, Nagaland), SW China (Xizang Zizhigu, Yunnan), N Myanmar (Kachin), N Laos (Xiangkhoang) and cen. Vietnam (Da Nang, Dong Nai, Gia Lai, Lao Cai, Quang Binh), 600–1830 m.

Sources: Bourret, 1936b, Deuve, 1970, Zhao & Adler, 1993, Ao et al., 2004, Whitaker & Captain, 2004, Ziegler et al., 2007, V.S. Nguyen et al., 2009 Southwest Pacific.

Remarks: Griffith collected in Afghanistan from Nov. 1838–June 1841. Pakistan (Sindh) record of Murray (1884) rejected *fide* Wall (1924a: 865).

3. *Liopeltis philippinus* (Boettger, 1897). Zool. Anz. 20(531): 164–165. (*Ablabes philippinus*)

Type: Lectotype, SMF 19318 (formerly SMF-B 8281,1a), a 628 mm male (O.F. von Moellendorff & O. Koch, 1897), designated by Mertens (1922: 180).

Type locality: "Inseln Culion (Calamianes), Philippien" [= Culion Island, Calamianes group, SW Philippines] via lectotype selection and type locality restriction *fide* Leviton (1964a: 371).

Distribution: Southwestern Philippines (Busuanga, Culion, N Palawan).

Sources: Boettger, 1898, E.H. Taylor, 1922a and Leviton, 1964a.

Remarks: Boettger's (1897: 165) Philippine record for Samar Island doubtful *fide* Leviton (1964a: 370).

4. *Liopeltis rappii* (A.C.L.G. Günther, 1860c). Proc. Zool. Soc. London 28(1): 154–155, pl. 26, fig. b. (*Ablabes rappii*)

Synonym: *Ablabes owenii* A.C.L.G. Günther, 1860.

Type: Holotype, BMNH 1946.1.5.61, a 419 mm female (H.R.A. von Schlagintweit, A. von Schlagintweit, & R. von Schlagintweit, 1854–1858).

Type locality: "Sikkim (5340 feet above the level of the sea)" [= Sikkim State, NE India].

Distribution: Southern Asia. Himalayas of Nepal (Kaski) and N India (Himachal Pradesh, Sikkim, N West Bengal), 340–2285 m.

Sources: Kramer, 1977, Murthy, 1986 and Schleich & Kästle, 2002 and Tiwari & Shah, 2004.

Remarks: Holotype listed as male *fide* Kramer (1977: 741). Record from Simla, W Himalayas doubtful *fide* M.A. Smith (1943: 186).

5. *Liopeltis stoliczkae* (Sclater, 1891a). J. Asiat. Soc. Bengal 60(3): 234, pl. 6, figs. 1a–b. (*Ablabes stoliczkae*)

Types: Syntypes (2), ZSI 3955 (formerly IMC 3955) (J. Butler, 1869–1876) [Assam], and IMC 8725 (F. Stoliczka, 1862–1874) [unknown], latter lost *fide* I. Das et al. (1998: 145).

Type locality: "Samagooting in the Naga Hills of Assam" [= Naga Hills, Nagaland, NE India] and unknown.

Distribution: Southeast Asia. Northeastern India (Nagaland, Sikkim, N West Bengal), cen. Myanmar (Kayah), cen. Laos (Bolikhamsai) and E Cambodia (Mondulkiri), 200–700 m.

Sources: Ao et al., 2004, B.L. Stuart et al., 2006, B.L. Stuart & Heatwole, 2008 and I. Das, 2010.

Remarks: Sclater (1891: 18) erroneously listed IMC 8725 as the Assam type collected by Butler and IMC 3955 as the no data specimen collected by Stoliczka.

6. *Liopeltis tricolor* (Schlegel, 1837). Essai Phys. Serp. 1: 151–152, 2: 187, pl. 6, figs. 16–18. (*Herpetodryas tricolor*)

Synonyms: *Coluber tricolor* H. Boie *in* Schlegel, 1826a *(nomen nudum),* and *Coluber tricolor* Schlegel, 1826b *(nomen nudum).*

Types: Syntypes (3), RMNH 492, RMNH 671 (H. Kuhl & J.C. van Hasselt, Dec. 1820–Sept. 1823), and RMNH 679 (H. Boie & H.C. Macklot, Dec. 1825–1832), longest syntype 560 mm.

Type locality: "Java" [SW Indonesia] Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Southeast Asia and East Indies. Southern Thailand, S Vietnam (Lam Dong), West Malaysia (Pinang), Singapore, East Malaysia (Sarawak), Brunei, Indonesia (Bangka, Bintan, Java, W Kalimantan, Mentawai Arch., Nias, Riau Arch., Sumatra, Weh) and SW Philippines (Bubuan, Palawan), 300–1200 m.

Sources: Rooij, 1917, C. Haas, 1950, Leviton, 1964a, Tweedie, 1983, Stuebing, 1991, M.J. Cox et al., 1998, V.S. Nguyen et al., 2009 and I Das, 2010.

LIOPHIDIUM Boulenger, 1896a (Pseudoxyrhophiidae)

Synonyms: *Idiophis* Mocquard, 1901, *Dakaria* F. Werner, 1925 *(nomen praeoccupatum), Wernerodakaria* Strand, 1928 *(nomen substitutum), Parasibynophis* Leviton & Munsterman, 1956, *Dekaria* – Tiedemann & Häupl, 1980 *(nomen incorrectum),* and *Liophidum* – Obst, Richter & Jacob, 1984 *(nomen incorrectum).*

Type species: *Liophidium trilineatum* Boulenger, 1896a.

Distribution: Madagascar, Mascarenes and Comoros.

Sources: Leviton & Munsterman, 1956, Guibé, 1958, E. Morgan, 1973, Domergue, 1984a, Cadle, 1999, Glaw & Vences, 2007, Franzen et al., 2009, Zaher et al., 2009 and Vieites et al., 2010.

Remarks: Morgan (1973: 9) erroneously listed type species as *Coronella torquata* Boulenger, 1888.

1. *Liophidium apperti* Domergue, 1984a. Bull. Mus. Natl. Hist. Nat. (1983) (4) 5A(4): 1111–1113, figs. 1a–c, 2.

Type: Holotype, MNHN 1982.442 (formerly CAD 873/S), a 238 mm male (C.A. Domergue, 17 Nov. 1968).

Type locality: "7 km au nord de la petite ville de Befandriana-sud, 2 km, à l'est de la route nationale no 9, Tuléar-Morombe, la région Malgache" [= Toliara Province, SW Madagascar].

Distribution: Southern Madagascar (S Toliara), 200–615 m.

Source: Ziegler et al., 1996.

2. *Liophidium chabaudi* Domergue, 1984a. Bull. Mus. Natl. Hist. Nat. (1983) (4) 5A(4): 1117–1119, figs. 6a–c.

Type: Holotype, MNHN 1978.2789 (formerly CAD 730/S), a 446 mm female (C.A. Domergue, 1970–1978).

Type locality: "Village d'Ankorongo, non loin de l'aérodrome de Tuléar, de la région Malgache" [= Toliara Province, SW Madagascar].

Distribution: Southwestern Madagascar (SW Toliara), 10–200 m.

3. *Liophidium maintikibo* Franzen, Jones, Raselimanana, Nagy, Cruze, Glaw & Vences, 2009. Amphibia-Reptilia 30(2): 174–177, figs. 1a–b, 2–3.

Type: Holotype, ZSM 2052/2007, a 255 mm specimen (J. Jones, 20 Nov. 2004).

Type locality: "near Kirindy research station (20°03'S, 44°39'E), elevation below 100 m, about 60 km north of Morondava (district of Morondava, region of Menabe, Toliara Province), western Madagascar."

Distribution: Western Madagascar (Toliara), < 100 m. Known only from type locality.

4. *Liophidium pattoni* Vieites, Ratsoavina, Randrianianina, Nagy, Glaw & Vences, 2010. Salamandra 46(1): 3–7, figs. 1a–c, a–d2.

Type: Holotype, ZSM 186/2009 (formerly DRV 5948), a 417 mm male (M. Vences, D.R. Vieites, F.M. Ratsoavina & R.D. Randrianiaina, 28 June 2009).
Type locality: "Angozongahy at the western side of the Makira plateau, within the newly created reserve 'Makira Natural Park', 15º26'13.3"S, 49º07'07.0"E, 1009 m above sea level, district of Mandritsara, region of Sofia, province of Mahajanga, northeastern Madagascar."
Distribution: Northeastern Madagascar (Mahajanga), NSL–1100 m.

5. *Liophidium rhodogaster* (Schlegel, 1837). Essai Phys. Serp. 1: 152–153, 2: 193–194. (*Herpetodryas rhodogaster*)

Type: Holotype, MNHN 1956, a 530+ mm female lacking a skull (J.R.C. Quoy & J.P. Gaimard, 1817–1829).
Type locality: "'île de Madagascar."
Distribution: Eastern Madagascar (Atananarivo, Antsiranana, Fianarantsoa, Toamasina, Nosy Be Is.) 20–1300 m.
Source: Henkel & Schmidt, 2000.

6. *Liophidium therezieni* Domergue, 1984a. Bull. Mus. Natl. Hist. Nat. (1983) (4) 5(4): 1114–1116, figs. 4a–c, 5a.

Type: Holotype, MNHN 1982.444 (formerly CAD 679/S), a 726 mm male (Y. Therezien, 14 Feb. 1966).
Type locality: "Forêt d'Anatelo, en bordure du massif calcaire de l'Ankarana (sous-préfecture d'Ambilobe) de la région malgache" [= Anatelo forest, Ambilobe Prefect., NW Antsiranana Province, N Madagascar].
Distribution: Extreme N Madagascar (N Antsiranana), 20–230 m.
Source: Franzen et al., 2009.

7. *Liophidium torquatum* (Boulenger, 1888a). Ann. Mag. Nat. Hist. (6) 1(2): 103–104, pl. 5, fig. 3. (*Coronella torquata*)

Type: Holotype, BMNH 1946.1.3.38, a 410 mm female (R. Baron, 1875–1888).
Type locality: "Madagascar."
Distribution: Madagascar (Antsiranana, Fianarantsoa, Mahajanga, Toamasina, S Toliara), 100–950 m.
Sources: Ziegler et al., 1996, Henkel & Schmidt, 2000 and A. Mori et al., 2006.

8. *Liophidium trilineatum* Boulenger, 1896a. Cat. Snakes Brit. Mus. 3: 599.

Type: Holotype, BMNH 1946.1.15.66, a 330 mm male (J.T. Last, 1890–1896).
Type locality: "S.W. Madagascar."
Distribution: Southwestern Madagascar (SW Toliara), 50–100 m.
Source: Ziegler et al., 1996.

9. *Liophidium vaillanti* (Mocquard, 1901). Bull. Mus. Hist. Nat., Paris 7(6): 253. (*Idiophis vaillanti*)

Synonyms: *Idiophis vaillanti extensa* Boettger, 1913, and *Dakaria subpunctata* F. Werner, 1925.
Type: Lectotype, MNHN 1901.186, a 608 mm female (C. Alluaud, 1892–1893), designated herein by E.C. Morgan.
Type locality: "Isaka, le sud de Madagascar" [= Isaka-Ivondro, 30 km NW Taolagnaro, SE Toliara Prov., S Madagascar] via lectotype selection.
Distribution: Madagascar (Mahajanga, Toliara) and the Mascarenes (Reunion), NSL–800 m.
Sources: Mocquard, 1902a, M.A. Smith, 1928b and A. Mori et al., 2006.
Remarks: Lectotype designation of MNHN 1901.186 *fide* Morgan (1973: 134) invalid.

LIOPHIS Wagler, 1830 (Xenodontidae)

Synonyms: *Iaculatrix* Boddaert, 1783 (*nomen nudum*), *Dromicus* Bibron, 1843 *in* Ramón de la Sagra, 1838–1857, *Calophis* Fitzinger, 1843, *Leimadophis* Fitzinger, 1843, *Opheomorphus* Fitzinger, 1843, *Pariopeltis* Fitzinger, 1843, *Pseudophis* Fitzinger, 1843, *Caelophis* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Calliophis* Agassiz, 1847 *(nomen emendatum), Limadophis* Agassiz, 1847 *(nomen emendatum), Dromiscus* – Kingsley, 1888 *(nomen incorrectum), Lhiophis* – Peracca, 1896b *(nomen incorrectum), Adromicus* – Cope, 1900 *(nomen incorrectum), Liopis* – Rosén, 1911 *(nomen incorrectum), Lemiadophis* T. Barbour, 1916c *(nomen incorrectum), Leophis* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Oreomorphus* – Cochran, 1961 *(nomen incorrectum).*
Type species: *Coluber cobella* Linnaeus, 1758.
Distribution: Central America, West Indies and South America.
Fossil record: Pleistocene of West Indies (Barbados).
Sources: Roze, 1964, J.A. Peters & Orejas-Miranda, 1970, Cunha, 1976b, Dixon 1980, 1989, Pérez-Santos & Moreno, 1988, Vidal et al., 2000, Curcio et al., 2009a, Hedges et al., 2009, Zaher et al., 2009 and Vidal et al., 2010.
Remarks: *Liophis amarali* Wettstein, 1930 has been placed in a new genus (*Caaeteboia*) by Zaher et al., 2009. *Liophis* is paraphyletic *fide* Curcio et al. (2009a:

66–67) and Zaher et al. (2009: 146) and considered a synonym of *Erythrolamprus fide* Grazziotin et al. (2012: 14).

1. *Liophis almadensis* (Wagler *in* Spix, 1824). Serp. Brasil. Sp. Nov.: 30–31, pl. 10, fig. 3. (*Natrix almadensis*) (*nomen corrigendum*)

Synonyms: *Natrix almada* Wagler *in* Spix, 1824 *(nomen incorrigendum), Liophis almadensis* Wagler *in* Spix, 1824 *(nomen corrigendum),* ? *Natrix bahiensis* Wagler *in* Spix, 1824, *Liophis wagleri* Jan, 1857, *Liophis conirostris* A.C.L.G. Günther, 1858, *Liophis y-graecum* W.C.H. Peters, 1882, and *Trigonocephalus scolecomorphus* Bacqué, 1906.

Type: Lectotype, ZSM 2688/0, a 170 mm specimen (J.B. von Spix & K.F.P. von Martius, Oct.–Nov. 1819), designated by Hoogmoed & Gruber (1983: 331).

Type locality: "Almada, Bahia, Brazil" [= Castelo Novo, Bahia State, NE Brazil, ca. 14°39'S, 39°10'W] via lectotype selection.

Distribution: Southern South America. Southern and E Brazil (Bahia, Distrito Federal, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, S Pará, Paraíba, Parana, Pernambuco, Rio de Janeiro, Rio Grande do Norte, Rio Grande do Sul, Santa Catarina, São Paulo, Marajo Is.), E Bolivia (Beni, Santa Cruz), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí), NE Uruguay (Rivera, Tacuarembó, Trienta y Tres) and N Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Misiones, Santa Fe), 25–130 m.

Sources: Serie, 1921, 1936, Hoge, 1953, Barth, 1957, Cordeiro & Hoge, 1974, Abalos & Mischis, 1975, Amaral, 1978, Lema & Fabián-Beurmann, 1977, Lema, 1987, Dixon, 1991, Cei, 1994, Dixon et al., 1993, Rufino, 1999, Leynaud & Bucher, 1999, Giraudo & Scrocchi, 2002, Carreira-Vidal et al., 2005, Cacciali, 2008 and Prigioni et al., 2011.

Remarks: Original orthography *Natrix almada* in text, *Natrix almadensis* on plate. See Hoogmoed & Gruber (1983: 331) for discussion.

L

2. *Liophis andinus* Dixon, 1983b. Ann. Carnegie Mus. 52(6):129–132, figs. 5–6d.

Type: Holotype, CM 2808, a 485 mm male (J. Steinbach, Oct. 1921).

Type locality: "Incachaca, 2500 m, Cochabamba, Bolivia."

Distribution: Central Bolivia (Cochabamba), 2500 m. Known only from type locality.

3. *Liophis atraventer* Dixon & Thomas, 1985. Herpetologica 41(3): 260–261, fig. 1.

Type: Holotype, MZUSP 5066, a 505 mm male (W.R. Heyer, 28 Oct. 1968).

Type locality: "Boracéia (Estação Biológica), 28°38'S, 45°50'W, São Paulo, Brazil."

Distribution: Southeastern Brazil (Rio de Janeiro, São Paulo), 950 m.

Source: Passos & Fernandes, 2001.

Remarks: Latitude of type locality in error: probably 23°38'S.

4. *Liophis breviceps* Cope, 1860e. Proc. Acad. Nat. Sci. Philadelphia 12(6): 252.

Synonyms: *Liophis longiventris* Amaral, 1925b, and *Liophis canaima* Roze, 1957a.

Type: Holotype, ANSP 3697, a 442 mm female (C.J. Hering, 1860).

Type locality: "Suriname" [= Suriname].

Distribution: Amazonia. Southeastern Colombia (Amazonas, Meta, Vaupés), E Venezuela (Amazonas, Bolívar, Delta Amacuro, Monagas), Guyana (Barima-Waini, Cuyuni-Mazaruni, Demerara-Mahaica, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Brokopondo, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Ecuador (Napo, Pastaza), NE Peru (Loreto), N Brazil (Amazonas, Mato Grosso, ? Pará, Roraima) and Bolivia (Beni), NSL–500 m.

Sources: Beebe, 1946, Roze, 1966a, Dixon, 1983a, Pérez-Santos, 1986, Gorzula & Señaris, 1998, Starace, 1998, Frota, 2001a, D.S. Fernandes et al., 2002, Rivas-Fuenmayor & Molina, 2003, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: Publication date erroneously listed as 1861 *fide* J.A. Peters & Orejas-Miranda (1970: 177).

5. *Liophis carajasensis* Cunha, Nascimento & Ávila-Pires, 1985. Publ. Mus. Avulsas Para. Emílio Goeldi (40): 53–54, pls. 4–5.

Type: Holotype, MPEG 16.611, a 429 mm male (Mus. Goeldi, 18 Nov. 1983).

Type locality: "campo rupestre do platô N1, Serra Norte, da área de Carajas, Pará, Brasil, 600–800 m."

Distribution: Northern Brazil (SE Pará), 600–800 m. Known only from type locality.

6. *Liophis ceii* Dixon, 1991. Texas J. Sci. 43(3): 230–233.

Type: Holotype, TCWC 53409, a 524 mm male (J.R. Dixon, 18 May 1977).

Type locality: "near Tucumán, Tucumán, Argentina" [= vicinity of Tucumán (26°49'S, 65°13'W, elevation 465 m), Tucumán Prov., N Argentina].

Distribution: Southeastern Bolivia (Santa Cruz, Tarija) and NW Argentina (Catamarca, Jujuy, Salta, Santiago del Estero, Tucumán), 1000–2000 m.

Source: Cei, 1994.

7. *Liophis cobellus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 218–219. (*Coluber cobella*)

Synonyms: *Coluber venosa* Laurenti, 1768, *Coluber cobella dimidiata* Weigel, 1783, *Coluber serpentinus* Daudin, 1803d, *Coluber cenchrus* Daudin, 1803d, *Coluber cancellatus* Gravenhorst, 1807, *Coluber melanogaster* Gravenhorst, 1807, and *Rhadinae cobella* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Types: Syntypes (5): ZMUU 4A–B (C. Gyllenborg, 1744), ZMUU 91 (MAF, 1745), and NHRa–b, a 650 mm and 590 mm specimen (MAFR).

Type locality: "America." Restricted to Suriname *fide* J.R. Dixon (*in litt.*).

Distribution: Guianas. Eastern Venezuela (Amazonas, Bolívar, Delta Amacuro, Monagas, Sucre), Trinidad and Tobago (Trinidad), Guyana (Barima-Waini, Cuyuni-Mazaruni, Demerara-Mahaica, East Berbice-Corentyne, Essequibo Islands-West Demerara, Mahaica-Berbice, Potaro-Siparuni), N Suriname (Brokopono, Commewijne, Marowijne, Nickerie, Saramacca, Suriname) and N French Guiana (Cayenne, Saint-Laurent-du-Maroni), NSL–2630 m.

Sources: Emsley, 1977, Dixon, 1983a, J.C. Murphy, 1997, Starace, 1998, Freitas, 1999 and Frota, 2001b, Fernandes et al., 2002, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: Lectotype restricted to ZMUU without number *fide* Hoge (1964d: 59). *Liophis trebbaui* Roze, *L. ingeri* Roze and *L. torrenicola* Donnelly & Myers have been considered synonyms.

8. *Liophis cursor* (Bonnaterre, 1790). Tabl. Ency. Méth., Ophiol.: 27–28, pl. 42, fig. 3. (*Coluber cursor*)

Synonyms: *Coluber cursor* Lacépède, 1789 *(nomen rejiciendum), Coluber fugitivus* Donndorff, 1798, *Liophis putnami* Cope, 1862b, and *Liophis cursor andreoides* F. Werner, 1924a.

Types: Syntypes (2), ANSP 5580, a 654 mm specimen (Jardin de Plantes), and MNHN, a 624 mm specimen (M. de Chanvalon, King of France's cabinet, Paris).

Type locality: "Martinique" [Lesser Antilles].

Distribution: Lesser Antilles (W Martinique, Rocher de Diamant Is.).

Sources: Lazell, 1967, A. Schwartz & Thomas, 1975, Dixon, 1981, A. Schwartz & R.W. Henderson, 1991, Breuil, 2003 and R.W. Henderson & Powell, 2009.

9. *Liophis epinephelus* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 78. (*Liophis epinephalus*)

Synonyms: *Liophis reginae albiventris* Jan, 1863a, *Liophis reginae quadrilineata* Jan, 1863a, *Opheomorphus alticolus* Cope, 1868b, *Zamenis ater* A.C.L.G. Günther, 1872b, *Liophis fraseri* Boulenger, 1894a, *Liophis bimaculatus* Cope, 1899b, *Liophis bipraeocularis* Boulenger, 1903b, *Liophis opisthotaenius* Boulenger, 1908a, *Liophis pseudocobellus* Peracca, 1914, *Liophis cobellus alticolus* Amaral, 1931, *Liopihis bipraeoculares* – Briceño-Rossi, 1934 *(nomen incorrectum), Leimadophis taeniurus juvenalis* Dunn, 1937b, *Leimadophis bimaculatus lamonae* Dunn, 1944b, *Leimadophis epinephalus ecuadorensis* Laurent, 1949, and *Liophis epinephelus kogiorum* Bernal-Carlo, 1994.

Type: Holotype, ANSP 3688 (formerly SIM 4305), a 527 mm specimen (N. Michler Exped., 1857–1858).

Type locality: "Truando, New Granada" [= Truandó, N Chocó Dept., W Colombia, 7°22'N, 77°06'W, elevation NSL].

Distribution: Lower Central America and NW South America. Costa Rica (Alajuela, Cartago, Guanacaste, Heredia, Limón, Puntarenas, San José, Bonita Is.), Panama (Bocas del Toro, Canal Zone, Chiriquí, Coclé, Colón, Darién, Herrera, Los Santos, Panamá, Veraguas, Barro Colorado Is.), W Colombia (Antioquia, Bolívar, Boyaca, Caldas, Caquetá, Cauca, Cesar, Chocó, Córdoba, Cundinamarca, Huila, La Guajira, Magdalena, Nariño, Norte de Santander, Risaralda, Santander, Tolima,Valle), W Venezuela (Aragua, Falcón, Mérida, Táchira, Trujillo, Zulia), W Ecuador (Azuay, Bolívar, Cañar, Carchi, El Oro, Esmeraldas, Guayas, Imbabura, Loja, Los Ríos, Manabí, Morona-Santiago, Pichincha, Tungurahua) and W Peru (Cajamarca, Huancavelica, Piura, La Libertad, Lima), NSL–3400 m.

Sources: Dixon, 1983e, Pérez-Santos, 1986, Bernal-Carlo, 1994, Rivas-Fuenmayor & Fuentes, 2002, Savage, 2002, Rojas-Runjaic et al., 2007, Navarrete et al., 2009 and Rojas-Morales, 2012b.

Remarks: Original orthography corrected in errata and addenda sheet *fide* Cope (1862e: 594).

10. *Liophis festae* (Peracca, 1897f). Boll. Mus. Zool. Anat. Comp. Univ. Torino 12(300): 16–17. (*Rhadinaea festae*)

Type: Holotype, MZUT 227 (formerly MZUT 2178), an adult male (E. Festa, Sept. 1895–July 1897).

Type locality: "Valle del Rio Santiago, Ecuador" [= Río Santiago, W Loreto, E Peru, ca. 3°49'S, 77°45'W, elevation 215 m].

Distribution: Eastern Ecuador (Chinchipe-Zamora, Morona-Santiago, Napo, Pastaza) and N Peru (Amazonas, Cajamarca), 200–1300 m.

Sources: Dixon & Markezich, 1979 and Frota & Yuki, 2001.

Remarks: Photograph of the holotype in Andreone & Gavetti (2007: fig. 11). Occurs in S Colombia *fide*

Dixon (1989: 13) but not listed *fide* Pérez-Santos & Moreno, 1988.

11. *Liophis frenatus* (F. Werner, 1909b). Mitt. Naturhist. Mus. Hamburg 26: 224. (*Rhadinaea frenata*)

Synonyms: *Rhadinaea brazili* Amaral, 1923, and *Liophis brazili* Amaral, 1926a.
Type: Holotype, ZMH, a 430 mm male (Rolle), destroyed in July 1943 during World War II.
Type locality: "Paraguay."
Distribution: Southeastern South America. Southeastern Brazil (Mato Grosso do Sul, S Minas Gerais, Paraná, São Paulo), Paraguay (Alto Paraná, Boquerón, Itapúa, Presedente Hayes, San Pedro) and Argentina (Corrientes, Misiones), 760–880 m.
Sources: Hoge et al., 1976, Dixon, 1983a, Freitas, 1999, Giraudo, 1999, Valdujo & Nogueira, 2001, Arzamendia & Giraudo, 2002 and D.S. Fernandes et al., 2002 and Cacciali, 2008.

12. *Liophis guentheri* Peracca, 1897b. Boll. Mus. Zool. Anat. Comp. Univ. Torino 12(274): 11–12.

Synonym: *Erythrolamprus albertguentheri* Grazziotin, Zaher, Murphy, Scrocchi, Benavides, Zhang & Bonatto, 2012 *(nomen substitutum).*
Types: Syntypes (6), MZUT 1510.1–4 (formerly MZUT 1964), longest syntype 890 mm (A. Borelli, 1895–1896), BMNH 1946.1.5.69, a female (H. Druce), and BMNH unnumbered.
Type locality: "Caiza (Chaco boliviano)" [= Caiza, ext. S Tarija Dept., S Bolivia, 22°02'S, 63°41'W, elevation 625 m].
Distribution: Southern South America. Southern Bolivia (Tarija), Paraguay (Chaco, Presidente Hayes) and N Argentina (Chaco, Formosa, Salta, Santiago del Estero), 130–625 m.
Sources: Dixon, 1987, Cei, 1994 and Leynaud & Bucher, 1999.

L

13. *Liophis ingeri* Roze, 1958c. Acta Biol. Venez. 2(25): 303–305, fig. 2. (*Liophis cobella ingeri*)

Type: Holotype, FMNH 74038, a 630 mm male (J.A. Steyermark & J. Wurdack, 12 Feb. 1955).
Type locality: "Chimantá Tepui, Estado Bolívar, Venezuela. Colectado entre rocas a log largo del río Tirica, en la sección central del campo en la cumber; 1,900 metros de altura."
Distribution: Southeastern Venezuela (Bolívar), 1900 m.
Sources: D.S. Fernandes et al., 2002 and C.W. Myers & Donnelly, 2008.
Remarks: Previously a subspecies of *L. cobella*.

14. *Liophis jaegeri* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 37. (*Coronella jaegeri*)

Synonyms: *Liophis dorsalis* W.C.H. Peters, 1863c, *Aporophis coralliventris* Boulenger, 1894c, and *Rhadinaea lineata* Jensen, 1900 (*nomen praeoccupatum*).
Types: Syntypes (2), BMNH 1946.1.5.78, a 584 mm female (G. Gardiner, 1836–1841) and BMNH 1946.1.9.12, a juvenile female (M. Clausen).
Type locality: "Brazil."
Distribution: Southeastern South America. Southeastern Brazil (Bahia, Espírito Santo, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rio Grande do Sul, Santa Catarina, São Paulo), Paraguay (Alto Paraná, Amambay, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, San Pedro, Concepción Is.), S Uruguay (Artigas, Canelones, Montevideo, Rocha, Salto) and NE Argentina (Buenos Aires, Chaco, Corrientes, Entre Ríos, Formosa, Misiones, Santa Fe, Treinta y Tres), NSL–850 m.
Sources: Boulenger, 1894a, Miranda et al., 1983, Dixon, 1985b, 1987a, Gudynas, 1989, J.D. Williams & Francini, 1991, Cei, 1994, Freitas, 1999, Leynaud & Bucher, 1999, Carreira-Vidal et al., 2005, Cacciali, 2008 and Prigioni et al., 2011.

15. *Liophis janaleeae* Dixon, 2000a. Copeia 2000 (2): 487–488.

Type: Holotype, BMNH 1874.8.4.62, a 422 mm male (A.H. Roff, 1874).
Type locality: "Moyobamba, Peru, 854 m,"[= Moyobamba, N San Martín Prov., Peru, 6°02'S, 76°58'W, elevation 850 m].
Distribution: Northern Peru (Huánuco, San Martín), 850–2700 m.

16. *Liophis juliae* (Cope, 1879). Proc. Amer. Philos. Soc. 18: 274–275. (*Aporophis juliae*)

Synonyms: *Leimadophis mariae* T. Barbour, 1914a, and *Dromicus juliae copeae* H.W. Parker, 1936b.
Type: Holotype, USNM 10152, a 640–668 mm female (F.A. Ober, 1877).
Type locality: "Island of Dominica" [= Dominica, Lesser Antilles].
Distribution: Lesser Antilles (Dominica, Guadeloupe: Basse-Terre and Grande-Terre, Marie-Galante, Terre-de-Bas des Saintes).
Sources: A. Schwartz & Thomas, 1975, Dixon, 1981, A. Schwartz & R.W. Henderson, 1991, Malhotra & Thorpe, 1999, Breuil, 2002, 2003 and R.W. Henderson & Powell, 2009.

17. *Liophis maryellenae* Dixon, 1985b. Proc. Biol. Soc. Washington 98(2): 295–297, fig. 2b.

Type: Holotype, AMNH 62202, a 325 mm male (R. M. Gilmore, 7 March 1936).
Type locality: "Annapolis (16°20'S-48°58'W), Goias, Brazil."
Distribution: Southeastern Brazil (W Bahia, Distrito Federal, S Goiás, Minas Gerais, Tocantins), 600–1040 m.
Sources: Dixon, 1987, Argôlo, 1999a, Freitas, 1999, Valdujo & Nogueira, 2001 and França, 2004.

18. *Liophis melanotus* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 534. (*Coluber melanotus*)

Synonyms: *Coluber raninus* Merrem, 1820, *Coluber vittatus* Hallowell, 1845a, *Liophis melanonotus* Cope, 1860e *(nomen emendatum), Aporophis crucifer* Ahl, 1925, *Leiphis melanotus* – Briceño-Rossi, 1934 *(nomen incorrectum), Liophis melanotus lamari* Dixon & Michaud, 1992, and *Liophis melanotus nesos* Dixon & Michaud, 1992.
Type: Lectotype, a 457–610 mm specimen described and illustrated in Seba (1735: 62, pl. 62, fig. 3), designated herein.
Type locality: "Africana, Promontorii Bonae Spei" [= Cape of Good Hope, South Africa] (in error *fide* Dixon, 1989: 15) via lectotype selection.
Distribution: Northern South America. Colombia (Antioquia, Arauca, Atlántico, Bolívar, Boyaca, Cesar, Córdoba, Cundinamarca, La Guajira, Magdalena, Meta, Santander del Norte, Sucre, Tolima, Valle del Cauca), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia, Cubagua and Margarita Is.) and Trinidad and Tobago (Tobago, Trinidad), NSL–2630 m.
Sources: Roze, 1966a, Emsley, 1977, Lancini, 1986, Pérez-Santos, 1986, A. Schwartz & R.W. Henderson, 1988, 1991, Dixon & Michaud, 1992, Gorzula & Señaris, 1998, Renjifo & Lundberg, 1999, Markezich, 2002, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Navarrete et al., 2009 and Ugueto & Rivas, 2010.
Remarks: Grenada record rejected *fide* Emsley (1977: 222).

19. *Liophis miliaris* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 220. (*Coluber miliaris*)

Synonyms: *Coluber merremii* Wied-Neuwied, 1821, *Coluber dictyodes* Wied-Neuwied, 1824b, *Coluber bicolor* A. Reuss, 1834, *Ablabes purpurans* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Coronella australis* A.C.L.G. Günther, 1858, *Ophiomorphus merremii* – Cope, 1862b *(nomen incorrectum), Liophis collaris* Jan, 1863a, *Coronella orientalis* A.C.L.G. Günther, 1864a, *Rhadinaea chrysostoma* Cope, 1868b, *Coronella poecilolaemus* A.C.L.G. Günther, 1872b, *Rhadinaea orina* L.E. Griffin, 1916, *Dromicus amazonicus* Dunn, 1922, *Rhadinaea merremii natricoides* F. Werner, 1927, and *Liophis mossoroensis* Hoge & Lima-Verde, 1973.
Type: Holotype, NHR Lin-56 (formerly MAFR), a 600 mm specimen (Dahlberg via Mus. Drottn.), designated by Gans (1964b: 39).
Type locality: "Indiis" [= India] (in error *fide* Dixon, 1989: 15). Corrected to Suriname *fide* Dixon (1983d: 799).
Distribution: South America. Southeastern Colombia (Amazonas, Cundinamarca, Meta, Tolima, Vaupés), Venezuela (Amazonas, Bolívar), E Ecuador (Morona-Santiago, Napo, Pastaza), E Peru (Loreto, Madre de Dios), N Guyana (Cuyuni-Mazaruni, East Berbice-Corentyne, Potaro-Siparuni, Upper Demerara-Berbice), N Suriname (Nickerie, Para, N Sipaliwini, Suriname), N French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Alagoas, Amapá, Amazonas, Bahia, Ceará, Espírito Santo, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Paraná, Pernambuco, Piaui, Rio de Janeiro, Rio Grande do Norte, Rio Grande Do Sul, Rondônia, Santa Catarina, São Paulo, Sergipe, Anchieta, Bom Abrigo, Cananéia, Cardoso, Comprida, Couves, Grande, Porchat, Santo Amaro, São Sebatião, São Vicente and Vitória Is.) and E Bolivia (Beni), 100–1960 m.
Sources: Gans, 1964b, Hoge & Gans, 1965, Cunha & Nascimento, 1970, Dixon, 1983d, Pérez-Santos, 1986, Chippaux, 1987, Nascimento et al., 1987, Fugler & Riva, 1990, Henle & Ehrl, 1991, J.D. Williams & Francini, 1991, Cei, 1994, Marques & Castro-Souza, 1993, Lema, 1994, Starace, 1998, Freitas, 1999, Frota & Santos, 2002, Fuentes-R., 2003, Carreira-Vidal et al., 2005, Duarte-Rocha & Van Sluys, 2006, Cicchi et al., 2007, C.W. Myers & Donnelly, 2008, Navarrete et al., 2009 and C.J. Cole et al., 2013.
Remarks: Photographs of the holotype in Gans (1964b: figs. 23a–e). Another syntype (ZMUU 28) lost long ago *fide* Lönnberg (1896: 37). Type locality restriction to the port of Santos, São Paulo State, Brazil *fide* Gans (1964b: 35) rejected by Dixon (1983d: 796).

20. *Liophis oligolepis* Boulenger, 1905b. Ann. Mag. Nat. Hist. (7) 15(89): 455.

Type: Holotype, BMNH 1946.1.4.66, a juvenile male (M.A. Robert, 1902–1905).
Type locality: "Igapé-Assu, Pará, Brazil." Emended to Igarapé-Açu, Pará, Brazil *fide* Cunha & Nascimento (1993: 73).
Distribution: Colombia, Venezuela (Amazonia), Brazil (Acre, Maranhão, Pará, Rondônia), Peru (Iquitos region) and N Bolivia, 40–100 m.
Sources: Cunha et al., 1985, Dixon & Soini, 1986 and Cunha & Nascimento, 1993.

21. *Liophis ornatus* (S.W. Garman, 1887b). Proc. Amer. Philos. Soc. 24(126): 281. (*Dromicus ornatus*)

Synonyms: *Dromicus giganteus* Jan, 1863b (*nomen nudum*), and *Leimadophis boulengeri* T. Barbour, 1914a.

Types: Syntypes (6), MCZ 6135, a 1058 mm female (S.W. Garman, 1 April 1879), MCZ 6136, a 756 mm male (S.W. Garman, 14 Feb. 1879), MCZ 6137, an 875 mm female (S.W. Garman, 14 Feb. 1879), MCZ 176765, an 857 mm female (S.W. Garman, 14 Feb. 1879), MCZ 176766, a 550 mm (svl) male (S.W. Garman, 14 Feb. 1879), and BMNH 1946.1.9.18 (formerly MCZ), a female (S.W. Garman, 14 Feb. 1879).

Type locality: "St. Lucia, West Indies." Emended to Point Castries, St. Lucia *fide* MCZ catalogue.

Distribution: Lesser Antilles (Maria Major, St. Lucia).

Sources: Dixon, 1981, A. Schwartz & R.W. Henderson, 1988, 1991 and R.W. Henderson & Powell, 2009.

Remarks: Only MCZ 6135 has locality data of St. Lucia; all others from Point Castries. Extirpated from St. Lucia *fide* R.W. Henderson & Powell (2009: 369).

22. *Liophis perfuscus* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 77.

Synonym: *Liophis rufus* Jan, 1863a.

Types: Syntypes (2), USNM 6044a–b, a 423–432 mm male and 301 mm female (T.N. Gill, 1859–1862).

Type locality: "Barbadoes" [= Barbados, West Indies].

Distribution: Lesser Antilles (Barbados).

Sources: Emsley, 1963b, Dixon, 1981, A. Schwartz & R.W. Henderson, 1991 and R.W. Henderson & Powell, 2009.

Remarks: USNM 6044 erroneously listed as holotype *fide* A. Schwartz & Thomas (1975: 183). Last seen in 1963 and possibly extinct *fide* R.W. Henderson & Powell (2009: 369).

23. *Liophis poecilogyrus* (Wied-Neuwied, 1824a). Isis von Oken 14(6): 669. (*Coluber poecilogyrus*)

Synonyms: *Coluber m-nigrum* Raddi, 1820 *(nomen rejiciendum), Coluber alternans* Lichtenstein, 1823 *(nomen rejiciendum), Natrix forsteri* Wagler *in* Spix, 1824 *(nomen rejiciendum), Coluber doliatus* Wied-Neuwied, 1825c *(nomen rejiciendum), Xenodon schottii* Schlegel, 1837, *Liophis merremii sublineatus* Cope, 1860e, *Liophis subfasciatus* Cope, 1862b, *Opheomorphus doliatus caesius* Cope, 1863d, *Liophis reginae ornatissima* Jan, 1863a, *Liophis typhlus gastrosticta* Jan, 1863a, *Liophis verecundus* Jan, 1863a, *Liophis cobella flaviventris* Jan, 1866 *in* Jan & Sordelli, 1866–1870, *Liophis reginae viridicyanea* Jan, 1866 *in* Jan & Sordelli, 1866–1870, *Opheomorphus meleagris* Cope *in* Boulenger, 1894a *(lapsus calami), Rhadinaea dichroa* F. Werner, 1899a, *Rhadinaea praeornata* F. Werner, 1909d, *Leimadophis poecilogyrus reticulatus* H.W. Parker, 1931, *Leimadophis poecilogyrus albadspersus* Amaral, 1944j, *Leimadophis poecilogyrus amazonicus* Amaral, 1944j, *Leimadophis poecilogyrus franciscanus* Amaral, 1944j, *Leimadophis poecilogyrus intermedius* Amaral, 1944j, *Leimadophis poecilogyrus montanus* Amaral, 1944j, *Leimadophis poecilogyrus pictostriatus* Amaral, 1944j, *Leimadophis poecilogyrus pineticola* Amaral, 1944j, *Leimadophis poecilogyrus platensis* Amaral, 1944j, *Leimadophis poecilogyrus xerophilus* Amaral, 1944j, and *Dromicus poecilogyrus lancinii* Hoge, Romano & Cordeiro, 1978 (*nomen substitutum).*

Types: Syntypes (5), AMNH 3593, a 517 mm female, and AMNH 3594, a 378 mm female, and ZMH 4429–31 (formerly ZMH 787) (A.P.M. zu Wied-Neuwied, 26 Nov.–19 Dec. 1815).

Type locality: "von Barra de Jucú, unweit des Flusses Espírito Santo, Brasilien" [= Barra do Jucu, near Río Espírito Santo, E Espírito Santo State, E Brazil, ca. 20°20'S., 40°20'W, elevation NSL].

Distribution: South America. Venezuela (Amazonas, Anzoátegui, Bolívar, Guárico), S Guyana (Potaro-Siparuni, Upper Takutu-Upper Essequibo), Suriname (Commewijne, Nickerie, Suriname), Brazil (Alagoas, E Amazonas, Bahia, Ceará, Distrito Federal, Espírito Santo, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Paraiba, Paraná, Pernambuco, Piauí, Rio de Janeiro, Rio Grande do Norte, Rio Grande do Sul, S Rondônia, Santa Catarina, São Paulo, Sergipe, Cardoso, Grande, Marajo, Santo Amaro and São Vicente Is.), E Bolivia (Beni, Cochabamba, La Paz, Santa Cruz, Tarija), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Boquerón, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro), Uruguay (Artigas, Cerro Largo, Colonia, Flores, Florida, Lavalleja, Maldonado, Montevideo, Paysandú, Rio Negro, Rivera, Rocha, Salto, San José, Soriano, Tacuarembó, Treinta y Tres) and Argentina (Buenos Aires, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, Jujuy, La Pampa, La Rioja, Misiones, Salta, San Luis, Santa Fe, Santiago del Estero, Tucumán), NSL–300 m.

Cole et al., 2013.

Remarks: Original description reprinted in Wied-Neuwied (1824b: 1103 & 1824c: pl. 44). Official Specific Name *fide* Opinion 1832 (ICZN, 1996a). Records from Ecuador (J.A. Peters, 1960a: 523 & J.A. Peters and Orejas-Miranda, 1970: 145) rejected *fide* Dixon (1989: 20).

24. *Liophis problematicus* C.W. Myers, 1986. Amer. Mus. Novit. (2853): 2–5, figs. 1–6.

Type: Holotype, FMNH 64733, a 275 mm male (H.H. Heller, 22 Nov.–20 Dec. 1950).

Type locality: "at 1520 m above sea level at San Juan, Tambopata [Río], Sandia [Province of], Department of Puno, Peru. (= San Juan del Oro, about 30 km ENE of the town of Sandia, on the west bank of the Río Tambopata—at 14°13' S, 69°10' W.)"

Distribution: Extreme SE Peru (NE Puno), 1520 m. Known only from type locality.

25. *Liophis reginae* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 219. (*Coluber reginae*)

Synonyms: ? *Coluber crassicaudus* Gmelin, 1789, *Coluber violaceus* Lacépède, 1789 (*nomen rejiciendum*), *Coluber graphicus* G. Shaw, 1802, *Natrix semilineata* Wagler *in* Spix, 1824, *Liophis reginae maculata* Steindachner, 1867b, *Leimadophis reginae macrosoma* Amaral, 1935e, *Leimadophis reginae maculicauda* Hoge, 1953f, *Liophis miliaris intermedius* Henle & Ehrl, 1991, and *Liophis dorsocorallinus* Esqueda, Natera, La Marca & Ilija-Fistar, 2005b.

Type: Lectotype, NHR Lin-45 (formerly MAFR), a 200–250 mm specimen (Mus. Drottn.), designated by Hoge (1964d: 57–58) and Dixon (1983b: 114).

Type locality: "Indiis" [= India] (in error *fide* Hoge, 1964d: 57). Restricted to Suriname by Hoge (1964d: 57) and Dixon (1983b: 114).

Distribution: South America. Southeastern Colombia (Amazonas, Arauca, Boyacá, Caqueta, Casanare, Meta, Putumayo, Vaupés), N Venezuela (Amazonas, Anzoátegui, Aragua, Barinas, Bolívar, Carabobo, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Trujillo, Yaracuy), Trinidad and Tobago (Tobago, Trinidad), Guyana (Barimi-Waini, Cuyuni-Mazaruni, East Berbice-Corentyne, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Takutu-Upper Essequibo), Suriname (Brokopondo, Commewijne, Coronie, Marowijne, Nickerie, Saramacca, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Acre, Alagoas, Amazonas, Bahia, Ceará, Espírito Santo, Goiás, Marahhao, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará: Marajo Is.; Pernambuco, Rio de Janeiro, Rio Grande do Sul, Rondônia, Santa Catarina, São Paulo), E Ecuador (Loja, Los Ríos, Morona-Santiago, Napo, Pastaza, Tungurahua, Zamora-Chinchipe), E Peru (Ayacucho, Cusco, Huanuco, Junin, Loreto, Madre de Dios, Pasco, San Martín), Bolivia (Beni, Chuquisaca, Cochabamba, La Paz, Pando, Santa Cruz, Tarija), Paraguay (Amambay, Central, Presidente Hayes, San Pedro) and ext. N Argentina (Formosa, Misiones, Salta), NSL–3000 m.

27. *Liophis semiaureus* (Cope, 1862d). Proc. Acad. Nat. Sci. Philadelphia 14(5): 348. (*Opheomorphus merremii semiaureus*) (*nomen corrigendum*)

Synonyms: *Opheomorphus meremmii semiaureus* Cope, 1862d *(nomen incorrigendum),* and *Liophis reginae ornata* Jan, 1863b.

Type: Holotype, USNM 4655, a female (T.J. Page [Paraguay Exped.], Sept. 1853–Jan. 1856).

Type locality: "Paraguay." Probably the lower Paraguay River *fide* Gans (1964: 39).

Distribution: Southern South America. Southern Brazil (S Rio Grande do Sul), Paraguay (Alto Paraná, Canindeyú, Central, Itapúa), Uruguay (Artigas, Canelones, Cerro Largo, Colonia, Durazno, Florida, Lavalleja, Maldonado, Montevideo, Paysandú, Rio Negro, Rivera, Rocha, Salto, San José, Treinta y Tres) and N Argentina (Buenos Aires, Córdoba, Corrientes, Entre Ríos, Formosa, Misiones, ? Salta, Santa Fe, Treinta y Tres).

Sources: Gans, 1964, J.D. Williams & Francini, 1991, Cei, 1994, Giraudo, 2002, Giraudo et al., 2006, Cacciali, 2008 and Prigioni et al., 2011.

28. *Liophis taeniogaster* Jan, 1863a. Arch. Zool. Anat. Fis. 2(2): 292–293.

Synonym: *Liophis cobella dyticus* Dixon, 1983.
Types: Syntypes (4), ZSM, an 880 mm specimen [Brazil], MHNN, an 870 mm specimen [Brazil], NMW, a 620 mm specimen [So. Amer.], and MHNG, a 500 mm specimen [So. Amer.].
Type locality: "Brasile," and "Amer. Merid" [= Brazil and South America].
Distribution: Central South America. Colombia, NE Brazil (Amapá, Bahia, Ceará, Mato Grosso, Pará, Bantanal Is.), Ecuador, Peru (Loreto, Madre de Dios) and Bolivia.
Sources: D.S. Fernandes et al., 2002 and Duellman, 2005.
Remarks: A valid species *fide* D.S. Fernandes et al. (2002: 9) and Frota & Santos (2003: 388).

29. *Liophis taeniurus* Tschudi, 1845. Arch. Naturg. 11(1): 164.

Type: Lectotype, MHNN 9 (formerly MZN 79), a 737+ mm female (J.J. von Tschudi, Aug. 1838–Feb. 1841), designated by Schätti (1986a: 101).
Type locality: "Dans les régions boisées chaudes (du Pérou)" [= hot rainforest regions of Peru] via lectotype selection.
Distribution: Northwestern South America. Colombia (Nariño), Ecuador (Loja, Pichincha, Tungurahua), E Peru (Ayacucho, Cajamarca, Cusco, Huanuco, Junín, Loreto, Pasco, Puno) and Bolivia (La Paz), 1400–3700 m.
Sources: Dixon & Markezich, 1979, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988 and Dixon, 2000a.
Remarks: Original description reprinted in Tschudi (1846: 51, pl. 5). Page 164 of original description misnumbered "166."

30. *Liophis torrenicolus* Donnelly & Myers, 1991. Amer. Mus. Novit. (3017): 41–45, figs. 26, 29. (*Liophis torrenicola*)

Type: Holotype, AMNH 136211 (formerly CWM 19983), a 457 mm male (C.W. Myers & M.A. Donnelly, 26 Feb. 1990).
Type locality: "Summit Camp 1, 1030 m elevation, north side of Cerro Guaiquinina, Bolívar, Venezuela."
Distribution: Southeastern Venezuela (Amazonas, Bolívar), 1030–2000 m.
Sources: Roze, 1958c, D.S. Fernandes et al., 2002, Barrio-Amorgós & Brewer-Carias, 2008, C.W. Myers & Donnelly, 2009 and Navarrete et al., 2009.
Remarks: Possibly a synonym of *L. cobellus.*

31. *Liophis trebbaui* Roze, 1958c. Acta Biol. Venez. 2(22): 243–270, fig. 11.

Type: Holotype, AMNH 61019, a 583 mm female (W.H. Phelps, 2 April 1938), lost *fide* C.W. Myers & Donnelly (2008: 126).
Type locality: "Auyantepui, Estado Bolívar, Venezuela."
Distribution: Eastern Venezuela (Bolívar), 1020 m.
Sources: D.S. Fernandes et al., 2002 and C.W. Myers & Donnelly, 2008.

32. *Liophis triscalis* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 224. (*Coluber triscalis*)

Synonym: *Coluber corallinus* Linnaeus, 1758.
Type: Lectotype, NHR Lin-146 (formerly MAFR), a 450 mm specimen described and illustrated in Seba (1735: 18–19, pl. 17, fig. 1) (L. Ulrika, 1752), designated herein.
Type locality: "Indiis" [= India] (in error *fide* Dixon, 1981: 302) via lectotype selection. Corrected to Curaçao *fide* Roze (1966a: 163).
Distribution: Netherlands Antilles (Curaçao).
Sources: Brongersma, 1940, 1959, Roze, 1966a, Dixon, 1981 and Buurt, 2001, 2005.
Remarks: Holotype of *Coluber triscalis* Linnaeus lost *fide* Dixon (1981: 302). NHR Lin-146 is holotype of *Coluber corallinus* Linnaeus.

33. *Liophis typhlus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 218. (*Coluber typhlus*)

Synonyms: ? *Coluber albiventris* Reuss, 1834, *Liophis typhlus prasina* Jan, 1863b (*nomen nudum*), *Liophis typhlus olivacea* Jan, 1863a, *Xenodon isolepis* Cope, 1870, *Opheomorphus brachyurus* Cope, 1887b, *Liophis elaeoides* L.E. Griffin, 1916, *Liophis macrops* F. Werner, 1925, and *Liophis elacoides* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type: Holotype, NHR (formerly MDG), a 630 mm specimen.
Type locality: "Indiis" [= India] (in error *fide* Hoge, 1964d: 58).
Distribution: South America. Eastern Colombia (Amazonas, Boyacá, Caqueta, Casanare, Cundinamarca, Meta, Putumayo, Vaupés), Venezuela (Amazonas, Bolívar, Monagas), Guyana (Barima-Waini, Cuyuni-Mazaruni, Demerara-Mahaica, East Berbice-Corentyne, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Demerara-Berbice), Suriname (Commewijne, Nickerie, Paramaribo, Saramacca), French Guiana (Cayenne, Saint-Laurent-du-Maroni), Brazil (Acre, Amapá, Amazonas, Bahia, Distrito Federal, Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Pernambuco, Rio de Janeiro, Rondônia, São Paulo), E Ecuador (Morona-Santiago, Napo, Pastaza), E Peru (Amazonas, Huanuco, Junín, Loreto, Madre de Dios, Pasco, San Martín), SE Bolivia (Beni, Cochabamba, La Paz, Santa Cruz) and N Paraguay, 100–1640 m.

L

Sources: Amaral, 1926b, Beebe, 1946, Roze, 1966a, Cunha & Nascimento, 1978, Miranda & Couturier, 1984, Lancini, 1986, Chippaux, 1987, Dixon, 1987, Starace, 1998, Freitas, 1999, Leynaud & Bucher, 1999, Duellman, 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.

34. *Liophis viridis* A.C.L.G. Günther, 1862a. Ann. Mag. Nat. Hist. (3) 9(50): 58–59, pl. 9, fig. 2.

Synonym: *Liophis typhlus prasina* Jan, 1863b *(nomen nudum),* and *Liophis typhlus prasina* Jan, 1866 *in* Jan & Sordelli, 1866–1870.
Type: Holotype, BMNH 1946.1.5.69, a 559 mm female (native, 1858–1861).
Type locality: "Pernambuco" [= Pernambuco State, Brazil].
Distribution: Northeastern Brazil (Alagoas, Bahia, Ceará, Maranhão, Minas Gerais, Rio Grande do Norte, Paraíba, Pernambuco, Piauí, Sergipe), NSL–510 m.
Sources: K.P. Schmidt & Inger, 1951, Cordeiro & Hoge, 1974, Vanzolini et al., 1980, Vitt, 1983, Dixon, 1987 and Freitas, 1999.
Remarks: Two types reported *fide* A.C.L.G. Günther (1862a: 59) but BMNH catalogue lists only one. If second type is found, BMNH 1946.1.5.69 will become lectotype via designation by Dixon (1987a: 180).

35. *Liophis vitti* Dixon, 2000a. Copeia 2000(2): 485–488, figs. 3a–b.

Type: Holotype, KU 179506, a 496 mm male (J.D. Lynch, 31 May 1977).
Type locality: "Maldonado, 1410 m, Carchi, Ecuador (0°54'N; 78°06'W)."
Distribution: Extreme N Ecuador (Carchi), 1070–1650 m. Known only from type locality.

36. *Liophis williamsi* (Roze, 1958a). Breviora (88): 1. (*Urotheca williamsi*)

Type: Holotype, MCZ 51329, a 420 mm female (G. Marcuzzi, Oct. 1949).
Type locality: "El Junquito, Distrito Federal, Venezuela, 1900 meters."
Distribution: Cordillera de la Costa of N Venezuela (Aragua, Distrito Federal), 1200–2000 m.
Sources: Roze, 1964, Test et al., 1966, Dixon, 1983b, C.W. Myers, 1986 and Navarrete et al., 2009.

37. *Liophis zweifeli* (Roze, 1959c). Amer. Mus. Novit. (1934): 4–7, fig. 1. (*Leimadophis zweifeli*)

Type: Holotype, MBUCV 95, a 645 mm female (J. Racenis, 6 Sept. 1949).
Type locality: "Rancho Grande in the state of Aragua, Venezuela, at an elevation of 1100 meters."
Distribution: Northern Venezuela (Amazonas, Aragua, Carabobo, Distrito Federal, Miranda), 675–1800 m.
Sources: Roze, 1966, Dixon, 1983b and Rivas-Fuenmayor et al., 2012.
Remarks: A valid species *fide* Rivas-Fuenmayor et al. (2012: 46). Status of Amazonas population uncertain *fide* Rivas-Fuenmayor et al. (2013: 46).

LIOPHOLIDOPHIS Mocquard, 1904 (Pseudoxyrhophiidae)

Synonym: *Liopholiodophis* – Maass-Berlin, 1933 *(nomen incorrectum).*
Type species: *Liopholidophis grandidieri* Mocquard, 1904a.
Distribution: Madagascar.
Sources: Jourdran, 1904, Guibé, 1958, Domergue, 1973, Cadle, 1996a, Underwood, 1999, Nagy et al., 2003, Glaw & Vences, 2007, Glaw et al., 2007a, Kelly et al., 2009 and Zaher et al., 2009.
Remarks: Closely related to *Liophidium fide* Glaw et al. (2007: 299).

1. *Liopholidophis dimorphus* Glaw, Nagy, Franzen & Vences, 2007a. Zool. Scripta 34(4): 294–297, figs. 3–4.

Type: Holotype, ZSM 252/2004 (formerly FGZC 491), a 1072 mm male (F. Glaw, M. Puente, R.D. Randrianiaina & A. Razafimanantsoa, 21 Feb. 2004).
Type locality: "Montagne d'Ambre, northern Madagascar, 12°30'S, 49°10E, c. 800-1000 m above sea level."
Distribution: Northern Madagascar (Antsiranana), 800–1000 m. Known only from type locality.

2. *Liopholidophis dolicocercus* (Peracca, 1892). Bol. Mus. Zool. Anat. Comp. Univ. Torino 7(112): 1–3, pl., figs. 1, 1a–d. (*Dromicus dolicocercus*)

Type: Holotype, MZUT 857, a 427 mm male.
Type locality: "Madagascar – Valle dell'Umbi (Andrangoloka)" [= Umbi River Valley, Andrangolaoka, Toamasina Prov., E Madagascar, 19°02'S, 47°55'E, elevation 1400 m].
Distribution: Eastern Madagascar (Antsiranana, Fianarantsoa, Toamasina), 800–1400 m.
Remarks: Holotype listed as MZUT 796 *fide* Cadle (1996a: 460).

3. *Liopholidophis grandidieri* Mocquard, 1904a. Bull. Mus. Hist. Nat., Paris 10(6): 304–305.

Type: Holotype, MNHN 1902.103, a 1636 mm male (A. Grandidier, 1867–1891).
Type locality: "l'embouchure du Saint-Augustin, Madagascar" [= mouth of Saint-Augustin River, Madagascar] (in error *fide* Cadle, 1996a: 460).

Corrected to town of Ianantsony, mouth of Onilahy River, SW Toliara Prov., SW Madagascar [ca. 23°33'S, 43°46'E, elevation NSL] *fide* Cadle (1996a: 460).

Distribution: Southern Madagascar (Fianarantsoa, SW Toliara, Toamasina), NSL–1375 m.

4. *Liopholidophis rhadinaea* Cadle, 1996a. Bull. Mus. Comp. Zool. 154(5): 373–380, figs. 1–2.

Type: Holotype, MCZ 180395, a 720 mm male (J.E. Cadle, 20–26 Dec. 1991).

Type locality: Talatakely, Ranomafana National Park, 950–1,000 m, Fivondronana Ifanadiana, Fianarantsoa Province, Madagascar [21°16'S, 47°25'E].

Distribution: Eastern Madagascar (Fianarantsoa, Toamasina), 235–1000 m.

5. *Liopholidophis sexlineatus* (A.C.L.G. Günther, 1882). Ann. Mag. Nat. Hist. (5) 9(52): 264–265, 2 figs. (*Dromicus sexlineatus*)

Synonym: *Dromicus macrocercus* A.C.L.G. Günther, 1882.

Types: Syntypes (3), BMNH 1946.1.13.17–19 (formerly BMNH 1882.5.8.2–4), three females, longest syntype 610 mm (W.D. Cowan, 1874–1881).

Type locality: "Eastern Betsileo, Madagascar" [= N Fianarantsoa Prov., cen. Madagascar].

Distribution: Eastern Madagascar (Antananarivo, Fianarantsoa, Toamasina), 670–2450 m.

Source: Langrand & Gordman, 1996.

6. *Liopholidophis varius* (J.G. Fischer, 1884b). Jahrb. Hamburg. Wiss. Anst. 1: 36–38, pl. 3, fig. 8. (*Leptophis varius*)

Synonyms: *Liopholidophis pinguis* H.W. Parker, 1925b, and *Philodryas pallidus* F. Werner, 1927.

Type: Lectotype, ZMH 4319 (formerly ZMH 1175), a 617–623 mm female, designated by Cadle (1998: 434).

Type locality: "Madagascar" via lectotype selection.

Distribution: Northeastern Madagascar (Andasibe, Antananarivo, cen. Toamasina) 435–1065 m.

Sources: H.W. Parker, 1925b, Cadle, 1998 and R.A. Thomas et al., 2001.

Remarks: Photographs of the lectotype in Cadle (1998: fig. 1).

L

LIOTYPHLOPS W.C.H. Peters, 1881b (*nomen substitutum*) (Anomalepididae)

Synonyms: *Rhinotyphlops* W.C.H. Peters, 1857b (*nomen praeoccupatum*), *Liotyphiops* – W.W. Tanner & Avery, 1982 *(nomen incorrectum), Hawkeswoodus* Hoser, 2012am *(nomen illegitimum),* and *Kraussus* Hoser, 2012am *(nomen illegitimum).*

Type species: *Rhinotyphlops albirostris* W.C.H. Peters, 1857b.

Distribution: Central America and South America.

Sources: Robb & Smith, 1966, J.A. Peters & Orejas-Miranda, 1970, Hahn, 1980a, Dixon & Kofron, 1984, McDiarmid et al., 1999, Tipton, 2005, Freire et al., 2007, Silva Haad et al., 2008 and Centeno et al., 2010.

Remarks: An undescribed species from Barra do Tapirapes, Mato Grosso, Brazil *fide* Dixon & Kofron (1984: 259).

1. *Liotyphlops albirostris* (W.C.H. Peters, 1857b). Mber. Königl. Akad. Wiss. Berlin 1857(8): 402. (*Rhinotyphlops albirostris*)

Synonyms: *Typhlops emunctus* S.W. Garman, 1884, *Helminthophis petersii* Boulenger, 1889b, *Helminthophis canellei* Mocquard, 1903, *Helminthophis bondensis* L.E. Griffin, 1916, *Liotyphlops cucutae* Dunn, 1944c, *Liotyphlops caracasensis* Roze, 1952b, and *Liotyphlops rowani* H.M. Smith & Grant, 1958b.

Types: Syntypes (2), ZMB 9529 and ZMB 63438, a 190 mm and 158 mm specimen (J. Warszewicz, 1844–1850).

Type locality: "Veragua" [Veraguas, Veraguas Prov., Panama, 8°52'N, 80°54'W, elevation 35 m].

Distribution: Lower Central America and NW South America. Southwestern Costa Rica, Panama (Coclé, Canal Zone, Chiriquí, Colón, Panamá, Veraguas, Barro Colorado and San José Is.), NW Colombia (Antioquia, Atlántico, Bolívar, Córdoba, Cundinamarca, Magdalena, Meta, Santander, Santander del Norte, Sucre, Tolima), N Ecuador (Guayas), NW Venezuela (Aragua, Carabobo, Cojedes, Distrito Federal, Falcón, Mérida, Miranda, Portuguesa, Sucre, Zulia, Toas Is.) and Netherlands Antilles (Bonaire, Curaçao), NSL–1640 m.

Sources: Bocourt, 1882 *in* Duméril, Bocourt & Mocquard, 1870–1909, Brongersma, 1940, 1959, E.H. Taylor, 1951, Roze, 1952b, 1966a, Valdivieso & Tamsitt, 1963, Savage, 1980a, 2002, Pérez-Santos, 1986, Lancini & Kornacker, 1989, Mijares-Urrutia & Arends, 2000, Markezich, 2002, La Marca & Soriano, 2004, Rojas-Runjaic & Rivero, 2004, Buurt, 2005 and Navarrete et al., 2009.

2. *Liotyphlops anops* (Cope, 1899b). Philadelphia Comm. Mus. Sci. Bull. (1): 10–11, pl. 4, figs. 1a–f. (*Helminthophis anops*)

Synonym: *Liotyphlops metae* Dunn, 1944c.
Types: Syntypes (2), PCM 14a–b, longest syntype 372 mm, lost *fide* Dunn (1944c: 48).
Type locality: Probably "in the neighborhood of Bogota, department of New Grenada, Colombia." [= near Bogotá (4°36'N, 74°05'W, elevation 2620 m), Cundinamarca Dept., Colombia]. Probably within a 50 mile radius of Bogotá *fide* Dunn & Stuart (1951: 56).
Distribution: Central Colombia (Cundinamarca, Meta, Santander), 250–1040 m.
Sources: Dunn, 1944c and Pérez-Santos, 1986.
Remarks: Syntypes exhibited in the New Granada Dept. of 1898 Chicago World Exposition. Some Colombian (Cundinamarca & Santander) records might be *L. argaleus fide* Dixon & Kofron (1984: 260).

3. *Liotyphlops argaleus* Dixon & Kofron, 1984. Amphibia-Reptilia (1983) 4(2–4): 261–262, fig. 6 (paratype).

Type: Holotype, MCZ 67933 (formerly MLS 50), a 266 mm specimen (H. Nicéforo-María, 1922–1983).
Type locality: "La Selva, Cundinamarca, Colombia" (in error). Corrected to Hacienda "La Selva," south of Cúcuta, Norte de Santander Dept., Colombia, ca. 7°54'N, 72°30'W, elevation 300 m *fide* MCZ catalogue and data label.
Distribution: Northern Colombia (Cundinamarca, Norte de Santander, Santander), 160–1600 m.
Source: Pérez-Santos & Moreno, 1988.
Remarks: Discussion of type locality *fide* Dixon & Kofron (1984: 262) and Pérez-Santos & Moreno (1988: 414) irrelevant as the two specimens sent by Nicéforo-Maria (MLS 50–51, now MCZ 67933–67934) had the specific locality of Hacienda La Selva.

4. *Liotyphlops beui* (Amaral, 1924a). Proc. New England Zool. Club 9: 29. (*Helminthophis beui*)

Type: Holotype, IB 1806, a 290 mm specimen (T. Beu, 1915–1924), destroyed by fire 15 May 2010.
Type locality: "Butantan, S. Paulo, Brazil" [= Bairro Butantan, São Paulo, São Paulo State, SE Brazil, 23°43'S, 46°43'W, elevation 750 m].
Distribution: Southeastern Brazil (Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Paraná, Rio Grande do Sul, Rio de Janeiro, São Paulo), SE Paraguay (Alto Paraná) and ext. NE Argentina (Misiones), 155–915 m.
Sources: Vanzolini, 1986, Cei, 1994, Giraudo, 1994, Lema, 1994 and Marques et al., 2001, 2004, 2005.

5. *Liotyphlops caissara* Centeno, Sawaya & Germano, 2010. Herpetologica 66(1): 88–89, figs. 2–3.

Type: Holotype, IB 76774, an 195 mm female (F.C. Centeno & K.R. Zamudio, 17 Jan. 2007), destroyed by fire 15 May 2010.
Type locality: "Trilha da Água Branca in Ilha de São Sebastião (23° 50' 45" S, 45° 21' 12" W), municipality of Ilhabela, São Paulo state, southeastern Brazil, 300 m above sea level."
Distribution: Southeastern Brazil (São Paulo), 300 m. Known only from type locality.

6. *Liotyphlops haadi* Silva-Haad, Franco & Maldonado, 2008. Biota Colomb. 9(2): 296–297, figs. 1–2.

Type: Holotype, IAvH 5434, a 180 mm specimen (V. Tanimuka, Feb. 2007).
Type locality: "southern Colombian Amazon, in the Amazonas Department, middle region of the Caquetá River, Vereda de los Engleses, La Pedrera district (01°19'42"S, 69°30'33"W)."
Distribution: Southeastern Colombia (Amazonas), 65–85 m.

L

7. *Liotyphlops schubarti* Vanzolini, 1948. Rev. Bras. Biol. 8(3): 379–381, figs. 1–2.

Type: Holotype, MZUSP 2665 (formerly DZUSP 425), a 191 mm male (O. Schubart, 1936–1948).
Type locality: "Cachõeira de Emas, no Município de Pirassununga, Estado de São Paulo" [= Brazil, 21°55'S, 47°21'W, elevation 585 m].
Distribution: Southeastern Brazil (Minas Gerais, São Paulo), 585–700 m.

8. *Liotyphlops ternetzii* (Boulenger, 1896a). Cat. Snakes Brit. Mus. 3: 584. (*Helminthophis ternetzii*)

Synonyms: *Helminthophis incertus* Amaral, 1924a, and *Helminthophis collenettei* H.W. Parker, 1928.
Type: Holotype, BMNH 1946.1.11.77 (formerly BMNH 1895.5.17.282), a 335 mm specimen (C. Ternetz, 1895–1896).
Type locality: "Paraguay."
Distribution: Southeastern South America. Guyane, Brazil (E Amazonia, Brazilia, Ceará, Distrito Federal, Goiás, Mato Grosso, Minas Geraís, Pará, Paraná, Rio de Janeiro, São Paulo), S Paraguay (Amambay, Caazapá, Canendiyu, Itapúa, Presidente Hayes), Uruaguay (Rio Negro, Salto) and N Argentina (Corrientes, Entre Ríos, Formosa, Jujuy, Misiones, Salta), 25–915 m.
Sources: Amaral, 1955a, Roig & Cei, 1961, Cunha & Nascimento, 1975b, 1978, 1993, Melgarejo & Meneghel, 1984, Chippaux, 1987, Giraudo, 1994, Kretzschmar, 1998, Starace, 1998, Carreira-Vidal, 2004, Carreira-Vidal et al., 2005, Cacciali, 2008 and Loebmann, 2009b.

Remarks: Possibly occurs in French Guiana *fide* Starace (1998: 71). Type locality of Suriname for *Helminthophis incertus* Amaral rejected *fide* Dixon & Kofron (1984: 256).

9. *Liotyphlops trefauti* Freire, Caramaschi & Argôlo, 2007. Zootaxa (1393): 20–23, figs. 1a–e (paratype).

Type: Holotype, MZUSP 12178, a 362 mm male (E.M.X. Freire, 4 Nov. 1994).
Type locality: "Fazenda Bananeira, Municipality of Murici (9°14'S, 35°48'W, 640 m), State of Alagoas, Brazil."
Distribution: Northeastern Brazil (Alagoas, Bahia), 50–640 m.
Source: Freire et al., 2007.

10. *Liotyphlops wilderi* (S.W. Garman, 1883). Sci. Observ. 4(5–6): 48. (*Typhlops wilderi*)

Synonym: *Helminthophis guentheri* Boulenger, 1889b.
Types: Syntypes (3), MCZ 5126, a 169 mm female, MCZ 19585 (formerly CU), a 185–187 mm female, FMNH 73387 (formerly CU & MCZ 18138), a 170 mm specimen (J.G. Branner, 1878–1879).
Type locality: "São Cyriaco, Brazil" [= Cipriano, Minas Gerais State, SE Brazil, 19°45'S, 43°57'W, elevation 850 m]. Emended to near Serra Providencia, Minas Gerais, Brazil *fide* Hammar (1908: 335).
Distribution: Southeastern Brazil (Minas Gerais, Rio de Janeiro, Grande Is.) and Paraguay.
Sources: Boulenger, 1908e, Hammar, 1908 and Amaral, 1978.
Remarks: MCZ 5126 was recorded as the holotype in 1883 by S.W. Garman *fide* MCZ catalogue and specimen data label. Two CU specimens were exchanged with MCZ in May 1924 (MCZ 18138, 19585s). The former specimen was subsequently exchanged with FMNH in 1954 (FMNH 73387). Hammar (1908: 335) mentioned two CU specimens as the types and that three specimens were from Cyriaco, near Serra Providencia, Minas Gerais, Brazil. Hahn (1980a: 5) suggested the two CU syntypes were lost, and Dixon & Kofron (1984: 253) mentioned one being lost.

†*LITHOPHIS* Marsh, 1871 (Boidae)

Type species: †*Lithophis sargenti* Marsh, 1871.
Distribution: Middle Eocene of USA.
Sources: Gilmore, 1938, Holman, 1979b and Rage, 1984a.

1. †*Lithophis sargenti* Marsh, 1871. Amer. J. Sci. Arts (3) 1(5): 325.

Type: Holotype, YPM 2719, one fragmentary trunk vertebra (H.B. Sargent, 1870).
Type locality: "in the Eocene 'Mauvaises Terres' beds at Grizzly Buttes, near Fort Bridger, Wyoming Territory" [Uinta Co., Wyoming, USA, Bridger formation, middle Eocene].
Distribution: Middle Eocene (Bridgerian: 46.2–50.3 mya) of USA (Wyoming). Known only from type locality.

LOVERIDGELAPS McDowell, 1970 (Elapidae)

Type species: *Hoplocephalus elapoides* Boulenger, 1890b.
Distribution: Solomon Islands.
Sources: McDowell, 1970, M. McCoy, 1980, Golay et al., 1993, O'Shea, 1996, Keogh, 1998, David & Ineich, 1999, Zaher et al., 2009 and Hoser, 2012e.

1. *Loveridgelaps elapoides* (Boulenger, 1890b). Proc. Zool. Soc. London 58(1): 30, pl. 2, fig. 3. (*Hoplocephalus elapoides*)

Type: Holotype, BMNH 1946.1.18.98 (formerly BMNH 1889.3.29.19), a 750 mm male (C.M. Woodford, 1886–1889).
Type locality: "Florida Island, or Gela, north of Guadalcanal, Solomon Islands" [= Nggela Sule Is., South Solomons, bet. 9°00–12'S & 160°03–25'E].
Distribution: South Solomons (Florida, Gizo, Guadalcanal, Malaita, Nggela and Santa Isabel Is.).

LOXOCEMUS Cope, 1861d (Loxocemidae)

Synonyms: *Plastoseryx* Jan, 1862a, *Platoseryx* Marschall, 1873 *(nomen emendatum), Loxonemus* – Boucard, 1884 *(nomen incorrectum),* and *Loxocenus* – Velasco, 1890a *(nomen incorrectum).*
Type species: *Loxocemus bicolor* Cope, 1861d.
Distribution: Mesoamerica.
Sources: Bocourt, 1882, *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, E.H. Taylor, 1940c, 1954, Mertens, 1951, G. Haas, 1955, Nelson & Meyer, 1967, McDowell, 1975a, L.D. Wilson & Meyer, 1985, Mora, 1987, Pitts et al., 1992, Cundall et al., 1994, García & Ceballos, 1994, McDiarmid et al., 1999, Savage, 2002, Wilcox et al., 2002, J.C. Murphy & Schlager, 2003, G. Köhler et al., 2005, N. Herrera et al., 2007 and M. Lee et al., 2007.

1. *Loxocemus bicolor* Cope, 1861d. Proc. Acad. Nat. Sci. Philadelphia 13(3): 77.

Synonyms: *Xenopeltis alveolarius* Wagler, 1833 (*nomen oblitum), Plastoseryx bronni* Jan, 1862a, *Loxocemus sumichrasti* Bocourt, 1876, and *Loxocemus unicolor* Herter, 1960 (*nomen nudum*).

Type: Holotype, USNM 4948 (J.M. Dow, 1860–1861), lost *fide* H.M. Smith & Taylor (1945: 27).

Type locality: "La Union, San Salvador" [= La Unión, La Unión Dept., ext. E El Salvador, 13°29'N, 87°54'W, elevation 65 m].

Distribution: Mesoamerica. Southwestern Mexico (Chiapas, Colima, Guerrero, Jalisco, Michoacán, Morelos, Nayarit, Oaxaca: Laguna Superior Is.), Central America: SE Guatemala (Juitapa), W Honduras (Atlántida, Choluteca, Comayagua, Cortés, Valle, Yoro), ext. E El Salvador (La Libertad, La Unión, San Miguel, Santa Ana, San Vincinte, Sonsonate, Usulután), W Nicaragua (Carazo, Chinandega, León, Managua, Masaya, Matagalpa) and NW Costa Rica (Guanacaste), NSL–600 m.

Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Loxocemus bicolor* Cope is designated a *nomen protectum* and *Xenopeltis alveolarius* Wagler a *nomen oblitum*.

LYCODON H. Boie *in* Fitzinger, 1826a (Colubridae)

Synonyms: *Lycodon* H. Boie *in* F. Boie, 1826, *Cercaspis* Wagler, 1830,

Ophites Wagler, 1830, *Lycodontos* – Wagler, 1833 *(nomen incorrectum),* Sphecodes A.-M.-C. Duméril, 1853, *Lijcodon* Bleeker, 1856 *(nomen emendatum), Leptorhytaon* A.C.L.G. Günther, 1858, *Leptorhyton* A.C.L.G. Günther, 1858 *(nomen incorrectum), Tetragonosoma* A.C.L.G. Günther, 1858, *Euprotodon* Cope, 1860c, *Tytleria* Theobald, 1868b, *Ophitis* – Edeling, 1870 *(nomen incorrectum), Lycondon* – W.F. Sinclair, 1889 *(nomen incorrectum), Ceraspis* – Hoffmann, 1890 *(nomen incorrectum), Tetragosoma* – Hoffmann, 1890 *(nomen incorrectum), Anoplophallus* Cope, 1893a *(nomen substitutum), Haplonodon* L.E. Griffin, 1910, *Tyleria* – Wall, 1921g *(nomen incorrectum), Lycon* – Maki, 1931 *(nomen incorrectum), Lyocdon* – Donoso-Barros, 1969b *(nomen incorrectum),* and *Lgcodon* – Biswas & Sanyal, 1980 *(nomen incorrectum).*

Type species: *Coluber aulicus* Linnaeus, 1758.

Distribution: Southern and SE Asia and East Indies.

Sources: Boulenger, 1893a, Wall, 1909b, Rooij, 1917, E.H. Taylor, 922a, 1965, M.A. Smith, 1943, C. Haas, 1950, Leviton, 1965c, Welch, 1988, Zhao & Adler, 1993, Ota & Ross, 1994, Adler & Zhao, 1995, I. Das, 2010, 2012 and Zhang et al., 2011.

Remarks: Zhao & Adler (1993: 246) replaced *Lycodon* with the name *Ophites* Wagler, incorrectly *fide* Adler & Zhao (1995: 75). *Cercasis* Wagler a synonym of *Lycodon fide* Pyron et al. (2013: 976).

1. *Lycodon alcalai* Ota & Ross, 1994. Copeia 1994(1): 159–161, figs. 2a–b, 3a–c.

Type: Holotype, PNM 990, a 787 mm male (R.S. Kennedy & field crew, 30 May 1985).

Type locality: "Batan Island (20°25'N, 121°58'E), Batan Island Group; northern Philippines; approximately 2.5 km ENE of Basco on the W slope of Mt. Iraya, alt. 150 m."

Distribution: Extreme N Philippines (Batan), 130–320 m.

2. *Lycodon aulicus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 220–221. (*Coluber aulicus*)

Synonyms: *Lycodon aulica* – Laurenti, 1768, ? *Coluber scalaris* Gravenhorst, 1807, *Lycodon subfuscus* Cantor, 1839b, *Lycodon aulicum* – A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Lijcodon aulicum* Bleeker, 1856 *(nomen emendatum), Lycodon anamallensis* A.C.L.G. Günther, 1864a, *Lycodon aulicus oligozonatus* Wall, 1909b, and *Lycodon osmanhilli* E.H. Taylor, 1950b.

Type: Holotype, NHR ? Lin-21 (formerly MAFR), a 250 mm specimen (Mus. Drottn.).

Type locality: "America" (in error). Corrected to India *fide* Kramer (1977: 742).

Distribution: Southern Asia. Eastern Pakistan (Punjab, Sindh), India (Andhra Pradesh, Assam, Bihar, Goa, Gujarat, Jammu, Karnataka, Kashmir, Kerala, Maharashtra, Madhya Pradesh, Manipur, Mizoram, Nagaland, Orissa, Rajasthan, Sikkim, Tamil Nadu, Uttar Pradesh, West Bengal), Sri Lanka (Central, Eastern, North-Central, Northern, Northwestern, Saharagamuwa, Southern, Uva, Western), Nepal (Bardiya, Bhojpur, Chitwan, Jhapa, Kanchanpur, Kaski, Kathmandu, Latlipur, Myagdi, Palpa Parsa, Rupandehi, Sindhupalchok), Bangladesh and N Myanmar (Shan, Yangon), NSL–2130 m.

Sources: Laidlaw, 1902, Wall, 1909b, 1921g, Herklots, 1935, Rendahl, 1937, E.H. Taylor, 1953b, Deraniyagala, 1955, Acharji, 1958, P. Silva, 1969, 1990b, 2001, 2009, Singh, 1972, R.C. Sharma, 1974, M.A.R. Khan, 1988, M.S. Khan, 1977, 2002, Kramer, 1977, J. Daniel, 1983, Nanhoe & Ouboter, 1987, Dutta & Acharjyo, 1990, Zhao & Adler, 1993, Henkel & Schmidt, 2000, Hallermann et al., 2001, Tiwari & Shah, 2004, Whitaker & Captain, 2004, N. Khaire, 2006, Somaweera, 2006, Mukherjee & Bhupathy, 2007, M.F. Ahmed et al., 2009 and Ganesh & Chandramouli, 2011.

Remarks: Andersson (1899: 16) stated the type represented variety D (= *capucinus*) of Boulenger (1893a: 353) but pl. 12, fig. 2, of Linnaeus, 1754, clearly depicts variety A (= *aulicus*). *Lycodon osmanhilli* Taylor a valid species *fide* A. Silva (2009: 82, pl. 35).

3. *Lycodon bibonius* Ota & Ross, 1994. Copeia 1994(1): 162–164, figs. 6a–b, 7a–c (all paratypes).

Type: Holotype, PNM 2044, a 511 mm female (R.I. Crombie & H. Ota, 21 May 1989).

Type locality: "Camiguin Island (18°55'N, 121°55'E), Babuyan Island Group, northern Philippines; ca. 1.5 km E of Mambit, alt. 70 m."

Distribution: Extreme N Philippines (Camiguin), NSL–70 m.

4. *Lycodon butleri* Boulenger, 1900c. J. Bombay Nat. Hist. Soc. (1900–1902) 13(2): 336.

Type: Holotype, BMNH (1946.1.14.90 formerly SM), a 540 mm female (A.L. Butler, 1898).

Type locality: "Perak hills, at an altitude of 5,000 feet" [= Larut Hills, Perak State, W West Malaysia *fide* Boulenger, 1900e: 193].

Distribution: Malay Peninsula. Southern Thailand (Krabi, Trang) and West Malaysia (Pahang, Perak, Selangor), 1220–2030 m.

Sources: B.L. Lim, 1956, 1967b, Tweedie, 1983, M.J. Cox, 1991a, Chan-ard et al., 1999 and Daltry & Wüster, 2002.

Remarks: Original description reprinted in Boulenger (1900e: 193).

L

5. *Lycodon capucinus* H. Boie *in* F. Boie, 1827. Isis von Oken 20(6): 551.

Synonyms: *Natrix fenestrata* Wagler, 1825 (*nomen ineditum*), *Natrix plebeja* Wagler, 1825 (*nomen ineditum*), *Lycodon capucinus* H. Boie *in* Schlegel, 1926a *(nomen nudum), Lycodon capucinus* Schlegel, 1926b *(nomen nudum), Lycodon unicolor* F. Boie, 1827, *Lycodon hebe* Schlegel, 1837, *Lycodon atropurpureus* Cantor, 1839b, *Lycodon aulicum cochinchinensis* Jan, 1863b (*nomen nudum*), *Lycodon aulicum picturatum* Jan, 1863b (*nomen nudum*), *Lycodon aulicum reticulatum* Jan, 1863b (*nomen nudum*), and *Tytleria hypsirhinoides* Theobald, 1868b.

Type: Lectotype, a 483 mm specimen described and illustrated in P. Russell (1801: 41, pl. 37), designated herein.

Type locality: "Java" [W Indonesia] via lectotype selection. Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Southeast Asia and East Indies. Eastern India (Andaman & Nicobars: Andaman, Long and Nicobar Is.), S China (Fujian, Gansu, Guangdong, Hong Kong, Hunan, Yunnan), Laos, Vietnam (Ba Ria-Vung Ta, Bing Duong, Da Nang, Ho Chi Minh City, Khanh Hoa, Kien Giang, Tay Ninh, Cu Lao Panjang Is.), Cambodia (Kampong Chhnang), Thailand (Bangkok, Chaiyaphum, Chiang Mai, Chon Buri, Krung Thep Mahanakhon, Loei, Lop Buri, Nakhon Ratchasina, Phang Nga, Phuket, Prachuap Khiri Khan, Ratchaburi), S Myanmar (Tanintharyi, Yangon), Maldives, West Malaysia (Kedah, Pinang), Singapore, Indonesia (Adonara, Alor, Babar, Bali, Buton, Ende, Flores, Java, Kalao, Komodo, Lomblen, Moyo, Padar, Rinca, Roti, Salajar, Savu, Sawu, Semau, Solar, Sulawesi, Sumatra, Sumba, Sumbawa, Timor, Wetar), Timor-Leste, Philippines (Bantayan, Cebu, Cuyo, Leyte, Luzon, Masbate, Mindanao, Mindoro, Negros, Palawan, Panay, Romblon, Samar) and ? Mauritius, NSL–700 m.

Nguyen et al., 2009, Kaiser et al., 2011, Lang, 2011 and Harikrishnan et al., 2012.

Remarks: Original description based on H. Boie's MS (1823–1825) and P. Russell (1801: 41, pl. 37). Type locality erroneously listed as Trivandrum, India *fide* E.H. Taylor & Elbel (1958: 1136). Introduced to Christmas Island *fide* L.A. Smith (1988: 251).

6. *Lycodon cardamomensis* Daltry & Wüster, 2002. Herpetologica 58(4): 499–502, figs. 1–2, 4.

Type: Holotype, BMNH 2000.70, a 316 mm male (J.C. Daltry, 9 Feb. 2000).

Type locality: "from 500 m above sea level at 12° 25' N ; 103° 02' E in the Phnom Samkos Wildlife Sanctuary, Pursat Province, Cardamom Mountains, Southwest Kampuchea."

Distribution: Northeastern Thailand (Chanthaburi) and Cambodia (Pursat), 500 m.

Sources: Pauwels et al., 2005, Vogel & Brachtel, 2008, Vogel & Luo, 2011 and I. Das, 2012.

7. *Lycodon carinatus* (Kuhl, 1820). Beiträge Zool. Vergl. Anat.: 95–96. (*Hurria carinata*)

Types: Syntypes (2), MNHN and RMNH (formerly MHNPB), longest syntype 343 mm.

Type locality: Unknown. Designated as Insel Ceylon [= Sri Lanka] *fide* F. Boie (1837: 517).

Distribution: Sri Lanka (Central, Northern, Sabaragamuwa, Southern, Western), 150–1200 m.

Sources: Schlegel, 1837, Wall, 1921g, M.A. Smith, 1943, Deraniyagala, 1955, P. Silva, 1969, P. H. Silva, 1980a, A. Silva, 1990b, 2001, 2009, Somaweera, 2006 and Zaher et al., 2009.

Remarks: Transferred from *Cercaspis* to *Lycodon fide* Pyron et al. (2013: 976).

8. *Lycodon chrysoprateros* Ota & Ross, 1994. Copeia 1994(1): 165–167, figs. 9a–c. (*Lycodon chrysoprateros*) (*nomen corrigendum*)

Synonym: *Lycondon chrysoprateros* Ota & Ross, 1994 (*nomen incorrigendum*).
Type: Holotype, PNM 2045, a 727 mm female (R.I. Crombie, 18 March 1990).
Type locality: "east side of Dalupiri Island (19°05'N, 121°15'E), Babuyan Island Group, northern Philippines."
Distribution: Extreme N Philippines (Dalupiri).

9. *Lycodon davidi* Vogel, Nguyen, Kingsada & Ziegler, 2012. NW J. Zool. 8(2): 345–347, figs. 1–3.

Type: Holotype, IEBR A.2011.7 (formerly NQT 2010.39), a 390 mm male (T.Q. Nguyen & P. Kingsada, 6 May 2010).
Type locality: "Nam Cave (18°54.597'N, 102°25.998'E, 268 m above sea level), near Ban Muang Song, Vang Vieng District, Vientiane Province, Laos."
Distribution: Northern Laos (Vientiane), 270 m.

10. *Lycodon dumerilii* (Boulenger, 1893a). Cat. Snakes Brit. Mus. 1: 368–369. (*Stegonotus dumerilii*)

Synonym: *Dryocalamus mccroryi* E.H. Taylor, 1922b.
Type: Lectotype, BMNH 1946.1.15.6 (formerly BMNH 1877.10.9.67), a female (A.H. Everett, May–July, 1877 or March–May, 1878), designated *fide* Leviton (1965c: 123).
Type locality: "Surigao, Surigao Province, Mindanao Island, Philippines" via lectotype selection.
Distribution: Southern Philippines (Basilan, SW Mindanao).
Sources: Leviton, 1965c and Ota & Ross, 1994.

11. *Lycodon effraenis* Cantor, 1847a. J. Asiat. Soc. Bengal 16(182): 917–918, pl. 40, fig. 2.

Synonyms: *Tetragonosoma effrene* A.C.L.G. Günther, 1858 *(nomen emendatum), Lycodon ophiteoides* Bleeker, 1859b, *Lycodon adspersus* Jan, 1863b, *Lycodon effrenis* Boulenger, 1893a *(nomen emendatum),* and *Lycodon ophitevides* – E. Bartlett, 1895a *(nomen incorrectum).*
Type: Holotype, BMNH 1946.1.13.84, a 318 mm specimen (W. Norris, 1844–1847).
Type locality: "Pinang" [= Penang Is., Pinang State, NW West Malaysia, 5°25'N.L. 100°19'E.].
Distribution: Southeastern Asia and Greater Sundas. Thailand (Krabbi, Nakhon Si Thammarat), West Malaysia (Kelantan, Pahang, Pinang, Selangor, Penang Is.), East Malaysia (Sarawak), Brunei and Indonesia (Kalimantan, Sumatra), 30–700 m.
Sources: Boulenger, 1912c, B.L. Lim, 1967a, Tweedie, 1983, K.F.L. Lim & Lee, 1989, Stuebing, 1991, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Daltry & Wüster, 2002 and I. Das, 2007b, 2012.
Remarks: Original description reprinted in Cantor (1886: 176–178). Boulenger (1893a: 356) and subsequent authors erroneously cite p. 70 as original description.

12. *Lycodon fasciatus* (J. Anderson, 1879). Anat. Zool. Res. W. Yunnan: 827, pl. 78, fig. 2. (*Ophites fasciatus*)

Synonyms: *Ophites subminiatus* Morice, 1875a, and *Dinodon yunnanensis* F. Werner, 1922a.
Type: Neotype, BMNH 1901.4.26.1, an 815 mm male (H. Hampton, 1898–1901), designated by Vogel & Luo (2011: 32).
Type locality: "'Mogok', Mandalay Division, Myanmar" [= 22°55'N, 96°30'E, elevation 1120 m] via neotype selection.
Distribution: Southeastern Asia. Southern China (Fujian, Gansu, Guangdong, Guangxi, Guizhou, Hubei, Shaanxi, Sichuan, Xizang, Yunnan), NE India (Arunachal Pradesh, Assam, Meghalaya, Nagaland, N West Bengal), Bhutan, Bangladesh, N Myanmar (Chin, Kachin, Shan), N Thailand (Chiang Mai, Loei, Nakhon Ratchasima, Tak), N Laos and N Vietnam (Cao Bang, Hai Duong, Ha Tinh, Kon Tum, Lai Chau, Lao Cai, Quang Binh, Son Lai, Vinh Phuc), 500–2300 m.
Sources: Wall, 1911c, 1923a, C.H. Pope, 1935, Bourret, 1936b, Dueve, 1962b, E.H. Taylor, 1965, Tian et al., 1986, Y. Zhang & Tang, 1990, Zhao & Adler, 1993, Chan-ard et al., 1999, Orlov et al., 2000, Daltry & Wüster, 2002, Ao et al., 2004, V.S. Nguyen et al., 2009, Vogel et al., 2009, Vogel & David, 2010, Vogel & Luo, 2011, Zhang et al., 2011, Wangyal, 2012 and Yao, 2012.
Remarks: Holotype lost during World War II *fide* Das *in* Vogel & Luo (2011: 29). Photographs of neotype in Vogel & Luo (2011: figs. 1a–b, 2).

13. *Lycodon fausti* Gaulke, 2002. Spixiana 25(1): 87–88, figs. 2–3.

Type: Holotype, PNM 7271, a 337 mm juvenile (E. Sanchez, 2001).
Type locality: "Baranguay Guia, Municipality Pandan, Antique Province, W Panay Peninsula, Philippines."
Distribution: Central Philippines (Panay).

14. *Lycodon ferroni* Lanza, 1999. Trop. Zool. 12(1): 90–94, figs. 1–2.

Type: Holotype, MZUF 36690, a 382 mm male (C. Ferron, 28 April 2001).
Type locality: "Lungib Ginbagsangan, 12°00'00"N-124°55'40"E, about 32 km by air NNE of Catbalogan, 40 m a.s.l. [Barrio Kag-Toto-Og; Provincia Samar Occidental (= Western Samar Province), Samar Island, central-eastern Philippines."
Distribution: Central Philippines (Samar), 40 m.

15. *Lycodon flavicollis* Mukherjee & Bhupathy, 2007. Russ. J. Herp. 14(1): 22–25, figs. 2–4.

Type: Holotype, ZSI 25641, a 543 mm male (D. Mukherjee, 7 Sept. 2003).
Type locality: "Mangarai village located on the periphery of the Aneikatti Reserve Forest (600 m a.s.l. 11º05' N, 76º47' E), Western Ghats, Coimbatore District, Tamil Nadu State, southwestern India."
Distribution: Southwestern India (S Tamil Nadu), 600 m.

16. *Lycodon flavomaculatus* Wall, 1907b. J. Bombay Nat. Hist. Soc. (1906–1907) 17(3): 612–614, fig. 1, pl., 2 figs.

Types: Syntypes (6), BNHSa–e, all specimens ca. 350 mm (C. Hudson & Millard) and BMNH (formerly FM).
Type locality: "Sangli (S. Maratha District), Kirkee, Poona, Nasik, and Dharwar, all places on the western Ghats inside the Bombay Presidency" [= W Maharashtra and NW Karnataka States, India]. Restricted to Kirkee [= Khadki, Pune, W Maharashtra State, W India, 18°34'N, 73°52'E, elevation 560 m] *fide* M.A. Smith (1943: 262).
Distribution: Western Ghats of W India (Karnataka, Kerala, Maharashtra), 550–660 m.
Sources: Murthy, 1985, 1991, Captain, 1999, Whitaker & Captain, 2004, N. Khaire, 2006 and Mukherjee & Bhupathy, 2007.
Remarks: Partial type locality restriction of Oudi *fide* M.A. Smith (1943: 262) invalid as not one of original localities. A synonym of *L. striatus fide* Captain, 1999.

17. *Lycodon futsingensis* (C.H. Pope, 1928a). Amer. Mus. Novit. (320): 5–6. (*Dinodon futsingensis*)

Type: Holotype, AMNH 34106, a 796 mm female (C.H. Pope, April–Sept. 1926).
Type locality: "Ch'ungan Hsien, northwest Fukien Province, China" [= Fujing Xian Co., 25º44"N, 119º22'E, Fujian Prov., China].
Distribution: Southern China (Fujian, Hong Kong) and Vietnam (Bác Kan, Lam Dong, Lào Cai, Hà Tinh, Quang Binh, 15–625 m.
Sources: Zhao & Adler, 1993, Ziegler, 2002, Vogel et al., 2009, 2012b and Vogel & Luo, 2011.
Remarks: Previously a synonym of *Dinodon septentrionale*.

18. *Lycodon gongshan* Vogel & Luo, 2011. Zootaxa (2807), 33–35, figs. 3–4.

Type: Holotype, KIZ 730034, a 963 mm male.
Type locality: "'Bapo, Gongshan, China', today Dulongjiang Township, Gongshan County, Yunnan Province, People's Republic of China."
Distribution: Southern China (Hengduan Mts. of Yunnan)

19. *Lycodon jara* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 525. (*Coluber jara*)

Synonyms: *Coluber bipunctatus* Cantor, 1839b, and *Lycophidion bipunctatum* W.C.H. Peters, 1863d.
Type: Lectotype, a 381 mm specimen described and illustrated in P. Russell (1796: 19–20, pl. 14) (Snodgrass), designation herein.
Type locality: "Ganjam, India" [= Ganjam, Orissa State, E India, 19°23'N, 85°03'E, elevation 5 m].
Distribution: Southern Asia. Northeastern India (Arunachal Pradesh, Assam, Haryana, Orissa, Sikkim, Uttarkhand, Uttar Pradesh, West Bengal), Bangladesh, Nepal (Bardiya, Chitwan, Kanchanpur, Udayapur), Bhutan (Sarpang) and N Myanmar (Kachin), 150–340 m.
Sources: Wall, 1907b, M.A.R. Khan, 1988, Basu, 1989, Schleich & Kästle, 2002, Tiwari & Shah, 2004, Whitaker & Captain, 2004, Mukherjee & Bhupathy, 2007, I. Das, 2010 and Wangyal, 2012.
Remarks: G. Shaw (1802: 525) erroneously cited Russell's plate as "44."

20. *Lycodon kundui* M.A. Smith, 1943. Fauna Brit. India, Rept. Amph. 3: 260.

Type: Holotype, BMNH 1946.1.13.68, a 225 mm juvenile (Kundu).
Type locality: "Gyobyu, Taikkyi Township, Pegu district" [= Yangon Div., S Myanmar, 17°22'N, 96°03'E, elevation 100 m].
Distribution: Southern Myanmar (Yangon), 100 m. Known only from type locality.

21. *Lycodon laoensis* A.C.L.G. Günther, 1864a. Rept. Brit. India: 317–318.

Types: Syntypes (3), BMNH 1946.1.13.64–65, a 419 mm male and female (H. Mouhot, 1858–1860) [Laos], and BMNH 1946.1.13.76, a female (Price) [Thailand]. [one female 470 mm].
Type locality: "Laos Mountains" and "probably Siam" [= Laos Mtns. and Thailand]. Restricted to Laos, French Indo-China [= Laos Mtns., Laos] *fide* M.A. Smith (1943: 259).
Distribution: Southeastern Asia. Northeastern India (Arunachal Pradesh), S China (Yunnan), Laos (Borikhan, Kamphaeng Na Khon, Vientiane), Cambodia (Kampot, Siem Reap), Thailand (Chachoengsao, Chiang Mai, Chon Buri, Krabi, Loei, Nakhon Ratchasima, Nakhon Si Thammarat, Narathiwat, Pattani, Phang Nga, Phitsanulok, Saraburi, Si Saket, Songkhla, Trang), Vietnam (Bac Giang, Binh Phuoc, Dong Nai, Ho Chi Minh City, Lam Dong, Quang Nam, Tay Ninh) and N West Malaysia (Kedah, Kelantan, Perlis), NSL–1820 m.
Sources: Boulenger, 1893a, M.A. Smith, 1915d, Bourret, 1936b, B.L. Lim, 1958, E.H. Taylor, 1965, Campden-Main, 1970a, Deuve, 1970, Saint-Girons, 1972a,

L

Tweedie, 1983, Zhao & Adler, 1993, M.J. Cox et al., 1998, Chan-ard et al., 1999, Daltry & Wüster, 2002, Whitaker & Captain, 2004, Bain et al., 2007a and V.S. Nguyen et al., 2009.

Remarks: Laos Mountains may be located ca. 15°N, 105°E in S Laos or SE Thailand.

22. *Lycodon liuchengchaoi* Zhang, Jiang, Vogel & Rao, 2011. Zootaxa (2982): 60–64, figs. 1–4.

Type: Holotype, CWNU 867001, a 747 mm female (Q. Deng, July 1986).

Type locality: "Tangialhe National Nature Reserve (32.5439°N, 104.8322°E, elevation 1360m), Qingchuan County, Sichuan Province, P. R. China."

Distribution: Southern China (Sichuan), 1230–1360 m.

23. *Lycodon mackinnoni* Wall, 1906c. J. Bombay Nat. Hist. Soc. (1906–1907) 17(1): 29–30, 3 figs.

Type: Holotype, BMNH 1946.1.13.81 (P.W. Mackinnon, 1895–1906).

Type locality: "neighbourhood of Mussoorie, Himalayas, at an altitude of 6,100 feet" [= Mussoorie, Uttar Pradesh, N India, 30°27'N, 78°04'E, elevation 1900 m].

Distribution: Western Himalayas of N India (Uttar Pradesh), 1860–1900 m.

Sources: Wall, 1923d and Lamba, 1987.

24. *Lycodon muelleri* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 382–384.

Synonym: *Haplonodon philippinensis* L.E. Griffin, 1910.

Type: Holotype, MNHN 1320, a 558 mm specimen.

Type locality: "Java" [Indonesia] (in error). Corrected to Philippines *fide* Leviton (1965c: 126). Restricted to Luzon Island, Philippines *fide* Leviton (1965c: 126).

Distribution: Northern Philippines (Batan, Catanduanes, Luzon, Mindoro, Polillo).

Sources: Leviton, 1965c, Ross & Gonzales, 1992 and Ota & Ross, 1994.

25. *Lycodon multifasciatus* (Maki, 1931). Monogr. Snakes Japan: 127–129, figs. 83a–e. (*Dinodon septentrionale multifasciatum*)

Type: Holotype, KIU A, a 695 mm female (S. Nischiishigaki, April 1928).

Type locality: "Ishigaki-shima, Loo Choo Islands" [= Ishigakijima, Okinawa Prefecture, Ryukyu Archipelago, Japan].

Distribution: Extreme S Japan (Ryukyus: Iriomatejima, Ishigakijima and Miyakojima Is.).

Sources: M. Mori, 1984, 1986, Ota, 1988, Vogel & Brachtel, 2008 and Vogel et al., 2009, 2012b.

Remarks: Colored plate of original description in Maki (1931–1933: pl. 47).

26. *Lycodon ophiophagus* Vogel, David, Pauwels, Sumontha, Norval, Hendrix, Vu & Ziegler, 2009. Trop. Zool. 22(2): 157–160, figs. 11–13, 15.

Type: Holotype, QSMI 596, a 909 mm female (M. Sumontha, 30 Dec. 2002).

Type locality: "Lamru Waterfall, Khao Lak-Lamru National Park, Phang-Nga Province, southern Thailand."

Distribution: Southern Thailand (Chumphon, Phang Nga, Ranong).

Source: Vogel et al., 2012b.

27. *Lycodon paucifasciatus* Rendahl *in* M.A. Smith, 1943. Fauna Brit. India, Rept. Amph. 3: 267.

Type: Holotype, NHR 3095, a 763 mm specimen (B. Björkegren, July–Aug. 1938 or Feb.–April 1939).

Type locality: "Thua Lun, Annam, 50 km. south of Hué" [= Thua Luu, Thua Thien-Hue Prov., cen. Vietnam, 16°15'N, 107°56'E, elevation 150 m].

Distribution: Central Vietnam (Quang Binh, Thua Thien-Hue), NSL–255 m.

Sources: V.S. Nguyen et al., 2009 and Vogel et al., 2009, 2012b.

Remarks: Type locality spelling corrected to Thua Luu *fide* Campden-Main (1970a: 35).

28. *Lycodon ruhstrati* (J.G. Fischer, 1886). Abh. Naturw. Ver. Hamburg 9(1): 64–65, pl. 2, figs. 6a–d. (*Ophites ruhstrati*)

Synonym: *Lycodon ruhstrati abditus* Vogel, David, Pauwels, Sumontha, Norval, Hendrix, Vu & Ziegler, 2009.

Types: Syntypes (2), LMNMO 918 (formerly LMNMO 37c & 73), a 583+ mm male, and LMNMO 919 (formerly LMNMO 37b & 74), a 248–250 mm specimen (E.K.A. Ruhstrat, 1884–1886).

Type locality: "Süd-Formosa" [= S Taiwan].

Distribution: Southeastern Asia. Southern China (Anhui, Fujian, S Gansu, Guangdong, Guangxi, Guizhou, Hong Kong, Jiangsu, Jiangxi, Shaanxi, Sichuan, Yunnan, Zhejiang), Taiwan (Nantou), N Laos (Xiangkhouang) and N Vietnam (Bac Giang, Cao Bang, Da Nang, Ha Tinh, Hoa Binh, Lao Cai, Quang Binh, Son La, Thanh Hoa, Vinh Phù), NSL–1500 m.

Sources: C.H. Pope, 1935, Romer, 1966, 1979a, Karsen et al., 1986, Zhao & Adler, 1993, Orlov et al., 2000, Zhao, 2006, Ziegler et al., 2007, Vogel & Brachtal, 2008, Kucharzewski et al., 2009, V.S. Nguyen et al., 2009, Vogel et al., 2009, 2012b, Xiang & Li, 2009, Vogel & Luo, 2011 and Yao, 2012.

Remarks: Original description pagination was erroneously cited as page 16 *fide* Boulenger (1893a: 363). Photographs of syntypes in Kucharzewski et al. (2009: figs. 1–3).

29. *Lycodon solivagus* Ota & Ross, 1994. Copeia 1994(1): 168–169, figs. 10 a–b, 11a–c.

Type: Holotype, PNM 2046, a 946 mm female (H. Ota, 28 April 1989).

Type locality: "Cabatacan Barrio, Lasam, Cagayan Province, Luzon Island, northern Philippines (18°00'N, 121°35'E)."

Distribution: Extreme N Philippines (N Luzon), NSL.

30. *Lycodon stormi* Boettger, 1892b. Zool. Anz. 15(405): 418–419.

Type: Holotype, LNHM, a 597 mm specimen (H. Storm, 1887–1892), destroyed 28 March 1942 during World War II.

Type locality: "Celebes" [= Sulawesi, E Indonesia].

Distribution: Eastern Indonesia (Sulawesi).

Sources: Bosch, 1985, Lang & Vogel, 2005 and Koch, 2012.

31. *Lycodon striatus* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 527. (*Coluber striatus*)

L

Synonyms: ? *Coluber malignus* Daudin, 1803e, *Coluber galathea* Daudin, 1803e, *Lycodon napei* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Lycodon napei* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Contia bicolor* Nikolsky, 1903b, *Lycodon striatus nordicus* Deraniyagala, 1955, and *Lycodon striatus sinhaleyus* Deraniyagala, 1955.

Type: Lectotype, a 356 mm specimen described and illustrated in P. Russell (1796: 22, pl. 16), designation herein.

Type locality: "Vizagapatam, coast of Coromandel, India" [= Vishakhapatnam, Andhra Pradesh State, SE India, 17°41'N, 83°13'E, elevation 25 m].

Distribution: Southern Asia. Extreme SW Tadzhikistan, ext. S Turkmenia, Turkmenistan, S Uzbekistan, E Iran (Sistan va Baluchestan), Pakistan (Balochistan, Khyber Pakhtunkhwa, Punjab, W Sindh), India (Andhra Pradesh, Bihar, Himachal Pradesh, Jammu, Jharkhand, Karnataka, Kashmir, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh, West Bengal), Nepal (Bardiya, Ilam) and Sri Lanka (Central, Uva, Western), NSL–1830 m.

Sources: Wall, 1909b, Chernov, 1935, Minton, 1966, P. Silva, 1969, 1990b, 2009, K.K. Tiwari & Sharma, 1971, Mahajan & Agrawal, 1976, Bannikov et al., 1977, M.S. Khaire, 2006, Somaweera, 2006 and Mukherjee & Bhupathy, 2007.

Remarks: Original description based on P. Russell (1796: 22, pl 16).

32. *Lycodon subcinctus* F. Boie, 1827. Isis von Oken 20(6): 551.

Synonyms: *Coluber platurinus* G. Shaw, 1802 *(nomen nudum), Coluber platyrhinus* Merrem, 1820 (*nomen substitutum*), *Natrix semifasciata* Wagler, 1825 (*nomen ineditum*), *Lycodon subcinctus* H. Boie *in* Schlegel, 1826a *(nomen nudum), Lycodon subcinctus* Schlegel, 1826b *(nomen nudum), Lycodon platurinus* Cantor, 1847, *Lycodon succinctus* – A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrectum), Elapoides annulatus* Sauvage, 1884, *Anoplophallus maculatus* Cope, 1895a, and *Lycodon subcinctus sealei* Leviton, 1955.

Type: Lectotype, a 953 mm specimen described and illustrated in P. Russell (1801: 44, pl. 41), designated herein.

Type locality: "Java" [W Indonesia] via lectotype selection.

Distribution: Southeastern Asia and East Indies. Myanmar (Kachin, Tanintharyi, S China (Fujian, Guangdong, Guangxi, Hainan, Hong Kong), Laos (Borikhan), Vietnam (Bac Kan, Ha Tay, Lai Chau, Son La, Tay Ninh, Thanh Hoa, Vinh Phuc), Cambodia, S Thailand (Nakhon Ratchasima, Nakhon Si Thammarat, Narathiwat, Pattani, Phang Nga, Phetchabun, Satun), West Malaysia (Pahang, Pinang, Perak, Penang Is.), Singapore, East Malaysia (Sabah, Sarawak), Brunei, Indonesia (Alor, Bali, Flores, Java, Kalimantan, Lombok, Mentawi, Nias, Simeulue, Sumatra, Sumba, Sumbawa), Timor-Leste and ext. SW Philippines (Palawan), NSL–1770 m.

Sources: Flower, 1899, K.P. Schmidt, 1927a, Kopstein, 1930, Mertens, 1930, Herklots, 1935, C.H. Pope, 1935, Bourret, 1936b, Leviton, 1955, 1965c, E.H. Taylor, 1965, Deuve, 1970, Saint Girons, 1972, Romer, 1979a, Tweedie, 1983, Karsen et al., 1986, Tian et al., 1986, Stuebing, 1991, Zhao & Adler, 1993, Ota & Ross, 1994, David & Vogel, 1996, M.J. Cox et al., 1998, Chan-ard et al., 1999, Orlov et al., 2000, Daltry & Wüster, 2002, Malkmus et al., 2002, Zhao, 2006, V.S. Nguyen et al., 2009, Kaiser et al., 2011 and Lang, 2011.

Remarks: Original description based on H. Boie's MS (1823–1825), Seba (1734: 173, pl. 109, fig. 7) and P. Russell (1801). Mindanao, Philippine record doubtful *fide* Leviton (1965c: 129).

33. *Lycodon synaptor* Vogel & David, 2010. Bonn Zool. Bull. 57(2): 290–293, fig. 1–3, 6a.

Type: Holotype, BMNH 1905.1.30.63, a 463 mm female (J. Graham [Yunnan Exped.], Mar.–Nov. 1868 or Jan.–March 1875).

Type locality: "'Tongchuan, Yunnan', today Dougechuan, 100 km north of Kumming, Yunnan Province, People's Republic of China."

Distribution: Southern China (Yunnan), 1400 m. Known only from vicinity of type locality.

Source: Vogel & Luo, 2011.

34. *Lycodon tessellatus* Jan, 1863b. Elenco Sist. Ofidi: 96. (*Lycodon tessellatum*)

Type: Holotype, NMW 21708, a 344 mm male (native, 24 April 1848).
Type locality: "Manilla" [=Manila, Manila Prov., SW Luzon Is., N Philippines, 14°36'N, 120°59'E, elevation 10 m].
Distribution: Northern Philippines (S Luzon). Known only from holotype and dataless specimen.
Sources: Jan & Sordelli, 1870–1881, Leviton, 1965c, Ota & Ross, 1994 and Ota, 2000.

35. *Lycodon tiwarii* Biswas & Sanyal, 1965. Proc. Zool. Soc. Calcutta 18(2): 137–139, pl. 5.

Type: Holotype, ZSI 20849, a 768 mm specimen (K.K. Tiwari, 5 Feb. 1959).
Type locality: "Mayabundar, North Andaman, Andaman Islands."
Distribution: Eastern India (Andaman & Nicobars: North Andaman Is.).
Source: Vijayankumar & David, 2006.

36. *Lycodon travancoricus* (Beddome, 1870). Madras Month. J. Med. Sci. 2: 169. (*Cercaspis travancoricus*)

Types: Syntypes (2), BMNH 1946.1.13.75, a 381 mm female (R.H. Beddome, 1857–1870), location of other syntype unknown.
Type locality: "Travancore hills, Attraymallay, 5,000 feet elevation, Madras Presidency" [= Attraymallay, Travancore Hills, Kerala State, SW India, 1525 m].
Distribution: Southern India (Andhra Pradesh, Karnataka, Kerala, Laccadives: Androth; Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu), 145–1800 m.
Sources: Boulenger, 1893a, Wall, 1905c, Adiyodi, 1963, Minton, 1966, M.S. Khan, 1982, 2002, J. Daniel, 1983, Inger et al., 1984, Murthy, 1985, Whitaker & Captain, 2004, N. Khaire, 2006, Mukherjee & Bhopathy, 2007, Hutton & David, 2009 and Chandramouli & Ganesh, 2010.
Remarks: Boulenger (1893a: 355) listed one type (either holotype or lectotype). Record from Pakistan (Sindh) doubtful *fide* J. A. Peters *in* Minton (1966: 133) and Whitaker & Captain (2007: 192).

37. *Lycodon zawi* Slowinski, Pawar, Win, Thin, Gyi, Oo & Tun, 2001. Proc. California Acad. Sci. (4) 52(20): 398–403, figs. 1, 2a, 3a.

Type: Holotype, CAS 210323, a 480 mm male (H. Win, T. Thin, K. Wiseman, J. Lovette, & J.V. Vindum, 17 July 1999).
Type locality: "Alaungdaw Katapha National Park (AKNP) (22°19'N, 94°29'E), Sagaing Division, Myanmar."
Distribution: Southeast Asia. Bangladesh, NE India (Assam, Meghalaya, Mizoram) and W Myanmar (Rakhine, Sagaing), 145–500 m.
Sources: Whitaker & Captain, 2004, Ali Reza, 2010 and I. Das, 2012.

LYCODONOMORPHUS Fitzinger, 1843 (Lamprophiidae)

Synonyms: *Lycodontomorphus* Agassiz, 1847 *(nomen emendatum), Ablabes* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Ablates* – Beddome, 1862 *(nomen incorrectum), Neusterophis* A.C.L.G. Günther, 1863d, *Ablables* – Senna, 1886 *(nomen incorrectum), Ablabophis* Boulenger, 1893a, *Glypholycus* A.C.L.G. Günther, 1893a, *Ablabs* – Palacky, 1898 *(nomen incorrectum), Glypholicus* – Palacky, 1898 *(nomen incorrectum), Nerophidion* F. Werner, 1924a, *Glupholycus* – Briceño-Rossi, 1934 *(nomen incorrectum), Nerophidon* – Neave, 1940a *(nomen incorrectum), Ablades* – Guibé, 1958 *(nomen incorrectum), Albabophis* – Duguy, 1970 *(nomen incorrectum), Abladophis* – Fukada, 1975 *(nomen incorrectum),* and *Abladophis* – Barnard, 1996 *(nomen incorrectum).*
Type species: *Coluber rufulus* Lichtenstein, 1823.
Distribution: Central, SE and S Africa.
Sources: Loveridge, 1958, Broadley, 1967b, Branch, 1988, Kelly et al., 2003, 2009, Vidal et al., 2008 and Zaher et al., 2009.

1. *Lycodonomorphus bicolor* (A.C.L.G. Günther, 1894c). Proc. Zool. Soc. London (1893) 62(1): 629, fig. 1. (*Glypholycus bicolor*)

Synonym: *Nerophidion hypsirhinoides* F. Werner, 1924a.
Types: Syntypes (6), BMNH 1946.1.7.81–86, five males and one female, two longest syntypes 660 mm and 530 mm (E. Coode-Hore, 1889).
Type locality: "shores of Lake Tanganyika" [= W Kigoma or W Rukwa Prov., W Tanzania].
Distribution: Lake Tanganyika (East Africa). Southeastern Democratic Republic of the Congo (E Katanga, Sud-Kivu), SW Burundi (W Bururi), W Tanzania (W Kigoma, W Rukwa) and NE Zambia (N Northern, Mutondwe and Nkumbula Is.), 780 m.
Sources: M.A. Smith, 1928b, Witte, 1952, 1962, Vesey-FitzGerald, 1958, Broadley, 1971d and Madsen & Osterkamp, 1982.
Remarks: Type locality erroneously listed as Lake Victoria *fide* Vesey-FitzGerald (1958: 36).

2. *Lycodonomorphus inornatus* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 434–435. (*Lamprophis inornatus*)

Synonyms: *Lamprophis inornatus* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Boodon infernalis* A.C.L.G.

Günther, 1858, and *Pachyophis temporalis* F. Werner, 1924a.

Type: Holotype, not designated, a 711 mm specimen, location unknown.

Type locality: "des environs du Cap de Bonne-Espérance" [= vicinity of Cape of Good Hope, Western Cape Prov., SW South Africa, 34°21'S, 18°28'E, elevation 20 m].

Distribution: Eastern South Africa (Eastern Cape, E Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Western Cape), NSL–1780 m.

Sources: M.A. Smith, 1928b, Branch, 1988 and R. Hermann, 1993.

Remarks: Type not in MNHN. Original description erroneously cited on p. 464 *fide* V.F.M. FitzSimons (1962a: 114) and Broadley (1983: 84). Namibia records rejected *fide* M. Griffin (2003: 134).

3. *Lycodonomorphus laevissimus* (A.C.L.G. Günther, 1862b). Ann. Mag. Nat. Hist. (3) 9(49): 124–125, pl. 9, fig. 4. (*Natrix laevissima*)

Synonyms: *Grayia lubrica* Sclater, 1898, *Hydrablabes melanogaster* F. Werner, 1923a, *Lycodonomorphus laevissimus fitzsimonsi* Raw, 1973, and *Lycodonomorphus laevissimus natalensis* Raw, 1973.

Type: Holotype, BMNH 1946.1.12.78 (formerly FPM R9 & BMNH 1861.11.7.23), an 850–864 mm male.

Type locality: "probably from the East Indies," (in error *fide* V.F.M. FitzSimons, 1962: 104). Corrected to South Africa *fide* V. FitzSimmons (1962a: 104).

Distribution: Swaziland and E South Africa (Eastern Cape, N Free State, KwaZulu-Natal, Mpumalanga), NSL–1715 m.

Sources: Raw, 1973, Broadley, 1983, Branch, 1988 and Haagner & Branch, 1994.

Remarks: Holotype label has "Mediterranean" crossed out, replaced by "Cape" *fide* Haagner & Branch (1994: 238).

4. *Lycodonomorphus leleupi* (Laurent, 1950b). Rev. Zool. Bot. Afr. 43(4): 351. (*Ablabophis whytei leleupi*)

Type: Holotype, MRAC 17637, a 582 mm female (N. Leleup, April 1950).

Type locality: "Station d'études [de l'IRSAC] des Kundelungu (1.750 m.)" [IRSAC Biol. Stn., Kundelungu National Park, Haut-Katanga Prov., SE Democratic Republic of the Congo, ca. 10°38'S, 27°50'E].

Distribution: Southeastern Democratic Republic of the Congo (Katanga), 1750 m.

Sources: Witte, 1953, 1962, Laurent, 1956a, Sweeney, 1961, Broadley & Cock, 1975 and Broadley, 1983, 1988.

Remarks: Loveridge (1958: 14) erroneously listed type locality as being located in "northwest Lake Tanganyika."

5. *Lycodonomorphus mlanjensis* Loveridge, 1953. Bull. Mus. Comp. Zool. 110(3): 253–255. (*Lycodonomorphus rufulus mlanjensis*)

Type: Holotype, MCZ 51050, a 735 mm male (A. Loveridge, 1 April 1949).

Type locality: "Ruo River, Mlanje Mountain, Nyasaland" [= Ruo River, S of Mulanje Mtns., Southern Region, S Malawi, 16°06'S, 35°39'E, elevation 715 m].

Distribution: Southern Malawi (Southern), E Zimbabwe (Manicaland, Mashonaland East) and S Mozambique, 715–1500 m.

Sources: Broadley & Cotterill, 2004 and Broadley & Blaylock, 2013.

6. *Lycodonomorphus obscuriventris* V.F.M. FitzSimons, 1964. Kodoe (7): 26–28, 1 fig. (*Lycodonomorphus whytii obscuriventris*)

Type: Holotype, TMP 26665, a 483 mm female (U. de V. Pienaar, 26 Feb. 1959).

Type locality: "Ngirivane Windmill — approximately 24° 20' S Lat. and 31° 40'E Long. — Kruger National Park, E. Transvaal, South Africa" [= NE Mpumalanga Prov., NE South Africa, elevation 350 m].

Distribution: Southern Mozambique (Gaza, Inhambane, Sofala, Zambézia), ext. SE Zimbabwe (S Manicaland, SE Masvingo), E Swaziland and NE South Africa (E Limpopo, E Mpumalanga), 350 m.

Sources: Broadley, 1995c and Broadley & Blaylock, 2013.

7. *Lycodonomorphus rufulus* (Lichtenstein, 1823). Verzeich. Doubl. Zool. Mus. Univ. Berlin: 105. (*Coluber rufulus*)

Synonym: *Coronella leucopilus* A. Smith, 1831.

Type: Holotype, ZMB 1759, a 610 mm specimen (K.H. Bergius, 1815–1817), lost *fide* R. Günther (*in litt.*)

Type locality: "Afr. austr." [= South Africa]. Restricted to vicinity of Cape Town, south-western part of the Western Cape Province of South Africa (between 33°30'–34°15'S and 18°15'–19°00'E) *fide* Bauer (2000: 55).

Distribution: Southen Africa. Eastern Zimbabwe (Manicaland, Mashonaland East, Midlands), Mozambique (Manica, Niassa, Sofala, Inhaca Is.), Swaziland, Lesotho and South Africa (Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Western Cape), 365–2135 m.

Sources: Barros e Cunha, 1935, Broadley & Cock, 1975, Pienaar et al., 1983, Auerbach, 1987, Branch, 1988, Broadley, 1990a, Haagner & Cockeran, 1993, Bauer, 2000 and Broadley & Blaylock, 2013.

Remarks: Restriction of type locality to Swartkops River, Uitenhage area *fide* ffolliott & Liversidge (1971: 46) invalid and their designation of G.L.E. Krebs as collector of type also incorrect *fide* ZMB catalogue. Probably occurs in SE Botswana *fide* Auerbach (1987: 155). Namibia record doubtful *fide* M. Griffin (2003: 134).

8. *Lycodonomorphus subtaeniatus* Laurent, 1954a. Publ. Cult. Comp. Diamantes Angola (23): 38–40, figs. 1–4. (*Lycodonomorphus subtaeniatus subtaeniatus*)

Type: Holotype, MRAC 14864 (formerly RGMC 14864), a 589 mm female (N'Kele, 1941).

Type locality: "Keseki, près de Kwamouth" [= Keseki, near Kwamouth (3°10'S, 16°13'E, elevation 305 m), SW Equateur Prov., W Democratic Republic of the Congo].

Distribution: Western Democratic Republic of Congo (Bandundu, Bas-Congo, S Equateur, Kasai Occidental, Kasai Oriental, Kinshasa, Katanga) and NE Angola (Lunda Norte), 265–725 m.

Source: Witte, 1962.

Remarks: Laurent (1954a: 39) listed 504 mm as trunk length and 85 mm as tail length, implying an overall length of 589 mm but the 17% tail length ratio indicates a 504 mm length.

9. *Lycodonomorphus upembae* Laurent, 1954a. Publ. Cult. Comp. Diamantes Angola (23): 41–43, figs. 5–8. (*Lycodonomorphus subtaeniatus upembae*)

Type: Holotype, MRAC 5201 (formerly RGMC 5201), a 729 mm female (A. Bayet, 1925).

Type locality: "Nyonga" [= Nyonga, Katanga Prov., SE Democratic Republic of the Congo, 8°35'S, 26°18'E, elevation 565 m].

Distribution: Southeastern Democratic Republic of the Congo (Bandundu, Bas-Congo, Katanga, Sud-Kivu), 565–895 m.

Source: Witte, 1953, 1962 and Broadley & Cotterill, 2004.

10. *Lycodonomorphus whytii* (Boulenger, 1897h). Proc. Zool. Soc. London 65(3): 802, pl. 46, fig. 2. (*Glypholycus whytii*)

Type: Holotype, BMNH 1946.1.13.93, a 565 mm female (A. Whyte, 1896).

Type locality: "Fort Hill, Masuku district, 4000 ft., Northern Nyasaland" [= Chitipa, Chitipa District, ext. Northern Region, N Malawi, 9°42'S, 33°16'E, elevation 1280 m].

Distribution: Southeastern Africa. Southwestern Tanzania (S Iringa, Kigoma, Morogoro, W Ruvuma), N Malawi (Northern) and SE Zimbabwe (ext. S Manicaland, SE Masvingo), 270–1525 m.

Sources: Cott, 1935, Broadley & Cock, 1975, Broadley, 1983, Pienaar et al., 1983, Branch, 1988, Spawls et al., 2002 and J.B. Rasmussen, 2004.

Remarks: Holotype erroneously listed as BMNH 1946.1.13.96 and type locality listed as Chipata [= E Zambia, 13°38'S, 32°39'E, elevation 1100 m] *fide* J.B. Rasmuseum (2004: 157 & 160).

LYCODRYAS A.C.L.G. Günther, 1879c (Pseudoxyrhophiidae)

Synonym: *Lycodrias* – Phisalix, 1922 *(nomen incorrectum).*

Type species: *Dipsadoboa maculata* A.C.L.G. Günther, 1858.

Distribution: Comoros.

Sources: Guibé, 1958, Brygoo, 1983, 1987, Domergue, 1994, Glaw & Vences, 1994, Zaher et al., 2009 and Hawlitschek et al., 2012.

1. *Lycodryas cococola* Hawlitschek, Nagy & Glaw, 2012. PLoS One 7(8): 11–12, fig. 4g.

Synonym: *Lycodryas cococola innocens* Hawlitschek, Nagy & Glaw, 2012.

Type: Holotype, ZSM 41/2020 (formerly FGZC 1512), a 672 mm male (O. Hawlitschek, J. Berger & B. Brückmann, 13 Feb. 2010).

Type locality: "Comoros Archipelago, Comoros, Grand Comoro, Lac Salé; volcanic rocks around lake (11.37375°S; 43.37306°E, 72 m elevation)."

Distribution: Comoros (Grande Comoro Is.), 10–600 m.

2. *Lycodryas maculatus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 183. (*Dipsadoboa maculata*)

Synonyms: *Dipsas gaimardii comorensis* W.C.H. Peters, 1874a, *Lycodryas sanctjohannis* A.C.L.G. Günther, 1879c, and *Lycodryas sanctijohannis mayottensis* Boettger, 1913.

Type: Holotype, BMNH 1946.1.21.47, a 655–710 mm male (M. Parzudaki).

Type locality: "Central America" (in error). Corrected to Comoro Archipelago, [Indian Ocean] *fide* Domergue (1970: 451).

Distribution: Comoros (Anjouan, Grande Comore, Moheli, Mayotte), NSL–100 m.

Sources: Boulenger, 1896a, Domergue, 1970 and Blanc, 1971, 1972.

LYCOGNATHOPHIS Boulenger, 1893a (Natricidae)

Synonyms: *Scopelophis* Fitzinger, 1843 *(nomen rejiciendum),* and *Lycognathopsis* – Palacky, 1898 *(nomen incorrectum).*

Type species: *Psammophis seychellensis* Schlegel, 1837.

Distribution: Seychelles.

Sources: Rendahl, 1939, Nussbaum, 1984, Dowling, 1990, Vidal et al., 2008 and Zaher et al., 2009.

Remarks: Official Generic Name *fide* Opinion 1856 (ICZN, 1996b).

1. *Lycognathophis seychellensis* (Schlegel, 1837). Essai Phys. Serp. 1: 155, 2: 212–213. (*Psammophis seychellensis*)

Synonym: *Thrasops citrinus* Cope, 1869c.
Types: Syntypes (2), MNHN 3509, a 280 mm male (F. Péron), and MNHN 7408, a 660–670 mm specimen (J.-J. Dussumier, 1816–1837).
Type locality: "îles Seychelles" [= Seychelles Arch., Indian Ocean, bet. 4°12–49'S and 55°12–57'E].
Distribution: Seychelles (Frégate, Mahé, Praslin, Silhouette Is.), NSL–915 m.
Remarks: Official Specific Name *fide* Opinion 1856 (ICZN, 1996b).

LYCOPHIDION Fitzinger, 1843 (Lamprophiidae)

Synonyms: *Lycophydion* Agassiz, 1844 *(nomen emendatum), Lycophidium* Agassiz, 1847 *(nomen emendatum), Lissophis* Hallowell, 1857b, *Metoporhina* A.C.L.G. Günther, 1858, *Metophorhina* – V.F.M. FitzSimons, 1962 *(nomen incorrectum), Cryptolycus* Broadley, 1968e, *Lycophodium* – Anthony, 1955 *(nomen incorrectum), Lycophydium* – Villiers, 1956 *(nomen incorrectum), Licophidion* – Lanza, 1972 *(nomen incorrectum),* and *Jacobclarkus* Hoser, 2012ae *(nomen illegitimum).*
Type species: *Lycodon capense* A. Smith, 1831.
Distribution: Southwestern Arabia and Subsaharan Africa.
Sources: Witte, 1962, Laurent, 1968b, Guibé & Roux-Estève, 1972b, Hughes, 1983, Broadley, 1991a, 1992b, 1996a, Broadley & Hughes, 1993, Vidal & Hedges, 2002, Lawson et al., 2005, Nagy et al., 2005, Vidal et al., 2008, Kelly et al., 2009 and Zaher et al., 2009.

1. *Lycophidion acutirostre* A.C.L.G. Günther, 1868. Ann. Mag. Nat. Hist. (4) 1(6): 427, pl. 19, fig. d. (*Lycophidium acutirostre*)

Types: Syntypes (5), BMNH 1946.1.14.34–38 (formerly BMNH 1868.2.29.16), five 203–280 mm females (J. Kirk, 1858–1864).
Type locality: "Zanzibar," (in error *fide* Laurent, 1968: 471). Corrected to Mozambique *fide* Broadley (1996a: 12).
Distribution: Southeastern Africa. Southern Tanzania (Lindi), N Mozambique (Nampula, Sofala, Mozambique Is.) and S Malawi (Southern), NSL–615 m.
Source: Spawls et al., 2002.

2. *Lycophidion albomaculatum* Steindachner, 1870a. Sber. Akad. Wiss. Wien 62(3): 334. (*Lycophidion horstockii albomaculata*)

Type: Holotype, NMW 23464 (F. Steindachner, Oct.–Dec. 1868).
Type locality: "Umgebung von Dakar, Senegambien" [= vicinity of Dakar (14°42'N, 17°27'W, elevation 10 m), Dakar Region, W Senegal].
Distribution: West Africa. Southern Senegal (Dakar, Kédougou, Kolda, Tambacounda, Thiès, Ziguinchor), Gambia (Kombo Saint Mary, Western), Guinea-Bissau (Biombo, Bissau, Bolama Is.), Guinea (Boffa, Boké, Télimélé) and SW Mali (Kayes, Koulikoro, Sikasso), NSL–105 m.
Sources: Manaças, 1955, Villers, 1975, Hakansson, 1981, J.-F. Trape & Mané, 2004, 2006b, Chippaux, 2006, Auliya et al., 2012 and Chirio, 2013.
Remarks: Original but unnamed description based on two specimens from Gambia (A. Smith coll.), described and illustrated in Günther (1866: 29, pl. 7, fig. a). Holotype donated to NMW in Feb. 1869 by Steindachner *fide* Tiedemann et al. (1994: 70).

3. *Lycophidion capense* (A. Smith, 1831). So. Afr. Quart. J. 1(5): 18. (*Lycodon capensis*)

Synonyms: *Lycodon horstokii* Schlegel, 1837, *Lycophidium abyssinicum* Boulenger, 1893a, *Lycophidium jacksoni* Boulenger, 1893a, *Lycophidion capense loveridgei* Laurent, 1968b, *Lycophidion capense vermiculatum* Laurent, 1968b, and *Lycophidion gambensis* Garcia, 1991 *(nomen ineditum).*
Types: Syntypes (2), none designated, RSM, longest syntype 432 mm male, lost *fide* V.F.M. FitzSimons (1937: 262).
Type locality: "near Cape Town," and "close to Port Elizabeth, South Africa." Restricted to Port Elizabeth, Eastern Cape Prov., South Africa *fide* De Waal (1978: 91).
Distribution: Africa and ext. SW Arabia. Northeastern Egypt (Faiyum), SE Sudan (Al Jazirah, Sennar), S South Sudan (Central Equatoria, Eastern Equatoria, Western Equatoria), Eritrea, Ethiopia (Bale, Gondar, Gojjam, Hararge, Illubabor, Shoa, Sidamo, Wollega), W Somalia (Hiraan, ? Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer, Woqooyi Galbeed), S Kenya (Central, Coast, Nairobi, North-Eastern), Uganda (Central, Eastern, Northern, Western), NE Democratic Republic of the Congo (Nord-Kivu, Orientale, Sud-Kivu), Rwanda (Gikongoro), Burundi (Ruyigi), Tanzania (Coast, Dar es Salaam, Kigoma, Kilimanjaro, Lindi, Morogoro, Mtwara, Mwanza, Rukwa, Tanga, Ukewere and Zanzibar Is.), S Zambia (Central, Copperbelt, Eastern, Lusaka, Southern), Malawi (Central, Northern, Southern), Mozambique (Gaza, Inhambane, Manica, Maputo, Sofala, Zambézia), Zimbabwe (Bulawayo, Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands), Namibia (Erongo, Hardap, Karas, Khomas, Kunene, Okavango, Omaheke, Otjozondjupa), Botswana (Central, Gaborone, Kgalagadi, Kweneng, North West, South East), E Swaziland, E South Africa

(Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, E Northern Cape, North West, Western Cape) and W Yemen, NSL–2500 m.

Sources: Sternfeld, 1910e, 1912, Scortecci, 1932a, Flower, 1933, Monard, 1951, Mertens, 1955, 1964a, V.F.M. FitzSimons, 1962a, Thys van den Audenaerde, 1965, Broadley, 1971d, 1983, 1991a, Pitman, 1974, Branch, 1976, 1988, De Waal, 1978, Broadley & Blake, 1979, Trape, 1981, Derleyn et al., 1983, Lanza, 1983a, Pienaar et al., 1983, Gasperetti, 1988, Joger, 1990, Broadley & Hughes, 1993, Largen & Rasmussen, 1993, Clauss & Clauss, 2002, Spawls et al., 2002, Broadley et al., 2003, Marais, 2004, Chippaux, 2006, Chirio & Ineich, 2006 and Broadley & Blaylock, 2013.

Remarks: Syntypes not in BMNH *fide* FitzSimons (1937: 262). Type locality erroneously listed as Kurrichane, Rustenberg Distr., Gauteng Prov., South Africa *fide* Laurent (1968b: 473). Baha El Din (2006: 243) indicated that the Egyptian population is likely extinct. Probably occurs in E Botswana *fide* Broadley & Blake (1979: 10).

4. *Lycophidion depressirostre* Laurent, 1968b. Bull. Mus. Comp. Zool. 136(12): 472–473, fig. 7.

Type: Holotype, MCZ 53348, a 467–469 mm female (J.S. Owen, 20 May 1950).

Type locality: "Torit, Sudan" [= Torit, Eastern Equatoria Prov., SE South Sudan, 4°25'N, 32°35'E, elevation 620 m].

Distribution: Eastern Africa. Eastern Central African Republic (Bamingui-Bangoran, Mbomou, Ouaka, Ouham), SW Sudan (Shamal Darfur), SE South Sudan (Eastern Equatoria), S Ethiopia (Hararge, Kefa, Shoa, Sidamo), Somalia (Bakool, Bay, Hiraan, Jubbada Dhexe, Jubbada Hoose, Mogadishu, Shabeellaha Dhexe, Shabeellaha Hoose, Togdheer), Kenya (Coast, Eastern, North-Eastern, Rift Valley, Lamu Is.), S Uganda (Central) and E Tanzania (Dar es Salaam, Iringa, Lindi, Morogoro, Mtwara, Piwani, Ruvuma, Tanga), 620–1200 (2000) m.

Sources: Lanza, 1983a, Broadley & Hughes, 1993, Largen & Rasmussen, 1993, Spawls et al., 2002, Chippaux, 2006, Chirio & Ineich, 2006 and Largen & Spawls, 2010.

5. *Lycophidion hellmichi* Laurent, 1964a. Publ. Cult. Comp. Diamantes Angola (67): 95–97, fig. 29.

Type: Holotype, MD 3824, a 471 mm female (H. Baumann, 20 March 1954).

Type locality: "Kapolopopo, désert de Moçâmedes, ±15.55 S 12.42 E, ± 450 m" [= Capolopopo, Mossamedes desert, Namibe Distr., ext. SW Angola, 15°53'S, 12°48'E, elevation 515 m].

Distribution: Southwestern Angola (Benguela, Huambo, Huíla, Namibe) and NW Namibia (Erongo, Kunene, Otjozondjupa), NSL–1215 m.

Sources: Mertens, 1955, 1971, Broadley, 1983, 1991b, Branch, 1988 and M. Griffin, 2003.

Remarks: Questionable record from "Kongostaten" *fie* Broadley (1996a: 18).

6. *Lycophidion irroratum* (Leach *in* Bowdich, 1819). Miss. Cape Coast Castle-Ashantee: 494. (*Coluber irroratus*)

Synonyms: *Hypsirhina maura* Gray, 1842d, and *Lycophidion guttatus* Jan, 1863b.

Type: Holotype, BMNH 1946.1.14.30, a juvenile (T.E. Bowdich, April 1817–Oct. 1818).

Type locality: "Fantee, Cape Coast castle to Ashantee" [= Fantee tribal area, between Mansu and Fosu along Amissa (Oki) River, Central Region, S Ghana, elevation 160–180 m]. Restricted to vicinity of Cape Coast, Central Region, SW Ghana *fide* Leston (1970: 142).

Distribution: West and cen. Africa. Southwestern Senegal (Fatick/Ziguinchor), Guinea–Bissau (Bissau, Tombali), Guinea (Boffa, Kindia, Nzérékoré, Télimélé), Sierra Leone (Southern), Liberia (Montserrado), Ivory Coast (Abidjan, Bouna, Lagunes, Toumodi), S Mali (Sikasso), S Burkina Faso (Centre-Est), Ghana (Ashanti, Central, Eastern, Western), S Togo (Plateaux), S Benin (Collines), S Nigeria (Oyo), Cameroon (Centre, Nord, Nord-Ouest), Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Ombella-Mpoko), N Democratic Republic of the Congo (Bandundu, Bas-Congo, Orientale) and SE South Sudan (Eastern Equatoria), 500–1950 m.

Sources: Bowdich, 1819, Villiers, 1950a, 1965, 1975, Manaças, 1955, Perret, 1961, Doucet, 1963, Blackwell, 1967, Leston & Hughes, 1968, Hughes & Barry, 1969, Hughes, 1983, 2013, Broadley & Hughes, 1993, Ineich, 2003, Villiers & Condamin, 2005, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Segniagbeto et al., 2011, Auliya et al., 2012 and Chirio, 2013.

Remarks: Type locality restriction to coastal region west of Takoradi, Western Region, SW Ghana *fide* Hughes & Barry (1969: 1008) invalid.

7. *Lycophidion laterale* Hallowell, 1857b. Proc. Acad. Nat. Sci. Philadelphia (1857–1858) 9(3): 58–59.

Synonyms: *Lycophidion laterale ocellata* Sternfeld, 1908b, and *Lycophidion polylepis* Boulenger, 1919b.

Type: Holotype, ANSP 10268, a 367 mm female (H.A. Ford, 1851–1857).

Type locality: "Gaboon country, West Africa" [= Gabon].

Distribution: West and cen. Africa. Southern Ivory Coast, S Ghana (Accra, Brong-Ahato, Eastern), S Togo (Plateaux), S Nigeria, S Cameroon (Centre, Est, Littoral, Nord-Ouest, Sud, Sud-Ouest), Equatorial Guinea (Bioko Is.), W Gabon (Moyen-Ogooué, Ngounié, Nyanga, Ogooué-Maritime), S Central African Republic (Haut-Mbomou, Lobaye, Mbomou, Ombella-Mpoko, Sangha), Congo (Brazzaville, Kouilou),

Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai, Katanga, Kinshasa [LSUMZ 40710], Nord-Kivu, Orientale, Sud-Kivu) NW Angola (Cabinda) and W Uganda (ext. W Western), 25–1880 m.

Sources: Bocage, 1895, Sternfeld, 1908b, Villiers, 1953, 1975, Doucet, 1963, Mertens, 1965c, Thys van den Audenaurde, 1965, Leston & Hughes, 1968, Hughes & Barry, 1969, Guibé & Roux-Estève, 1972, Hughes, 1983, D. Lawson, 1993, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Villiers & Condamin, 2005, Chippaux, 2006, Chirio & Ineich, 2006, Chirio & LeBreton, 2007 and Segniagbeto et al., 2011.

Remarks: Possibly occurs in Benin *fide* Hughes (2013: 151).

8. *Lycophidion meleagre* Boulenger, 1893a. Cat. Snakes Brit. Mus. 1: 337, pl. 21, figs. 2, 2a–2b. (*Lycophidium meleagris*)

Type: Lectotype, BMNH 1946.1.14.40, a 260 mm female, designated by Broadley (1996: 9).

Type locality: "Ambrizette, Angola" [= Ambrizette, W Zaire Prov., ext. NW Angola, 07°14'S, 12°52'E, elevation NSL] via lectotype selection.

Distribution: Central Africa. Northwestern Angola (Cabinda, Zaire), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Orientale), SE Kenya (S Coast) and NE Tanzania (Morogoro, Tanga), NSL–1600 m.

Sources: Barbour & Loveridge, 1928, Loveridge, 1957a, J.B. Rasmussen, 1981 and Spawls et al., 2002.

9. *Lycophidion multimaculatum* Boettger, 1888e. Ber. Senck. Naturf. Ges. 1888: 67–68. (*Lycophidium capense multimaculata*)

Type: Lectotype, SMF 17973 (formerly SMF-B 7340, a), a female (P. Hesse, 5 Oct. 1886), designated by Mertens (1922: 179).

Type locality: "Povo Netonna, unterer Kongo" [= vicinity of Banana, lower Congo, or mouth of Congo River, Bas-Congo Prov., W Democratic Republic of the Congo, 6°01'S, 12°25'E, elevation NSL] via lectotype selection.

Distribution: Central Africa. Cameroon (Adamaoua, Est, Centre, Nord, Ouest), E Central African Republic (Bamingui-Bangoran, Haut-Mbomou, Haute-Sangha, Ombella-Mpoko, Ouaka, Ouham, Vakaga), S Gabon, S Congo (Bouenza, Brazzaville, Kouilou), Democratic Republic of the Congo (Bandundu, Bas-Congo, Equateur, Kasai Occidental, Kasai Oriental, Katanga, Kinshasa, Orientale, Sud-Kivu), W Tanzania (Rukwa), Angola (Benguela, Bié, Cabinda, Cuando Cubango, Cuanza Norte, Huambo, Huíla, Lunda Norte, Malanje, Moxico, Namibe), W Zambia (Copperbelt, Northern, North-Western, Western), and NE Namibia (Caprivi, Okavango), NSL–2450 m.

Sources: Boettger, 1888, Mertens, 1955, 1971, Laurent, 1964a, Broadley et al., 2003, M. Griffin, 2003, Chippaux, 2006 and Chirio & LeBreton, 2007.

Remarks: Mertens (1922: 179 and 1967: 96) listed lectotype collection date as April 1887, probably date received in Germany.

10. *Lycophidion namibianum* Broadley, 1991a. Ann. Transvaal Mus. 35(14): 210–212, figs. 1, 3 (paratype).

Type: Holotype, TMP 52730, a 475 mm female (H. Bachran, 1966).

Type locality: "west of Usakos, Karibib District, Namibia (2115 C4)."

Distribution: Northwestern Namibia (Erongo, Khomas, Kunene, Otjozondjupa), 350–1665 m.

Source: M. Griffin, 2003.

11. *Lycophidion nanum* (Broadley, 1968e). Arnoldia, Rhodesia 4(10): 2–3, figs. 1–3. (*Cryptolycus nanus*)

Type: Holotype, NMZB-UM 6988, a 219 mm male (L.A. Balarin & D.G. Broadley, 3 Dec. 1963).

Type locality: "Xiluvo, Manica e Sofala District, Mozambique at ca. 250 metres" [= Xiluvo, Sofala Prov., Mozambique, 19°15'S, 34°04'E, elevation 250 m].

Distribution: Eastern Zimbabwe (E Manicaland) and cen. Mozambique (Manica, Sofala), 35–300 m.

Sources: Broadley & Cock, 1975, Branch, 1994, Marais, 2004 and Broadley & Blaylock, 2013.

12. *Lycophidion nigromaculatum* (Schlegel *in* W.C.H. Peters, 1863c). Mber. Königl. Akad. Wiss. Berlin 1863(6): 288. (*Alopecion [Lycodon] nigromaculatus*)

Synonym: *Lycophidion melanogaster* Hoogmoed *in* Bauer, Günther & Klipfel, 1995 *(lapsus calami).*

Type: Holotype, RMNH 88 (H.S. Pel, 1840–1855).

Type locality: "Guinea" [= coast of Ghana]. Restricted to Dabocrom, Ghana *fide* Hughes & Barry (1969: 1015).

Distribution: West Africa. Southeastern Guinea (Nzérékoré), Liberia, Ivory Coast (Tabou), S Ghana (Central, Eastern, Western) and S Togo (Plateaux), 15–280 m.

Sources: Jan, 1870 *in* Jan & Sordelli, 1870–1881, Leston & Hughes, 1968, Hughes & Barry, 1969, Villiers, 1975, Hughes, 1983, J.-F. Trape & Roux-Estève, 1995, Ineich, 2003, Villiers & Condamin, 2005, Chippaux, 2006 and Segniagbeto et al., 2011.

Remarks: Type locality is listed as Dabo Crom *fide* RMNH catalogue. *Lycophidion melanogaster* Hoogmoed *in* Bauer et al. (1995: 69) is a MS name from the old RMNH catalogue. Schlegel is the author following Art. 50.1.1 as the description makes it clear that Peters did not examine the specimen (the description is brief and there are no segmental counts or measurements listed) and he attributed the name to Schlegel. Possibly occurs in Benin *fide* Hughes (2013: 152).

13. *Lycophidion ornatum* H.W. Parker, 1936d. Novit. Zool. (1936–1937) 40(1): 122–123.

Type: Holotype, BMNH 1946.1.14.28 (formerly BMNH 1936.8.1.690), a 344 mm female (K. Jordan, April 1934).
Type locality: "Congulu, Angola" [= Congulo, Cuanza Sul Distr., N Angola, 10°52'S, 14°17'E, elevation 570 m].
Distribution: Central and East Africa. Nigeria, ext. E Cameroon (Adamaoua, Est, Nord), Congo (Lekoumou), S Democratic Republic of the Congo (Kasai Occidental, Kasai Oriental, Katanga, Kivu, Idjwi Is.), N Angola (Cuanza Sul), SE South Sudan (Eastern Equatoria), S Uganda (Central, Eastern, Western), Kenya (Eastern, Nairobi, Western), W Rwanda (Butare, Cyangugu, Gisenyi), W Burundi (Bujumbura, Bururi, Ruyigi) and W Tanzania (Arusha, Kigoma), 570–2900 m.
Sources: Witte, 1953, Laurent, 1956a, Pitman, 1974, Broadley & Hughes, 1993, Derleyn et al., 1983, J.-F. Trape & Roux-Estève, 1995, Spawls et al., 2002, Chippaux, 2006 and Chirio & LeBreton, 2007.
Remarks: Loveridge (1957a: 252) listed Ghana [MCZ 49606].

14. *Lycophidion pembanum* Laurent, 1968b. Bull. Mus. Comp. Zool. 136(12): 478, fig. 10. (*Lycophidion capense pembanum*)

Type: Holotype, BMNH 1940.1.18.74, a 267 mm male.
Type locality: "Pemba Island, Tanzania." Restricted to Mtambile (5°23'S, 39°42'E, elevation 30 m), Pemba Is., Zanzibar Arch., Zanzibar Region, NE Tanzania *fide* Broadley (1996a: 18).
Distribution: Northeastern Tanzania (Pemba Is.), 20–60 m.
Source: Spawls et al., 2002.

15. *Lycophidion pygmaeum* Broadley, 1996a. Syntarsus (3): 13–14, fig. 9.

Type: Holotype, TMP 56602, a 288 mm female (J.D. Visser, Feb. 1982).
Type locality: "St Lucia, Hlabisa District, KwaZulu, South Africa" [= St. Lucia, KwaZulu Natal Prov., E South Africa, 28°23'S, 32°25'E, elevation 25 m].
Distribution: Eastern South Africa (KwaZulu-Natal), 20–630 m. Known only from type series.

16. *Lycophidion semiannule* W.C.H. Peters, 1854. Mber. Königl. Akad. Wiss. Berlin 1854(11): 622. (*Lycophidium semiannulis*)

Type: Holotype, ZMB 4813, a 256–260 mm male (W.C.H. Peters, July–Oct. 1846).
Type locality: "Tette" [Mozambique] (in error). Corrected to Inhambane, Mozambique *fide* Broadley *in* Bauer et al. (1995: 72).
Distribution: Mozambique (Inhambane, Benguerua Is.), NSL–125 m.
Sources: Laurent, 1964a, Broadley, 1983 and Branch, 1988.
Remarks: Original description reprinted in W. Peters (1855: 51).

17. *Lycophidion semicinctum* A.-M.-C. Duméril, Bibron & Duméril, 1854a. Erpét. Gén. 7(1): 414–415.

Synonyms: *Lycophidion semicinctum* A.-M.-C. Duméril, 1853 (*nomen nudum*), and *Lycophidion gambiense* Rochebrune, 1885.
Type: Holotype, RMNH 307, a 283 mm specimen (D.F. Eschricht, 1830–1854).
Type locality: "Cap de Bonne-Espérance, Afrique australe" [= Cape of Good Hope, South Africa] (in error). Corrected to Ghana *fide* Guibé & Roux-Estève (1972b: 394).
Distribution: West Africa. Southeastern Guinea (Nzérékoré), SW Mali (Koulikoro, Sikasso), Sierra Leone (Northern, Southern), Ivory Coast (Bouaké, Toumodi), Burkina Faso (Centre, Centre-Est, Centre-Nord, Centre-Ouest, Est, Hauts-Bassins, Nord, Sud-Ouest, Volta-Noire), Ghana (Accra, Northern, Upper East, Upper West, Volta), Togo (Plateaux), Benin (Alibori, Atakora, Collines, Zou), SW Niger (Dosso), Nigeria, N Cameroon (Adamaoua, Extreme-Nord, Nord), SW Chad (Mayo-Krebbi) and Central African Republic (Bamingui-Bangoran, Kemo-Gribingui, Mbomou, Ombella-Mpoko, Ouaka, Sangha, Vakaga), 250–1125 m.
Sources: Jan 1870 *in* Jan & Sordelli, 1870–1881, Sternfeld, 1908b, 1910a, Angel, 1933b, Manaças, 1957, Doucet, 1963, Leston & Hughes, 1968, Hughes & Barry, 1969, Papenfuss, 1969, Roux-Estève, 1969, Villiers, 1975, Roman, 1980, Hakansson, 1981, Hughes, 1983, 2013, Joger, 1990, Ineich, 2003, Villiers & Condamin, 2005, Chippaux, 2006, Chirio & Ineich, 2006, J.-F. Trape & Mané, 2006b, Chirio & LeBreton, 2007, Ullenburch et al., 2010 and Segniagbeto et al., 2011.

18. *Lycophidion taylori* Broadley & Hughes, 1993. Herpetol. J. 3(1): 12–13, fig. 2.

Type: Holotype, BMNH 1949.2.1.76, a 237 mm male (R.H.R. Taylor, 1932–1933).
Type locality: "Borama District (43°E: 10°N) at ca. 1375 metres, along the boundary between northern (formerly British) Somalia and Ethiopia" [= Woqooyi Galbeed Region, NW Somalia, elevation 1375 m].
Distribution: West and E Africa. Senegal (Kaolack), SE Chad (Ouaddai), Central African Republic (Vikaga), E Ethiopia (Hararge, Kefa, Shoa), Djibouti, S Somalia (Jubbada Hoose, Mogadishu, Shabeellaha Dhexe), NW Kenya (N Rift Valley) and NE Tanzania (Kilimanjaro), 540–1525 m.

Sources: H.W. Parker, 1949, Lanza, 1972, Broadley & Hughes, 1993, Largen & Rasmussen, 1993, Gravlund, 2000b, Spawls et al., 2002, Chippaux, 2006, Chirio, 2009 and Largen & Spawls, 2010.
Remarks: Photograph of holotype in Broadley & Hughes (1993: fig. 2).

19. *Lycophidion uzungwense* Loveridge, 1932c. Bull. Mus. Comp. Zool. 72(10): 375. (*Lycophidion capense uzungwensis*)

Type: Holotype, MCZ 30117, a 219 mm male (A. Loveridge, 1 Jan. 1930).
Type locality: "Dabaga, Uzungwe Mountains, Tanganyika Territory" [= SW Kigoma Region, W Tanzania, ca. 6°S, 30°E].
Distribution: Southern Tanzania (Uzungwe Mtns. of Iringa, Kigoma), 1000–1940 m.
Sources: Loveridge, 1933 and Spawls et al., 2002.

20. *Lycophidion variegatum* Broadley, 1969. Arnoldia, Rhodesia 4(27): 1–4, fig. 1, pls. 1–2.

Type: Holotype, NMZB-UM 10666, a 367 mm male (D.G. Broadley, 20 March 1966).
Type locality: "Chitora River, 40 km. south of Umtali, Rhodesia at ca. 920 metres" [= E Manicaland Prov., E Zimbabwe].
Distribution: Southeastern Africa. Southern Zambia (Southern), Zimbabwe (Manicaland, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, Midlands) and NE South Africa (N KwaZulu-Natal, Limpopo, Mpumalanga), 400–990 m.
Sources: Branch, 1976, 1988, Broadley & Cock, 1975, Broadley, 1983, Pienaar et al., 1983, Broadley et al., 2003 and Broadley & Blaylock, 2013.

L

LYGOPHIS Fitzinger, 1843 (Xenodontidae)

Synonyms: *Lycophis* Agassiz, 1844 *(nomen emendatum), Aporophis* Cope, 1878a *(nomen substitutum), Digophis* – Briceño-Rossi, 1934 *(nomen incorrectum), Ligofis* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Ligophis* – Briceño-Rossi, 1934 *(nomen incorrectum).*
Type species: *Coluber lineatus* Linnaeus, 1758.
Distribution: South America.
Sources: J.A. Peters & Orejas-Miranda, 1970 and Curcio et al., 2009a.
Remarks: Resurrected from synonymy of *Liophis fide* Zaher et al. (2009: 147).

1. *Lygophis anomalus* (A.C.L.G. Günther, 1858). Cat. Colub. Snakes Brit. Mus.: 37–38. (*Coronella anomala*)

Synonyms: *Lygophis rutilus* Cope, 1862b, and *Coronella pulchella* Jan, 1863a.
Type: Holotype, BMNH 1946.1.9.13, a 474 mm (svl) male (Haslar, Mus.).
Type locality: "Banks of the Parana" [= Río Paraná, Argentina]. Probably from near the city of Santa Fe, Santa Fe Prov., Argentina *fide* Dixon (1985a: 570).
Distribution: Southeastern South America. Southern Brazil (Minas Gerais, Rio Grande do Sul, Santa Catarina, São Paulo), Uruguay (Artigas, Canelones, Cerro Largo, Durazno, Flores, Florida, Maldonado, Montevideo, Paysandú, Rio Negro, Rivera, Rocha, Salto, San José, Soriano, Tacuarembó, Treinta y Tres) and NE Argentina (Buenos Aires, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, La Rioja, Santa Fe, Salta, Treinta y Tres), 300–1600 m.
Sources: Dixon, 1985a, Cei, 1986, 1994, Leynaud & Bucher, 1999, Freitas, 1999, Carreira-Vidal et al., 2005 and Prigioni et al., 2011.

2. *Lygophis dilepis* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 81.

Type: Holotype, USNM 5861, a 648 mm specimen (T.J. Page [Paraguay Exped.], 1853–1858).
Type locality: "Paraguay."
Distribution: Southeastern South America. Eastern Brazil (Bahia, Ceará, Mato Grosso do Sul, Minas Gerais, Paraíba, Pernambuco, Piauí, Rio Grande do Norte), SE Bolivia (S Santa Cruz), Paraguay (Alto Paraguay, Alto Paraná, Amambay, Asunción, Boquerón, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, Presidente Hayes, San Pedro) and NE Argentina (Chaco, Corrientes, Formosa, Santa Fe), 10–650 m.
Sources: Hoge, 1953g, Lema, 1985a, 1989b, Michaud & Dixon, 1987, Yanosky et al., 1993, Cei, 1994, Leynaud & Bucher, 1999 and Cacciali, 2008.
Remarks: Holotype not listed in Cochran, 1961 for USNM.

3. *Lygophis elegantissimus* (Koslowsky, 1896a). Rev. Mus. La Plata (1895) 7: 154, pl. 1. (*Rhadinaea elegantissima*)

Type: Holotype, MLP, a 630 mm female (J. Koslowsky & N. Alboff, 1890), lost *fide* J.D. Williams *in* Dixon (1985a: 571).
Type locality: "Sierra de la Ventana, Provincia de Buenos Aires" [= Sierra de la Ventana, S Buenos Aires Prov., E Argentina, 38°14'S, 61°40'W, elevation 300 m].
Distribution: Eastern Argentina (S Buenos Aires), 300 m. Known only from vicinity of type locality.
Sources: Cranwell, 1942, Dixon, 1985a and Cei, 1994.

4. *Lygophis flavifrenatus* Cope, 1862b. Proc. Acad. Nat. Sci. Philadelphia 14(1): 80–81.

Synonyms: *Dromicus amabilis* Jan 1863b (*nomen nudum*), *Dromicus amabilis* Jan, 1867 *in* Jan & Sordelli,

1866–1870, *Zamenis parallelus* T. Vogt, 1927 *(nomen praeoccupatum),* and *Zamenis vogti* F. Werner, 1929b *(nomen substitutum).*

Types: Syntypes (2), USNM 5397, a 656–666 mm female, and ANSP 4604 (formerly USNM 5398) (T.J. Page [Paraguay Exped.], 22 May–5 July 1854).

Type locality: "Rio Vermejo region" [= Río Bermejo, 122 mile stretch between 26°10'S, 59°39'W and 26°52'S, 58°28'W, Formosa Prov., N Argentina *fide* Page, 1859: 110, 256].

Distribution: Southeastern South America. Southeastern Brazil (Mato Grosso do Sul, Paraná, Rio Grande do Sul, São Paulo), Paraguay (Guaivá, Presidente Hayes), NE Argentina (Chaco, Corrientes, Formosa, Misiones) and N Uruguay (Artigas, Paysandú, Salto, Tacuarembó, Treinta y Tres), NSL–725 m.

Sources: Hoge, 1953g, Meneghel & Achaval, 1983, Michaud & Dixon, 1987, J.D. Williams & Francini, 1991, Cei, 1994, Kucharzewski & Tillack, 2006 and Carreira-Vidal & Lombardo, 2007b.

Remarks: Type locality is "Paraguay" *fide* USNM catalogue and specimen data tag, with "Buenos Ayres" later added in USNM catalogue and systematic cards. Cochran (1961: 196) listed "Buenos Aires, Argentina" as type locality (point of departure of expedition). The type locality is probably in Argentina as the Río Bermejo flows into the Río Paraguay at the Argentina-Paraguay border and Puerto Bermejo is in Argentina.

5. *Lygophis lineatus* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 221. (*Coluber lineatus*)

Synonyms: *Coluber minervae* Linnaeus, 1758, *Coluber jaculatrix* Linnaeus, 1766, *Coluber iaculatrix* Boddaert, 1783, *Iaculatrix surinamensis* Boddaert, 1783 (*nomen nudum*), *Coluber terlineatus* Lacépède, 1789 (*nomen rejiciendum*), and *Natrix sentzenii* Merrem, 1820.

Types: Syntypes (3), NHR Lin-49–51 (formerly MAFR), 750 mm, 580 mm and 555 mm specimens (Mus. Drottn.).

Type locality: "Asia," (in error *fide* Hoge et al., 1978b: 46).

Distribution: Panama and N South America. Eastern Panama (Coclé, Herrera, Los Santos, Veraguas), Colombia (Antioquia, Atlántico, Bolívar, Caquetá, Córdoba, Cundinamarca, Guaviare, La Guajira, Magdalena, Meta, Nariño, Santander, Sucre, Tolima, Vaupés, Vichada), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Nueva Esparta, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia), Guyana (East Berbice-Corentyne, Essequibo Islands-West Demerara, Potaro-Siparuni, Upper Takutu-Upper Essequibo), Suriname (Marowijne, Paramaribo, Saramacca, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni) and N Brazil (Amapá, Amazonas, ? Bahia, Pará, Roraima, Marajo Is.), NSL–900 m

Sources: Hoge, 1953f, Roze, 1966a, Vanzolini et al., 1980, Lancini, 1986, Pérez-Santos, 1986, Michaud & Dixon, 1987, Lema, 1989b, Starace, 1998, Esqueda & La Marca, 1999, Freitas, 1999, Mijares-Urrutia & Arends, 2000, Markezich, 2002, Rivas-Fuenemayer & Barrio-Amorgós, 2005, Navarrete et al., 2009 and C.J. Cole et al., 2013.

Remarks: Costa Rican (Limón) and Ecuadorian (Esmeraldas, Manabí) records doubtful *fide* Michaud & Dixon (1987: 3), latter specimens probably transported from Panama.

6. *Lygophis meridionalis* (Schenkel, 1901). Verh. Naturf. Ges. Basel (1901–1902) 13(1): 160–166. (*Aporophis lineatus meridionalis*)

Synonym: *Aporophis lineatus lativittatus* Müller, 1928.

Type: Lectotype, NMBA 1454, a juvenile male (C. Ternetz, 1895–1896), designated by Kramer (1978: 658).

Type locality: "Paraguay: Bemalcue; Mte. Sociedad," (partially in error). [= Cerrito, 28 km N of Asunción, SE Presidente Hayes Dept., Paraguay, 24°58'S, 57°33'W, elevation 75 m *fide* Cacciali & Wüest, 2009: 383].

Distribution: Central and S South America. Eastern Bolivia (Beni, Santa Cruz), cen. and SE Brazil (Distrito Federal, Espírito Santo, Goiás, Mato Grosso, Mato Grosso do Sul, Minas Gerais, ext. S Pará, Paraná, São Paulo, Tres Estados Is.), Paraguay (Alto Paraguay, Alao Paraná, Amambay, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Itapúa, Misiones, Neembucú, Presidente Hayes, San Pedro) and ext. NE Argentina (Corrientes, Formosa, Misiones), NSL–400 m.

Sources: Hoge, 1953f, Michaud & Dixon, 1987, Cei, 1994, Leynaud & Bucher, 1999, Valdujo & Nogueiro, 2001, Padua Alneida et al., 2006, Cacciali, 2008 and Cacciali & Wüest, 2009.

Remarks: Cacciali & Wüest (2009: 383) have shown that Bermalcue (= Bernal Cué) and Monte Sociedad (= Cerrito) are two different localities. *Aporophis lineatus lativittatus,* whose type was destroyed during World War II, possibly a synonym of *L. dilepis* as both *L. meridionalis* and *L. dilepis* occur in Bolivia (Dixon, *in litt.*).

7. *Lygophis paucidens* Hoge, 1953b. Mem. Inst. Butantan (1952) 24(2): 189–190, pl. 4–5.

Type: Holotype, IB 12016 (formerly MNRJ), a 484 mm female (H. Sick, 24 Sept. 1948), destroyed by fire 15 May 2010.

Type locality: "Mato Verde, Estado de Goiás, Brasil" (in error). [= Mato Verde, on Río Araguaia, ext. NE Mato Grosso State, cen. Brazil, 11°11'S, 50°51'W, elevation 185 m].

Distribution: Central South America. Eastern Brazil (Bahia, Distrito Federal, S Goiás, NE Mato Grosso, Minas Gerais, Paraíba, Pernambuco, Piauí), 80–780 m.

Sources: Hoge, 1953f, Lema, 1985a, 1989b, Michaud & Dixon, 1987, Freitas, 1999, Nogueira, 2001 and Valdujo & Nogueira, 2001.

Remarks: Mato Verde is near Mato Grosso-Goiás border but clearly in Mato Grosso *fide* Hoge (1953b: 191, map).

8. *Lygophis vanzolinii* (Dixon, 1985a). Copeia 1985(3): 567–569.

Type: Holotype, AMNH 65263, a 748 mm male (P. Horen, 1943).

Type locality: "Achiras, Córdoba, Argentina" [= Achiras, W Córdoba Prov., cen. Argentina, 33°10'S, 65°00'W, elevation 850 m].

Distribution: Central Argentina (Córdoba, San Luis), 850 m.

Source: Cei, 1994.

LYSTROPHIS Cope, 1885a (Xenodontidae)

Synonyms: *Rhinostoma* Fitzinger, 1826a *(nomen rejiciendum), Rhinostoma* Wagler, 1830 *(nomen praeoccupatum), Rhinosiphon* Fitzinger, 1843 *(nomen rejiciendum), Rhinosyphon* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen emendatum), Lystrophys* – E. Santos, 1943 *(nomen incorrectum),* and *Lysorhophis* – H.M. Smith & White, 1955 *(nomen incorrectum).*

Type species: *Heterodon dorbignyi* Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854a.

Distribution: Southern South America.

Fossil records: Middle-Upper Pleistocene of Argentina (Buenos Aires).

Sources: A. Ferreira, 1949, Orejas-Miranda, 1966a, J.A. Peters & Orejas-Miranda, 1970, Hoge et al., 1976a, Amaral, 1978, J.D. Williams & Francini, 1991, Scrocchi & Cruz, 1993, Scanferla et al., 2005 and Zaher et al., 2009.

Remarks: A synonym of *Xenodon fide* Zaher et al., 2009.

1. *Lystrophis dorbignyi* (Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 772–774. (*Heterodon dorbignyi*)

Synonyms: *Rhinostoma proboscidea* Fitzinger, 1826a *(nomen nudum), Vipera nasua* Oppel *in* Wagler, 1830 *(nomen rejiciendum), Rhinostoma nasua* Wagler, 1830, *Rhinostoma nasuum* A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen emendatum), Lystrophis dorbignyi chacoensis* Lema, 1994, *Lystrophis dorbignyi orientalis* Lema, 1994, and *Lystrophis dorbignyi uruguayensis* Lema, 1994.

Types: Syntypes (5), MNHN 3633, MNHN 7554–55 (A.C.V.M.D. d'Orbigny, Oct. 1826–Nov. 1828), USNM 420, a 388 mm (svl) stuffed skin (A.F.C.P. de Saint-Hilaire or Dupré, Jan.–May 1820), and IB (formerly MNHN 7556) (C. Gaudichaud-Beaupré, Dec. 1817–Feb. 1818, 1831–1833 or Feb.–July 1836), longest syntype 480 mm, the latter destroyed by fire 15 May 2010.

Type locality: "Amérique du Sud: Buenos-Ayres" [= Buenos Aires, Argentina, 20 Jan. 1827–8 Nov. 1828], "Montevideo" [= Montevideo, Uruguay, 29 Oct. 1826–20 Jan. 1827], "Sainte-Catherine" [= Santa Catarina, Brazil], and "Brésil" [= Brazil].

Distribution: Southern South America. Southern Brazil (Rio Grande do Sul), S Paraguay (Alto Paraná, Amambay, Asunción, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, San Pedro), Uruguay (Artigas, Canelones, Cerro Largo, Colonia, Durazno, Florida, Lavalleja, Maldonado, Montevideo, Paysandú, Río Negro, Rivera, Rocha, Salto, San José, Soriano, Tacuarembó, Treinta y Tres) and Argentina (Buenos Aires, Chaco, Córdoba, Corrientes, Entre Ríos, La Pampa, Río Negro, Salta, Santa Fe, Santiago del Estero).

Sources: Lema, 1961b, 1994, Gudynas, 1979, Cei, 1994, Reati, 1996, Leynaud & Bucher, 1999. Carreira-Vidal et al., 2005, Nenda & Cacivio, 2007 and Cacciali, 2008.

Remarks: Official Specific Name no. 1966 *fide* Opinion 698 (ICZN, 1964). Contrary to Opinion 698, Bibron must be the author according to Art. 50a because Duméril, Bibron & Duméril (1854a: 774, 776) explicitly stated that the name was proposed by Bibron, who studied the material from the d'Orbigny expedition.

2. *Lystrophis histricus* (Jan, 1863a). Arch. Zool. Anat. Fis. 2(2): 224. (*Heterodon histricus*)

Type: Holotype, formerly MSNM, a 350 mm specimen, destroyed in 1943 during World War II.

Type locality: Unknown. Designated as South America *fide* Jan & Sordelli [1865 *in* 1860–1866, 1(livr. 11): pl. 4, fig. 2].

Distribution: Southern South America. Southern Brazil (Mato Grosso, Paraná, Rio Grande do Sul), Paraguay, E Uruguay (Cerro Largo, Lavalleja, Maldonado, Treinta y Tres) and NE Argentina (Chaco, Corrientes, Formosa, La Pampa, Misiones).

Sources: Hoge et al., 1976, Viñas and Olmedo, 1988, Cei, 1994, Carreira-Vidal et al., 2005 and Prigioni et al., 2012.

Remarks: Original description reprinted in Jan (1863b: 44).

3. *Lystrophis matogrossensis* Scrocchi & Cruz, 1993. Pap. Avul. Zool. 38(10): 181–183, pls. 3–4.

Type: Holotype, IB 53544, a 441 mm female, destroyed by fire 15 May 2010.

Type locality: "Miranda, Mato Grosso do Sul, Brasil" [= Miranda, W Mato Grosso do Sul, SW Brazil, 20°15'S, 56°22'W, elevation 130 m].

Distribution: Brazil (Mato Grosso, Mato Grosso do Sul) and Bolivia (Santa Cruz), 535 m.
Sources: Giraudo, 1997 and Jansen, 2008.

4. *Lystrophis nattereri* (Steindachner, 1867a). Reise Öster. Novara 1: 90. (*Heterodon nattereri*)

Type: Holotype, NMW 23378, a 355 mm specimen (J. Natterer, 1817–1835).
Type locality: "Brasilien" [= Brazil]. Emended to interior of Brazil *fide* Steindachner (1864: 233).
Distribution: Eastern Brazil (Bahia, Distrito Federal, Goías, S Mato Grosso do Sul, Minas Gerais, Paraná, S Piauí, São Paulo), 720–1200 m.
Sources: Hoge et al., 1976, Argôlo, 2002a and Silveira et al., 2004c.

5. *Lystrophis pulcher* (Jan, 1863a). Arch. Zool. Anat. Fis. 2(2): 222. (*Heterodon pulcher*)

Type: Holotype, formerly MSNM, destroyed in 1943 during World War II.
Type locality: "Bolivia."
Distribution: Southern South America. Eastern Bolivia (Santa Cruz, Tarija), W Paraguay (Alto Paraguay, Boquerón, Central, Neembucú, Presidente Hayes, San Pedro) and Argentina (Catamarca, Chaco, Córdoba, Corrientes, Entre Dios, Formosa, Jujuy, Junín, La Rioja, Salta, San Juan, San Luis, Santa Fe, Santiago del Estero, Tucumán), 100–400 m.
Sources: Scrocchi & Cruz, 1993, Leynaud & Bucher, 1999, Nenda & Cacivio, 2007, Cacciali, 2008 and Jansen, 2008.
Remarks: Revalidated by Scrocchi and Cruz, 1993.

6. *Lystrophis semicinctus* (Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 774–776. (*Heterodon semicinctus*) (*nomen corrigendum*)

Synonyms: *Heterodon semi-cinctus* Bibron *in* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Heterodon semicinctus* Jan, 1863a *(nomen corrigendum),* and *Lystrophis semicinctus weiseri* Müller, 1928.
Types: Syntypes (3), MNHN 1209, MNHN 1521, and MNHN 3634, a skin (A.C.V.M.D. d'Orbigny, 20 Jan. 1827–8 Nov. 1828 [Buenos Aires] and 11 Nov. 1830–21 June 1831 and 17 Sept.–17 Nov. 1832 [Santa Cruz]), longest syntype 420 mm.
Type locality: "Buenos-Ayres et à Santa-Cruz" [= Buenos Aires, Argentina, 34°36'S, 58°23'W, elevation 175 m, and Santa Cruz de la Sierra, Santa Cruz Dept., Bolivia, 17°48'S, 63°10'W, elevation 425 m].
Distribution: Southern South America. Southern Brazil (Rio Grande do Sul), S Bolivia (Cochabamba, Santa Cruz, Tarija), Paraguay and Argentina (Buenos Aires, Catamarca, Chubut, Córdoba, Corrientes, Entre Ríos, La Pampa, La Rioja, Mendoza, Neuquén, Rio Negro, San Luis, Tucumán), 150–4000 m.
Sources: Koslowsky, 1895, P. Muller, 1969a, Scrocchi & Cruz, 1993, Cei, 1994, D.R. Norman, 1994 and Giambelluca, 1999.

LYTORHYNCHUS W.C.H. Peters, 1862a (Colubridae)

Synonyms: *Chatachlein* Jan, 1863a, *Acontiophis* A.C.L.G. Günther, 1875, *Catachlaena* Blanford, 1881 *(nomen emendatum), Lythorhynchus* – Bocage, 1882a *(nomen incorrectum), Lythorynchus* – Olivier, 1894 *(nomen incorrectum), Lytorynchus* – Olivier, 1899 *(nomen incorrectum), Lithorhynchus* Doumergue, 1901 *(nomen praeoccupatum), Lytorhyncus* – Andersson, 1903 *(nomen incorrectum), Acanthiophis* – Nikolsky, 1916 *(nomen incorrectum), Lytovinchus* – Zavattari, 1929 *(nomen incorrectum), Aconitophis* – Mertens, 1969a *(nomen incorrectum), Acantiophis* – Leviton & Anderson, 1970 *(nomen incorrectum),* and *Lytorhynebus* – Gasperetti, 1974 *(nomen incorrectum).*
Type species: *Heterodon diadema* A.-M.-C. Duméril, Bibron & Duméril, 1854a.
Distribution: Southwestern Asia and N Africa.
Sources: Minton, 1966, Leviton & Anderson, 1970b, Leviton, 1977 and Gasperetti, 1988.

1. *Lytorhynchus diadema* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 779–780. (*Heterodon diadema*)

Synonyms: *Lithorhynchus diadema hirouxii* Doumergue, 1901, *Lytorhynchus gaddi* Nikolsky, 1907, *Lithorhynchus diadema hoggarense* Angel, 1944, *Lytorhynchus diadema arabicus* G. Haas, 1952a, and *Lytorhynchus diadema mesopotamicus* G. Haas, 1952a.
Type: Holotype, MNHN 7560, a 380 mm female (P.K.A. Schousboe, 1850).
Type locality: "Algérie et du désert de l'ouest de l'Afrique Septentrionale" [= Algeria and desert of W North Africa].
Distribution: North Africa and SW Asia. Mauritania (Adrar, Dakhlet Nouadhibou, Inchiri, Tagant, W Tiris Zemmour, Trarza), Western Sahara (Rio de Oro, Saguia El Hamra), S Morocco (Kaar Es Souk, Ouarzazate, Oujda, Tan Tan, Tata), Western Sahara (Rio de Oro, Saguia El Hamra), Algeria (Béchar, El Bayadh, Illizi, Naama, Tamanrasset), S Tunisia (Gabès, Gafsa, Kairouan, Kasserine, Tozeur), N Niger (Agadez), N Libya (Ajdabiya, Al Jabar Al Akhdar, Al Jurfah, Banghazi, Gharyan, Darnah, Tarabulus, Tripoli), NE Sudan, Egypt (Cairo, El-Bahr El-Ahmar, Faiyum, Giza, Ismailia, Matrouh, New Valley, North Sinai, South Sinai, Suez), Saudi Arabia (Asir, Eastern, Ha'il, Jawf, Jazan, Madinah, Makkah, Qasim, Riyadh), Kuwait, Bahrain, United Arab Emirates (Abu Dhabi,

L

Ras al Khaimah, Sharjah), Oman (Al Wusta, Dhofar, Muscat), SW Yemen (Lahij), S Israel (Central, Gaza Strip, Southern, Tel Aviv), Syria (Homs), Jordan (Maan, Waddi Ramm), Iraq (Al Basrah, Baghdad, Ninawa) and SW Iran (Bushehr, Khuzestan), NSL–2300 m.

Sources: Mayet, 1903, Angel & Lhote, 1938, G. Haas, 1952a, Chpakowsky & Chnéour, 1954, Arnold 1980b, Le Berre, 1989, Latifi, 1991, Leviton et al., 1992, Martens, 1993, Schätti & Gasperetti, 1994, Bons & Geniez, 1996, Schleich et al., 1996, Bouskila & Amitai, 2001, Disi et al., 2001, Geniez et al., 2004, Chippaux, 2006, J.-F. Trape & Mané, 2006b, Smid, 2010 and Bar & Haimovitch, 2011.

2. *Lytorhynchus gasperetti* Leviton, 1977. J. Saudi Arabia Nat. Hist. Soc. (19): 17–19, figs. 1a–c.

Type: Holotype, CAS 134150, a 380 mm female (J. Gasperetti, 9 Jan. 1972).

Type locality: "Khasawiyah (16°56'N, 42°37'E), Saudi Arabia" [= Jazan Prov., SW Saudi Arabia].

Distribution: Extreme SW Saudi Arabia (S Asir, Jazan), NSL–2000 m.

Source: Farang & Banaja, 1980 and Gasperetti, 1988.

L

3. *Lytorhynchus kennedyi* K.P. Schmidt, 1939b. Field Mus. Nat. Hist. (Zool.) 24(7): 75.

Type: Holotype, FMNH 19586, a 380 mm male (H. Field & R.A. Martin, 21 May 1934).

Type locality: "between Homs and Palmyra, Syria" [= bet. Homs (34°44'N, 36°43'E, elevation 500 m), and Palmyra (34°33'N, 38°17'E, elevation 400 m), Homs Distr., Syria].

Distribution: Syria (Homs) and Jordan (Aqabah, Maan, Mafraq, Tafilah), 400–500 m.

Sources: Leviton et al., 1992, Martens, 1993 and Amr & Disi, 2011.

Remarks: Probably occus in SW Iraq fide Leviton et al. (1992: 98). A subspecies of *L. diadema fide* Schleich et al. (1996: 496).

4. *Lytorhynchus maynardi* Alcock & Finn, 1897. J. Asiat. Soc. Bengal (1896) 65(4): 562–563, pl. 14, figs. 1, 1a–1c.

Types: Syntypes (4), BMNH 1946.1.14.79, a male, and ZSI 14223–25 (formerly IMC), longest syntype 381–400 mm (A.H. MacMahon & F.P. Maynard [Afghan-Baluch Bound. Comm.], 30 March–May 1896).

Type locality: "Near Robat I, just south of the Koh Malik-do-khand, Afghan-Baluch Boundary, 4500 feet" [= ext. S Helmand Prov., S Afghanistan, 29°33'N, 63°38'E, elevation 1310 m].

Distribution: Southwest Asia. Eastern Iran (Razavi Khorasan), ext. SW Afghanistan and W Pakistan (ext. N Balochistan), 790–1680 m.

Sources: F. Werner, 1929a, M.A. Smith, 1943, Baloutch, 1976 and M.S. Khan, 2002.

Remarks: Wall (1923d: 619) implied only two types and M.A. Smith (1943: 192) listed only three types.

5. *Lytorhynchus paradoxus* (A.C.L.G. Günther, 1875). Proc. Zool. Soc. London 43(1): 232–233, fig. 5. (*Acontiophis paradoxa*)

Synonym: *Lytorhynchus monticornis* F. Werner, 1927.

Type: Holotype, BMNH 1946.1.14.75, a 305 mm male (T.C. Jerdon, 1836–1852).

Type locality: "probably within the Himalayan region or in Khassya" [= Himalayan region or Khassia, Bulandshahar Distr., Uttar Pradesh, N India]. Restricted to N India *fide* M.A. Smith (1943: 191) and to Zangipur, N Sindh *fide* Minton (1966: 130)..

Distribution: Eastern Pakistan (Punjab, Sindh) and NW India (Rajasthan), NSL–150 m.

Sources: M.A. Smith, 1943, M.S. Khan, 1977, 1982a, 2002, Whitaker & Captain, 2004 and Baig et al., 2008.

Remarks: Type locality restriction of Zangipur, N Sindh, Pakistan *fide* M.S. Khan (2002: 111) invalid.

5. *Lytorhynchus ridgewayi* Boulenger, 1887e. Ann. Mag. Nat. Hist. (5) 20(120): 413–414.

Synonyms: *Lythorhynchus ridgewaji roseni* Elpatjewsky & Sabanejew, 1906, and *Lytorhynchus gabrielis* F. Werner, 1938a.

Types: Syntypes (2), BMNH 1946.1.14.77–78, two males, longest syntype 425 mm (J.E.T. Aitchison, 27–29 May 1885).

Type locality: "Chin Kilak, Afghanistan" [= Chinkalok, 38 km NW of Herat, Herat Prov., NW Afghanistan, ca. 34°32'N, 61°53'E, elevation 600 m].

Distribution: Southwestern Asia. Extreme SW Turkmenistan, E Iran (Central, Fars, Kerman, Khuzestan, Mazandaran, Sistan va Baluchestan), W Afghanistan (Helmand, Herat) and W Pakistan (Balochistan, Punjab), 600–2440 m.

Sources: Boulenger, 1889d, Leviton & Anderson, 1970b, Bannikov et al., 1977, Latifi, 1991, Szczerbak, 1994 and M.S. Khan, 2002.

M

MACRELAPS Boulenger, 1896a (Atractaspididae)

Synonym: *Macrolaps* – Maass-Berlin, 1933 *(nomen incorrectum).*
Type species: *Uriechis microlepidotus* A.C.L.G. Günther, 1860i.
Distribution: Southern Africa.
Sources: Witte & Laurent, 1947, V.F.M. FitzSimons, 1962a, 1974, Branch, 1981, 1982, 1988, Broadley, 1983, Wallach, 1991, Underwood & Kochva, 1993, Nagy et al., 2005, Kelly et al., 2009 and Zaher et al., 2009.

1. *Macrelaps microlepidotus* (A.C.L.G. Günther, 1860i). Ann. Mag. Nat. Hist. (3) 5(27): 168–169, pl. 9. (*Uriechis microlepidotus*)

Synonym: *Atractaspis natalensis* W.C.H. Peters, 1877c.
Types: Syntypes (2), BMNH 1946.1.3.9, a 940 mm female (T. Ayres), and BMNH 1946.1.8.67, a juvenile (J.H. Gurney, 1858–1860).
Type locality: "Port Elizabeth, in Algoa Bay, South Africa" (in error). Corrected to D'Urban Port Natal *fide* Gurney (1860: 342) [= Durban, Natal Province, NE South Africa].
Distribution: Eastern South Africa (Eastern Cape, KwaZulu-Natal), NSL–525 m.

MACROCALAMUS A.C.L.G. Günther, 1864a (Calamariidae)

Type species: *Macrocalamus lateralis* A.C.L.G. Günther, 1864a.
Distribution: Malay Peninsula.
Sources: Grandison, 1972, Tweedie, 1983, Vogel & David, 1999, Norsham & Lim, 2003, David & Pauwels, 2004, Zaher et al., 2009 and I. Das, 2010, 2012.

1. *Macrocalamus chanardi* David & Pauwels, 2004. Raffles Bull. Zool. 52(2): 637–639, fig. 4.

Type: Holotype, BMNH 1900.6.14.17, a 264 mm female (A.L. Butler).
Type locality: "Larut Hills, Perak, 3500-4500 ft." [= Bukit Larut, Perak State, West Malaysia *fide* David & Pauwels, 2004: 637].
Distribution: Central West Malaysia (Pahang, Perak), 1065–1500 m.

2. *Macrocalamus gentingensis* Norsham & Lim, 2003. Hamadryad (2002) 27(1): 83–87, figs. 1–3.

Type: Holotype, ZRC 2.5062, a 378 mm female (O.K. Sang, June 2001).
Type locality: "Genting Highlands, about 32 km north-east of Kuala Lumpur, in the vicinity of the water pump at 1181 m in elevation, Pahang, Malay Peninsula (03°26'N, 101°47'E)."
Distribution: Central West Malaysia (Pahang), 1180–1690 m.

3. *Macrocalamus jasoni* Grandison, 1972. Bull. Brit. Mus. Nat. Hist. (Zool.) 23(4): 88–90, fig. 4.

Type: Holotype, BMNH 1967.2283, a 760 mm female (J.A. Bullock, 9 April 1967).
Type locality: "track below camp 5 at about 5800 ft, Gunong Benom, C. Pahang, W. Malaysia" [= Mt. Benom, Pahang State, cen. West Malaysia, 1765 m].
Distribution: Central West Malaysia (Pahang), 1765–1980 m. Known only from type locality.
Source: Vogel & David, 1999.

4. *Macrocalamus lateralis* A.C.L.G. Günther, 1864a. Rept. Brit. India: 199, pl. 18, fig. d.

Synonym: *Macrocalamus lateralis* A.C.L.G. Günther, 1863c (*nomen nudum*)
Type: Holotype, BMNH 1946.1.7.23, a 305 mm male (T. Hardwicke, 1756–1823).
Type locality: "East Indies, probably from the continent." Restricted to Malay Peninsula *fide* Flower (1899: 674) and to mainland opposite Penang Is., Pinang State, West Malayasia *fide* David & Pauwels (2004: 640).
Distribution: Peninsular Thailand (Narathiwat) and West Malaysia (Pinang), 400 m.
Sources: Flower, 1899, Boulenger, 1912, M.A. Smith, 1922, B.L. Lim, 1963, 1967a, Tweedie, 1983, M.J. Cox et al., 1998, Chan-ard et al., 1999, Vogel & David, 1999 and B.L. Lim et al., 2002.
Remarks: Type locality designation of India *fide* A.C.L.G. Günther (1863c: 350) in error. Type locality restriction to Cameron Highlands, Pahang State, West Malaysia *fide* B.L. Lim (1963a: 101) in error.

5. *Macrocalamus schulzi* Vogel & David, 1999. Raffles Bull. Zool. 47(2): 318–322, figs. 1–3 (paratype), pls. 1, 4–5, 9–12.

Type: Holotype, ZFMK 51159, a 383 mm male (K.-D. Schulz, June–July 1989).

Type locality: "Tanah Rata (ca 4°29›N, 101°23›E), Cameron Highlands, Pahang, West Malaysia, Malaysia" [= Tanah Rata, Pahang State, cen. West Malaysia, 4°29'N, 101°23'E, elevation 1430 m].

Distribution: Central West Malaysia (Pahang), 1000–1800 m.

6. *Macrocalamus tweediei* B.L. Lim, 1963a. Bull. Natl. Mus. Singapore (32): 100, fig. 1, pl. 2.

Type: Holotype, ZRC 2.2174 (formerly IMRKL 57656), a 500 mm specimen (B.L. Lim & H.E. McClure, 2 Oct. 1959).

Type locality: "Gunong Brinchang, Cameron Highlands, Pahang at an elevation of 6,000 ft., Malaya" [= Mt. Batu Berinchang, Pahang State, cen. West Malaysia, elevation 1830 m].

Distribution: Central West Malaysia (Pahang, Selangor), 1500–1970 m.

Sources: M.J. Cox et al., 1998, Vogel & David, 1999 and Chan-ard et al., 1999.

M

7. *Macrocalamus vogeli* David & Pauwels, 2004. Raffles Bull. Zool. 52(2): 642–643, figs. 7–9.

Type: Holotype, BMNH 1968.764, a 192 mm male (FMSM Meteorol. Surv., Sept. 1921).

Type locality: "'Camp Padang, Gunong Tahan, Pahang, Malaya, 5.400–5.700 ft.,' Gunung Tahan, Pahang, West Malaysia, Malaysia."

Distribution: Central West Malaysia (Pahang), 1650–1750 m.

MACROPISTHODON Boulenger, 1893a (Natricidae)

Synonyms: *Macropisthistodon* – Steindachner, 1913b *(nomen incorrectum), Macropistodon* – M.A. Smith, 1915c *(nomen incorrectum), Macropisthon* – Maki, 1933 *(nomen incorrectum),* and *Maciophistodon* – Briceño-Rossi, 1934 *(nomen incorrectum).*

Type species: *Amphiesma flaviceps* A.-M.-C. Duméril, Bibron & Duméril, 1854a.

Distribution: Southern and SE Asia and W Indonesia.

Sources: Boulenger, 1893a, C. Haas, 1950, McDowell, 1961, E.H. Taylor, 1965, Tweedie, 1983, Stuebing, 1991, Kelly et al., 2003, Zaher et al., 2009, I. Das, 2010, 2012 and Cadle, 2011.

1. *Macropisthodon flaviceps* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 738–739. (*Amphiesma flaviceps*)

Synonyms: *Amphiesma flaviceps semifasciata* Jan, 1863b (*nomen nudum*), *Amphiesma flaviceps semifasciata* Jan, 1865c, *Tropidonotus leucomelas* A.C.L.G. Günther, 1864a, *Amphiesma rufo-torquatum* Edeling, 1865 *(nomen incorrigendum),* and *Amphiesma rufotorquatum* – Boulenger, 1893a *(nomen corrigendum).*

Type: Holotype, MNHN 3601 (formerly RMNH), a 710 mm specimen.

Type locality: "Bornéo" [= East Malaysia or Kalimantan, Indonesia].

Distribution: Malay Peninsula and Greater Sundas. Extreme S Thailand (Surat Thani), West Malaysia (Pahang, Perak, Pinang), East Malaysia (Sarawak) and Indonesia (Bangka, Kalimantan, Nias, Sumatra), NSL–1300 m.

Sources: M.A. Smith, 1922b, 1930a, David & Vogel, 1996 and I. Das, 2012.

Remarks: M.A. Smith (1943: 529) designated pl. 35 in Hardwicke (1756–1823) (2: fig. 35) the lectotype of *Tropidonotus leucomelas* A.C.L.G. Günther.

2. *Macropisthodon plumbicolor* (Cantor, 1839b). Proc. Zool. Soc. London 7(1): 54. (*Tropidonotus plumbicolor*)

Synonyms: *Xenodon viridis* A.-M.-C. Duméril, 1853 (*nomen nudum*), *Trigonocephalus elliotti* Jerdon, 1854, *Xenodon viridis* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Amphiesma brachyura* Jan, 1863b (*nomen nudum*), *Amphiesma brachyura* Jan, 1865c, and *Macropisthodon plumbicolor palabariya* Deraniyagala, 1955.

Type: Lectotype, specimen illustrated in colored sketch of T.E. Cantor (1834–1837) in RSL, designated by M.A. Smith (1943: 314).

Type locality: "Malwa (Saugor), India" [= Sagar, Madhya Pradesh State, cen. India, 23°50'N, 78°45'E, elevation 535 m] via lectotype selection.

Distribution: Southern Asia. India (Andhra Pradesh, Goa, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, West Bengal), Bangladesh, Myanmar and Sri Lanka (Central, North-Central, Northern, Uva), 600–2135 m.

Sources: Wall, 1905a, 1906a, 1921g, 1923d, M.A. Smith, 1943, Deraniyagala, 1955, P. Silva, 1969, R. Sharma, 1971, 1974, 1976a, Daniel, 1983, M.S. Khan, 1983, M.A.R. Khan, 1988, A. Silva, 1990b, 2001, 2009, Whitaker & Captain, 2004, N. Khaire, 2006, I. Das, 2010 and Vyas, 2011.

Remarks: Single Pakistan (Sindh) record of Murray (1884: 380) doubtful.

3. *Macropisthodon rhodomelas* (H. Boie *in* F. Boie, 1827). Isis von Oken 20(6): 535. (*Tropidonotus rhodomelas*)

Synonym: *Tropidonotus rhodomelas* H. Boie in Schlegel, 1826a *(nomen nudum), Tropidonotus rhodomelas* Schlegel, 1826b *(nomen nudum),* and *Tropidonotus mortoni* Theobald, 1868b.

Type: Lectotype, RMNH 1078, designated by R.F. Inger herein.

Type locality: "Java" [W Indonesia] via lectotype selection. Restricted to region of Mt. Pangerango and Mt. Salak, West Java, Indonesia *fide* Brongersma (1948b: 14). Emended to Tjihandjawar, at the foot of Mt. Pangerango, W. Java [= Cihanyawar, Nagrak, Jawa Barat, W Java, SW Indonesia, 07°03'S, 108°40'E] *fide* Brongersma (1950: 1499).

Distribution: Malay Peninsula and Greater Sundas. Southern Thailand (Nakhon Si Thammarat, Trang), West Malaysia (Pahang, Perlis, Pinang), Singapore, East Malaysia (Sabah, Sarawak) and W Indonesia (Bangka, Java, Sumatra), 150–1330 m.

Sources: E.H. Taylor, 1965, K.F.Lim & Lee, 1989, David & Vogel, 1996, M.J. Cox et al., 1998 and Malkmus et al., 2002.

Remarks: Original description based on H. Boie's MS (1823–1825). Single Sulawesi record of Rooij (1917: 92) doubtful *fide* Bosch (1985: 26).

MACROPROTODON Guichenot, 1850 (Colubridae)

Synonyms: *Macroprodon* – Zavattari, 1930 *(nomen incorrectum), Macropodon* – Maass-Berlin, 1933 *(nomen incorrectum),* and *Macroptodon* – Buresch & Zonkow, 1934 *(nomen incorrectum).*

Type species: *Macroprotodon mauritanicus* Guichenot, 1850.

Distribution: Southwest Europe, N Africa and ext. SW Asia.

Fossil records: Fossils unassigned to species include middle Pliocene (Ruscinian, MN 15: 3.2–4.2 mya) of Spain and upper Pliocene (MN 16/17) of Morocco.

Sources: J. Anderson, 1898, Mosauer & Wallis, 1927, Roux, 1939, Chpakowsky & Chnéour, 1954, Lanza & Bruzzone, 1960, Steward, 1971, Bruno, 1977, 1984, Andrada, 1980, J.B. Rasmussen, 1985b, Gisbert & García-Perea, 1986, Wade, 1988, 2001, Busack & McCoy, 1990, Pleguezuelos et al., 1994, Bons & Geniez, 1996, Schleich et al., 1996, Bailon, 2000, Corti & Luiselli, 2001, Carranza et al., 2004 and Szyndlar, 2012.

Remarks: Molecular study of Carranza et al., 2004, suggested five or six species *(M. abubakeri, brevis, cucullatus, ibericus, mauritanicus, textilis)* but results are inconclusive.

1. *Macroprotodon abubakeri* Wade, 2001. Bull. Nat. Hist. Mus. London (Zool.) 67(1): 95–100, figs. 2, 5a, 6f.

Type: Holotype, BMNH 1913.7.3.14, a 464 mm male (W. Rothschild & E. Hartet, Feb. 1908–June 1912).

Type locality: "Oran, Algeria" [= Oran, Oran Wilaya, N Algeria, 35°42'N, 0°38'W, elevation 120 m].

Distribution: Northwest Africa. Northern Morocco (Al Hoceima, Nador, Oujda), S Spain (Melilla) and NW Algeria (Ain Defla, Ain Témouchent, Algiers, Annaba, El Bayadh, Laghouat, Mascara, Mostaganem, Oran, Setif, Tlemcen, Habibas Is.), NSL–1000 m.

2. *Macroprotodon brevis* (A.C.L.G. Günther, 1862a). Ann. Mag. Nat. Hist. (3) 9(49): 58. (*Coronella brevis*)

Synonym: *Macroprotodon cucullatus ibericus* Busack & McCoy, 1990.

Type: Holotype, BMNH 1946.1.9.87 (R.T. Lowe, 1858–1861).

Type locality: "small island (without name) off the coast of Mogador" [= Essaouira islet, W of Mogador Is., SW of Essaouira, Morocco, 31°30'N, 9°47'W, elevation NSL].

Distribution: Iberian Peninsula and N Morocco. Northern Morocco, Spain (Almería, Avila, Badajoz, Centa, Mallorca, Melilla, Menorca, Barcelona, Cáceres, Cadiz, Castellón, Ciudad Real, Córdoba, Huelva, Jaén, Madrid, Málaga, Murcia, Salamanca, Sevilla, Toledo, Valencia, Zamora, Zaragoza, Baleares Is.) and Portugal (Algarve, Alentejo, Alto Alentejo, Baixo, Beira Litoral, Estremadura, Minho, Trás-os-Montes), NSL–600 m.

Source: Feriche et al., 2008.

Remarks: Supplemental original description in A.C.L.G. Günther (1862c: 48–52).

3. *Macroprotodon cucullatus* (I. Geoffroy-Saint-Hilaire, 1827 *in* Savigny, 1809–1829). Descr. Rept. Égypte 1(1): 148–151, pl. 8, figs. 3–3′. (*Coluber cucullatus*)

Synonyms: *Lycognathus taeniatus* A.-M.-C. Duméril, Bibron & Dumeril, 1854a, *Lycognathus textilis* A.-M.-C. Duméril, Bibron & Duméril, 1854a, *Oxyrhopus scolopax* Gasco, 1876, *Macroprotodon maroccanus* W.C.H. Peters, 1882b, and *Macroprotodon cucullatus melanocephala* Mosauer & Wallis, 1927.

Type: Holotype, not designated, a 356 mm specimen (F. Schoushoé), lost *fide* Busack & McCoy (1990: 268).

Type locality: "Egypte" [= Egypt]. Restricted to Lower Egypt *fide* Mertens & Müller (1928: 50).

Distribution: Northern Africa and Middle East. Western Sahara (Rio de Oro, Saguia El Hamra), Morocco (Al Hoceima, Boulemane, Figuig, Nador, Oujda), N Algeria (Al Butnan, Al Jazair, Annaba, Batna, Béchar, Djelfa, El Bayadh, Médéa, Mostaganem, Oran, Ouahran, Qacentina, Sétif, Saida, Tamanrasset, Tlemcen, Habibas Is.), Tunisia (Gabès, Nabeul, Tozeur,

Tunis, Zembra Is.), S Italy (Lampedusa Is.), N Libya (Ajdabiya, Al Akhdar, Al Jabal, Az Zawiyah, Al Khaliji, Banghazi, Butnan, Darnah, Gharyan, Misratah, Surt, Tarabulus), N Egypt (Alexandria, Beheira, Beni Suef, Cairo, Faiyum, Gharbia, Giza, Ismailia, Matrouh, North Sinai), SW Israel (Gaza Strip, W Southern) and Syria, NSL–2500 m.

Sources: Doumergue, 1901, Chpakowsky & Chnéour, 1954, Kramer & Schnurrenberger, 1963, Blanc, 1988, Bouskila & Amitai, 2001, Geniez et al., 2004, Sindaco et al., 2006 and Bar & Haimovitch, 2011.

Remarks: Type locality restriction to El Aricha region (34°13'N, 1°01'W), Naâma Wilaya, Algeria *fide* Doumergue (1901: 283) and Wade (2001: 91) invalid. See Carranza et al. (2004: 530) on the status of this species.

4. *Macroprotodon mauritanicus* Guichenot, 1850. Explor. Sci. Algérie: 22, pl. 2, fig. 2.

Synonym: *Macroprotodon mauritanicus* Duméril & Bibron *in* Guichenot, 1850 *(nomen ineditum)*.

Types: Syntypes (4), MNHN 2171, a 469 mm male, MNHN 1994.2339, a 452 mm female, MNHN 1994.2340, a 487 mm female, and MNHN 1994.2341, a 557 mm male (A. Guichenot, 1840–1842).

Type locality: "Algérie" [= Algeria].

Distribution: Spain (Mallorca), N Algeria (Algiers, Annaba, Batna, Béjaïa, Biskra, Bordj Bou Arreridj, Constantine, Guelma, Medea, Setif), N Libya and N Tunisia (Ben Arous, Bizerte, Jendouba, Nabeul, Sfax, Tunis, Zaghouan, Galita Is.).

Sources: Wade, 2001 and Carranza et al., 2004.

M

MACROVIPERA A.F.T. Reuss, 1927a (Viperidae)

Synonym: *Laidlawus* Hoser, 2012k *(nomen illegitimum)* and *Maxhoservipera* Hoser, 2012k *(nomen illegitimum)*.

Type species: *Coluber lebetinus* Linnaeus, 1758.

Distribution: Greece, Middle East, W Asia and N Africa.

Fossil records: Lower Miocene to upper Pliocene of Europe and extreme NW Africa, and middle Pleistocene of Greece. Fossils unassigned to species include lower Miocene (Orleanian, MN 4: 16.0–16.9 mya) of Spain, middle Miocene (Astaracian, MN 7/8: 11.1–12.8 mya) of Romania, upper Miocene (Turiolian, MN 11–12: 7.3–8.7 mya) of Hungary, upper Pliocene of France and Morocco. *Macrovipera* is included with a group, which as unassigned fossil material, are referred to as the "Oriental vipers," and may include any of the following records: lower Miocene (Orleanian, MN 4–5: 13.7–16.9 mya) of France, Germany, Portugal and Russia, middle Miocene (Astaracian, MN 6-8: 11.1–13.7 mya) of France and Germany, upper Miocene (Vallesian, MN 9–10: 8.7–11.1 mya) of Hungary, Turkey and Ukraine, upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Greece, Hungary, Italy and Ukraine, lower Pliocene (Ruscinian, MN 14: 4.2–4.9 mya) of Spain and Ukraine, upper Pliocene (Villanyian, MN 16: 2.6–3.2 mya) of Greece, upper Pliocene/lower Pleistocene of Morocco, and middle Pleistocene (Ionian: 0.13–0.78 mya) of Greece.

Sources: Brodmann, 1987, Herrmann et al., 1992, Golay et al., 1993, Schleich et al., 1996, Herrmann & Joger, 1997, Nilson & Andrén, 1997, David & Ineich, 1999, McDiarmid et al., 1999, Bailon, 2000, Lenk et al., 2001b, Szyndlar & Rage, 2002, Mallow et al., 2003, Szyndlar & Rage, 2007, Dobiey & Vogel, 2007, Venczel & Stiuca, 2008, Stümpel & Joger, 2009 and Phelps, 2010.

1. †*Macrovipera burgenlandica* (Bachmayer & Szyndlar, 1987). Ann. Naturhist. Mus. Wien 88A: 33–37, figs. 5.1–5.3, pl. 1, figs. 5–6. (†*Vipera burgenlandica*)

Type: Holotype, NMWGP 1986/3, one basiparasphenoid.

Type locality: "Kohfidisch, province of Burgenland, southeastern Austria. Late Miocene (Mammalian stage – Lower Turolian; Mammalian European continental biozone MN 11; Pontian in Paratethyan terms)."

Distribution: Upper Miocene (Turolian, MN 11: 7.8–8.7 mya) of Austria.

2. †*Macroviopera gedulyi* (Bolkay, 1913). Mitt. Jahrb. Kgl. Ungar. Geol. Reichsanst. 21(7): 225–226, pl. 12. figs. 9–12. (†*Vipera gedulyi*)

Types: Syntypes, HGIM ob.–4467/vt. 74, 97 skull bones, 19 maxillae and 206 fangs.

Type locality: "Polgárdi, Hungary" [= Turolian, upper Miocene *fide* Rage, 1984b: 56].

Distribution: Upper Miocene (Turolian, MN 13: 4.9–7.3 mya) of Hungary. Known only from type locality.

Sources: Bolkay, 1920, Rage, 1984b, Szyndlar, 1991a, Venczel, 1994, 1998 and Nilson & Andrén, 1997.

Remarks: Closely related to *Vipera ammodytes fide* Rage (1984b: 56).

3. †*Macrovipera kuchurganica* (Zerova *in* Zerova, Lungu & Chkhikvadze, 1987). Proc. Zool. Inst., Acad. Sci. Leningrad (1986) 158: 95–96, fig. 3. (†*Vipera kuchurganica*)

Type: Holotype, ZIK 37-2536, one trunk vertebra.

Type locality: "Kuchurgan, near Odessa, Ukraine, USSR, Middle Pliocene."

Distribution: Middle Pliocene (Ruscinian, MN 14–15: 3.2–4.9 mya) of Moldova and Ukraine.

Sources: Zerova, 1993, Nilson & Andrén, 1997 and Redkozubov, 2003.

Remarks: Transferred to *Macrovipera fide* Zerova, 1993.

4. *Macrovipera lebetina* (Linnaeus, 1758). Syst. Nat., ed. 10, 1: 218. (*Coluber lebetinus*)

Synonyms: *Vipera obtusa* Dwigubsky, 1832, *Vipera euphratica* W.C.L. Martin, 1838, *Vipera libethina* Filippi, 1865 *(nomen emendatum), Vipera peilei* Murray, 1892, *Vipera lietina* – Wall, 1908i *(nomen incorrectum), Macrovipera lebetina cypriensis* A.F.T. Reuss, 1933c, *Vipera lebetina turanica* Chernov *in* Terent'ev & Chernov, 1940, *Vipera lebentina* – Khalil, 1963 *(nomen incorrectum), Vipera libertina* – Roitman, 1967 *(nomen incorrectum), Vipera lebtina obtuse* – Minton, 1968 *(nomen incorrectum), Vipera lebethina* – Elter, 1981 *(nomen incorrectum), Vipera lebentina lebentina* – Billings & Schätti, 1984 *(nomen incorrectum),* and *Vipera lebetina transmediterranea* Nilson & Andrén, 1988b.

Type: Holotype, not designated (formerly MAFR), lost *fide* Andersson (1899: 29).

Type locality: "Oriente" [= Eastern Asia]. Restricted to Cyprus *fide* Mertens & Müller (1928: 52).

Distribution: North Africa, Middle East and SW Asia. Northern Algeria (Aïn Témouchent, Naama, Oran, Tlemcen), N Tunisia (Ben Arous, Gafsa, Jendouba, Kairouan, Kasserine, Medinine, Nabeul, Zaghouan), E Turkey, Cyprus, Syria (Halab), Lebanon (Mont-Liban), Jordan (Karak, Tafilah), S ext. SW Russia (Dagestan), Armenia, SE Georgia, Azerbaijan, Turkmenistan, Uzbekistan, Tadzhikistan, Iraq, Iran (Bakhtaran, Central, East Azarbaijan, Esfahan, Fars, Ghilan, Hamadan, Khuzestan, Kordestan, Lorestan, Mazandaran, Razavi Khorasan, Semnan, West Azarbaijan, Zanjhan), Afghanistan, Pakistan (Balochistan) and NW India (Kashmir), NSL–2500 m.

Fossil records: Middle Pleistocene (Ionian: 0.13–0.78 mya) of Greece.

Sources: Steindachner, 1897, Doumergue, 1901, Mayet, 1903, F. Werner, 1939, Chpakowsky & Chnéour, 1954, Balozet, 1957, Bannikov et al., 1977, Billing & Schätti, 1984, Nilson & Andrén, 1988b, Chikin, 1991, Szyndlar, 1991a, Esterbauer, 1992, Herrmann et al., 1992, Leviton et al., 1992, Szczerbak, 1994, Spawls & Branch, 1995, Bons & Geniez, 1996, Schleich et al., 1996, Herrmann & Joger, 1997, Nilson & Andrén, 1997, David et al., 1999, Szyndlar & Rage, 1999, Disi et al., 2001, Hraoui-Bloquet et al., 2002, M.S. Murphy & Schlager, 2003, Geniez et al., 2004, Whitaker & Captain, 2004, Arikau et al., 2005, Göçmen et al., 2006, 2007a, Smedt, 2006, Baier et al., 2009, Tuniyev et al., 2009 and Amr & Disi, 2011.

Remarks: Type locality restriction of Mertens & Müller invalid *fide* David & Ineich (1999: 322).

5. *Macrovipera schweizeri* (F. Werner, 1935). Sitz. Akad. Wiss. Wien 144(1–2): 117, figs. 18–20. (*Vipera lebetina schweizeri*)

Synonyms: *Vipera lebetina siphnensis* Wettstein, 1953a, *Vipera lebetina schweitzeri* – González, 1991 *(nomen incorrectum),* and *Vipera lebetina cernovi* Chikin & Szczerbak, 1992.

Type: Lectotype, MCZ 37008, a 680–690 mm female (H. Schweizer, July 1932), designated by Mertens (1951b: 208).

Type locality: "Milos" [= Milos Is., SW Cyclades, S Greece, bet. 36°39–46'N, 24°19–33'E] via lectotype selection.

Distribution: Southern Greece (Cyclades Arch.: Kimolos, Milos, Polyaigos, Sifnos).

Sources: Nilson & Andrén, 1988b, Herrmann & Joger, 1997, Nilson et al., 1999, Mallow et al., 2003, Smedt, 2006, Kreiner, 2007 and Valakos et al., 2008.

Remarks: Golay et al. (1993: 276) incorrectly listed the type as MCZ 37000. Previously a subspecies of *M. lebetina*.

6. †*Macrovipera ukrainica* (Zerova, 1992). Neues Jb. Geol. Paläont. Abh. 184(2): 236–243, fig. 1. (†*Vipera ukrainica*)

Type: Holotype, ZIKP 22-1786, one left maxilla.

Type locality: "limestone quarry on the right bank of the river Khomora, 3 miles westward from the village Gritsev, Shepetovsky district of the Khmelnitsky region, Ukraine; Lower (Novomoskovsky) horizon of the Middle Sarmatian (Upper Miocene, Vallesian, MN9a)."

Distribution; Upper Miocene (Vallesian, MN 9: 9.7–11.1 mya) of Ukraine. Known only from type series.

Sources: Nilson & Andrén, 1997 and Zerova, 1993.

Remarks: Transferred to *Macrovipera fide* Zerova, 1993.

M

MADAGASCAROPHIS Mertens, 1952e (Pseudoxyrhophiidae)

Synonyms: *Eteirodipsas* Jan, 1863b, *Heterodipsas* – Palacky, 1898 *(nomen incorrectum), Hetaerodipsas* Berg, 1901 *(nomen emendatum), Eteirodispsas* – Jourdran, 1903 *(nomen incorrectum), Madagascariophis* – J.A. Campbell & Murphy, 1977b *(nomen incorrectum),* and *Madagacarophis* – Dowling, Highton, Maha & Maxson, 1983 *(nomen incorrectum).*

Type species: *Dipsas colubrina* Schlegel, 1837.

Distribution: Madagascar.

Sources: Jourdran, 1904, Guibé, 1958, Brygoo, 1977, Domergue, 1987, Nagy et al., 2003, 2007, Glaw & Vences, 2007, Kelly et al., 2009 and Zaher et al., 2009.

Remarks: An undescribed species exists in ext. N Madagascar *fide* Nagy et al. (2007: 241).

1. *Madagascarophis colubrinus* (Schlegel, 1837). Essai Phys. Serp. 1: 161, 2: 273–274. (*Dipsas colubrina*)

Synonyms: *Eteirodipsas colubrina citrina* Boettger, 1877, *Madagascarophis colubrinus insularis* Domergue, 1987, *Madagascarophis colubrinus occidentalis*

Domergue, 1987, *Madagascarophis colubrinus pastoriensis* Domergue, 1987, and *Madagascarophis colubrinus septentrionalis* Domergue, 1987.

Type: Lectotype, MNHN 3891, a 375–408 mm male (J.P. Goudot & Milius [Barberie Voy.], 1827–1836), designated by Domergue (1987: 460, 472).

Type locality: "Madagascar" via lectotype selection. Restricted to vicinity of Tamatave (Toamasina), Madagascar *fide* Domergue (1987: 460).

Distribution: Madagascar (Antananarivo, Antsiranana, N Fianarantsoa, Mahajanga, Toamasina, N Toliara, Nosy Be and Nosy Komba Is.), NSL–1400 m.

Source: Henkel & Schmidt, 2000.

Remarks: Lectotype listed as female *fide* Guibé & Roux-Estève (1972: 132).

2. *Madagascarophis meridionalis* Domergue, 1987. Bull. Mus. Natl. Hist. Nat. (4) 9A(2): 482–483, fig. 3 (left).

Type: Holotype, MNHN 1985.378 (formerly CAD 202/S), an 870 mm male (native, 23 June 1961).

Type locality: "village de Mahavelo, plateau Karimbola, une trentaine de kilomètres à l'ouest de Beloha (Androy), altitude 150m, la région malgache" [= ext. S Toliara Province, ext. SW Madagascar].

Distribution: Southern Madagascar (Fianarantsoa, Toliara), NSL–1070 m.

M

3. *Madagascarophis ocellatus* Domergue, 1987. Bull. Mus. Natl. Hist. Nat. (4) 9A(2): 484, fig. 3 (right).

Type: Holotype, MNHN 1977.1056 (formerly CAD 190/S), an 826 mm male (native, 20 June 1961).

Type locality: "hameau de Zampongotra, plateau Karimbola (pays Antandroy), vers la bifurcation de la piste Beloha-Marolinta-Ampotaka, altitude 156m, la région malgache" [= ext. S Toliara Province, ext. S Madagascar].

Distribution: Southwestern Madagascar (SW Toliara), NSL–350 m.

Source: Henkel & Schmidt, 2000.

†*MADTSOIA* Simpson, 1933 (†Madtsoiidae)

Type species: †*Madtsoia bai* Simpson, 1933.

Distribution: Upper Cretaceous of Argentina, Madagascar, Niger and Spain, lower Eocene of Argentina, and Paleocene of Argentina, Australia, Brazil and Morocco.

Sources: Simpson, 1933, Hoffstetter, 1959, 1961a, Broin et al., 1974, Rage, 1984b, Astiba et al., 1990, Le Loeuff, 1991, Albino, 1993, Scanlon, 2005, LaDuke et al., 2010, Albino, 2011b and Mohabey et al., 2011.

1. †*Madtsoia bai* Simpson, 1933. Bull. Amer. Mus. Nat. Hist. 67(1): 10–12, figs. 1–3, 5–6.

Type: Holotype, AMNH 3154, 45 posterior trunk vertebrae and ribs (G.G. Simpson, 17 Jan. 1931).

Type locality: "*Notostylops* Beds, Cañadón Vaca, Chubut, Patagonia, Argentina, Eocene" [= "Cow Canyon," cen. Patagonia, S Chubut Prov., S Argentina].

Distribution: Upper Cretaceous (Campanian-Maastrichtian: 65.5–83.6 mya), upper Paleocene (54.0–57.0 mya), and lower Eocene (Casamayorian: 48.0–54.0) of Argentina, and middle Paleocene (Itaboraian: 57.0–59.0) of Brazil.

2. †*Madtsoia camposi* Rage, 1998. Palaeovertebrata 27(3–4): 116–121, fig. 2.

Type: Holotype, DGM 1311-R (field crew, 1949), one middle trunk vertebra.

Type locality: "Itaboraí, state of Rio de Janeiro, Brazil; middle Palaeocene."

Distribution: Middle Paleocene (Itaboraian: 57.0–59.0) of Brazil. Known only from type series.

3. †*Madtsoia madagascariensis* Hoffstetter, 1961a. Bull. Mus. Natl. Hist. Nat. (2) 33(2): 152–159, figs. 2–3.

Type: Holotype, MNHN MAJ 5, one trunk vertebra (R. Lavocat, 1955).

Type locality: "provient du N de Berivotra, localité située à 35 km au SE de Majunga et à 25 km au NNW de Marovoay, Madagascar, peut-être santonien, plus probablement campanien, le Crétacé supérieur." Emended to 'Gîte du Guide', north of Berivotra, Mahajanga Prov., Madagascar, upper Cretaceous (Santonian or Campanian) *fide* Rage (1984b: 30).

Distribution: Upper Cretaceous (Santonian, 83.6–86.3 mya, or Campanian: 72.1–83.6 mya) of Madagascar and Niger, and Paleocene of Morocco.

Sources: Rage, 1999 and LaDuke et al., 2010.

4. †*Madtsoia pisdurensis* Mohabey, Head & Wilson, 2011. J. Vert. Paleont. 31(3): 580–592, figs. 2a–e, 3.

Type: Holotype 225/GSI/PAL/CR/10, two posterior trunk vertebrae.

Type locality: "PIS I, less than 1 km from the village of Pisdura (20º21'N, 79º02'E), Maharashtra State, central India, Lameta Formation, Maastrichtian age, upper Cretaceous."

Distribution: Upper Cretaceous (Maastrichtian: 65.5–72.1 mya) of India. Known only from type locality.

MAGLIOPHIS Zaher, Grazziotin, Cadle, Murphy, Moura-Leite & Bonatto 2009 (Xenodontidae)

Type species: *Dromicus exiguus* Cope, 1862b.

Distribution: Puerto Rico and Virgin Islands.
Sources: A. Schwartz, 1967, Rivero, 1978, 1998, T. Campbell & Campbell, 1999, R.W. Henderson & Powell, 2009 and Zaher et al., 2009.

1. *Magliophis exiguum* (Cope, 1862b). Proc. Acad. Nat. Sci. Philadelphia 14(1): 79. (*Dromicus exiguus*)

Synonym: *Dromicus exiguus subspadix* A. Schwartz, 1967.
Types: Syntypes (5) (formerly ANSP & USNM), longest syntype 434 mm (Rüse, 1855–1862), lost *fide* A. Schwartz & Henderson (1991: 585).
Type locality: "St. Johns and St. Thomas, W.I." [= U.S.Virgin Islands]. Restricted to St. Thomas, U.S. Virgin Islands *fide* A. Schwartz (1967: 3).
Distribution: Puerto Rico Bank. Southern Puerto Rico (Arroyo, Guánica, Guayanilla, Culebra and adj. islands), U.S. Virgin Is. (Hassel, St. Thomas) and British Virgin Is. (Anegada, Guana, Peter, Tortola and Virgin Gordo), NSL–1800 m.
Remarks: *Magliophis e. subspadix* possibly a valid species *fide* R.W. Henderson & Powell (2009: 370).

2. *Magliophis stahli* (Stejneger, 1904). Ann. Rep. U.S. Natl. Mus. 1902: 695–697, fig. 161. (*Leimadophis stahli*)

Type: Holotype, USNM 27323, an adult female (A. Stahl, 1900).
Type locality: "Bayamon, Puerto Rico" [= Bayamón, Bayamón Municip., N Puerto Rico, 18°22'N, 66°10'W, elevation 20 m].
Distribution: Northern Puerto Rico (Aguada, Aguadilla, Arecibo, Bayamón, Isabella, Lares, Los Rábanos, Manatí, Maricao, Maunabo, Mayaguez, Morovis, Naguabo, Quebradillas, Río Grande, San Juan, Vega Baja, Verde Is.), NSL–1800 m.
Source: Zaher et al., 2009.
Remarks: A valid species *fide* Zaher et al., 2009.

MALPOLON Fitzinger, 1826a (Psammophiidae)

Synonyms: *Coelopeltis* Wagler, 1830, *Caelopeltis* Bonaparte, 1831 *(nomen emendatum), Rhabdodon* Fleischmann, 1831 (*nomen rejiciendum*), *Bothriophis* Eichwald, 1837, *Malpodon* – Schinz, 1840 *(nomen incorrectum), Rabdolon* – A.-M.-C. Duméril, Bibron & Duméril, 1854b *(nomen incorrectum), Malpolum* – Cope, 1896b *(nomen incorrectum), Coclopeltis* – Tristram, 1860 *(nomen incorrectum), Colopeltis* – Garcia, 1896 *(nomen incorrectum), Coelopetis* – Nikolsky, 1916 *(nomen incorrectum), Coelopeltes* – Caziot, 1922 *(nomen incorrectum), Coelopaltis* – Flower, 1926 *(nomen incorrectum), Calopeltis* – Dowsett, 1928 *(nomen incorrectum),* and *Molpolon* – Szyndlar, 1981 *(nomen incorrectum).*
Type species: *Coluber monspessulanus* Hermann, 1804.
Distribution: Southern Europe, SW Asia and N Africa.
Fossil records: Middle Pliocene to upper Pleistocene of S Europe and extreme NW Africa. Fossils unassigned to species include upper Pliocene (Villanyian, MN 16: 2.6–3.2 mya) of France, Greece and Morocco, and upper Pleistocene (Tarantian: 0.01–0.13 mya) of Morocco.
Sources: J. Anderson, 1898, Flower, 1933, K.P. Schmidt, 1939b, Lanza & Bruzzone, 1960, Pasteur & Bons, 1960, Kramer & Schnurrenberger, 1963, Bons, 1967, Marx, 1968, Y. Werner, 1971, Woerkom, 1982, Osman & Sir, 1988, Bailon, 1989, 2000, Gruber, 1989, Le Berre, 1989, Latifi, 1991, Szyndlar, 1991a, Leviton et al., 1992, Brandstätter, 1995, Gravlund, 2001, Bailon & Aouraghe, 2002, Nagy et al., 2003, Lawson et al., 2005, Kelly et al., 2009 and Zaher et al., 2009.
Remarks: †*Palaeomalpolon borealis* Szyndlar possibly a synonym *fide* Holman (1998a: 116–117). The species *moilensis* has been transferred to the resurrected genus *Rhagerhis.*

1. *Malpolon fuscus* (Fleischmann, 1831). Dalmatiae Nova Serp. Gen.: 26–30, pl. 2, figs. a–e. (*Rhabdodon fuscus*)

Synonyms: *Coluber flexuosus* G. Fischer, 1832 and *Coluber monspessulana neumayeri* Bonaparte, 1838 *in* 1832–1841.
Type: Holotype, not designated, a 1270 mm specimen, location unknown.
Type locality: "Dalmatia et Istria prope ad hortes et urbes" [= gardens and urban Croatia and Istrian Peninsula].
Distribution: Southeastern Europe and SW Asia. Northern Italy (Liguria, Trentino-Alto Adige, Veneto), Croatia (Cres, Korcula, Krk and Mljet Is.), Bosnia-Herzegovina, Montenegro, N Macedonia, Albania, S Bulgaria (Blagoevgrad, Burgas, Haskovo, Kardzhali, Plovdiv, Yambol), Cyprus, Turkey (Adana, Ankara, Balikesir, Diyarbakir, Hatay, Istanbul, Izmir, Kars, Konya, Mardin, Siirt, Urfa), Greece (Aitolia and Akarnania, Alonissos, Arkadhia, Akhaia, Argolis, Arta, Attica, Drama, Evritania, Éuboea, Evros, Évvola, Florina, Fokis, Fthiotis, Grevena, Hydra, Idhra, Ilia, Imathia, Ioannina, Kardhitsa, Kastoria, Kefallinía, Kérkira, Khalkidhiki, Khíos, Kilkis, Korinthia, Kos, Kozani, Lakonia, Larisa, Lesvos, Levkas, Magnisia, Messinia, Páros, Pella, Pieria, Preveza, Rodhopi, Salamis, Sámos, Samothráki, Serrai, Skiathos, Skópelos, Thásos, Thesprotia, Thessaloniki, Trikala, Voiotia, Xanthi, Zakinthos), Armenia, Azerbaijan, ext. SW Russia, N Iraq (Dohuk, Khordestan) and Iran (Bakhtaran, Central, East Azerbaijan, Hamadan, Hormozghan, Khuzestan, Mazandaran, Razavi Khorasan, West Azerbaijan, Zanjhan), NSL–700 m.

Remarks: In accordance with Art. 23.9.2 of the Code (ICZN, 1999), *Coluber monspessulanus* Hermann is designated a *nomen protectum* and *Coluber hannasch asuaed* Forskal a *nomen oblitum*.

MANOLEPIS Cope, 1885a (Xenodontidae)

Synonyms: *Monolepis* – A.C.L.G. Günther, 1895 *in* 1885–1902 *(nomen incorrectum), Manelopis* – Phisalix, 1922 *(nomen incorrectum),* and *Manolopis* – Maass-Berlin, 1933 *(nomen incorrectum).*

Type species: *Dromicus putnami* Jan, 1863b.

Distribution: Southwestern Mexico.

Sources: Jan & Sordelli, 1867 *in* 1866–1870, Hartweg & Oliver, 1940, H.M. Smith & Taylor, 1945, Werler & Smith, 1952, J.D. Johnson, 1978b, Villa et al., 1988, Zaher et al., 2009 and Vidal et al., 2010.

1. *Manolepis putnami* (Jan, 1863b). Elenco Sist. Ofidi: 67. (*Dromicus putnami*)

Synonym: *Tomodon nasutus* Cope, 1864.

Type: Holotype, MCZ 824, a 546 mm male (E.S.C. Cammar, 1 May 1861).

Type locality: "St. Blas Jalisco, Messico" [= San Blas, Nayarit, Mexico] (possibly in error, but could be the vicinity of San Blas). Corrected to west coast of Mexico *fide* MCZ catalogue.

Distribution: Southwestern Mexico (Chiapas, Colima, Guerrero, Jalisco, Michoacán, Nayarit, Oaxaca), NSL–1900 m.

Remarks: Type was found on a ship that sailed from the port of San Blas, Mexico.

MASTICOPHIS Baird & Girard, 1853 (Colubridae)

Synonyms: *Mastigophis* – A.C.L.G. Günther, 1865 *(nomen incorrectum), Masticophiss* – Velasco, 1893 *(nomen incorrectum), Nasticophis* – Boulenger, 1896a *(nomen incorrectum), Mesticophis* – Velasco, 1896 *(nomen incorrectum), Maticophis* – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Masticophus* – A.H. Wright & Wright, 1952 *(nomen incorrectum).*

Type species: *Leptophis taeniata* Hallowell, 1852a.

Distribution: Southwestern USA, Mesoamerica and NW Latin America.

Fossil records: Middle Pliocene to upper Pleistocene of S USA. Fossils unassigned to species include upper Pleistocene (Rancholabrean II) of USA (Arizona, Texas). Due to difficulty in distinguishing this genus from *Coluber* (Auffenberg, 1963, Holman, 1981a, Schätti, 1987), it may also be known from the Pleistocene of Georgia, Kansas, Missouri and/or Tennessee.

Sources: Ortenburger, 1928, Schätti, 1986b, Nagy et al., 2004, Utiger et al., 2005 and Collins & Taggart, 2008.

Remarks: A synonym of *Coluber fide* Lopez & Maxson, 1995, 1996 and Utiger et al., 2005. A valid genus *fide* Nagy et al., 2004 and Pyron & Burbrink *in* Crother, 2012.

1. *Masticophis anthonyi* (Stejneger, 1901b). Proc. U.S. Natl. Mus. 23(1231): 715–717. (*Bascanion anthonyi*)

Type: Holotype, USNM 24390, a 1450 mm male (A.W. Anthony, spring 1897).

Type locality: "Clarion Island, Revilla Gigedo group, west coast of Mexico, about 400 miles southwest from Cape St. Lucas, Lower California" [= Clarion Is., Revillagigedo Arch., Colima, W Mexico, 18°22'N,114°44'W].

Distribution: Western Mexico (Colima). Known only from type locality.

M

2. *Masticophis aurigulus* (Cope, 1861e). Proc. Acad. Nat. Sci. Philadelphia 13(7): 301. (*Drymobius aurigulus*)

Type: Holotype, USNM 5793, anterior 520 mm of mangled body (J. Xantus, 1859–1861).

Type locality: "Cape St. Lucas, Lower California, Mexico" [= Cabo San Lucas, S Baja California Sur State, NW Mexico, 22°53'N, 109°55'W, elevation 25 m].

Distribution: Western Mexico (ext. S Baja California Sur), NSL–1600 m.

Sources: Grismer, 1990a, 1990b, 1999, 2002.

Remarks: A valid species *fide* Grismer (1999: 459).

3. *Masticophis barbouri* (Van Denburgh & Slevin, 1921a). Proc. California Acad. Sci. (4) 11(6): 96. (*Coluber barbouri*)

Type: Holotype, CAS 49157, an adult female (J.R. Slevin, 30 May 1921).

Type locality: "Isla Partida, Espiritu Santo Island, Gulf of California, Mexico."

Distribution: Mexico (Baja California: Espíritu Santo, Partida Sur), NSL–575 m.

Source: Grismer, 1990a–b, 1999, 2002.

Remarks: A valid species *fide* Grismer (1999: 459). Previously a subspecies of *M. aurigulus*.

4. *Masticophis bilineatus* Jan, 1867 *in* Jan & Sordelli, 1866–1870. Icon. Gén. Ophid. 2(22): 3, pl. 6, figs. 2, 2a–b, e–g, n, r, v.

Synonyms: *Masticophis bilineatus* Jan, 1863b (*nomen nudum*), *Bascanium semilineatum* Cope, 1892a, and *Masticophis bilineatus lineolatus* Hensley, 1950.

Type: Holotype, MTD 15523, a 467 mm (svl) female.

Type locality: "Mexique" [= Mexico]. "Messico occid. ?" [= W Mexico] *fide* Jan (1863: 65). Restricted to Guaymas, Sonora, Mexico *fide* H.M. Smith & Taylor (1950a: 344) and Casas Grandes, Chihuahua, Mexico *fide* K.P. Schmidt (1953a: 190).

Distribution: Extreme SW USA (S Arizona, ext. SW New Mexico) and W Mexico (Aguascalientes, ext. SW Chihuahua, Colima, W Durango, Jalisco, Nayarit, Oaxaca, Sinaloa, E Sonora, Zacatecas, Tiburón Is.), NSL–2500 m.

Sources: Jan & Sordelli, 1867 *in* 1861–1870, H.M. Smith, 1941j, Fowlie, 1965, Stebbins, 1985, Camper & Dixon, 1994, Camper, 1996a, Degenhardt et al., 1996, Grismer, 1999, 2002, R.D. Bartlett & Tennant, 2000, McCranie & Wilson, 2001b and Lemos-Espinal et al., 2004a–b.

Remarks: Jan's 1863b description does not adequately separate *Masticophis bilineatus* from *M. flagellum*. Grismer (1999: 459) considered *M. bilineatus slevini* a distinct species.

M

5. *Masticophis flagellum* (G. Shaw, 1802). Gen. Zool., Amph. 3(2): 475. (Coluber flagellum)

Synonyms: *Coluber flagelliformis* Daudin, 1803c, ? *Coluber americanus* Gravenhorst, 1807, *Coluber testaceus* Say *in* E. James, 1823, *Herpetodryas psammophis* Schlegel, 1837, *Psammophis flavigularis* Hallowell, 1852a, *Bascanium flagelliforme piceum* Cope, 1875a, *Bascanium flagelliforme bicinctum* Yarrow, 1883a, *Bascanion flagellum frenatum* Stejneger, 1893b, *Masticophis flagellum lineatulus* H.M. Smith, 1941i, *Masticophis flagellum ruddocki* Brattstrom & Warren, 1953, and *Masticophis flagellum cingulum* Lowe & Woodin, 1954.

Type: Lectotype, specimen described and illustrated in Catesby (1743: 54, pl. 54).

Type locality: "Carolina and Virginia" [USA]. Restricted to Charleston, South Carolina, USA *fide* K.P. Schmidt (1953a: 188).

Distribution: Southern USA (Alabama, Arizona, Arkansas, California, E Colorado, Florida, Georgia, ext. SW Illinois, Kansas, S cen. Kentucky, Louisiana, Mississippi, Missouri, ext. SW Nebraska, W Nevada, New Mexico, SE North Carolina, Oklahoma, South Carolina, Tennessee, Texas, ext. SW Utah) and N Mexico (Aguascalientes, NE Baja California Norte, Chihuahua, Coahuila, E Durango, Nuevo León, Querétaro, San Luis Potosí, N Sinaloa, Sonora, Tamaulipas, N Veracruz, N Zacatecas), NSL–2500 m.

Fossil records: Middle Pliocene (Blancan III) of USA (Texas), upper Pliocene (Blancan V) of USA (Nebraska), lower Pleistocene (Irvingtonian I) of USA (Florida), middle/upper Pleistocene (Irvingtonian II) of USA (Arkansas), and upper Pleistocene (Rancholabrean II) of USA (California, Florida, Nevada, New Mexico).

Sources: L.D. Wilson, 1970b, 1973b, Christman, 1980, R.W. Murphy & Ottley, 1984, Ernst & Barbour, 1989, Van Devender & Bradley, 1994, Palmer & Braswell, 1995, Degenhardt et al., 1996, P.R. Brown, 1997, Tennant, 1997, Holman, 2000a, Werler & Dixon, 2000 and Quintero-Diaz et al., 2007.

6. *Masticophis fuliginosus* (Cope, 1895b). Amer. Nat. 29(343): 679–680. (*Zamenis lateralis fuliginosus*)

Types: Syntypes (2), USNM 15135–36, an 815+ mm and 665 mm specimen.

Type locality: "St. Margarita Island, Lower California" [= Baja California Sur, Mexico].

Distribution: Southwestern USA (ext. SW California) and Mexico (Baja California Norte, Baja California Sur, Coronados, Carmen, Cerralvo, Danzante, Espiritu Santo, Magdalena, Montserrate, Partida Sur, San Ildefonso, San José, San Marcos, Santa Margarita and Tiburón Is.), BSL–2515 m.

Source: Grismer, 2002.

Remarks: A valid species *fide* Grosmer (2002: 290). Previously a subspecies of *M. flagellum*.

7. *Masticophis lateralis* (Hallowell, 1853a). Proc. Acad. Nat. Sci. Philadelphia 6(7): 237. (*Leptophis lateralis*)

Synonym: *Masticophis lateralis euryxanthus* Riemer, 1954.

Type: Holotype, ANSP 5365, a 461 mm male (A.L. Heermann [Pacific Railroad Exped.], 1853).

Type locality: "California" [USA]. Probably Sierra Nevada foothills, N California *fide* Jennings (1983a: 343.1).

Distribution: Extreme W USA (California) and ext. NW Mexico (NW Baja California Norte, E Baja California Sur), NSL–2250 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (California).

Sources: Jennings, 1983a, Grismer, 1990a, 2002, Grismer & Mahrdt, 1996, P.R. Brown, 1997, R.D. Bartlett & Tennant, 2000 and Holman, 2000a.

Remarks: Type locality restriction to San Diego, California, USA *fide* K.P. Schmidt (1953: 189) in error *fide* Jennings (1983a: 343.1).

8. *Masticophis mentovarius* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 187. (*Coryphodon mentovarius*) (*nomen corrigendum*)

Synonyms: *Coryphodon mento-varius* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen incorrigendum), Liophis wagleri varia* Jan, 1863b, *Bascanion*

suboculare Cope, 1867b, *Spilotes corais suborbitalis* W.C.H. Peters, 1868b, *Bascanium mentovarium* – Cope, 1879 *(nomen corrigendum), Bascanion lineatus* Bocourt, 1890 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Coluber striolatus* Mertens, 1934b, *Masticophis flagellum variolosus* H.M. Smith, 1943a, and *Coluber mentovarius centralis* Roze, 1953b.

Types: Syntypes (2), MNHN 3199 and MNHN 3331, two females.

Type locality: "Mexique" [= Mexico]. Restricted to Tehuantepec, Oaxaca, Mexico *fide* H.M. Smith & Taylor (1950a: 340).

Distribution: Latin America. Mexico (Aguascalientes, Campeche, Chiapas, SW Chihuahua, Colima, S Durango, Guanajuato, Guerrero, Jalisco, S México, Michoacán, Morelos, Nayarit, La Peña and San Juanito Is.; Oaxaca, S Puebla, Querétaro, ext. N Quintana Roo, S San Luis Potosí, Sinaloa, S Sonora, Tabasco, N Veracruz, Yucatán, S Zacatecas, María Madre and María Magdalena Is.), Belize (Belize, Cayo, Corozal, Orange Walk), Guatemala (Alta Verapaz, Jutiapa, Petén, Santa Rosa), E El Salvador (Ahuachapán, Cabañas, Chalatenango, Cuscatlán, La Libertad, La Paz, Morazán, San Miguel, San Salvador, Usulutan), Honduras (Comayagua, Cortés, Francisco Morazán, Gracias a Dios, Olancho, Valle), Nicaragua (Atlántico Norte, Boaco, Chontales, Granada, Madriz, Managua, Masaya, Matagalpa, Rivas: Ometepe Is.), Costa Rica (Cartago, Guanacaste, Puntarenas, San José), cen. Panama (Coclé), ext. N Colombia (La Guajira, Magdalena) and N Venezuela (Anzoátegui, Apure, Aragua, Bolívar, Carabobo, Cojedes, Distito Federal, Falcón, Guárico, Lara, Mérida, Monagas, Nueva Esparta, Sucre, Zulia, Margarita Is.), NSL–2170 m.

Sources: H.M. Smith, 1942c, E.H. Taylor, 1951, Roze, 1953b, 1966a, Lancini., 1966, 1986, R.W. Henderson & Hoevers, 1975, J.D. Johnson, 1977, 1982, J.C. Lee, 1980, 1996, L.D. Köhler et al., 2005, Navarrete et al., 2009 and Ugueto & Rivas, 2010.

9. *Masticophis schotti* Baird & Girard, 1853. Cat. No. Amer. Rept., Serp. 1: 160–161.

Synonym: *Masticophis ruthveni* Ortenburger, 1923.

Type: Holotype, USNM 1972, a 943 (svl) mm male (A.C.V. Schott [U.S.-Mex. Bound. Comm.], 1852–1853).

Type locality: "Eagle Pass, Tex." [Maverick Co., Texas, USA].

Distribution: Southern USA (S Texas) and N cen. Mexico (E Coahuila, Guanajuato, Hidalgo, N Michoacán, Nuevo León, Querétaro, San Luis Potosí, Tamaulipas, cen. Veracruz), NSL–2395 m.

Sources: Camper & Dixon, 1994, Camper, 1996b, Werler & Dixon, 2000 and Auth et al., 2000.

10 *Masticophis slevini* Lowe & Norris, 1955. Herpetologica 11(2): 93–95. (*Masticophis bilineatus slevini*)

Type: Holotype, SDSNH 3826, a 1206 mm female (G. Bancroft, 18 April 1930).

Type locality: "San Esteban Island, Gulf of California, Sonora, Mexico."

Distribution: Western Mexico (Sonora: San Esteban Is.), NSL–430 m.

Source: Grismer, 2002.

Remarks: A valid species *fide* Grismer (1999: 459).

11. *Masticophis taeniatus* (Hallowell, 1852a). Proc. Acad. Nat. Sci. Philadelphia 6(5): 181. (*Leptophis taenita*)

Synonyms: *Masticophis ornatus* Baird & Girard, 1853, *Coluber taeniatus girardi* Stejneger & Barbour, 1917, and *Masticophis taeniatus australis* H.M. Smith, 1941j.

Type: Holotype, USNM 2110, a 741–807 mm male (S.W. Woodhouse, 1849–1850).

Type locality: "New Mexico" [USA]. Emended to west of the Rio Grande, New Mexico, USA *fide* Cochran (1961: 193). Restricted to Shiprock, San Juan County, New Mexico, USA *fide* H.M. Smith & Taylor (1950a: 359) and specimen label on holotype.

Distribution: Western USA (Arizona, E California, W Colorado, S Idaho, Nevada, New Mexico, E Oregon, SW Texas, Utah, S Washington) and NE Mexico (Aguascalientes, Chihuahua, W Coahuila, Durango, NE Jalisco, N Zacatecas), NSL–3075 m.

Fossil records: Upper Pleistocene (Rancholabrean II) of USA (Nevada).

Sources: Van Devender & Lowe, 1977, W.S. Parker & Brown, 1980, W.S. Parker, 1982, Camper & Dixon, 1990, 1994, H.A. Brown et al., 1995, Stumpel, 1995, Camper, 1996c, Degenhardt et al., 1996, P.R. Brown, 1997, R.D. Bartlett & Tennant, 2000, Holman, 2000a, Werler & Dixon, 2000, McCranie & Wilson, 2001 and Sigala-Rodríguez et al., 2008.

Remarks: Spelling of epithet corrected to *taeniata* by Hallowell (1854f: 133).

MASTIGODRYAS Amaral, 1934a (Colubridae)

Synonyms: *Eudryas* Fitzinger, 1843 *(nomen praeoccupatum), Coryphodon* A.-M.-C. Duméril, Bibron & Duméril, 1854a *(nomen praeoccupatum), Endryas* – A.-M.-C. Duméril & Bibron, 1844 *(nomen incorrectum), Coryphedon* – Lohmeyer, 1882 *(nomen incorrectum), Goryphodon* – Bocourt, 1884 *(nomen incorrectum), Coriphodon* – Velasco, 1896 *(nomen incorrectum),*

Coryphdom – Briceño-Rossi, 1934 *(nomen incorrectum),* and *Dryadophis* L.C. Stuart, 1939 *(nomen substitutum).*

Type species: *Mastigodryas danieli* Amaral, 1934a.

Distribution: Latin America.

Sources: L.C. Stuart, 1941a, H.M. Smith, 1963b, J.A. Peters & Orejas-Miranda, 1970, L.D. Wilson & Meyer, 1985, Pérez-Santos, 1986, Pérez-Santos & Moreno, 1988, Hernández & Rada de M., 1992 and Montingelli, 2009.

Remarks: Official Generic Name no. 2008 *fide* Opinion 1035 (ICZN, 1975). Revision of genus in progress *fide* Montingelli, 2009.

1. *Mastigodryas alternatus* (Bocourt, 1884). Bull. Soc. Philom. Paris (1883–1884) (7) 8(3): 133–134. (*Coryphodon alternatus*)

Synonym: *Dryadophis sanguiventris* E.H. Taylor, 1954.

Type: Holotype, MNHN 6202, a 380 mm specimen (C. Viguier, Nov. 1876–April 1878).

Type locality: "Isthme de Darien" [= Daríen Prov., Panama].

Distribution: Honduras (Colón, Gracias a Dios, Olancho), Nicaragua (Atlántico Norte, Atlántico Sur, Chontales, Estelí, Masaya, Matagalpa, Monagua, Rio San Juan, Zelaya), Costa Rica (Cartago, Guanacaste, Limón, Puntarenas, San José), Panama (Bocas del Toro, Canal Zone, Chiriquí, Saboga Is.) and Ecuador (Manabi: Plata Is.), NSL–300 m.

Sources: L.D. Wilson & Meyer, 1985 and McCranie, 2011a.

Remarks: Resurrected from synonymy of *M. melanolomus fide* McCranie (2011a: 157).

2. *Mastigodryas amarali* (L.C. Stuart, 1938). Copeia 1938(1): 7–8. (*Eudryas amarali*)

Type: Holotype, USNM 22534, an 897 mm female (W. Robinson, 13 July 1895).

Type locality: "Marguerita Island, Venezuela" [= Isla Margarita, Nueva Sparta State, NE Venezuela].

Distribution: Northeastern Venezuela (Monagas, Sucre, Nueva Esparta, Margarita Is.), NSL– 200 m.

Sources: Roze, 1966a, Lancini, 1986, Navarrete et al., 2009 and Ugueto & Rivas, 2010.

Remarks: Single Tobago record rejected *fide* J.C. Murphy (1997: 186).

3. *Mastigodryas bifossatus* (Raddi, 1820) Mem. Math. Fis. Soc. Ital. Sci. 18(2): 333–334. (*Coluber bifossatus*)

Synonyms: *Coluber capistratus* Lichtenstein, 1823, *Coluber lichtensteinii* Wied-Neuweid, 1825a, *Coluber pantherinus* Schlegel, 1837, *Drymobius bifossatus striatus* Amaral, 1931a, *Drymobius bifossatus triseriatus* Amaral, 1931a, *Dryadophis bifossatus villelai* Hoge, 1953b, and *Mastigodryas bifossatus lacerdai* Cunha & Nacimento, 1978.

Type: Holotype, ? MZUF (formerly IRMC), a 1575 mm specimen (G. Raddi, 1817–1818).

Type locality: "Neri di Rio-Janeiro, Brasile" [= vicinity of Rio de Janeiro (22°54'S, 43°14'W, elevation NSL), S Rio de Janeiro State, SE Brazil].

Distribution: South America. Eastern Colombia (Meta), Venezuela (Amazonas, Apure, Aragua, Barinas, Bolívar, Cojedes, Guárico, Monagas, Portuguesa), Guyana, N French Guiana (Cayenne, Saint-Laurent-du-Maroni), E Peru, E Bolivia (La Paz, Santa Cruz), Brazil (Bahia, Ceará, Goiás, Maranhão, Mato Grosso, Minas Gerais, Pará, Pernambuco, Rio de Janeiro, Rio Grande do Sul, São Paulo, Sergipe, Bananal Is.), S Paraguay (Alto Paraná, Amambay, Asunción, Caaguazú, Caazapá, Canindeyú, Central, Concepción, Cordillera, Guairá, Itapúa, Misiones, Neembucú, Paraguarí, San Pedro) and N Argentina (Chaco, Corrientes, Entre Ríos, Formosa, Jujuy, Misiones, Salta, Santa Fe, Tucumán), 50–760 m.

Sources: Roze, 1966a, Cunha & Nascimento, 1978, 1993, Lancini, 1986, Hernández & Rada de M., 1992, Starace, 1998, Markezich, 2002, Cacciali, 2008, Navarrete et al., 2009 and Montingelli & Zaher, 2011.

4. *Mastigodryas boddaerti* (Seetzen, 1796) Meyer's Zool. Arch. 2: 59. (*Coluber boddaerti*)

Synonyms: *Coluber fuscus* Hallowell, 1845a, *Herpetodryas rappii* A.C.L.G. Günther, 1858, *Ablabes frenatus* Berthold, 1859, *Ablabes tesellatus* Jan *in* Berthold, 1859, *Herpetodryas bilineatus* Jan, 1863b, *Herpetodryas reticulata* W.C.H. Peters, 1863c, *Drymobius boddaerti californiensis* Bocourt, 1890 *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909, *Eudryas dunni* L.C. Stuart, 1933, and *Eudryas ruthveni* L.C. Stuart, 1933.

Type: Holotype, not designated, a 635 mm specimen, lost *fide* Hoge (1964d: 55).

Type locality: Unknown. Restricted to Suriname, South America *fide* Merrem (1820: 110).

Distribution: Northern South America. Colombia (Atlántico, Antioquia, Bolívar, Boyacá, Caldas, Cauca, Chocó, Córdoba, Cundinamarca, La Guajira, Magdalena, Meta, Nariño, Santander, Sucre, Tolima, Valle, Gorgona Is.), Venezuela (Amazonas, Anzoátegui, Apure, Aragua, Barinas, Bolívar, Carabobo, Cojedes, Delta Amacuro, Distrito Federal, Falcón, Guárico, Lara, Mérida, Miranda, Monagas, Portuguesa, Sucre, Táchira, Trujillo, Yaracuy, Vargas, Zulia), Guyana (Baramita-Waini, East Berbice-Corentyne, Essequibo Islands-West Demerara, Upper Demerara-Berbice, Upper Takutu-Upper Essequibo, Santa Rosa Is.), Trinidad and Tobago (Tobago, Trinidad), Suriname (Saramacca, Suriname), French Guiana (Cayenne, Saint-Laurent-du-Maroni), W Ecuador (Esmeraldas, Guayas, Loja, Manabi, Pichincha), Peru (Ancash,

Casco, Junín, Loreto), N Bolivia (Beni, La Paz, Pando, Santa Cruz) and N Brazil (Amazonas, Bahia, Ceará, Mato Grosso, Pará: Marajó Is.; Rondônia), NSL–2200 m.

Sources: Hoge, 1964c, Roze, 1966a, Lancini, 1986, Nascimento & Lima-Verde, 1989, Hernández & Rada de M., 1992, Starace, 1998, C.W. Myers & Donnelly, 2008, Navarrete et al., 2009, Montingelli & Zaher, 2011 and C.J. Cole et al., 2013.

5. *Mastigodryas bruesi* (T. Barbour, 1914a). Mem. Mus. Comp. Zool. 44(2): 337–338. (*Alsophis bruesi*)

Type: Holotype, MCZ 7792, a 1010 mm specimen (G.M. Allen & C.T. Brues, 17 Aug.–25 Sept. 1910).

Type locality: "near St. George's, Grenada" [St. George Parish].

Distribution: Leeward Islands. St. Vincent & the Grenadines (Baliceaux, Bequia, Caille, Carriacou, Mustique, Quatre, Union), Grenada and Barbados (introduced).

Sources: A. Schwartz & R.W. Henderson, 1985, 1988, 1991, B.T. Greene et al., 2003 and R.W. Henderson & Powell, 2009.

Remarks: T. Barbour & Loveridge (1929: 208) erroneously listed five syntypes with Allen & Barbour as collectors. A population in Barbados is introduced *fide* B.T. Greene et al. (2003: 777).

6. *Mastigodryas cliftoni* (L. Hardy, 1964). Copeia 1964(4): 714. (*Dryadophis cliftoni*)

Synonym: *Dryadophis fasciatus* L. Hardy, 1963 (*nomen praeoccupatum*)

Type: Holotype, KU 73489, a 1532 mm male (P.L. Clifton, 29 Aug. 1962).

Type locality: "Plumosas, 22 kilometers east of Matatán, elevation 770 meters, Sinaloa, México."

Distribution: Western Mexico (SW Chihuahua, Jalisco, Nayarit, S Sinaloa, Zacatecas), 100–1700 m.

Sources: L. Hardy, 1963, Ponce-Campos & Huerta-Ortega, 1998, Lemos-Espinal et al., 2004b and R.A. Villa et al., 2011.

Remarks: Original description in L. Hardy (1963: 669–671, figs. 1a–b).

7. *Mastigodryas danieli* Amaral, 1934a. Mem. Inst. Butantan (1933–1934) 8: 158–159.

Type: Holotype, IB 8694, an 895 mm female (I. Daniel), destroyed by fire 15 May 2010.

Type locality: "Medellin, Colombia," = [Medellín, Antioquia Dept., NW Colombia, 6°14'N, 75°35'W, elevation 1480 m].

Distribution: Northwestern Colombia (Antioquia, Magdalena, Tolima, Valle), 250–2000 m.

Remarks: Official Specific Name no. 2545 *fide* Opinion 1035 (ICZN, 1975).

8. *Mastigodryas dorsalis* (Bocourt, 1890) *in* A.H.A. Duméril, Bocourt & Mocquard, 1870–1909. Miss. Sci. Mex. Amér.-Cen., Rept. 3(12): 724–725, pl. 51, figs. 2, 2a–2d. (*Drymobius [Eudryas] dorsalis*)

Types: Syntypes (2), MNHN 7391 and MNHN 91.257, longest syntype 1140 mm (Comm. Scient., 1865–1866).

Type locality: "le plateau de Guatemala" [= highlands of Guatemala].

Distribution: Upper Central America. Southern Guatemala (Baja Verapaz, Guatemala, Izabal, Sololá, San Marcos), El Salvador (Ahuachapán, Chalatenango, Cuscatlán, La Libertad, La Unión, Morazán, San Vicente, Santa Ana, Usulután), Honduras (Copán, Cortés, El Paraíso, Francisco Morazán, Intibucá, La Paz, Lempira, Ocotepeque, Olancho, Santa Bárbara, Yoro) and N Nicaragua (Estelí, Jinotega, Matagalpa), 450–2290 m.

Sources: Villa, 1971a, L.D. Wilson & Meyer, 1985, G. Köhler et al., 2005 and McCranie, 2011a.

9. *Mastigodryas heathii* (Cope, 1875b). J. Acad. Nat. Sci. Philadelphia (1876) (2) 8(2): 179–180. (*Drymobius heathii*)

Type: Holotype, ANSP 11544, a 780 mm specimen (E.R. Heath).

Type locality: "in the valley of Jequetepeque, which extends from the Cordillera of Caxamarca to near the coast at Pacasmayo, Peru" [= Jequetepeque Valley, from Cajamarca (7°20'S, 78°22'W, elevation 3400 m), Cajamarca Dept. to Pacasmayo (7°24'S, 79°33'W, elevation 35 m), N La Libertad Dept., W Peru].

Distribution: Coastal Peru (Ancash, Cajamarca, La Libertad, Lima, Puno) and Ecuador (Esmeraldas), 800–2600 m.

Sources: L.C. Stuart, 1941a, J.A. Peters, 1960a, Ortega-Andrade et al., 2010 and Cadle, 2012a.

Remarks: Photograph of holotype in Cadle (2012: fig. 1).

10. *Mastigodryas melanolomus* (Cope, 1868c). Proc. Acad. Nat. Sci. Philadelphia 20(2): 134–135. (*Masticophis melanolomus*)

Synonyms: *Herpetodryas laevis* J.G. Fischer, 1881, *Dromicus coeruleus* J.G. Fischer, 1885b, *Drymobius boddaerti modesta* F. Werner, 1903a, *Eudryas boddaertii gaigeae* L.C. Stuart, 1933, *Eudryas boddaertii mexicanus* L.C. Stuart, 1933, *Eudryas slevini* L.C. Stuart, 1933, *Dryadophis melanolomus veraecrucis (nomen substitutum),* L.C. Stuart, 1941a, *Dryadophis melanolomus stuarti* H.M. Smith, 1943a, and *Dryadophis melanolomus tehuanae* H.M. Smith, 1943a.

Type: Holotype, USNM 24985, an 1124 mm specimen (A.C.V. Schott, 1865–1866).

Type locality: "Yucatan" [Mexico]. Restricted to Chichen Itzá, Yucatán, Mexico *fide* H.M. Smith & Taylor (1950a: 352).

M

Distribution: Latin America. Southern Mexico (Campeche, Chiapas, Colima, Guerrero, Hidalgo, Jalisco, Michoacán, Nayarit, Oaxaca, Puebla, Querétaro, Quintana Roo, San Luis Potosí, Sinaloa, Tabasco, Tamaulipas, Veracruz, Yucatán, María Cleofas and María Magdalena Is.), Belize (Belize, Cayo, Corozal, Orange Walk, Stann Creek, Toledo), N Guatamala (Alta Verapaz, Izabal, Petén), El Salvador (Ahuachapán, San Salvador, Santa Ana), N Honduras (Atlántida, Comayagua, Copán, Cortés, Francisco Morazán, Islas de la Bahía, Santa Bárbara, Yoro, Cochino Grande and Utila Is.) and Nicaragua (Jinotega), 1180–1345 m.

Sources: L.C. Stuart, 1933, H.M. Smith 1943a, E.H. Taylor, 1951, Hidalgo, 1981a, L.D. Wilson & Meyer, 1985, Lee, 1996, J.A. Campbell, 1998b, G. Köhler, 1999b, Canseco-Marquez et al., 2000, Torres-Carvajal, 2004, G. Köhler et al., 2005, McCranie et al., 2005, 2006, McCranie, 2011a, Montingelli & Zaher, 2011 and Travers et al., 2011.

11. *Mastigodryas moratoi* Montingelli & Zaher, 2011. J. Herp. 45(1): 112–113, fig. 4a.

Type: Holotype, MZUSP 5371, an 1151 mm male (Exped. Permanente Amazonia, 4 Nov. 1972).

Type locality: "approximately 50 m of altitude, on the north bank of the Negro River in Tapera, State of Amazonas, Brazil (00º25'S, 64º35'W)."

Distribution: Northern Brazil (Amazonas, Roraima) and N Guyana, 50–60 m.

12. *Mastigodryas pleii* (A.-M.-C. Duméril, Bibron & Duméril, 1854a). Erpét. Gén. 7(1): 661–663. (*Dromicus pleii*)

Synonyms: *Dromicus pleii tristriata* Jan, 1863b (*nomen nudum*), *Dromicus pleii cicatricosa* Jan, 1863b (*nomen nudum*), *Herpetodryas quinquelineatus* Steindachner, 1870b, *Dromicus maculivittis* W.C.H. Peters, 1877b, and *Alsophis pulcher* S.W. Garman, 1887b.

Type: Lectotype, MNH 3549, a 690 mm specimen (L.D. Bauperthuis, 1841), designated by type locality restriction of Hoge & Lancini (1960a: 61).

Type locality: "la province de Venézuela dans la Colombie" [= Zulia State, NW Venezuela] via lectotype selection.
